ORDERS OF REFERENCE

HOUSE OF COMMONS
TUESDAY, October 8, 1968.

Resolved,—That the following Members do compose the Standing Committee on Transport and Communications:

Messrs.

Blouin,	Horner,	Nowlan,
Caccia,	Jerome,	Pringle,
Carter,	Laflamme,	Schreyer,
Coates,	Lessard (*LaSalle*),	Serré,
Corbin,	Mahoney,	Skoberg,
Douglas,	Nesbitt,	Thomas (*Moncton*)—(20).
Godin,	Noël,	

WEDNESDAY, October 16, 1968.

Ordered,—That, saving always the powers of the Committee of Supply in relation to the voting of public moneys, the items listed in the Revised Main Estimates for 1968-69, relating to the Canadian Transport Commission, Communications, the National Harbours Board, the Post Office and the St. Lawrence Seaway Authority, be withdrawn from the Committee of Supply and referred to the Standing Committee on Transport and Communications.

ATTEST:

ALISTAIR FRASER,
The Clerk of the House of Commons.

29105—1½

MINUTES OF PROCEEDINGS

TUESDAY, October 22, 1968.
(1)

The Standing Committee on Transport and Communications met this day at 11.10 a.m. for the purposes of organization.

Members present: Messrs. Blouin, Caccia, Corbin, Douglas, Godin, Laflamme, Lessard (*LaSalle*), Mahoney, Nesbitt, Noël, Pringle, Serré, Skoberg and Thomas (*Moncton*)—(14).

The Clerk attending and having called for nominations, it was moved by Mr. Pringle, seconded by Mr. Serré that Mr. Gustave Blouin be elected Chairman of this Committee.

On motion of Mr. Laflamme, seconded by Mr. Nesbitt,

Agreed,—That nominations be closed.

The Clerk put Mr. Pingle's motion and it was *resolved* in the affirmative.

Mr. Blouin took the Chair, thanked the members for the honour and requested their co-operation during the deliberations of the Committee.

The Chairman then called for nominations for the election of a Vice-President.

On motion of Mr. Corbin, seconded by Mr. Pringle,

Agreed,—That Mr. Mahoney be elected Vice-Chairman of the Committee.

On motion of Mr. Lessard (*LaSalle*), seconded by Mr. Serré,

Agreed,—That the Subcommittee on Agenda and Procedure be comprised of the Chairman, the Vice-Chairman and *FOUR* other members appointed by the Chairman after the usual consultations with the *Whips* of the different parties.

It was moved by Mr. Pringle, seconded by Mr. Lessard (*LaSalle*), that the Committee print 750 English and 350 French copies of its Minutes of Proceedings and Evidence until such time as Committee *Hansards* were produced in a single bilingual issue similar to the printing of Bills for House use.

After debate thereon, the motion was resolved in the affirmative.

On motion of Mr. Laflamme, seconded by Mr. Lessard (*LaSalle*),

Agreed,—That the estimates of Canadian Transport Commission, Communications, National Harbours Board, Post Office and St. Lawrence Seaway Authority be printed as an appendix to today's Proceedings. (See Appendix "A").

At 11.35 o'clock on motion of Mr. Lessard (*LaSalle*) the Committee adjourned to the call of the Chair.

R. V. Virr,
Clerk of the Committee.

APPENDIX "A"

STANDING COMMITTEE

ON

TRANSPORT AND COMMUNICATIONS

Chairman: Mr. GUSTAVE BLOUIN

MINUTES OF PROCEEDINGS AND EVIDENCE

No. 2

FRIDAY, NOVEMBER 15, 1968

Revised Main Estimates (1968-69) of the Canadian Transport Commission.

WITNESS:

From the Canadian Transport Commission: Hon. J. W. Pickersgill, President.

ROGER DUHAMEL, F.R.S.C.
QUEEN'S PRINTER AND CONTROLLER OF STATIONERY
OTTAWA, 1968

29107—1

STANDING COMMITTEE
ON
TRANSPORT AND COMMUNICATIONS

Chairman: Mr. Gustave Blouin

Vice-Chairman: Mr. P. M. Mahoney

and Messrs.

Carter,	Lessard (*LaSalle*),	[4] Perrault,
Corbin,	[3] Marshall,	Pringle,
Douglas,	[2] McGrath,	Schreyer,
Godin,	Nesbitt,	Serré,
Jerome,	Noël,	Skoberg,
Laflamme,	[1] Paproski,	Thomas (*Moncton*)—20.

(Quorum 11)

R. V. Virr,
Clerk of the Committee.

[1] Replaced Mr. Nowlan on November 14, 1968.
[2] Replaced Mr. Coates on November 14, 1968.
[3] Replaced Mr. Horner on November 14, 1968.
[4] Replaced Mr. Caccia on October 23, 1968.

ORDERS OF REFERENCE

WEDNESDAY, October 23, 1968.

Ordered,—That the name of Mr. Perrault be substituted for that of Mr. Caccia on the Standing Committee on Transport and Communications.

THURSDAY, November 14, 1968.

Ordered,—That the names of Messrs. Paproski, McGrath and Marshall be substituted for those of Messrs. Nowlan, Coates and Horner on the Standing Committee on Transport and Communications.

ATTEST:

ALISTAIR FRASER,
The Clerk of the House of Commons.

29107—1½

MINUTES OF PROCEEDINGS

FRIDAY, November 15, 1968
(2)

The Standing Committee on Transport and Communications met this day at 9.35 a.m., the Chairman, Mr. Blouin, presiding.

Members present: Messrs. Blouin, Carter, Corbin, Douglas, Jerome, Lessard (*LaSalle*), Marshall, McGrath, Nesbitt, Noël, Pringle, Schreyer, Skoberg, Thomas (*Moncton*)—(14).

Also present: Messrs. Hees, McCleave, Lundrigan and Moores, Members of Parliament.

In attendance: From the Canadian Transport Commission: Hon. J. W. Pickersgill, President, Mr. H. Arbique, secretary, Mr. L. L. Marks, Financial Adviser.

The Chairman announced that the following members had been appointed to the Steering Committee: Messrs. Blouin, Godin, Mahoney, Serré, Schreyer and Thomas (*Moncton*).

Pursuant to the Order of Reference, the Chairman called the Estimates of the Canadian Transport Commission and introduced the President Hon. J. W. Pickersgill.

Mr. Pickersgill briefly outlined the responsibilities, functions and operations of the Commission and was examined thereon by the Committee.

It was moved by Mr. Nesbitt that the Committee seek the permission of the House to continue its study of the transportation problems of the Atlantic Provinces.

After debate thereon, and the bells having rung calling the House to order, the Committee adjourned to the call of the Chair.

R. V. Virr,
Clerk of the Committee.

EVIDENCE

(Recorded by Electronic Apparatus)

Friday, November 15, 1968

• 0940

The Chairman: Good morning, gentlemen. I see we have a quorum.

I would first like to advise you that the Steering Committee is composed of Mr. Mahoney, Mr. Serré, Mr. Schreyer, Mr. Godin, Mr. Thomas (Moncton) and myself.

Our order of reference is the estimates of the Canadian Transport Commission. I will call Item 50.

Department of Transport

C—CANADIAN TRANSPORT COMMISSION

50 Administration, Operation and Maintenance including the degaussing of Canadian Government Ships and Canadian-owned merchant ships of 3,000 gross tons to 20,000 gross tons of Canadian registry or of United Kingdom registry if subject to re-transfer to Canadian registry under special intergovernmental arrangement, $4,600,900.

The Chairman: Before we begin I would like to introduce to you the hon. J. W. Pickersgill, President of the Canadian Transport Commission, and I will ask him to make an opening statement. Mr. Pickersgill.

Hon. J. W. Pickersgill (President, Canadian Transport Commission): Mr. Chairman, I think my opening statement will consist of introducing Mr. Arbique, the Secretary, and Mr. Marks, an administrative officer on the financial side. I really do not think there is anything I can say about the work of the Commission that would be very illuminating beyond the fact that it was established on September 19, 1967, so it has therefore been in existence for about 14 months. It would probably be very much better if I merely answered questions.

The Chairman: Thank you, Mr. Pickersgill. Mr. Nesbitt?

Mr. Nesbitt: As this is the first time the President of the Commission has been before us and as there are new members present who perhaps are unfamiliar with the Act, I wonder if Mr. Pickersgill could give us a brief resume of the activities of the Commission, and after that we can get into the questions.

Mr. Pickersgill: Perhaps it would be helpful to those members of the Committee who were not members of Parliament when the act was passed in 1967 if I were to explain that under the Act there was the Board of Transport Commissioners' which regulated railways, telegraphs and telephones—or, as we now call them, telecommunications—under the jurisdiction of Parliament. There was the Air Transport Board, which regulated civil aviation, and there was also the Maritime Commission, which performed certain functions with respect to water transport and in particular it dealt with ferry services and coastal steamship services, which were subsidized by the government. And it had other functions which were taken away from it before it became part of the Commission, and these were given to the Department of Industry. These three agencies were extinguished by the law and were replaced by the Water Transport Committee in the case of the Maritime Commission, the Air Transport Committee in the case of the Air Transport Board and the Railway Transport Committee in the case of the Board of Transport Commissioners.

• 0945

In addition, two other committees were provided for under the law. There was the Motor Vehicles Transport Committee, which at the time the law was passed it was indicated would be available to administer motor vehicle traffic. This is under the jurisdiction of the Parliament of Canada until such time as the Governor in Council may see fit to vest that jurisdiction or any part of it in the Canadian Transport Commission instead of allowing it under the Motor Vehicle Transport Act—which is the correct title of it—of 1954, which vested in provincial agencies and boards the federal jurisdiction in this field. Provision was also made for a Committee on Solids Pipe Lines. This was done because

there was a bill currently in Parliament to establish a particular solids pipe line company and it was felt that as there was no jurisdiction formally vested in any agency of government it would be as well to make provision for it.

I may say that up to the present time neither Part III, which deals with motor vehicle transport, or Part IV, which deals with commodity pipe lines, have been proclaimed. When I was the Minister of Transport I gave an undertaking that the motor vehicle transport part of the Act would not be proclaimed until there had been consultations with the provincial governments. This was not because the provincial governments or the provincial legislatures had any jurisdiction whatsoever, but because it seemed to me that these governments which had permitted their agencies to act as federal agencies for this particular purpose were entitled as a courtesy to be consulted. Also, because in the provinces, with very, very few exceptions, all highways are the physical property of the provincial or local authorities under the provincial jurisdiction and it seemed to me that it would be very difficult to have an effective federal jurisdiction of interprovincial and international commercial motor transport without a reasonable degree of understanding and cooperation with the provincial governments.

We were concerned, of course, because the Coughlin case was then before the Supreme Court, that we might be forced into exercising this jurisdiction rather suddenly if the decision of the Supreme Court had been different from that which it in fact took. It took the decision that the Act in all respects on which it was challenged was *intra vires* of Parliament and therefore still in operation. I would crave the indulgence of members not to ask me to speculate about when Part III might be proclaimed because the only answer I could give is whenever the Governor in Council so determines, and I am not privy to his intentions, if at the moment he has any.

The Chairman: Thank you, Mr. Pickersgill. Are there any other questions? Mr. McGrath?

• 0950

Mr. McGrath: Mr. Chairman, I would like to direct some questions to Mr. Pickersgill. I think he probably has a fair idea what he is talking about. For example, Mr. Chairman, in the Annual Report of the Canadian Transport Commission, the only one we have, ten lines were devoted to level crossing accidents in the Province of Quebec, and I think four lines were devoted to the abandonment of the rail passenger service in the Province of Newfoundland. Is this to infer that the Commission looks upon the abandonment of a total provincial railway passenger service as warranting only four lines in the Annual Report?

Mr. Pickersgill: I think these quantitative measurements have no qualitative significance, sir.

Mr. McGrath: You spoke about—well, it has a certain great deal of significance for some of us, Mr. Chairman.

The Chairman of the Commission in his preliminary remarks referred to areas of provincial jurisdiction. This is a question which is of a great deal of interest to some of us, because in their hearings in Newfoundland on the application of the CN to abandon rail passenger service, I think I am correct in stating that they implied in handing down their decision they were prepared to allow the CN to abandon their rail passenger service on the understanding that they would operate a bus service. Is this correct?

Mr. Pickersgill: Mr. Chairman, I think perhaps I should make my position as a witness as clear as I can about this particular matter, and perhaps I should apologize to the members of the Committee for not having pointed out that the Commission also has a research division as well as its regulatory functions. On the research side, of course, it is not dissimilar to any other department of government; in other words, the activities of the research division are either pure research, or advisory to the government, or in the way of enquiry.

On the regulatory side, the Commission is a court of record, and as a court of record it makes decisions after hearing the witnesses who appear at the hearing. Its decision is then rendered and under the law there are certain remedies open to anyone who disagrees with those decisions. I think it would be . . .

Mr. McGrath: Mr. Chairman, I would like to raise a point of order here because I think what Mr. Pickersgill is now saying is not at all germane to the line of questioning that I was asking. I think you must rule that my question was in order or not, because if we are to have these lectures from the witness on how we should conduct ourselves, I think we are going to make very slow progress.

The Chairman: I have asked Mr. Pickersgill for an opening statement, and questions thereafter. I think if you let Mr. Pickersgill finish what he had to say, we could consider your point.

Mr. McGrath: Mine was a very simple question, Mr. Chairman. Did the Commission in handing down its decision in Newfoundland allowing CN to abandon their rail passenger service do so with the understanding that CN would be operating a provincial bus service? I raised this in the context of his opening remarks whereby he referred to areas of provincial jurisdiction.

Mr. Pickersgill: I think the decision speaks for itself, sir, and I do not think there is anything I can usefully add to the decision, which was taken by certain of my colleagues on the Commission acting in the quasi-judicial capacity with which they were clothed by the Parliament of Canada.

Mr. McGrath: Well, that brings up another interesting question, Mr. Chairman. In relation to that particular reply, why was this application for the total abandonment of a rail passenger service in an entire province not heard by the entire Commission? Surely, it was important enough to warrant a hearing by a full Commission?

• 0955

Mr. Pickersgill: Well, without again venturing to give a legal opinion, since I am not a lawyer, it does seem to me that if one reads the Act carefully, it does not envisage hearings by the whole Commission of any case.

Mr. McGrath: I would just like to get back for a moment...

The Chairman: Yes, go ahead.

Mr. Carter: Mr. Chairman, may I have a supplementary to the question Mr. McGrath asked Mr. Pickersgill?

The Chairman: A supplementary question?

Mr. Carter: Yes. In its summation to the Transport Commission, the CNR set forth certain claims with regard to shelters, etc. They set forth certain plans they had with regard to bus shelters and facilities along the line. From a newspaper article I find that even now with the bus system not even started they have begun to cut back on these facilities, and I think where once they started out with 14 bus shelters or stations, I now find that these have been cut down to just three or four.

When you heard CNR's proposal to abandon the rail passenger service, was the decision rendered based on their summation at that time wherein they agreed to provide so many bus shelters and busses? Even now before they have started they have begun already to cut back on these facilities.

Mr. Pickersgill: I am afraid I have not had the benefit of reading the newspaper report to which Mr. Carter refers. I think the decision speaks for itself, and I would assume that if the decision is not properly carried out, the proper steps would be taken as provided by law in that regard. As Mr. Carter has said, the bus service has not yet started and, therefore, it might be very difficult to ascertain that anything laid down with respect to the bus service had not been carried out.

Mr. McGrath: Mr. Chairman, regarding that answer by the witness, I would just like to say that page 5 of the decision of the Commission, or at least the railway committee of the Commission, refers to the bus service, and reads:

> ...and substituted therefor a fast comfortable bus service operating over the highway.

Then they go on and give a description of the bus service. They talk about 39 seats and a lavatory, and what have you. My question, Mr. Chairman, is what right does the Canadian Transport Commission have to, in effect, usurp the provincial jurisdiction of the Government of Newfoundland, and more particularly their agency, the public utilities commission, who were the only body that had any authority to grant a franchise to operate a bus service in Newfoundland or to hear any evidence in relation to the granting of a franchise.

Mr. Pickersgill: I believe, Mr. McGrath—and I am simply repeating what I believe to be accurate hearsay here because I am not a servant of the Government of Newfoundland—that the legislation conferring upon the public utilities commission this jurisdiction was not proclaimed until after these hearings were held. I know, of course, that the jurisdiction of Parliament over motor vehicle transport which has existed in all other nine provinces had been conferred by the Motor Vehicle Transport Act, which is a federal act, upon the agencies in all other nine provinces, but was conferred upon the agency in New-

foundland only at the request of the Government of Newfoundland concurrently with the establishment of that jurisdiction provincially.

• 1000

Mr. McGrath: Of course, the witness has me at a disadvantage there, Mr. Chairman. I was of the opinion that the provincial government did have jurisdiction in this regard because two or three years ago following the completion of the Trans-Canada highway in Newfoundland, they heard two applications from independent operators to operate a provincial bus service, and at that time there was never any suggestion that they did not have jurisdiction in this matter. On the contrary, their decision was deferred leaving open the suggestion that there was obviously some knowledge on the part of the government of Newfoundland of the intent of the Canadian National to pull out its rail passenger service. It seems rather strange that even now the application of the CNR to operate a bus service was just heard by the Public Utilities Commission last week and a decision has yet to be rendered on it, which raises a very interesting question, Mr. Chairman. What if the Public Utilities Commission of Newfoundland exercises its right and its sovereignty in this matter and refuses the application of the CNR for a bus service? Where does that leave the Canadian Transport Commission with its decision to allow the CNR to abandon its rail passenger service based upon its application to provide a bus service?

Mr. Pickersgill: You know, sir, that I was once a member of Parliament and I know there is a rule, which I suppose most people regard as a very salutary rule, that witnesses should not answer hypothetical questions. I have no means of knowing what will happen about this application but I think I can, however, clear up one point which Mr. McGrath has raised, and I am trying to be as helpful as I can about those things I know about.

I may be totally wrong, and perhaps I was mistaken in even suggesting that I knew anything about what jurisdiction the Public Utilities Commission might have in respect of those services that come within provincial jurisdiction, but of course this particular bus service that was recommended by the Canadian National Railways would not come within provincial jurisdiction; it would be within the jurisdiction of Parliament because the Canadian National Railways is an interprovincial not an intraprovincial operation.

The Public Utilities Commission in acting on an application would be acting as the agent of the Government of Canada under the Motor Vehicle Transport Act of 1954. That jurisdiction was conferred upon the Public Utilities Commission by the Government of Canada by an Order in Council which, if my memory serves me correctly, was dated June 1.

The Chairman: A supplementary, Mr. Lundrigan?

Mr. Lundrigan: Could the Chairman say whether the Commission has received any commitment from the provincial government, through the Public Utilities Commission that the application of the CNR will be accepted in relation to the operation of buses?

Mr. Pickersgill: I can say with absolute certainty that there has been no communication whatever between the Public Utilities Commission and the Canadian Transport Commission on this matter.

Mr. Lundrigan: Therefore, would it not be logical to assume that in the event the Public Utilities Commission does not accept the application of the CNR, that would nullify the agreement of the Canadian Transport Commission which made its decision on the basis that the bus service would be provided in lieu of the rail passenger service?

Mr. Pickersgill: If that situation should arise it would certainly be a new situation.

Mr. McGrath: It raises a very interesting question and there seems to be a contradiction in this. The witness indicated that the Newfoundland Public Utilities Commission would be acting on this particular application as an agent of the Government of Canada. Of course, we must accept his superior knowledge of these matters and I have no reason to doubt his word. However, do we not have a conflict of jurisdiction here? Why, if the Government of Canada has jurisdiction in this matter, would the Newfoundland Public Utilities Commission have to hear an application in the first place since a body of the Government of Canada, the Canadian Transport Commission, has already in fact conferred upon them jurisdiction?

Mr. Pickersgill: As Mr. McGrath said, I do not want to give a lecture but I think perhaps to make the answer clear I have to go back to

1954. In 1954 the Privy Council in one of the last Canadian cases it heard decided that jurisdiction over commercial highway traffic which everyone up until then had believed to be under the jurisdiction of the provincial legislatures was, in fact, under the jurisdiction of the Parliament of Canada, and every undertaking of a commercial character in the motor vehicle field extending beyond the province was under the jurisdiction of Canada.

• 1005

Without entering into a long discussion about what the word "undertaking" means, the government of that day, the Government of Mr. Louis St-Laurent, in order to fill the vacuum, since nobody had any power to regulate these things once this decision was made, recommended to Parliament and Parliament enacted the Motor Vehicle Transport Act of 1954. Under that Act, wherever a provincial government would agree, the provincial body that regulated traffic within the province and undertakings within the province had conferred on it a jurisdiction as a federal agent to regulate traffic and to regulate undertakings that extended beyond the province.

Mr. McGrath: To grant franchises also?

Mr. Pickersgill: Oh, yes, but they were limited to doing them on exactly the same terms and on exactly the same basis as they did for the intraprovincial ones. Since then there has been another Privy Council decision, that power of the legislature cannot be delegated to Parliament and Parliament cannot be delegated to the legislature. They are in law acting as the agent of the Government of Canada but Parliament has prescribed exactly how that is to be done. It is to be done the same way as is done with an intraprovincial.

Mr. McGrath: Let me go back to my original question, Mr. Chairman. I want to pursue this because my original question is what brought this on. Why, then, is the Public Utilities Commission of Newfoundland hearing an application by the CNR? Why are they now sitting on that application before rendering a decision when, in fact, if the Government of Canada has jurisdiction in this area the decision was already made for them by your Commission?

Mr. Pickersgill: The Commission will not have the power to make any such decision until Part III is proclaimed. It is in the law but it has to . . .

Mr. McGrath: What is part III again?

Mr. Pickersgill: Part III is the part which gives the Commission direct jurisdiction over extra-provincial motor vehicle undertakings.

Mr. Lundrigan: Mr. Chairman, to follow up on that question, I have a supplementary. The Chairman said that the Public Utilities Commission has not rendered a decision. It had not been made prior to the CTC's decision to abandon rail passenger service.

Mr. Pickersgill: Yes, but it did not even have jurisdiction at that time.

Mr. Lundrigan: The Chairman also indicates that if it were not to render a decision in favour of the Canadian National Railways to operate a bus service it would be a new situation. That was his statement: a new situation. I do not know exactly what that means. It seems to me to imply that the old situation was that they were to render a positive decision.

There seems to be something amiss when we know that the Canadian National Railways has already purchased the buses, lavatories and all, and are ready to begin operations on April 15. The date they are going to run their buses has already been set. Now, I ask the Chairman of the Commission what would happen if the Public Utilities Commission did not accept the situation with respect to the operation of buses? Would the decision of the CTC then be rendered null?

Mr. Pickersgill: The decision of the CTC—and I really question whether I should try to interpret a decision which was made by the court and in doing so I am not going beyond what Mr. Lundrigan himself is doing—as I understand it, was with respect to the abandonment of a passenger train, and it was made a condition of abandonment that a bus service should be established. That is all. In other words, the decision did not authorize the establishment of a bus service; it merely said that the railway could not abandon the passenger service unless it established a bus service.

Mr. McGrath: Then you have answered our question because the decision would, in fact, be null if the Public Utilities Commission decided not to grant the application of the CNR to operate a bus service.

Mr. Pickersgill: I neither accept nor reject your legal interpretation.

• 1010

Mr. McGrath: It is not a legal interpretation. I agree with what the witness has just said. He answered the question. I wish to go to another question, because this is germane to the whole.

Mr. Pickersgill: I am sure, Mr. McGrath does not seek to be unfair to me.

Mr. McGrath: Oh, no.

Mr. Pickersgill: I merely want to say that I neither accept nor reject his conclusion on the decision...

Mr. McGrath: The evidence will show what was said.

Mr. Pickersgill: I hope I am not in contempt, sir, but I would like to finish my sentence.

All I was saying was that I would not like it to appear on the record that I either accepted or rejected Mr. McGrath's statement about what the effect would be upon the decision of the Transport Commission. That is a legal question in which I have no competence to give an answer.

Mr. McGrath: Mr. Chairman, I have far too much respect for Mr. Pickersgill's reputation as a parliamentarian, which I know firsthand, ever to try to put words into his mouth.

I was merely suggesting, and he has confirmed—as I think the evidence will bear out—that this is germane to a suggestion that has been made in the press, which has not been officially or categorically denied, to the effect that this whole matter came about as a result of collusive action between the Government of Canada, when the witness was Minister of Transport, and the Government of Newfoundland whereby, to get the Newfoundland Government off the hook of fulfilling a political promise to complete the Trans-Canada Highway, a deal was made by which if the Newfoundland Government allowed the Government of Canada to abandon the rail passenger service, they, in turn, would pay for 90 per cent of the cost of completion of the Trans-Canada Highway.

I suggest to you, sir, that that has not been officially denied, either by yourself, or by the Government of Newfoundland, or by the Premier of Newfoundland. The evidence of the questioning this morning has borne out the fact that this was a foregone conclusion, that the whole thing was cut-and-dried and that this is merely a façade that the Public Utilities Commission of Newfoundland is now presenting.

If we are to accept the evidence of Mr. Pickersgill—and surely his evidence on this must be accepted because he is Chairman of the Commission—I am not asking him to confirm or deny it; but I am asking whether it is not rather interesting that there has not been a categorical denial.

Mr. Pickersgill: Mr. Chairman, if you will permit me, I would like to say—and this has nothing to do with my present functions—that, this statement having been made by Mr. McGrath, I deny in the most categorical, emphatic fashion that there was ever any discussion whatsoever, direct or indirect, between me or, to the best of my knowledge, any other member of the Government of Canada and the Premier or any other Minister of Newfoundland about any connection whatsoever between this proposed bus service and the completion of the Trans-Canada Highway.

In fact, to the best of my knowledge, I certainly never knew that the CNR had any thought of establishing a bus service at the time the dceision was made to pay 90 per cent of the cost of the Trans-Canada Highway. It did not come to my notice at all until a long time after that.

Mr. Lundrigan: Mr. Chairman, I have a supplementary...

The Chairman: Just a moment, please. I would remind the Members of the Committee that we are not here to discuss political problems.

Mr. Lundrigan: No; this is a supplementary.

The Chairman: We are here to discuss the Estimates of the Commission. We are still on the opening remarks of Mr. Pickersgill, and I would therefore ask you to...

• 1015

Mr. Lundrigan: Mr. Chairman, for the record, and because I think Mr. Pickersgill would want to make it clear, he did very carefully in his remarks indicate that there was no collusion in respect of the bus service and the Highway. I do not know if it was intentional or otherwise, but he omitted reference to the abandonment of the rail passenger service. I am sure he would also like

to have on the record that there was absolutely no agreement between the Government of Newfoundland and the CTC about the abandonment of the CNR rail passenger service.

Mr. Pickersgill: You mean the Government of Canada, do you not?

Mr. Lundrigan: Very well, then; if you want to...

Mr. Pickersgill: Because the CTC did not exist at that time.

I totally agree. The decision relative to the Trans-Canada Highway was taken at a time when there was no discussion, of which I knew anything at all about abandoning the passenger service.

Mr. McGrath: Mr. Chairman, I accept your ruling. I did become a little bit political for a moment. Your ruling was well taken. I will try to stick to the straight-and-narrow in my questioning.

I wish to ask Mr. Pickersgill a question which refers to one I asked previously. A decision as important as this has constitutional overtones. For example, the spirit of Term 29 of the Terms of Union between Newfoundland and Canada, with which the witness is very familiar because he was one of the authors of it, has been violated. This is an argumentative point. It has also been suggested—and I am not a lawyer—that the letter of Term 31 has been violated by abandoning this rail service.

Surely a matter involving such important constitutional questions would warrant the whole Commission sitting in on this application?

Mr. Pickersgill: Sir, had there been any question of that sort the time to raise it, no matter who sat on the application, was when the case was being heard; and I do not know whether the question was raised or not.

Also, if Mr. McGrath will examine the National Transportation Act and the Railway Act, there are specific rules, laid down by the Parliament of Canada as part of the law of Canada, for dealing with decisions made by the Transport Commission; and the decision of any committee of the Commission is a decision of the Commission. I suggest that any person who is aggrieved or dissatisfied has remedies that were laid down by Parliament...

Mr. McGrath: Mr. Chairman, the witness is starting to lecture again. I think that is unfortunate because we were making some progress. I and Members of the Committee are aware of this.

I want to return to my question. Is Mr. Pickersgill, as Chairman of the Commission, satisfied that the terms of union between Newfoundland and Canada, whether in spirit or in letter, have not been violated by this decision?

Mr. Pickersgill: Mr. Chairman, I think this question is wholly beyond my competence to determine.

Mr. Hees: Mr. Chairman, the Commissioner under-rates his ability. I have worked with him, when he was on the other side of the House, for many years and I have the greatest confidence in his ability.

Mr. Pickersgill: Thank you, Mr. Hees. I appreciate that statement but I do not share it.

Mr. Hees: You wish you had not been so good, Jack?

Mr. McGrath: I have a supplementary. With great respect...

The Chairman: Order, please.

Mr. McGrath: Mr. Hees said that in a joking way, but, more seriously, the witness is, I suppose, one of the experts in Canada on the Terms of Union between Newfoundland and Canada. He probably had more to do with drafting them than anybody else in Canada. Certainly he is the author of Term 29.

I will put my question to him again. In his opinion, as Chairman of the Commission, and as an expert on the Terms of Union, bearing in mind the historical facts, have the terms been violated, either in spirit or in letter—and I am referring especially to Terms 29 and 31?

The Chairman: Order, please. I do not think this question is within our terms of reference.

Mr. McGrath: It relates to a decision of the Transport Commission and we are examining the evidence of the Transport Commission. Why is the question not relevant?

The Chairman: I think it is completely away from the terms of reference.

Mr. Pickersgill: Perhaps, sir, you might save time by letting me answer it, if you do not mind.

I must say I totally agree with your ruling. It seems to me that neither I nor the Canadian Transport Commission was set up to decide constitutional questions. If there has been a breach of the constitution there are appropriate ways in which that matter can be brought before the Courts; but one of those Courts is not the Canadian Transport Commission.

It would, I think, be an impertinence on my part, acting as a witness—whatever my private view might be—to try to prejudge the decision of the Courts of this country on whether or not the constitution has been violated.

Mr. McGrath: Is there presently before your Commission an appeal against this decision?

Mr. Pickersgill: Under the law there is no provision for an appeal to the Commission. There are provisions for appeals to other bodies. To the best of my knowledge no appeal has been made to any of those.

• 1020

Mr. McGrath: Mr. Chairman, the witness is now contradicting the Minister of Transport who, in reply to a question in the House of Commons on September 13 suggested that there was machinery for an appeal and this appeal had not been lodged with the Commission and acting upon this advice, to the best of my recollection, there was at least one competent body in Newfoundland—I believe it was the Newfoundland Federation of Labour—who lodged an appeal with the Canadian Transport Commission. Now, whose view are we to accept?

Mr. Pickersgill: I suggest the statute.

Mr. McGrath: I beg your pardon?

Mr. Pickersgill: I suggest that you read the law.

Mr. McGrath: I just want to know. The Minister of Transport in Parliament tells us that an appeal can be made to the Commission against the decision of the Railway Committee. You tell us that no such appeal can be made.

Mr. Pickersgill: No, no, I did not. I said that an appeal could be made.

Mr. McGrath: To whom?

Mr. Pickersgill: It is not for me to elucidate the law, but there are provisions for appeals to the Supreme Court and also to the Governor in Council.

Mr. McGrath: Do you mean to tell me that there is no appeal to this full Commission against the decision of one of its subsidiary committees?

Mr. Pickersgill: I am advised that a decision of the Railway Committee is a decision of the Commission, and that there is no appeal to the Commission against itself.

Mr. Lundrigan: Mr. Chairman, could I ask a very important supplementary? We are aware, then, that there is an area for rescinding this decision and an appeal can be lodged, and so on, but in view of the tremendous outcry from people across Canada—not only in Newfoundland but across Canada—and in view of the attitude taken toward the decision by the population of Newfoundland specifically, can the Commission set aside its own decision in this regard?

Mr. Pickersgill: Well, I would hesitate, sir, to express a view on a legal question of that sort.

Mr. Lundrigan: Well, Mr. Chairman, is there any machinery for the Commission's setting aside its own decision in this regard?

Mr. Pickersgill: I am not a lawyer, Mr. Lundrigan, and I think it is a salutary principle for witnesses to avoid expressing legal opinions. Certainly, if an application were made to the Commission be some interested party it would have to be dealt with in some fashion.

Mr. McGrath: Just to supplement that and to put the record straight with your permission, there is a very serious question of interpretation arising here. We have one version from the Minister of Transport in the House and we have another version from the Chairman of the Commission. I quote the Minister of Transport from *Hansard* of September 14, pages 22-23:

> I think this is a matter for the Canadian Transport Commission. However, I believe that this decision is subject to appeal, and to the best of my knowledge—although I could be wrong—no appeal has been launched up to the present time.

Mr. Pickersgill: I agree with that answer totally.

Mr. McGrath: Mr. Chairman, you will agree that the answer suggests an appeal can

be made to the Canadian Transport Commission.

Mr. Pickersgill: I do not; I emphatically do not suggest that it can.

Mr. McGrath: Well, to whom can the appeal be made? Surely you are not suggesting that you are an all-powerful body having the power to eliminate a complete public transportation system in a province and there are no avenues for appeal against this decision except the Supreme Court of Canada?

Mr. Pickersgill: I think, Mr. McGrath, I did say once before that there were provisions for appeal in the law and that I do not feel I should attempt to interpret the law.

Mr. Lundrigan: Mr. Chairman, could I ask my question again?

The Chairman: Just a moment. Mr. Thomas has asked a question.

Mr. Lundrigan: Mr. Chairman, this relates directly, and I do not want to monopolize...

• 1025

The Chairman: Do you have a supplementary?

Mr. Lundrigan: Yes, very much so. Mr. Chairman, I asked a supplementary question at the Chairman of the Canadian Transport Commission whether the CTC had the machinery to set aside its own decision and the Chairman could not really answer my question, but he said if an application were made by a responsible body then perhaps the question would no longer be hypothetical.

Mr. Pickersgill: No, I said if an application were made to the Canadian Transport Commission asking it to do something about its decision, as a matter of courtesy we would have to get the advice of our legal adviser whether or not we have the power to deal with it, and I cannot give that advice here.

Mr. Lundrigan: Have you received an application from some responsible body respecting your decision?

Mr. Pickersgill: We have received representations respecting the position but I do not think anything that might be described as an attempt to start a legal proceeding has taken place. If it had I would have told the Committee.

Mr. Lundrigan: Could you define the difference between an application and a representation? You say representations have been received but no application has been received.

Mr. Pickersgill: Well, the only way I can define it is that if somebody wrote a letter and said, "I apply to the Railway Transport Committee of the Canadian Transport Commission to set aside its decision for the following reasons", then I am sure we would have to follow the law which prescribes a certain person—who is not me—as the legal adviser, and he would have to give the Commission an opinion of whether we had any jurisdiction and if we had, of course we would have to act. If we had not, we would have to reply and explain why we did not have the jurisdiction, and I am sure that would be done as promptly as possible.

Mr. Skoberg: I have a supplementary, Mr. Chairman.

The Chairman: Mr. Marchand, do you have a supplementary?

Mr. Marchand (Kamloops-Cariboo): Yes.

The Chairman: I am sorry, Mr. Skoberg, Mr. Marchand is before you.

Mr. Marchand (Kamloops-Cariboo): Apart from the legal technicalities, terms of union, Mr. Pickersgill was a representative of the people of Newfoundland for many years. Newfoundland needs new industry and the basis for creating a better province or a better Canada is transportation. As a minister representing the people of Newfoundland, instead of wasting time on all these questions, would he give his opinion of whether it is just to abandon the railway and if so, why?

Mr. Pickersgill: I am afraid, sir, my answer would have to be that in my present capacity it would be a very improper and political act to give any such opinion and therefore I think, sir, I must respectfully say that I do not think my opinion as an official would be worth anything. If Mr. Marchand wants to discuss the matter with me privately I would be glad to.

Mr. Marchand (Kamloops-Cariboo): Well, we have got to...

The Chairman: Mr. Skoberg has a supplementary.

Mr. Skoberg: Mr. Chairman, it has been said that Part 3 of the Regulations...

Mr. Pickersgill: Of the Act.

Mr. Skoberg: ...of the Act has not yet been proclaimed. Am I correct in concluding that until such time as Part 3 is proclaimed the abandonment cannot be effective?

Mr. Pickersgill: Oh no; the two things have no relation to one another whatever.

Mr. Skoberg: Part 3 was your motor vehicle.

Mr. Pickersgill: Yes, that is right.

Mr. Skoberg: Under this particular portion this comes under the jurisdiction of your Commission. Until such time as that is proclaimed then you have no jurisdiction over the bus service in Newfoundland. Am I correct?

Mr. Pickersgill: That is correct.

Mr. Skoberg: Then until such time as Part 3 is proclaimed, how could you provide alternate service as suggested in the conclusion?

Mr. Pickersgill: I think it is very simple. I may be going beyond my brief, but nobody said in that decision that a bus service had to be established. What was said in that decision was that the train service could not be stopped until the bus service was established. In other words, the Commission was acting within its jurisdiction over railways to say that unless an alternate mode of transport was established, the railway would not be allowed to abandon the passenger service.

Mr. McGrath: Mr. Chairman, just to supplement that, I have the decision of the Commission here. There is no suggestion of an alternate mode of service. They refer to a bus service. They refer to a timetable of April of next year. They are quite specific. There are no ifs, ands, or buts in it. We are back to my original suggestion that there seems to be a conflict of jurisdiction.

• 1030

Mr. Skoberg: That is just the point and I believe it has been well taken. I cannot understand, Mr. Chairman, if Part 3 has not yet been proclaimed and with the decision as handed down referred to by Mr. McGrath, how you could possibly abandon that particular passenger service until this part is proclaimed.

Mr. Pickersgill: The bus service does not need to be established under Part III; it can be established equally well under a licence from the Public Utilities Commission.

Mr. Skoberg: I presume though that Canadian National had applied for this bus service.

Mr. Pickersgill: So I am informed.

Mr. McGrath: But they applied for the bus service after the Canadian Transport Commission rendered its decision. This is what we are getting at. And a decision has not been made on that application. They only met on the hearing last week.

Mr. Schreyer: I asked for a supplementary.

Mr. Chairman: Mr. Schreyer on a supplementary.

Mr. Schreyer: I now have two, if you will allow them.

Mr. Pickersgill, can you not be a little more definite. In reply to Mr. Lundrigan's question you said that you could not really say, that you would have to get legal opinion as to whether or not the Commission has the competence to consider de novo a matter which it had already rendered a decision on. It seems to me this is a pretty basic procedure. Either it has or it has not, and I would think that you are well able to answer that question now.

Mr. Pickersgill: Well I am not really well able to answer the question now, Mr. Schreyer. If I were still a Minister and still a Member of Parliament I would probably venture to do so, but under the law made by Parliament the Vice-President, in a case such as this, where the President is not a lawyer, is the official legal adviser of the Commission and he has given me no advice on this point.

An hon. Member: Is the Vice-President here?

Mr. Pickersgill: Not this morning. I can read the Act—I have no doubt that Mr. Schreyer has also read it because I had some experience with him—and there are certain sections of it in which the language used seems to me to be pretty clear. If somebody wanted his attention directed to them it could be done, but that would not really get us much farther forward because we can all read.

The Chairman: Have you another supplementary?

Mr. Schreyer: Yes, I do, Mr. Chairman, but I want clarification on this point.

I take it then, Mr. Pickersgill, that you are not saying that the Commission does not have the jurisdiction or the competence to consider again a subject matter which it has just rendered a decision on in the last calendar year.

Mr. Pickersgill: I am not saying that it has or that it has not.

Mr. Schreyer: I will now proceed to my second supplementary. I want to try to make a determination here, if possible. Mr. McGrath leads us to believe that there is nothing definite as to whether or not the CNR will be providing alternative bus service next spring; Mr. Pickersgill gives us to understand that it is part of the decision rendered that there will be no abandonment of the railway passenger service until such time as bus service is provided? Now what is the fact of the matter? Is it definite: no abandonment until bus service is provided?

Mr. Pickersgill: Well, actually, I interpreted it as a judgment.

Mr. Lundrigan: Which really means, Mr. Chairman, that there is no decision to abandon the rail passenger service in Newfoundland?

Mr. Pickersgill: No, I do not think that follows at all.

Mr. Lundrigan: There are certain conditions attached to the decision which have not been met which in actual fact therefore renders the decision before it null and void until a decision has been reached by another body. To that not correct, Mr. Pickersgill?

Mr. Pickersgill: Well, I am afraid that I cannot really add anything very illuminating to what I have tried to say.

Mr. McGrath: Mr. Chairman, perhaps I can supplement that answer because I have the evidence and the decision right here. Here is the decision handed down by the Railway Committee:

• 1035

The Railway Transport Committee of the Canadian Transport Commission hereby orders:

1. Subject to the following conditions, the Applicants shall, on April 15, 1969, discontinue passenger train service between St. John's and Port aux Basques, in the Province of Newfoundland, provided by Train Nos. 101 and 102 and each service on Mixed Train Nos. 203 and 204:

> (1) The bus service proposed by the Applicants and described in detail in the Judgment of Woodard, C., shall be inaugurated and continued as long as a requirement for passenger service continues, and the passenger facilities, including terminals and the shelters mentioned therein, with proper communication links, shall be provided and installed,

There is no doubt about that at all.

Mr. Pickersgill: No, I do not think there is any doubt about it either.

Mr. McGrath: It is specifically referred to. I just wanted to get the record straight on that, Mr. Chairman.

Mr. Pickersgill: Does that not bear out my answer, that the train cannot be abandoned unless those conditions are fulfilled.

Mr. McGrath: It bears out our contention that your decision is null and void because the Newfoundland Board of Commissioners of Public Utilities is the only authority that can grant the franchise for a bus service.

Mr. Pickersgill: Well, Mr. McGrath...

Mr. McGrath: You either have jurisdiction in this area or you do not?

Mr. Pickersgill: I feel you are perfectly entitled not only to express an opinion but to have an opinion of any sort as long as you do not ask me to subscribe to yours anymore than you subscribe to mine.

Mr. McGrath: I am merely a Member of Parliament asking the witness some questions.

Mr. Lundrigan: On a point of order, Mr. Chairman, the witness is not aware of the fact that he is not the Chairman of the Canadian Transport Commission and is not the Minister of Transport in the House of Commons. This is the way the Minister has been behaving. He has exemplified great qualities of a legal mind, of a very competent person, and he has done an excellent job of evading the issues. We have asked some very simple questions.

We are not here to try to put Mr. Pickersgill on the spot, Mr. Chairman. Mr. Pickersgill has tremendous experience. He is not going to worry about me putting him on the spot. We are here to try to justify the contentions of the people of the Province of New-

foundland, that the Canadian Transport Commission acted irresponsibly in its decision, and to this end we are trying to bring forward some evidence. The President of the Canadian Transport Commission has done an excellent job of politicizing his views here this morning, and I think the Chair should exercise jurisdiction.

The Chairman: Mr. McGrath, you have not asked a question. We do not have to interpret, on the one hand, what the Minister of Transport has said in the House of Commons and, on the other, what the President of the Canadian Transport Commission has said.

I will proceed to Mr. Thomas.

Mr. Thomas (Moncton): Thank you, Mr. Chairman. We have had a long discussion on a case of abandonment in the Atlantic provinces. I want to ask Mr. Pickersgill a question which relates to what looks to be another case of abandonment in the Atlantic region—I am hoping it is only temporary desertion. I am referring of course to a long standing over-all transportation problem in the Atlantic region. This is nothing new, and I am sure every member is aware of it. We have been urging the government to take some action for some years now. I think probably some members of this Committee have personal knowledge, of an attempt that was made last spring, when they encountered some of the problems that we have been talking about for a hundred years.

However, the thing that is bothering us in the Atlantic region now is that apparently these 80-odd briefs that were prepared at that time but never did get presented have been swept under the rug somewhere in the hope that they will go away. We ask questions in the House of the Minister of Transport and we get nothing but evasion—we cannot get a definite answer. We want to know what is being done, or what will be done. I know a task force has been appointed by the four premiers and they are presently working on a report, but here again they say it will be the end of the year before we get it.

There is one glimmer of hope, and I am hoping that this gentleman this morning can increase that hope. On September 13 the Minister said:

> The Canadian Transportation Commission is undertaking studies in relation to the transportation problems of the Atlantic region and I hope they will have a report, at least of an interim nature . . .

Of course, here is the sticker every time.

> . . . perhaps sometime later this year.

• 1040

Now on November 1, in reply to another question, the Minister of Transport said:

> I did not say the report was completed, Mr. Speaker, but I understand that an internal paper has been forwarded for consideration by our department. Just how extensive it is I cannot say, because I have not yet seen it.

Could Mr. Pickersgill tell us if this interim report has been presented and, if so, could he give us any idea what is being done and what is being proposed to be done?

Mr. Pickersgill: As to the accuracy of the Minister's statement, it is of course completely accurate and I am only too happy to corroborate that. Both the Research Section of the Canadian Transport Commission and the Transportation Policy and Research Division of the Department of Transport have been working, as the Minister said, on a paper to report to him, and it is felt that there are several other departments of government that are very greatly interested as well in these various problems of transport in the Atlantic Provinces. An interdepartmental committee is now in process of considering this document, but the document itself of course is in the first place advice to the Government.

I was a minister once and I know how I would have felt if officials had communicated to other people papers on which they had decisions to make. I am afraid that this kind of question can be pursued only in Parliament or in Committee with the Minister who is the official spokesman.

I do not think it would be proper for me because he may have an entirely different idea from the ideas we put forward.

Mr. Thomas (Moncton): I believe this is a proper question, sir. Can you tell us when you expect your report will be completed and in his hands? I know the Chairman of the Atlantic Task Force is very anxious to see your report before they finalize theirs. That is a fair question. When will it be completed?

Mr. Pickersgill: As a matter of fact I rather have a suspicion that the Minister of Transport would like to see their views before he finalizes his, and I think he is entitled to it.

Mr. Thomas (Moncton): Is this not what I am saying? It is a case of stalling.

Mr. Pickersgill: This is a matter that is within federal jurisdiction, that we are talking about, and the provincial premiers have indicated that they wish to express some views about it. It would seem to me to be logical that they should put forward their views. Maybe privately, maybe they do not want to make them public, but they should put forward their views to the Minister to help him make his recommendations to the Government.

Mr. Thomas (Moncton): One further question, sir. In December, 1967, the members of the task force met with the Minister of Transport here in Ottawa I believe, and at that time he gave them some assurance that he would review the implication of the increase in LCL rates with the possibility of maybe offering some easement.

Mr. Pickersgill: Yes.

Mr. Thomas (Moncton): Could you give your views on this? What are your views on the present LCL freight rates?

Mr. Pickersgill: I think there was a question answered in the House of Commons on that just the other day, if I remember rightly.

Mr. Thomas (Moncton): I have not seen a definite answer yet.

Mr. Pickersgill: These recollections about something that are not within my jurisdiction are a great mistake, but my recollection—I will say it just the same—was that the provincial premiers indicated that they wanted to express further views on this subject, and that the Minister is still waiting for those views, and that such a statement was made in the House only the other day.

Mr. Thomas (Moncton): One further question. The car lot rates are exempted from the increase for a two-year period. That is, a two-year freeze was put on the increase in car lot rates and that will expire in March, 1969.

Mr. Pickersgill: March 23.

Mr. Thomas (Moncton): March 23.

Mr. Pickersgill: And that is class and commodity rates.

Mr. Thomas (Moncton): And as I understand it, the reading that stops you indicates this freeze may be renewed by order of the Governor in Council. Is that correct? In other words, what action would be necessary to continue this freeze?

• 1045

Mr. Pickersgill: I do not think it can be by Order in Council, but I am speaking from recollections.

Mr. Thomas (Moncton): This is very important, sir. It can expire in March, 1969.

Mr. Pickersgill: What is in the Act is in the Act, and—

Mr. Thomas (Moncton): That is the way I read it. I am not a lawyer you see, but I would like . . .

Mr. McGrath: I wonder if I could raise a point of order at this time.

The Chairman: A point of order?

Mr. McGrath: Yes, in the interest of procedure and expediency of the conduct of the hearing, I wonder if perhaps we can have some sort of relevancy to the discussions. There are a number of us who still have a number of questions to direct to Mr. Pickersgill regarding the rail abandonment in Newfoundland, and with great respect to my colleague there are a number of questions also on LCL rates and other areas concerned with his line of questioning. Just so that we will not be going back and forth and having those examples of the figure skating and stick handling of the witness which was the same in the House of Commons, I am wondering if perhaps we could . . .

Mr. Pickersgill: I never could learn to skate.

Mr. McGrath: —in the interest of procedure, just stick to the line of questioning that was started on. I do not want to dominate the thing, but in my opinion this is a very important subject.

The Chairman: Yes, but I think, Mr. McGrath, we will have some other meetings, We have all these estimates of the Canadian Transport Commission to go through, so I think you will have ample time to pose questions.

Mr. Lundrigan: Do we have some guarantee that the Chairman will come with people who can answer the questions next time, like his Vice-Chairman and other people he does not have with him today, because obviously we are not getting answers to our questions. It

would be very much appreciated, and I am sure the Chairman of the Canadian Transport Commission would be in full agreement with me on that point, that we need definite answers to our questions. If we cannot get them here, where can we get the answers? I think he would be in agreement that next time he should come well equipped with people who can answer the questions directly.

An hon. Member: Including one from the CNR, Mr. Chairman.

Mr. Pickersgill: Mr. Chairman, I am at the service of the Committee to the greatest possible extent. I recognize that all officials have a duty to satisfy the legitimate inquiries of Members of Parliament, and I will do my very utmost to do that.

Mr. McGrath: I would suggest, Mr. Chairman, that the witness do a little more, because he knows that the practice of these Committees is that when estimates are being considered, all the senior officials of the Department or an agency appear. He comes here this morning without his legal advisor in the person of his Vice-President, or without any senior official from the Railway Committee—if that is the proper designation of the Canadian Transport Commission—and also to get back to my original point of order, Mr. Chairman, are we to proceed with the rule of relevancy and develop questioning on a specific subject, or are we going to bounce back and forth all over the place. I would like your ruling on this and not Mr. Pickersgill's, by the way.

The Chairman: Our term of reference is that we are going to proceed to Item No. 50 on estimates, so you can either ask questions about railway abandonment or railway rates...

Mr. McGrath: I am aware of that, Mr. Chairman, but I am asking you in your competence as presiding officer in the interests of the procedure and the questioning of the witness if we could stick to one specific subject at a time, instead of bouncing back from LCL rates, to abandonment, to something else. I mean this has been the procedure in all of the other Committees.

The Chairman: This morning is the first meeting of the Transport Committee. I think we have been very lenient about it. You have been asking all sorts of questions, and we have been shifting around as required, but we have to proceed through the estimates to item No. 50, and then again we can ask questions.

Mr. McGrath: We are prepared to stay on Item No. 50 until Mr. Pickersgill gets his pension, if that is necessary.

The Chairman: I do not accept this. Mr. Hees was asking.

• 1050

Mr. Hees: I would like to go back to the Newfoundland railway question, Mr. Chairman. When I had some responsibility for these matters, we naturally looked into the operation of the Newfoundland railway as far as efficiency and cost and so on was concerned. In view of the statement in Term 31 of the Act that adequate transportation would be provided—as I understand it including the railway, even though the railway at that time was not paying its way, as so many transportation facilities in Canada do not pay their way, as the Chairman knows—we decided that the Newfoundland railway was a satisfactory operation, that it was giving good service to the people of Newfoundland and that although it was not paying its way, it should be continued and encouraged and it was continued and encouraged in those days. I remember, as a matter of fact, travelling quite some distance on the railway. I think it was from Grand Falls to Port aux Basques, and I was very impressed by the operation of it. I thought it was a good railway.

Mr. Chairman, many of our transportation operations in Canada have never paid their way. I remember very well when I was the minister that we subsidized a Prairie—as they called it—milk run where we serviced about four or five cities in the West by air transport at a cost to the Canadian taxpayer of about $1 million a year because it was considered necessary to provide this transportation facility to the people in the West. I am wondering what has taken place between the time that I am talking about and now to make the Commission decide that they should go against Term 31 of the Terms of Union, as I read it, and decide to abandon this railway, in view of the fact that the people of Newfoundland and the Government of Newfoundland want this railway continued. Could the Chairman answer that point?

Mr. Pickersgill: I do not think I could, sir. Under the law, the Canadian National Railways was entrusted with the responsibility of operating the railway, applied for the abandonment of the passenger service and un-

dertook in its application to provide a bus service. This application was heard in accordance with the terms of the National Transportation Act and the Railway Act. A decision was rendered on that matter.

Whatever view anyone may have of that decision and, of course, this is a free country and people are perfectly free to criticize that decision, the law does provide for certain legal remedies that any aggrieved person can take. There is an appeal to the Governor in Council, as I said earlier and as Mr. Hees, of course, well knows because when he was minister, or shortly afterwards while he was still in the government, there was a very celebrated appeal. If anyone thinks there has been any error in law, there is an opportunity to appeal to the Supreme Court. And I would think that if anybody feels that the Canadian Transport Commission has in any way set aside the Constitution, the proper way to get that determined would be to go to the courts that have the competence to decide. But it is not a matter on which I could possibly have any jurisdiction.

Mr. Hees: Mr. Chairman, if I may say so, this seems to bring to light the fact that things have gotten slightly out of control with the appointment—with no reflection on the Chairman or the Commission—but it seems, from a practical point of view, that things have rather unfortunately gotten out of control in this way: that in the old days before the Commission was set up there was the Board of Railway Commissioners...

Mr. Pickersgill: The Board of Transport Commissioners.

Mr. Hees: ...the Board of Transport Commissioners, which came directly under the Minister of Transport. Theoretically, just as the Board of Transport Commissioners had the right to make their own decisions, practically they did not make a decision until it was okayed by the Minister of Transport. The former minister knows that.

Mr. Pickersgill: I can assure you, sir, that I have to differ with Mr. Hees because when I was Minister of Transport the Board of Transport Commissioners, acting as a court of record, scrupulously made their own decisions and I was never consulted or even advised until after a decision had been made.

I think it is a very serious reflection upon a court to suggest that at any time so distinguished a jurist as Mr. Kerr, or any of his predecessors, would ever have consulted the Executive about any act that they took in their judicial capacity. Certainly I would think it was wholly improper for any member of the Transport Commission acting on the judicial side to consult the government or any member of it before making a decision.

• 1055

Mr. Hees: Perhaps we should go back one step further, Mr. Chairman. I think the former minister and present Chairman would agree that these matters do not come up for decision by the Board of Transport Commissioners unless the Canadian National Railways, in particular, makes an application. I think the former minister will agree with this; that any sensible, practical chairman of the Canadian National Railways, just as any governor of the Bank of Canada in working with a government, discusses these matters as to what might be proposed and what they might be thinking of doing with the Minister of Transport or the Minister of Finance well ahead of time, and that whatever is done is worked out between the chairman of the Canadian National Railways and the Minister of Transport. I do not think there is any doubt in the former minister's mind that this is the way government actually operates.

In this way, if the system had worked the way it did before this Canadian Transport Commission was set up, the President of the Canadian National Railways would have come to the Minister of Transport and asked him, "What about this; do you think this is feasible; can we do it? This is what we, from an operating point of view, think should be done, for these reasons." Then it would be the decision, really, of the Minister of Transport, taking all factors into account, the service to the people of an area and things of that kind, over and above the actual operating efficiency of the railway in particular, that would have a great bearing on the decision made.

I feel that if that had been done in this case any sensible Minister of Transport—I think Mr. Hellyer is a sensible Minister of Transport as I think Mr. Pickersgill was a sensible Minister of Transport—if it had been done in this way, Mr. Chairman, we would not have this application for abandonment of this line before us at the present time. I think there is no more justification for the abandonment of this line today than there was ten years ago or five years ago. I think it is unfortunate that the thing has gotten out of control where sensible people could not bring to

bear on the decision the considerations of the provision of transportation to the people of a certain area irrespective of whether that transportation paid its way or not.

As the Chairman of the Transport Commission knows, a great many services are maintained in Canada that do not pay their way. I think that this should be treated in exactly the same way and I regret very much that this discussion is even taking place today because, as a former Minister of Transport and having studied this matter minutely in my day, I am convinced just as much today that this railway should be continued.

The Chairman: Mr. Nesbitt?

Mr. Nesbitt: Just one thing, as I realize we are going to have to adjourn.

There is a matter that I would like to bring before the Committee that I think should be decided at this moment. This particular Committee, last spring, was holding hearings in the Atlantic Provinces on questions of the Atlantic Provinces' transport problems. I think we should perhaps go into this question again.

I would like, Mr. Chairman, to move that this Committee request permission to continue the hearings that were being held in the Atlantic Provinces last spring and that these hearings be continued at the earliest convenience. I would move that this Committee ask permission of the House to so do.

The Chairman: I think we should take this up at the next meeting. As you know we do not have the authority to sit while the House is sitting and we have to go now as we hear the bell.

Mr. Nesbitt: Mr. Chairman, I would like to put this again, that we request permission to do this. I do not wish to set any specific times because that would be up to the Committee to decide, but I think we should have authority to do this and we cannot do it without authority from the House. I would move at this time that we request permission to continue hearing the Atlantic Provinces at the earliest convenience to the Committee.

The Chairman: Do you agree that we discuss this at the next meeting, as we do not have much time just now.

Mr. Nesbitt: No, I would like to put the motion now, Mr. Chairman.

The Chairman: You want to put the motion now. Do you have a seconder?

Mr. Jerome: Mr. Chairman, I think that motion is in order.

Mr. Pringle: Mr. Chairman, I would like to second the motion for deferment. It seems to me that we should learn more of the status of the hearings from the last effort to find out where we stand before we immediately ask for...

The Chairman: Is it agreed that we discuss this at the next meeting?

Mr. Nesbitt: No, Mr. Chairman. I have made a motion and I would like it put right now.

Mr. Pringle: Maybe we ought to vote on a motion to defer it to the nex meeting.

• 1100

Mr. Nesbitt: Oh, no. My motion is the first motion. I said that we request permission from the House to continue these meetings in the Atlantic Provinces.

Mr. Schreyer: On a point of order, Mr. Chairman. I think the motion to defer must be accepted and put to a vote. If it is defeated then we must vote on Mr. Nesbitt's motion. I suggest we proceed that way.

The Chairman: Yes. We have no authority now. Anything we decide now is without authority.

Mr. Nesbitt: It is only a request to the House.

The Chairman: Can we consider the request at the next meeting?

Mr. Nesbitt: No, I think we should do it right now; I have made the motion.

The Chairman: We are not allowed to consider the request at the present time.

Mr. Pringle: Mr. Chairman, I think we can consider the request at the present time, with all due respect.

The Chairman: No, we cannot.

Mr. Pringle: I feel there are many ramifications here that we should discuss before we make a request of this magnitude to the House with regard to barging off into. . .

Mr. Skoberg: Is the gentlemen speaking on the deferral motion or on the motion?

Mr. Pringle: I am speaking on the motion that we should defer until the next meeting.

The Chairman: We have no authority at the present time.

Mr. Nesbitt: Mr. Chairman, I respectfully suggest that you put the motion for deferment.

The Chairman: My decision is that we postpone the motion until the next meeting.

Mr. Nesbitt: I object to your decision, Mr. Chairman, and I would request that you put it to a vote.

The Chairman: We have no authority whatsoever. I am very sorry but the House is sitting and we have no authority.

Mr. Thomas: It was not sitting when the motion was put, with all due respect, sir.

The Chairman: We will have to discuss it at the next meeting. I am very sorry, but we have no authority for whatever decision we take at the present time.

Mr. Nesbitt: Well, if the government members wish to leave this to other parties, all right.

OFFICIAL REPORT OF MINUTES

OF

PROCEEDINGS AND EVIDENCE

STANDING COMMITTEE

ON

TRANSPORT AND COMMUNICATIONS

Chairman: Mr. GUSTAVE BLOUIN

MINUTES OF PROCEEDINGS AND EVIDENCE

No. 3

TUESDAY, NOVEMBER 19, 1968

Revised Main Estimates (1968-1969) of the St. Lawrence Seaway Authority.

WITNESSES:

From the St. Lawrence Seaway Authority: Mr. P. Camu, President; Mr. D. E. Taylor, Member of the Board; Mr. J. M. Martin, Director of Finance and Accounting.

ROGER DUHAMEL, F.R.S.C.
QUEEN'S PRINTER AND CONTROLLER OF STATIONERY
OTTAWA, 1968

STANDING COMMITTEE

ON

TRANSPORT AND COMMUNICATIONS

Chairman: Mr. Gustave Blouin

Vice-Chairman: Mr. P. M. Mahoney

and Messrs.

Carter,	Jerome,	Noël,
[2] Cyr,	Laflamme,	Pringle,
Godin,	[4] LeBlanc (*Rimouski*),	Schreyer,
[5] Groos,	Lessard (*LaSalle*),	Skoberg,
[3] Howard (*Okanagan Boundary*),	Marshall,	Thomas (*Moncton*)—(20)
	McGrath,	
[1] Howe,	Nesbitt,	

(Quorum 11)

R. Virr,
Clerk of the Committee.

[1] Replaced Mr. Paproski, on November 18, 1968.
[2] Replaced Mr. Perrault, on November 18, 1968.
[3] Replaced Mr. Serré, on November 18, 1968.
[4] Replaced Mr. Corbin, on November 18, 1968.
[5] Replaced Mr. Douglas (*Assiniboia*), on November 18, 1968.

ORDER OF REFERENCE

HOUSE OF COMMONS

MONDAY, November 18, 1968.

Ordered,—That the names of Messrs. Howe, Cyr, Howard (*Okanagan Boundary*), LeBlanc (*Rimouski*) and Groos be substituted for those of Messrs. Paproski, Perrault, Serré, Corbin and Douglas (*Assiniboia*) on the Standing Committee on Transport and Communications.

ATTEST:

ALISTAIR FRASER,
The Clerk of the House of Commons.

29109—1½

MINUTES OF PROCEEDINGS

TUESDAY, November 19, 1968.
(3)

The Standing Committee on Transport and Communications met this day at 9.40 a.m. The Chairman, Mr. Blouin, presiding.

Members present: Messrs. Blouin, Cyr, Carter, Godin, Groos, Howe, Jerome, Mahoney, McGrath, Nesbitt, Noël, Schreyer, Skoberg and Thomas (*Moncton*)—(14).

In attendance: From the St. Lawrence Seaway Authority: Mr. P. Camu, President; Mr. D. E. Taylor, Member of the Board; Mr. J. M. Martin, Director of Finance and Accounting.

The Committee had for consideration the main estimates (1968-69) of the St. Lawrence Seaway Authority. The Chairman introduced the President of the Seaway Authority, Mr. P. Camu, and requested him to make an opening statement regarding the operations of the Seaway.

Mr. Camu assisted by Mr. Taylor and Mr. Martin responded to questions of the Committee members.

Items 85, 90 and L125 relating to the St. Lawrence Seaway Authority were passed by the Committee.

The Chairman thanked the witnesses and they were permitted to retire.

On motion of Mr. Nesbitt, it was agreed that the Committee seek the authority of the House to resume study of the transportation problems relating to the Atlantic Provinces. The Chairman was instructed by the Committee to make the appropriate Report to the House.

At 11.05 a.m., the Committee adjourned to the call of the Chairman.

R. V. Virr,
Chairman of the Committee.

EVIDENCE

(Recorded by Electronic Apparatus)

Tuesday, November 19, 1968

• 0943

The Chairman: Order, please. We have with us this morning the Seaway Authority. I have the pleasure of introducing Mr. Camu to you, the President of the St. Lawrence Seaway Authority, and I would ask him now to present his opening statement. Mr. Camu.

Mr. P. Camu (President, The St. Lawrence Seaway Authority): Thank you, Mr. Chairman. Gentlemen, I have with me Mr. Taylor, who is a member of the Seaway Authority. Next is Mr. Martin, who is from Cornwall. He is the Director of Finance and Comptroller.

I would like to say two or three words about the Seaway as a whole. Our organization is a Crown corporation, Class D, Proprietary, and we operate a waterway from Montreal to Lake Erie. We have a staff of approximately 1,700 employees, scattered over this 1,000 mile stretch of the St. Lawrence River. We also operate a group of what we call non-toll canals or ancillary facilities, such as the Lachine canal in the Montreal area, the Cornwall canal in Cornwall and also the Sault Ste. Marie canal and lock. Our headquarters are in Cornwall, Ontario, and the head office, which is the executive, is in the City of Ottawa. We also have an engineering staff to look after the maintenance of our facilities and some of the major construction projects located in Montreal.

• 0945

The Seaway as such has been in operation since 1959 and we are now coming to the end of the ninth season of navigation. This season we will probably close around December 10 and it looks as if it will be perhaps not a record year, but rather close to the record year of 1966, when ships in transit through the Seaway were able to carry up to 49 million tons of commodities through the system. Up to last week, around November 15, the traffic in the section of the Seaway from Montreal to Lake Ontario reached a tonnage of about 41 million tons. Approximately 85 per cent of this tonnage was in bulk commodities, the two dominant items being grain and iron ore. On the other major section of the Seaway, the Welland Canal between Lake Erie and Lake Ontario, the traffic has always been higher because, in addition to the through traffic, there is also local traffic between the two lakes. The tonnage there these days is approximately 51 million tons of commodities. The year 1968 has been remarkable from that point of view, and we had an excellent recovery despite the strike by the Seaway employees for three weeks last summer, which you may remember.

Two votes are presented here as part of our budget for 1968-69. One is a vote of about $2,400,000 which is needed to cover the operation and maintenance of these non-toll canals, the Lachine, the Cornwall and the Sault Ste. Marie facilities. It also covers some very small ancillary facilities that are located in the Niagara Peninsula near the Welland Canal. The second vote relates to payment for the operation and maintenance of the Welland Canal, and the amount is $9.8 million. This is to cover the deficit from an operation standpoint of that canal. These are the two votes that we are presenting in the Blue Book. I do not think I will comment further. I would much prefer that we try to answer to our best ability the questions that the members of the Committee would like to raise.

The Chairman: Thank you, Mr. Camu. Do the members of the Committee have any questions?

Mr. Nesbitt: Yes, Mr. Chairman, I have some questions. Do you have any technological plans thought out to keep the Seaway open during the winter months? Do you have any comment to make on that subject?

Mr. Camu: We do not have any plans to keep the Seaway open on a 12 month basis. We have plans to firm up, as we call it, the end and the beginning of the season of navigation, which always gives us some problems. I am referring to this period from November 15 to December 10, which is the official clos-

ing date, or December 15, we will have to wait and see, but we always have ice and weather problems at that time of the year. In order to deal with the physical disabilities in the system. We have all kinds of techniques that we use, and we have spent some money in the past three years in improving the hydraulics of our two downstream locks, the locks in the Montreal area where the water, of course, is always colder than in the system above, and we have changed the hydraulics by increasing the flow that we control with gates, and so forth. We also usually increase the flow of water from, let us say, the second week of November, and we increase that by so many hundreds of cubic feet per second as we approach the limits of our season, which is around December 10 to 15. In the spring we work it in reverse sequence in order to be ready for April 1, which is the official opening date.

Mr. Nesbitt: Then there are no plans, as has sometimes been reported, for doing any research with a view to perhaps keeping the Seaway open all year round on a permanent basis.

Mr. Camu: Not at this moment. We already have enough problems in trying to stay in business as long as we can, and we try to solve these problems first. Perhaps later on we can deal with that, but for the time being we do not have any plans.

Mr. Nesbitt: I just have two other brief questions. What are the present plans for a projected second Welland Canal?

• 0950

Mr. Camu: I should also have mentioned that among the loans on the following page there is an amount of $41 million as part of these loans and this leads, of course, to an answer to your question. The plans are as follows. We got permission from the government to proceed with a Welland bypass, a reconstruction, construction of a new canal behind the City of Welland. It is a stretch of about 8.6 miles. It is a brand new canal. It is now being worked and the plans are going very well. The project started in the spring of 1967 and should be completed for the beginning of the 1972 navigation season.

Mr. Nesbitt: What is the proposed cost? Do you have any idea?

Mr. Camu: The original cost was around $110 million.

Mr. Nesbitt: There have been rumours that it might cost close to $1 billion. Would you care to comment on that?

Mr. Camu: No, the $1 billion is the figure that has been mentioned in connection with an entirely new seaway from Montreal to Lake Erie. There has been no work on this at all. This is just a section of it at that cost for which we have the permission of the government to proceed.

Mr. Nesbitt: I have one final question. In your view, as head of the Authority, what would be the general effect on the Seaway traffic—perhaps this is a general term but I would like to have your comment—if revenues were instituted in some or perhaps all of the canals and the locks? Would it affect trade and traffic to any great degree? Have there been any studies on this? I suppose there must have been.

Mr. Camu: In our case we have two sets of tolls. The main stream is a toll waterway, so we have a system of tolls from Montreal to Lake Ontario that we share with the Americans. They operate two locks and we operate five. This is a very simple tariff, where you have two tolls. One is a few cents on each gross registered ton, and the other one is a toll on the commodity, 40 cents for every ton of bulk and 90 cents for every ton of general cargo.

On the Welland canal we have a different system. It is a lockage fee; it is a flat $40 per lock per ship and since there are eight locks in line, each ship pays that fee as it proceeds up or down. We determined the effect of these tolls at the time of our renegotiation in April, 1967. We did a survey before, and you may recall that the proposal of the Authority was to increase our tariff by 10 per cent. It did not work at all and we had to continue with the same tariff for another five years, so the tariff right now is fixed until the year 1971.

Mr. Nesbitt: You say this proposed increase of 10 per cent would not work. I gather from that it was felt this would be a serious deterrent to the traffic going through the Seaway.

Mr. Camu: No, we did a study at the time and our economists as well as two firms of consultants worked on it and they came to the conclusion that a 10 per cent increase would not divert any traffic from the Seaway. In other words, we were trying to get as much as possible without chasing the traffic

away, and that was their opinion. They said perhaps there might be a one-million ton diversion of iron ore. Instead of coming up the Seaway to American sources located in Pennsylvania, that traffic would go, let us say, from Sept Iles straight to the Atlantic Coast. However, nobody was sure.

Mr. Nesbitt: And then up the Erie canal, I suppose.

Mr. Camu: No; straight to Norfolk, Baltimore, Philadelphia, and from there by rail to Pittsburg, for instance.

This was forecast by the economists as being a possibility if we went beyond 10 per cent.

Mr. Nesbitt: The 10 per cent was not instituted, I gather.

Mr. Camu: No, it was not.

Mr. Nesbitt: You say the economists felt that 10 per cent would be all right with this one possible reservation.

Mr. Camu: That is right.

• 0955

Mr. Nesbitt: What was the reason it was not instituted? You said you found it would not work.

Mr. Camu: The two authorities, we and the American corporation which is called the St. Lawrence Seaway Development Corporation, were in agreement to increase the toll by about 10 per cent and we submitted that to our respective governments but it was not approved.

Mr. Nesbitt: It was a government decision.

Mr. Camu: Yes, sir.

The Chairman: Mr. Groos?

Mr. Groos: I recall, about three years ago there was a collision in the Seaway or in the entrances to the Seaway—I cannot remember whether it was above or below Montreal—and at that time there was a great deficiency, it appeared, in navigational aids and in communications between ships travelling up and down the river and between pilots of different ships, and so on.

I believe a lot of work has been done on that and a fair amount of money has been spent on it. I wonder if you would outline to us exactly what the system is now? I would be interested to hear what happens. If a ship is approaching the Seaway, how does it get into the system and what navigational aids have you recently installed to look after that ship while it is proceeding through the system until it gets to Lake Erie?

Mr. Camu: I would have to make a distinction between below Montreal, which is navigation to sea level, and from Montreal above where you have navigation through restricted waters, canals, locks and so forth. Three years ago, I think, the accident you refer to was below Montreal outside of our jurisdiction.

Mr. Groos: That is what triggered it.

Mr. Camu: Yes, it may have been Lake St. Peter, where a vessel overturned completely in the channel, or something like that. I am sorry to say that we had a recent collision between two ships near Valleyfield; that was about two weeks ago. In that case, of course, there was no loss of life and only one of the vessels ran aground, and we were able to re-establish normal traffic within 24 hours. Our types of accidents, and there are some, are usually control. I may explain to you in order to answer your question what kind of traffic control we have in our own system.

The aids to navigation like buoys and lighthouses are the responsibility of the Department of Transport and they put these in our own waters at our request. We have nothing to do with the placing, the repairs or the moving of these facilities. We have a traffic control system run by dispatchers, the first of which is located at Beauharnois for the stretch from the port of Montreal to the American lock. Then it is under American jurisdiction in the American sector, and we pick it up again with another dispatcher at our Iroquois lock from the end of the American sector almost to the beginning of Lake Ontario.

We have another dispatcher that looks after the whole Welland canal area, and we have some jurisdiction on either side of the canal. Pilots are not under our jurisdiction. Every ocean-going ship entering the Seaway has to have a pilot, but the lakers do not have to because usually their masters and mates are fully qualified to navigate in narrow waters.

There are two types of accident or collision. I might be between two ships, as happened about two or three weeks ago, or sometimes it is against our own facilities like a ship hitting a wall or having trouble inside a lock when the lock is being flooded or emptied,

and in all these cases we conduct what we call an investigation right away with our own superintendent of operations and other officers.

The Board of Inquiry which is usually instituted is done by the Department of Transport which looks, I would say, more for human errors or is there to investigate what the various men responsible did. In our case, we mostly look at it to see whether anything happened to our facilities one way or another.

• 1000

There have been no major accidents in the Seaway since 1959, except for the case of the *Stonefax* which ran aground completely about two years ago and developed a hole and had to sit at the bottom of the Welland canal. We were able to remove that vessel before the end of the season of navigation, and the incident about two weeks ago near Valleyfield happened in a patch of fog that suddenly moved from inland, and it was very difficult to help in that case.

At every bridge we have radar and we also have very extensive facilities for traffic control over the river from Montreal to the Lakehead.

Mr. Groos: So you say that the Department of Transport places all these lights and so forth. You have no electronic navigational aids other than the radars on the bridges, and so forth?

Mr. Camu: Yes, we do. In the Welland Canal, which is about 26 or 27 miles long, we have a very sophisticated system where we use television to control the movement of ships in that stretch. I could describe this to you. It is a room about one-third the size of this one, and we have three men there 24 hours a day, seven days a week, during our 265 days of navigation. Each of the two despatchers looks after half of the canal, and he has four or five television sets in front of him. Each of these sets gives him a complete view of not only one or two locks, but also about a mile or two on either side of each lock. In addition to that we have a complete telemetric system where with lights and all kinds of signals he is able to see exactly the operation of each lock and what is happening. He also has a panel in front of him which covers the whole canal, and small models of ships move up and down. So by looking in front of him, he has a complete up-to-date account of where the ships are, how fast they move, where they are going, and so forth. With his own radio he is in constant contact with them as well.

We think this system, which started in 1967 at the beginning of the navigation season, is the most up-to-date and most modern in the world. We are now trying to do the same thing in the Montreal-Lake Ontario section. It is a little more complicated there, because the facilities are not so congested. In other words, between locks in some places we have a lake.

We are building up another extensive traffic control centre at Beauharnois having the same facilities, telemetry, television, radio, radar and all the other usual visual aids that are available to us.

Mr. Groos: You say that you have no pilots on board, because the ships that are operating in your facility are capable of inland navigation themselves. If you do not have any pilots on board, what is your responsibility, if any, for ships travelling up and down the canal should they get into difficulty?

Mr. Camu: I said there are no pilots on board the lakers, on board vessels of the Canadian and American domestic fleets, but there are pilots on all ocean ships going up and down.

Mr. Groos: Are these pilots provided by your authority?

Mr. Camu: No, sir. They are part of the Federation of St. Lawrence Pilots, and they come under the pilotage authority which is the Minister of Transport.

• 1005

Mr. Groos: Could you tell us from your knowledge what the federal government's responsibility is for ships that are travelling through the system? If they are in collision while they are under command of a pilot, who pays the bill?

Mr. Camu: If there is a collision between two vessels in our own waters, a board of inquiry will be conducted, and this board comes under the Department of Transport, not under us. We deal only with what we call an investigation to see if our facilities were not properly manned, or if something happened with our own people. But under the Canada Shipping Act we have no power to conduct a board of inquiry in the case of an accident as such.

Mr. Groos: Your system then differs considerably from the method of operation of the Panama Canal, where once the ship enters the system under a Panama Canal pilot, the company is completely responsible for that ship. If it gets into difficulty they repair it.

Mr. Camu: You are correct. The pilots of the Panama Canal are employees of the company. The pilots on the seaway are not our employees at all.

Mr. Groos: So we have the best of both worlds?

Mr. Camu: That is one way to look at it.

The Chairman: Mr. Howe.

Mr. Howe: Mr. Chairman, I would like to ask the witness a few questions about deficits year by year. Does the Commission foresee a time when the traffic will be great enough that there will not be any deficit?

Mr. Camu: It is difficult to answer. All this is related of course to our tolls policy. With the present tariff and with the traffic anticipated in the future it is difficult to present a better picture than the one we have now. It is not possible at the present time. If the traffic increases at a tremendous pace, and if we are able to increase our tolls also, then I think it would be possible for us to start collecting enough money, not only to pay for operation and maintenance, but also to start to amortize the capital invested as well as the interest that has been capitalized.

Mr. Howe: Of course this is a subsidy that is just the same as a freight rate subsidy. It is a subsidy of the St. Lawrence Seaway, is it not?

Mr. Camu: We operate at a net surplus, however, every year. We collect about $3 or $4 million that we give back to the government, but this is never enough to pay even the interest.

Mr. Howe: Well, suppose the government decided, as they did in the bill that we passed on transport last year, that freight rates had to be phased out at the rate of so much per year. Supposing they insisted that this thing pay, like a Crown corporation.

We see the government phasing out the joint programs of the provinces. Suppose they say you people have to make this pay, or else. What would happen? You told Mr. Nesbitt that extra tolls on some of these extra services might go up 10 per cent. Could you raise your entire revenue by 10 per cent and still maintain the volume of traffic on the seaway?

Mr. Camu: At the present time we feel that this would be possible. We do not think we would lose too much of the traffic, and this would be a very good contribution towards solving our financial problems.

Mr. Howe: Is there any suggestion that the government might tell you to do this?

Mr. Camu: We tried that in 1967, and we were unsuccessful. The next time around will be in the case of the Montreal-Lake Ontario section, and this will be reviewed in 1970, and the Welland Canal lockage fee will be reviewed in 1971. For the time being we live by an agreement between the two countries that confirms the agreement of the two entities. Therefore, we cannot do anything for the time being.

Mr. Howe: In reply to the questions Mr. Nesbitt was asking about twinning the Welland Canal, I understand, according to this newspaper article, that there is an interdepartmental committee working on that. Is this true?

Mr. Camu: That is correct, sir. The interdepartmental committee is studying now what I call Part II of our construction program. This is a project to construct another section of the canal, this time from the Niagara escarpment to Lake Ontario. This is the sector that involves the reconstruction of locks as well. An interdepartmental committee is looking at that specific proposal at this time.

• 1010

Mr. Howe: I have another question, Mr. Chairman, that has to do with Lake Erie. We hear many reports about what is happening there, that it is getting shallower all the time and that the bottom is building up. Do you foresee any problems there in the future with regard to maintaining a right of way or a passage through this lake?

Mr. Camu: No, we do not envisage any difficulty as far as navigation is concerned. It is true that it is the shallowest lake of the Great Lakes and perhaps also the most polluted, but as far as we are concerned, our requirements are determined by the depth of a lock. So we operate at 25 feet 9 inches, and that means, in fact, a depth of 27 feet or so. There is no difficulty in that lake where the average depth is about 80 feet. So from a

strictly navigation point of view I do not anticipate any difficulty at all in the main line or the main navigation channel through the lake.

Mr. Howe: One further question. You brought up the question of pollution. We do hear stories about the boats spewing out their garbage into the lakes. Do you people have authority to lay charges against boats that might do this?

Mr. Camu: Yes, it is in our regulations. It is forbidden for any ship to discharge anything in our waters. It is strictly forbidden and if it is spotted by our own people it does not take much time for us to move and lay a charge.

Mr. Howe: Have you had many prosecutions in this regard?

Mr. Camu: The Department of Transport is looking after the oil pollution for us. We ourselves have laid a few charges in cases of air pollution such as smoke coming out of stacks. This has happened several times. In fact, it does happen every season.

In the case if garbage we have not noticed anything. They are very careful, of course, in our waters. It may happen at night in the lakes in the open spaces, but this is impossible for us to really check. But as far as we are concerned every one of our lockmasters has instructions to deal with them.

Mr. Howe: In connection with the prosecutions, have there been any charges laid with regard to the oil slick, oil pollution?

Mr. Camu: This is done by the Department of Transport.

Mr. Howe: And do you not have any knowledge of anything like that?

Mr. Camu: No, we do not. There was one . . . Mr. Taylor will answer that.

Mr. D. E. Taylor (Member of the Board, The St. Lawrence Seaway Authority): Yes, sir, there was one prosecution last year, I understand, by the Department of Transport related to the Welland Canal and it was successful.

Mr. Howe: And what was the fine in that connection?

Mr. Taylor: Speaking from memory, I believe it was about $200.

Mr. Howe: It is not very large, is it?

Mr. Taylor: No.

Mr. Howe: The problem with a lot of our pollution is that the fines involved are not nearly large enough to deter the offenders or others from doing the same thing. Thank you very much, Mr. Chairman.

The Chairman: Have you a supplementary, Mr. Thomas?

Mr. Thomas (Moncton): I did not quite hear what the witness said on this 10 per cent increase. I was very much interested to hear him say that the Authority thought the rates could be raised by 10 per cent and that they had made this proposal, but to what authority would you apply to raise these rates? You said that you could not apply again until 1972. Did I hear you right on that?

Mr. Camu: The tariff of tolls is part of a joint agreement with the United States, and any one of the two partners cannot do anything without the agreement of the other.

• 1015

In 1959 the tolls were set firm for a period of five years and it was in the agreement that they should be reviewed a year before to determined what the tolls would be in the future. At the time we reviewed them, about 1964, we came to the conclusion that we did not know enough about traffic patterns and traffic forecasts, so the review was postponed for two more years, until 1966 to see what trends in shipping would develop in the Seaway. In 1966 we reviewed the tolls again to be effective on April 1, 1967, and we had economists working on this review to see what kind of tolls we could propose for the future.

In other words, how far should we go? How much could we ask from our customers to get more money, as much revenue as possible to cover our deficit, and on the other hand without losing a ton of traffic? These are the questions we asked and they produced all kinds of tables. They came up with statistical data and research and forecast studies and said, "This is how traffic looks for the future, and with that kind of traffic, having studies carefully these dominant commodities, we think you can go as far as asking for a 10 per cent increase. You will get more revenue and we do not think you will lose much traffic"—except the case I have indicated a moment ago about a possibility of some iron ore going by another route.

Mr. Thomas (Moncton): Yes, this is what I do not understand. The St. Lawrence Seaway Authority made this proposal and you were satisfied that this could be done. Were the U.S. authorities against you?

Mr. Camu: The St. Lawrence Seaway Development Corporation was also in agreement with us. The two authorities were in agreement and we made this proposal.

Mr. Thomas (Moncton): I still do not understand. Why was not the increase put into effect if you were both in agreement?

Mr. Camu: Mr. Taylor will amplify that part of it.

Mr. Thomas (Moncton): You both agreed that it could be done.

Mr. Taylor: If I may just amplify this a little. The St. Lawrence Seaway Development Corporation, which is our sister agency, agreed for purposes of public hearings to the 10 per cent increase, but did not agree with and did not support our Canadian proposal for a 10 per cent increase on the river section. Accordingly, since this is a joint agreement it was impossible to come to a conclusion on that.

If I may be permitted, though, there were very decided results from these toll hearings which were advantageous to Canada, we believe. In this same river section our percentage of the total revenue had been 71 per cent as set in 1959, I believe. This was raised to 73 per cent. Each percentage point amounts to about $250,000. So, in fact, Canada's revenue from the river section, that is from Montreal to Lake Ontario, amounted to about $500,000 a year more, which was in fact taken from the U. S. and given to Canada.

In addition to that the Canadian Government determined that a lockage charge would be instituted on the Welland Canal and to this the U. S. St. Lawrence Seaway Development Corporation agreed—that it would be included in the tariff of tolls. This lockage charge will produce in the year 1969 approximately $3,750,000, and this will increase to about five million dollars over the five-year period that we made an agreement for. In effect, the Canadian St. Lawrence Seaway Authority did obtain some part of its request.

Mr. Thomas (Moncton): On the basis of this year's revenues or those of the last year you have completed, how much in dollars would the 10 per cent increase in tolls amount to? Could you tell me that?

Mr. Taylor: To the Canadian Authority, about $1,600,000, if you take $16 million approximately as our share.

Mr. Thomas (Moncton): So you did just as well on the agreement.

Mr. Taylor: We wanted this in addition to it.

Mr. Thomas (Moncton): When will this come up again? Not until 1972?

Mr. Taylor: Yes, sir. I think the emphasis of the Canadian Authority on a more appropriate tool charge is related to our very substantial investment as compared to the American investment in the Seaway.

Mr. Thomas (Moncton): Thank you.

The Chairman: Mr. Godin?

[*Interpretation*]

Mr. Godin: Mr. Chairman, shortly after the introduction of the witnesses, would I be in order to put a question relating to navigation between Quebec and Montreal, on the St. Lawrence?

Mr. Chairman: Between Quebec and Montreal? I think this has nothing to do with..

Mr. Camu: This Sector of the river is outside of our jurisdiction.

Mr. Godin: Thank you very much.

[*English*]

The Chairman: Mr. Mahoney.

Mr. Mahoney: Can you give us an estimate, sir, of the grain tonnage that will be handled through the system during the current shipping season?

Mr. Camu: This current shipping season? It would be approximately, I would say, seven or eight million tons.

Mr. Mahoney: How does that compare with 1967?

• 1020

Mr. Camu: I have the 1967 figures here. It was about 11 million in 1967.

Mr. Mahoney: Would all this seven or eight million originate in Canada or would some of it originate in the United States?

Mr. Camu: No, this is American grain as well.

Mr. Mahoney: Have you any idea of the split on that?

Mr. Camu: Yes, I have that in the report.

Mr. Mahoney: An approximation will do for my purposes here.

Mr. Camu: Roughly, 20 per cent is the nearest figure I have.

Mr. Mahoney: Twenty per cent U.S.?

Mr. Camu: Yes.

Mr. Mahoney: During the current shipping season would you estimate that percentage would be any different or would it be much higher?

Mr. Camu: It is higher; American grain is higher.

Mr. Mahoney: Can you give me a guess on that at this point?

Mr. Camu: It is difficult because we are about a month late on our statistical data and nothing moved through the summer in Canadian grain. It is very hard at this time for me to tell.

Mr. Schreyer: I have a supplementary. The proportion of American grain going in transit through the Seaway is higher this year?

Mr. Camu: Yes, it is higher than last year, American grain compared to American grain.

Mr. Schreyer: Which is simply a reflection of grain sale patterns between the two countries.

Mr. Camu: Yes, the pattern of American grain is quite different. It is usually moving from ports like Chicago and Milwaukee and, of course, Duluth and it is usually going two ways, direct in ocean ships to overseas markets, or in Canadian and American lakers to the ports of Baie Comeau on the North Shore of the St. Lawrence River and to Port Cartier, and from there it is trans-shipped into ocean ships going overseas.

Very little American grain stops at the ports of Montreal, Quebec, Trois-Rivières or Sorel; this is mostly Canadian. The leading trans-shipment point for American grain is the two large elevators of Cargill Company at Baie Comeau and Dreyfus Company at Port Cartier.

Mr. Schreyer: I have other questions. Put me down for later.

Mr. Mahoney: I do not think we could really say that is necessarily attributable to American export policies. It might have something to do with the strike at the Lakehead.

Mr. Camu: That is right. It is difficult, because a lot of shipments of American grain even from the Middle West are going through New Orleans. In fact, New Orleans is the competing port for American grain with Chicago, for instance.

Mr. Nesbitt: It is the second largest port in the United States, is it not?

Mr. Camu: I think so.

An hon. Member: The main new commodity down there is corn.

The Chairman: Mr. Skoberg?

Mr. Skoberg: Mr. Chairman, we realize there is quite a bit of container traffic now moving. Do the facilities for handling these containers at the respective unloading points come under control of the Authority?

• 1025

Mr. Camu: I should like to make a comment if you will allow me. We do not operate ships. We operate only facilities, not like the CNR who operate not only the road bed but the trains, so that is a major difference. We watch carefully the pattern of shipping and we look at all these trends and we have noticed in the past three or four years that many ocean ships coming or going and dealing in the general cargo trade have containers on deck. These are not specially built cargo ships but the regular liners, but they do carry a lot of containers.

Already there are a few ships that have appeared in the Seaway this season that are specially built for bulk commodities but also have the capability to carry 400 to 500 containers on board. This is a new service between the ports at the Great Lakes and European ports. Some facilities are now being built in some of the major ports of the Great Lakes, but only the major ones. There are some; it is a beginning.

Mr. Skoberg: This would be unloading facilities?

Mr. Camu: Unloading and loading of containers, both.

Mr. Skoberg: The point, Mr. Chairman, is whether or not the Authority has to supply

the facilities for the unloading of these containers. Now, which jurisdiction does this come under?

Mr. Camu: We do not have any facilities of that kind. We are not, in other words, in the port business. We are not on that side of it.

Mr. Skoberg: I have another question, Mr. Chairman, getting back to the movement of traffic through the Seaway, I presume there is an operating code of rules for the movement of such traffic. Does this come under the Department of Transport or is this under the direct supervision of this Authority?

Mr. Camu: No, there are navigation rules published jointly by us and the United States corporations. There is a book called *The Seaway Handbook* which every captain must have on board when travelling through our waters.

Mr. Skoberg: Along the same line, Mr. Chairman, who would have jurisdiction over the safety and sanitary standards of the employees? Does this come within the scope of the Authority?

Mr. Camu: Do you mean our own employees?

Mr. Skoberg: Yes.

Mr. Camu: Of the 1,700 employees we have, which I mentioned at the beginning, approximately 1,100 are outside working right on the locks and throughout the system dealing with operation and maintenance. As any other employer, we have internal regulations dealing with the safety of employees, and so forth. We have all that.

Mr. Skoberg: I have a last question. Does the granting of contracts for any improvements to the Seaway come within your jurisdiction?

Mr. Camu: Yes, sir.

Mr. Skoberg: Are there any outstanding claims now before you that have not been settled?

Mr. Camu: There are no outstanding claims left.

The Chairman: Is that all, Mr. Skoberg? Mr. Cyr.

[*Interpretation*]

Mr. Cyr: I would like to come back to the operation and the deficit that is expected for next year. I believe that you mentioned a moment ago that, in 1967, you had thought of raising the rates by 10 per 100 in order to make up this $2,355,000 operating deficit. What kind of increase in rates should have been provided for 1968-1969 What is the percentage?

Mr. Camu: Here is my answer. We operate the seaway with a net surplus each year. But the sum we collect is not sufficient to amortize our debt and to pay the interests that are extremely high each year for a sum of that nature. In order to run the seaway and pay these expenditures entirely, we would need at least 25 million dollars per year. This amount is essential in order to meet the cost of maintenance operations, amortize the debt and pay off our interests. We are still far from reaching this objective.

Mr. Cyr: What kind of an increase in percentage rates, on the average, does this represent?

Mr. Camu: More than 10 per 100. It is impossible to give an exact figure unless we make a calculation right now.

Mr. Cyr: You have mentioned that the next readjustment that will be proposed to the government, and also to our neighbour, cannot be made before 1972.

• 1030

Mr. Camu: That is right. Not before the beginning of navigation season of 1972, because there is an agreement between our two countries dealing with this. It is a regular agreement with a time limit. The agreement was signed in 1967, and it will be in force for five years.

Mr. Cyr: According to the MPs who spoke earlier, including Mr. Howe, it seems that the Committee would agree to let the Seaway Navigation Commission try to balance its budget some day. If this is expected to occur by 1972, Mr. Chairman, maybe we might see Mr. Kierans as minister of Transport, at that time, as he considers himself an expert in balancing budgets.

This probably answers my question, Mr. Martin. It is agreed that all public services, for a specific amount of time, must be subsidized by the government, as is the case with the C.N.R. and for other concerns, including the Post Office.

[*English*]

The Chairman: A supplementary? Mr. Howe.

Mr. Howe: It has to do with the question of deficits in Canada. How does this compare with the United States? Do they have a surplus or a deficit in their operations?

Mr. J. M. Martin (Director of Finance and Comptroller, The St. Lawrence Seaway Authority): The United States deficit is approximately two-fifths of ours, sir. Let me give you some estimated figures for this year. By taking two-fifths of them you will see exactly what the state is with regard to the Americans. On the Montreal-Lake Ontario section, we estimate that this year we will make a profit before interest of about $12.5 million which we will pay over to the government as interest. However, the total interest bill will be about $17 million, so that we will show on this section a deficit of $4.5 million before providing for any repayment of debt. In the case of the Americans, the figures will be a profit of about $4 million and interest of about $5 million.

Mr. Howe: Does that indicate that they are a little more efficient than you are?

Mr. Martin: No. The proportions are pretty well the same, sir.

Mr. Howe: Yet they do not operate as large a part of the seaway as you.

Mr. Martin: They have two locks, whereas we operate five.

Mr. Howe: I see.

Mr. Camu: I may add that the rates of interest are the current rates, and they started at a lower rate of interest in 1959 and have been favoured by lower rates all the way. So that, of course, shows forth a better financial picture.

Mr. Howe: Or a more stable government? More stable interest rates? Thank you.

The Chairman: A supplementary? Mr. Schreyer.

Mr. Schreyer: Is the fact that they have a lower rate of interest an indication that it is somewhat artificial, or is it simply an indication of lower rates of interest generally in the U.S. money markets?

Mr. Martin: It is an indication of lower interest rates. The basis for determining what rate is to be charged is the same in both countries, namely, the rate of interest being paid by the government at the time the money is borrowed.

Mr. Schreyer: Long-term or short-term?

Mr. Martin: Long-term.

Mr. Schreyer: Thank you.

The Chairman: Mr. Nesbitt.

Mr. Nesbitt: In the world in which we live things are not always secure. Are there arrangements to provide for the safety and security of the seaway—I mean, some foreign ship on some occasion trying to block the canal, and things of that nature. I actually do not expect you to go into details if there are such arrangements, but is there any spot-checking of ships? Are there devices for checking against the possibility of a serious interruption of the canal by an explosion in a ship, or the sinking of a ship and blocking one of the locks?

• 1035

Mr. Camu: We do not have a disaster plan. On the other hand, we cope with what we call the "dangerous cargo" types of commodity, which are carried all the time. We have very strict regulations for them. They are classified. If there is a dangerous cargo ship coming up with chemicals or petroleum products which are highly volatile and so forth, this ship travels by day only, and is single in the lockage even if we could put two ships together, and so forth. There are all kinds of regulations like that dealing with this type of cargo. But in the case of a major eventuality, we do not have any specific plans.

Mr. Nesbitt: There are regulations, then, to allow for and try to prevent accidents, but there are no arrangements to attempt to check on deliberate sabotage or destruction.

Mr. Camu: No, except that a few years ago in the Montreal area there was some agitation, and there was a bomb threat on one of our bridges. As soon as this happened, we called in the RCMP to investigate all our facilities. Out of that they prepared a report, and we have various new facilities such as fencing, lights, and guards as well in remote areas?

Mr. Nesbitt: You have guards now actually on the seaway premises?

Mr. Camu: Yes. Not at all facilities, only at certain spots.

Mr. Nesbitt: But there are no security arrangements to check the possibility of some very serious or major sabotage of the canal.

Mr. Camu: No, it is almost impossible with the length of the territory we have to cover. It is just not feasible for us to do that.

The Chairman: A supplementary? Mr. Skoberg.

Mr. Skoberg: Are there any inspections of the ships that come into the seaway?

Mr. Camu: Yes, before they enter the seaway, it is done.

Mr. Skoberg: They are actually inspected?

Mr. Camu: Yes. In fact before a new ship comes into the seaway for the first time, usually they send the blue-prints of that ship to our own office in Cornwall in the winter. We look at all the facilities because for a ship to come into the system, they must have special equipment, like one or two extra winches, landing booms, and so forth, and if they do not have these they will not be admitted into our system.

Mr. Skoberg: What about the cargo?

Mr. Camu: No, the cargo is not inspected by us?

Mr. Skoberg: You do not know what is on board, other than what they tell you?

Mr. Camu: Their own declaration, yes.

The Chairman: A supplementary? Mr. Schreyer.

Mr. Schreyer: Yes, Mr. Chairman. I wanted simply to ask what the total bill was for security? Do you have that as a separate figure?

Mr. Camu: Yes, we do have that. It will take a few minutes.

Mr. Schreyer: It would be interesting to get this. I understand that you started this only one or two years ago?

Mr. Camu: Three or four years ago.

Mr. Schreyer: Prior to that you had no specific security arrangements?

Mr. Camu: No. We had fences all around and near the locks, but they were not, let us say, completely foolproof, or not completely fenced. But now we have that, and near bridges.

Mr. Schreyer: What is the nature of this security arrangement? Do you simply have a contract with some firm that provides security guards?

Mr. Camu: That is correct. We have a contract with a security agency.

Mr. Schreyer: You do not have the figures readily available as to what you are paying this firm?

Mr. Camu: Yes. In 1967 for the Montreal—Lake Ontario section, the amount was $109,022.

Mr. Schreyer: Then this would be your only expenditure for the specific purpose of security.

Mr. Camu: For security, yes.

Mr. Schreyer: And for that they provide how many personnel?

Mr. Camu: It is round the clock. It is difficult to estimate because it varies. Sometimes we have more over the weekend. But there may be 15 guards night and day at various points. Sometimes it is less during the year, sometimes more.

• 1040

Mr. Schreyer: Do you have in mind or have you discussed the desirability of perhaps discontinuing this practice?

Mr. Camu: We reduced the number of guards after two years. This year we have again reduced the number. This has been based on experience.

Mr. Schreyer: And hopefully in two years you can reduce it again.

Mr. Camu: I would like very much to do that, if it is possible.

The Chairman: Is that all?

Mr. Schreyer: I have other questions but . . .

The Chairman: You are next on the list, so you can carry on with your next question.

Mr. Jerome: May I ask a supplementary question first?

The Chairman: Yes, Mr. Jerome.

Mr. Jerome: It has to do with security. Do I take it that as the Seaway Authority you are not really concerned with the question of security other than for the protection of your property, as a manufacturer would want to protect his factory. For example, you are not concerned with such things as smuggled shipments or narcotics. This is really not your concern.

Mr. Camu: No. This is outside our jurisdiction.

Mr. Schreyer: Access to the ships can be had by those authorities who are concerned with the detection of such crimes, but this is not your problem?

Mr. Camu: No, not as such. However, ships cannot stop in our system. They cannot disembark or embark passengers. They cannot load or unload except at specific points. This must be done in ports, which are usually outside our system. If there is an emergency, such as a break-down and they need a motor, or something has to be repaired on a ship, then we help them. Otherwise it is impossible to discharge or load anything along the way.

Mr. Schreyer: Yes.

Mr. Camu: There are only one or two spots where this can be done; that is, inside the lock—it has to be done within a lockage—when, for instance, they need some special parts for the ship. There might also be a need for food or laundry. However, it is well controlled and restricted and it is always done in a matter of minutes and in sight of the lockmaster.

Mr. Jerome: But in respect to anything brought in illegally from outside the country on any of these ships, this is really not your concern. You are not a customs authority.

Mr. Camu: No, we are not.

Mr. Jerome: Or have anything to do with police detection, so you do not concern yourself.

Mr. Camu: However, all these ships are inspected at the Port of Montreal before they enter the Seaway. They are boarded there by officials of the Department of Agriculture, a customs inspector—all kinds of inspectors. We have a couple of our own ship inspectors who also go there sometimes when a ship is coming into the Seaway for the first time, and they look at the ship to see if it is fit to navigate in our waters. They go on board with about five or six officials of various federal government departments. There is even a doctor if there is a seaman on board who is sick, and so forth. That is done before they enter the Seaway.

Mr. Jerome: And done at Montreal, the first stop of the ship in Canada.

Mr. Camu: Yes, before they come in. There would be no use in their coming to our approach lock and we find out something then. They would have to call on two tugs, turn the ship around and go back to the port to be fixed.

Mr. Jerome: Thank you.

Mr. Schreyer: Do you have the estimates as shown in this document? Perhaps you could help me to try to understand the way some of the figures are presented here.

I notice that reference is made to a deficit in two separate places. One is an operating deficit of $2.3 million and the other one, I take it, is the deficit relative to the Welland Canal alone. If you add the $9.8 million and the $2.4 million it gives you a total of $12.2 million. Is this your estimated total net deficit of operation?

Mr. Camu: Mr. Martin will answer that question for you.

• 1045

Mr. Martin: The $9.8 million relates to the Welland Canal and the $2.4 million relates to the non-toll canals, which were entrusted to us by the government in 1959. In addition to these two deficits, we incur the interest deficit that I mentioned ealier in respect to the Montreal-Lake Ontario section.

Mr. Schreyer: This is my other question. There seems to be a strange pattern of alternation each year. I notice at the very bottom of the page, and I take it this is the expenditure to the Crown, that in 1965-66 it was $8 million, the next year it was $10 million, last year it was $8 million and this year it is $10 million again. It seems to have almost the same rhythm as a motor. Is this not so?

Mr. Martin: It may seem to but it does not quite. In 1966-67 we had a very expensive wage settlement that affected our figures rather substantially. Then in 1967-68 we had labour peace. Again this year, you may recall, we had a strike which resulted in a wage settlement, which in turn resulted in a 7½ per cent increase in our payrolls.

There is another reason for the fluctuation. Maintenance is sometimes a great deal heavier in one year than it is in another. The reason for this is that the work is done as planned by our engineering branch but in some years there are very heavy jobs and in other years there is not so much work.

Mr. Schreyer: Mr. Martin, what is the total appropriation that the Crown must make this year to satisfy the authorities' needs? Is it simply a case of adding those two bold type figures?

Mr. Martin: That is right.

Mr. Schreyer: The $9.8 million and $2.4 million?

Mr. Martin: These are operating needs, Mr. Schreyer. Other than that, of course, we require money to finance the capital expenditures, and these are to be found on the following page.

Mr. Schreyer: Yes.

Mr. Martin: It is $41 million for capital expenditures.

Mr. Camu: The major amount of which is this construction on the Welland Canal.

Mr. Schreyer: On the twinning.

Mr. Camu: We used to call it the "twinning" but we have now changed it to "modernization".

Mr. Schreyer: Yes. How many years do you anticipate you will require amounts of this range for that same purpose?

Mr. Camu: This project will continue until 1972. The new 8.9 miles of canal will open—and I think we are on time—on April 6, 1972.

Mr. Schreyer: Subsequent to 1972 do you anticipate capital needs in that same range for some other purpose? To put it another way, do you have anything in the nature of a substantial capital expenditure on the drawing board or in the planning stage for 1972?

Mr. Camu: Yes. This is the proposal that is now being studied by the interdepartmental committee for the other section of the Welland Canal from the escarpment to Lake Ontario.

Mr. Schreyer: For the sake of clarification, Mr. Mahoney, you made some reference to a strike as having perhaps a direct bearing on the proportion of American to Canadian grain moving through the Seaway. What particular strike were you thinking of?

Mr. Mahoney: The grain handlers at the Lakehead.

Mr. Camu: You see, Port Arthur and Fort William were not shipping grain at all from the end of the Seaway strike, which was July 15, until the beginning of September. During that time American grain was flowing down the St. Lawrence.

Mr. Schreyer: Yes, but this is the point on which I would like clarification. In order to make that statement one must assume we had waiting markets to which to move this grain. I do not know, perhaps this is a digression, but I would like to get your view on whether it can be said that the grain handlers strike had the effect of reducing grain movement through the Seaway, particularly when it can be counter-alleged in the opposite direction that in any case there were no markets to which to move this grain. Would it have moved had there been no strike? Do you get my point? Is it valid to assert that the grain handlers strike resulted in a reduction of movement of grain through the Seaway? That is my question.

• 1050

Mr. Camu: It is a very good question. We are not interested of course, in the source of the product nor where it goes; we are in the middle, where the grain is moving through our facilities.

To compare it with other commodities, the strike in our own system lasted for about three weeks and at the end of it we said to ourselves, "Have we lost something? Shall we be able, in the remainder of the season, to recoup part of the traffic?" So far we have; we are, in fact, ahead of last year and almost in line with the record year of 1966.

I do not know whether grain will follow the same pattern, but I can tell you that after the settlement of the strike of grain handlers at the Lakehead a tremendous number of large ocean ships and lakers came down with grain a little earlier than usual, in September and in October. Therefore, instead of having a regular flow of Canadian grain down towards the lower St. Lawrence and eventually to the world markets we had nothing for two months and then a big rush in September and part of October. Now it is down again to regular, normal traffic.

Mr. Schreyer: One could infer from all that that although the timing of the movement may have been much different the total volume and end result will be about the same.

Mr. Camu: I hope so; because we are interested in carrying as much commodity as possible; and I hope that at the end of the year the figure I have given you will be higher. This we will see in the remaining four weeks during which there will be much grain coming down.

Mr. Schreyer: Thank you, Mr. Chairman.

The Chairman: If there are no further questions, gentlemen, shall Vote 85 carry?

Yes, Mr. Skoberg?

Mr. Skoberg: On the question I asked about any outstanding claims by some of the contractors who were doing the work, it is whether or not these are satisfied claims, or are there contractors who are still unsatisfied with the settlement made?

Mr. Camu: I do not think there are any unsatisfied contractors at this time.

To clarify my answer, are you talking about the claims relative to the construction of the Seaway in the period 1954-59? After that, in 1960, we had a tremendous number of claims, to the amount of about $45,000,000 from at least two or three dozen contractors. It took three and a half years to clean that up, at a cost of roughly $11,000,000 to $12,000,000. This was done through a Committee of Treasury Board, with our own chief engineer and one or two other representatives, mainly engineers, from the Department of Public Works, as I recall, and from National Harbours Board. It went through a special committee, and it went very well. I was there then and I remember that we were able to clean up everything except one. He went to the Exchequer Court, and the judgment was that we had to pay $85,000 which was about what had been our original intention anyway.

After that there was a lapse, with no construction at all, and then we started construction on the Welland Canal around 1965, with major improvements, and so forth. In this second major period of construction, we are dealing with any claims, as we go along, through progress reports rather than waiting until the end and getting a big claim and having an unsatisfied person. We try to solve the problems, if any, as we go along, with each individual contractor.

• 1055

The Chairman: Shall Vote 85 of the Estimates carry?

Item 85 agreed to.

Item 90 agreed to.

Item L125 agreed to.

The Chairman: When we adjourned our meeting on Friday. Mr. Nesbitt had made a motion to resume the study of the transportation problems.

Mr. Nesbitt: To request permission.

The Chairman: To request permission from the House?

Mr. Nesbitt: Yes.

The Chairman: To study the transportation problems of the maritime provinces.

I understand that quite a few briefs have been presented to the Transportation Committee.

Mr. McGrath: Perhaps before we proceed we should excuse these gentlemen. They are very busy.

The Chairman: Perhaps you are right, Mr. McGrath. If there are no further questions we can release them.

Mr. Camu: I would like to thank you, gentlemen, for a very good inquiry this morning.

The Chairman: Thank you very much, Mr. Camu, Mr. Martin and Mr. Taylor. Goodbye, and best of luck with the St. Lawrence Seaway. I understand there is a great deal of traffic these days.

Mr. Skoberg: Mr. Chairman, while we have a quiet moment I have a question.

I asked these gentleman about the handling of containers at port facilities. Does this come under the National Harbours Board and if so, when do we discuss that particular aspect?

The Chairman: If I may answer you, I think some of the containers come under the National Harbours Board. Naturally, the traffic that goes up the lakes is part of the Seaway.

Mr. Skoberg: I am concerned about the boat facilities.

The Chairman: Yes; the National Harbours Board. Relative to containers, I suppose I can say that the National Harbours Board is

building some wharf facilities at the present time. Am I right?

Mr. Nesbitt: We will be coming to that when we have officials of the Harbours Board here.

That is the only question I have.

The Chairman: Yes. We will fix a date for the National Harbours Board at our next meeting.

To revert to Mr. Nesbitt's motion is it agreed, that we get permission from the House to sit as soon as possible?

An hon. Member: Yes; as soon as is convient.

The Chairman: Does everybody agree?

Mr. Skoberg: Mr. Chairman, I doubt that you really know what investigations were made, or what type of briefs were being accepted at the time that the hearings were broken off.

The Chairman: Mr. Skoberg, I understand there are over 20 briefs.

An hon. Member: Eighty-two.

The Chairman: I beg your pardon?

An hon. Member: Eighty-two.

The Chairman: Eighty-two briefs; therefore, I do not know the details of them.

Mr. Thomas (Moncton): Mr. Chairman, they are all embodied in last year's Transportation Committee reports.

Mr. Skoberg: I am not really worried about what is in the individual briefs but about the purpose of the investigation. In other words what were the terms of reference of the committee that was travelling about the country at that time?

The Chairman: To study the transportation problems of the maritimes.

Mr. Skoberg: A broad study?

The Chairman: Yes. Our clerk, Mr. Virr, can send you the briefs and the terms of reference.

Mr. Skoberg: The only reason, Mr. Chairman, for my raising this is that I sometimes doubt the merit of our travelling around the country holding hearings unless there are definite terms of reference. If there were, and some progress was made at that time I am completely in favour of the motion as it now stands.

The Chairman: There are definite terms of reference. These people spend a lot of time and money preparing briefs because they actually have big problems in transportation. I live in that part of the country, although not in the maritimes—across the Gulf—and I know that we also have many very, very urgent problems in transportation.

Mr. Skoberg: Mr. Chairman, I am not doubting that there are problems. I have listened to, and been on many of, these groups who have presented briefs to committees travelling throughout the country. Invariably, when the committees get back and report no action is taken. Unless the recommendations made by this Committee are accepted and adopted there is no use the people on the property itself presenting briefs.

• 1100

This has been the problem throughout the piece, that we send committees travelling throughout the country, and the recommendations of the Committees are never accepted nor ever adopted in any shape or form.

Mr. Howe: It is up to the government to ensure that they are accepted.

Mr. Schreyer: On a point of order, Mr. Chairman, do you require a seconder for that motion? If you do, I will second it.

The Chairman: Yes. The motion is as follows: Mr. Nesbitt moved that the Committee request permission of the House to resume its study of the transportation problems of the Maritimes.

Some hon. Members: The Atlantic Provinces.

The Chairman: Yes, the Atlantic Provinces.

Mr. McGrath: Mr. Chairman, I would not want to miss that bus ride across Newfoundland in January.

The Chairman: All in favour? Mr. Cyr.

[*Interpretation*]

Mr. Cyr: Mr. Chairman, you say that the terms of reference were made last year, before you went to the Atlantic Provinces. But, the terms of reference were made by another government and another Parliament. Is it the Committee or the government

that issued the terms of reference? If this was done by another government, they ought to be issued anew. Are they still in force at the present time?

The Chairman: To answer your question, Mr. Cyr, I believe that the terms of reference had been studied, as you mentioned, and, accordingly...

[*English*]

Mr. McGrath: Mr. Chairman, on a point of order, that is the whole purpose of the motion.

The Chairman: Yes, it is, but I just wanted to explain a few words to Mr. Cyr.

[*Interpretation*]

This had been studied. Now, the Committee Secretariat has developed these briefs and they are going to be under study again and are going to be presented to the Committee. I believe that according to the motion under study now, we are to request permission, first from the House, to authorize us to go and study, on the spot, transportation problems in the Maritimes. I should add that the House of Commons will give us other terms of reference.

[*English*]

An hon. Member: Perhaps the House will give us another Order of Reference.

The Chairman: If it is agreed, yes. Mr. Schreyer?

Mr. Schreyer: Mr. Chairman, the point Mr. Cyr raises is a technical point which must be met, and I should think the simple way to do it is for this Committee to pass the motion. The motion will suggest its own terms of reference and then the House in taking action, at least, on that motion will be granting the terms of reference to the Committee when it deals with the motion. There is no problem.

The Chairman: Yes. The motion will determine the new terms of reference. Am I correct? All in favour?

Motion agreed to.

The Chairman: The next meeting, gentlemen, will be on November 21, at 11.00 a.m.—next Thursday—to discuss the National Harbours Board estimates. Mr. Pickersgill of the Canadian Transport Commission will return on November 28.

Mr. Nesbitt: That is next Tuesday?

• 1105

The Chairman: That is Thursday; a week from this coming Thursday.

Mr. Howe: Mr. Chairman, apparently this Committee is having the same problem as a lot of other committees in getting the reports on time. How is the Committees Branch getting along? Are they getting them into shape so that we can have the Minutes from meeting to meeting?

The Chairman: The report of the last meeting has not been received from the Committee Reporters yet. It should be up today and will go to the printers tonight, so we will have it by Thursday.

Mr. Howe: For people that are being moved off and on the Committee it is rather hard to keep up with the questioning and know what has gone before if you do not have the Committee reports in your hand.

The Chairman: I think we are running into the same problem again. It is the translation. There is a slow process in the translation.

Mr. Howe: Well, let us speed it up.

The Chairman: If there is nothing else, the meeting is adjourned. Thank you very much.

[2]Mr. Serré replaced Mr. Howard (*Okanagan Boundary*), on November 20, 1968.

[3]Mr. Allmand replaced Mr. Cyr, on November 20, 1968.

[4]Mr. Douglas replaced Mr. Groos, on November 20, 1968.

[5]Mr. Corbin replaced Mr. LeBlanc (*Rimouski*), on November 20, 1968.

CORRIGENDUM

Issue number 3—Minutes of Proceedings and Evidence

Page 3-5 R. V. Virr, *Chairman of the Committee,* should read R. V. Virr, Clerk of the Committee.

ORDER OF REFERENCE

HOUSE OF COMMONS

WEDNESDAY, November 20, 1968.

Ordered,—That the names of Messrs. Nowlan, Serré, Allmand, Douglas and Corbin be substituted for those of Messrs. Marshall, Howard (*Okanagan Boundary*), Cyr, Groos and LeBlanc (*Rimouski*) on the Standing Committee on Transport and Communications.

ATTEST:

ALISTAIR FRASER,
The Clerk of the House of Commons.

29249—1½

REPORT TO THE HOUSE

THURSDAY, November 21, 1968

The Standing Committee on Transport and Communications has the honour to present its

FIRST REPORT

Your Committee would greatly appreciate the opportunity of resuming its study of the Transportation problems of the Atlantic Provinces.

Respectfully submitted,

GUSTAVE BLOUIN,
Chairman.

(*Text*)

MINUTES OF PROCEEDINGS

THURSDAY, November 21, 1968.
(4)

The Standing Committee on Transport and Communications met this day, at 11:00 a.m. The Chairman, Mr. Blouin, presided.

Members present: Messrs. Allmand, Blouin, Corbin, Douglas, Godin, Howe, Lessard (*La Salle*), Nesbitt, Nowlan, Schreyer, Serré, Skoberg, Thomas (*Moncton*)—(13)

Also present: Messrs. Bell, Groos, Hogarth, Lewis and McCleave.

In attendance: From the National Harbours Board: Messrs. H. A. Mann, Chairman of the Board; J. E. Lloyd, Member of the Board; L. R. Stratton, Chief Engineer and J. S. Dron, Chief Treasury Officer.

The Chairman called item 70 ($7,450,000) of the Revised Estimates for the fiscal year ending March 31, 1969, relating to the National Harbours Board. He called upon Mr. H. A. Mann, Chairman of the Board to make a statement.

Mr. Mann made a short statement following which he and representatives of the Board were questioned by members.

During the questioning of the witnesses, a question was directed to Mr. Mann requesting certain information contained in documents pertaining to an agreement between the Keyser Coal Corporation and the National Harbours Board.

Mr. Mann drew the attention of the Committee to the fact that the information sought was of a confidential nature and therefore he did not have, at this moment, the authority to answer.

And debate arising thereon, the Chairman was ordered by the Committee to obtain the following information from the authorities concerned:

1. How to proceed to force a witness to answer questions put to him by members of the Committee.
2. If a Committee room would be available for a 2:00 o'clock meeting this afternoon, should the witness be authorized by his superiors to divulge the information deemed to be confidential.

Following a suggestion made by members to visit certain ports where Harbours' containers are in operation, the Chairman stated that the suggestion would be studied at the next meeting of the subcommittee on Agenda and Procedure.

At 1.00 p.m. the questioning of the witnesses continuing, the meeting was adjourned to the call of the Chair.

Robert Normand,
Clerk of the Committee.

EVIDENCE

(Recorded by Electronic Apparatus)

Thursday, 21 November, 1968.

• 1109

The Chairman: Gentlemen, our witnesses today are Mr. H. A. Mann and his colleagues. Mr. Mann is Chairman of the National Harbours Board. Mr. Mann?

Mr. H. A. Mann (Chairman, National Harbours Board): The Board is a Crown corporation which reports to the Minister of Transport and administers some of the major harbours in Canada from St. John's, Newfoundland, through the north of Churchill to Vancouver, British Columbia.

I think the best thing to do, sir, in order to give the Committee the greatest possible time, would be merely for us to stop talking and be ready for questions from the members.

The Chairman: I thank you, Mr. Mann. Do any of the members have questions to pose to Mr. Mann? Mr. Allmand?

• 1110

Mr. Allmand: Mr. Mann, I want to ask you some questions about the port of Montreal. To begin with I would like to ask questions relating to the facilities for longshoremen. Last spring we were told by the Minister of Labour and the Minister of Transport that the National Harbours Board would construct certain waiting rooms and rest room facilities for the longshoremen and I understand that one prototype has been built. I would like to know what progress has been achieved with respect to the construction of other waiting rooms and rest room facilities.

Mr. Mann: Perhaps I could put this into the context of the situation, Mr. Allmand. The rest room and amenities matter really arose out of the Picard report, which was a report commissioned by the Department of Labour in order to look into the relations between the Shipping Federation of Canada and the International Longshoremen's Association.

We were not involved in this investigation because we were not the employers of the ILA.

It was in the Picard report that the recommendations were made with regard to the provision of amenities for workers in the port, and the report did point out that this was a responsibility of the employer in this case, therefore, the Shipping Federation of Canada. However, realizing our responsibility as a port authority and not wanting to wait until the two parties had come to an agreement, we went ahead on our own motion, and provided longshoremen's facilities at Montreal.

We have finished the first one, which was duly dedicated by the Minister of Labour some little while ago. I believe the second one is under construction and plans are being readied, in conjunction with the unions, for additional facilities, so we are looking forward to having decent and dignified facilities for labour in the port of Montreal within a relatively short time.

Mr. Allmand: Can you tell us exactly how many of these buildings or sheds or whatever they are will be constructed in all?

Mr. Mann: I do not have the details here, Mr. Allmand. We could get you that information. I believe it is in excess of four or five, if that is correct.

A Witness: It is more than that.

Mr. Mann: Is it more than that? For the sake of accuracy I would like to take this as a question to be answered in writing to the Committee if that is all right.

Mr. Allmand: Very good. Now I want to ask some questions with respect to National Harbours Board plans for containerization in Montreal. Last week they opened containerized facilities but these were provided by the Manchester Liners in Montreal, and many people are wondering whether the National Harbours Board is going to try to participate in the building of containerized facilities in the Montreal harbour. Can you tell us whether there are any plans by the National Harbours Board to do this and what they are?

Mr. Mann: Indeed I can, sir. I hope you will not mind my making a factual correction of your remarks. You said that these facilities were provided by Manchester Liners, this is factually not quite correct. In fact, the facilities were provided by the National Harbours Board. They are under lease to Manchester Liners via their agent in Canada, Furness Whithy and Company Limited, but the wharf was provided by the National Harbours Board, the berth was provided by the National Harbours Board, the buildings were provided by our Montreal administration of the National Harbours Board. Only the crane was provided by Manchester Liners who had, however, the option of having that crane provided by us on a repayment basis and chose not to exercise that option.

Mr. Allmand: Was the capital investment involved in erecting and supplying the crane made by Manchester Liners?

Mr. Mann: It was made by Manchester Liners on their own choice, having had the opportunity of having it done by the National Harbours Board and having refused to take that opportunity.

Mr. Bell: Mr. Chairman, may I make a suggestion in order to make our procedure easy for everybody? Three of us here are interested in this competitive containerized situation in the Eastern ports, Montreal, Halifax and Saint John, and I am wondering if Mr. Mann would find it easier, when he talks about Montreal, to relate the plans the National Harbours Board has and what it has done in each one of the ports. If we get into some narrow arrangements on cranes in Montreal I find it difficult to fit that in to what I have in mind in Halifax.

• 1115

I am just giving Mr. Mann an invitation to expand, if Mr. Allmand does not mind.

The Chairman: Do you mean, Mr. Bell, to explain briefly the situation in each of the ports?

Mr. Bell: Yes; in other words, take the opportunity to expand generally about these three ports and it could be that they want to bring in other ports. It is just that there is some competition from the new containerized plans and I think it would save time; that is my main reason for mentioning it.

The Chairman: Yes, to give brief explanations on the three ports mentioned...

Mr. Allmand: With respect to containerization.

The Chairman: Yes. Would that be all right, Mr. Mann?

Mr. Mann: Perhaps if the Committee will allow us to do so we should accept containerization in its over-all ambiance and then deal with the matter specifically. We rather suspected containerization would rank high on the interest agenda of the Committee and if you will permit us to do so we will make the statement along those lines.

First of all, containerization is a relatively new development. The first overseas container ship that presented itself in any European port did so only in 1966. That does not mean, however, that container services had not been in operation prior to that; it dates back to about the early 1950's, but at that time it was mainly a question of captive movements of American steamship companies, particularly on such runs as United States to Hawaii and United States to Puerto Rico. These were nice captive movements, but the penetration of the container concept into overseas traffic is relatively more recent.

Containerization is a breakthrough in the handling of general cargo. It is not necessarily the only way of rationalizing general cargo handling because there are people of some repute and experience, such as Inter-Olsen Lines in Norway, who have deliberately chosen not to go into container movements but have adapted a Canadian pioneered system, namely, the side-port loading system, which is in operation now by Canada Steamship Lines and Clarke Steamship Lines in Newfoundland. They have chosen to adapt that to overseas movement and it is a very efficient way of doing things.

The third trend in general cargo rationalization is one that finds its concrete realization in the so-called "lash" concept, that is, lighters aboard ship, which is basically a way of loading lighters—small lighter barges—aboard a mother ship and floating them off at destination. This, of course, requires no water depth at all and, therefore, denigrates the role of the harbour even further that it is already being denigrated by containers.

It should be realized that container movements—the container concept—has some trailing effects on ports. Not necessarily in order of importance, but I hope fairly completely, this is what happens in a container era. The role of the port itself becomes less

important. You are now dealing with a systems approach and the systems approach, ideally, is what has been called the house to house movement of merchandise, that is, from the shipper's door to the receiver's door using an inland carrier at origin and a harbour at transferring the container, a steamship line, a harbour of unloading the container, an inland factor on the other side and then the receiver's door.

• 1120

Now, this is the ideal system. There are variations of that and I hope you will not mind if I do not go into details, because they become rather unnecessarily complex.

Basically, the point we want to make is that a container movement cannot be looked on as a harbour function; it is a system function requiring at least in the Canadian context, an ocean carrier, a harbour and an inland carrier working in conjunction. The traditional role of the harbour is, in the opinion of many people, now becoming less important. Instead of a harbour being a collection and distribution point for general merchandise with a high degree of labour intensity, what you are getting now is the harbour merely being a quick transfer point for boxes of varying sizes—they are standardized—which come off a ship at a very rapid rate, require a minimum of handling by people and then are transferred to an inland carrier to go to destination.

It is to that context that our ports must adapt themselves. Now, what have we done with it? What you require in a container era is a berth sufficiently long for a container vessel—and the vessels, by the way, do vary in size quite appreciably. The berth must be sufficiently deep. Unless there be any misunderstanding about this, container vessels have a very shallow draft; you do not require ships of a very deep draft. None of the container vessels, I believe, now in existence or planned, is over 32 feet of draft.

Then you require a crane to take the containers out of what they call the cellular holds of the vessel and the crane is a specialized piece of equipment which works with a high speed. You then require an area to marshal the container and facilities for taking them off harbour property to inland destinations which, in the Canadian context or anybody's context, can be either rail or truck.

Now, this is quite a change from the traditional concept of harbours with their berths, the aprons on which the cargo is landed and the transit shed and all the many people that handle cargo. It is to this context therefore, Mr. Chairman, that we must adapt ourselves and are adapting ourselves. Let me just go through the availability of sites, if I may for a minute, at the various ports we have.

At St. John's, Newfoundland, container movements have not yet been mooted at all and we have, at this juncture, no existing site for container movements, but one could be made available with sufficient lead-time. The problem has not arisen, chiefly because of the nature of the traffic at St. John's, Newfoundland. At Halifax we are currently building Pier C, which is actually being built on the old Seaward Defence site and I believe a tender was just opened for the second stage of this a week ago today. I believe it is slated to be ready to operate by June of 1970. This area will provide berthing and handling facilities for containers on a scale and of a kind that will be equal to anything in any major harbour in the world. At Saint John, New Brunswick, we have a site already in existence. This site is at Pier I side and Navy Island and it has been known as a container site for some time. We have again in Saint John a sufficiently large and a sufficiently well located area to handle containers.

• 1125

At Quebec we have sites at both Anse au Foulon and at the Battures Beauport. Actually, sir, discussions are currently taking place with regard to container services to Quebec, and I would like to bring to the attention of the Committee an announcement made by Canadian Pacific on September 16 of this year respecting the operation of a container service to Quebec. We dedicated Canada's first overseas terminal at Montreal last Friday and I would again like to point out so there will be no doubt left in anyone's mind that this container terminal was provided by the port and released to the Manchester Liners, with the exception of the crane which, by their own choice, was acquired by the lessee. In Montreal we have additional sites available, and as traffic is reasonably anticipated we will bring these sites into operation. We do not operate any ports on the Great Lakes, and any questions about Toronto and the future of general cargo in Toronto in the container era I think would have to be answered by the Department of Transport, under whose tutelage the National Harbours Board comes.

At Vancouver we have just called tenders for a container crane which will be installed at Centennial Pier and which we hope will serve the container traffic, as we now see it, for a number of years. We have no problem at all in Vancouver with regard to the provision of sites. It is almost an "embarras du choix". We have a number of sites and the question is to use the most rational site.

This, sir, is a general survey of the situation as it exists today.

Mr. Allmand: Mr. Mann, I would like to follow up with a few specific questions.

The Chairman: Do you want to come back to your original question, Mr. Allmand?

Mr. Allmand: Yes. As I understand it, you said that the National Harbours Board would have made the capital investment for the cranes if this was an option, but that Manchester Liners preferred to make the investment themselves. Do you make that same offer on other sites? For example, in Quebec City, where Canadian Pacific hopes to develop a containerized port, will Canadian Pacific be obliged to make the capital investment for the cranes or will the National Harbours Board do that?

• 1130

Mr. Mann: The offer is open to anyone. We must operate our enterprise in a non-discriminatory fashion, and we cannot say to one person that we will do something for him that we are not prepared to do for another. This is subject to a policy adopted by the Board and which is very clear in that regard.

Mr. Allmand: There have been allegations made that Montreal is lagging behind the eastern American ports in containerization and that we stand to lose business to Boston, New York and to other ports if we do not containerize quickly enough. You say that there are other sites available in Montreal. I would like to know whether the National Harbours Board could develop these sites quickly if it was felt that we were really losing business to the American ports because of containerization.

Mr. Mann: We believe we can, sir. I think we should have a look at these allegations. As we so well know, an allegation is one thing, but proof is another. Allegations can be made much more easily than proof can be furnished, and the statistical proof of this so-called loss is not there at all. It is quite true that some companies have chosen to route traffic to New York in containers. I think it would be proper to find out why this has been done. In some cases it has been done at the request of the buyers overseas. In some cases it has been done because New York, being what it is and being in a class by itself, is an immediate hinterland that has more people than all of Canada combined, it has a magnetism which is very difficult to resist, and therefore it can also command frequency of sailings that we in our Canadian context cannot match to quite the same extent. However, I would point out very quickly that for a country with our population and traffic generation we are doing exceedingly well in serving the world with steamship lines.

So, we are conscious of potential traffic losses to other ports and these traffic losses could be caused by a number of factors: the option of the buyer overseas, the frequency of sailings and the labour situation. We might have a strike and they might not. It might be the other way around.

Mr. Allmand: One hears there is a high rate of pilferage at Montreal, and in discussing the advantages of containerization you did not point out that one of the great advantages of containerization is that I understand you reduce pilferage to a great degree.

Mr. Mann: Mr. Chairman, if there are any questions on pilferage I would be delighted to deal with that subject on its own . . .

Mr. Allmand: All right.

Mr. Mann: . . .because I think it probably merits some remarks, Mr. Allmand. You have been interested in this matter.

Mr. Allmand: We will leave it until later.

The Chairman: We can come back to this. Do you have a supplementary?

Mr. Allmand: I have many other questions but the other members do as well, so I will stop after two questions that can be answered very quickly, sir.

With respect to the Champlain and Jacques Cartier Bridge, are there plans to reduce or eliminate the tolls on those two bridges?

Mr. Mann: I believe the Jacques Cartier Bridge has been without tolls since 1962.

Mr. Allmand: Yes, I meant the Champlain.

Mr. Mann: The Champlain Bridge is under tolls. We are following government policy on

this. I am afraid there is not very much I can about the matter until there is a change in policy approach. At this juncture and by using tokens it costs a commuter exactly eight cents to cross Champlain Bridge. If he chooses not to use tokens it costs him the magnificent sum of 25 cents, which is considerably less, by the way, than some American toll bridges.

Mr. Allmand: Where does the payment for the bridge stand? Are the tolls meant to keep the bridge up or is it to pay off the capital cost?

Mr. Mann: Both.

Mr. Allmand: I see. When will the capital cost be paid?

Mr. Mann: Again, we could try and make a stab at getting this for the Committee, if we can take this as written notice. Could we do this?

The Chairman: Very well.

Mr. Allmand: That will be fine. I will come back later.

The Chairman: Mr. Corbin?

Mr. Corbin: Mr. Chairman, most of my questions were answered in the general statement which was made by Mr. Mann, but I have a few supplementaries to ask.

For example, you mentioned a site in Newfoundland that could be developed but you did not give us the name of that site. Could we have it, please.

Mr. Mann: It is in St. John's harbour. If you are familiar with St. John's harbour you will realize there are only two possibilities: on the shore opposite the city and in the bend that carries on from the marginal wharf that we now operate.

• 1135

Mr. Corbin: Thank you, Mr. Chairman.

I would have preferred that we had opened this meeting by a very broad general statement about National Harbours Board policy, because there are a few members here—anyhow, I will skip that request.

I would like to know if the National Harbours Board is in such a position that it can effectively recommend or promote the development of one site more than another in the matter of container facilities. What is your policy in this respect?

Mr. Mann: That is a very pertinent question, Mr. Chairman. We are, of course, in some difficulty about this. It is very easy for us to say that all our ports are good, but it is very difficult for us to say that one port is better than anotther. This is a restriction, of course, on us; it is not an unnatural restriction. Whether it inhibits the development of Canadian ports is an academic question.

As you know, there are a considerable number of private interests doing promotion, and among them are local groups in our ports with whom we operate, in many cases most harmoniously, and who show considerable enthusiasm, and who are supported by us. In addition, there are steamship lines who, of course, have an economic stake in promoting the use of a port they run to. There are organizations such as the railway companies who do a fair amount of promotion. So there are already in the field a number of promoting agencies, quite apart from the full resources of our Department of Trade and Commerce, which are at our disposal.

The question of the efficacy of promotion, which I take it is what you are coming to, is again one which can of course not be quantitatively measured. The Port of New Orleans, for instance, if I may just give one example, has been very promotion-conscious, and yet finds that it is faced with a slippage of traffic and a very bad financial situation. Whether this is due to promotion, I must leave to somebody's judgment. It is very difficult to quantify these things.

Mr. Corbin: Perhaps I can get down to a specific case I have in mind, the case of Halifax and Saint John. You have the situation now in Saint John where there is a Canadian Pacific Railway terminal, and on the other hand Canadian Pacific is developing container facilities at the Port of Quebec. In Halifax you have the other side of the story, where you have CN facilities. What happens here? What can you do to—what is the limit of the direction you can give to either of these interests to develop one site rather than another one?

Mr. Mann: The limits of the port authority are very narrow. As I mentioned at the outset of our statement, we are dealing with a systems approach, and the partners in the system are ocean steamship companies, inland transportation companies, and the port.

You mentioned the case of Canadian Pacific. It is a rather interesting case because

it illustrates exactly what happens. Here is a company that has traditionally called Saint John, New Brunswick, its home port. It has phased out its passenger operations at Saint John. They looked very carefully—and we know they did, because they visited sites at Saint John; they visited sites at other ports—at the over-all economics of a container movement from Europe to Canada. They came to the conclusion that Quebec was the terminal they wanted to use. I am just trying to see whether I can find the phrase used in their announcement. If you will forgive me, Mr, Chairman.

• 1140

Mr. Corbin: You cannot in any case at any time tell Canadian Pacific Railways, for example, that they should, or that it would be preferable for them to develop a container site in Saint John, rather than in Quebec City. You cannot do this?

Mr. Mann: You cannot force. You are dealing with...

Mr. Corbin: But you can suggest, and hope for the best.

Mr. Mann: You can suggest that sites are available and you can suggest, with all due deference, until the cows come home, but if they lose a dollar the suggestion will be totally useless. You are dealing with free enterprise—or private enterprise, I suppose would be a better way of putting it—components, namely shipping companies and inland transportation companies, and unless the government wishes to assume a role of dictating to the private sector the routing of its freight through gateways and inland channels—and we have chosen in the national transportation policy not to do that—there is a very little a harbour authority can do other than hold sites available, advise the users and potential users of these sites, and hope that some rational decision can be made.

Mr. Corbin: I understand very well. As a matter of fact you follow trend and demand.

Mr. Mann: We anticipate demand reasonably.

Mr. Corbin: You have a notion that there will be a demand for them in the future.

Mr. Mann: I think so, sir. We are no different from other port authorities. The Port of Hamburg is one of the leading world ports, and since we in this country always feel better when we can use somebody else as an example to look at, particularly a successful one, will you permit me to quote the policy of the Port of Hamburg. I make apologies; I have to translate this from German, and my English rendering of it may not be as good as it should otherwise be.

The Chairman: Well, it is very nice if you can translate it from German.

Mr. Mann: "The concept of the investment policy of the Senate"—this is the Senate of Hamburg—"is based on the principle of anticipated demand. That is, construction will be carried out at a rate demanded by the foreseeable, and with great probability expectable, traffic."

This, really, is the policy that is being followed by us. So we are not at all unique. I wish we could lay claim to being more often unique.

Mr. Corbin: Thank you, Mr. Mann.

The Chairman: Mr. Skoberg.

Mr. Skoberg: Thank you, Mr. Chairman. Mr. Mann, you referred to the fact that some of the development is being carried on jointly with your Harbours Board, the railways, and the steamships. How do you set rules and regulations governing the operation of these ports and harbours as it refers to containerization, the transportation phase of it? It bothers me that once again we may have a hodgepodge set-up of facilities with no rules and regulations which, in the end, will affect the economic structure of that community, which we have seen so much of in the past, and I am wondering what rules and regulations you do have set up at this time?

•1145

Mr. Mann: We have a general policy, Mr. Chairman, for the development of container facilities. I think one should be careful not to make a general policy a straitjacket. Deliberately, the general policy has to be stated in general terms, and we would be very happy to file a copy of this general policy with the Committee. We try to avoid a hodgepodge, we try to achieve rationalization to the extent that it can be done, and we certainly attempt to avoid any kind of discrimination of treatment.

Mr. Skoberg: Further to this, Mr. Chairman and Mr. Mann, what direct consultations have you had with the railway companies that are involved in these particular ports, and is

there a close working relationship at all times with the companies involved?

Mr. Mann: Indeed there are. We in this country are very fortunate that we only have to deal with two railway companies, so we are better off than some American ports, and I can assure the Committee that our working relationship with both Canadian National Railways and Canadian Pacific Railway is extremely close—it must be.

Mr. Skoberg: Another question, Mr. Chairman. It was stated on November 6 that the National Harbours Board last month refused a Saint John, New Brunswick request for a container-handling crane. You referred to the fact that the Manchester Liners have installed their own crane at the port of Montreal. Do you not think it would be better if the National Harbours Board itself provided a standard facility at these particular ports?

Mr. Mann: Sir, while there is an over-all look to a container terminal, it is difficult to talk about exact standards. Let me give you an example. The Manchester Liners service, because it has restrictions in Manchester with the Manchester Ship Canal, is using vessels of a certain size and a certain beam. It is also using 20 foot containers. Therefore, it does not require a container crane at the port which has a capacity very much greater than is required to handle a 20 foot container. Another service may come with ships very much bigger than this and with a wider beam looking forward to using either 20 foot containers or 40 foot containers and requiring a crane that has an outreach much larger than the one required for Manchester Liners. And that service might also require the handling of 40 foot containers which are heavier and therefore require a bigger crane or the marriage of two 20 foot containers in one lift. So that to talk about a standard, you can talk about it in terms of providing a wharf, a well lighted paved service area and inland connections, but the exact mechanical components of that terminal have to vary from service to service. There is no standard formula on this.

Mr. Skoberg: You suggested that the Manchester Liners have put the crane in but are leasing the facilities at Montreal.

Mr. Mann: That is correct.

Mr. Skoberg: What would the terms of that lease be and just what authority does that give the Manchester Liners in that particular port?

Mr. Mann: The authority is restricted by the terms of our arrangement with them. The terminal has to be available as well to other vessels that want to use it. This may not be necessary as you have a number of container terminals but for the first one a common user approach certainly is a required or desirable thing.

Mr. Skoberg: Thank you.

The Chairman: Mr. Schreyer.

Mr. Schreyer: Mr. Mann, is it correct to say that the policy of the National Harbours Board is now to encourage greater use of containerization in transportation?

Mr. Mann: The first paragraph of our policy, Mr. Schreyer, reads as follows:

> The Board encourages the movement of containers through its ports and is prepared to co-operate fully with all modes of transportation in the development and facilitation of such movements.

Mr. Schreyer: Thank you. Is it possible to say at what point in time the National Harbours Board started this intensive drive, if I can put it that way, to make greater use of containerization?

• 1150

Mr. Mann: It is possible to say, sir, that we started this prior to June 15, 1967. In fact I should perhaps mention in passing, Mr. Chairman, that the first effort to arouse interest in Canada in container movements was one generated by the National Harbours Board away back in 1961 when we called Canada's first container conference in Toronto. We at that time felt that containers were certainly the coming thing and we got together a lot of people—a lot of interest at this conference. We then tried to have a continuing mechanism, which required a minor input of money by the interested parties, to keep the flame alive, to nourish it and to increase it, and we found to our dismay and discouragement that no one was terribly interested. It was only when other people started in other ports that the Canadian public got a hold of this idea. I am really saying this so that we have something on the record that shows that we have not been asleep at the switch.

Mr. Schreyer: I was not suggesting that National Harbours Board was, but that leads me to another question. Who really is able to

determine the pace or the rate of increase in the use of containerization? I do not suppose it is the National Harbours Boards? Is it the shipping companies, the inland transportation companies, or is it a combination of two or three?

Mr. Mann: Basically, it is a very difficult question because it is a deceptive one and I do not want to give a facile answer.

Mr. Schreyer: I ask it, Mr. Mann, only because it is clear that National Harbours Board policy is to encourage greater use of this mode, but it does not really determine whether or not this in fact will be done.

Mr. Mann: I will make a stab at answering this. It is a difficult question and we are conscious of the difficulty of it. I suppose one should really start out by saying that the shipper is the king in this whole thing—he pays the freight. The shippers' demands of course are very important in this and he is becoming aware of the advantages of containerization.

I do not want to take the time of the Committee to go into these advantages unless there are specific questions. If I may, I will leave it at that point.

The next thing of course has to do with the decision the steamship companies themselves make; they have to make the agonizing decision, particularly when it has vessels that are not yet amortized and still have a lot of life in them, as to whether or nor to join this containerization game. It is an open question how many of these steamship companies are going to get their fingers burnt. It is interesting to note, because of the high capital investment and the high risk factor involved, the formation of consortia of steamship companies because the single company simply cannot undertake it.

• 1155

Then the other thing of course is support itself. It must be got ready, it must be available, it must help in being an efficient link. When we talk about the port now surely we have to have a subdivision. There is the physical facility and there is the attitude of labour to the matter, and the pace may be influenced in so far as support is concerned by both the physical development and the attitude of labour. Containerization is the most contentious issue in the current negotiations on the American east coast between the ILA and the shipping companies. It is a real problem and a human problem because containerization is not labour-intensive and you have all the problems of automation thrown at the labour force in a port. Then going beyond that—and this is why the answer is so different Mr. Schreyer—you have the inland carrier. If there is no equipment, available and even more so if the rate structure is not favorable to container movement, you can do whatever you want, on the shipside and the portside and you will not have a container movement. This is particularly important if we may point it out, in the context of the Atlantic ports and the context of Vancouver, where you have long distance to centres of industrial gravity and where the inland factor in the Canadian context probably becomes the most single significant factor.

Mr. Schreyer: Mr. Chairman, I have four questions. I will try to get through them as quickly as I can. Mr. Mann, if you have not already done so, could you now indicate in a very approximate way—I realize you would not have the exact figures—what percentage of the total cargo tonnage that moves through your facilities now goes by way of containerization?

Mr. Mann: It is still a very minor part, sir. I do not think we have the exact statistics handy. We could make a stab at it, if that is all right. Can we take this as a question?

Mr. Schreyer: Yes. All I really expect is a rough approximation.

Mr. Mann: At this juncture we can say generally that it is minor as compared with the ordinary, conventional cargo.

Mr. Schreyer: Are you hopeful that it will increase dramatically?

Mr. Mann: It is not a matter of hoping, sir. It will increase.

Mr. Schreyer: Thank you.

Mr. Mann: There is no way out.

Mr. Schreyer: I noticed in a press release from the office of the Minister of Transport that a survey was made a couple of years ago of West Coast commodity movements through your facilities. I further understand that the total cargo tonnage moving through the Vancouver facilities is expected to double in about 12 years.

Mr. Mann: Yes.

Mr. Schreyer: That being so, what program of capital construction do you have presently underway there?

Mr. Mann: The cargo survey was a survey of all commodities. Just so there will not be any confusion on the record, this was not only with regard to general cargo, and therefore its significance in containerization, but it was with regard to general cargo in foreign trade, bulk cargo in foreign trade and all cargo in domestic trade. I just wanted to make it clear that we are in the same ball park on this.

The forecast showed that there was going to be a very rapid growth in bulk movements through the port complex of Vancouver. The outlook for grain particularly seemed good. The outlook for potash, although we seem to have run into a temporary down on that, was optimistic. Sulphur was one of the leading growth commodities and coal was mentioned prominently. It is interesting—if I may digress for one second—to see how one has to watch these economic forecasts. The forecast was that by 1975 we could expect the export of about 5 million tons of coal through the port of Vancouver. We think we will reach this figure by the end of 1970 and we have to adjust our upward targets quite considerably because of the bullishness of coal export situation in the Vancouver context.

• 1200

In response to that a number of developments have taken place. We now have bulk capacity in Burrard Inlet which is highly modern and highly capable. We also have grain capacity which has recently been augmented—this year in fact—by the latest Canadian elevator built by Saspool on a site leased by the National Harbours Board. This is a very modern terminal and it is built along the same lines as our No. 4 terminal in Montreal. We also have commenced construction of an outer port complex at Roberts Bank. This is well underway and I think it is rather interesting to recall that we let the contract in May, I believe. Is that correct, Mr. Stratton.

Mr. Stratton: Did you say "Roberts Bank"?

Mr. Mann: Yes, Roberts Bank. At the end of April we let the contract for the creation of 50 acres of land three miles out to sea and a connecting causeway to the uplands. The work has gone so well that by now the 50 acres are complete and they are working on the causeway. I think there is just a little bit more to do on the 50 acres. To show you how quickly this can be done, the first coal for export to Japan should move over that facility from the Fernie-Michel area by December of 1969 or January of 1970 at the latest.

Mr. Schreyer: Thank you. If you are in fact proceeding with construction at Roberts Bank—if this is not too sensitive an area—has this problem with the government of British Columbia as to jurisdiction been resolved?

Mr. Mann: There are no arrows flying, sir, and no bombs planted, and we have had discussions with the Province of British Columbia. In fact, we are now constructing a causeway over land to which the Province of British Columbia holds legal title, and we have an arrangement with the Province of British Columbia on this matter.

Mr. Schreyer: So as far as the National Harbours Board is concerned there is no problem of jurisdiction or otherwise at Roberts Bank.

Mr. Mann: There is a problem of the final resolution of the matter, which becomes a government policy matter. Meanwhile we, as the hired hands, are proceeding to provide the West Coast with an export harbour for Canadian coal, which is part of a contract requirement. We cannot wait.

Mr. Schreyer: If you are proceeding in this way, Mr. Mann, what is left to be resolved? You say that the final resolution must still be made.

Mr. Mann: As the Minister of transport has repeatedly mentioned in public, the question of administration of Canadian harbours is under intensive study and I should think that this particular Roberts Bank problem is a very good one to be resolved within that context.

Mr. Schreyer: Can you say in a general way whether the National Harbours Board is making as intensive an effort in the Vancouver harbour area to provide for containerization as it is in the East Coast ports?

Mr. Mann: I would think so, sir, bearing in mind the uncertain nature of the demand for a container movement between Japan and say we will have containers but it is not quite so easy to substantiate the statement quantitatively. From what we know there will be a container movement between Japan and

Vancouver starting in the near future. But this movement is not necessarily one in full cellular hold container ships but may very well turn out to be a movement which is a combination of containers and conventional break bulk services, and for that you require a facility that is somewhat different from the full-scale container terminal. And this is what we are providing.

• 1205

Mr. Schreyer: Is it correct to say that your financial statement for each year's operation alternates, with one year a slight operating loss and the following year a surplus balance?

Mr. Mann: We are very fortunate, Mr. Schreyer, to have as a member on our Board a chartered accountant, and I would dearly like to turf this question over to my good friend, Jack Lloyd.

Mr. J. E. Lloyd (Member of the Board, National Harbours Board): The changes, of course, reflect differences in revenues and expenditures, and the Harbours Board has addressed itself to the problem of how we can improve this information. To that end we hope to be able to provide more comprehensive financial statements in the future.

Today's planning conditions, Mr. Schreyer, I think you will agree demand a different approach perhaps from that developed in the past. Almost two years now have been spent on that aspect of the management problems of an organization of this kind. This has to do with loaned boats, for example. It has been the practice to lend boats or moneys to harbours. Obviously if you lend boating moneys to harbours where there is not sufficient revenue to pay interest then up accumulates the interest and up goes the deficit figure. And to the layman looking at these figures there tends to be some confusion as to its significance.

The Auditor General has had comments on this subject in his annual reports and at the last meeting of the Public Accounts Committee he undertook to find solutions to that problem. How should the capital be provided to the National Harbours Board? We are about ready now to carry on discussions with the Treasury Board officials to reach a conclusion on that subject.

We should say, Mr. Chairman, that the Board did start out with every harbour it inherited with tremendous arrears of interest There were some partial write-offs and there was a policy of trying to build up replacement funds at the same time. This became unrealistic as time went on, so that it is a little premature to analyze what has happened except to say that there are changes to be made in the method of reporting.

If you want any specific explanation on any specific point I will be happy to deal with it now.

Mr. Schreyer: No. My question was prompted by the fact that in 1966, after allowing for depreciation and interest costs, your net operating position was $1.2 million deficit. I was wondering whether in this year it has changed substantially one way or the other. That is for the year in which the estimates are before us.

Mr. Lloyd: Dealing with 1967?

Mr. Schreyer: Yes.

Mr. Lloyd: If you take the over-all expenditures you find, for example, that Vancouver shows an almost break-even position—a little better perhaps for 1967. You find that Montreal is about four years in arrears in interest which runs about $4 million a year and then you find that the remainder of the ports except Trois Rivières, Port Colborne and Port Prescott, which are grain elevator ports, except for those three, the rest of them are all in deficit positions. In fact, Halifax and St. Jean, Quebec, are not paying any interest whatsoever. But the interest is shown as an expense. Obviously if you have drawn your accounts to show huge capital loan liabilities and do not adjust them to reality, you keep on accumulating these interest charges, and the deficit just gets bigger and the interest arrears get bigger. What you have in a consolidated statement is just precisely that: you have a net figure. You have to look at each port to understand the significance of the income earning capacity, if you like, or the deficit incurring situation at each unit.

• 1210

Mr. Schreyer: Mr. Chairman, if you will allow me one more question I will then pass.

The Chairman: Yes, go ahead.

Mr. Schreyer: Mr. Mann, can you explain the case of the port of Churchill. It had a good reputation over the years for having a very short period of turn-around time—short periods of delay. The shipowners were quite happy. But in the last two years or so this

good reputation has slipped somewhat. There have been more lengthy delays, longer turnaround times. Can you say why this has happened?

Mr. Mann: I do not quite know whether that really is so, Mr. Schreyer, and I am not casting any aspersions on your statement...

Mr. Schreyer: Well, I am only going by reports.

Mr. Mann: Yes. I think one of the things that should be borne in mind is that the nature of vessels that present themselves—and this can be readily ascertained from the number of vessels we get—is changing. Instead of getting the smaller vessels that used to carry the grain, we are now getting very much larger vessels and these, by the nature of things, take a bigger load and stay in port a little longer. Whether the statement was based on that or not I cannot tell you.

Mr. Schreyer: I take it from your answer that the problem, if it does exist, is not so severe that it has been brought to your attention.

Mr. Mann: We have been able, Mr. Schreyer, to ship out of Churchill every bushel of grain that the Wheat Board has been able to sell, or offer for sale, through Churchill and for which sales were made. The port has not suffered because of anything inherent in it. We have fulfilled our requirements in so far as the Wheat Board is concerned.

Mr. Schreyer: Thank you.

The Chairman: Mr. Bell.

Mr. Bell: Mr. Chairman, I want to explore this business of the establishment of container facilities and its relationship to the National Harbours Board. Many of my questions have been asked, and asked quite well, by previous questioners.

First of all, I would like to say that I have always felt that the National Harbours Board—just so that I will not be misunderstood—has always been quite fair in not preferring one port over another, particularly where you have this unique competitive situation in eastern Canada. But I do want to satisfy myself that at least in these new modern moves which may mean the life and death of the ports, the Harbours Board is being scrupulously fair in these arrangements that take place.

First of all, Mr. Mann, in just going over what you have said, am I right in assuming that generally speaking a particular steamship line, probably the leader of a consortium—and you have mentioned CPS in the case of Quebec and the Manchester lines in Montreal—will decide for various reasons that it likes a port for what it has in mind and it comes to the National Harbours Board and says: "What have you to offer? Let us sit down and talk business." I believe that that is substantially right; that there is generally no previous other contact.

Then what part of the matters that they are concerned in would you talk about? For example, how important is the availability of your services? How about wharfage rates? How about labour? Can you give us a little more detail there, please?

Mr. Mann: I can make a stab at it. Monsieur le président. Let us come to the concrete case that Mr. Bell referred to. Since there have been enough press statements about the matter we would have no hesitation in saying here that interest has been evinced by a container service by a consortium consisting of Clarke Traffic Services, a Canadian company; Bristol City Line, a British company; and Compagnie Maritime Belge, a Belgian company, in a container service using one of the two Atlantic ports under our jurisdiction as a stop-off point on the way to the United States.

The companies involved are conscious and aware, and have been made aware, of the existence of physical facilities for the handling of containers and we are currently discussing with the steamship interests, with involvement of local groups in Halifax and Saint John, the very naughty question of how the rabbit should run.

Mr. Bell: There has not been any decision yet?

Mr. Mann: There has been no decision as of 12.14 p.m. of this day.

Mr. Bell: Well, this leads me to repeat my question. After these initial examinations have been made by them, they come to you people and you talk to them. First of all, is there a final agreement signed? What kind of agreement do you sign for the use of the wharves? I do not exactly understand this agreement. Can you give me an idea of the agreement that you sign, in general terms, in Montreal and Quebec City? Let us get away from Halifax and Saint John because we are

friendly rivals—at least the members of Parliament are.

• 1215

Mr. Mann: I cannot tell you, Mr. Bell, what agreement we have signed in Quebec City because we have not started the final negotiations or even the initial negotiations with Canadian Pacific. We have had some preliminary talks, but there have been no negotiations on any agreement.

In Montreal, as can be witnessed by the fact that the first containership has already been called, we have an agreement with Manchester Liners, and this is for the lease of the facility and it is a long-term lease.

What needs to be done obviously in the case of one or the other of the two Atlantic ports under our jurisdiction, Halifax and Saint John, is to come to an agreement following a determination by the users of which port they want for the use of a container terminal. What we must do, and must be sure we do, and are in fact doing, is to be absolutely certain that any conditions we want them to meet are on all fours with regard to those ports, because this Board certainly will not—and I want to emphasize this very strongly—will not discriminate between either Halifax or Saint John. Our offer will be fair for both ports, and will be on all fours insofar as both ports are concerned.

Mr. Bell: Are you involved in any way in railway rates, rates of any kind other than the wharfage? I assume the wharfage is not a factor: they are set rates.

Mr. Mann: No. As a Board we are not and cannot be involved in the railway rates.

Mr. Bell: And can you tell me what you said about the cranes? Is your policy one of no cranes at the moment, or have you any information in that regard about the future?

Mr. Mann: I am sorry...

Mr. Bell: What did you say about che connection of National Harbours Board and cranes?

Mr. Mann: Cranes?

Mr. Bell: Yes, cranes.

Mr. Mann: I am sorry, you had me on trains there because of railway rates. The policy of the Board is that, unless the company chooses to finance it, which is the European pattern, we will make available a crane and lease it to the company operating the service, and hopefully get our money back over a reasonable period of time.

Mr. Skoberg: Who requested the crane at Saint John which was turned down by the National Harbours Board?

Mr. Mann: We had a meeting with a number of local interests—it was a very constructive meeting—in Saint John some little while ago at which the province and the city were also represented, and which a request was made to us to build a container crane. At the end of the that discussion, there was quite general consensus that it was rather difficult to do this unless there was some reasonably anticipated demand for it. I read earlier the policy of the Port of Hamburg on this, and our policy is no different.

At the time the request was made to us there was not even a nibble of a service, and it was represented to us that if we put the crane up it would attract the traffic. This does not necessarily follow. Had we had the crane up in Saint John it would not necessarily have made any difference to Canadian Pacific in its choice of Quebec as the terminal for its service, which was arrivd at quite independently of the existence of a crane, and was indeed decided before any crane existed in Quebec.

• 1220

So it was this—it was not the refusal to build a crane. It was an attempt by us to communicate to the people in Saint John that you just do not build these things in thin air. You must have some reasonable expectation of a demand for it. It does not mean you have got to have it signed with a double signature and an ironclad guarantee, but it does mean that you should have some hope that this monumental structure you build will be used, and at that time we did not have that hope.

Mr. Bell: In other words, a crane at the moment is not a factor, a major factor, in the negotiations. Would you agree with that Mr. Mann?

Mr. Mann: I beg your pardon.

Mr. Bell: The availability of a crane is not the major thing at the moment in these negotiations.

Mr. Mann: Not at all.

Mr. Bell: Well, I will try to sum up what I have been questioning Mr. Mann on. I have

had absolutely no experience at all—very few have had—but I see three major factors when a consortium is faced with deciding on a port. There are the facilities, of which you are the major supplier; there is a labour factor; and there are the general transportation costs.

I do not know whether that is fair, but these are the three major things, and you have told us here today and past experience has certainly born it out, that you cannot prefer one port over another, and you really are offering apart from some geography and this and that, almost the same facilities in each port. So if there is competition—and of course when the St. Lawrence comes into competition with Halifax and Saint John there are many other factors—but if there is competition between these ports, it is merely a case of a labour problem as much as anything, and the insurmountable transportation costs and rates. In other words,what you are trying to say is that you are out of the picture once you have set up your facilities and made the offer.

Mr. Mann: Yes. If we have facilities available which serve the trade that demands them, then really the trade must make up its mind on the combination of factors that you, Mr. Bell, have pointed out, namely the cost to the steamship company of reaching port A vis-à-vis port B, the labour situation at port A vis-à-vis the other, and the inland rate and service factor from one port vis-à-vis another.

Mr. Bell: Would you foresee the time when all your ports will have these container facilities about which we have been talking?

Mr. Mann: When all ports will...

Mr. Bell: When all your Eastern Canadian ports will have some of these containers?

Mr. Mann: I do not think that all ports will have container facilities. This, I think, is why the interest is so very great, and legitimately so very great, because we are in a new ball game.

Now, again, there are different schools of thought. There is the loads centre school of thought which says that only a couple of ports on the North American continent will attract everything. Proof? None.

There is the other theory that points out that in the European context most major ports have attracted at least one major container service. That is an empirical proof. Now, how that is going to look in 1985 I do not think any one of us can say, but we do know this—and we, on the Board, are very conscious of it—that we must go on with our efforts to provide container facilities that can be offered to steamship companies and that we must do so in co-operation with the steamship companies and the inland carriers. Because, as we mentioned earlier, this is a systems approach we are now talking about. The unilateral decision of a port authority is completely insignificant.

Mr. Bell: Then it is a fact. The one that gets the initial early start in these container facilities will be in a position to get into the large land—bridge concept of bulk containerization? Or do you think that that is something different?

• 1225

Mr. Mann: You have just used a new concept, Mr. Bell, that of the land—brige. With your permission, sir, I will come back to that in one second.

The Chairman: Go ahead.

Mr. Mann: It is not necessarily so, that a port that gets a container service in 1969 or 1970 is going to be the only port that is going to have that. If that were so, Canadian Pacific, knowing full well what Manchester Liners plans were for Montreal, would have gone to Montreal. The proof of the pudding is right there. They have chosen not to go to Montreal. They have chosen to go to Quebec.

It therefore follows that if you have a...I should not be so didactic. It could be the case, Mr. Bell, that if one Atlantic port gets a container service in 1969 or 1970, the other one might very well get one in 1971. Because it may be to the advantage of another consortium of steamship companies, running cellular-hold ships in a full container service, to prefer the other one.

Mr. Bell: We are talking about the future, but I think it is important, Mr. Chairman. I find myself confused.

You are going to have three containerized ports in Eastern Canada, one in Montreal, one in Quebec City and one in Halifax or Saint John. At least you are going to have these, and I think it is reasonable to assume there will be more.

Mr. Mann: We are going to have three container facilities. That is not to say that we have three containerized ports. Because, coexisting with container movements, will be

conventional break bulk movements and also side port movements. You have this co-existence.

Mr. Bell: At most, then, if there are only three of these types of facility ports, all you have done is that you have knocked out one. There has been no decision on whether it is going to be Montreal, Quebec or one of the other two. It is just the case that one, Halifax or Saint John, will have been knocked out of the race, and it will still go on for the big future business.

Mr. Mann: Yes; and I do not know that you can say that it has been knocked out. For the purposes of the concrete traffic that we can now see—and we are talking about the consortium traffic that I mentioned earlier—there is a race on now between Halifax and Saint John. I do not think we can unilaterally say go here or go there.

Mr. Bell: No; and I do not want to start that. All through the years we have always competed in various ways; and there are differences in types of cargo, and so on.

However, I will leave the questioning, and I wish to thank Mr. Mann for this answers.

I do suggest that, as it is shaping up now, indirectly, perhaps the National Harbours Board cannot do anything about it; but by not doing anything it may be that one national port for which you have responsibility may be left out of this business.

I do not know where that leaves your final responsibility and authority, but probably this matter of ports is all under review anyway.

Mr. Mann: It is difficult to see what one can do. Does one bring into being two fully containerized facilities at Halifax and Saint John and then hope that, *expost facto*, a company will use them; and, meanwhile, if it does not work out that way, one of these facilities would be used—and, moreover, has been, in a sense, tailored to the demands of a particular service and may not be responsive to the demands of another one? Is that the course of action we should follow?

Mr. Bell: I do not know. I do not criticize the National Harbours Board as much as others who have said that you have not done enough in the promotional field; but by not doing anything you have caused provincial governments and cities and everybody else—the lines themselves—to be involved in facilities, and this may turn out to the detriment of ports that were supposed to be getting equal treatment under this...

• 1230

Mr. Mann: I have a little problem, Mr. Chairman, with the phrase "by not doing anything". I do not quite know...

Mr. Bell: By not building up facilities in one port more than the other, if you like. Undoubtedly, we have lost some international business to the United States because we have not preferred one port over the other.

Mr. Mann: Mr. Bell, we have had available in Saint John for, I believe, five years, Long Wharf, and when we built the shed on it we built a 50 foot apron, against the opinions of some of the local people. We did that because we thought that when container movements came about we would have enough room to put a container crane in front of that and use the wharf and the shed as a break bulk shed. We looked forward that far.

That has been in existence for how long five or six years?

Mr. L. R. Stratton (Chief Engineer, National Harbours Board): Roughly five years.

Mr. Mann: This has been known, and yet no container service has offered.

In addition to Long Wharf, which I think has roughly 11 acres, we now have available the Pier 1 Navy Island site with a total of 17 acres, which is more than ample for any container facility; and this is known.

We found, when dealing with the container facility for Manchester Liners in Montreal that our engineers had to work very closely with their engineers and operational people in order to provide a facility the traffic flow of which was geared to optimize that operation.

You cannot just build these on a mass production basis, because the service requirements are different. The Manchester Liners ships will have a capacity of 500 containers; the ones the consortium talks about are very much larger than that; so obviously the design requirements are different.

What we have done, and done repeatedly and frequently and intensively has been to point out to steamship companies the availability of these sites.

Mr. Bell: That is fine, Mr. Chairman. In many years, I am glad the National Harbours Board has not decided on one big eastern

Canadian port, but I am simply saying we may have to pay a price internationally by having at least three now still in this competitive field.

Mr. Mann: I do not think we will, quite frankly. The United States has gone the same way, and so have the Europeans. You could theoretically make a case for the European Common Market to concentrate on one port, be it Rotterdam, Antwerp, Amsterdam or Hamburg. They have chosen not to do that. As a consequence, there are container facilities built at each one of them, and at Rotterdam and Antwerp all that the port authority does is to provide a wharf and an area and say to private enterprise, "Be our guests. We will lease it to you. You pay for the cranes, the sheds, the van carriers, and so on". They have no involvements in this at all. That is it. And it is private enterprise that does these things.

Mr. Bell: Thank you, Mr. Chairman.

The Chairman: Mr. Hogarth?

Mr. Hogarth: What is the present projected size of the part of Roberts port now being constructed?

Mr. Mann: The first phase has a site of approximately 50 acres, with a causeway connecting it to the uplands.

Mr. Hogarth: What is the projected cost?

Mr. Mann: The contract for phase one was three million, eight hundred and forty-two thousand and some odd dollars.

Mr. Hogarth: Where did that money come from?

Mr. Mann: The money was furnished by the National Harbours Board.

Mr. Hogarth: Was any other port budget depreciated because of that cost? Was it taken from the port of Vancouver's budget?

Mr. Mann: I might say, Mr. Hogarth, that the Port of Roberts Bank is part of the Port of Vancouver, so it was . . .

• 1235

Mr. Hogarth: Was it taken from that part of the port of Vancouver that is in the city of Vancouver?

Mr. Mann: Yes, it was taken out of our consolidated funds for port of Vancouver.

Mr. Hogarth: What is the projected depth of Roberts port?

Mr. Mann: Sixty-five feet below low water.

Mr. Hogarth: How many harbours in Japan have a depth of 65 feet?

Mr. Mann: Very few at the moment.

Mr. Hogarth: Are there any?

Mr. Mann: We have not got the up to date list, sir, but we do know that the companies receiving the coal that is under contract from the Fernie-Nichel area, people like Yawato Steel, and so on, will have available . . .

Mr. Hogarth: Will it have a depth of 65 feet?

Mr. Mann: It will have a depth of approximately that.

Mr. Hogarth: How many ports on the East Coast of Canada are projected to have a depth of 65 feet?

Mr. Mann: Halifax now has a depth of over 70 feet. I think that is about the major port, and we have sites available at other locations that have that depth.

Mr. Hogarth: Are you planning building at those sites?

Mr. Mann: If there is any reasonable demand for it, sir, we will.

Mr. Hogarth: I see. Are there any plans now to do it?

Mr. Mann: Not at the moment. There is no problem at Halifax because it is already in existence.

Mr. Hogarth: Has an agreement been entered into by the National Harbours Board with the Kaiser Steel Corporation for the operation of Roberts Bank?

Mr. Mann: There have been discussions about such an agreement; the agreement has not yet received the approval of the Government of Canada.

Mr. Hogarth: Have proposals been made by the Kaiser Steel Corporation concerning the operation agreement with respect to Roberts Bank?

Mr Mann: Yes.

Mr. Hogarth: What is the proposed term?

Mr. Mann: Mr. Chairman, I am in your hands. Certainly it is not the wish of the Board to hold anything back, but the documentation concerning the discussions between the Board and Kaiser Coal Canada Limited is before the Governor in Council now. Whether we are permitted under these circumstances to talk about it, I am not sure.

Mr. Hogarth: The House made an Order three weeks ago that allowed for the tabling of these documents and I submit there is no privilege with regard to them.

Mr. Mann: Mr. Chairman, perhaps this is a matter that should be directed to the Minister.

Mr. Hogarth: It is an Order in the House to table these.

The Chairman: Yes.

Mr. Hogarth: Therefore, I think I can inquire from this witness what those documents might contain, if they ever get filed. What is the proposed term in those agreements?

Mr. Mann: Mr. Chairman, I am sorry, I am in your hands. The propsed term...

Mr. Hogarth: I want to know, what is the proposed term of the occupation of Roberts Bank port by the Kaiser Steel Corporation in the proposal that is at present before the government.

Mr. Mann: Let me assure you first of all that we are not trying to evade anything because I do not think we have anything to evade.

Mr. Hogarth: Of course not, so that is the proposed term?

Mr. Mann: Now, second—may I?

Mr. Hogarth: Yes, by all means.

Mr. Mann: Second, we have not at this point got the approval of the Government of Canada for the discussion that we have had with Kaiser Coal, so even if one said that the proposed term was X years and the Government of Canada does not sanction this sort of thing, we really are dealing with...

Mr. Hogarth: I want to know what the proposed term is that they might or might not sanction.

Mr. Mann: Mr. Chairman, if I am directed by the Committee to give this information I will, of course, be in the hands of the Committee.

Mr. Hogarth: I ask, Mr. Chairman, whether the Committee is entitled to have this information? I suggest it should be.

The Chairman: If there is an Order in the House I do not think Mr. Mann is obligated to answer this question.

Mr. Hogarth: With respect, Mr. Chairman, the documents have not yet been filed despite the fact that the Order was made some weeks ago, and it is my submission that if they are not going to file the documents in due course I can at least ask this witness what he knows about it. There is no privilege that I can think of, none whatsoever, and Parliament is entitled to know these things.

The Chairman: Yes, I know. Is it the opinion of the Committee that Mr. Mann should answer this question?

Mr. Hogarth: There is only one Order under dispute and that is the confidential memorandum between the government employees and the Minister, but the orders were made on the motion of Mrs. MacInnis and on the motion of Mr. Rose and all documents were to be tabled, with the exception of the confidential ones. I am not asking about any confidential documents. I want to know what Kaiser has proposed.

• 1240

Mr. Mann: We are dealing at this juncture with a document that is before Council. Now, whether or not that is a confidential document perhaps is a matter for determination by the law officers of the Crown.

The Chairman: So far as I know there are no confidential documents involved in this.

Mr. Hogarth: No proposal by the Kaiser Steel Corporation to the Government of Canada could possibly be confidential. I am not saying that anybody is to reveal what advice has been given.

The Chairman: Mr. Allmand?

Mr. Allmand: Will this Committee reconvene on Harbours Board matters after lunch or later or do you intend to finish everything by noon?

The Chairman: We would like to finish this by 1 o'clock, if it is possible.

Mr. Allmand: I see; I was going to say that if we were not going to finish perhaps you as Chairman could take this request under advisement, but if you are going to finish by noon you had better make a decision right away.

The Chairman: If the Committee agrees, I think you could answer, Mr. Mann, to the best of your ability as you have done so far.

Mr. Mann: Is that a direction of the Committee, sir?

The Chairman: Do you all agree?

Mr. Allmand: Mr. Chairman, I for one would abstain because I am not familiar with the document in question, and if there is some dispute I do not consider myself competent to vote on that particular question.

The Chairman: To tell you the truth, I am not very familiar myself. I am putting this to the Committee, and if all the Committee are in favour I would let Mr. Mann continue and give his answer.

Mr. Lessard (LaSalle): Mr. Chairman, I do not think we could force anyone. I think we should follow the idea of Mr. Allmand to leave it up to you to inquire at noon whether you could allow Mr. Mann to give this information.

The Chairman: Mr. Skoberg?

Mr. Skoberg: Mr. Chairman, Mr. Mann said this is confidential information and naturally he will not give it. If it is not confidential then we are entitled to an answer here and now. There is only one way of looking at it, either it is or it is not. Now, if has been tabled as such and the question, in my opinion, should be answered right here, but I believe it is up to Mr. Mann to say whether this is confidential or not.

Mr. Allmand: Mr. Chairman, there is also the point that Mr. Hogarth brings up that there has been an Order for return. I am not familiar enough with the Order for return to know whether it refers explicitly to these particular documents.

Mr. Hogarth: It refers to documents in general.

Mr. Mann: Perhaps I will describe the situation as it exists and then the Committee can determine the confidentiality or otherwise of it. The situation as it exists now is that officers of the National Harbours Board have had discussions with officers of Kaiser Coal Canada Limited concerning a lease of property on Roberts Bank in Vancouver. These discussions have led to some conclusions by the two parties that have been embodied in a document now before the Governor in Council.

Documents before the Governor in Council are clearly labelled "Confidential", and "Property of the Government of Canada". The fact of the matter is that as of now the Governor in Council has not issued an Order in Council, so one could make the deduction that until such time as an Order in Council exists there is no agreement between Kaiser Coal Canada Limited and National Harbours Board because we have no capacity to make such an agreement. It could therefore be well the case that if the Governor in Council so directs we must re-open negotiations with Kaiser Coal or forget the whole thing.

At the moment the only document we have is one clearly labelled "Property of the Government of Canada; Confidential to the Governor in Council". This is the factual situation. We have no wish to hold anything back, but I wonder whether this is not a matter which should be put either to the law officers of the Crown or to our Minister for determination. I feel that our capacity to act on Mr. Hogarth's request is somewhat restricted, with all due respect, Mr. Hogarth.

• 1245

The Chairman: Does this give you the explanation?

Mr. Hogarth: No, sir. I cannot see any privilege connected with these proposals at all. I think we are entitled to have the information pertaining to the negotiations, what the proposed term is, what the proposed rent is, what restrictions are on the use of this port, what options to renew might be in this lease and what options they have on other lands other than the acreage that Mr. Mann has described. I think that Parliament is entitled to know these things, and I can see no privilege connected with it at all.

Mr. Mann: May I make a suggestion, Mr. Chairman, that might be helpful. If it is acceptable, the problem could be put to the Minister of Transport and if we are authorized so to do we will be more than happy to supply the answer in writing and to subject ourselves to any additional questioning by the Committee. We would be delighted to do that.

This might provide a solution to the problem that we are facing now.

Mr. Hogarth: Mr. Chairman, I take the position that the disclosure of these documents should not be left to the discretion of the Minister of Transport. This is a Committee of Parliament, we are inquiring into the operations of the National Harbours Board, and I think we are entitled to know all aspects of its operations, including the nature of these negotiations and what draft agreement has been put forward.

The Chairman: Would you permit your Chairman ample time to get advice on this.

Mr. Hogarth: Of course.

Mr. Allmand: So that we will not waste time, could I suggest that we reconvene at two o'clock, a half hour before Parliament sits to dispose of this one point. This will give the Chairman time over the lunch period to take this point under advisement. But let us finish up the rest of it now.

The Chairman: Is that all right?

Mr. Hogarth: I am quite agreeable to the witness getting advice but I will never be agreeable to his withholding the documents.

In any event, Mr. Mann, you were quoted in the Vancouver *Sun Province* on either April 8 or April 9 of this year to the effect that there would be one communication channel between the mainland proper and Roberts Port. Was that a correct quote?

Mr. Mann: This was our hope and policy—to the extent of course that we cannot influence that; it is beyond us. We felt, and we made it quite clear at the time, that we wanted to avoid a multiplicity of communication channels to the port.

Mr. Hogarth: Yes, I appreciate that. I am merely asking if you were correctly quoted along that line.

Mr. Mann: I have not the quote in front of me sir, as I—

Mr. Hogarth: I say that you were quoted to the effect that there would be one communication channel between the mainland proper and the port. Is that a correct quotation?

Mr. Mann: Yes, inasmuch as this pertains to the land under our jurisdiction, which is the causeway, there will be one communication channel to the port.

Mr. Hogarth: You were further quoted in the same article as saying that there would be consultations with the lower mainland Regional Planning Board before that channel was determined. Was that a correct quote?

Mr. Mann: I do not know.

Mr. Hogarth: Does it appear inconsistent with what you said at the time?

Mr. Mann: I do not think so, because...

Mr. Hogarth: I am sorry, witness. Why would the lower mainland Regional Planning board be particularly interested in the location of the causeway which is only a few hundred yards long?

Mr. Mann: They are not.

Mr. Hogarth: No, so your reference was, was it not, to the whole communication channel to the port through the lower mainland?

Mr. Mann: That was the hope that we expressed at the time.

Mr. Hogarth: What communications or consultations did the National Harbours Board have with respect to the location of that channel?

Mr. Mann: We had no direct consultations with the lower mainland Regional Planning Board on the channel itself for the very simple fact...

Mr. Hogarth: All right, I just want yes or no answers so we can get through this quickly. Do you have any communications with them at all?

Mr. Mann: With all due respect, if I may, I realize that yes and no answers are easy but they are also perhaps somewhat misleading.

Mr. Hogarth: All right, if you wish to qualify, go ahead.

Mr. Mann: I am not qualifying, I would like to explain if I may. The location of the railway line—and this is what we are talking about...

Mr. Hogarth: Yes.

Mr. Mann: ... is not one within the determination of the Nationa Harbours Board. We can only go as far as the port facility. We can go one step further, and we have gone one step further, by expressing a hope that there would be an efficient communication channel—preferably one—to that port.

• 1250

Mr. Hogarth: If it was not something over which the National Harbours Board had any authority, why did you suggest in April that the lower mainland Regional Planning Board would be consulted?

Mr. Mann: As I said, I would have to see the thing in its context.

Mr. Hogarth: Perhaps we can get that at two o'clock too.

Mr. Mann: Yes, perhaps we can.

Mr. Hogarth: Tell me why it is that the jurisdictional question as between the province and the federal government was not settled before Roberts Bank Port was built?

Mr. Mann: I cannot tell you that because presumably conversations have been taking place between the province and the federal government on this matter and no conclusion was reached.

Mr. Hogarth: But why was it not settled before the port was constructed?

Mr. Mann: I suppose one or the other, or both parties were not able to come to a settlement. I think that is the factual explanation of the thing.

Mr. Hogarth: Is it not so that the federal government has moved into the expenditure of these millions of dollars in a questionable area of jurisdiction?

Mr. Mann: In the opinion of the law officers of the Crown the jurisdiction was not questionable, Mr. Hogarth.

Mr. Hogarth: I see. Then there is no problem between the federal government and the provincial government in the federal government's eyes with respect to who owns or who is going to operate this port.

Mr. Mann: There is no problem in the opinion of the law officers of the Crown in the proprietary rights of the Government of Canada for the area in which the port facilities—that is, the 50 acres—are located. I am sorry, let me correct myself: There is no problem equally with regard to the property rights over part of the causeway, namely that part that lies between low water and high water. That is clearly within provincial proprietary rights other than any existence of private rights that may be there.

Mr. Hogarth: Where does the problem arise?

Mr. Mann: The problem arises in coming to a final agreement on the area between low water and high water. That is the chief problem in so far as we are concerned.

Mr. Hogarth: And why was that not resolved before the port was built?

Mr. Mann: I cannot answer that. It was just not resolved. Discussions were not fruitful.

Mr. Hogarth: Suppose they end up adverse to the federal government's position, what effect will that have on the port?

Mr. Mann: I am sorry, sir, but that is a hypothetical question and I cannot answer it.

Mr. Hogarth: Well that is a simple question, Mr. Mann.

Mr. Mann: I cannot answer it.

Mr. Hogarth: If they are determined to be entirely within the provincial jurisdiction what effect will that have on the operation of this port?

Mr. Mann: It will have the effect which will result from the determination of a policy by the Government of Canada which I am not familiar with and none of our Board is familiar with at this point because it has not been made.

Mr. Hogarth: What is the maximum coal capacity for shipment from the Vancouver city harbour?

Mr. Mann: For coal?

Mr. Hogarth: Yes.

Mr. Mann: We would have to get the information, Mr. Hogarth.

Mr. Hogarth: Could you do that for me?

Mr. Mann: Could we have your question rephrased, Mr. Hogarth?

Mr. Hogarth: I want to know what amount of bulk coal could be shipped from Vancouver city harbour.

Mr. Mann: Yes.

Mr. Hogarth: I mean what its capacity is for the shipment of bulk coal?

Mr. Mann: I can tell you now it is a little difficult to answer because you are putting it

on bulk coal rather than bulk cargo. We have bulk cargo figures but I do not think, sir, that we have the bulk coal figures.

Mr. Hogarth: They could be obtained, could they?

Mr. Mann: The bulk cargo is I think what you are probably interested in.

Mr. Hogarth: I am interested in coal.

Mr. Mann: Yes.

Mr. Hogarth: Bulk coal shipments from the Vancouver city harbour.

Mr. Mann: I do not think we have the coal breakout.

Mr. Hogarth: Are you telling us that Roberts port was built without knowing how much capacity the Vancouver city harbour could handle?

Mr. Mann: Not at all, sir. What I am saying or perhaps should have said a few minutes earlier, and I am sorry I am a little late in this, is that it was part of the contract between the Japanese coal buyers and the providers of the coal, namely Kaiser Coal Canada Limited, that a port at Roberts Bank be available for the shipments. It was in response to that . . .

• 1255

Mr. Hogarth: The result of that is that the Japanese dictated the construction of Roberts Bank port.

Mr. Mann: That is an inference which you are drawing, sir.

Mr. Hogarth: That is a fair inference, is it not?

Mr. Mann: I do not know whether it is fair or not. It is a fact that the port is being built in fulfillment of a contract.

Mr. Hogarth: Why could they not ship out of Vancouver harbour? What reason did the Japanese give?

Mr. Mann: The reason that they gave was that they would have ships which would draw in excess of the currently available draft at first narrows. Also, they actually did not want to go beyond the second narrows and since the shipment originated on the Canadian Pacific Railway there may have been a connection between the fact that the north shore of Vancouver is served by Canadian National Railways and Port Moody is served by Canadian Pacific Railway.

I was not privy to the conversations and the negotiations so it is very difficult for us to say what the exact reasons were.

Mr. Hogarth: Mr. Chairman, I will return at 2 o'clock with regard to the questions pertaining to the Kaiser Agreement.

Are you privy, sir, to the agreement between the railway companies with respect to the operation of this port?

Mr. Mann: No.

Mr. Hogarth: Have you any knowledge of it at all?

Mr. Mann: I have heard about it.

Mr. Hogarth: Do you know what it contains?

Mr. Mann: I have a rough idea, sir.

Mr. Hogarth: Do you take the same position on that agreement as you have with respect to the Kaiser Agreement?

Mr. Mann: It is even worse, because it is not even an agreement to which we are a party.

Mr. Hogarth: I appreciate that, but I am asking about things of which you have knowledge. Is your position with respect to that agreement the same as the position you have taken with respect to the Kaiser Agreement?

Mr. Mann: I would think that it would have to be, sir. Apart from that I would be talking from an incomplete knowledge, and it might be more useful to the Committee to have as witnesses officers of the railway companies concerned who can give more authoritative information.

Mr. Hogarth: I think we would determine from the little that we can learn of it from you as to whether we should pursue the matter further. Would you seek advice on that, too, during the noon hour recess?

Mr. Lessard (LaSalle): Most of my questions were asked by Mr. Bell, but I would still like to ask one question of Mr. Mann regarding the National Harbours Board. Do you have any plans to increase the winter traffic at the Harbours Board in Montreal?

Mr. Mann: Mr. Lessard, the plans are not ones that we can make. We have the facilities available; they can be used by commerce. The

extent to which they are used is dictated by a number of factors: the availability of high-strengthened ships, particularly to Class 1 Lloyd specifications; the level of the insurance premiums; and the state of the river in the winter, whether it is open or not. However, like a 24-hour pharmacy, we are open year-round, and any ship that presents itself will and can be handled.

Mr. Lessard (LaSalle): Are you expecting an increase for 1969-70?

Mr. Mann: I do not have the latest figures. We do know that Louritzen Lines have pulled out, but that the Russians are coming in. I am just advised that it will be about the same.

Mr. Lessard (LaSalle): Are you providing any facilities for the traffic for the winter at the moment?

Mr. Mann: I am sorry, I do not quite know what you have in mind, Mr. Lessard, as far as facilities are concerned. We have the facilities there in so far as we control them, namely the berths, the sheds and the wharfs, the railway and the road system, and the labour force. Is there anything else you had in mind, sir?

Mr. Allmand: I just read an article in the newspaper the other day that some new line intended to compete by putting in a new set of icebreaking ships or ships that could withstand...

Mr. Mann: Mr. Allmand, this may be a reference to the container service by *Manchester Liners.*

Mr. Allmand: That is right; it is.

Mr. Mann: Manchester Liners are using this route the year round, and their ships are strengthened to Class 1 Lloyd specifications.

Mr. Allmand: That would mean there would be an increase in winter traffic in that area anyway.

• 1300

Mr. Mann: There will certainly be a new ball game because you have a container service year-round to Montreal.

Mr. Allmand: But as far as the Harbours Board itself is concerned, if there is an increase in winter traffic, the Harbours Board is prepared to handle it?

Mr. Mann: We always have been, and we can.

Mr. Lessard: Mr. Chairman, are we coming back at 2 o'clock, or only after the Orders of the Day?

The Chairman: I do not think that we will have very much time between 2 o'clock and 2.30. We cannot sit while the House is sitting. We have no authority to sit while the House is sitting. Could we have another session with the Harbours Board at another date? Are you available?

Mr. Mann: We would be more than delighted, sir; we are available to the Committee at any time.

The Chairman: I think we should have another session—I am in the hands of the Committee—because I cannot see that we will have very much time between 2 o'clock and 2.30.

Mr. Skoberg: Mr. Chairman, in addition to that, I wonder whether or not the steering committee would take into consideration, in co-operation with the Harbours Board, arranging a tour of some of the facilities of these containers some time in the future. Could this be arranged if it was convenient? I am sure it would be interesting.

The Chairman: It is an excellent suggestion. As a matter of fact we have to ask for an order of the House to hear the brief presented from the Maritimes, and maybe at the same time we could take the opportunity of visiting the ports or construction that has already begun and where there are containers already handled.

Mr. Skoberg: I would not want to complicate that with the Atlantic hearings.

The Chairman: No, but perhaps at the same time it could be arranged that we visit the container facility ports.

Mr. Mann: Mr. Chairman, if it should be the wish of the Committee to see the container operation that now exists in Montreal, if you could give us a convenient date which we can co-ordinate with the presence of a vessel there, which I think would make it more interesting, I am sure we could make arrangements to have the Committee tour the facility and get proper explanations as to how it works—whenever you notify us.

Mr. Lessard (LaSalle): We should leave it to the steering committee to decide with the Harbours Board.

The Chairman: Would that be all right?

As I explained earlier we will not have very much time to discuss these things this afternoon.

Mr. Allmand: The only reason that I suggested 2 o'clock was that I thought that was the only thing, but since there are many things and many other people, perhaps we should come back at a time to be decided upon between your steering committee and the witnesses.

The Chairman: I think next Tuesday is a day that is pretty well filled up, but anyway we can discuss that at the steering committee.

An hon. Member: What about tomorrow morning at 9.30?

The Chairman: That is something that I cannot answer. Tomorrow there are other committees; quite a few committees are sitting tomorrow morning. We will discuss this with the steering committee and will advise you.

Mr. Thomas (Moncton): Mr. Chairman, just before we break up, what is the prospect of getting reports of these proceedings a little more quickly than we are now? We have had three meetings.

The Chairman: We run into some problems. As you know we cannot get these reports back until they are fully translated.

Mr. Thomas (Moncton): Could the English reports not be distributed first?

The Chairman: It was agreed upon earlier that we would wait until the translation was made and present both.

Mr. Thomas (Moncton): It is very difficult, for example when we have the same witness back on a second day. It would be nice to have a report of the proceedings of what went on the first time.

Mr. Allmand: We sought the authority of the House last Friday to set up the translating of these proceedings by using tapes. That would be much quicker. It was accepted as an order of the House on Friday.

The Chairman: As soon as we can get the reports you will have them. I think the report of the first sitting will be out today or tomorrow. As you know some other committees have priority for translation. The translators are pretty busy translating two committees that I know of that have priority.

Mr. Allmand: Mr. Chairman, maybe our report could get precedence over that other place.

Mr. McCleave: I hope the Committee will give me the courtesy as a non-member of the Committee of asking a question. If, not, I do not know whether I could come back another day; I am too busy with committees for that, but I did put my name in.

• 1305

The Chairman: I did not have your name, Mr. McCleave, but as a non-member of the Committee you have questions to ask?

Mr. McCleave: I have one. Everything else has been answered—asked, really.

The Chairman: It depends on Mr. Mann. Are you prepared to answer?

Mr. McCleave: I would like to ask Mr. Mann whether, having seen the tenders for the Phase II development of Pier "C" in Halifax, he is satisfied that this can be kept on schedule—no flies in the ointment.

Mr. Mann: Perhaps I might ask our Chief Engineer to answer that, Mr. McCleave.

Mr. Stratton: The low tenderer has informed me that he expects to beat the completion date on that contract. He expects actually to finish that contract by the end of next year rather than in April of the following year.

Mr. McCleave: This is on the development for which tenders have just closed?

Mr. Stratton: That is right, sir. That is the whole wharf plus all the fill. It will not speed the job up too much because there we have to put in our water lines and pave, and we cannot pave in winter. There will be some pick-up, but not too much.

Mr. McCleave: Thank you.

The Chairman: The meeting is adjourned to the call of the Chair. Thank you, very much.

OFFICIAL REPORT OF MINUTES

OF

PROCEEDINGS AND EVIDENCE

This edition contains the English deliberations and/or a translation into English of the French.

Copies and complete sets are available to the public by subscription to the Queen's Printer. Cost varies according to Committees.

STANDING COMMITTEE

ON

TRANSPORT AND COMMUNICATIONS

Chairman: Mr. GUSTAVE BLOUIN

MINUTES OF PROCEEDINGS AND EVIDENCE

No. 5

FRIDAY, NOVEMBER 22, 1968

Revised Main Estimates for 1968-1969 relating to the National Harbours Board

WITNESSES:

From the National Harbours Board: Mr. H. A. Mann, Chairman; Mr. L. R. Stratton, Chief Engineer.

ROGER DUHAMEL, F.R.S.C.
QUEEN'S PRINTER AND CONTROLLER OF STATIONERY
OTTAWA, 1968

STANDING COMMITTEE ON TRANSPORT AND COMMUNICATIONS

Chairman: Mr. Gustave Blouin

Vice-Chairman: Mr. Pat Mahoney

and Messrs.

Allmand,	Jerome,	Nowlan,
Carter,	Laflamme,	Pringle,
Corbin,	Lessard (*LaSalle*),	Schreyer,
Douglas,	McGrath,	Serré,
Godin,	Nesbitt,	Skoberg,
Howe,	Noël,	Thomas (*Moncton*)—(20).

(Quorum 11)

Robert Normand,
Clerk of the Committee.

MINUTES OF PROCEEDINGS

FRIDAY, November 22, 1968.
(5)

The Standing Committee on Transport and Communications met this day at 9.30 a.m. The Chairman, Mr. Blouin, presided.

Members present: Messrs. Allmand, Blouin, Corbin, Douglas, Howe, Lessard (*La Salle*), Noël, Skoberg, Thomas (*Moncton*) (9).

Also present: Mrs. MacInnis and Messrs. Hogarth and McCleave.

In attendance: From the National Harbours Board: Messrs. H. A. Mann, Chairman of the Board; J. C. Lloyd, Member of the Board, L. R. Stratton, Chief Engineer and J. S. Dron, Chief Treasury Officer.

The Chairman referred to Mr. Mann's evidence of November 21, pertaining to certain confidential material. After a brief discussion thereon and having consulted with the proper persons, the Chairman ruled that the information sought was of a confidential nature and that further questioning thereon, would not be accepted by the Chair.

The Committee resumed consideration of item number 70—($7,450,000.)

At 11:00 a.m., the division bells ringing, item number 70 was allowed to stand and the Chairman adjourned the meeting until Thursday, November 28, 1968, at 9:30 a.m.

Robert Normand,
Clerk of the Committee.

29251—1½

EVIDENCE

(Recorded by Electronic Apparatus)

Friday, November 22, 1968.

• 0947

The Chairman: We do not have the quorum we need, but I think we can start. I understand there are some members still to arrive, and when they do we will have the necessary quorum and then we can regularize the meeting. Is that agreeable to the Committee?

Mr. Howe: Mr. Chairman, there are some members here who are not on the Committee.

The Chairman: Some of them are not on the regular members' list, but because of the fact that we have to return to the House at 11 o'clock, I think...

Mr. Allmand: I think we could hear the evidence, Mr. Chairman. If we have no resolutions to pass, I think we can hear evidence or ask questions.

The Chairman: As far as I know we have no resolutions. Is it agreeable to the Committee that we start?

Gentlemen, when we rose yesterday Mr. Hogarth had asked for information concerning contracts on the Roberts Bank Port construction job, and I replied that I would seek the information he wanted. The advice we have received is that these documents are of a confidential nature and therefore the information cannot be divulged.

Mr. Hogarth: First of all, Mr. Chairman, I would like to correct a remark I made yesterday. I spoke of two motions for return that were made in the House on October 31. One was on the motion of Mr. Rose, the member for Fraser Valley West, and the other on the motion of Mrs. MacInnis, the member for Vancouver-Kingsway. I led you to believe that this Kaiser contract which I am interested in was encompassed in those motions. I checked those motions last night and they only pertain to the railway agreements, that is to say, the railway communications and they would not apply to the Kaiser agreement. I wish to have my remarks in that connection corrected to that effect.

The Chairman: Do they pertain to the railway?

Mr. Hogarth: Yes, they only pertain to the railway...

The Chairman: Rather than the construction?

Mr. Hogarth: Yes. This agreement we are concerned with has nothing to do with the construction of the port. This is the operation of the port. The construction of the port is being carried out by the National Harbours Board but, as presently contemplated, the operation of the port will be done by the Kaiser Coal Corporation.

• 0950

Yesterday, I led you to believe that the order for return that had been agreed to in the House encompassed this Kaiser agreement. However, the order was not broad enough; it only encompassed the railway agreement.

I just wanted my remarks corrected to that effect. I take it from what you have told us this morning that I am precluded from asking any questions of this witness pertaining to the proposed Kaiser Corporation contract with the National Harbours Board for the operation of that port. Is that correct?

The Chairman: That is correct.

Mr. Hogarth: On what basis, sir, are the documents confidential?

The Chairman: First of all, these documents are between the National Harbours Board and Kaiser, and some of them are confidential. I believe there is the request in the House for these documents.

Mr. Hogarth: I do not think so, sir. There may be. A debate in the House is now pending on communications; whether or not communications between members of the public service pertaining to Roberts Bank Port are to be disclosed. However, I would respectfully suggest that that has nothing to do with the proposals that have been entered into,

either finally or in draft form, between the Kaiser Corporation and the National Harbours Board. I am not asking for any confidential information exchange between members of the public service, I do not think that can be disclosed, but certainly any proposals between Kaiser Corporation and the National Harbours Board surely can be enquired into. I cannot see how they could possibly be privileged.

The Chairman: My ruling is that this information cannot be given at this time.

Mr. Hogarth: Perhaps I could return when you have a full quorum and possibly ask the Committee to deal with that ruling. With the greatest respect, I think that ruling is incorrect.

The Chairman: If you do not mind, we will pass to some other items. Mr. Skoberg.

Mr. Skoberg: Further to what has been said, I think one of the questions that was asked by the member was what the guaranteed annual coal shipment was from Roberts Bank. I do not think this would be confidential. There must be some figures to show what the guaranteed minimum shipment would be from that port.

Mr. Hogarth: No, I did not ask that question. I asked what the capacity of Vancouver City harbour was for the exportation of coal.

Mr. Skoberg: That was at Vancouver harbour?

Mr. Hogarth: Vancouver City harbour.

Mr. Skoberg: Yes. Then I will ask this question as a supplementary to what we have been discussing, Mr. Chairman. When will the port at Roberts Bank be open and what is the guaranteed annual minimum coal shipment from Vancouver City harbour?

The Chairman: Perhaps Mr. Mann could anser that question.

Mr. H. A. Mann: Chairman, National Harbours Board): The target date for shipments from Roberts Bank is either December 1969 or January 1970. The contract that was entered into between Kaiser Coal Corporation and a consortium of Japanese steel companies was for 45 million long tons over 15 years, therefore the minimum shipment will be three million tons per year.

Mr. Skoberg: I realize the answer was given yesterday so far as the harbour of Vancouver is concerned, but could this amount of coal be handled at the other port quite easily?

Mr. Mann: Could the volume of three million tons have been handled in Burrard inlet? The answer is yes, if the Japanese had allowed it to be handled that way. The contract which was entered into after long negotiation between the mining company and the Japanese purchasers required that shipment be over facilities other than those in Burrard Inlet. The answer has to be qualified to that extent.

Mr. Skobert: Why would that be?

Mr. Mann: The Japanese looked at the situation in Vancouver harbour and after looking at their own transport economics they came to the conclusion that shipment through a facility at Roberts Bank—or not within Burrard Inlet—would form an integral part of the contract which they were willing to sign.

• 0955

Mr. Skoberg: Mr. Mann, there is definitely an agreement between the National Harbours Board and the Japanese coal firms?

Mr. Mann: There is no agreement between the National Harbours Board and the Japanese coal firms.

Mr. Skoberg: This agreement would be with whom, then?

Mr. Mann: This agreement, which does not become an agreement until it is approved by the Governor in Council, is between the National Harbours Board and Kaiser Coal Limited.

Mr. Skoberg: And this has not been approved as yet?

Mr. Mann: Not at this point.

Mr. Skoberg: In other words, the National Harbours Board went ahead with the port at Roberts Bank without any agreement with Kaiser Coal Limited or the Japanese?

Mr. Mann: The National Harbours Boar went ahead with the construction at Roberts Bank on the reasonable expectation that the traffic would materialize. Otherwise we would not have built.

Mr. Skoberg: Based on these two sources?

Mr. Mann: That is correct.

The Chairman: Mr. McCleave.

Mr. McCleave: Mr. Chairman, as a follow-up to a question I asked yesterday, I wonder if Mr. Mann could indicate whether a request has been made for a waterfront crane for the properties of the National Harbours Board at Halifax, and what if anything is being done about such a suggestion?

Mr. Mann: We have had requests for the installation of a bridge-type gantry crane for the handling of containers at both Halifax and Saint John. We are currently negotiating with the shipping interests that would be expected to use either one of these ports, and of course the crane is part of these negotiations.

The Chairman: Mr. Howe.

Mr. Howe: Mr. Chairman, I have a few questions on containerization in connection with carrying freight. Do you feel that the containerizing that is going on, the projects that are going forward, will reduce freight costs?

Mr. Mann: They should, I think, in the long run. Please do not let me use the term "long run". I think Keynes once said that in the long run we are all dead. They should, in the foreseeable future, reduce freight costs. There are a number of reasons for this. For instance, the shipper overseas who uses a container instead of the conventional break-bulk method finds that he can pack his commodities in the kind of package that he uses in domestic freight rather than in overseas freight. He does not have to pay a lot of money, for instance, for heavy crating. The damage and loss in containers should be reduced when compared to conventional break-bulk movements. This is particularly so in the case of damage because you have less handling if you put a number of commodities into closed, sealed box. For instance, we think that eventually insurance rates, even if they do not go down at least they will not keep rising to the extent that they have been rising. These are some of the factors. Also, competition between container consortia by the early 1970's will probably have a downward effect on freight rates because of heavy competition, and the traditional rating indulged in by steamship conferences will have to come under rather close scrutiny because it is not a very useful rating system in a container era. I think on the whole, Mr. Howe, the answer to your question is that we think, there will be a downward trend or at least an arrest of the upward trend of costs.

Mr. Howe: That is good, because the freight rates have really been going up since the transport bill of last year, when they were phasing out the $18 million a year on freight rates. This has really had an upward effect on freight rates.

I have another question with regard to containerizing. At the present time the cost element is not a big factor. Is it the faster movement of goods from one part of the country to the other that is going to be facilitated by containerizing?

• 1000

Mr. Mann: I am sorry, I do not quite understand the full import of your question.

Mr. Howe: The point I am making is that this is an innovation. We are not sure whether it is going to reduce the freight rates. Is it going to increase the service or make it speedier or faster?

Mr. Mann: Yes, it probably will. One may not put in minor qualifications, but if you have a direct movement from a shipper overseas to a receiver in Canada, and that direct movement can be effected in a container, then of course there is no question that the movement will be much, much faster because you eliminate a lot of intermediate steps. Where you get a multitude of commodities in a container, and you have to go through an unstuffing or unpacking operation and a resorting operation, the time saving will not be great.

Mr. Howe: In connection with this whole program, would it not be necessary to have some agreement or understanding with the railroads that they would provide the possible handling facilities for these products from the Maritime points right across to the Pacific coast, for instance? Are the railways entering into any agreements to give faster freight train service across Canada?

Mr. Mann: The railways along with everybody else have entered into this new ball game and they are making available at inland terminals, such as the Concord terminal I in Toronto, container-handling facilities. They are also providing specialized cars for the carriage of containers. At the moment these are chiefly modified existing cars, but new cars are being looked at. So, the railway is very heavily involved in, (a), the provision of rolling stock; (b), the provision of handling equipment at inland and possibly at some port terminals; (c), the provision of faster

service for this type of traffic and (d) of course, the all-important provision of suitable incentive rates for the carriage of containers. I think that is pretty well the extent of the railway involvement.

Mr. Howe: Are there special types of containers to handle certain specialized merchandise? Suppose frozen foods are containerized, does the container itself contain a unit to maintain the temperature?

Mr. Mann: Yes. There are specialized containers which have refrigeration or heating facilities much along the lines of the thermalking units on highway trucks, for instance. If these containers have to be marshalled for any length of time at the port electrical outlets have to be provided so that protection can be continued while the container is in port.

Mr. Howe: This brings up the question of returnable containers. They would not be disposed of at one end or the other, when unloaded. Are they quite expensive?

Mr. Mann: I cannot give you the price off hand but they are very expensive—certainly more expensive than if you were handling pellets. The question of the provision of containers, their routing, their control and their disposition is one that plagues steamship companies and inland carriers quite a lot. I think this is a worldwide problem. It is quite possible that what will emerge in the long run will be either a continental or an intercontinental container pool much along the lines of what is presently being done on the North American continent with regard to railway cars where you have agreements between the American Association of Railways and the Canadian railways for per diem charges and routing and return of cars. We can see this coming eventually in the field of containers.

Mr. Howe: This is going to increase the cost of your containerizing program though because you are going to have to build storage areas where you are going to set up these pools.

• 1005

Mr. Mann: Well when I mentioned "pool" I was not thinking of it so much in terms of a physical location as a method of interchange. There is nothing to be gained by storing these units for any length of time. You can only make money with them if they keep moving, much as our freight cars do now. There will undoubtedly be a requirement for the marshalling or storage of containers, but that would merely be another way of storing freight instead of building warehouses at inland locations—and it probably would be a cheaper way of doing it.

Mr. Howe: I have a question on vote 75. Are we still on vote 70?

The Chairman: We are still on the first vote, yes, vote 70.

Mr. Howe: Then those are all the questions I have on vote 70, Mr. Chairman.

The Chairman: Mr. Allmand, I think when we rose yesterday you were talking about...

Mr. Allmand: I have new questions now.

The Chairman: ...pilferage at the Port of Montreal.

Mr. Allmand: I want to ask Mr. Mann about passenger service. Two years ago we opened up two new passenger terminals at the Port of Montreal—very good passenger terminals, but since that time we have lost the *Carmania* and the *Carinthia* I think and now I understand that we have lost the *Batory*—it has made its last trip to Montreal. Is it correct that all we have left are the two Canadian Pacific ships and the *Alexander Pushkin*.

Mr. Mann: I think that is essentially correct. The *Batory* was lost merely because she faltered with old age. There may be a possibility that the Poles will replace her with a new passenger vessel which might or might not trade into Montreal. Passenger trade has been going down quite significantly. The ships you mentioned, the ones that end in "ia" of course are all the Cunard ships and Cunard, as we know, has made its decision to get out of the business other than perhaps for the new *Queen Elizabeth II*. Now what the future will bring is not at all certain at this juncture. It may well be that some cruise possibilities will open up which might use Montreal Harbour.

Mr. Allmand: I was going to ask Mr. Mann if the National Harbours Board has any program to promote passenger trade to Montreal. I was also going to ask how much we spent on those two passenger terminals which were opened in 1967 and which seemed to have been built at the end of the passenger years. One wonders whether that money was properly spent.

Mr. Mann: I think it becomes very much a matter of guessing. We did not—and we think

properly—give in to the urgings of some who felt that we should build a completely new magnificent passenger terminal in Montreal Harbour, because we were afraid of the future. It was for that reason that we used the upper storeys of two existing sheds which had been in existence for quite some time. The use of these sheds cut down the investment in passenger facilities and yet provided standards of passenger handling to which the public had become accustomed.

• 1010

Now I cannot offhand give you the figure, because I have not got it here, that we spent on the two passenger terminals, but if the Committee would like to have that figure we would be very happy to break it out. I do not think we have it with us now.

Mr. Allmand: You do not have it with you?

Mr. Mann: No, unfortunately not.

Mr. Allmand: I would like to have that figure. With all due respect, sir, we asked several questions yesterday and the figures were not available. I am just wondering if next year, when you come to the Committee, you could try to arrange to have more figures available so that we could proceed more quickly. Yesterday I asked for two figures and you promised to give them to us, which is quite all right, but it would be better I think if you could try and have them here we ask the questions.

Mr. Mann: It is a point well taken, Mr. Chairman. We came here of course prepared to discuss the 1968-69 estimates. What Mr. Allmand is asking now refers to a matter several years back and it is a little difficult to have all the material with you all the time.

Mr. Allmand: That is right, but I think it is relevant. Is anything being done to promote the use of these passenger facilities by the National Harbours Board?

Mr. Mann: Not by us directly other than our literature containing references to them. I suppose we would have to enter into advertising campaigns in competition with steamship companies. Is that what you have in mind?

Mr. Allmand: Yes. I was wondering if you did really try to bring shipping companies to Montreal by promoting your harbour.

Mr. Mann: Oh, our people are talking to shipping companies all the time, if that is what you mean.

Mr. Allmand: You do not solicit whatsoever.

Mr. Mann: Oh yes. Admittedly, we have not gone out and placed full page ads in European magazines promoting the charms of travel by sea up the St. Lawrence Seaway. We have not done that, but we talk to shipping companies all the time.

Mr. Allmand: My other question is on pilferage. Is it correct that the Smith Commission is still operating?

Mr. Mann: That is correct.

Mr. Allmand: Since the Smith Commission started to operate have any measures been taken to curtail pilferage, and has the rate of pilferage gone up or down in that period?

Mr. Mann: In answer to part one of the question, the measures that we have been taking are quite independent of the Smith Commission—and I will be quite happy to enlarge on that. The rate of pilferage was never quantifiable. You could not put a figure on pilferage, much as there have been figures bandied around.

We asked DBS to put a team into Montreal harbour to help us assess the rate of pilferage. The team reported back and said that on the documentation available from the shipping companies it was impossible to get exact figures, or statistically valid figures, on pilferage.

Mr. Allmand: Did not the insurance companies have claims?

Mr. Mann: The insurance companies made statements which, however, did not differentiate well enough between pilferage and damage, and also were not at all conclusive on the location of the pilferage. It could very well be that an alleged pilferage loss reported in Montreal actually took place overseas. These, of course, were not figures with which DBS could work along the standards that they are used to in this country.

Mr. Allmand: Can you say whether the amount of pilferage has decreased or increased?

Mr. Mann: Yes, I think one can, by using the same technique as that used by those who said it was high, which is impression and experience. I can give you some references. if I may, Mr. Chairman?

The Chairman: Yes, go ahead, Mr. Mann.

Mr. Mann: For example, the *Gazette*, on page 4 of its issue of Friday, November 22, has an item in the column by Fitz, which reads as follows:

> The shrinkage of looting from Montreal Harbor has caused one down-at-the-heels establishment selling everything from tools to toys to almost go "legit". It has been forced to switch its buying into regular channels instead of acting as a fence for stolen goods.

Mr. Allmand: Perhaps we should call Fitz as a witness.

• 1015

Mr. Mann: That is your privilege, sir. I can also read to you from a speech made on October 9, 1968, to the Chambre de commerce belge-luxembourgeoise by Mr. William Baatz who was Chairman of the Montreal Port Council and who had, on previous occasions, been rather critical of pilferage in Montreal harbour. This is what Mr. Baatz had to say:

[*Interpretation*]

> "There were serious problems of security: thorough investigations have been followed up since last April, by measures taken at the level of the National Harbours Board, to restore the normal conditions of protection for private property, especially for goods in transit in the harbour. Since then, we have stopped hearing about spectacular thefts such as were all too often reported by the newspapers last winter."

[*English*]

This, I think, is not a bad testimonial from a man who had pronounced himself rather critically on pilferage at the Port of Montreal.

The *Financial Post* of November 2, 1968, quotes Captain N. E. Rees-Potter, Terminal Manager for Canadian Overseas Shipping Limited, Montreal, as follows:

> 'We'd like to take some of the credit ourselves, but we know the harbor police deserve the most.'
>
> Another cargo superintendent spoke of a '100 per cent improved situation' all over the waterfront.

We also have reason to believe that the re-organization of our police force, which has put it on a professional basis and, in Montreal, under the direction of police Director Hobbs, who has a distinguished record with the Montreal City Police, is beginning to pay off very handsomely. The complaints to us about pilferage at Montreal are practically nil. I checked as late as this morning with the Director of our Security Police and he told me that Director Hobbs of our Montreal contingent had not received one complaint of pilferage from a shipper this year.

Let me quickly say that this does not mean that there is no pilferage. I think that would be unreasonable.

Mr. Allmand: What about the article that appeared in the Montreal *Star* in Bruce Taylor's column about a month ago and about which I asked a question in the House? Mr. Taylor said he entered the Port at night with another person, that nobody stopped him, and that he found a constable, or a protective officer, asleep in the back of a car somewhere near a shed. I am trying to recall the article from memory...

Mr. Mann: You are pretty well right on.

Mr. Allmand: I asked the Minister in the House about that, but I did not get a full reply. I understood there was going to be an investigation, or something of that sort.

Mr. Mann: Mr. Chairman, I thought a full reply had been given. If my memory does not trick me, it was as follows—and we have a very interesting police report on the matter—that Mr. Taylor indeed entered the Harbour—at least we think it was Mr. Taylor—in a car which our police officers knew belonged to the head of a private investigation and guard agency. For that reason, it is never checked, because we think that when the head of that agency enters the Harbour at any hour he does so on legitimate business. We believe Mr. Taylor was in that car. Hence, Mr. Taylor is quite right in saying that he was not checked when he went into the Harbour.

I leave you to draw the conclusion on whether Mr. Taylor's statement was right on or half off.

Mr. Allmand: I recall now that this was part of the answer given in the House.

When do you expect the final Smith report?

Mr. Mann: I do not know. This is in the hands of Mr. Justice Smith. I cannot answer that.

Mr. Allmand: Does he make interim recommendations to you when he feels...

Mr. Mann: Mr. Justice Smith was appointed not by the Minister of Transport but by the Minister of Labour under the Industrial Relations and Disputes Investigation Act.

• 1020

Mr. Allmand: I knew that that was so, but I thought perhaps he might communicate recommendations from time to time if he felt there was...

Mr. Mann: No; I am not aware of any.

Mr. Allmand: Thank you very much.

The Chairman: Mr. Douglas?

Mr. Douglas: I wish to ask the witness a little bit more about Roberts Bank.

Are there any provision for, or any thought of providing, grain handling facilities at Roberts Bank?

Mr. Mann: Not at this moment; there is available an area that could be used for the handling of grain if the grain trade felt it desirable. If it were felt that the facilities at Burrard Inlet, with which you are undoubtedly familiar, were not adequate then provision could be made at Roberts Bank. The sites are available, or will be available.

Mr. Douglas: They would have to build terminal elevators there if they wanted to make use of Roberts Bank.

Mr. Mann: That would be correct, sir.

Mr. Douglas: I have another question on containerization. I do not know whether or not you are the proper person to ask, but would there be any advantage to the handling of grain by containerization?

Mr. Mann: I am not sure of that. However, Mr. J. A. McDonald, who is the Vice-President of Canadian National Railways, made a speech in Winnipeg several months ago in which he dealt with the possibility of using containers in grain traffic.

If the Clerk of the Committee would also be good enough to remind us of this we will try to get a copy of that speech for you.

Mr. Douglas: Thank you. I expect that containers would be advantageous in other agricultural products such as linseed oil, rape-seed oil and probably meat or dairy products?

Mr. Mann: I am not qualified to answer that, sir.

Mr. Douglas: Thank you very much.

The Chairman: Mrs. MacInnis?

Mrs. MacInnis (Vancouver-Kingsway): As you know, Mr. Chairman, I am not a member of the Committee, but I am a West Coast member and I wish to ask a few questions about Roberts Bank.

The Chairman: You can still ask questions of Mr. Mann while he is here.

Mrs. MacInnis (Vancouver-Kingsway): First of all, I wanted to clear up a little point in an earlier question.

Am I correct, Mr. Mann, that you said that the Japanese interests put in their contract, or insisted, that the shipping of coal should be made from Roberts Bank rather than from Vancouver harbour?

Mr. Mann: That is correct.

Mrs. MacInnis (Vancouver-Kingsway): Well then, how do you reconcile that with what I think was your other statement that the National Harbours Board has no contract with Japanese interests?

Mr. Mann: I think it is very easily reconciled, Mrs. MacInnis, with all due respect. The contract is between the mining company, in this case Kaiser Coal who bought the Crowsnest deposits and a consortium of Japanese steel companies. It is in that contract that the requirement to use Roberts Bank is found.

It was then obvious to us that there would be a volume of traffic that would be moving through Roberts Bank, and since the contract had been signed and the volume had to move by a certain time, it was only reasonable that facilities be provided to facilitate the export of this coal from the Fernie-Michel area.

Mrs. MacInnis (Vancouver-Kingsway): Do you mean, then, that it was in the contract between Kaiser Coal and the Japanese interests that the coal had to be moved through the new port rather than Vancouver?

Mr. Mann: That is correct.

Mrs. MacInnis (Vancouver-Kingsway): Would the National Harbours Board not have any say, though, in that connection? Was the National Harbours Board consulted?

Mr. Mann: No. We were not part of the negotiations between the Kaiser people and the Japanese.

Mrs. MacInnis (Vancouver-Kingsway): In other words, you just had to take what they said.

Mr. Mann: We had to make a decision as to whether we were willing to handle three million tons of coal per year over 15 years guaranteed with a volume that might grow, or whether we should let that traffic go. It was also possible that had we not responded to what any port authority would think is a very good volume of traffic, the traffic might even have gone through a United States port and therefore been lost to Canada altogether.

Mrs. MacInnis (Vancouver-Kingsway): Now let me ask about the facilities at Roberts Bank port. Who is going to build the facilities?

• 1025

Mr. Mann: As I mentioned yesterday, Mrs. MacInnis, when you were not here—and I think this is as far, Mr. Chairman, as I can go—we have let a contract for the creation of a 50-acre site and a connecting causeway to the uplands. The contract was let, I believe, at the end of April in the amount of $3,842,000. It will provide a 50-acre site protected from the sea with a 65-foot depth and a causeway to connect it to the uplands. This is the extent at this juncture of National Harbours Board investment.

Mrs. MacInnis (Vancouver-Kingsway): Where does the provincial government come in on the building of facilities?

Mr. Mann: To my knowledge they do not come in at this juncture at all.

Mrs. MacInnis (Vancouver-Kingsway): Is this in spite of the fact that the former Minister of Public Works made the statement that water lots were under provincial jurisdiction? Has that nothing to do with it?

Mr. Mann: I am not familiar with that statement.

Mrs. MacInnis (Vancouver-Kingsway): I believe that he made that statement. But that does not bring it in at all?

Mr. Mann: I do not think the water lots on which we are constructing, Mrs. MacInnis, are under provincial jurisdiction.

Mrs. MacInnis (Vancouver-Kingsway): They are?

Mr. Mann: They are not.

Mrs. MacInnis (Vancouver-Kingsway): They are not. Well, we will have to find out what the Minister meant.

Mr. Mann: Oh, I am sorry, let me clarify this so that there will be absolutely no doubt about it. My colleagues and associates have just brought this to my attention. I mentioned yesterday in an answer to Mr. Hogarth, I believe, that the 50-acre site is on property which is that of the federal government, but part of the connecting causeway will traverse property which belongs to the Province of British Columbia. To that extent I must modify my answer.

Mrs. MacInnis (Vancouver-Kingsway): Who has jurisdiction over the causeway in that case?

Mr. Mann: At the moment we have an arrangement with British Columbia which allows the construction of the causeway to go on. The final arrangements as to property rights will be subject to further negotiations and talks.

Mrs. MacInnis (Vancouver-Kingsway): When I was on the Coast I heard gossip the way one hears gossip that some of these facilities were going to be leased, or were going to be built by foreign-owned companies. Is that true?

Mr. Mann: There are lots of rumours, Mrs. MacInnis. This gets us into the matter which I think is subject to the resolution of the Committee and perhaps I would like to defer the answer to that until the Committee has decided. I think Mr. Hogarth wanted a resolution.

Mrs. MacInnis (Vancouver-Kingsway): In other words, this is under the privileged part at the moment. I suppose, Mr. Mann, that you would not be in a position to know anything about the definitive legal opinion that is supposed to be being sought on provincial jurisdiction versus federal jurisdiction in the matter of that rail link to—

Mr. Mann: No, I am sorry. This is a little outside my—I was going to say province—but outside our scope.

Mrs. MacInnis (Vancouver-Kingsway): By the way, has a final decision been made as to where that rail link is to go?

Mr. Mann: I read in the papers, Mrs. MacInnis, that Mr. Bennett has made a final decision.

Mrs. MacInnis (Vancouver-Kingsway): Mr. Bennett's decisions are not always final. I was just wondering whether from your point of view a final decision has yet been made?

Mr. Mann: I am sorry, I can have no point of view of the matter. I can only say that our interests really are legitimate and legal involvement only begins at the point where the rails hit the end of that causeway. Beyond that is beyond the jurisdiction of the National Harbours Board, so it is a little difficult for me to enter into opinions on other jurisdictions.

Mrs. MacInnis (Vancouver-Kingsway): As far as the National Harbours Board is concerned, is everything cleared up? Do you feel that it is clear sailing on that 50-acre site?

Mr. Mann: We think that we can proceed in the full expectation that the port facility will be used by the end of December 1969 or the beginning of January 1970.

• 1030

Mrs. MacInnis (Vancouver-Kingsway): And is it clear federal operation of the port facilities, without any provincial participation?

Mr. Mann: At this juncture, where we sit today, we are building that facility. It is part of Vancouver Harbour, and unless government policy with regard to port administration changes, we will administer the Roberts Bank facility much the same way as we administer our facilities in the port of Vancouver for our inlet division.

Mrs. MacInnis (Vancouver-Kingsway): Thank you very much, sir. There has been so much discussion that I wanted to get some of these things cleared from your point of view.

Mr. Hogarth: May I ask a supplementary question?

The Chairman: Yes, Mr. Hogarth.

Mr. Hogarth: Mr. Mann, you stated that unless the National Harbours Board moved in and built this port, you would be letting the traffic go; that is to say this one contract on the export of coal from Michel. But is it not so that if you had not done that, the provincial government was going to build the port?

Mr. Mann: I could not speculate on that. There had been statements made that the provincial government would build the port.

Mr. Hogarth: Yes, so that the alternative was that if the National Harbours Board did not build the port, there was every probability that the provincial government would.

Mr. Mann: I do not know, Mr. Hogarth, whether that was a probability. The fact of the matter was that the only engineering that was done for this port was done by the National Harbours Board, or by the Government of Canada.

Mr. Hogarth: I appreciate that but the port was the conception of the provincial government in the first place, was it not?

Mr. Mann: I do not know whether the port was the conception of the provincial government. There were people who as far back as the early part of this century—

Mr. Hogarth: Oh, I appreciate that there has always been a port contemplated either on Roberts Bank or Sturgeon Bank, but in this particular instance when the coal export arrangement was made, was it not the position of the Government of the Province of British Columbia that they were going to build a port?

Mr. Mann: They made statements to the effect that they would build a port.

Mr. Hogarth: Yes, and is not the jurisdiction of the National Harbours Board under the British North America Act confined to shipping and navigation, with nothing whatsoever being said about harbours? That is to say, the land side of harbours.

Mr. Mann: I am sorry. Would you mind asking this again?

Mr. Hogarth: I put it to you that under Section 91 of the British North America Act, the federal government jurisdiction pertaining to harbours is described in the phrase "Navigation and Shipping" but it says nothing about harbours per se, does it?

Mr. Mann: Are you familiar with Section 108 of the British North America Act?

Mr. Hogarth: No. You could refresh my memory.

Mr. Mann: Section 108 deals with the jurisdiction of the federal government over harbours.

Mr. Hogarth: I see. What does it specifically say about provincial government powers over harbours?

Mr. Mann: I am sorry, now I must plead that I am not a man of your cloth and I...

Mr. Hogarth: You were about to refresh my memory.

An hon. Member: It is partly legal opinion.

Mr. Hogarth: I put it to you that there is still a real jurisdictional dispute whether or not the provincial government might participate in the operation of this harbour. There is still some question of that, is there not?

Mr. Mann: The Minister of Transport has made repeated statements to the effect that the whole question of harbour administration is currently under review.

Mr. Hogarth: I appreciate that, but one of the possibilities in that review is participation by the provincial government in the operation of West Coast harbours.

Mr. Mann: Mr. Hogarth, with all respect you are putting that forward as a possibility.

Mr. Hogarth: I just ask you if you agree or not?

Mr. Mann: There are lots of possibilities.

Mr. Hogarth: Fine. May I just ask one more supplementary question?

The Chairman: A supplementary question?

Mr. Hogarth: Yes. How much of the 50 acres you speak of will be required for the use of the Kaiser Corporation, do you know?

Mr. Mann: The 50 acres of terminal sites, Mr. Chairman, that are being built will be capable of handling more than three million tons a year for whoever might ship that traffic and whoever might operate that facility.

Mr. Hogarth: My question was relatively simple: How much of the 50 acres is contemplated to be used by the Kaiser Corporation?

Mr. Mann: We are getting into the substance of the matter that is still under review by the committee, and I do not think I should be asked to answer at this point.

Mr. Hogarth: Well, just from the point of view of logistics, without any reference to the contract or any confidential memorandum, considering the quantity of coal that it is anticipated will be exported, how much of the 50 acres will be necessary for the use of the Kaiser Corporation?

Mr. Mann: I cannot tell; you have coupled this with "for the use of the Kaiser Corporation". The plans made by our Board for the creation of that facility were made in view of a minimum anticipated through-put of three million tons of coal. Certainly, they were made with expansion in mind. How much you can put through, Mr. Hogarth, is not only a function of the size of the terminal, but also of the capacity of the equipment and the kind of the equipment so, therefore, it makes it a little difficult for me to answer that question.

• 1035

Mr. Hogarth: I see. Do you not know from the point of view of logistics just how much of that 50 acres is going to be used or is available for use by Kaiser Corporation?

Mr. Mann: I wish you would leave this out. I can tell you that three million tons initial through-put will be accommodated on the 50 acres.

Mr. Hogarth: Thank you. I have just one more question. Is it not so that the provincial government...

Mr. Mann: I have just been given some very important information that I should bring out. The 50 acres, quite apart from the number of tons that can be handled, was the minimum required for the laying out of a railway loop line to handle unit trains.

Mr. Hogarth: I appreciate that the railway has to be accommodated on the port site too, but I have just one more supplementary question. Has the provincial government not taken up 2,000 acres immediately inshore for its use?

Mr. Mann: The provincial government has expropriated 2,000 acres abutting the uplands all around the port side and going from Canoe Pass, skirting the Indian Reservation, right down to Tsawwassen Causeway.

Mr. Hogarth: Do you know to what use it anticipates putting those lands?

Mr. Mann: No, I do not, sir.

Mr. Hogarth: Have you any idea whatsoever?

Mr. Mann: I would not speculate.

The Chairman: Mr. Douglas?

Mr. Douglas: My question has to do with harbour facilities and was prompted by a question on the other side of the table. Is it possible for foreign corporations to build facilities in Canadian harbours and has it been done?

Mr. Mann: Oh, yes indeed. In the strait of Canso we have had what has hitherto been described as the Canadian member of the worldwide Gulf family, otherwise known as BA...

Mr. Douglas: It will soon be known as "Gulf" again.

Mr. Mann: . . . build port facilities. This is nothing uncommon. We have American iron ore companies building port facilities in Canada.

Mr. Douglas: Thank you.

Mr. Skoberg: I have a supplementary to that. To get back to Roberts Bank and the questions that have been asked by Mr. Douglas, do any of the companies that have built the port facilities have jurisdiction and the administration over that port?

Mr. Mann: Could you nail me down a little tighter?

Mr. Skoberg: You just suggested there have been companies that have built port facilities. Do they have complete jurisdiction and administration of the ports on which they have built facilities?

Mr. Mann: My problem, I think, arises out of whether we are talking about a port or a specific dock or area in a port.

Mr. Skoberg: All right, we will bring it right back to Roberts Bank.

Mr. Mann: Yes.

Mr. Skoberg: I concluded that you said there is now no agreement between the National Harbours Board and Kaiser Coal or any Japanese firm; there is no valid agreement.

Mr. Mann: That is correct.

Mr. Skoberg: You say that you cannot tell us whether or not Kaiser Coal or the Japanese firm will build the facilities because it is still under review and confidential. Correct? Could you tell us now, though, that the National Harbours Board will have complete jurisdiction and administration of that port? Would you stand for letting Kaiser Coal or anyone else have jurisdiction and administration of the port at Roberts Bank?

Mr. Mann: I think the answer to that is very simple. As a port authority we behave like most other port authorities. We make very certain that we have jurisdiction over the port that we administer.

The exact details of how this is done vary from place to place, because we are not a monolithic centralized organization, but certainly there is the over-riding authority and jurisdiction of the port authority which remains in all of our harbours.

Mr. Skoberg: I just hope that you are prepared to stick by that and make sure that we do have jurisdiction if there is public money being expended.

Are there any other indications of other shippers at this port of Roberts Bank at this time?

Mr. Mann: There has been quite a vivid interest in additional areas at Roberts Bank.

Mr. Hogarth: What additional areas has there been interest expressed in?

Mr. Mann: Our first phase, as I mentioned, Mr. Chairman, consists of the creation of 50 acres and a causeway to connect this.

The next phase will be the creation of another 232 acres abutting the 50 acres, and completing the eastern part of the spine of that causeway.

Mr. Hogarth: And your suggestion is that these other interests have shown interest in the additional area that will eventually be built.

Mr. Mann: That is correct, sir.

Mr. Hogarth: That leaves the original 50 acres to Kaiser, does it?

Mr. Mann: Not necessarily.

Mr. Hogarth: Has anybody else shown interest at all in the 50 acres that they are presently constructing?

Mr. Mann: I am trying quite frankly, Mr. Chairman, to weigh how far we are getting into what I am not supposed to talk about without their ruling.

Mr. Hogarth: May I say, Mr. Mann, that I am inclined from what we know to date to call this Kaiser Port, not Roberts Port, and I just want to know if anybody else has shown an inclination to . . .

Mr. Mann: Mr. Hogarth, with all due respect, we are inclined to call it the Port of Vancouver or Delta Port, or anything else that will enhance the prestige of the Port of Vancouver and the lower mainland.

Mr. Hogarth: Well, if we could see the agreement, Mr. Mann, I think maybe my mind might be changed, but in the meantime I am just going in that direction.

Mr. Mann: I am in the hands of the Committee, sir.

Mr. Douglas: I would like to enquire further into the building of facilities at harbours and ports. If someone, either foreign or domestic, wants to build a facility at a port, I suppose a long-term lease is drawn up to make certain that both parties are protected. Is this so? And if it is, what term of years is usually applied?

Mr. Mann: There is no standard answer to that because circumstances vary both as to the type of facility required and the port in question. I must say, again, that contrary to what has been said, we do not operate a monolithic centralized organization working from a hideaway in Ottawa. We are responsive to local variations, and you will find when you go through our operations that there are very significant local deviations. So that it is impossible to answer this question in just one way.

• 1045

Mr. Douglas: The Saskatchewan Wheat Pool built a terminal elevator at Vancouver recently. How long is their lease?

Mr. Mann: I believe, and I am working from memory, that their land lease—we did not build the facility—is for a term certain of 30 years.

Mr. Douglas: Thank you.

Mr. Mann: This may be subject to correction. I am working from memory.

Mr. Allmand: Earlier this year certain people in Montreal had alleged that traffic in Montreal would be greatly reduced owing to the labour troubles last year and still pending, and because of the St. Lawrence Seaway strike. Have you any figures on the total traffic to date this year? Did the traffic go down in Montreal this year, or did it go up, or did it remain the same? I realize the season is not closed yet, but just the figures up to date, and a prediction to the end of the season, if you could.

Mr. Mann: For the period January 1, 1968, to the end of October, 1968, we are down 7 per cent over the corresponding period in 1967. The main downward trend is in interior domestic traffic, which is down more than foreign traffic.

Mr. Allmand: Would that be due to the Seaway strike this summer?

Mr. Mann: I think that would have a very significant influence.

Mr. Allmand: What about foreign traffic or traffic down river towards the ocean?

Mr. Mann: Again using the same period January 1, 1968, to October, 1968, and comparing 1967 and 1968, we are down 3 per cent on foreign traffic. Again, of course, the season is not over and the final tally has not been made.

Mr. Allmand: Are you concerned about this? Do you think this is due to the labour dispute, the St. Lawrence Seaway dispute, or other causes?

Mr. Mann: I do not know whether you can pin it entirely on the labour dispute. Undoubtedly it has had its effect. There might have been changes in trading patterns or commodity movements which would have had an influence. In 1967 I suppose the traffic would have been swelled slightly by Expo-generated traffic and, therefore, the comparison must take that into account.

I think it would be more significant if at the end of the year we did what we normally do and struck the total figures, and also looked at variations in the commodities concerned because that will give us a better chance to get into the nub of the thing. But the figures are down slightly on foreign traffic, 3 per cent, and more significantly on internal domestic traffic.

The Chairman: Mr. Skoberg.

Mr. Skoberg: Do you negotiate directly with your employees under the National Harbours Board?

Mr. Mann: With our own employees, yes.

Mr. Skoberg: Are you in agreement with the recommendations of the Freedman Commission that there should not be any unilateral change in the contract conditions during the life of that contract?

Mr. Mann: I am not sufficiently familiar with the Freedman Commission Report. This was a report on run-throughs, I believe.

Mr. Skoberg: Or he laid down the basis...

Mr. Mann: That was on railways. I am not familiar enough with it to comment intelligently for the purposes of this Committee.

Mr. Skoberg: I will put it this way. Does your Board at any time make material changes in the working conditions of your employees during the life of that contract?

Mr. Mann: We recently had this matter looked at by the Department of Manpower, and the CNTU, I believe, participated in the enquiry. This resulted in the so-called Cohen Report. That Report made recommendations which have been implemented by us for compensation to employees displaced owing to technological change. We would be very happy to furnish a copy of that.

Mr. Skoberg: This Report then said that there should be no material changes in the life of a contract.

Mr. Mann: I am not sure about that particular point, sir.

Mr. Skoberg: I hope that you appreciate the fact that we have just discussed the Labour estimates. This is part of the problem of the whole labour unrest, that material changes are being made, and I would hope that your Board would look favourably at it.

Mr. Mann: I think perhaps I could help Mr. Skoberg more by making available a copy of the Cohen Report which would be of interest to him and which would deal with the matter.

Mr. Skoberg: I would appreciate having a copy, but the principle of the Report is most important.

Mr. Mann: We have accepted the principle of the Report and actually applied it. So, if the Report is of some use we would be delighted to furnish it.

Mr. Skoberg: Thank you.

The Chairman: Are there any more questions? If there are no more questions, and owing to the fact that we still do not have a quorum, we will have to adjourn this meeting.

• 1050

Mr. Skoberg: Mr. Chairman, may I make a statement. With the greatest respect to your ruling, and I know that you made if after careful thought, I hope to motivate one of the members of the Committee to appeal that ruling as soon as the quorum is present, and I just wanted to make you aware of that. I would ask that the witness be available if the appeal is successful. I think the details of this agreement are most important to people on the West Coast.

The Chairman: Do you have any questions?

Mr. Lessard (LaSalle): That is something we should wait to discuss when we have a quorum.

The Chairman: Thank you. This is what I was going to suggest.

Mr. Hogarth: When you have a quorum this is what I hope to do. I do not know whether I will be successful.

The Chairman: That is quite all right.

The meeting is adjourned. Next Thursday we will revert to the Canadian Transport Commission.

Mr. Allmand: Do I understand that you stood the items on the National Harbours Board?

The Chairman: Yes.

Mr. Allmand: Of course we have no quorum, so we have to stand them.

Mr. Douglas: Who will the witness be at the next meeting?

The Chairman: Mr. Pickersgill.

(*Text*)

MINUTES OF PROCEEDINGS

THURSDAY, November 28, 1968.
(6)

The Standing Committee on Transport and Communications met, this day, at 9.30 a.m. The Chairman, Mr. Blouin, presided.

Members present: Messrs. Allmand, Blouin, Corbin, Douglas, Godin, Lessard (*LaSalle*), Mahoney, McGrath, Nesbitt, Noël, Nowlan, Pringle, Schreyer, Serré, Skoberg, Smith (*St. Jean*), Thomas (*Moncton*)—(17).

Also present: Messrs. Peddle and Benjamin, Members of Parliament.

In attendance: From the Canadian Transport Commission: The Honourable J. W. Pickersgill, President and Messrs. H. Arbique, Secretary; L. L. Marks, Financial Adviser.

The Chairman opened the meeting and asked for a motion to regularize the meeting held on Friday, November 22, 1968. On motion of Mr. Lessard, it was

Resolved,—That the Evidence adduced at the meeting held on Friday, November 22, 1968, be made part of the official records of the Committee.

Then the Chairman read the First Report of the Subcommittee on Agenda and Procedure for the meeting held on November 26, 1968.

FIRST REPORT

The Subcommittee on Agenda and Procedure of the Standing Committee on Transport and Communications met at 11:00 o'clock this morning. The Chairman, Mr. Blouin, presided.

Members present: Messrs. Blouin, Mahoney, Schreyer, Serré, Thomas (*Moncton*) (5).

Your Committee agreed unanimously to the following decisions and recommendations.

1. That on Thursday, November 28 next, the Honourable J. A. Pickersgill, Chairman of the Commission, be invited again with his officials, respecting the estimates of the Canadian Transport Commission.
2. That on Tuesday, December 3, Mr. H. A. Mann, Chairman of the National Harbours Board be recalled with his officials, provided consideration of the estimates of the Canadian Transport Commission has been completed.
3. That on Thursday, December 5, the Honourable E. W. Kierans be called with his officials, respecting the estimates of the Post Office, provided that consideration of the estimates of the National Harbours Board has been completed.

4. That on Tuesday, December 10, the Honourable E. W. Kierans be recalled with his officials, respecting the estimates on Communications, provided that consideration of the estimates of the Post Office has been completed.

5. That the Committee report to the House asking that the scope of the Order of Reference dated October 16, 1968, be enlarged authorizing the Committee to study:
   (*a*) Transportation problems of the Atlantic Provinces.
   (*b*) Claims of the Great Slave Railway Company against the Canadian National Railway Company.

At 11:45 o'clock a.m., the Subcommittee adjourned.

Thereupon, on motion of Mr. Mahoney

Resolved,—That the First Report of the Subcommittee on Agenda and Procedure be adopted with the following amendment:

That sub-paragraph "b" of paragraph 5 be deleted and that the following be substituted therefor:

"Claims against the Canadian National Railway Company in respect to the Great Slave Railway Company."

The Chairman then called item 50 of the Canadian Transport Commission .....$ 4,600,900.

After putting a question to the witness, Mr. McGrath moved, That the Chairman of the Railway Transport Committee and the Vice President of the Canadian Transport Commission be called before this Committee in regard to the Revised Main Estimates of the Canadian Transport Commission.

And debate arising thereon, Mr. Allmand moved as a dilatory superseding motion that the motion under consideration be referred to the Subcommittee on Agenda and Procedure for consideration and report.

After further debate, the question being put on the above motion, it was, by a show of hands, resolved in the affirmative: Yeas: 9, Nays: 6.

The Committee resumed questioning of the witnesses. The Committee recessed from 11:30 a.m. to 1.45 a.m.

Upon reconvening, it was moved by Mr. Mahoney and

Resolved,—That the names of Messrs. Allmand and Nesbitt be substituted for that of Messrs. Mahoney and Thomas (*Moncton*) on the Subcommittee on Agenda and Procedure for today's meeting only.

The questioning of the witnesses then resumed and later, it was moved by Mr. Douglas

Resolved,—That the name of Mr. Skoberg be substituted for that of Mr. Schreyer on the Subcommittee on Agenda and Procedure for today's meeting only.

On a motion of Mr. Skoberg, it was

Resolved,—That an adequate representation of the Subcommittee on Agenda and Procedure attend the Transportation Conference to be held in Toronto from February 9 to February 12, 1968.

Then on a motion of Mr. McGrath

Resolved,—That the Canadian Transport Commission be requested to postpone the implementation of its decision to abandon railway service in Newfoundland until such a time as the Committee travel to Newfoundland to study the transportation problems of the Atlantic Provinces.

After debate, the question being put on the motion, it was by a show of hands, resolved in the affirmative: Yeas: 6, Nays: 5.

At 1.30 p.m. the Committee adjourned to the call of the Chair.

Robert Normand,
Clerk of the Committee.

EVIDENCE

(Recorded by Electronic Apparatus)

Thursday, November 28, 1968

• 0940

The Chairman: Order, please. Good morning, gentlemen.

First of all, may I have a motion to regularize the evidence heard at our meeting on Thursday, on November 22, at which we did not have a quorum?

Mr. Lessard (LaSalle): I so move.

Mr. Douglas: I will second the motion.

The Chairman: We have with us this morning Mr. Pickersgill, who was with us previously, and we are on Vote No. 50. If members have any questions...

Mr. McGrath: Mr. Chairman, I wish to ask one question on the line of questioning at our last meeting with Mr. Pickersgill on the Commission's decision to abandon the rail passenger service in Newfoundland.

Since then the Public Utilities Commission of Newfoundland has ruled on the application of CN to operate provincial buses. You will recall, Mr. Chairman, that the subject of the jurisdiction of the...

The Chairman: Just a moment, please, Mr. McGrath. There is something wrong with the technical section of our service. They cannot hear you.

An hon. Member: Someone has gone for a technician.

Mr. Schreyer: While we are waiting for him, can you tell me, Mr. Chairman, if the report of the subcommittee on Agenda and Procedure has been dealt with?

The Chairman: Yes.

Mr. Schreyer: When was it dealt with?

The Chairman: We had the Subcommittee meeting last Tuesday.

• 0945

Mr. Schreyer: Mr. Chairman, was it not the intention of the Subcommittee last Tuesday that the first item of business today would be to present to the Standing Committee their recommendations and that we would dispose of them and then go on to question Mr. Pickersgill?

The Chairman: I have the report of the Subcommittee. You are suggesting that it be adopted by the regular meeting? Is that correct?

Mr. Schreyer: Unless you have some reason for doing otherwise. That was my understanding. That is why I am a little puzzled.

The Chairman: I bring to your attention the report of the Subcommittee arising out of its meeting. It reads: (*See Minutes of Proceedings*).

Mr. Mahoney: The last sentence is not quite accurate. It should be, "Claims against the Canadian National Railways in respect of the Great Slave Lake line."

The Chairman: Would you repeat that, Mr. Mahoney?

Mr. Mahoney: "Claims against the Canadian National Railways in respect of the Great Slave Lake line."

The Chairman: Will somebody move to change this last item?

Mr. Mahoney: I so move.

Mr. Schreyer: I will second that.

Mr. Skoberg: Mr. Chairman, relative to the motion that you now have to change that item, referring to claims against the CNR in respect to the Great Slave Lake line, are the operational requirements of the Great Slave Lake Railway included therein, or do these...

The Chairman: What we have is a brief. There is a whole file on the Great Slave Lake Railway claim. Is that what you are referring to?

• 0950

Mr. Skoberg: Yes. I presume the operational requirements of the Great Slave Lake Railway will be considered by this commission? Is that correct?

The Chairman: By the Canadian Transport Commission? No. It is against Canadian National Railways.

Mr. Skoberg: But this Commission sets the regulations, not Canadian National Railways. Therefore, I presume that Mr. Pickersgill will handle the operational requirements. Is that not correct?

The Chairman: I do not think so; but I can ask Mr. Pickersgill. He is here.

Mr. Skoberg: I would hope that the CNR does not set the regulations.

The Honourable J. W. Pickersgill (President, Canadian Transport Commission): I am afraid I really do not quite understand the question.

Mr. Douglas: I think two different things are being talked about. The Chairman is still thinking about the claims and Mr. Skoberg is referring to the general operation of the Great Slave Lake Railway, and is asking when we will have an opportunity to discuss that. Is that not correct?

The Chairman: The general operations of the Great Slave Lake Railway?

Mr. Douglas: That has nothing to do with the claims we were talking about. It is a completely separate item.

The Chairman: I see. What we discussed in the Subcommittee was the claim only.

Mr. Skoberg: For clarification, Mr. Chairman, would Mr. Pickersgill care to deal with the operational requirements of the Great Slave Lake Railway, in this Committee, or should we leave that for general discussion when the claims against the CNR are being discussed?

The Chairman: What was understood at the Subcommittee was that we would leave the discussion about the general conditions...

Mr. Thomas (Moncton): Mr. Chairman, it was to hear the claims from the various contractors, was it not?

The Chairman: Yes.

Mr. Thomas (Moncton): I do not know what department has responsibility for the operations of the Great Slave Lake Railway but this had nothing to do with the operation of the railway. This is a special hearing on the claims of the various contractors.

The Chairman: Is the Committee in favour of this last change?

Some hon. Members: Agreed.

Mr. Schreyer: Mr. Chairman, did you assign a date for that last item?

The Chairman: Assign a date?

Mr. Schreyer: Did you assign a date? Have you fixed a date for these claims to be brought before the Committee?

The Chairman: No, we did not fix any date. Everything depends on whether we will be finished with the estimates on December 12. When we are through with the Estimates we will hear the Great Slave Lake Railway claim.

Mr. Schreyer: Thank you.

The Chairman: The Clerk points out that we also have to wait for the order of the House.

Mr. Douglas: That is what I was going to ask. I understood you were going to ask for an order of the House to permit us to deal with these claims.

The Chairman: Yes, we are. Next Tuesday a report will be presented to the House.

Mr. Nesbitt: I presume, then, that between now and Tuesday, Mr. Chairman; the first report of this Committee will be prepared for submission to the House and that it will contain a request to have a hearing on the claims against the CNR concerning the Great Slave Lake Railway and also a request that the Committee, at some date agreed by the House, visit the Atlantic Provinces?

The Chairman: That is correct. That report will be presented to the House on Tuesday.

Is that agreed?

Some hon. Members: Agreed.

The Chairman: Gentleman, we can now go back to where we started. The equipment is working and everything is all right.

Mr. McGrath, will you put your question?

Mr. McGrath: I wished to ask one or two questions along the line of those raised at the last meeting when Mr. Pickersgill was present.

• 0955

Since then the Public Utilities Commission of the Province of Newfoundland has made

its decision on the application of the Canadian National Railways to operate a bus service within the Province of Newfoundland. You will recall, Mr. Chairman, that this matter was raised during the meeting of the Committee on November 15, and there were a number of questions about jurisdiction and the right of the Province of Newfoundland, or its agency, the Public Utilities Commission, to make a ruling on this.

I have not read the evidence, but as I recall it, Mr. Chairman, Mr. Pickersgill stated that the Newfoundland Public Utilities Commission would be acting in this particular matter as an agent of the government of Canada in that it would be making a decision under the Motor Vehicle Transport Act. Is that correct?

Mr. Pickersgill: That is my understanding, yes.

Mr. McGrath: And that this, in effect, would be done because it would be an extra-provincial bus service operating out of—

Mr. Pickersgill: It is an extra-provincial undertaking. Canadian National Railways is an extra-provincial undertaking.

Mr. McGrath: Mr. Chairman, the Public Utilities Commission of the Province of Newfoundland does not agree with Mr. Pickersgill. I have here a newspaper clipping of December 2, and I will just read the pertinent section dealing with this particular matter:

> The Railway had also sought to have a licence issued under the Motor Transport Act to operate the bus service, rather than a certificate under the Motor Carrier Act—

which I understand is a provincial statute.

> The Railway had argued that "the pith and substance of the undertaking" is to provide a connecting service across Newfoundland with the ferry service to and from the mainland of Canada and that the "local" or "intermediate" runs are subsidiary to the overall operation. This in effect would make it an extra-provincial operation as well as an intra-provincial one.

I continue with the quotation:

> However, the Board rejected this argument and said it finds the proposed CN bus operations, being wholly and solely within the provincial jurisdiction,

and I would also suggest they are saying within provincial jurisdiction, are subject only to the Motor Carrier Act. I would like to ask Mr. Pickersgill if he would care to comment on that?

Mr. Pickersgill: No, I do not think I would care to comment on that at all. That is a question of law, and the Public Utilities Commission is acting within its own ambit, and if they are wrong, of course somebody will—as would be the case if we were wrong, and somebody was interested, he would take it into the courts. Therefore it would be very improper for me to make any comment on that.

Mr. McGrath: How does this decision affect future decisions of the Board regarding the Motor Vehicle Transport Act, any other provincial statute that may come into conflict with it, and the subsequent proclamation of Section 3 of the Transport Act?

Mr. Pickersgill: I am afraid, Mr. McGrath, I am not quite bright enough to understand that question.

Mr. McGrath: Mr. Chairman, perhaps I should rephrase the question. How does this decision affect any subsequent hearing of the Board, similar to the hearing of the CNR?

Mr. Pickersgill: By the Board, you mean...

Mr. McGrath: Not by the Board. I mean by the Commission. I beg your pardon.

Mr. Pickersgill: I do not think it would have any effect at all. Part Three has not yet been proclaimed by the government, and therefore there is no question whatever that until Part Three is proclaimed, the Public Utilities Commission has jurisdiction. Whether it has jurisdiction under the provincial statute or under the federal statute is a question of law. But there is no question that at the present time it has the sole power to decide whether there should be a bus service or not.

• 1000

If Part Three is proclaimed, a new question might arise, but it has not been proclaimed yet.

Mr. McGrath: I realize this is a hypothetical question and I do not really expect an answer, Mr. Chairman, but if the Public Utilities Commission of Newfoundland had ruled under the provincial statute against the application, it would be rather interesting to see what the position would be *vis à vis* the

Canadian Transport Commission and its decision.

Mr. Pickersgill: All I can say is I am very glad that did not happen.

Mr. McGrath: I just have one other question, Mr. Chairman. Has the Commission received an application, or has it had discussions with the Canadian National Railways regarding the abandonment of rail passenger service in the province of Prince Edward Island?

Mr. Pickersgill: I do not think there is any application. I have the timetable here and I just guessed that possibly this question might arise. I looked at the timetable and I think I should not take up the time of the Committee by reading it, but it appears that the Canadian National Railways has a bus service which operates from Charlottetown to Amherst, Nova Scotia. It has been operating for some time, and it is shown in the timetable. It seems to provide a quite ample service.

The timetable also shows a passenger train which, I was informed by the Chairman of the Railway Transport Committee, is composed mostly of freight cars, on which there is one, or possibly there may be two, passenger cars, and that that is the sole service that the Canadian National Railways provides on Edward Island or out of Prince Edward Island on rails.

Mr. McGrath: I come back to my question, then. I gather that there have been discussions with Canadian National Railways regarding proposed application to the Commission, or to the Railway Transport Committee of the Commission, for abandonment of the service in P.E.I.

Mr. Pickersgill: I do not think there has.

Mr. McGrath: Why would you refer to the schedule? Why would this be...

Mr. Pickersgill: I am a member of the public, and I...

Mr. McGrath: Why do you as Chairman of the Commission concern yourself with the schedule of the Canadian National Railways service in P.E.I. if in fact you were not contemplating an application to have the service abandoned.

Mr. Pickersgill: You know, Mr. McGrath, even I read the newspapers.

Mr. McGrath: Yes, but you cannot divorce yourself from the role that you are now in as Chairman of the Commission. You know that there has been a question raised in the House on this matter and I am suggesting to you, Mr. Pickersgill, that obviously from your reply you are entertaining or considering an application, or a proposed application for abandonment in P.E.I., or else you would not be concerned with the bus service, and with...

Mr. Pickersgill: Would you like to know really why I asked the question?

Mr. McGrath: No, I do not think I would, Mr. Pickersgill.

Mr. Pickersgill: I did not think you would.

Mr. McGrath: I think the record will show who is right on this matter. I would just like to ask one other question, Mr. Chairman, and that is in view of the questions of this subject at the meeting on November 15. Am I right in assuming, sir, that you did not bring any more of your officials with you than we had at that time, and if this is so, would you mind telling the Committee why you did not bring your Vice-Chairman who is responsible for legal matters, or your legal adviser, why you did not bring the Chairman of the Railway Transport Committee of the Commission with you, because it seems to me that this is in contempt, if you like, because the Committee indicated that it would like to have these officials here. Certainly the suggestion was made that it is unusual for a Committee to be examining estimates without having all of the senior officials of the department concerned present.

Mr. Pickersgill: I examined very carefully the *Proceedings* as they were reported, and I think that any of the questions that were asked I informed myself about, and I am quite prepared if anyone wants to repeat any of those questions to give an answer to them this morning.

Mr. McGrath: In other words, we are not going to be given the opportunity to examine the Chairman of the Railway Transport Committee of your Commission, or your legal adviser. Is that correct? Is that what you are saying?

• 1005

Mr. Pickersgill: I am not responsible for the proceedings of the Committee, sir. I was asked to come. I know one or two members

of the Committee did make certain suggestions at the last meeting at which I was present, but I heard no motion, I received no instructions about the matter and I thought I ought to inform myself about the points that were raised so I would be able to deal with them. If any other points are raised with which I cannot deal, I will certainly do my very best to provide the information.

Mr. McGrath: I will make the motion, Mr. Chairman, that this Committee call the Chairman of the Railway Transport Committee of the Canadian Transport Commission.

The Chairman: You are making a motion that the Chairman of the Railway Transport Committee be brought to the Committee? The motion is being put to the members.

Mr. Allmand: Before we begin with it I would like to ask questions on that motion.

The Chairman: Just a moment, please.

Mr. Lessard (LaSalle): Before the motion is put, we would like to know for what reason, for what purpose. Mr. Pickersgill is here to answer all the questions.

Mr. Peddle: Is there a seconder for the motion?

The Chairman: It does not need a seconder. Mr. Allmand.

Mr. Allmand: Mr. Chairman, it was my understanding that the President of the Canadian Transport Commission was the chief officer of that organization and was competent and responsible for the operations of that organization, and that the chairmen of the various committees are responsible to him and that he is the man who is supposed to answer the questions, not the Chairman of the Committee.

I am not an expert on the statute, although I was here when it was passed clause by clause, but Mr. Pickersgill, is it correct for me to state that you are the one who is responsible for the operation of the Canadian Transport Commission and not the chairmen of the various committees? Is that your understanding of your role?

Mr. Pickersgill: I think that is not an incorrect interpretation of the statute, with one exception, that if the Commission requires a legal opinion on which to base its proceedings as a Commission, I have not the right to give that. The person who has the right to give that is the Vice-President, but the Vice-President is the legal adviser to the Commission. He is not the legal adviser to anybody else.

Mr. Allmand: Therefore, any policy matters come under your responsibility.

Mr. Pickersgill: Ultimately, yes. I have to take the responsibility finally. Yes, that is right.

The Chairman: Mr. Schreyer, you want to talk on the motion?

Mr. Schreyer: Yes, I would support the motion, although I am a little puzzled. I was of the impression that when the Chair was going to get in contact with Mr. Pickersgill, the Chair was going to ask that Mr. Pickersgill bring some of his advisers with him. I want to ask Mr. Pickersgill if he did not receive a specific request that he bring certain officials with him.

Mr. Pickersgill: No, I did not receive any such request, and I did not understand that there was any decision. I mean, I was here. I did not understand that there was any decision by the Committee in that respect, and I did not feel that apart from the one or two legal questions that were put to me at the last meeting, which I hesitated to answer without advice—I think it turns out that the answers that I would have given would not have been incorrect.

But apart from that, I did feel that any questions on matters of fact I would be just as competent to answer as any of the chairmen of the committees. I have with me the Secretary and the Financial Adviser, because I understood the Committee was considering the estimates and I would not pretend to carry all those figures in my head, and I felt I did need help right here in order to satisfy members of the Committee on those points.

• 1010

Mr. Schreyer: Mr. Chairman, I just want to speak briefly. Mr. Pickersgill's answer reassures me that he certainly is not going counter to a specific request that was made of him, and I think that is the important point.

Nevertheless, I support the motion for the reason that I suspect some members here would feel better if they did have a chance to question one or two officials of this Commission other than Mr. Pickersgill. No one for a moment, sir, doubts your competence, but I suspect that 30 years of partisan effort leaves the impression in some minds that you cannot overnight divest yourself of that image, and

some of us would rest easier if we could question other officials who work with you.

[*Interpretation*]

The Chairman: Mr. Noël.

Mr. Noël: Mr. Chairman, I am against this motion, because we want to put questions to Mr. Pickersgill. On November 15, we tried to put questions to him, but he was not in a position to answer the Committee with all the required assurance. Now he is ready to answer those questions. I wonder why a motion is being put to bring here the person he has consulted, since Mr. Pickersgill himself is ready to answer. I think this would be childish! Therefore, I am against the motion because all the questions can be answered by Mr. Pickersgill. And, if he cannot do so, he will consult his legal adviser.

[*English*]

The Chairman: Mr. Thomas, do you want to speak on the motion?

Mr. Thomas (Moncton): Mr. Chairman, while there may not have been any specific request for Mr. Pickersgill to bring other officials with him, my impression after the November 15 meeting certainly was that the next time Mr. Pickersgill appeared here he would have certain other officials wih him. The reason I say that is because I asked Mr. Pickersgill a question which I thought was very pertinent and very important. I asked him what procedure was necessary to make application to continue the freeze on freight rates. I thought it was by Order in Council. Mr. Pickersgill answered me, "I do not think it can be by Order in Council, but I am speaking from recollections."

I understood him to say, in an aside at that time, that the next time he was here he would have his legal officer with him. He no doubt has the answer to this question today, but what if other questions of a similar nature come up today and Mr. Pickersgill says he cannot answer them? This is why I was under the impression that he would bring other people with him today.

The Chairman: Mr. Allmand.

Mr. Allmand: Mr. Thomas suggested that there may be questions that Mr. Pickersgill might not be able to answer today. Should we not wait and see if that is so. Let us put the questions to Mr. Pickersgill and if he is not able to answer them then I would think that perhaps we should call other officials if he feels other officials are better placed to answer them.

This morning I reread the evidence of the last meeting and I cannot see any questions that Mr. Pickersgill should not be able to answer along this line. As a matter of fact the questions this morning seem to be pretty much a repetition of the questions at the last meeting.

Mr. McGrath: Just wait awhile, Mr. Allmand.

The Chairman: Mr. Douglas.

Mr. Douglas: Mr. Chairman, I was going to say almost the same thing. We are presupposing already that the answers will not be forthcoming to questions that may be asked today. I would like to move that this motion be tabled until the end of our meeting to see whether or not we really require to take the time of these people and ourselves to call at some future date more officers of this Commission who may not be present today. I will make that motion that we defer consideration of the motion just put until the end of the meeting.

The Chairman: Have you finished?

Mr. Douglas: I move that it be tabled.

The Chairman: There is already a motion by Mr. McGrath to the effect that Mr. Pickersgill bring legal officers.

Mr. Pickersgill: I wonder, sir, would it be rude of me to ask what the motion really was, because that was not the way I understood it.

Mr. McGrath: You are quite correct. The motion was that the Chairman of the Railway Transport Committee of the Commission be called. If this motion succeeds, then I intend to move that the legal adviser, the Vice-Chairman, be called.

Mr. Pickersgill: The Vice-President, you mean.

Mr. McGrath: The Vice-President.

The Chairman: I am sorry, I was wrong, Mr. McGrath.

• 1015

Mr. McGrath: You were half right, Mr. Chairman.

Mr. Douglas: Mr. Chairman, I have no objection to these people being called if we find they are necessary but right now I have

no way of knowing if they will be necessary and I will vote against the motion.

Mr. Nesbitt: Mr. Chairman, I was just going to say, we have been members of the Committee for some time. Some of the members, with great respect, are perhaps new at the job here. I feel that Mr. Pickersgill will probably agree that a great deal of time may well be saved at the hearings here, if the Vice-president of the Commission and the Chairman of the Railway Transport Committee are permitted to come because otherwise a great deal of the Committee's time will be spent wrangling about this and making motions and asking all sorts of questions, unless, of course, Mr. Pickersgill has some objection to either of these gentlemen appearing. A great deal of time would be saved if we agreed to call them later today.

Mr. Allmand: Mr. Chairman, the order in which the witnesses are usually called is generally determined by the steering committee. Could we not refer this motion to the steering committee, because we have already passed a motion at the beginning of the meeting to call a list of witnesses, including the Postmaster General and others. Would it not be better for the steering committee to consider this motion at the earliest possible opportunity after this meeting so that you can determine, considering what took place at this meeting, if these particular witnesses are necessary? I move that this Mr. McGrath's motion be referred to the steering committee for decision and to report back to this Committee.

The Chairman: Well, we are facing three motions now.

Mr. Douglas: Mr. Chairman, you did not accept my motion because you already had a motion.

The Chairman: But there is one motion already, so we have to deal with that motion.

Mr. Allmand: No, I think it is a matter of procedure. I am making a motion to refer that motion, which takes precedence.

Mr. McGrath: Mr. Chairman, may I just make one observation? I find it difficult to understand why there is not general acceptance of my motion because the reason would appear obvious. We have been examining Mr. Pickersgill on a matter concerning a decision of the Railway Transport Committee of his Commission concerning the rail service of an entire province. In addition to that this morning we discussed the rumour or the proposed application, if you like, of the CN before the same Railway Transport Committee to abandon the service in another province. Surely the reasons for bringing the Chairman of that Committee before this Committee should be obvious and I find it difficult to understand why it would not receive general agreement.

The Chairman: Mr. McGrath, we have to deal with your motion first. Are the members ready to vote on that motion?

Mr. Allmand: Mr. Chairman, if we deal with Mr. McGrath's motion first, mine becomes meaningless. Mine is a procedural motion to refer the motion.

The Chairman: As far as procedure is concerned, yours is an amendment.

Mr. Allmand: How can we deal with Mr. McGrath's motion first? If his motion is passed or defeated it makes mine meaningless. I am moving to refer his motion to the steering committee for decision.

Mr. Schreyer: On a point of order

The Chairman: Mr. Schreyer.

Mr. Schreyer: Yes, Mr. Chairman, I suggest that a motion to table or refer is always in order and must be put to a vote first before you proceed with the main, substantive motion. Mr. Allmand's motion should be taken up first.

• 1020

Mr. Corbin: Mr. Chairman, on a point of order, if I understand things correctly, the motion was made on the basis that a formal request or a motion had been adopted at our last sitting to have the Vice-President here. In the minutes of our meetings of November 15, there was no such motion adopted. For that reason, that should be rejected.

Mr. McGrath: No, that suggestion was never made, that there was a motion adopted at out last meeting. What I did say was that there seemed to be the general impression at the last meeting from the comments of members of the Committee that the absence of these senior officials should be noted and that at the next meeting, when the Commission was again called, these officials would be present.

Mr. Corbin: That was the feeling, but I thought you said—

Mr. McGrath: No, I did not, no.

Mr. Corbin: That is the impression you left with me this morning.

Mr. McGrath: I am sorry.

The Chairman: Order.

Mr. Mahoney: I would respectfully suggest that if this carries on the way it is we may never find out whether or not it is necessary to have the Chairman of the Railway Transport Committee or the Vice-president of the Commission at all. In the interests of getting on with this, Mr. McGrath might think of withdrawing his motion at the present time, leaving it to a later stage of the proceedings this morning when it becomes apparent or not if such people will be called. Let us find out if the President of the Commission in fact can answer the questions put to them.

Mr. McGrath: I do not accept that Mr. Chairman, with great respect, because it is apparent to me from the questioning at the last meeting on November 15 and the questioning this morning that we need the Chairman of the Railway Transport Committee here.

Mr. Lessard (LaSalle): Mr. Chairman, I think you should put the question and be done with it.

The Chairman: I think you are right, Mr. Lessard. According to the rules, superseding motions, though independent in form are moved in the course of debate and questions which they seek to set aside. They are divided into two classes, namely dilatory motions; the previous questions.

Mr. Allmand: I move that Mr. McGrath's motion be referred to the steering committee, to be dealt with as soon as possible after this meeting and that a report be made to the Committee at its next meeting on this motion.

Mr. Nesbitt: For the clarification of Mr. Allmand's motion, when he says, "as soon as possible after this meeting", does he man after this meeting this morning? Perhaps he could make it a little more specific; for instance, at noon today or something of that nature.

Mr. Allmand: I would leave that up to the Chairman and the steering committee. I am not on the steering committee.

The Chairman: We are trying to sit here as long as possible; that is, until 1 o'clock.

Mr. Allmand: I will let you decide, sir.

The Chairman: Well, I think "after 1 o'clock"?

Mr. Allmand: I leave that up to you to decide, Mr. Chairman.

The Chairman: I say after 1 o'clock. Is that agreeable? On the motion put by Mr. Allmand, is there any seconder?

Mr. Pringle: I second the motion.

Motion agreed to.

Mr. Nesbitt: On a point of order, Mr. Chairman, the members of the Committee are changing from time to time and I have the right to some assurance that all the people who voted on this motion are, in fact, members of this Committee at the present time. A great many people come in and I would like some assurance on that.

The Chairman: Yes, the people who have voted are all regular members of the Committee. Do you want their names

Mr. Nesbitt: No. If I have your assurance, Mr. Chairman, that is quite adequate for me.

The Chairman: They are all regular members of the Committee. There are a few members at the present time who are not regular members but those who voted are regular members of the Committee.

Mr. Thomas (Moncton): Who here are not members of the Committee?

The Chairman: Are you asking who are not regular members of the Committee?

Mr. Thomas (Moncton): Yes.

• 1025

The Chairman: Mr. Benjamin, Mr. Peddle.

Mr. Thomas (Moncton): Mr. Chairman, as a member of the steering committee I would like to ask when the steering committee will meet to consider this. Time is important now.

The Chairman: At the last meeting of the steering committee we did not fix any date for the next one.

Mr. Thomas (Moncton): I am talking about this motion that you have just put.

The Chairman: Yes. We said after 1 o'clock this afternoon.

Mr. Thomas (Moncton): When do you think you will have a time? "After 1 o'clock is when very nebulous.

The Chairman: The House is not sitting today so we can meet at 3 o'clock. Is this agreeable?

Mr. Serré: Mr. Chairman, as we have other meetings this afternoon could we not meet

right at 1 o'clock and discuss the time of our steering committee meeting?

The Chairman: Right after this meeting?

Mr. Serré: Yes.

The Chairman: Are there many members who belong to other committees? We can meet right after this meeting if you wish: would that be satisfactory?

Mr. Thomas (Moncton): No. The reason I asked, is that I will not be here this afternoon.

The Chairman: There is a suggestion that we adjourn for 15 minutes and meet right away with the steering committee, and then carry on with the business of the Committee.

Mr. Allmand: Right now?

The Chairman: Yes.

Mr. Allmand: Or right after the meeting?

The Chairman: Right after the meeting, at 1 o'clock. Is that agreeable?

Mr. McGrath: I thought you were suggesting Mr. Chairman, that we adjourn now for 15 minutes and I thought that was a very good suggestion.

The Chairman: No, no, not right now; at 1 o'clock. Is that agreeable?

Mr. Nesbitt: Mr. Chairman, there are a great many questions members, would like to ask Mr. Pickersgill covering a rather broad field. For instance, there is rail and passenger service, and I would like to question Mr. Pickersgill on the subject of airlines. I was wondering if we could get some sort of modus operandi so that members asking questions would be able to carry through for perhaps a number of questions. For convenience sake if any member of any part of the Committee has a whole series of questions he would like to ask rather than to break up the line of questioning, we should arrive at some tentative agreement to carry through in that way dealing with one subject at a time so it will be a little more orderly.

The Chairman: We are still on Item 50 and naturally I am receiving as many questions as possible.

Mr. Nesbitt: Yes, but the Canadian Transport Commission has control of many different subjects.

The Chairman: Are we all ready for questions? The next member I have on the list is Mr. Nowlan.

Mr. Nowlan: Mr. Chairman, if we are going to proceed with questioning I want to ask Mr. Pickersgill questions on two different phases of the Canadian Transport Commission. One is Part III of the Act. I can remember Mr. Pickersgill sitting in about the same physical position in a different capacity in this room a little over a year ago when the National Transportation Act was discussed, amended and defined, and one of the clarion calls for the Act was that different modes of transport were, in effect, to be put on a competitive basis, and pay as you go was sort of the philosophy.

I would like to ask Mr. Pickersgill a general question. What negotiations or discussions, if any, have there been with the trucking industry about the implementation or proclamation of Part III of the Act so that the trucking industry can inherit supposedly some of the benefit of this new competitive philosophy of transportation, which was the purpose of the Act.

Mr. Pickersgill: There have been a number of meetings between representatives of the Canadian trucking associations and the Chairman and other members of the Motor Vehicle Transport Committee, and these gentlemen have met with me in informal discussions about some of the problems that would be involved in the implementation of Part III whenever the government saw fit to proclaim it. The Canadian trucking commissions have made public representations. As recently as the day before yesterday in Toronto Mr. Lewis the President of the Canadian Trucking Associations made a public speech in which he indicated the way in which the Trucking Associations felt it would be desirable to implement Part III, if the government decided to bring it into operation.

Mr. Nowlan: I imagine Mr. Pickersgill is also quite aware of the countermove on the part of some provincial capitals to keep the trucking industry in the balkan condition that it is in, each province in effect setting its own regulations and exercising control of the industry, which I am advised carried over one-third of the value of goods in Canada. I think Mr. Robarts made a speech just the other day, in which he said that Queen's Park should keep its interest in the trucking industry. I just wonder how far the Transport Commission has gone in deciding what it is going to do with Part III of the Act.

Mr. Pickersgill: Mr. Nowlan, you will appreciate that I am only a humble public servant.

Mr. Nowlan: You do not fool me with that humility. If I were as humble as you I would not have to worry.

Mr. Pickersgill: I do not think that any member of the Committee would expect me to make any comments of any description on the speech by the Premier of Ontario.

Mr. Nowlan: No, I appreciate that.

An hon. Member: That is political sagacity.

Mr. Pickersgill: Perhaps it is bureaucratic prudence.

On the second point, I do hope that Mr. Hellyer will consult me before he decides to recommend to the government that Part III is to be proclaimed. But he has no obligation to consult me at all. He is perfectly free because he is the Minister of Transport; he would have to recommend that and the government would have to agree to it. You can see what limitations I operate under. I do not think that I should express a view. However, I would be very glad to give any member of the Committee a copy of the speech I made in Toronto on Tuesday, just after Mr. Lewis spoke, in which I tried to set out what the state of the law was and what some of the problems were. But I also tried to be very correct, and when I was asked what I thought about the implementation of Part III—I was speaking to the Ontario association—I had no choice but to say, and no desire but to say, that that is a matter for the Government of Canada to decide.

Mr. Nowlan: I appreciate that, Mr. Chairman, and thank Mr. Pickersgill for that answer, as far as it goes. I would like to know if the Commission itself is taking any initiative in resolving the multitude of problems that Part III will undoubtedly create because Mr. Pickersgill, wearing another hat, deserved and received praise, as well as condemnation from different sources in stimulating the Transportation Act, which also involves a lot of problems. You showed initiative as a Minister bringing that Act to the fore and up to date, with all the perils therein. Is the Commission just sitting back listening to the trucking industry or is it taking the initiative to resolve some of the problems that Part III would create?

• 1035

Mr. Pickersgill: We are trying very hard to figure out several different ways in which there could be an administration so that if we are asked we will be able to advise the government that it could be done this way or it could be done that way, or it could be done in another way.

I think, in the light of what Mr. McGrath said a little earlier, that there does appear to be some difference of view as to what the Privy Council meant by an undertaking, and if that became a dispute probably nobody but a court of law could settle that. But within those limits we had understood that an undertaking was a company or an individual engaged in the motor vehicle transport industry and that if any of his operations crossed the provincial boundary he was solely under the legislative jurisdiction of the Parliament of Canada; if, on the other hand, all his operations were completely within a province he was solely under the legislative jurisdiction of the legislature. That is the way I understand the Privy Council decision.

It has been suggested—and the Supreme Court made a very important decision, as you know, Mr. Nowlan, quite recently in the Coughlen case—by the Canadian Trucking Associations and by others that if Part III was implemented the direct administration by our Commission should be confined to that part of operations that crosses the boundary, and all those parts of the operation that are entirely within the province should be left under the Motor Vehicle Transport Act so that the provincial boards, acting as agents of the government of Canada, would administer that part of it. Now we are examining that and have been for some time, ever since the Coughlen decision came down, to see whether that would be legally, and what is just as important, practically possible. That is the system in the United States. I think you know that. The Interstate Commerce Commission only regulates the traffic that actually crosses the boundary. In other words, they have the concept of operation rather than the concept of undertaking.

Mr. Nowlan: I have one further question for Mr. Pickersgill, regarding this point, Mr. Chairman. He certainly was well known for giving opinions in the past and I just wondered—it may not be fair—if he would care to give an opinion today, in his present capacity, on this: that for the trucking industry whose operations crosses provincial boundaries it certainly is in the interest of future development of the trucking industry to have Part III proclaimed if the industry is to grow as Canada is growing and as the industry is growing within provincial boundaries now.

Mr. Pickersgill: Mr. Nowlan, it is not my business to express an opinion on that point. My business is to do what Parliament and the Governor in Council, having been given certain powers by Parliament, tell me to do.

Mr. Nowlan: The Minister should give that opinion.

Mr. Pickersgill: The Minister or the government as a whole. I would give my opinion to the Minister but I do not think I should give it in public.

Mr. Nowlan: But you are in private, as a work of the Commission, discussing different ways to—

Mr. Pickersgill: I think that is our duty.

• 1040

Mr. Nowlan: Mr. Chairman, I have one other area of questioning and I will not be too long. This is more parochial than Part III and it concerns something called the Digby-Saint John ferry. This, Mr. Chairman, as Mr. Pickersgill well knows, has some political overtones and political history—it certainly has a long history in Nova Scotia. I would like to know from Mr. Pickersgill, as the head of the Commission, just what the present status is of the negotiations between the government and the CPR on the ferry and wharf facilities, and why this matter should not be made public so that people will know just who is dragging his feet.

Mr. Pickersgill: If I understand the facts correctly—and I think I do, I do not think anybody is dragging his feet. An agreement was made some time ago between the government—I think Mr. Hellyer mentioned this in the House—and the CPR that the CPR would go ahead and ask for tenders for a ship—I understand those tenders have been received and are being evaluated—and that the Department of Public Works would go ahead with the building of a wharf. The provincial governments of Nova Scotia and New Brunswick had agreed to provide certain facilities and I understand that as between the Government of Canada and the government of the provinces everything is practically settled. That is my understanding. That was the latest report I had on these negotiations. I believe there is some "dispute"—perhaps dispute is the wrong word.

Mr. Nowlan: ...difference of opinion.

Mr. Pickersgill: ...or haggling or bargaining going on between the Canadian Pacific and the government as to how much the Canadian Pacific will pay, but that is not holding up anything because the government gave an assurance.

Mr. Nowlan: Mr. Chairman, I am interested in Mr. Pickersgill's answer because if he is correct this certainly is a fact that I am not aware of. It really is not what Mr. Hellyer said in the House. I asked him if there has been an agreement between the Canadian Pacific and the government—

Mr. Pickersgill: Well there has not.

Mr. Nowlan: There has not been an agreement?

Mr. Pickersgill: No, there has not been an agreement. However, there was an understanding that the work would not be held up pending an agreement, that they would go ahead to procure the ship and build the landings, and that if an agreement between the two could not be reached some other means would be found to operate the ship. As I understand it—and I think I am very well informed about this because I ask questions on it about every three days—there is no time whatever being lost and these negotiations can go on while the work is being done.

Mr. Nowlan: At this stage is there anything prejudicial in having the light of publicity fall on the areas of haggling so that the thing can be tied down? As you appreciate, Mr. Chairman, as I think Mr. Pickersgill appreciates, this thing has ebbed and flowed in direct proportion to the tides in the Bay of Fundy. With a change in ministers and a change in government there was almost an agreement in 1963 before an unfortunate event occurred and that government went out of power and a new government and a new minister came in.

Mr. Pickersgill, how would the Minister or the Transport Commission prejudice the present position by making a direct statement to the people on the area of haggling and who the haggler is.

Mr. Pickersgill: I can answer that very simply. The question is how much the CPR is going to pay for the use of the wharf. I understand that if there is not agreement about that, the ship will be operated anyway in some other way.

Mr. Nowlan: Mr. Chairman, can Mr. Pickersgill answer me this? Is there a timetable

for completion of the ferry facilities at both the Digby and the Saint John end? If so, what is it?

Mr. Pickersgill: I do not believe that the tender has been let for the ship yet. The tenders were received only about two weeks ago, I believe, and I do not think this is an undue period for the examination of tenders for a ship that is going to last, we hope, for a long time.

• 1045

Mr. Nowlan: But my question, Mr. Chairman, was not about the ship but whether there is a timetable in Public Works for completion of the ferry facilities.

Mr. Pickersgill: Yes, the time table for the facilities is that they are to be ready by the time the ship is built.

Mr. Nowlan: But when is that?

Mr. Pickersgill: I did not submit any of the tenders. You know it takes a certain length of time to build this ship, and that might be one of the considerations that would govern which tender would be accepted. I understand there is more than one tender. While they are being evaluated I think you would agree that no businessman would start discussing that kind of question in public.

Mr. Nowlan: Then the present situation, Mr. Chairman, is that there is nothing in contract or agreement at the moment between the government and the Canadian Pacific Railway or a firm, and the Canadian Pacific Railway has not let the tender for the ferry. Is that correct?

Mr. Pickersgill: That is quite correct, unless it has happened in the last two days. But I think I am quite correct in saying, and I am going to hazard saying it anyway, that the government has said that a ship will be built and will be operated and if it cannot reach the terms of the Canadian Pacific it will be operated in some other way. I think that is just as far as I can go.

The Chairman: Mr. Skoberg.

Mr. Skoberg: Mr. Chairman, I would like to ask Mr. Pickersgill whether or not there has been any application before the Railway Transport Committee for crossing protection signals at the crossing where a serious accident occurred in which two students were killed out of Peterborough. Have there been previous requests before the Committee for crossing protection signals?

Mr. Pickersgill: I wonder if I could ask one of the officials beside me. That is the kind of factual question I want to be absolutely sure of. We have a list available and I will have one of them telephone and I think I will have an answer in a very few minutes.

Mr. McGrath: Why, all of a sudden, must we refer to officials, Mr. Chairman? Mr. Pickersgill is well versed on all matters of the Commission, and all of a sudden we now have to refer to officials.

Mr. Pickersgill: I do not carry all the details in my mind. I said that, I think, sir.

Mr. Skoberg: In the operation of the Great Slave Lake Railway, has the Railway Transport Committee assumed responsibility for the operational requirements of the freight that is moving on that line?

Mr. Pickersgill: What is this about operational requirements?

Mr. Skoberg: You have an operational order that should be issued by the Board.

Mr. Pickersgill: Do you mean, has its operation yet come under the jurisdiction of the Railway Transport Committee?

Mr. Skoberg: That is correct. It has?

Mr. Pickersgill: I believe it has not yet.

Mr. Skoberg: After three years of revenue traffic being carried on this line, is there any good reason why the Committee has not assumed responsibility?

Mr. Pickersgill: I believe the usual thing is that at a certain point after a railway has been constructed, when all the contracts are settled and the cost of it is known, it is regarded as complete and then comes under the jurisdiction. Up until that time it is under construction, even though it may be carrying traffic.

Mr. Skoberg: You are not suggesting, Mr. Pickersgill, that you would have to wait for the Canadian National Railways to say that the construction has been completed before we intervene?

Mr. Pickersgill: No, no. We have inspectors who would determine that.

Mr. Skoberg: Would you not conclude, though, that with the carrying of revenue traffic on that line for three years there should have been an operational order issued by this time?

Mr. Pickersgill: Well, perhaps there should have been.

Mr. Skoberg: Will you look into it?

Mr. Pickersgill: Yes, I will be very glad to.

• 1050

Mr. Skoberg: The other day I asked a question. I understand that there is some indication that the Canadian Pacific Railway may have made approaches to downgrade their "Canadian" passenger train, and I am wondering whether or not you are aware of any approaches to the Railway Transport Committee in this regard.

Mr. Pickersgill: There has been no application to my knowledge and I am sure I would have heard about it. There has been no application whatever to discontinue the train.

Mr. Skoberg: I am not referring to discontinuing; I am referring to a downgrading. I will refer specifically to the place—from Winnipeg to Calgary—where it has been suggested that the CPR may put a day liner on.

Mr. Pickersgill: Well, that would be substituting one train for another. To the best of my knowledge there has been no such application.

Mr. Skoberg: Even if they called it the "Canadian" it would still be a substitution and would have to come before the Board. Is that correct?

Mr. Pickersgill: I do not believe there has been any application of any kind with respect to the "Canadian".

Mr. Skoberg: They would have to come before the Board, though, if they wanted to downgrade that train.

Mr. Pickersgill: I am not so sure about that.

Mr. Skoberg: I would like a definite answer, Mr. Pickersgill.

Mr. Pickersgill: I cannot give you a definite answer.

Mr. Skoberg: Could I expect one?

Mr. Pickersgill: Yes.

Mr. McGrath: Has the matter been discussed with the CPR?

Mr. Pickersgill: No. Not to my knowledge.

Mr. McGrath: Has the Chairman of the Railway Transport Committee discussed the matter with the CPR?

Mr. Pickersgill: Not to my knowledge; and I think he would have told me.

Mr. Skoberg: I would like to have the assurance that you will have an answer as to whether or not they have to come before the Transport Commission.

Mr. Pickersgill: Oh, yes. I will get an answer to that.

Mr. Skoberg: It would appear that this is an indication of why we could have had other people from the Department with Mr. Pickersgill.

Mr. Chairman, in regard to the Roberts Bank question, which has been coming up quite frequently lately, could you tell me who has control of the rail link between the Crow's Nest and Roberts Bank at this particular time?

Mr. Pickersgill: There is no rail link between the Crow's Nest and Roberts Bank at the present time.

Mr. Skoberg: Well, the contemplated rail line that will be there.

Mr. Pickersgill: I did read a copy of the British Columbia *Gazette* which was sent to me—I think it appeared on my desk yesterday—in which the Minister who has the responsibility in British Columbia for the building of railways that are wholly within the province had approved a certain route for a rail link between the existing railways and Roberts Bank.

Mr. Skoberg: Of course, Mr. Pickersgill, this line is there now and I am wondering who has jurisdiction over the line.

Mr. Pickersgill: I am assured—I have not gone there on the spot to look at it—but I am assured there is not a rail line.

Mr. Skoberg: I think possibly one of the members from B.C. could clarify that quite easily.

Mr. Pringle: Are you talking about the CPR?

Mr. Skoberg: Yes. The CPR is there now.

Mr. Pickersgill: At Roberts Bank?

Mr. Pringle: I think you are referring to Fernie, B.C. and Natal and the Crow's Nest pass—the old Kettle Valley line and the CPR line that runs into the Fraser Valley. It ceases to be, as I understand it, a coal line for the CPR at Mission, when it crosses the bridge and joins the CNR track to Fort Langley, and from Fort Langley on it becomes the new route. Is that correct?

Mr. Pickersgill: My understanding is that the coal moves now and will continue to

move up that railway that was the main line up through that valley. Is it the East Kootenay?

Mr. Pringle: Yes.

Mr. Pickersgill: It does not move over the Kettle Valley.

Mr. Pringle: No, that is right.

Mr. Pickersgill: Then it follows the main line and at the present time, of course, it is shipped at Port Moody. But my understanding is that the coal will be moved under the new scheme when Roberts Bank is completed. It will be moved over a part of the CNR line—I think it is from Mission City—and then a railway has to be built and there may be little bits and pieces. A little bit of the Great Northern will be used. There are little bits and pieces but mainly all it is is a route, and I think the route follows rather closely an old railway that used to be there a long time ago just north of the airport, the Boundary Bay airport. Unfortunately I have not had an opportunity to go to British Columbia and look over this place recently.

Mr. Pringle: I can verify, Mr. Chairman, that there is no railroad from Fort Langley to Roberts Bank at the present time.

Mr. Skoberg: That is what the whole fight is about now, as to the route of the proposed spur line.

Mr. Pickersgill: That is what I understood.

• 1055

Mr. Skoberg: Getting back to the question, regardless of the route and all of the implications that are involved, the jurisdiction over rail lines will still come under this Canadian Transport Commission, will it not?

Mr. Pickersgill: Do you mean that once a railway is built the traffic would come under our jurisdiction?

Mr. Skoberg: You can word it any way you want.

Mr. Pickersgill: Well, the way you word it does rather make a difference, as people find when they go into the courts. If things are not worded properly you very often do not...

Mr. Skoberg: I did not know we were in a court. I am just wording it along the lines as I understand it.

Mr. Pickersgill: I am trying to give accurate answers.

Mr. Skoberg: It will come under our jurisdiction. Is that correct?

Mr. Pickersgill: Do you mean the traffic?

Mr. Skoberg: All right, the traffic.

Mr. Pickersgill: The traffic would come under the jurisdiction of the Canadian Transport Commission. I presume if it is a whole movement over a system most of which is under the jurisdiction of Parliament, it would certainly, for many purposes at any rate, come under the jurisdiction of the Commission. Once a railway is built, it carries the traffic.

Mr. Skoberg: What responsibility does the Canadian Transport Commission assume in so far as distribution of boxcars is concerned?

Mr. Pickersgill: I understand that if there are complaints that Canadian boxcars being hoarded by American railroads, or if there are arguments to the effect, as there sometimes have been, that American cars are unduly delayed here in Canada, this is something that the Railway Transport Committee certainly looks into. In fact, they are looking into this very question at the moment.

Mr. Skoberg: In view of the discussion that has been going on in the House, then, the Railway Transport Committee are looking into the number of boxcars across the line and also the equitable distribution of boxcars in Canada.

Mr. Pickersgill: The distribution within Canada.

Mr. Skoberg: What about the equitable distribution? Are you concerned about that?

Mr. Pickersgill: Well, there are as many views of the equitable distribution of boxcars as there are rural members of Parliament, if I may make an improper kind of answer to that question.

Mr. Skoberg: I think you realize the importance of the distribution and I hope you will be looking into it.

Mr. Pickersgill: As a matter of fact, in so far as it concerns wheat I think that most of the dealings are direct between the Canadian Wheat Board and the railways.

Mr. Skoberg: Are we assuming responsibility? Is your Department assuming responsibility to look into this box car situation?

Mr. Pickersgill: It is a nice question whether or not we could order the railways to put boxcars here, there and everywhere and whether 73 that would be a real interferrence with their management functions.

Mr. Benjamin: You do have the authority to order this if you wanted to use it?

Mr. Pickersgill: Well, that is a nice question.

Mr. Skoberg: Well, I am just wondering where we are at here. We have the Canadian Transport Commission—

Mr. Pickersgill: Let me put it this way. When we get complaints about a lack of box cars, we draw them to the attention of the railways and if there is much substance in the complains we usually get results. Whether this is moral suasion, or whether behind it is a legal power to order them, is another question. But the inspectors of the Railway Committee are constantly dealing with these problems.

Mr. Skoberg: Have you drawn this to the attention of the railroad up to date?

Mr. Pickersgill: Oh, a dozen times.

Mr. Skoberg: With what results, or what answer did you get?

Mr. Pickersgill: Well they vary. Sometimes the railways are able to show that the position they have taken is now wholly unreasonable. Quite often someone down the line has not been very careful and when it gets to higher management in the railways they correct it pretty fast. They do not like to be criticized any more than anyone else does.

Mr. Skoberg: Well, I think we are not worried about the criticism, we are worried about action, really.

Mr. Nesbitt: A supplementary question before Mr. Skobert goes on. I think the point that Mr. Skobert has raised is a very important matter of principle and what I would like to bring up or raise is this. When there is a conflict between the management policy of one or other of the major railways in Canada and the public interest, does the Canadian Transport Commission have the authority to make the decision or make an order, after having heard both sides of the matter?

Mr. Pickersgill: Mr. Nesbitt, you are a distinguished member of the Bar and I am only a layman, but would you not, if you were putting that question in a court, make it rather more specific?

Mr. Nesbitt: Well, then, let me ask you a specific question, directed to you through the Chairman of this Committee. Does the Canadian Transport Commission have the power or the authority to issue an order when the management policies of the railway conflict with the public interest? If you would like a specific example, I would be very glad to provide that.

Mr. Pickersgill: I do not think that we could assume to define the public interest in any way in which it is not defined in the law. I do not think that we can make an arbitrary decision that we know what the public interest is unless it is part of the law, and therefore, one would have to subject, I think, any individual circumstance to examination. It would depend upon whether there was any provision in the Railway Act or in the National Transportation Act by which Parliament had vested in the Commission the authority to act, and if it did, of course, it could act.

Mr. Nesbitt: Mr. Chairman, I would like to pose an example to Mr. Pickersgill and perhaps then he could give us an answer.

I dislike using examples from my own area, but I happen to be familiar with this one and it could happen any place in Canada, so I will use it.

In this case, Canadian National Railways operates a dayliner service between the cities of Widsor, London and Brantford, Ontario, and southwestern Ontario to the City of Toronto. It is designed for business people who are going down and wish to avoid taking their cars into Toronto and all its transportation problems. It returns late in the afternoon. It is a heavily patronized service.

There happen to be two large communities, my own, the City of Woodstock, which has 75 major industries, some employing up to 1,000 people, and a population within ten miles of the railway of some 40,000 to 50,000 people. The CNR has decided that it will not make a stop at Woodstock or at Chatham, but they do stop at Brantford.

The City of Woodstock feels, in this particular case, that this is a form of discrimination and that the industries there have parent or subsidiary industries in the City of Toronto and there is a great deal of traffic back and forth. Some intermediate official of the CNR decides that the dayliner will not stop, which entails only a matter of four minutes at the most on the schedule. Is there any recourse that the municipalities in this case, would have via the Canadian Transport Commission against the decision of some junior official of Canadian National Railways?

Mr. Pickersgill: I think, Mr. Nesbitt, an application would have to be made to the Commission with all the facts. The railways would have to be given the opportunity.

Mr. Nesbitt: Oh, certainly. But there is an opportunity of appealing to the Commission.

• 1105

Mr. Pickersgill: It is not a question of appealing in the ordinary sense. It is a question of applying this. I am thinking of appeal in the legal sense. It is a question of making an application and if that application comes within the four corners of the law, then we have a duty. If it does not, of course, we would be usurping a function that Parliament did not give to us.

Mr. Nesbitt: Does the Commission have authority to hear applications of this nature?

Mr. Pickersgill: It has authority to hear certain kinds of applications with respect to passenger service as they are set out in the law.

Mr. Nesbitt: Would it have authority to hear an application of the example I just cited.

Mr. Pickersgill: I think it would be really prejudging a case for me, sitting here, to try to—because it really depends on the stated facts and details whether or not there is jurisdiction, does it not?

Mr. Nesbitt: Perhaps the Vice-President of the Commission might be able to assist you in answering questions of this nature?

Mr. Pickersgill: I think he would probably want a very detailed statement of the facts and perhaps he would hesitate. After all, he is not the legal adviser of anyone except the Commission, and as his advice might be rather relevant in the determination of the case, it is just conceivable that he might consider the giving of his advice in advance of the hearing or of an application to be prejudicial to applicants or to the railway.

After all, Mr. Nesbitt, in any of these cases, as you know well, the Railway Transport Committee or any other of the Committees before whom there are parties, is sitting as a court of record, and the only place where those cases can be tried surely is within the court with both parties present. To express opinions outside the court when the court is not sitting about what would or would not happen in a particular case would, I think, be something that no one who might have to sit in judgment in the matter would want to do in advance.

Mr. Nesbitt: There is one thing . . .

The Chairman: You are still on the same supplementary?

Mr. Nesbitt: Yes, the same supplementary. Mr. Pickersgill has just told us that he does not want to give general replies to questions as to the jurisdiction of the Commission. Then I cited a specific example, and he still seems a little uncertain. Could Mr. Pickersgill outline to us what authority the Commission does have to deal with such applications.

Mr. Pickersgill: It has precisely the authority given to it by Parliament.

Mr. Nesbitt: Well, what is that?

Mr. Pickersgill: If you ask Mr. Hellyer that question in the House, Mr. Nesbitt, the Speaker, I think, would not permit him to answer because what you would be asking him to do and what you are asking me to do is give a legal interpretation of a statute.

Mr. Nesbitt: I am not asking a legal interpretation, Mr. Pickersgill. I am asking, since there seems to be a great deal of uncertainty as to what applications the Commission can even hear, I would like to know from you, as head of the Commission, what authority the Commission has under the statute passed by Parliament, what kind of applications may be heard?

Mr. Pickersgill: I think I can only say that the statute speaks for itself, and if anyone feels that he has a case he is certainly free to make an application and to state his facts and then the Committee—it is just like asking leave to appeal to the Supreme Court—would decide whether it had jurisdiction. If he was not satisfied, there are other legal remedies.

Mr. Nowlan: A further supplementary. What applications have you heard to date? What type of application have you heard to date specifically?

Mr. Pickersgill: Well, specifically there have been very few because the Committee has been largely concerned with the costing order. It has heard a number of applications about agency consolidations and things of that sort, and rendered judgments in them. It has heard an application for a certain rather well-advertised passenger train and rendered a decision in respect of it. But as I say, since

the Railway Committee of the Commission has been largely engaged in the very long proceedings over the costing order, it has not yet had an opportunity since the Canadian Transport Commission was established to hear any new cases.

I do not think the kinds of cases that it can hear were really radically altered by the National Transportation Act. I think they are the same kinds of cases that the Board of Transport Commissioners were able to hear under the Railway Act before. I do not recall—with respect to the particular kind of thing that Mr. Nesbitt has referred to—except, of course, in cases where a railway applies for an abandonment of a passenger service or an abandonment of a branch line, there is one new feature and that is if the Commission refuses to allow it to be abandoned when there is a loss, then the government is expected to pay the loss, according to the Act, and not throw the burden on the railways, only 80 per cent in the case of a passenger service but probably the total loss in the case of a branch line.

• 1110

Mr. Nesbitt: One final question. Does the Commission have authority to order the supplying of passenger services in whole or in part to specific parts of the country, either municipalities or parts of provinces?

Mr. Pickersgill: Do you mean supplying new passenger services that do not now exist?

Mr. Nesbitt: Yes, or in varying degrees.

Mr. Pickersgill: A passenger service that is declared by the Commission to be a passenger service cannot be abandoned without the permission of the Commission, but I do not think that it would be within the powers of the Commission to order a new service to be established.

Mr. Nesbitt: Even if the Commission felt after hearing representations that it were in the public interest to do so?

Mr. Pickersgill: I do not see how you could do it. How could we tell the Canadian Pacific Railway that they had to start a service that does not now exist and in their business judgment they think should not exist, any more than we could tell an airline that it has to start a new service, or any more than we could tell a bus company or a trucking company.

Mr. Nesbitt: How about the Canadian National Railways?

Mr. Pickersgill: I do not think that we could do it. I think Parliament could do it. If Parliament wanted to tell the Canadian National Railways that they have to provide a service, then I think that could be done, but I do not think it would be within...

Mr. Nesbitt: It would not be within the ambit of the Commission.

Mr. Pickersgill: No, I do not think so, because we are supposed to treat the Canadian National Railways, as I understand it, in exactly the same way as we treat private railways. Certainly that was my understanding when I was Minister of Transport. It was what Mr. Meighen suggested when the question of the relationship between the Canadian National Railways and Parliament and the government came up years ago, and it has been followed, I think, invariably by governments ever since, that the Canadian National Railways is supposed to run a businesslike operation and that its duties are to be imposed upon it, they should be imposed by statute. But if they try to relieve themselves of certain functions they are now performing, whether they be a private company or a public company, then they do have to apply, and those things are set out in the law.

Mr. Nesbitt: Well this is very interesting. To discontinue an existing service or to vary it in some way that implies discontinuance—

Mr. Pickersgill: There is quite a large measure of variation that does not come within the law. If it is considered a matter of management it does not come within the law.

Mr. Nesbitt: Who makes that decision?

Mr. Pickersgill: Presumably the people who are running the undertaking.

Mr. Nesbitt: What the management of the CN or the CPR might think constitutes a management problem might not be thought to be such in somebody else's view. Who decides?

Mr. Pickersgill: If anybody thinks that in any way a railway or any other carrier is not carrying out its obligation under the law that person can take whatever legal remedies there are to provide it—and there are a lot of them provided in the Railway Act.

The Chairman: Have you finished, Mr. Nesbitt?

Mr. Nesbitt: I do not wish you to take offence to personal remarks, Mr. Pickersgill, but it is really like pinning jelly to the wall.

Mr. Pickersgill: Mr. Nesbitt, if you, as a member of the Bar, were to put a specific case before the Commission you would get an answer and you would get it quickly.

The Chairman: Mr. Skoberg.

Mr. Skoberg: Mr. Chairman, listening to what Mr. Nesbitt has been saying, I would hope that the CTC does not become a rubber stamp in respect of these railroads' applications.

Mr. Pickersgill: It certainly does not.

• 1115

Mr. Skoberg: I have heard too many suggestions and I have seen too many things happen. Reports have been given out prior to the completion of certain hearings that something is going to happen. And this is no myth; it has happened exactly along these lines.

At one time the Board of Transport Commissioners issued an annual report, the format of which we all recognized. Has any decision been made to discontinue this type of publication?

Mr. Pickersgill: The Commission has made one report already. It is true that it was only for a short period. The Commission was established on September 19, 1967 and the report therefore did not cover a full year. Because the Commission is different from the Board of Transport Commission, the report is different in form, but there is an obligation under the law for the Commission to make an annual report.

Mr. Skoberg: Is it correct that we will continue to have the annual report of the Board of Transport Commissioners in the format that it used to appear.

Mr. Pickersgill: No, I do not think so. I think there will be some changes.

Mr. Skoberg: Whose decision is that?

Mr. Pickersgill: This is a purely internal matter for us, and if Parliament does not like it they can censure us.

Mr. Skoberg: This then leads to my next question. Who is actually responsible for the policy of the CTC, is it the Minister of Transport or this Commission here?

Mr. Pickersgill: I do not quite know what you mean by "policy".

Mr. Skoberg: You said that you expected some changes would be made in this particular annual report and that if Parliament did not like it they could do something about it.

Mr. Pickersgill: We are not changing anything. There has only been one annual report.

Mr. Skoberg: I only want to know if we are going to continue with that type of report? It was an excellent report as such.

Mr. Pickersgill: Well, I am not sure. It was pretty experimental because it was the first time we had ever done it with a consolidated Commission. I am not sure that it was entirely satisfactory and that we will not try to make some improvements in the report next year. If there are any criticisms of it we would like to have them because we like to know what kind of information people want that is not now in the report.

Mr. Skoberg: Who is actually responsible for the policy of the Canadian Transport Commission?

Mr. Pickersgill: I am afraid I do not know what you mean precisely by "policy".

Mr. Skoberg: Who is setting the policy for the Commission? Is it the Minister?

Mr. Pickersgill: What do you mean by "policy"?

Mr. Skoberg: You have policy and you have regulations. The regulations put into effect the policy once it has been established. Is that right?

Mr. Pickersgill: As I understand it, the policy of the Canadian Transport Commission was established by Parliament in the National Transportation Act.

Mr. Skoberg: But there is no new policy being established by this particular Canadian Transport Commission?

Mr. Pickersgill: I do not see how there can be. Only Parliament could change our mandate.

Mr. Skoberg: Well, I hope that is right.

Mr. Pickersgill: If we do anything we are not empowered to do by Parliament, we can be taken into court.

Mr. Skoberg: Another question, Mr. Chairman. Some time in September I asked a question in the House on jurisdiction respecting safety of railway workers. Now this was taken as notice by Mr. Hellyer and on September 24 Mr. Richardson answered and said that a judgment would be made shortly. Has

any decision been made in so far as the Railway Transport Committee is concerned on a general order setting out whether or not it has jurisdiction over safety as it relates to railway employees?

Mr. Pickersgill: My recollection is that that decision was rendered fairly recently and if you would like me to get the full details, I would be glad to.

• 1120

Mr. Skoberg: If it had been rendered I would expect that there should have been an acknowledgement made in the House.

Mr. Pickersgill: You know, the decisions of courts of law are not normally communicated to the House unless someone asked for them.

Mr. Skoberg: I do not think this was a court of law; this was a decision that was being asked of the Committee.

Mr. Pickersgill: The Committee is a court of law—Parliament said so, and every decision it makes where parties are heard—and parties were heard in that case, the railways and the employees—is the decision of a court.

Mr. Skoberg: I beg to differ with you in this regard, Mr. Pickersgill. The jurisdiction of safety as it affects employees is a question that concerns this Committee here. This did not go to a court of law. This is a matter of interpretation. Surely we could be expected to be given an answer in this regard.

Mr. Pickersgill: I will be very glad to give you...

Mr. Skoberg: Just one last question, Mr. Chairman. There has been a considerable amount of discussion regarding the rules for operation, maintenance and the testing of air-brakes and communication signals. This is a little booklet which we all should be familiar with. Does the Railway Transport Committee supervise the type of inspections going on now throughout the country on these run-through trains—passenger and freight and, if so, is this type of inspection continual?

Mr. Pickersgill: Again, I am a little uncertain of precisely what you mean.

Mr. Skoberg: Well if Steering Committee decides that you should bring along some other people with you, perhaps I could put my question to them.

Mr. Pickersgill: If I could understand the question I could answer it. Do you mean does this Railway Transport Committee have inspectors inspecting the operations of the railway to see that they are conforming with the law?

Mr. Skoberg: This is true.

Mr. Pickersgill: If that is what your question means, the answer is yes.

Mr. Skoberg: When disputes arise over the proper implementation of the rules contained in this book are the inspectors on the spot to supervise the complaints as they come in?

Mr. Pickersgill: Yes. Any complaint is investigated as fast as personnel can be gotten to the spot.

Mr. Skoberg: We will follow that one up later.

The Chairman: Mr. Allmand.

Mr. Allmand: Mr. Pickersgill, does the CTC have any say in the landing rights of international airlines in Canada?

Mr. Pickersgill: Yes. They have to be licensed by the Air Transport Committee or by the Canadian Transport Commission—it is the same thing, you know. But before they can be licensed the normal procedure is to have a bilateral agreement with the country concerned in which the airline resides. These bilateral agreements are not of course negotiated by the Commission as such; they are negotiated, like all our international arrangements are, by the Department of External Affairs in a formal sense. However, the Commission and Mr. Morisset, in particular, the Chairman of the new International Transport Policy Committee, is always represented in these negotiations. When a negotiation is made and when it is agreed that there will be a service between Canada and some other country and a service by some foreign carrier into Canada then, as a formality, the carrier, having been licensed by its own company, must also be licensed by the Air Transport Committee. But this is a pure formality because having made a treaty—the government having agreed, I think it would be really rather contemptuous of us not to carry out the governments' decision in this matter.

Mr. Allmand: But you could refuse.

Mr. Pickersgill: I suppose, technically, we could but I am sure we would hear about it—and quite properly too.

Mr. Allmand: My point is this. Say, an international airline that is presently landing in Montreal would like to land at Toronto instead of Montreal because in the airline's opinion it was felt that it would be more to their advantage, is that change negotiated by way of amendment to the treaty with the Canadian Government or do they go to the Canadian Transport Committee?

Mr. Pickersgill: Oh no. There has to be an agreement between the two governments. Then, in addition to that, in countries where there is more than one airline the airline has to be designated by the country that is concerned for this service. Then it is, as I say, practically automatic. If the government has agreed to this, and since the Commission takes part in these negotiations, there is no reason on earth that the Commission would not approve and would not give the formal document.

Mr. Allmand: Therefore it really is a government decision.

• 1125

Mr. Pickersgill: Oh yes, these are decisions between governments. Sometimes these negotiations take a terribly long time, as I know, having been rather closely associated with the last bilateral negotiations with the United States which came to an almost total standstill for nearly a year.

Mr. Allmand: On another point...

Mr. Nesbitt: I have a supplementary question. Can Mr. Pickersgill tell us how negotiations are getting on now between the Netherlands and Canada, because my understanding is that a few months ago the Netherlands government served notice it was terminating the air agreement between Canada and the Netherlands because of failure to acquire certain landing rights for KLM. Could you bring the Committee up to date on that?

Mr. Pickersgill: My latest information is that notwithstanding the fact that they have formally notified us the bilateral will cease to exist on some date in January that I do not carry in my head, the Netherlands has notified Canadian Pacific Airlines that they are free to continue to fly as though the bilateral still existed until April 1. It is our intention—and this is something that was considered just the other day with the appropriate authorities—to advise KLM that since their government has given this permission to Canadian Pacific, we extend a similar courtesy to KLM.

Mr. Nesbitt: Is it likely that KLM will be able to land in Toronto rather than Montreal, or perhaps both?

Mr. Pickersgill: Well, I did not bring my crystal ball.

Mr. Nowlan: I have a supplementary concerning international air traffic, and perhaps there has been an announcement. Has Alitalia received permission to come into Toronto or is that still in the air?

Mr. Pickersgill: I imagine you are speaking figuratively?

Mr. Nowlan: Figuratively.

Mr. Pickersgill: I would say it was very much in the air.

Mr. Nowlan: As a matter of interest, and coming back to policy, does your CTC actually decide that or is it going to be a ministerial decision?

Mr. Pickersgill: That would have to be negotiated between the two governments. Perhaps I am speaking a little beyond what I ought to as an official, but in these negotiations we try to calculate the losses and the gains to Canada—not to the airlines, but to Canada—in these matters. I think it is no secret that to allow any foreign air carrier to land in Toronto would increase the revenues of that carrier and correspondingly diminish the revenues of Canadian carriers and presumably, therefore, have an adverse effect on our balance of payments.

One would assume, therefore, that we would try to make that up by getting corresponding rights in the other country so that the balance that now exists would, as far as possible, be retained. That is the general principle on which we try to do these things.

Mr. Nowlan: So you do the detailed work, but actually the government say that Alitalia will come into Toronto.

Mr. Pickersgill: I do not think the government considers these matters solely as between airlines. I would assume—I know it was the case when I was a member of the government and perhaps I should not be so coy—but I think these receipts and disbursements in respect of air service are part of the invisibles of our total trade. One would pay some attention, I think, in these matters

not just to what the Canadian airline would lose and the foreign air carrier would gain and vice versa, but one would also pay some attention to the total balance between the two countries.

•1130

Mr. Nowlan: But my question is, does the CTC do this balancing and not the Department of Transport?

Mr. Pickersgill: We try to provide statistics solely with respect to the air service, but I have no doubt that the Minister of Trade and Commerce and the Minister of Finance also would provide statistics about the general effect that this would have on the total balance of trade which is also pretty important.

Mr. Nesbitt: Is public convenience in these matters taken into consideration?

Mr. Pickersgill: Yes. I would think so, and I think most Canadians would prefer to see people travel on the Canadian airlines.

Mr. Allmand: I have another question, Mr. Pickersgill. Some experts, including the Canadian Air Traffic Control Association, have alleged that there are not now enough air traffic controllers in the Toronto and Montreal areas and this constitutes a danger to air traffic. Are these complaints a concern of the CTC or is it purely a governmental decision whether we should have more air traffic control facilities in the Montreal and Toronto air traffic control areas?

Mr. Pickersgill: I think perhaps I ought to answer the question this way: Railway safety, traditionally and legislatively, was a function of the old Board of Transport Commissioners and is a function of the Canadian Transport Commission. Air safety is a function of the Department of Transport, and therefore it does not come within the ambit of the Commission at all, by law.

Mr. Nesbitt: I have a further supplementary; that is a very good point, Mr. Allmand.

The Chairman: A supplementary, Mr. Nesbitt?

Mr. Nesbitt: Recently Mr. John David Lyon, President of Canadian Air Traffic Control Association, said during a press interview in Calgary, apparently, in early November that there had been 12 near misses of aircraft collisions in Canada in the last year. No specific airline was mentioned. Would you care to comment on that statement by Mr. Lyon?

Mr. Pickersgill: I do not think it would be proper for me to comment on that. I think that question would be more appropriately introduced on the Department of Transport estimates because we have no responsibility. It is the Department of Transport that has the responsibility for the air traffic controllers and for air safety.

Mr. Nesbitt: That does not come under the Commission in any way?

Mr. Pickersgill: No; railway safety does, but not air safety.

Mr. Allmand: But does not the allocation of air corridors and air schedules come under the CTC? Does not the CTC decide, for example, whether regional air carriers should have lines from Montreal to Sudbury and North Bay.

Mr. Pickersgill: In that sense, yes, whether there should be services, but it has nothing to do with whether they apply at this altitude or that altitude, or on this air path or that air path; those are matters for the Department of Transport.

Mr. Allmand: But in allocating and deciding whether you will grant regional air services or other services to a certain city, you do consider the present traffic that must go into that airport.

Mr. Pickersgill: We always consult the Department of Transport to find out whether or not there are facilities so that they can operate, because it would be rather silly to give them a licence to operate when they could not physically do it.

Mr. Allmand: When the Canadian Transport Commission was set up the statute provided that there would be certain research functions associated with it. I was wondering whether any research is being done at present, or whether any is contemplated with respect to the whole problem of getting passengers and their baggage out of an aircraft and into the middle of the city. In Montreal you can spend more time going from the Queen Elizabeth Hotel to the Dorval Airport than you do in going from Toronto to Montreal.

Mr. Pickersgill: Would you mind if I had a brief word with the Chairman? I am suggesting, since we are embarking on a new topic, Mr. Allmand, that perhaps I can have about two minutes to reflect on this, if the Commit-

tee does not mind. It is rather a long time from 9.30 until 1.00.

The Chairman: I think the Committee agrees on that; as a matter of fact, I think we can all do it—your Chairman first.

• 1145

A short recess was taken

Upon resuming

The Chairman: Order, please. Gentlemen, before we proceed further may I say that we have one member of the Steering Committee that has to leave and I will entertain a motion for a substitute to replace him at the steering committee meeting this afternoon.

Mr. Mahoney: I move that Mr. Allmand substitute for Mr. Mahoney on the steering committee for the meeting this afternoon.

The Chairman: Are you requesting a replacement too?

Mr. Thomas (Moncton): I move that Mr. Nesbitt replace me.

The Chairman: Then there will be two replacements.

Mr. Skoberg: I would expect Mr. Schreyer will be back, Mr. Chairman. He had another commitment.

An hon. Member: Mr. Mahoney has to represent his constituents somewhere else.

Motions agreed to.

Mr. Pickersgill: Would you please repeat your question?

Mr. Allmand: When the Canadian Transport Commission was set up a research facility was supposed to be established in connection with it. Are these research facilities being used in any way to try to solve the problems of city to airport transport—not just from the airport. I understand that research is being done in the United States on ways of bringing passengers and baggage almost right from an aircraft right into the city in order to cut down on all this lost time between getting off an aircraft and getting into the city. Is your Commission or anybody else doing any of this research, or are there any new methods being proposed?

Mr. Pickersgill: Yes, there is research being done co-operatively by the Department of Transport and the research division of the Canadian Transport Commission on this problem. A lot of different possibilities are being looked at. I think that it is going to be some little time before some of these rather far-out means of doing these things are going to be developed sufficiently so that one can determine which is the best method. However, I have not any doubts in my mind that when you buy an airline ticket say, from Paris to Montreal, in the future, you will get on a vehicle somewhere in the middle of Paris—this will be included in your passage—which will take you right to the plane at the airport, and your luggage probably will be transported in some kind of container. Then, at the other end, unless you want to stop at the airport, the container will be transported, and so will you, right to the centre of the city—and in some cases it may be to more than one place in the city. I do not see how the present system can subsist very much longer. I am sure that every person here experiences the same thing as I do—a terrible lot of exasperation at the end of a journey, in having to wait for your baggage—no matter how efficient the airline is and no matter what airline it is. My baggage always seems to be the last to come off and once in a while it does not.

• 1150

Mr. Allmand: Have any applications been made or have there been any definitive proposals made with respect to helicopter service from downtown Montreal to the airport, and the same thing in Toronto?

Mr. Pickersgill: My recollection is that there were several approaches made to the old air transport board—I do not think there has been one since the Commission was established—and not one of them ever looked as though it would come within miles of paying. You know, transport by helicopter is a very expensive mode of transport and most people just will not pay it for the relatively small saving of time that there is.

Mr. Allmand: It was done during Expo—they transported people from Montreal airport right to the Expo island.

Mr. Pickersgill: Yes, I know.

Mr. Allmand: I do not know whether or not it paid.

Mr. Pickersgill: I do not know whether it paid or not. A lot of people who went to Expo were willing to pay a little extra, you know. If I may put it this way, it was the binge of a lifetime. But for regular transport I would not think the helicopter is very apt to be the

answer. My own view is that the most likely answer is some form of uninterrupted surface transport with no crossings of any kind. There are a lot of these things being developed. I have looked at some of these experimental things. They are frightfully interesting but there is always a dollar sign attached to them, and most of them do not have the bugs out of them yet.

Mr. Allmand: Is the decision to keep or not to keep open the St. Lawrence River up to Montreal throughout the year, including the winter, a purely political one or did your Committee have anything to do with that?

Mr. Pickersgill: Happily when I retired from politics I retired from that question. That is the burden that has to be borne by the Minister of Transport and the government.

Mr. Allmand: Thank you very much, sir.

The Chairman: Does that answer your question, Mr. Allmand? Mr. Peddle.

Mr. Peddle: Thank you, Mr. Chairman. I would like to ask Mr. Pickersgill a few questions in his role as a lowly, modest layman, overworked and underpaid, rather than a prudent bureaucrat. First, I understand Mr. Pickersgill, the Canadian Transport Commission which you head was formed in September, 1967?

Mr. Pickersgill: That is right.

Mr. Peddle: Very closely behind the formation of your Commission came the application to abandon the passenger service in Newfoundland. As a matter of fact, it was made the same month. The date of the application is September 29. Was that the first such application to come before your Commission?

Mr. Pickersgill: The first such application, yes.

Mr. Peddle: Were there others at the same time? When was the next application for an abandonment?

Mr. Pickersgill: I would not be able to be precise about that without looking at a chronology.

Mr. Peddle: I quote from the Toronto *Globe and Mail* of September 27 of this year:

> Hearings on the abandonment applications... These are other applications, abandonment of branch lines and passenger services.
>
> ... have been indefinitely postponed until criteria for determining railway operating costs can be established. These cost hearings are being conducted in Ottawa by the CTC's railway transport committee.

Why was permission given to abandon the passenger service in Newfoundland without the benefit of these new costing procedures. Why was the application considered on the basis of the old antiquated procedures?

• 1155

Mr. McGrath: Mr. Chairman, before the witness answers I would like to make a point of order?

The Chairman: On a point of order?

Mr. McGrath: It has to do with my motion that has been referred to the Steering Committee. I would like to quote briefly from the evidence of our meeting on November 15, if I may. Page 13, bottom of the second column:

> **Mr. Lundrigan:** Do we have some guarantee that the Chairman will come with people who can answer the questions next time, like his Vice-Chairman and other people he does not have with him today, because obviously we are not getting answers to our questions. It would be very much appreciated, and I am sure the Chairman of the Canadian Transport Commission would be in full agreement with me on that point, that we need definite answers to our questions. If we cannot get them here, where can we get the answers? I think he would be in agreement that next time he should come well equipped with people who can answer the questions directly.

And an honourable member interjected:

> Including one from the CNR, Mr. Chairman.

Then Mr. Pickersgill:

> **Mr. Pickersgill:** Mr. Chairman, I am at the service of the Committee to the greatest possible extent. I recognize that all officials have a duty to satisfy the legitimate inquiries of Members of Parliament and I will do my very utmost to do that.

Now, I raise that point, Mr. Chairman, and I think the records should note and you should bear in mind when the Steering Committee meets that there was an undertaking implied in what Mr. Pickersgill said, to have his

officials come before us at the next meeting, including, I submit, the Vice-Chairman who is his legal adviser and, of course, the Chairman of the Railway Committee, because we are getting back into questions of a detailed nature which Mr. Pickersgill could not be expected to answer. I submit that the Steering Committee should bear this in mind that there was an undertaking made, in my opinion, to have his officials here this morning.

The Chairman: If I can answer, I think your point of order is taken, and we will discuss that at the Steering Committee when we meet right after this meeting. We have already agreed to this, and I think we can discuss it at the Steering Committee. Is not that understood?

Mr. McGrath: Oh yes, Mr. Chairman. You are quite right. I raised a point of order so that the Steering Committee will take this into account. It is going to meet shortly, and if we are to continue with this investigation of these Estimates, this should be borne in mind when the Committee is considering my motion.

Mr. Pickersgill: I think Mr. McGrath has implied that I gave an undertaking to the Committee. I really do not think that my language bears the interpretation that he has put upon it, and I do not think I should enter into any dispute with him. But I would not like, by my silence, to appear to assent to the view that I had undertaken to do anything that I had not done. I said I would do my utmost to do that, that is, to satisfy the inquiries. Now the particular questions that were raised that I did not feel like answering at that time I indicated at the beginning of the meeting today I was ready to answer. They have not been put to me again, but I am ready to answer them at any time.

Mr. McGrath: You said you would do your utmost to satisfy Members of parliament, in other words to bring these officials here. Surely if you had suggested to your Vice-Chairman that he should be present this morning, he would be here.

• 1200

The Chairman: We will discuss that at the Steering Committee. I go back to Mr. Peddle.

Mr. Peddle: I do not think Mr. Pickersgill answered my question.

Mr. Pickersgill: No, I was not given an opportunity.

Mr. Peddle: Well, it is back to Mr. Pickersgill then, rather than back to me.

Mr. Pickersgill: You asked a question as to why the Newfoundland application was heard before the costing inquiry was held. This was done because the Canadian National Railways had indicated that they attached some urgency to this application because they wished to substitute for a system of transport which was losing, according to them, over a million dollars a year, though the Commission did not agree entirely with them and reduced the figures somewhat. They wished to substitute for it a service which, in their opinion, would be a better service and would pay. Having regard to the financial position of the country, it seemed not unreasonable to begin those hearings.

My own opinion is that if anyone had objected at those hearings, any competent person had objected that they should not be proceeded with because the costing inquiry had not yet been held, that this would probably have had to be taken into account. But of all the eminent witnesses who appeared, to the best of my recollection and I read the whole record, no one questioned the figures at the hearings. What was argued by certain witnesses at the hearings was that notwithstanding the fact that there was a loss, the service should still continue.

Mr. Peddle: That strikes me as being a very flimsy basis for abandoning a passenger service in a whole province because the CNR regard it as urgent. I am suggesting, sir, that the urgency of the CNR resulted in this thing being—as a gentleman across here said—rubber stamped. I support that with a document that I am not even supposed to have, but I have it, an analysis of various expenses.

The Act under which your Commission works, the Act that governs your Commission, states that the CNR when they are making such an application will support it with figures for a number of years, a certain number, any number that your Commission dictates. This application was supported with only the expense figures for one year, and I think it is very reasonable to assume that when the application was made to abandon a complete passenger service in a full province, your Commission would have insisted upon maximum support, rather than the very minimum. It is to my way of thinking a very unfair situation and one that I am firmly convinced was rubber stamped. Almost half of

the alleged deficit of $918,000 is made up of a figure of $429,765 called inside expenses. Would you tell the Committee the inside what?

Mr. McGrath: Did the Commission understand the CNR's cost accounting system?

Mr. Pickersgill: This case was heard by the Railway Transport Committee, acting as a court of law under the statute. The Committee has made a decision. That decision is appealable and it would, I think, be the grossest impropriety for me or for anyone else in an official capacity to attempt to retry that case without the witnesses or anyone else being present. I think I would just have to plead, sir, that this is not a question, since this is a question about a decision that has already been rendered in a lawful manner. It is a decision that Mr. Peddle does not like, but the decision has been rendered. It is appealable and...

Mr. Peddle: I am questioning figures which your Commission dealt with and used as a basis for a decision which you rendered, and surely it is quite in order for me to ask just what this meant. You are the Chairman of the Commission.

Mr. Pickersgill: I do not question, Mr. Peddle, your competence to ask the question. All I am questioning is my competence to answer it, or the propriety of my answering it.

Mr. McGrath: But surely you are not suggesting that Parliament does not have a right to this information?

Mr. Pickersgill: I am not saying anything about that at all, Mr. McGrath. What I am saying is that the Canadian Transport Commission acted under the law as a court of law, and it rendered a verdict and Parliament said that people who were dissatisfied with that verdict had a right of appeal. They have a right of appeal and up to now no appeal has been made, and it would be a shocking impropriety, it seems to me, for me to try to substitute myself for the court of appeal set out by Parliament.

• 1205

Mr. Peddle: Then you are suggesting, sir, that every question that we ask on this subject is out of order?

Mr. Pickersgill: No. I am not suggesting anything about the questions at all, Mr. Peddle.

Mr. Skoberg: Mr. Chairman, the member was just referring to the cost accounting. As he stated in his opening sentences, that with the establishment of the Canadian Transport Commission, that it inferred there would be no further abandonments until the cost accounting hearings were completed. Is this correct, Mr. Pickersgill?

Mr. Pickersgill: No.

Mr. Skoberg: Is this not what you said?

Mr. Peddle: No, I did not say that. I just asked why in this case the thing was rushed through without giving Newfoundland, the same as the other provinces, the benefits of these new streamlined costing procedures.

Mr. Pickersgill: I gave the answer to that question.

Mr. McGrath: I have a supplementary question, Mr. Chairman, because we have noted another reference to the fact that this decision is appealable. Mr. Pickersgill in his capacity as a witness said this, and the Minister said so in the House, but they have yet to say to whom the appeal is to be made.

Mr. Pickersgill: If you would look at the records you would see I said it quite clearly the other day, and I repeat, this can be appealed to the Privy Council. It could have been appealed any day, it can still be appealed.

Mr. McGrath: To the Governor in Council?

Mr. Pickersgill: To the Governor in Council.

Mr. McGrath: What is the procedure for such an appeal.

Mr. Pickersgill: The procedure is simply to address a communication to the Governor in Council stating that you do not agree with the decision and asking them to consider your appeal.

Mr. Nowlan: Can we get Mr. Jamieson to carry this communication to the Governor in Council?

Mr. Pickersgill: There were certain suggestions that I read in the newspapers that the railway unions were going to appeal, and I noticed an announcement just the other day that they had decided not to. They, apparently, are quite conversant with the proper procedure.

Mr. Peddle: Mr. Pickersgill, did I understand—I am getting a little confused here. I asked a question on this item, "inside expenses", which constituted just about half of the alleged deficit. Did I understand that you will not comment on that?

Mr. Pickersgill: I do not think it would be proper for me to comment on that.

Mr. Peddle: Is there anybody who would comment on it. This is a serious situation. The question is, did the commissioners just take this and look at it without knowing what it was or questioning it? I am asking about half the deficit which they were given permission to abandon on, on the basis of it—inside expenses, $429,765. Surely in this country of ours there must be somebody who can explain this, and if it is not the Chairman of the Canadian Transport Commission, who is it? Where do I go?

Mr. Pickersgill: Mr. Peddle, may I put the question to you this way. If a case had been heard and a decision rendered by one of the judges of the Supreme Court of Newfoundland, would you feel that a committee of the Legislature could summon him before them and ask him to explain how he had reached his decision when the law provides that if you do not like it, you can appeal to the other judges?

• 1210

The law here provides that an appeal can be made from this decision to the Governor in Council and the decision has been made. It has been made by the Canadian Transport Commission. It is true, I did not sit on the case myself, but I am one of the members of that Commission and I am not, I think, doing anything except what is appropriate and right in the circumstances in saying that it is not my function and it would not be proper for me to attempt to explain to anybody how the other commissioners arrived at the conclusion they did.

Mr. Peddle: I suggest, sir, that you do not know, and I would also suggest that if the other commissioners were here they would not know either.

Mr. Pickersgill: I would suggest, with great respect, that if they did know they should not explain it.

The Chairman: Mr. Pringle?

Mr. Pringle: I can understand the concern of the people of Newfoundland with regard to this problem. This is the second session that I have attended—I have been away—and we have spent almost 100 per cent of our time discussing this one problem which seems to me is turning our Transport Committee into an appeal board.

I understand there is such a thing as an appeal board in the Privy Council that can handle this work and is this not where this should be done? I appreciate and am sympathetic toward your problem, but this is the Transport Committee and I live in Western Canada and we would like to talk about a few things out in our country as well.

The Chairman: Order, please.

Mr. Pringle: Mr. Chairman, we have the Chairman of the Transport Commission here and I am just asking a few simple questions concerning the working of his Commission, and if it is out of order, well...

Mr. McGrath: I have listened to the point of order with great respect but this is not a problem peculiar to Newfoundland; this is a national problem because there is a great principle involved here and this is what we are getting at. The principle is that the railway should suddenly have to pay its own way. Surely that is not the basis on which public transportation in this country is founded.

The principle is that the railway now has to pay its own way and if we are to accept that principle then we must be prepared to accept abondonment of railways in other provinces. They have already talked about abandonment in the Province of Prince Edward Island; perhaps your province is next.

The Chairman: Mr. Allmand?

Mr. Pringle: They have not abandoned railroads.

Mr. McGrath: Have they abandoned the entire passenger service in your province?

The Chairman: Mr. Allmand?

Mr. Allmand: Mr. Chairman, Mr. Peddle has put forward the suggestion that perhaps the Transport Commission made its decision on this matter without considering proper evidence with respect to costing, and so forth, and that perhaps they should have waited until they had new methods and had heard all the facts with respect to costing. What he

is really doing is questioning the soundness of the decision of the Transport Commission.

Since the Act that set up this Commission provides for an appeal, what you do in those cases is take an appeal. You do not—and Mr. Pickersgill mentioned this—call a judge into a committee of Parliament and ask him why he made a decision. When they made that decision it was a written decision. It is available to everybody and they give their reasons. Perhaps their reasons are wrong but the proper recourse is to appeal that decision as the law sets out.

Now, if the Governor in Council supports the decision of the Transport Commission, they have to take the political heat. If they make a decision that the Transport Commission was correct, that the allegations that are made in the appeal are not founded—in other words, let us say some of the allegations that Mr. Peddle made—then the Minister and the government, when they make that decision, have to take the political heat, but I do not think this Committee can review the judge's reasons for making a decision. The proper way of doing it is to appeal it.

Mr. Nowlan: On a point of order, Mr. Chairman, with all due respect to Mr. Pickersgill, I think it was Pickersgillian logic to draw the analogy between a judge in a court of law and a decision of the Canadian Transport Commission on this application. Now, whether Mr. Peddle's question as initially framed, and as answered by Mr. Pickersgill is correct and what Mr. Allmand said about questioning the actual reasons for judgment of the CTC, I think most likely is a valid point. I do not accept the proposition that Mr. Pickersgill is here as a judge of the Supreme Court or any other court. I think this is just a red herring. I think Mr. Allmand has a point about Mr. Peddle's questioning the reasons for judgment, but I do not accept, and frankly I do not understand, why Mr. Pickersgill cannot answer.

We could have someone from the Railway Committee of the CTC or whatever it is called now to explain—I do not know whether Mr. Pickersgill knows what it is—how that inside expense is broken down and how it is assessed under the old accounting procedures or the new accounting procedures; in other words, an explanation of the inside expenses, not an attack on the reasons.

Now, Mr. McGrath, we are all Canadians from Newfoundland all across the country.

• 1215

From the explanation that I think we are entitled to ask the Chairman or someone in his Commission, from those explanations to this legislative committee—that is the committee that has some power in the CTC—then Mr. Peddle can go and make his appeal to the Cabinet and sound off and make any other allegations he wants. But to have an explanation of the inside expense of half the—if he happens to have his explanation and perhaps should not have had it, but to me it is a legitimate question to ask for an explanation, not to attack the reasons for the CTC decision here.

I am at cross-purposes in part with Mr. Peddle. The other thing I cannot understand, Mr. Peddle, which we did ask you for, which again is an explanation from the Chairman of the Commission, if the Act says as he alleges—and I do remember there was something in this Act because I was at Committee hearings—that you would take a period of years to make your assessment of variable expenses why in this case—and this is certainly a question which is proper to the Chairman of the CTC who has to take responsibility for the CTC—do they just take one year?

Those are questions that I think are for information. Mr. Peddle and Mr. McGrath and everyone else can do with the information what they will in another forum, perhaps, but I think this is a legitimate point

Mr. Pickersgill: There is no question whatever with Mr. Peddle's question as to why this matter was dealt with before the costing order was made. I thought it a perfectly proper question and I gave the best answer I could, which happened to be the truth. He thinks that we made a mistake in doing that and he is perfectly entitled to think that, but his other question deal with the evidence that was before the Commission in reaching its decision and I think I have to agree with what Mr. Pringle said, that when he asks me to comment on that evidence he is asking me to retry the case without the witnesses who were there in the first place.

Mr. Nowlan: Mr. Chairman, if I may intercede, from what I understand Mr. Peddle is not asking the Chairman to comment on his comments about the decision, but is asking for an explanation of a figure that was advanced at the hearing.

Mr. Pickersgill: Those figures were available and no witness at the hearing, to the best of my knowledge, questioned them, and the decision was then reached. It seems to me that if Mr. Peddle wishes to argue that the decision was reached improperly, that the evidence was used improperly, this is something that should be done in appeal.

Mr. McGrath: But we cannot do that unless we first of all have a chance to examine the Chairman of the Committee who exercised his judgment on this evidence and we want to know how he arrived at this judgment.

Mr. Pickersgill: Well, exactly, and...

Mr. McGrath: And in order to do that we must know what the evidence was. We do not know...

Mr. Pickersgill: My point is very simple about that. There is a written decision and, as I understand it, when a court gives a written decision that constitutes the reasons for judgment.

Mr. McGrath: This is not a court; it is a tribunal. It is not a court of law.

Mr. Pickersgill: It is a court of record, the law says so. And the law provides...

Mr. McGrath: Are you Mr. Justice Pickersgill? It is a poor analogy.

Mr. Pickersgill: It may be a poor analogy, but Section 53 of the Railway Act provides a procedure for an appeal from a court.

Mr. McGrath: How can we have a judicial tribunal with a layman as its head? I think this is a red herring, as somebody said, in order to prevent the Committee from properly examining this whole business.

Mr. Nowlan: Mr. Chairman, we are examining the CTC Chairman. This has been an activity, perhaps the first one of the CTC. I say and I repeat that I do not think anyone can question the reasons of the CTC, but I think as a member, that this is not completely a court of record because you, sir, with all respect for all your ability and knowledge of transportation, did not receive your appointment as judges are appointed.

This is a quasi-court and it is administrative as someone has said, but you cannot use the analogy of a court and Mr. Peddle may decide, if he has an explanation of that substantial figure, that there is not any reason to take it any further.

An hon. Member: Hear, hear.

Mr. McGrath: But he is here as a legislator, examining the activities of CTC—and this is one of the first acts of the CTC—and I believe very strongly, Mr. Chairman, that he can ask for information because...

Mr. Pickersgill: About the evidence?

Mr. McGrath: Yes, he can ask for information on that figure because it so happens that this is not a court. You have to come before the Committee and explain your activities for the year and this is one of the major ones so far as Newfoundland is concerned.

• 1220

The Chairman: Order, please. First of all, concerning the question of Mr. Peddle, I think this question was out of order according to the rules which say very clearly:

> All references to judges and courts of justice and to personages of high official station, of the nature of personal attack and censure, have always been considered unparliamentary,...

Mr. McGrath: What does that have to do with this, Mr. Chairman?

The Chairman: "All references to judges and courts of justice"...

Mr. Nesbitt: That is a bit much.

The Chairman: Yes, but this appeared before the Commission. The judgment was rendered before the Commission.

Mr. McGrath: Mr. Pickersgill is the one who made the analogy between his Commission which is, as I say, an administrative tribunal and a court of law.

Mr. Pickersgill: May I read from the National Transportation Act, Section 6, subsection (2). There is no analogy; it says:

> The Commission is a court of record...

Mr. Pringle: ... possible for these gentlemen to take this problem to the Appeal Court. We are into an appeal now. I understand they wish to reverse the decision. Is this not the only thing that really could be gained from it apart from this principle which is very doubtful because we have been abandoning railroads in western Canada for years; as long as I can remember. And we have been abandoning the railroad stations and post offices and a few other things because it

was felt that we should do so. It seems to me that to reverse a decision you must have an appeal and I think this should be the proper approach. Why can they not have an appeal to the proper court and let transportation get on with its business?

Mr. McGrath: Mr. Chairman, I repeat with great respect that we are not interested in this solely for the reason of trying to set aside this decision, desirable to some as that may be, but there is a precedent being set here, a very dangerous precedent. What is to stop the Commission from going all across the country and abandoning services in all of the provinces if they are not paying? This is the point that we are concerned with here. They have set a precedent and we want to examine it to see if it is a good precedent because we do not think it is.

Mr. Nowlan: Mr. Chairman, on this point, does Mr. Pickersgill's suggestion go this far, that it could affect the Fraser Valley? I do not know where the CTC would come into this, but on this Roberts Bank thing on the routes, and if some matter comes before the CTC affecting Roberts Bank, next year you are not going to come before this Committee and if Mr. Pickersgill or some other representative of the CTC is here you are going to be foreclosed and prevented from asking questions. You may want to attack the decision, because it may cut through your farm, but at least you can ask as a legislator to a legislative tribunal. That is what this is; this is not a court of law. This is a legislative tribunal and you as a member from your area certainly would be entitled to ask and seek information to, I think, suggest to you whether you want to take it any further on the Roberts Bank.

Mr. Pringle: Mr. Chairman, I merely make my point simply because we have been at it now for two full sessions and I think as legislators—and I agree with Mr. Nesbitt that I am a bit new here—but I am also a businessman. The thing that we like to do in business is once in a while get something accomplished. Is this not what we are supposed to do in Parliament, or in committee? We have heard repetitions and so on to the point where to me it seemed we were in a position, Mr. Chairman, where we were attempting to hold a hearing which I do not believe is our function. I agree that they should ask questions, yes, but we have heard so many questions and are we going to keep on that...

• 1225

Mr. Peddle: Mr. Chairman, I would have been finished half an hour ago if this question had not been raised.

The Chairman: Just a moment. Order, please. Mr. Benjamin.

Mr. Benjamin: Surely we are off the point of contention completely. I do not think the gentleman was asking Mr. Pickersgill to comment on the reasons for the decision. He was purely and simply only asking what that inside cost figure means. That is all he was asking. If Mr. Pickersgill does not have that information, then let us get a CNR vice-president here to find out. He was not asking Mr. Pickersgill to comment on the validity or non-validity of the decision that was made by the tribunal. He was only asking for a breakdown of what those inside costs are and what they mean. That is all.

Mr. Pickersgill: The full point is that those figures were part of the application. They were part of the material that was considered in reaching the judgment. They are what I perhaps in my unlearned way call the evidence in the case. A decision has been made by my brother commissioners on that evidence and I do not think that I should try to explain why they reached the decision or why they accepted or rejected that decision.

Mr. Benjamin: He is not asking you to explain why they accepted or rejected that. He is asking you to explain what are the inside costs and how they break down. That is all. He is not asking you to justify or not.

Mr. Pickersgill: I think I would agree one thing you said—that it would be a much more appropriate question to ask the CNR when they are before you.

The Chairman: Mr. Peddle?

Mr. Peddle: Mr. Chairman, I just want to read a line from the official report of Messrs. Jones, Woodard and Irwin, who were the Commissioners. The top line:

> The Committee had an opportunity to inspect a prototype bus at St. John's in December and, unquestionably—

very emphatic, this is "unquestionably,"

> —these vehicles will be clean, modern, comfortable and fast.

Can somebody tell me how you can go out and look at a bus and tell that it will be clean

and it will be modern and it will be comfortable and it will be fast. This is the kind of statements that go throughout this judgment. The whole thing is interspersed with this type of thing and to my mind it is just plain nonsense. There is no way in the world of making any sense out of it. Look at a bus and tell us that it is going to be clean, and fast, and comfortable.

The Chairman: Mr. Skoberg, have you a supplementary?

Mr. Skoberg: It was implied by Mr. Pickersgill that the Commission acts as a court of law as such and he referred to the second section for clarification purposes.

> (2) The Commission is a court of record and shall have an official seal which shall be judicially noticed.

Were you referring that with the wording as such in this National Transportation Act, this makes the Commission a court of law or if their records will be judicially noticed. Is this correct?

Mr. Pickersgill: Yes.

Mr. Skoberg: It is not a court of law.

Mr. Pickersgill: It is a court of law for certain limited purposes and its decisions are appealable; and they are appealable both to the Governor in Council and, in certain circumstances, to the Supreme Court of Canada. And that is all set out in the law. It seems to me that anyone who is aggrieved by the decision or thinks it was improperly made has recourse to the provisions for appeal that Parliament made.

Mr. Skoberg: Even though these Commissioners on there are not judges in their own right at all.

Mr. Pickersgill: They are Commissioners.

The Chairman: Mr. Peddle, have you finished?

Mr. Peddle: No, I am not finished, but I cannot get anywhere, Mr. Chairman, so there is no point in pursuing this thing.

The Chairman: Mr. Carter?

Mr. Carter: Mr. Chairman, getting away from the abandonment just for a moment—I intend to come back to it. I think my friends across can tolerate another few minutes of it.

• 1230

There are 90 miles of water, sir, separating Newfoundland from the rest of Canada.

Mr. Pickersgill: You mean to the south.

Mr. Carter: Yes, to the south—the ferry from point to point.

Mr. Pickersgill: It is only nine miles at the north.

Mr. Carter: Nine miles from the upper section there. The point I am making, Mr. Chairman, is that these are 90 expensive miles as far as Newfoundlanders are concerned. Can the Chairman tell me if the rate charged on the ferries for freight and passengers is computed on the same basis as regular road type rail passenger and freight traffic?

Mr. Pickersgill: The freight tariffs are exactly the same as though it were 90 miles of railway. There was a case taken I think to the Supreme Court shortly after Confederation. There was some difference with the Canadian National, and I believe the Government of Newfoundland took the case and they won the case. It is interpreted as being that many miles of railway and the same rates that apply to the railways apply to freight passing over that 90 miles. If it is intra-region or is going west out of the region it is subject, of course, to 30 per cent under the Maritime Freight Rates Act.

Mr. Carter: Mr. Chairman, to move a car on that ferry, which is only 90 miles, is about $50, I believe. Is it not?

Mr. Pickersgill: I was only answering the question about the railway—the freight. Motor cars are carried on the ferry on an entirely different basis. The motor traffic on that ferry is not railway traffic at all.

Mr. Carter: Should they not be subjected to the same regulation as that prevailing on trains, or regular—

Mr. Pickersgill: I do not know what the rates are for carrying a motor car on a train, but they are not very small. The Maritime Freight Rates Act does not apply to the carriage of a motor car that is driven on the roads and then taken on the ferry.

Mr. Carter: Does this same thing, Mr. Chairman, apply to trailers which bring things back and forth? Truck type trailers.

Mr. Pickersgill: I understand that the Canadian National cannot carry its own trailers at any lower rate than it carries the trailers of competitors.

Mr. Carter: Mr. Chairman, I think the Committee members are wondering why we are making such a fuss about this CNR thing, but I hope they appreciate that to Newfoundlanders, this is very, very important.

A statement was made by the Canadian National's Operation Manager, which the people of St. John's read on October 28 in reply to their question with regard to bus shelters in the event that they are unable to drop passengers off at certain points because of snow storms and so on. They asked what would happen if they had to take them to the next point, two or three or four or five or a hundred miles further on. And his answer was that these people would be charged for the additional run and they would have to pay to get back to their original destination. Does the Committee wonder why we are upset and why we are questioning certain statements made by the CTC? Are you aware of this statement, Mr. Pickersgill?

Mr. Pickersgill: No, I was not aware of that statement. I do not think I should comment on it because that is a statement by the Canadian National Railways and you will have the Canadian National before you in due course and you can ask them about their officers. I do not think it is appropriate for me to comment.

Mr. Carter: I am wondering, Mr. Chairman, if we can ask, because we are asking questions concerning this abandonment which is very important and...

Mr. Pickersgill: I think perhaps I should draw your attention to another statement by the Canadian National Railways which was made, I believe, the day they were given the franchise to operate their bus. That was to the effect that they intended, notwithstanding the judgment of the Canadian Transport Commission, to continue to operate the train throughout the whole winter on the same schedule as they did a year ago. So no train has been abandoned at all.

• 1235

Unfortunately the day before yesterday, I am advised, the train was unable to go beyond Bishop's Falls when it was on its way from St. John's to Port aux Basques and the passengers had to be taken in the bus the rest of the way. But that is just a little bit of history.

Mr. Nesbitt: Just a point of order, Mr. Chairman. The Chairman of the Commission has just told us that we will be able to question officials of the Canadian National Railways when they appear before this Committee. As I understand it, do we have any authority to have the officials of the CNR or Air Canada before this Committee at the present time?

Mr. Pickersgill: Not at this present time, but I cannot answer for them even if they are not coming. But they always do come every year.

Mr. Nesbitt: We are not having them this year, Mr. Chairman. It would be news to me if we are.

The Chairman: We will have them. I think I mentioned before that we will have them on the annual report. When that will be I do not know. I think they will be on the annual reports of the Canadian National Railways and Air Canada.

Mr. Nesbitt: If the government refers it to us. At the moment we have no authority.

The Chairman: No.

Mr. Carter: I wonder if you could explain, Mr. Chairman, the statement a moment ago about the train that could not get farther than Bishop's Falls and had to . . .

Mr. Pickersgill: I probably should not have said it because it was just a report—a news report like to a lot of others that have been referred to.

The Chairman: Are you finished, Mr. Carter?

Mr. Carter: No, I am not, Mr. Chairman. I too would like to know why the year 1966 was singled out as having shown a deficit of $918,000, a part of which, of course, is now questionable—why that one year was singled out and not other years taken or an average broken down over so many years in the Canadian National's application to the CTC. Any explanation?

Mr. Pickersgill: This again would be simply going into the case that was before the Committee and attempting to set my judgment against that of those who have the responsi-

bility of doing it would not, I think, be very helpful to anyone.

Mr. Carter: Yes; but can the Chairman of the CTC tell us if their whole decision relative to the $918,000 was based on the operations of the CNR's Newfoundland service in 1966?

Mr. Pickersgill: The basis of their decision is set out in their judgment.

Mr. Carter: In other words, you do not care to answer my question?

Mr. Pickersgill: I do not care to give any judgment different from the one that has already been given by the Commission.

Mr. Carter: But you do not care to answer my question whether it was wholly based on the year 1966?

Mr. Pickersgill: I could not answer that question, Mr. Carter, because I did not make the decision and I did not participate in making it.

Mr. Nowlan: I have a supplementary, Mr. Chairman. Mr. Pickersgill really did not answer this, because Mr. McGrath came in on a point of order after Mr. Peddle posed the question. Is it correct—and I think this is within your ambit of competence although there may be disagreement about other areas—as Mr. Peddle read from the *Globe and Mail*, that since the CTC disposed of the Newfoundland train all other applications for abandonment have, in effect, been held up until these new concepts and procedures have been developed?

Mr. Pickersgill: No other application for abandonment, either of branch lines or of passenger trains, has been heard since, to the best of my knowledge.

Mr. Nowlan: In other words, until this Newfoundland train is disposed of every other application has been postponed, and the reason for the postponement is to consider these procedures and for a review to be made and completed; is that right?

Mr. Pickersgill: The reason is that they could not be done concurrently.

Mr. Nowlan: Just as an explanation to some of the members opposite, and related to the point of order that was raised when Mr. Peddle was upset about a member questioning the time taken, I was in the House—I do not know whether the member opposite was—when Mr. Hellyer said: "Please let this matter proceed"—I think if was during the Estimates...

Mr. Pickersgill: That is right.

Mr. Nowlan: ... "and you will have your opportunity to come before the Committee and question the CTC officials." This may be one reason for an abnormal amount of time being taken on something very important.

• 1240

Mr. Pickersgill: That was the present Minister.

Mr. Nowlan: It was the Minister's suggestion.

The Chairman: We will get back to Mr. Carter.

Mr. Carter: Mr. Chairman, there is not much point in asking further questions of the hon. gentleman, because we are not getting answers. Why waste time?

The Chairman: Mr. Nesbitt, do you have further questions?

Mr. Nesbitt: I have questions on another subject, but if anyone has further questions on this subject perhaps it would be best to dispose of them first.

Mr. Skoberg: Mr. Chairman, what ever happened to the crossing protection signals at Peterborough?

The Chairman: I beg your pardon?

Mr. Pickersgill: I have an answer here which I have not had time to read. I have so much confidence in the secretary that I will read it aloud:

> A proposal from the County Engineer in 1947, to *eliminate* the crossing, finally in 1959, following correspondence and drafting of specific plans—resulted in a decision by the then BTC that the proposal (a costly one) represented a highway improvement and did not warrant a contribution from the fund. However, at the same time the Board expressed willingness to contribute 80 per cent of the cost of automatic protection. City Engineer in reply said municipality did not feel it necessary to install automatic protection at that time (1959).
>
> A subsequent request to improve the road approaches was held to be a high-

way—and hence a provincial matter. There was one non-casualty accident on November 3, 1960, (of which we have no details). No official representation of any kind has since been made.

Mr. Skoberg: Mr. Pickersgill was official representation made in 1959 for crossing protection? I missed the first part of that.

Mr. Pickersgill: No.

Mr. H. Arbique (Secretary, Canadian Transport Commission): It was proposed by the Board. The Board proposed that in view of what...

Mr. Pickersgill: The Board decided that it was a highway improvement and did not warrant a contribution from the fund for a grade separation. At the same time, in 1959, the Board expressed willingness to contribute 80 per cent of the cost of automatic protection. But the city apparently rejected that.

Mr. Skoberg: Who initiated the original request?

Mr. Pickersgill: The county engineer.

Mr. Skoberg: The county engineer?

Mr. Pickersgill: In 1947.

Mr. Skoberg: For a grade separation.

Mr. Pickersgill: That is the information that has been extracted from the files.

The Chairman: Have you finished, Mr. Skoberg?

Mr. Skoberg: Yes, thank you.

The Chairman: Mr. Nesbitt?

Mr. Nowlan: Just before Mr. Nesbitt starts, Mr. Chairman, may I ask that the Subcommittee on Agenda and Procedure consider at noon this question of information versus condemnation of a judgment. It is rather important, not only in this case, but if committees, as is expected, are going to function more in the future, then I would like to know, for my own edification, just who is correct on this point of procedure. Perhaps the Subcommittee could consider this and also the avisability of calling the legislative counsel this afternoon to give us his interpretation of the propriety of asking information on something that is an activity of the CTC, separate and apart from attacking the CTC.

The Chairman: This will be discussed by the Subcommittee immediately after this meeting. That was understood and voted on. Mr. Nesbitt?

Mr. Nesbitt: On the matter of air carriers, it is my understanding that for practical purposes air carriers in Canada are divided into three groups, and in the parlance of the trade, so to speak, I understand they are referred to as main line carriers, which, of course, are Air Canada, Canadian Pacific Airlines, as regional carriers; and, as the third group, third level carriers.

• 1245

In October 1966 a statement of principles governing regional air carriers was set out by the then minister of transport who is now the Chairman of the Commission.

It is my understanding that the Air Transport Association of Canada in their annual report, which was released about a month or so ago, is very concerned about the failure of the Canadian Transport Commission to put these principles into effect.

All of us must realize that the Commission is new and has just started, but I have a question or two of the witness.

I wish to quote a brief section of the 34th Annual Report of the Air Transport Association of Canada, which is for the year ending September 30, 1968, from the middle of page 4. I think it is important that we have it on the record. It reads:

> I would be remiss if I did not record the disappointment and frustration of this industry resulting from the confusion existing regarding government policy. Not only has there been no implementation of previously enunciated policy governing the mainline and regional carriers, but no extension of policy governing other segments of the industry has been developed. Virtually, all Canadian air carriers are suffering under a tremendous handicap in the development of plans, acquisition of new aircraft, and the continued operation of their companies on a profitable basis as action is delayed in providing effective air policy.

I note this morning a quotation from Canadian Press that Georgian Bay Airways, which is a regional carrier—

Mr. Pickersgill: It is a third level carrier.

Mr. Nesbitt: A third level carrier?

Mr. Pickersgill: Yes.

Mr. Nesbitt: But I see it is apparently becoming—

Mr. Pickersgill: Oh, no.

Mr. Nesbitt: The press reports that Georgian Bay Airways has been authorized to establish the first direct air service between Montreal and the Sudbury-North Bay area of Ontario the Canadian Transport Commission announced today. It then gives the details of the passenger service for five days a week.

I agree with the comments of the Chairman of the Commission that Georgian Bay Airways would normally come under the classification of a third level carrier, but my first question to Mr. Pickersgill is: When do third level carriers become regional carriers?

Mr. Pickersgill: At the time the statement of policy was made there were five carriers in Canada that were considered regional carriers, Pacific Western Air Lines, Transair, Nordair, Quebecair and Eastern Provincial Airways; and there are still only five that are considered regional carriers.

Mr. Nesbitt: All the other small—

Mr. Pickersgill: All the others are third level carriers, or perhaps very local carriers.

Mr. Nesbitt: Although they may carry out some of the functions that might be ascribed to regional carriers?

Mr. Pickersgill: I think, perhaps, there is a sort of qualitative difference, really. A regional carrier is a carrier that uses relatively large aircraft—aircraft larger than DC-3's—and third level carriers are all limited in the size of their aircraft.

Mr. Nesbitt: My main question to Mr. Pickersgill is this: Has an agreement been worked out in the offices of the Commission about the routes that are now, and in the foreseeable future, going to be used by Air Canada and Canadian Pacific Airlines? I refer specifically at this point to routes within Canada.

Mr. Pickersgill: Are you referring to main line routes?

Mr. Nesbitt: Yes, the main line routes of Air Canada.

Mr. Pickersgill: That was covered by another statement of policy, and—there is an application before the Commission at the present time from Canadian Pacific.

Under a policy that was enunciated relative to main line carriers it was said that by 1970 Canadian Pacific could work up to 25 per cent of the estimated total traffic. They now have two flights a day across the country. They have made an application to come up to somewhere around 20 per cent. That is before the Commission now and Air Canada and some of the regional carriers, I believe, have been sent copies of it and they are making comments. A final decision has not yet been reached. I hope it will be quite soon because they all want to know.

• 1250

Mr. Nesbitt: The acquisition of aircraft—

Mr. Pickersgill: I do not think it is terribly important, perhaps, because Canadian Pacific has assumed that the policy meant what it said and it would get approximately half way between what it is now and what it could hope for in 1970 anyway. I think it has made provision for its aircraft.

Mr. Nesbitt: Was there general agreement when this policy was announced, a sort of de facto general agreement between the two major airlines ?Was it satisfactory or actually unsatisfactory?

Mr. Pickersgill: I am not absolutely sure that the President of Air Canada was altogether pleased that Canadian Pacific was allowed quite as much as 25 per cent but this was a decision made by the whole government and it does seem to have been pretty well received. Air Canada does not appear to me to have suffered unduly and it has given the public a little greater measure of choice than they had before.

Mr. Nesbitt: Have any steps been taken by the Commission to transfer to the regional carriers some of the more localized air routes that Canadian Pacific Air Lines and Air Canada have been carrying, particularly in Western Canada and in some parts of Ontario and Quebec?

Mr. Pickersgill: There have been no transfers of routes but a licence was authorized very recently to Pacific Western to fly from Vancouver, with a compulsory stop at Kamloops, to Calgary which duplicates both Air Canada and CPA but because of the compulsory stop it is a regional service. Between Vancouver and Calgary it does compete with Canadian Pacific.

There are, of course, other applications by PWA for further routes out of British Columbia that are under very active consideration at the moment and, of course, during the summer there were very considerable extensions of all three regional carriers that go into the Arctic. They were given additional routes and additional service, as well as some of the third level carriers.

Mr. Nesbitt: Is it the intention of the Commission which oversees these things eventually to phase out some of these localized operations of the two main line carriers and turn them over to the...

Mr. Pickersgill: That was foreshadowed in the statement. I think you have it there. I should have brought it but I did not. I do not exactly know if off by heart but I think I know everything that is in it. It was said it would not be done on a wholesale scale, it would be done gradually; but it is envisaged. My guess would be that at the stage when new aircraft are needed for some of these routes, the main line carriers would not want to get new aircraft for them and at that time it would be sensible to switch them to the regional carriers. That is what I hope will happen.

Mr. Nesbitt: Can you give an estimate over what period of years this policy will be adopted?

Mr. Pickersgill: I would look for some of them to happen fairly soon.

Mr. Nesbitt: How soon would you think that the whole process might be completed?

Mr. Pickersgill: I do not know how long, really, because I suspect it will be reassessed every year or so, depending on the nature of the traffic, and so on. There may be a reluctance in some places to have a regional carrier rather than Air Canada or CPA, and there may be a reluctance...

Mr. Nesbitt: A matter of prestige.

Mr. Pickersgill: Yes, quite, but I am hoping that this can be worked out in a reasonable fashion because it is very important in my view—and here perhaps I am speaking about something I had something to do with as a Minister—that we have strong regional carriers in this country to provide the kind of service that the main line carriers cannot provide.

Mr. Nesbitt: Well, that is the question perhaps I am leading up to. In view of the complaint by the Chairman of the Canadian Air Transport Association—a very recent one—that the delay in implementing these policies has caused serious problems for the regional carriers in planning the purchase and financing of equipment and making associated plans, can the Chairman of the Commission give us some assurance that there will be a determined effort by the air branch of his Commission to get these policies implemented as soon as possible, taking into consideration the needs of these regional carriers?

• 1255

Mr. Pickersgill: I am very sympathetic and I really did not take the slightest exception to Mr. McPherson, who is an old personal friend of mine, putting a little heat on us.

Mr. Douglas: Mr. Chairman, are we going to adjourn at one o'clock?

The Chairman: Yes, we will have to adjourn just about one o'clock.

Mr. Douglas: And then you will be having a steering committee meeting?

The Chairman: Right after that, yes, because we have to—

Mr. Douglas: There are some members of the steering committee that are not available and I would like to make a motion to replace one of them temporarily for this coming meeting if it is in order. I do not know whether Mr. Mahoney is going to be able to be there.

The Chairman: That has already been done.

Mr. Douglas: This has to do with Mr. Schreyer. He is not here and Mr. Skoberg will be available and I move that he be put on the steering committee in Mr. Schreyer's place for this afternoon.

The Chairman: Is it agreed by the Committee that Mr. Skoberg replace Mr. Schreyer?

Some hon. Members: Agreed.

Motion agreed to.

Mr. Nesbitt: I have one more brief question I wanted to ask Mr. Pickersgill and because it is pretty close to one o'clock perhaps we can adjourn after that unless there are other points.

Mr. Pickersgill: It would be humane if you did!

M. Nesbitt: It is my understanding that there is often a delay of up to two years after licences have been applied for in receiving approval or disapproval. Could something be done to speed up this process?

Mr. Pickersgill: I am going to try.

The Chairman: Are you through, Mr. Nesbitt?

Mr. Nesbitt: Yes, thank you, Mr. Chairman.

Mr. Pringle: Mr. Chairman, will we be coming back to this subject at the next meeting? Will it be possible? When will the next meeting be held?

The Chairman: The next meeting will be next Tuesday when we will consider the estimates of the Post Office.

Mr. Pringle: I am very interested in Mr. Nesbitt's line of questioning and I would like to continue with it if possible at the next meeting.

Mr. Pickersgill: I would be prepared to come back this afternoon if the Committee could meet.

An hon. Member: Mr. Chairman, may I...

Another hon. Member: It was the purpose...

The Chairman: Order! One at a time. Just a moment.

Mr. Allmand: Mr. Chairman, on a point or order, is it not the purpose of this day, if Mr. Pickersgill physically can stand it—it has not been too hard today.

Mr. Pickersgill: I would be quite prepared to come back if we can have a recess once in a while.

The Chairman: Yes.

Mr. Pringle: I have Agriculture on this afternoon, Mr. Chairman, and I am sure many of us have other committees, that is the only unfortunate thing...

Mr. Allmand: I think the House leaders set up a schedule for the entire day.

The Chairman: I have to tell members of the Committee that the schedule requires us to vacate this room in order to make room for some other committee. I am ready to call a meeting for this afternoon, but to find a room, a place where we could meet...

Mr. Nesbitt: Perhaps we could make interim arrangements when the steering committee meets.

Mr. Pickersgill: I wonder whether I could be permitted to put on the record the answer to Mr. Skoberg's question about the Great Slave Railway? I am told the answer is yes and no, which will not be very satisfactory but I will try to elaborate.

Construction of the line is not yet complete and, therefore, authority to open the line cannot be given under subsection 1 of section 279 of the Railway Act. However, under subsection 7 of section 279 an operating order may be granted by the CTC, subject to CTC engineering inspections and reports, for limited use of the line during the period of construction. This was granted in 1967.

Mr. Skoberg: I had some of these answers previously but it appears to me there is no good excuse for an operational order not to be granted immediately if these are the facts.

Mr. Pickersgill: There is an interim order.

Mr. Skoberg: Yes, but that does not take in the supervision of safety of the employees affected on that particular line.

I have one other point, Mr. Chairman, and I realize it is just about one o'clock, but I asked a question in the House of the Minister of Transport concerning the transportation conference that is to be held in Toronto. I failed to follow this up in his remarks, but he referred it to this Committee for a decision or recommendation and I would like to see this referred to the steering committee to have as large a representation as possible in Toronto at that conference that will be held, I think, in February. I move that this be referred to the steering committee, Mr. Chairman.

• 1300

The Vice-Chairman: Excuse me, your motion is—Mr. Chairman, you are excused. You must leave and we understand that.

Mr. Skoberg: I move that the steering committee consider having as large a representation as possible at the transportation conference in Toronto on February 9 to 12.

The Vice-Chairman: You want to discuss this at the next meeting of the steering committee?

Mr. Skoberg: I just referred it to the steering committee; the motion referred it to them for report back to us.

The Vice-Chairman: I see. Is that agreed?

Motion agreed to.

Mr. McGrath: Mr. Chairman, before we adjourn the matter has been raised about the Committee's taking up its time with this decision of the CTC affecting Newfoundland. I was wondering whether the Chair would entertain a motion at this point that the decision of the CTC to allow CN to abandon rail service in Newfoundland not be implemented until the Committee has had a chance to go to Newfoundland?

The Vice-Chairman: You mean to say that this problem would be discussed on the Atlantic Provinces problems of the Transport Committee.

Mr. McGrath: My motion is that the decision of the CTC allowing CN to abandon rail passenger service in Newfoundland not be implemented until this Committee has had a chance to go to the Province of Newfoundland.

Mr. Nesbitt: Mr. Pickersgill mentioned that they were not going to stop the trains anyway until the spring and it would not really cause any problem.

The Vice-Chairman: The Committee cannot instruct...

Mr. McGrath: It is a request to the House to be made in your report. That is all.

The Vice-Chairman: Yes.

Mr. McGrath: The Committee requests the CTC through the government—through the House—to withhold implementing its decision allowing CN to abandon rail service in Newfoundland until the Transport and Communications Committee has had a chance to go to Newfoundland.

The Vice-Chairman: To hear wintesses.

Mr. Nesbitt: I point out in that regard, Mr. Chairman, that Mr. Pickersgill said the CNR is not going to stop the trains anyway until after the winter is over, so it would not cause any practical problem for the CNR.

Mr. Allmand: There is just one difficulty, Mr. Chairman. Parliament passed a law less than two years ago setting up a Canadian Transport Commission to make decisions like this. I think the decision to set up that board was put through not only by the government members but by many of the opposition members. Now, today, because we do not like...

Mr. McGrath: One Parliament cannot bind another. This Parliament is...

Mr. Allmand: That is right, but we would have to pass a law amending the Act.

Mr. McGrath: Well, this Committee is sitting here now and this Committee is going to recommend.

My motion is that the Committee recommend to the House that this particular decision not be implemented until this Committee has had a chance to go to the Atlantic Provinces.

Mr. Allmand: I see a great danger in that. That means that every time members of Parliament do not like decisions of a Board that we, as a Parliament, have set up we make a motion in the House to postpone ...

Mr. McGrath: That is precisely what Parliament is for.

Mr. Allmand: The purpose of Parliament is to pass laws to cover general situations.

Mr. McGrath: Mr. Chairman, did you rule out my motion?

Mr. Nesbitt: Just a minute. I wish to speak on the point that Mr. Allmand has raised. There has been quite a bit of discussion and questioning on the kind of evidence on which the Transport Commission based its decision, and it has been suggested that an appeal may well be launched in the appropriate place—perhaps the Privy Council.

• 1305

Mr. Allmand: An appeal is a different thing.

Mr. Nesbitt: Just a minute, wait until I finish. Do not anticipate too much what I am going to say.

The only effect of a temporary delay—and, for practical purposes, no delay at all because it has been pointed out by Mr. Pickersgill that the CNR has no pert intention of implementing it until the spring in any event and we will be there in all likelihood before then—is that additional evidence may be given to this Committee which might be useful to those who might be interested in

launching an appeal. It might be very helpful. That is the only effect there really would be. It is not a question at all of negating a decision of the Commission; it is only asking for a temporary delay in the implementation of it so that if an appropriate person in Newfoundland wishes to launch an appeal to the Privy Council . . .

Mr. Allmand: Or be heard by this Committee.

Mr. Nesbitt: . . . he may have available to him certain additional evidence. That is all that it amounts to.

Mr. Allmand: I think a very serious question of principle is involved.

An hon. Member: Let us have the Chairman's ruling.

Mr. Allmand: I think you can make the motion, but I do not feel that I am prepared to vote on it right now.

Mr. McGrath: That is your privilege.

Mr. Allmand: Right. So even if he accepts your motion, I would like to have it tabled until the next meeting because I think it is a very serious principle for Parliament, after setting up a Committee, to have each individual decision reviewed and . . .

Mr. McGrath: That is Parliament's decision.

Mr. Allmand: Right. Then let us amend the Act. If you people feel that the Act should be amended maybe it should be.

The Chairman: It is a question of hearing witnesses in Newfoundland on that?

Mr. Nesbitt: Yes, who might provide additional evidence as a basis upon which to perhaps launch an appeal to the Privy Council. That is all.

Mr. Lessard (LaSalle): Mr. Chairman, the motion might be in order and it might not be. This is the second time this has happened. They wait until one o'clock, until half our members are gone, to put a motion to a vote, and I think it is unfair to those members who have just left here.

The Chairman: Could your motion be postponed until the next . . .

Mr. Lessard (LaSalle): We were supposed to sit until one o'clock.

Mr. McGrath: The honourable gentleman is imputing motives. I have a right to make a motion before this Committee without motives being imputed. I made the motion as a member of this Committee, and I would suggest to you on a question of privilege that my motives have been impugned.

Mr. Lessard (LaSalle): You make a motion after one o'clock and we are supposed to sit until one o'clock.

Mr. McGrath: That does not make any difference; the Committee is still in session.

The Chairman: I must remind members that we have not adjourned yet. The motion is being put, and . . .

Mr. McGrath: The question.

The Chairman: The question. Are you ready for the question?

Mr. Allmand: What is the question again, explicitly?

Mr. McGrath: I move:

> That the Canadian Transport Commission be requested to postpone the implementation of its decision to abandon railway service in Newfoundland until such a time as the Committee travel to Newfoundland to study the transportation problems of the Atlantic Provinces.

Mr. Allmand: May I make a further motion, Mr. Chairman?

Mr. McGrath: You cannot make a further motion. There is one motion before the Chair.

Mr. Allmand: I can make a motion for several things: I can make a motion to table your motion, I can make a motion to refer it to the Steering Committee, and I can make a motion to adjourn.

I think that we should move that we should adjourn at this time, Mr. Chairman—it is after one o'clock—and we will deal with this motion at the next meeting.

Mr. McGrath: The question on my motion, Mr. Chairman.

Mr. Allmand: I think a motion to adjourn takes precedence over all other motions.

Mr. McGrath: The Chairman has already put the question and the motion has merely been read. Now we must vote on it. The question has been put.

The Chairman: A motion to adjourn is not debatable.

Mr. McGrath: Mr. Chairman, the question has been put. You put the question, I was merely reading the motion for you. Now I suggest to you that the record would show that the question has in fact been put.

The Chairman: All right, let us put the motion.

Mr. McGrath: The question.

The Chairman: The question. All those in favour?

An hon. Member: Of what? What...

An hon. Member: Wait a minute now.

The Chairman: We are voting on the motion of Mr. McGrath. Those against?

The motion is carried. Just a moment; it is five, five.

Some hon. Members: No, no, no.

Mr. McGrath: There is one, two, three, four, five, six.

An hon. Member: What is going on?

An hon. Member: Call the vote again.

Mr. McGrath: The six members who voted, stand up. Now there is no doubt about that, Mr. Chairman; you can count.

The Chairman: Six. Against?

An hon. Member: What is going on here anyway? What kind of a kangaroo court is this?

The Chairman: Five.

Motion agreed to.

The Chairman: The meeting is adjourned.

First Session—Twenty-eighth Parliament

1968

STANDING COMMITTEE

ON

TRANSPORT AND COMMUNICATIONS

Chairman: Mr. GUSTAVE BLOUIN

MINUTES OF PROCEEDINGS AND EVIDENCE

No. 7

TUESDAY, DECEMBER 3, 1968

Revised Main Estimates (1968-1969) of the Canadian Transport Commission.

WITNESSES:

From the Canadian Transport Commission: The Honourable J. W. Pickersgill, President; Mr. Pierre Taschereau, Vice-President; Mr. H. Arbique, Secretary; Mr. L. L. Marks, Financial Adviser. *From the Railway Transport Committee:* Mr. David Jones, Chairman.

ROGER DUHAMEL, F.R.S.C.
QUEEN'S PRINTER AND CONTROLLER OF STATIONERY
OTTAWA, 1968

29491—1

STANDING COMMITTEE

ON

TRANSPORT AND COMMUNICATIONS

Chairman: Mr. Gustave Blouin

Vice-Chairman: Mr. P. M. Mahoney

and Messrs.

Allmand,	Godin,	Nowlan,
[6] Benjamin,	[8] Howe,	Pringle,
[7] Carter,	Lessard (*LaSalle*),	Serré,
Corbin,	[9] McGrath,	Skoberg,
Douglas,	Nesbitt,	[10]Thomas (*Moncton*),
[5] Givens,	Noel,	Smith (*St-Jean*)—(20).

(Quorum 11)

Robert Normand,
Clerk of the Committee.

[1] Mr. Macquarrie replaced Mr. Carter, on November 29, 1968.
[2] Mr. McCutcheon replaced Mr. Howe, on November 29, 1968.
[3] Mr. Ritchie replaced Mr. McGrath, on November 29, 1968.
[4] Mr. Paproski replaced Mr. Thomas (*Moncton*), on November 29, 1968.
[5] Replaced Mr. Jerome, on December 2, 1968.
[6] Replaced Mr. Schreyer, on December 2, 1968.
[7] Replaced Mr. Macquarrie, on December 2, 1968.
[8] Replaced Mr. McCutcheon, on December 2, 1968.
[9] Replaced Mr. Ritchie, on December 2, 1968.
[10] Replaced Mr. Paproski, on December 2, 1968.

ORDERS OF REFERENCE

HOUSE OF COMMONS
FRIDAY, November 29, 1968.

Ordered,—That the names of Messrs. Macquarrie, McCutcheon, Ritchie and Paproski be substituted for those of Messrs. Carter, Howe, McGrath and Thomas (*Moncton*) on the Standing Committee on Transport and Communications.

MONDAY, December 2, 1968.

Ordered,—That the names of Messrs. Givens, Benjamin, Carter, Howe, McGrath and Thomas (*Moncton*) be substituted for those of Messrs. Jerome, Schreyer, Macquarrie, McCutcheon, Ritchie and Paproski on the Standing Committee on Transport and Communications.

ATTEST:

ALISTAIR FRASER,
The Clerk of the House of Commons.

29491—1½

REPORT TO THE HOUSE

TUESDAY, December 3, 1968.

The Standing Committee on Transport and Communications has the honour to present its

SECOND REPORT

Your Committee recommends that its Order of Reference be enlarged allowing it to consider the following:

1. The problems of transportation in the Atlantic Provinces.
2. The claims of the Great Slave Railway Company against the Canadian National Railway Company.

Respectfully submitted,

GUSTAVE BLOUIN,
Chairman.

(*Text*)

MINUTES OF PROCEEDINGS

TUESDAY, December 3, 1968.
(7)

The Standing Committee on Transport and Communication, met this day, at 9:30 a.m. The Chairman, Mr. Blouin, presided.

Members present: Messrs. Allmand, Benjamin, Blouin, Carter, Corbin, Douglas, Givens, Howe, Lessard (*LaSalle*), McGrath, Nesbitt, Noël, Nowlan, Pringle, Serré, Skoberg, Thomas (*Moncton*), Smith (*St. Jean*)—(18).

Also present: Messrs. Jerome and Bell, M.P.'s.

In attendance: From the Canadian Transport Commission: The Honourable J. W. Pickersgill, President; Mr. Pierre Taschereau, Vice-President; Mr. H. Arbique, Secretary; Mr. L. L. Marks, Financial Adviser. *From the Railway Transport Committee:* Dr. David Jones, Chairman.

The Chairman read the Second Report of the Sub-committee on Agenda and Procedure for the meeting held on November 28, 1968.

SECOND REPORT

The Sub-committee on Agenda and Procedure of the Standing Committee on Transport and Communications met at 1:30 this afternoon. The Chairman, Mr. Blouin, presided.

Members present: Messrs. Allmand, Blouin, Nesbitt, Serré, Skoberg (5).

Your Committee met to study the content of a Motion presented by Mr. McGrath asking that the Chairman of the Railway Transport Committee and the Vice-President of the Canadian Transport Commission be called before this Committee in regard to the Estimates of the Canadian Transport Commission.

Your Committee then agreed unanimously to the following decision and recommendation:

> That the Vice-President of the Canadian Transport Commission acting as Legal Adviser and the Chief Accountant of the Railway Transport Committee in charge of accounting procedure be called before this Committee when the consideration of the Estimates of the Canadian Transport Commission is resumed.

At 2.00 o'clock p.m., the Sub-committee adjourned.

Thereupon on motion of Mr. Serré,

Resolved,—That the Second Report of the Sub-committee on Agenda and Procedure be adopted as read.

The Chairman then recognized Mr. Allmand who presented the following Notice of Motion:

December 3, 1968—Mr. Warren Allmand,—

That the resolution passed at the meeting of the Standing Committee on Transport and Communications held on Thursday, November 28, 1968 be now rescinded.

The said resolution read as follows:

Resolved,—That the Canadian Transport Commission be requested to postpone the implementation of its decision to abandon railway service in Newfoundland until such a time as the Committee travel to Newfoundland to study the transportation problems of the Atlantic Provinces.

The Chairman introduced Mr. J. W. Pickersgill, President of the Canadian Transport Commission and the Committee resumed consideration of Item 50 ($4,600,900) of the Main Estimates 1968-69 of the Canadian Transport Commission.

It was then agreed that the document entitled "Press Release—New Ferry Service" be printed as an appendix to this day's Minutes of Proceedings and Evidence. (*See Appendix "B"*).

Later on, it was agreed that members question the President of the Commission on any of the four items of the Revised Main Estimates of the Canadian Transport Commission presently before this Committee.

The questions being concluded, Items 50 ($4,600,900); 55 ($3,000,000); 60 ($10,000,000) and 65 ($11,033,300) were severally approved.

It was then moved by Mr. Benjamin,

Resolved,—That the name of Mr. Skoberg be substituted for that of Mr. Schreyer, on the Subcommittee on Agenda and Procedure.

At 12:45 p.m. the Committee adjourned until Friday, December 6, 1968 at 9:30 a.m.

Robert Normand,
Clerk of the Committee.

EVIDENCE

(Recorded by Electronic Apparatus)

Tuesday, December 3, 1968.

• 0943

The Chairman: Order please. I see we have a quorum.

The Subcommittee on Agenda and Procedure met last Thursday afternoon. I will read the report and then request that someone move that the report be adopted. (*See Minutes of Proceedings*)

• 0945

Is it agreed that we adopt these minutes?

Agreed.

Now, gentlemen, we have Mr. Pickersgill President of the Canadian Transport Commission back with us. I am sorry, Mr. Allmand.

Mr. Allmand: Mr. Chairman, I want to raise a point of order at this time.

Near the end of our last meeting a resolution was put to the meeting by Mr. McGrath, I believe, respecting passenger service in Newfoundland and although some of us objected that the motion was not in order it was nevertheless put to a vote and carried.

Since the meeting I have checked into the procedure relating to such motions and I have come to the conclusion—my own conclusion, after seeking advice, that the motion was illegal on the following grounds.

At the time when the motion was put forward we were discussing Item 50 of the estimates. Now whenever estimates are discussed in the House or in Committee and an item of estimates is before the House or the Committee the only thing that can be voted upon, in one way or another is that item of estimates because that is the item that is before the meeting. In other words, at the last meeting, since we had Item 50 before us, the only vote that could have taken place would be a vote to accept Item 50, a vote to reject Item 50, or a vote to reduce Item 50. As a matter of fact, the rules are very clear. You cannot even make an amendment to increase an item in the estimates. The House of Commons sitting as a Committee of the Whole or a Committee of this House cannot even move to increase. There are only three motions that are permissible: the vote to accept, the vote to reject, or the vote to reduce. That was the item before the Committee, and we did not even make a motion to suspend the business that was before us before that resolution was introduced. Therefore, on those grounds—on the grounds that we did not vote on what was before us, or even set aside the business that was before us, the motion is *ultra vires* and illegal. That is one argument I advance toward the illegality of the vote.

The second argument is that our present committee system can only deal with whatever is referred to it by the House of Commons. We do not have a system such as in the United States where committees can initiate studies. The only thing that the House referred to us were estimates, including the estimates of the Canadian Transport Commission. So even if we had disposed of Item 50 of the estimates and we had not taken up the second item of the estimates—let us say, we were between items—even then a resolution such as was put at the last meeting could not have been introduced because we were not seized with the question of railway transportation service in Newfoundland; all we were seized with were the estimates of the Canadian Transport Commission. As I say, there are only three possibilities there; they could have reduced the estimates of $1.00 or to zero, they could have rejected the estimates altogether, or they could have passed them.

I just raise this point of order now, but so that we can get on with the business of the Committee I would like to refer my point of order to the steering committee so that when it is preparing its report on the estimates of the Canadian Transport Commission—the report that it will submit to the House of Commons, it can consider this point of order. And my submission would be that the resolution passed was *ultra vires* and illegal on the two grounds—first, that we were dealing with an item of estimates and, second, that you cannot deal with what has not been referred to a

committee. There are other grounds too but I will not get into them, I will leave that to the steering committee to decide when preparing their report.

• 0950

If the report comes back to this Committee before going to the House, including that resolution, then we will have to deal with it further, but I think it would be premature for me to argue this at length now or to insist on a vote on anything like that. All I want to do is raise the point of order, refer it to the steering committee, so that you yourself, as Chairman, can maybe check and get advice on it, so that the opposition can get advice on it from their procedural expert, and in the steering committee you can decide what to do with the point of order with respect to the motion. I think that would be the best way for us to go about it because we would waste a lot of time this morning if we argued it.

The Chairman: All right, Mr. Allmand. Is it agreed that we refer the point of order raised by Mr. Allmand to the steering committee?

Mr. Nesbitt: No, Mr. Chairman. There are a few comments I would like to make on Mr. Allmand's point of order.

I am rather puzzled by the point that he brought up, because we are not voting on anything in this Committee. As I recall it the motion was a request by the Committee—and the request came as we were discussing Item 50 of the estimates—for authority to request the House to do something. We of course cannot do certain things. We can only do, as Mr. Allmand very well pointed out, what we are empowered to do by the House. It was a request to the House—a double request really—a request, I suppose, through the House to the government to suspend the order of the Canadian Transport Commission concerning the function of the Newfoundland railway or the removal of passenger service until this Committee had gone to Newfoundland, as per a previous request made by the Committee to the House to do this.

To suggest that requests cannot be made to the House for a further authority, as a result of discussions of items in the estimates, would to me simply make the function of this Committee absolutely useless. I have some difficulty in following Mr. Allmand's reasoning in that regard. I say, in addition, if Mr. Allmand should be correct then the request of this Committee to the House for authority to make a return visit to the Atlantic Provinces to look into certain transportation matters would also be invalid. In fact, any request that this Committee should ever make as a result of discussion of the estimates would be invalid, if Mr. Allmand is correct, and we would have no purpose at all really in meeting here except in the most limited way. I cannot follow that.

That is all I have to say at this time, Mr. Chairman.

Mr. Allmand: Mr. Chairman, as we have these other gentlemen here I do not want to reply to Mr. Nesbitt's argument at this time. But as he has put forward one argument and I have put forward another perhaps we should refer it to the steering committee. The steering committee will report back to this Committee at a later date and perhaps at that time we can take the matter up further.

The Chairman: That is what I was going to say, Mr. Allmand. I think we should refer this to the steering committee.

Mr. Nowlan: On a further point of order here, Mr. Chairman. I do not want to take up the time of the officials who are here by discussing this procedural point, but this illustrates the very dilemma that this Committee finds itself in when, with officials waiting, and after having taken a vote and recommended something which now is a matter for the House to decide, it once again tries to become involved.

If, Mr. Allmand's point is correct—just reviewing one argument of Mr. Nesbitt's—it means the function of this Committee is redundant and useless. Mr. Allmand was here and voted. The time to raise the procedural point that he is raising now was then, before the vote was taken. You cannot have a retroactive reprieve on procedural points, whether you are in court or in Parliament, otherwise the whole system breaks down. It is the case that later on in a court—since Mr. Pickersgill used this analogy the other day, you sometimes raise, as a point of appeal, a procedural point or the inadmissibility of certain evidence. But for this Committee to make a judgment or a decision and then three days later, two days later or even two hours later to entertain a procedural point that might have been raised and considered before the vote was taken is tantamount to a retroactive reprieve of a procedural point that should have been resolved before the motion was put.

• 0955

Mr. Chairman, there is something else that is fundamental if this Committee is going to

work. We are governed by parliamentary procedure. In effect, if we accepted Mr. Allmand's suggestion we would be reversing ourselves. We have made a decision, rightly or wrongly, and it is up to the House, when this Committee reports, to determine what they are going to do with our decision. But as I understand parliamentary procedure for committees, for us to reverse ourselves requires (1) a member who has changed his mind to raise it and (2) a two-thirds vote of this Committee. If that is correct then I suggest that Mr. Allmand's perhaps superficial reasonable request to refer it to the steering committee is out of order *ab initio*. Unless there is some parliamentary procedure that we can use as a guide, and I submit there is, we are bound to get as a guide, and I submit there is, we are bound to get into these hagglings and hassels that we have experienced this morning.

The Chairman: Would you permit me to read...

Mr. McGrath: Well before you do, Mr. Chairman...

The Chairman: Just a moment. I want to read this rule.

> Rescission of resolutions of select committees.—It is a rule of the House of Commons that "every question by voice in committee bindeth, and cannot be altered by themselves" (b). In practice, this rule is sometimes disregarded, and resolutions or other decisions of committees are rescinded (c). Previous notice must, however, be given to all the members of any motion for rescinding a resolution.

Mr. Nowlan: I think somewhere else there is another provision. I think you have to give notice, I think it has to be raised by a member who wanted to change his mind for one reason or another, and I think it has to be a two-third majority vote of the Committee that made the decision.

In any event, Mr. Chairman, my argument goes further than Mr. Nesbitt's. I say, firstly, that the procedural point that Mr. Allmand has raised today could have been raised then. He was here. He voted. But, more important, we have made a decision, and the Committee will bog down unless decisions that have been made, perhaps even incorrectly—although I am not saying this was an incorrect decision—are adhered to. We must follow some parliamentary rules. It is up to the House to decide what they are going to do with the eventual report of this Committee. That is where the matter has to be resolved. Mr. Allmand's motion, in all fairness to him, is in effect changing the decision of this Committee.

That is all I have to say, Mr. Chairman.

The Chairman: Mr. Allmand did not make a motion. He raised a point of order.

Mr. Allmand: I do not want to argue it now. I think all these arguments can be made in the steering committee.

An hon. Member: We are not all on the steering committee.

Mr. Allmand: But nothing can be decided by the steering committee. It has to prepare a report which will be accepted by this meeting before it goes back to the House. Am I not correct in stating that?

The Chairman: The steering committee's report has to be approved by the regular meeting.

Mr. Allmand: Not only that, but before this Committee reports the estimates to the House that report that would be sent to the House has to be approved by this Committee.

The Chairman: That is correct, the regular committee.

Mr. Allmand: The report you would send back to the House would either include the resolution that was passed at the last meeting or it would not, and all I am saying is that if that report comes back to this Committee, concluding that resolution, then I will argue it at length. I think now is really an improper time to do that. I just raised the point of order so that the steering committee, in preparing their report, can consider it.

Mr. Nowlan: Mr. Chairman, just one further comment. If Mr. Allmand's point is valid, then this is an effective way to short-circuit any decision of a committee. I think in all parliamentary fairness, whether you agree with the decision of this Committee or not, you are going to get into the very situation we are in right now—of having officials come and do business on another day while we argue retroactively a procedural point that we should have debated, discussed and defined.

An hon. Member: We tried to.

An hon. Member: Every time you lose a vote in Committee you want to refer it to the steering committee.

The Chairman: Order please. Mr. Skoberg.

Mr. Skoberg: I think your point is well made. The steering committee had better not change anything that this Committee as a whole has resolved. The steering committee has no authority to change any recommendations back to the House. All they do is coordinate the material that we have passed here and, as such, there is no purpose at all in referring this back to the steering committee for further consideration. The decision was made here in the presence of Mr. Allmand, he voted on it and, as such, it becomes part of the minutes of this particular Committee. The steering committee has no authority to delete anything that has been decided by the over-all Committee.

Mr. Allmand: I never suggested that it did.

The Chairman: Mr. Skoberg, as you well know, anything that is passed by the steering committee, has to be approved by the regular committee.

Mr. Skoberg: Mr. Chairman, it has been suggested that the steering committee maybe delete this portion—the motion that was made here at the last meeting. The steering committee has not the right to delete anything. This is the point that I wish to make.

Mr. Nowlan: Mr. Chairman, I think this whole discussion is out of order in view also of the rule that you read. There has been no notice given to all members to reverse a decision of this Committee. This is the fundamental point. How do you reverse it? Is the Steering Committee going to amend it, or is it going to refer it back with modifications? No matter how you do it, it, in effect, disturbs a decision, for what it is worth, of this Committee.

• 1000

Any other discussion is, I think, out of order and futile, because we have not even followed the rule that you have read. I think it goes beyond that, as I mentioned earlier. There has to be a change of vote, and a two-thirds vote of the Committee, otherwise the whole Committee system breaks down.

Mr. Allmand: If I may introduce a motion now I will distribute it and leave it to be voted on at a future meeting.

Mr. Lessard (LaSalle): First of all, Mr. Chairman, I think we were out of order in the first place. You should not allow such questions to come to a vote. It was not in order. And I believe that we are still in the position today of not being in order. We have not got anything before us to discuss. I think we are out of order completely.

Mr. McGrath: The honourable gentleman who is now speaking was here last week and he did not raise that as a point of order, Mr. Chairman.

An hon. Member: Because the vote was called.

Mr. McGrath: You did not raise it. You did not suggest that the motion was out of order last week.

Mr. Lessard (LaSalle): We tried to put a motion to adjourn. You said you had a motion and a motion has to be voted on.

An hon. Member: Why do you not take the Chair?

The Chairman: Order, order.

An hon. Member: You seem to be doing a very good job on it.

The Chairman: Order, please.

Mr. Allmand?

Mr. Allmand: I moved this motion, Mr. Chairman, but it would waste a great deal of time to discuss it now, I do not propose that it be voted on now. I suggest that our side, the other side and you, as Chairman, deliberate upon it and seek some advice on the procedure and we can put it to a vote at the next meeting, at which we can argue these points, if necessary.

I will also seek further advice on it myself to see if I have a good case, although I have already checked.

I do not intend to move it this morning, and not much will be gained by raising points of order back and forth. I am giving notice. It is a notice of motion.

The Chairman: It is a notice of motion?

Mr. Allmand: Yes.

The Chairman: Is it agreed that we refer this notice of motion to the Steering Committee?

Mr. Allmand: It is not even necessary to do that. I am just giving notice of the motion to the Committee.

The Chairman: The notice of motion will be referred to the Steering Committee for further discussion and advice.

Mr. Nowlan: Mr. Allmand, as I understand it has tabled notice of a motion that he may very well move at the next meeting.

An hon. Member: That is right.

Mr. Nowlan: As far as I am concerned, I think he has every...

The Chairman: Is that agreed?

Mr. Nowlan: I do not know if it is agreed, but I think he has every right...

An hon. Member: You do not have to agree.

Mr. Allmand: I am making a motion, but I am not asking you to vote...

The Chairman: It will be discussed at the next meeting.

Mr. Thomas?

Mr. Thomas (Moncton): Mr. Chairman, this is a point of order, too, but it has nothing directly to do with what has been raised. There has been talk of referring to a steering committee. I am beginning to wonder what is the point of having a steering committee.

On November 26, as you will recall, the Subcommittee on Agenda and Procedure met to work out a schedule of meetings for the balance of the year. At that time there was general agreement on this schedule and it was drawn up. These minutes were read at the last meeting and approved by the Committee. I, in good faith, therefore notified our Party Whip of the schedule of meetings and he made arrangements to have members with a particular interest in the subject, come today to hear the National Harbours Board.

I listened to the report of the minutes of the last Steering Committee and no mention was made of this change in procedure. The first notice we had was when the orders came out yesterday. They showed that today we would again be hearing the Canadian Transport Commission.

The Party Whip wanted to know why I had given wrong information, and we had to go to the House again last night to make a further change in the Committee members.

Although I am very happy to see these elusive senior officials finally with us—and do not want to drive them away after getting them here—I still protest strongly about changes being made in procedure that has been agreed upon by the Subcommittee on Agenda and Procedures. Why make decisions if we are not going to follow them?

The Chairman: Mr. Thomas, it was agreed that today we would take the Canadian Transport Commission...

• 1005

Mr. Thomas (Moncton): When was it agreed?

The Chairman: It was agreed by a resolution of Mr. McGrath today at the Steering Committee.

Mr. McGrath: I am not even on the Steering Committee.

The Chairman: No; but your resolution ..

Mr. Thomas (Moncton): I listened very closely to the minutes you have just read and it was not there.

The Chairman: I read it when we started.

Mr. Nowlan: Yes, but you did not say "today". You said that the next time the Canadian Transport Commission was here we would have the senior officials. You did not say "today".

Mr. McGrath: It referred to the next scheduled appearance of the Commission, which was going to be later in December—next Thursday, to be more specific.

Mr. Serré: Relative to what Mr. Thomas has said, the Steering Committee met last Thursday, and it was then agreed that the proposed agenda for the coming Tuesday be deferred relative to the request made by a member of his Party, namely, Mr. McGrath, that the officials of the Canadian Transport Commission appear before us at our next meeting.

That is why it was decided on the Steering Committee—and Mr. Nesbitt was on the Steering Committee then, and he agreed, too—that Mr. Pickersgill and the Chairman of the Railway Transport Committee appear before us on the following Tuesday. That is why we changed the whole agenda.

Mr. Thomas (Moncton): Mr. Chairman, I thought possibly there had been a change.

That is why I listened so carefully to the reading of those minutes; and it is not in those minutes.

The Chairman: It was agreed that the Chairman and the Vice-Chairman of the Canadian Transport Commission would come to the next meeting, and the next meeting is today.

Mr. Nesbitt: Mr. Chairman, I am afraid I must beg to differ. It may be due to a misunderstanding, and I am not imputing motives to anyone. I certainly agreed on those who would represent the Canadian Transportation Commission when they did appear, but it was my understanding that it was indefinite whether Mr. Pickersgill and the other officials would be able to come, and, without that knowledge arrangement would be made at some future meeting to have them.

Otherwise, I understood that the agenda as arranged would proceed, with the National Harbours Board, then Mr. Kierans and then some time found when the officials of the Canadian Transport Commission could be here.

Mr. Skoberg: Mr. Chairman, I filled in for Mr. Schreyer on the Steering Committee last Thursday. It certainly was not my thought that we were going to have this group here today.

We were given the agenda early on in the meeting, and the National Harbours Board was supposed to be before us today and Mr. Kierans was to be here on the 5th and the 10th. These gentlemen were to be worked in at some convenient time, but I did not understand that they would be here today. Actually until we saw this on our desk this morning we did not know that these gentlemen would be here.

Mr. McGrath: May I just add, with great respect, that neither was it the understanding of our Party Whip, because we changed the complement of our Committee on Friday to coincide with the schedule that had been agreed to by the Steering Committee, namely, the hearing of the National Harbours Board and the Post Office. We had to change the complement again last night because of this fancy manoeuvre on the part of somebody.

The Chairman: I do not think there was any fancy manoeuvre. It was quite in order. The Steering Committee met immediately after the regular meeting last Thursday and it was decided that at the next meeting the Chairman of the Canadian Transport Commission would be here with the Vice-Chairman and his legal adviser, and it was approved this morning.

Mr. Thomas (Moncton): Mr. Chairman, would you read those minutes again? The minutes do not state that.

The Chairman: The minutes do not state that?

Mr. Thomas (Moncton): No; the last paragraph.

The Chairman:

> Your Committee then agreed unanimously to the following decision and recommendation: That the Vice-Chairman of the Canadian Transport Commission acting as Legal Adviser and the Chief Accountant of the Railway Transport Committee in charge of accounting procedure be called before this Committee when the consideration of the Estimates of the Canadian Transportation Commission is resumed.

Mr. Thomas (Moncton): Yes; "when it is resumed..."

Mr. McGrath: Yes; when it is resumed. The schedule meant...

The Chairman: Well, it resumed today.

Mr. McGrath: It was not scheduled for today. That is the point.

The Chairman: I see little use of debating this any longer.

Mr. Nowlan: It should be referred to the Steering Committee for later discussion.

The Chairman: Yes; I quite agree with that.

Gentlemen, we have with us today the Chairman of the Canadian Transport Commission, with his officials.

I will ask Mr. Pickersgill to introduce those members of the Commission who have not been with us so far.

• 1010

Mr. J. W. Pickersgill (President, Canadian Transport Commission): Mr. Pierre Taschereau is the Vice-President of the Canadian Transport Commission. Because I am not a member of the Bar, Mr. Taschereau is, by statute, the legal adviser to the Commission.

When I received the message asking that someone described as the chief accountant

come before you, I was unable to identify any such person. We do not have a separate accountant for each Committee of the Commission.

Mr. Marks, who has been here all along, is the financial officer for the whole Commission and has the over-all duty of working on the Estimates.

However, to make sure that someone would be here to speak in a formal way for the Railway Transport Committee I thought I should perhaps follow the motion made by Mr. McGrath and have the Chairman of the Railway Transport Committee present, and he is here in the person of Mr. David Jones.

The Chairman: Thank you, Mr. Pickersgill.

Are there any questions?

Mr. McGrath: I am not going to pursue my line of questioning but I would just like to say why. It is because I think it is futile.

I moved the motion. I am not bringing it up again, but it is relevant to why I am not going to pursue my line of questioning with the official whom Mr. Pickersgill was kind enough to bring along this morning in compliance with the request of the Committee.

I moved a motion, in good faith, at the last meeting of our Committee. In it I suggested that we recommend to the House that the implementation of this particular decision, namely, the curtailment of rail passenger service in Newfoundland, be deferred until the Committee has had a chance to go to Newfoundland.

I felt then, as I do now, that the Committee would be in a position, if it went to Newfoundland, to experience at first hand some of the things we have been talking about, such as the tremendous popular protest there is against this decision of the Canadian Transport Commission and the hazardous travelling conditions attendant upon bus highway travel in Newfoundland in the winter time.

Because Mr. Allmand and his Liberal colleagues have introduced a notice of motion setting aside that particular motion, thereby making any future deliberations of this Committee and any future examination of this particular Estimate, to my mind, meaningless, I see no point in pursuing the line of questioning. Quite frankly, if this particular motion, when put, carries, it will make a complete mockery of the Committee system.

The Chairman: Mr. McGrath, if I may answer you...

Mr. McGrath: No answer is required, Mr. Chairman. I am merely making a point.

The Chairman: I beg your pardon?

Mr. McGrath: No answer is required. I am not asking a question. I am just making a point.

Mr. Allmand: Are we dealing with Item No. 50, Mr. Chairman?

The Chairman: Yes. Let us get into it. Shall Vote No. 50 carry?

Some hon. Members: Carried.

Mr. Nowlan: Just a minute; if Vote No. 50 carries all these officials can be excused and they can go on their way. Is that not right?

The Chairman: No. There are three further votes. Vote No. 50 is the first vote of the Estimates.

Mr. Nowlan: On Vote No. 50 I would like to ask a few questions of either Mr. Pickersgill or his officials, one of whom, I gather, is a legal adviser. Can Mr. Taschereau answer questions, or is he the legal adviser to the CTC?

Mr. Pickersgill: He is the legal adviser to the CTC, but he is also, of course, on the regulatory side as the chief administrative or executive officer of the Commission. Mr. Taschereau has no direct relationship with the research side of the Commission, but on the administrative side he really is the principal officer of the Commission, and in that capacity there is no reason that questions should not be directed to him as well as to me.

• 1015

Mr. Nowlan: I had two lines of questions, Mr. Chairman, one of which is very brief. I do not imagine Mr. Taschereau can give me an answer but I would like to know if he today could produce an agreement between the Canadian Pacific Railway and the CTC on this Digby-Saint-John Ferry.

Mr. Taschereau, I do not imagine you can produce a firm signed agreement between the CTC or the government of Canada and the CPR on this Digby-Saint-John Ferry. I asked Mr. Pickersgill in a general way about this the other day. As the legal adviser, would you be the one, if and when an agreement is signed, who would be responsible for crossing the t's and dotting the i's.

Mr. Pierre Taschereau (Vice-President, Canadian Transport Commission): My role as legal adviser is not one of deciding questions of law every day; my role is determined in the Act as deciding questions of law at proceedings of the Commission and not on an every day basis.

Mr. Nowlan: You might be a very good officer to have in this Committee from time to time to help us move from port to port. Your role is deciding questions of law at proceedings of the Commission rather than being involved in the deliberations of the Commission and what might be done outside Commission hearings.

Mr. Taschereau: My function is rather to sit at proceedings of the Commission and decide questions of law that arise.

Mr. Nowlan: What relationship is there between the CTC and the National Harbours Board on this large problem of containerization?

Hon. J. W. Pickersgill (President, Canadian Transport Commission): If you would not mind, Mr. Nowlan, before I answer that question I would like to draw your attention to a point about the Digby-Saint-John ferry. I brought this morning—because the other day I answered off the top of my head—the announcement that was made on May 31, by Mr. Hellyer with respect to the decision. If you would like me to read it, I could read it very quickly; it is a very short one. I think it bears out exactly what I said the other day. Perhaps it could be incorporated in the proceedings. What it does say is that they are going right ahead to build the terminal facilities, that the CPR is calling for tenders for a ship, that the negotiations will proceed and while they are proceeding the work will go ahead. I think that is substantially what I said the other day. I was also correct in saying that the CPR have received tenders but they have not yet evaluated them and let the contract. There is as yet no agreement, but I checked with Mr. Darling, the Chairman of the Water Transport Committee yesterday, and he told me that these negotiations, which he and his officials in the main are conducting with Canadian Pacific, are at what he believes almost a final stage. In any event, the main point I wanted to emphasize is that I was correct in my recollection the other day that there is no holding up of any procedure toward getting the ferry just because an agreement was not reached with the railway.

Mr. Nowlan: The only exception I took was to the preliminary part of your answer when you mentioned a firm agreement and then you qualified it by saying that there was an understanding that things would proceed notwithstanding a contractual agreement.

Mr. Pickersgill: Yes, that is right. There is an understanding; the understanding is that the service will be instituted whether or not there is an agreement between the government and the CPR. It seems I was not incorrect. It does seem that I went perhaps a little beyond Mr. Hellyer's statement, but not beyond the facts.

Mr. Nowlan: I appreciate that.

Mr. Chairman, could we have that announcement made part of the proceedings?

Mr. Pickersgill: I think it would be useful to have that announcement because it was made when there was no Parliament.

Mr. Nowlan: That is right.

The Chairman: Is it agreed to attach this to the proceedings.

Mr. Pickersgill: Perhaps it could just be incorporated into the record as though I had read it.

• 1020

The Chairman: Would the members prefer having a copy of it?

Some hon. Members: Agreed.

Mr. Pickersgill: May I now go on to the second question.

My understanding is that the National Harbours Board is at the present time discussing with a consortium of three shipping companies the possibility of establishing a facility in the harbours of Halifax and Saint John for unloading containers from this ship and loading them onto a railway train. I have taken a very active interest in this because it is an important new development that the research division of the Commission has been interested in. This division has been asked by the government to take an active interest in this. I had several conversations with Mr. Mann, the Chairman of the Harbours Board, about this matter. However, the Commission has no part at all in the discussions with the consortium. This is entirely a matter for the Harbours Board. I understand they had a meeting last week at which the port managers of both Halifax and Saint John were present.

I am afraid I have not anything to report on that. It is a nice question whether I should report it if I did have, but I tried to get Mr. Mann and I found that he was out of town and would not be back until this afternoon. I think perhaps it would be better to pursue the details with him.

Mr. Nowlan: I appreciate that, Mr. Pickersgill, and I only raised it today in view of a speech made by a Mr. Cope of the Canadian Transport Commission in Montreal on October 31. He did say in that speech that the CTC, as I understand it, would be letting a contract to consultants to do a comprehensive study of the potential for container operations into and across Canada, and I was wondering, if this is so, whether there is any liaison with the National Harbours Board—or are they conducting a survey, separate and apart from any consortium of private interest, to explore the potential.

Mr. Pickersgill: There is the closest possible consultation and collaboration. We have no intention of having this long-range study done with the thorough agreement and concurrence of the Harbours Board. But that does not mean that we are going to hold up a specific proposal for establishing a service while we are waiting for a long-term study. We think a long-term study is very desirable, but we also think that it is very important—we agree completely with the Harbours Board and I think with everyone else interested—that we should not miss any chance to get a promising service started just because a long-term study is being made. For example, I read in the press that Canadian Pacific is going to have a container facility in Quebec City and that a container service has already been started by Manchester Liners in Montreal. These things have been done by private initiatives, they have been very much welcomed, and this consortium of these three companies is also an initiative that we certainly welcome.

Mr. Nowlan: But other than the contract with consultants to explore the potential, is this the only initiative being taken by the CTC in the containerization field. Perhaps that is a necessary one as a preliminary step —I do not know.

Mr. Pickersgill: One duty that is imposed upon us by the Act is to consider alternative modes of using public funds for the development of transportation. There is a nice question at the present time whether with container services and unit trains transport would not be as cheap—all things considered, the time factor and everything else—as certain types of water transport. That is one of the big long-term questions, and an important one.

• 1025

Also, the research side and the Water Transport Committee side of our Commission try at all times to keep abreast of the actual day to day developments that are going on. But they do not have any executive function in that sphere; they simply have an advisory function.

Mr. Nowlan: Would it be possible then, Mr. Chairman, to ask Mr. Pickersgill if the CTC is keeping abreast and having a survey made and, at the same time, this is also being done by a committee of the National Harbours Board—

Mr. Pickersgill: What the National Harbours Board is doing is considering a concrete proposition for the use of their facilities and it appears that this consortium has gone to Saint John Harbour and the Halifax harbour and has asked for proposals in both places. This is really rather a negotiation; it perhaps illustrates pretty well the difference between the research side of the Commission and any executive agency, whether it is the Department of Transport or the Harbours Board or the St. Lawrence Seaway. It is not our business to interfere with their day to day operations, but if they come to us for advice we give it. We try to keep in close touch and, happily, we all happen to be friends and we try to help one another out in every way we can.

Mr. Nowlan: So the research and exploration of potential is being done by the CTC.

Mr. Pickersgill: That is right—the long-term research and exploration.

Mr. Nowlan: Could you give us an idea of what the terms of reference are or the time limit is for this contractual study that Mr. Cope mentioned. Are they English consultants, American consultants, or Canadian consultants?

Mr. Pickersgill: I think I would have to get some details. I would be very glad to provide a memorandum setting out the details. I think it would be a very great mistake for me to try to speak from memory.

Mr. Nowlan: A memorandum would be fine.

Mr. Pickersgill: I would be very happy to provide a memorandum either to the Committee or to you personally. If the Committee would like it I would be very glad to provide the secretary with one and copies of it could be circulated to all members of the Committee.

Mr. Nowlan: That would satisfy me for the present time.

Mr. Skoberg: Is the CTC working closely with the National Harbours Board at all times in regard to the containerization traffic that we can expect.

Mr. Pickersgill: Yes.

Mr. Skoberg: When do you expect that Part III of the Act will be implemented?

Mr. Pickersgill: I suggest that the next time the Estimates are up in the House of Commons that perhaps that would not be an inappropriate question to put to the Minister of Transport, since it is the Governor in Council who decides that question, not us.

Mr. Skoberg: Then is any representation that is being made before the Minister or before the CTC.

Mr. Pickersgill: If I was the Minister of Transport—and I used to be—and some official tried to give an answer for me, I would be annoyed. This is a function. Even the Minister of Transport cannot decide this, it can only be decided by the Governor in Council. But I am a retired Privy Councillor and I am not privy to these things.

Mr. Skoberg: What I am wondering Mr. Chairman, is that if the Trucking Associations make representation to whom do they make it?

Mr. Pickersgill: The Canadian Trucking Associations have made a good many representations to the Canadian Transport Commission. They made some to me the other day on how they would like to see Part III administered if it were proclaimed. I think that is a very proper thing to do, but I suggested to them that if they sought to make representations about whether or not it should be proclaimed the appropriate persons to whom to make them were Ministers, because the decision would be made by the Governor in Council and not by us.

• 1030

Mr. Skoberg: Their representation no doubt was made particularly along the lines of their intra and provincial and countrywide transportation...

Mr. Pickersgill: Mr. Lewis, the President of the Canadian Trucking Associations Inc., made a speech in Toronto. I think I can probably get some copies of it. It was a very excellent presentation of their position.

Mr. Skoberg: Would not the CTC make recommendations to the Minister on these representations?

Mr. Pickersgill: I am of the opinion that the CTC would be a little hesitant, of its own volition, to try to tell the government what it ought to do. But before any decision, one way or the other, was taken in this matter I would hope that we would be consulted by the Minister.

Mr. Skoberg: This is what makes it rather difficult to understand what are the functions of various departments of government. I realize that it will take me some time to try to sort them out, but there seems to be a great deal of duplication of efforts somewhere.

Mr. Pickersgill: I have been around Ottawa since 1937 and I am still sorting them out, Mr. Skoberg, so do not be discouraged.

Mr. Skoberg: Possibly with your experience, Mr. Pickersgill, you could make recommendations.

Under the Railway Grade Crossing Fund what work is being done to improve the type of protection at grade crossings?

Mr. Pickersgill: There are two aspects to this question. Any new device or procedure that we hear about from any source, the engineering people in the Railway Transport Committee look at very carefully, to see whether it would improve the situation at some of these grade crossings.

There is also the fund for grade separations. When I was Minister of Transport I undertook, while the bill which is now the National Transportation Act was before Parliament, that we would have a careful study made of the whole problem of grade separations. That study is in the course of being made at the present time. It is not completed, but I do not think anything very serious is being lost because of that, because all the funds that Parliament has so far been willing to grant are fully committed to actual projects.

But some consideration is being given—I do not think this is any secret—to the question of whether the $500,000 limit of federal contribution to any one project is too low. That is a matter that the Canadian Transport Commission could not decide. Only the government could decide that—no, even the government could not decide it. Only Parliament could decide it, because the law made by Parliament says at present that it cannot be more than $500,000. The government, however, would be the only body that could recommend to Parliament that that ceiling be raised. That is one thing.

There is also being considered the possibility, if a railway relocation in, say, an urban community would eliminate a great many grade crossings of englobing the contributions, which otherwise would be made to each, and making that an aggregate contribution to the relocation.

Parliament has never passed on that question, and with the amount of funds available at the present time I think, it would be very hard to get anyone to agree that one community should be given a proportion of the total funds so large as to make that possible.

In some respects, it is rather appealing as a way of not only improving the situation relative to traffic safety, but also perhaps of contributing something to urban renewal. However, as I say, this is in the idea stage, and it is being considered.

Mr. Skoberg: Mr. Chairman, is the RTC or the CTC using the facilities of the National Research Council to try to imporve the type of protection at these crossings? I am particularly concerned with the increase in the amount of the inflammable material being carried on highways. This creates danger not only to highway traffic but to the operation of...

• 1035

Mr. Pickersgill: I think I would prefer to let Mr. Jones, who is...

Mr. Corbin: On a point of order, Mr. Chairman, have we now passed from Item 50 to Item 60?

The Chairman: No; we are still on Item 50.

Mr. Corbin: Because what we are discussing comes under Item 60. We are into a new line of discussion, Mr. Chairman, are we not?

The Chairman: We are still on Item 50.

Mr. Skoberg: We have had a general discussion since we started.

Mr. Corbin: If it comes under Item 60 perhaps it could be discussed later?

Mr. Skoberg: If the question could be asked, Mr. Chairman, during a lapse in the questioning it might save time later on.

The Chairman: Mr. Jones?

Mr. David Jones (Chairman, Railway Transport Committee): Yes; I will be glad to answer that question, Mr. Chairman.

Your question, sir, was whether the Canadian Transport Commission is co-operating with the National Research Council. The answer is yes, we do. As one example of many, there is a project going on at the moment—I am not sure whether Canadian Pacific is involved in it, but I know that Canadian National is—involving a type of warning light that is put on top of a locomotive. It is a revolving type of thing and is designed to give additional warning at night of the approach of a train toward a crossing. These are under test and members of the Committee may have seen them on locomotives. I have seen them myself in this area.

The type of lens and the intensity of the red light to be used in the crossing signal are matters which are under study at the moment, and the National Research Council is doing some work on that.

There are others, and will be others as we go along.

Mr. Skoberg: Are any funds set aside in the budgets of the CTC or the RTC for this type of research, or is it all done under the National Research?

Mr. Jones: Certainly not out of the Grade Crossing Fund. I do not think there are, specifically.

Mr. Skoberg: I have just one further question, Mr. Chairman.

Mr. Pickersgill, how many outside consultants are being used now by the CTC and how are these consultants employed? Are they put up for tender, or is preferential treatment given to—

Mr. Pickersgill: Perhaps I could provide the Committee with a memorandum on this subject. It would involve quite a long explanation. There was a meeting of some 80 persons representing the majority of the consulting firms interested in the kind of work that the Canadian Transport Commission is doing...

Mr. Skoberg: Do you have invitation tenders, then?

Mr. Pickersgill: No; this was to discuss the method and the problem of selection, and so on. I could provide the Committee with a memorandum outlining the results of that, and I would be very happy to do so. I think it is a very interesting and important subject.

Mr. Skoberg: Thank you, Mr. Chairman.

The Chairman: Mr. Benjamin?

Mr. Benjamin: In the Item under Vote 50, "Degaussing Canadian Government Ships and Canadian-owned merchant ships", what does "degaussing" mean? Is it taking the barnacles off?

Mr. Pickersgill: Mr. Nesbitt probably knows more about that than I. He has probably had some personal experience. It is a process that has some relation to mines.

Mr. Nesbitt: It removes the magnetic field for ships.

Mr. Benjamin: I can see that the CTC would pay for the cost of this for government-owned ships. When it is done for other Canadian-owned merchant ships are they charged for it or is the cost recovered from them, or what?

Mr. Pickersgill: Do you know the answer to that Mr. Marks?

Mr. L. L. Marks (Financial Adviser, Canadian Transport Commission): I do not know the answer to that, Mr. Pickersgill. I do not believe they are charged. This is a government program for government-owned ships.

Mr. Pickersgill: For government-owned ships.

Mr. Benjamin: But it says, "and Canadian-owned merchant ships" of 3,000 to 20,000 gross tons.

Mr. Pickersgill: Perhaps we ought to get an answer on that. I will be very glad to.

The Chairman: Mr. Carter?

Mr. Carter: I have a couple of questions of Mr. Jones of the Railway Transport Committee.

First of all, the east coast ferry, Argentia-North Sydney, has been taken off. Is it going to be a seasonal operation? There are expensive facilities there, and an access road that cost many millions of dollars, and the ferry is operating only on a summertime basis.

Is it going to be the policy just to operate it on a sort of tourist schedule, or all year round?

Mr. Jones: I do not know that I can answer that question, Mr. Chairman. I doubt that it is in our jurisdiction.

Mr. Pickersgill: I do not think you can. It is under the jurisdiction of the Water Transport Committee.

The ferry is operated, of course, for the government, as are all other ferries, by the Canadian National Railways, and the schedules and use of the ferries in the wintertime, as I think you know, Mr. Carter, depend a good deal on the amount of traffic offering and also on the necessity for the removal of the ships for refit, and that sort of thing.

I really do not know the details of it but I would be very glad to get them.

Mr. Carter: My second question, Mr. Chairman, relates to railway crossings. There are several in my riding, St. John's West, which are very hazardous. During the past few years there have been some serious accidents. Have representations been made by the St. John's City Council or by the provincial government about, or has any consideration been given to, improving these crossings? One in particular is the Waterford Road crossing.

The Chairman: Order, please.

Mr. Carter: Mr. Chairman, I have several other questions relating to the abandonment of the C.N.R. but I think we should wait until this motion of Mr. Allmand's has been disposed of.

The Chairman: Yes, you are quite correct.

Mr. Carter: So, I will waive any further questions on that until this motion has been disposed of.

The Chairman: Mr. Jerome.

Mr. Jerome: Mr. Chairman, my questions also pertain to the abandonment of service in certain areas, and it might be more appropriate and expeditious if I left that questioning until after these estimates are completed.

The Chairman: It certainly would be. Mr. McGrath.

Mr. McGrath: Mr. Chairman, since there seems to be a tendency to deal with all of the

items under the General item, I presume that is the way the Committee is proceeding.

I have one question so as not to hold up the item when we get past the first item. It comes under Vote 65 and it is not really a question. It is merely in the form of a recommendation to the Commission. It concerns the subsidy to the Bell Island and Portugal Cove ferry service.

I have had discussions with the crew of the vessel that receives this subsidy, the John Guy and in my opinion these men are underpaid for the work they have to perform and I hope that the Commission will bear that in mind. But what I am mostly concerned about is the fact that they are paid monthly and that they do not get their cheques until anywhere from a week to ten days after the month closes.

• 1045

The excuse that they have been given by the company is that the company is late in getting the subsidy. It seems to me that that is a very lame excuse because certainly any bank would carry them for a week or ten days. The suggestion that the crew have made is that they have the use of their money interest-free for two weeks. I hope that the Commission will bear this representation in mind and communicate to the company that perhaps it should even be made a condition of the subsidy that the men be paid on time.

Mr. Pickersgill: I have heard a lot about the Bell Island ferry but frankly, Mr. McGrath, this is the first time I have heard this particular complaint. But I can tell you that before the day is out I will get in touch with the Chairman of the Water Transport Committee and ask him to look into it at once. It does not seem to me at first glance—there may be something you and I do not know about—to be a very convincing argument, especially in the case of pay.

Mr. McGrath: Thank you very much.

The Chairman: Shall Item 50 carry? We have been switching from Item 50 to . . .

Mr. McGrath: I did so on the understanding that we were going to deal with all the items under the General item.

Mr. Howe: I have a question on Item 50. I am not a member of the Committee but I understand we are allowed questions. I was interested in the questions that were being asked under Professional and Special Services. I sometimes wonder whether we do not get carried away with this business in a lot of our committees, in a lot of our commissions. I think the Glassco Commission had something to say about that. Does the Canadian Transport Commission, when you need professional people, go to the air services, to the marine services and find out if there is anybody available there before going out and hiring people to do these special jobs that are necessary? I think it is mentioned in the Glassco Commission report that there should be more co-operation between departments of government instead of going out into the marketplace and hiring extra people. Is this being done?

Mr. Pickersgill: This is certainly being done. As a matter of fact one of the reasons why it was felt desirable to have a research division in the Canadian Transport Commission, as I am sure you will recall when we had the debates on the bill itself, is that when you get outside experts, no matter how good they are, they have to spend quite a lot of time learning about the job before they can do it; whereas if you employ people as much as you can who are dealing with these problems from day to day, they do not have to get a certain amount of education at the expense of the taxpayers. Every effort is made in all our research projects and certainly every effort is made by the Railway Transport Committee, the Water Transport Committee and the Air Transport Committee to make use of every kind of facility that the government has including, as Mr. Jones pointed out a few moments ago, the National Research Council. We are restricted, I think rather fortunately, in the amount of money we can spend and that is a further incentive to economy in this regard.

Mr. Howe: What do you mean by further economy? Professional and Special Services—Item 50—for the Canadian Transport Commission has gone up almost $400,000 from last year.

Mr. Pickersgill: Yes, but last year was not a very long year. Most fiscal years start on April 1 but last year for this Commission it started on September 19, as the Commission was only established then.

Mr. Howe: Yes, but there still would be some people available from the old Transport Commission and people from the old Board of Transport Commissioners.

Mr. Pickersgill: Oh, yes. Would you be interested in having a kind of breakdown?

Mr. Howe: I understand you are going to give the Committee a memorandum on that to indicate who these people are and what category they are in.

Mr. Pickersgill: Yes, and what they are doing. That is right. We will be very happy to.

The Chairman: Mr. Howe, do you have further questions?

Mr. Howe: Are we allowed to question on Item 60, the Railway Grade Crossing Fund? You have been answering questions on that.

• 1050

Mr. Pickersgill: I wonder, Mr. Chairman, if it would be impudent on my part to make the suggestion that you follow the same rules as followed in the House of Commons and let anybody ask questions on the General vote, on all the votes. I think it would be more convenient.

The Chairman: Is that agreed?

Some hon. Members: Agreed.

Mr. Howe: Then, Mr. Chairman, it will be all right to ask a few more questions on the Railway Grade Crossing Fund. I am rather interested. Has that $10 million not been there for a long, long time?

Mr. Pickersgill: Oh, it is spent every year. But do you mean that the amount has not increased?

Mr. Howe: That is right. I cannot remember its ever being changed.

Mr. Pickersgill: Mr. Howe, I suppose I should not dare to say this because the reporters might hear me but if you would make some representations to Mr. Benson...

Mr. Howe: Mr. Chairman and Mr. Pickersgill, in the way that the cost of living is going up, this government does not seem to be able to control it at all. The cost of these railway crossing divisions or signals and everything else certainly has gone up, so that there must be fewer being built these days than there were. Mr. Chairman, I feel that in view of the fact that the trains are going so much faster these days there should be an increase in this amount. With the necessity for more efficient and adequate signals at the crossings, especially in view of the new turbo train between Toronto to Montreal, I shudder to think what will happen at level crossings when that travels at 110 or 120 miles an hour. No whistle or no light—there has to be a signal at the crossing. It has to be very, very efficient and adequate or you are going to have a lot of accidents at these crossings. As I say, that $10 million has been there for so long that there cannot be too much works being done these days in regard to railway crossings and separations.

Mr. Pickersgill: I certainly will agree with you, Mr. Howe, that there are more applications every year than it is possible to satisfy.

Mr. Howe: As I say, the increased cost of all of these signals and separations must also cut down on the number that you can process. You only have $10 million and that must have been there for 15 years.

Mr. Pickersgill: I do not think it is quite that long but it has been there for quite a long time.

Mr. Howe: It has been there for a long time.

Under the same vote I notice "Statutory —Payments to railway and transportation companies of amounts determined pursuant to the provisions of the National Transportation Act—$96 million." It was $110 million in 1967-68. What is that for?

Mr. Pickersgill: That is a statutory item. You will recall, Mr. Howe, when we were putting the bill through that it was to be reduced by 12.5 per cent a year. This is the phasing out of all the various payments that were at that time being made to the railways. It is not what is called a controllable expenditure because unless you amend the National Transportation Act it just has to be paid.

Mr. Howe: In that phasing out, I understand it was supposed to be the freight rate subsidy that was being phased out at the rate of $18.5 million per year. Was it not?

Mr. Pickersgill: There is no freight rate subsidy now.

Mr. Howe: No, but was there not something to be phased out at the rate of about $18 million a year in that bill?

Mr. Jones: It is $14 million a year. For 1967 it was $110 million. For 1968 it was $96 million and next year it will be $14 million less and so on up to and including—

Mr. Howe: Oh, yes. I see it now.

Mr. Jones: It is right in the Railway Act, sir, in Section 469.

Mr. Howe: I sometimes wonder whether we do not need another freight rate subsidy act, Mr. Chairman, because of the fact that freight rates have gone up so tremendously in the last year. It has certainly been one thing that has kicked the cost of living way up above reach.

Mr. Pickersgill: I think that is something that would be beyond my capacity to comment on. That is a question of policy to be taken up in the House of Commons where the politicians are.

•1055

Mr. Howe: Mr. Chairman, this brings up a point that I think is very important in all these committees, that the minister or his parliamentary secretary should be here to answer some of the questions in regard to government policy that arise in these committees. I think this is another move on the part of this government to put those ministers away up on a pedestal where nobody can get at them.

With regard to this business of freight rate subsidies I think this should not have been phased out because we know what has happened to the cost of freight rates in the last six months or a year. This certainly has put a tremendous pressure on the cost of living. Of course, I realize that this government does not seem to give any consideration to what things cost or the pressures they put on the cost of living, but I think this is an area where there should have been some care taken and probably some consideration given to bringing in another freight rate subsidy act to see that those freight rates are held level.

We know, Mr. Chairman, that there is going to be an increase in railway wages and who is going to absorb them—the man on the street in the cost of the things he buys. This is where everything goes and this is where the increase goes, and it is a trend that has to be stopped because there are not going to be any dollars left in the ordinary man's pocket by the time he has paid all these increased freight rates and cost of living. And freight rates have a tremendous amount to do with the cost of living.

The Chairman: Have you any further questions, Mr. Howe?

Mr. Howe: No. Thank you.

The Chairman: Mr. Nesbitt.

Mr. Nesbitt: Mr. Chairman, I have two or three disassociated questions that deal with different things. If anybody else has anything specific—

The Chairman: Have you a supplementary, Mr. Allmand, on the Railway Grade Crossing Fund?

Mr. Allmand: Did Mr. Pickersgill say that each year for the last few years we have had more applications for funds out of the Grade Crossing Fund than there were funds available?

Mr. Pickersgill: I think that is correct.

Mr. Jones: I will put it this way. Certainly the Fund is under pressure now at its present level. The Railway Transport Committee authorises protection or grade separation of one kind or another on an average rate of about 500 locations a year. This may involve a separation, it may involve a crossing equipped with warning lights or it may be a reconstruction of an old project that should be brought up to date. Those orders use up the Fund.

Mr. Allmand: Have you had to turn down an application that you would have accepted otherwise because there was not any money left in the Fund?

Mr. Jones: Not to my knowledge.

Mr. Allmand: So that some of these applications that were turned down might have been turned down on other grounds?

Mr. Jones: Yes. What happens, of course, when an application is made to protect a crossing is that a great deal of engineering work has to be done both by the city or town or highway department, whatever agency is making the application, and by the Railway Transport Committee to be sure that all of the technical aspects are in proper operating condition and that they provide the best protection for the particular location. This work goes on continually and we find that each vote is used up. However, at the same time we find that an application that might be decided this year or next year, if there is no money left in the Fund, will be put on the following year. I cannot say how many of those there would be, I would have to check and find out for you. However, I do

not know of any applications that have been turned down by reason of lack of money in the Fund.

[*Interpretation*]

The Chairman: Mr. Serré, do you have a supplementary question?

[*English*]

• 1100

Mr. Serré: No, not regarding the railway.

Mr. Givens: Could we have the question on the vote first.

The Chairman: You can put your question now, Mr. Serré?

Mr. Serré: Thank you, Mr. Chairman. I have a question regarding Item No. 55, which is subsidies to regional air carriers for their operating costs. I wonder if Mr. Pickersgill could tell us if these subsidies are given to privately-owned air lines or to Air Canada?

Mr. Pickersgill: No. They are only given to regional carriers. At the present time there are five air lines in Canada that are defined as regional carriers. Moving from east to west, there is Eastern Provincial Airlines Limited, with its headquarters in Gander; there is Quebecair, Incorporated; there is Nordair Limited; there is TransAir Limited and there is Pacific Western Airlines Limited. Up to now two of those air lines have received subsidies, Eastern Provincial Airlines Limited and Quebecair, Incorporated. I do not think any of the others have applied for a subsidy.

Mr. Serré: I wonder if you could elaborate as to their operating cost.

Mr. Pickersgill: The subsidies are not given in respect of their total operations but in respect of particular services where the service is not in itself sufficient but where, for one of several reasons that are set out in the statement of policy, it is considered desirable in the public interest to provide a service. I should have brought the statement with me, but I think I can summarize it by saying that if there is no other mode of transport except air service, and although there is a substantial population the air line cannot make a go of it, then it is eligible for consideration for subsidy. If there is an area where some development is going to take place that looks very promising, that looks as though in two or three years it will be self-sufficient and it is cheaper to put in an air line than to build a road or a railway or provide some alternative service, this area is eligible for consideration. That is the kind of situation I mean. These subsidies are supposed to be on a "use it or lose it" basis. In other words, if the service is not used the subsidy will not be continued.

Mr. McGrath: If you will permit me, Mr. Chairman, I would like to raise a point of order. It is now 11 o'clock and other committees are meeting at this hour. As I understand it, the practice has been that those committees which meet at 9.30 adjourn at 11 o'clock. I just point that out for your consideration, Mr. Chairman, because, as I say, it is now 11 o'clock and other committees are meeting. I also do not think it is fair to Mr. Pickersgill and the senior officials if we keep them here. as we did last Thursday, from 9.30 a.m. until 1.10 p.m.

The Chairman: There was no set hour and...

Mr. Serré: I am really surprised that Mr. McGrath would raise this point of order today, Mr. Chairman. What happened last week was not my idea.

The Chairman: I think we shall carry on. Those members who were called for other committees, it is their duty to attend or not to attend, but we shall carry on until...

Mr. McGrath: Mr. Chairman, I am not going to allow you to treat my point of order in such a manner as that. I am now going to put this to you in the form of a direct question. Has there not been a decision by the Steering Committee of the House that committees shall meet from 9.30 a.m. until 11.00 a.m. and from 11.00 a.m. until 12.30 p.m.?

The Chairman: No. there were no set hours, no set time. You may carry on, Mr. Serré.

Mr. Serré: I have a further question. I wonder if Mr. Pickersgill and his Commission have considered the feasibility of allowing subsidies to air line carriers at points in northern Ontario where there is not sufficient railroad service and where we do not have proper air line facilities at the moment?

• 1105

Mr. Pickersgill: The policy under which the Canadian Transport Commission is now operating is such that if any one of those five air lines which provide regional carrier service

were to apply in that sort of a situation it would certainly be considered, but so far there have been no applications. I would not be very surprised if a situation of that sort did arise, but when that statement of regional policy was made—and I would like to send you a copy of it because I should have had it here—it also envisaged, of course, some transfers of routes at some time in the future from Air Canada or Canadian Pacific Air Lines Limited to some of these regional carriers. That, of course, might have some considerable bearing both on the situation in northern Ontario and in northwestern Quebec.

The Chairman: Mr. Corbin do you have a supplementary question?

Mr. Corbin: Yes, supplementary to this, Mr. Chairman. First of all, I think we should set the record straight. Mr. Pickersgill mentioned Eastern Provincial Airlines. Should it not be "Airways"?

Mr. Pickersgill: Probably.

Mr. Corbin: I think it is.

The Chairman: Eastern Provincial Airways Limited.

Mr. Pickersgill: I apologize.

Mr. Corbin: My question has to do with the license you granted to Eastern Provincial Airways Limited to operate an air service between, among other points, Charlottetown, Charlo and Quebec City, to give them an open door into central Canada. When you granted the license to Eastern Provincial Airways Limited you turned down the application by Quebecair, Incorporated.

Mr. Pickersgill: That is right.

Mr. Corbin: To come into the Maritime area of operations, so to speak. Does that decision mean that the door is now closed once and for all to Quebecair, Incorporated from operating in our general area?

Mr. Pickersgill: No, not at all. The Committee was just dealing with a particular application.

Mr. Corbin: I see. I think that Quebecair, Incorporated was turned down on the basis that the facilities at Edmundston, for one, were not adequate, according to the Department of Transport specifications.

Mr. Pickersgill: I think I would have to take the same attitude, Mr. Corbin, about the decision of the Air Transport Committee that I took about a decision of the Railway Transport Committee. I would be very glad to give you a copy of the decision, which speaks for itself.

Mr. Corbin: I have one, sir.

Mr. Pickersgill: I think it woud be very improper for me to comment on the decision.

Mr. Corbin: If the airport facilities at Edmundston were relocated or improved in any way to meet the Department of Transport specifications, and if Quebecair, Incorporated were to reapply for an operating license in that area—

Mr. Pickersgill: If they reapplied their application would certainly be considered. There is no question about that.

Mr. Corbin: What is the status of the license which you gave to Eastern Provincial Airways Limited in its Charlottetown-Bathurst Quebec City service? It was mentioned in that decision that the service to northern New Brunswick was by way of Charlo/Bathurst.

Mr. Pickersgill: That is right.

Mr. Corbin: What exactly is involved here?

Mr. Pickersgill: I think this is so technical a point that I would not be infringing the proprieties if I said that it means that the service operated by Eastern Provincial Airways Limited between Charlottetown and Montreal can be either through Charlo or Bathurst.

Mr. Corbin: Or Bathurst.

Mr. Pickersgill: Yes.

Mr. Corbin: From both points?

Mr. Pickersgill: Yes, or both; either or both.

Mr. Corbin: As they so wish.

Mr. Pickersgill: Yes. However the airline decides what kind of schedules it is going to have.

Mr. Corbin: But they have the authority to give this or that service.

Mr. Pickersgill: That is what that oblique stroke means. I was also a little puzzled about it the first time I saw it.

The Chairman: Mr. Givens, did you have a supplementary on air?

Mr. Givens: Not on air, Mr. Chairman, on the subject of the elimination of level crossings.

The Chairman: I think Mr. Jerome has a supplementary question on this subject. I will come back to you.

Mr. Jerome: This may be a question of a very general character, Mr. Chairman, but I think it is clearly supplementary to Mr. Serré's question in respect to air services in northern Ontario. However, it ties in with rail service as well, and I think the two of them are linked together because the consideration of a subsidy of any sort for a regional carrier now operating in northern Ontario might be linked to the declining passenger rail service. I know very recently—and I am sure Mr. Pickersgill is aware of this—a licence was granted to a regional air carrier, Georgian Bay Airways Limited, to operate from Sudbury—

Mr. Pickersgill: We do not regard that as a regional carrier. That is what is called a third level carrier.

Mr. Jerome: I see.

Mr. Pickersgill: And they are restricted as to the size of aircraft they can use.

Mr. Jerome: They were recently licensed by the Air Transport Committee to operate directly between Sudbury and Ottawa. I think that decision was long overdue, and it highlights the declining passenger service that is taking place on the railroads. While air service is very convenient in that respect, as Mr. Pickersgill is probably very well aware the weather conditions in northern Ontario are such that it sometimes becomes an unreliable service and during the winter months it stresses all the more the vital need and the often useful service that the railroads provide. Notwithstanding that fact, at the present time it is impossible to get overnight accommodation from Sudbury on either of the railroads to Toronto or Montreal. I know that that is attributed to the declining use by passengers, but I wonder if we have not arrived—and I ask you to comment on this, sir, if you would—at the stage where your Commission should be considering as a matter of policy that we simply can no longer afford this competition that exists for passenger service over similar rail lines, this competition for the declining passenger dollar by both railroads?

Mr. Pickersgill: This is, of course, one of the questions that would obviously have to be considered in relation to any application that either railway might make, as they are entitled to do under the law, for a subsidy. I am quite sure that if railway asked for a subsidy to maintain its passenger service, the Commission would feel obliged to look at all the alternative modes of transport before they decided that for some particular passenger service the taxpayers of Canada generally should pay a subsidy to a particular line. We would have to look—the law says that we must—at every other alternative way of giving it from A to B, and that subsidy should only be paid if there is not adequate service in some other way. Among other things, we would certainly look at the question of whether or not, over substantially the same route, there should be two trains operated at the same time by two railways.

Mr. Jerome: May I go further and ask you, sir, whether you agree with me that the Commission should be encouraging rail lines not to compete with one another for the limited passenger volume?

Mr. Pickersgill: We do carry on a lot of discussions with them. A nice question of course is to what extent you ought to interfere with the management of businesses—you know, the great white father here in Ottawa telling people how to run their business. But the moment they come and ask for a subsidy then I think we are entitled to say, "Well before we put the taxpayers' money into your operation, as you are asking us to do, we have to look very hard at whether this is a very high priority use of the taxpayers' money".

Mr. Jerome: You will appreciate, sir, the reason I am asking you for your feelings at this time is that I understand later in the session we will be talking to the people who are responsible for the management of the two companies, and I am sure when I ask them the questions they are going to say, as you have said, that perhaps it is the other man that you should be asking.

Mr. Pickersgill: My own feeling is that the moment there is any question raised by either railway about a subsidy for any passenger service, we have a duty. Maybe I have always been regarded as a penny pincher and interested in the taxpayer's dollar, but I think it is our duty to see that we do not provide tax money for services that are not really necessary.

• 1115

The Chairman: Do you have further questions, Mr. Jerome?

Mr. Jerome: I have no further questions. Thank you, Mr. Chairman.

The Chairman: Mr. Skoberg?

Mr. Skoberg: I wonder if Mr. Pickersgill is stating a policy of the Canadian Transport Commission at this particular time when he refers to the competition between railroads. I think the point was made the other day that too many of these decisions are already made before they get to a commission—that too many communities make representations before a commission when the decision is cut and dried. If the decision is going to be cut and dried at the high level there is no use putting communities and individuals to the expense of making representation before these boards and commissions. I would ask Mr. Pickersgill whether or not he considers that this time limit under the Act that we have here will have to be extended in so far as subsidies are concerned if we are going to retain a unified Canada in so far as transportation is concerned.

Mr. Pickersgill: No, I do not think there is any relationship—I am speaking really rather more as a nominal author of the bill than as the President of the Transport Commission. The purpose of these transitional subsidies was to enable the railways to get enough experience, as the subsidies declined, to make applications for specific subsidies for any services that were imposed upon them as a public duty. Therefore, I think paying these global transitional subsidies and extending them any longer than is envisaged in here would be a retrograde step because you do not know what you are paying for.

I am sure Mr. Skoberg is aware that these subsidies are not very popular with competing modes of transport, like the truckers. That is why the law also provides that if a passenger train is continued by order of the Canadian Transport Commission when it can be shown clearly to be losing money, that the railway is then entitled to apply for 80 per cent of the loss. That is why, if a branch line is required to be continued when the railway has shown conclusively that they are losing money on it, these losses become an obligation of the Treasury. In other words, the whole object really of this transitional subsidy was to allow enough time for the railways to segregate those losing operations from their other operations on which we expect them to earn a living and then look at each individual losing operation on its merits—whether it was really needed in the community, and if it was really needed in the community then the taxpayers and not the railway should have to pay for it, if it is a loss and one which cannot be avoided. If it is not really needed, it should be gotten rid of.

Mr. Skoberg: Mr. Chairman, the point I wish to make, and I hope Mr. Pickersgill will accept it, is that that philosophy is fine in a high density population area in the central part of Canada. But we have two other ends of this country, we have the West and we have the East, and the social consequences of abolishing and abandoning branch lines and passenger service of every description have to be taken into consideration.

Mr. Pickersgill: Well, that is what the law says—precisely.

Mr. Skoberg: I believe you made the point quite well a little while ago when you said that you were recognized as a penny-pinching individual. I would suggest that we have to look a little further at this penny-pinching and realize the consequences this will have on these communities. I would sincerely ask that there be no decision or policy stated by yourself or the Transport Commission to the effect that everything is being based on that dollar. It appears that too many communities are being affected now by exactly that philosophy.

Mr. Pickersgill: With one single exception since this law came into effect, there has not been an abandonment of one mile of railway line, and with one single exception there has not been a decision to abandon a single passenger train. The Commission might perhaps be faulted for taking as long as we have and having done none of the things that the law provided for. I do not think that it can be argued that we are rushing into this thing.

• 1120

Mr. Skoberg: Mr. Pickersgill is well aware, Mr. Chairman, that there are abandonments by the dozens just waiting for attention and the research going into the abandonments of branch lines, passenger lines and everything else is tremendous, which he also is well aware of. It will be coming in one lump. But I do not want to see a policy set down by yourself or by this Commission which deter-

mines how these abandonments wlil take place.

Mr. Pickersgill: The policy was set by Parliament with the National Transportation Act. I can assure you that the policy will be followed and that all the parties will be heard, and that if any of the parties are dissatisfied with the decisions either because they think they are illegal or because they think they are contrary to public policy, they have a right of appeal, as set out in the Act.

Mr. Skoberg: Little Joe Blow out in the country though is not quite familiar with the right of appeal and he is the guy that I am concerned about.

Mr. Pickersgill: Our experience is that there are provincial governments and other organizations that are very very familiar indeed with the law.

The Chairman: Mr. Givens?

Mr. Givens: There are two questions that I would like to ask. You may not have the answers to them right now, Mr. Pickersgill, but I was wondering whether you could get me the information. We were talking about the elimination of railway crossings. There is one railway crossing with about six or seven lines of track on Strachan Avenue in Toronto between King Street and Lake Shore Boulevard. This crossing has been there for at least 50 years. They have synchronized railway crossings there, but they always synchronize this crossing with the emission of large crowds from the Canadian National Exhibition Grounds. As 30,000 cars were leaving the Grey Cup Game on Saturday they decided to shunt a train. Is there a proposed elimination or phasing out of that crossing—I am not trying to be sarcastic or facetious—this century? This crossing has been a matter of great and awesome consequences in Toronto, and it certainly has not added to the attractiveness of the CNE.

Also, we have had periodic scandalous outbreaks in Toronto over the past few years of children being entrapped on open railway lines, particularly at a bridge crossing near the area known as Rosedale in Toronto—and there have been fatalities there. Most of the time that I was mayor, prior thereto and since, letters have been sent to the Department here, to the CNR and the CPR pleading with them to do something to eliminate this kind of entrapment. There is something fascinating about rail lines that attract kids to them and they get themselves into jackpots. I would like to know whether the railways or the Department have considered a program of either eliminating or fencing in these open railway lines in and around Toronto which have led to these fatalities. If you would be good enough, sir, to provide me with answers to these questions I would be very grateful.

Mr. Pickersgill: I would like to make a comment and then let Mr. Jones carry on.

I know that the applications for grade separations are usually made by municipalities or departments of highways. Under the law, which Parliament could change but has not, all the grade crossing fund can contribute is half a million dollars to each single project. Of course there would be no objection to the City of Toronto paying all the rest. If it has gone on for 50 years, the sole responsibility is certainly not Parliament's. I am just being facetious, Mr. Givens, and I know you will not mind that. Seriously, it may well be that this is the kind of crossing that I was referring to earlier when I said there was maybe quite an argument for raising the $500,000 ceiling. Beyond that, Mr. Jones will deal with specific cases.

Mr. Givens: Five hundred thousand dollars would not pay for the raising of those tracks, and they certainly were not put there by the City of Toronto, sir. That is a major hazard. There are grade separations all the way down the line, but not there. Now may be it is part of the southerly extension of Highway 400—I do not know; I have been trying to find this out for years. This has been a matter of great annoyance to the people of the City of Toronto.

Mr. Jones: If you are agreeable, sir, I will get the details of that. I do not have them at hand at the moment. It was Strachan Avenue?

Mr. Givens: Strachan Avenue between King Street West and Lake Shore Boulevard.

Mr. Jones: All right.

Mr. Givens: There are two sets of tracks: one with a bridge overpass where the military cemetery is, and one on the level. I could never understand why there were two there, but there are and there have been for years.

Mr. Jones: I will find out what the situation is and provide the information.

Now on the other question, relating to children getting caught on railway bridges, this is an extremely difficult problem and it worries us a great deal. There was an accident sometime during the summer in Toronto. Of course there are accidents all over Canada and we wish we could prevent all of them. But, more specifically, dealing with Toronto, that particular bridge has been the subject of an investigation by the Railway Transport Committee, an investigation by the coroner of Ontario, and there is now a committee under the auspices of Metropolitan Toronto working on the problem and representatives of the Railway Transport Committee have been attending those meetings. I hope they will come up with some specific solution to that particular problem.

High-speed railway lines in built-up areas is another of the questions that we are reviewing in the course of the study that Mr. Pickersgill referred to earlier this morning. Signals, fencing and other means of preventing trespass—unfortunately that is what it usually amounts to—are occupying our attention, and we hope to be able to arrive at some solutions.

I hope that answers your question.

Mr. Givens: It will answer it when you come up with the solution; because these fatalities now happen on a pretty regular basis. There is a terrible outcry every time a child is killed and unquestionably it is a justifiable outcry.

It seems to be a needless waste of life when, from an engineering standpoint—and I am not an engineer—there must be some way of putting up gates or fences. We have been seeking the answer to this for a long, long time, but apparently there have been no answers. The people are very concerned about this.

It does not add to the image either of the department or of the railways when they simply appear to throw up their hands and say: "There is nothing we can do. We are still studying it." This goes on *ad infinitum*.

Mr. Jones: I can only add, sir, that in the case of the bridge you speak of—if we are discussing the same one—on the Don River Valley, I assume that at municipal expense a footbridge was erected across the valley, not too far distant from that bridge, with this in view.

For some reason, children still seem to want to use the railway bridge; this notwithstanding the fact that the railways erected chain link fencing.

The information we have is that the chain link fencing is cut by people—whatever their reasons may be—who seem to want to continue to use this route. This is one of the difficulties we face.

I will go back to what I said previously. We are doing our best to come up with a solution for this kind of problem, which is not, of course, confined to the City of Toronto. We find this in other built-up areas as well.

• 1130

Mr. Pringle: Mr. Chairman, I wish to comment on the questions relating to general aviation. In so doing, I would like to say, having been involved in this matter for a good many years, that we have received a great deal of help from the Department of Transport. All in all, they have done an excellent job, through various regulations, in assisting pilots, flying clubs and charter operations to function.

But it seems to me, from discussing it with the various organizations, that perhaps the time has come when we should consider a review of the existing policies relating to the problems arising out of accelerated expansion of air transportation, and especially so at the air transport level.

Air lines have been expanding very rapidly as a result of public acceptance of this type of transportation, but we have only one air space. The air is there, and that is the air we have to use; and there is a lot of it.

We are talking about high-density zones around big cities, and are getting into the area of small planes confusing the approach patterns, as are the air transports. They are talking about near-misses, which, of course, is rather a broad subject.

Is any thought being given by your department to simplifying, or reforming, the procedures in applications for third level charters, for example, or is anything being done about getting the charter operators in the various areas together to discuss the problems relating to their own operations?

It seems that when a third level or charter operator wishes to apply for a licence he is immediately confronted with a hearing and with objections from various other people in the area. Those who object say they do so because they feel that if they do not object it will jeopardize their future licences, and so on.

In British Columbia, from where I come, we depend a great deal on aviation, and certainly not on the large transports. We have remote areas which require small operators and there is a great deal of private flying; we have many flying farmers, and so on. Then we have reducing air navigational facilities, which I presume is not a correct question to put to this group at the present time...

Mr. Pickersgill: That is for the Department of Transport.

Mr. Pringle: But it is there, and it is something we would have to consider.

In a general way, is your department giving consideration to establishing a promotional department—if I may use the term loosely—to assist in the development of general aviation in view of the problems they are faced with at the present time?

• 1135

Mr. Pickersgill: If I could go back into history a little, and to the establishment of the Air Transport Board at the end of World War II, one of the functions of that Board—and, of course, we have inherited all of those functions—was the promotion of civil aviation. That has never been lost sight of.

At the same time, it involves people. After all, a licence is a licence to use a bit of the air, which is public property. If you give it to one person and then to another, neither may be able to make a living, whereas if you give it to one, he might.

This is a consideration, in the use of any form of quasi-monopoly, that a public body has to take account of. I am sure you understand that, Mr. Pringle, and probably a lot better than do I.

At the present time we are making a very thorough study of all the procedures relative to small carriers and charter operators to see if we cannot greatly simplify the procedures and avoid, as far as possible, expensive hearings; whether we can have conferences between the carriers where it is merely a matter of concern between one carrier and another; and, where all the community is interested, on having the service and not who gives it. Once the community is concerned about who gives the service I think you have to let them have a say.

When all is said and done our real job is to consider the public interest. The interest of the carrier is secondary to that. I am sure you will agree with that. But where it is just a choice of having three operators or two in an area perhaps many of the problems could be ironed out by conferences, without these small operators having to hire lawyers and go to a great deal of expense. We are trying to work out some more simplified procedures in this field.

We also have to examine very closely how restrictive one ought to be about the entry. You may have been familiar with one or two decisions the Minister of Transport has recently made on appeal. In one he was asked to review a certain area and that review is now under way.

I am rather hopeful that we may be able to find some means—if I can say this without offence to any of the officials, or any of the hard-working and conscientious people—of perhaps cutting away a little of the red tape that grows up over the years. I think this has to be done by every agency every so often.

You get procedures, and once in a while you have to take a look at them to see if they are still fulfilling the function for which they were originally intended. We are trying to work in that direction, especially in relation to the small carriers.

Mr. Pringle: Mr. Pickersgill, your answer will be very, very encouraging to those in general aviation. I am sure they will welcome those words.

My comments are not based on criticism of what has happened in the past, but we would have to agree that inevitably regulations build up and other regulations build on them, and sometimes they reach a point where they are almost insurmountable.

I hope my next question is being asked of the proper people, but what approach is being made to high density zones, as related, say, to Montreal and Toronto?

Mr. Pickersgill: We are very concerned about that, but there is a fundamental difference between the Canadian Transport Commission's jurisdiction relative to rail safety and air safety. We are the body responsible for rail safety; Parliament decided that the Department of Transport would be the body responsible for air safety.

That is, therefore, not an area on which it would be proper for me to comment. It would have been, when I was Minister of Transport, but in my new role it would not be proper for me to express any view.

Mr. Pringle: Mr. Chairman, I would be wrong, then, to ask a question related to the development of smaller airports?

Mr. Pickersgill: That, again, is a matter for the Minister of Transport, except that we are trying to examine this whole problem in our research division to see if we can come up with some bright new ideas. But the implementation of those ideas and the administration of them, would be entirely a matter for the Department of Transport.

Mr. Pringle: May I suggest, then, research being under your jurisdiction, that you might consider reviewing the existing regulations as they relate to small airports? Some of them, at this date and in view of the type of aircraft available today as compared to some years ago, may be rather stringent.

Mr. Pickersgill: You are thinking, perhaps, of certain two-engine aircraft that do not require strips quite as long as the regulations provide for?

Mr. Pringle: I am referring to night-lighting and the requirements for beacons, and so on.

• 1140

Mr. Pickersgill: I will be glad to pass this suggestion on to the people in the Department of Transport.

Mr. Pringle: Thank you very much.

Mr. Nesbitt: I have quite a few questions arising out of those of Mr. Pringle. The first one is on the matter of air safety.

Although I gather that this is a matter strictly for the Department of Transport, I would take it from the Chairman of the Commission that there are dealings between it and the Commission.

Mr. Pickersgill: Oh, yes.

Mr. Nesbitt: And if any suggestions are presented, they might be relayed. One question I had in mind is the question of fuelling of aircraft with passengers on board. The Chairman probably is not in a position to comment on that, as to whether that is a safety regulation or whether it is not, but it was a matter that was brought to my attention the other day where passengers were on a flight in Ottawa here, and after they got aboard it was found that apparently someone forgot to fuel the aircraft, and the fuel going around sounded like a Shelley Berman record, apparently—I am sorry to put it that way.

However, Mr. Pickersgill did mention that there was certain research going on. Has any research been given in Canada—I know there has been in the United States—to this question of passengers carrying explosives on board aircraft, either on their person or in baggage, and secondly, this new "in" thing as you might say now of hijacking aircraft and going to Cuba unexpectedly. There is a certain amount of levity I know in these three things, and it is very amusing. There was certainly one attempt, in Canada, to take people to Cuba rather than where they were going.

Mr. Pickersgill: This was Moncton, was it not?

Mr. Nesbitt: I was wondering whether any research has been done on devices for detecting explosives, or firearms and the like?

Mr. Pickersgill: I believe that while this would primarily be work done by the Department of Transport, and probably they would avail themselves of the various scientific agencies as well, probably the Defence Research Board. I say probably, I do not know. Perhaps National Defence would be interested in this, and the National Research Council. I have no doubt whatever that there is a good deal of work going on.

This is hardly the kind of research that would normally come within the scope of our Commission. It is really much more a matter for the Department of Transport because it is not related to long-term policy and that sort of thing. The question of safety is an immediate question, and a very important question too.

It does seem to me sometimes that just ordinary old-fashioned frisking might suffice.

• 1145

Mr. Nesbitt: On another subject, and it is a different matter altogether, but it has to do with air. In view of the fact that even the major air carriers are having some difficulty in financing the purchasing of these very expensive large aircraft, not to mention regional carriers and third level carriers, is consideration being given by the Transport Commission—in a matter of long-term policy research—to the question of the legality of the financing of these operations by banks, trust companies, and the like, of leasing equipment which is owned by the financial institutions to airlines, at either of the three levels?

Mr. Pickersgill: There has been a lot of consideration given to that, not merely by us,

and not even primarily by us, but by the Department of Finance, by the Treasury Board, by the Department of Transport. And I also understand that the IDB has been somewhat actively engaged in financing some of these operations.

And we are very concerned about it, particularly in relation to any of these regional carriers which might be applying for a subsidy, because we want to be sure, if they are likely to apply for a subsidy, that they get the capital as cheaply as possible, so that we are not paying a subsidy on an unnecessarily high rate of return to the person who sold the aircraft, or leased the aircraft. It is a very big problem.

Mr. Nesbitt: Do you know of any company—I do not want you to name the company or anything like that—but are there instances so far in this country where aircraft have been leased to any of the carriers, either from a bank or a trust company?

Mr. Pickersgill: I do not know offhand. The airlines in Canada have leased aircraft from outside the country. Canadian Pacific has, and I should think it is no secret. After they had that regrettable accident in Tokyo, they were really terribly short and they did lease an aircraft, a DC-8 I believe, for a while. I believe that Air Canada on one or two occasions has leased aircraft. I understand the regional carriers more than once have done this.

Mr. Nesbitt: Those are basically from other transportation companies?

Mr. Pickersgill: Yes, I think so. I am not aware that anyone has gone into the business of buying aircraft or acquiring aircraft for the purpose of leasing them to the airline. I am not sure some of the airlines would not be delighted, and are hoping someone would do it. But I suspect it would be just about as financially hazardous for a company doing that kind of thing, as it would be for the airlines themselves. Perhaps there will be some consideration given in the future to some co-operative arrangements in these fields between the airlines.

Mr. Nesbitt: But there is a lot of attention being paid to this.

Mr. Pickersgill: Oh, yes, I can assure you.

Mr. Nesbitt: By other branches of government.

Mr. Pringle: A supplementary, Mr. Chairman.

The Chairman: Mr. Pringle.

Mr. Pringle: There is some leasing going on as I know, but not necessarily at the transport level, or the air carrier level. Are licences or is permission required from your Commission in order for them to do this?

Mr. Pickersgill: I understand so, yes.

Mr. Nesbitt: Of course, it would depend on whether the Bank Act or something else permits financial institutions to acquire personal property for leasing purposes.

Mr. Pickersgill: I am not an expert on the Bank Act, but I think you are, Mr. Nesbitt.

Mr. Nesbitt: No, no, that is not one of my fields. One other question, and I think this one perhaps would be more properly addressed to the gentleman who is acting as adviser on accounting procedures here. The matter has already been alluded to by a number of the members of the Committee this morning. It is the question of the elimination of passenger service or other forms of rail service. I do not refer particularly to Newfoundland in this case.

• 1150

On occasion I have attended one or two hearings before the old Board of Transport Commissioners when branch lines were being discontinued, and evidence was presented on those occasions as I recall to show on behalf of the railway concerned, that they were losing money. And some of the accounting methods—I commented on this in the House on some occasions—were unusual to say the least. But I will leave that for the moment.

The question I specifically want to inquire about is this. Since the Transportation Commission, as Mr. Pickersgill has indicated, is looking into the background and research and long-term policies of these things, when an application is made by a railway to reduce or eliminate passenger service, is consideration given or is an investigation conducted to see if this passenger service has not been deliberately, or appeared to be deliberately, impeded by the railway itself.

I mean by that the railway wishing to eliminate or reduce passenger service, as the case may be, so that it can invest its money in more profitable operations. It may very well make the time of travel between points

longer, reduce the opportunity of purchasing food on the train, introduce long stops and waits, and that kind of thing. This has been alluded to in the press on a number of occasions. Does the Transport Commission look into this to see if the railway has been deliberately undermining its own service so it can get rid of it, and this sort of thing?

Mr. Pickersgill: Well, I think maybe the only two people who might express any opinion on that are Mr. Jones and myself. I know you will not take any offence, Mr. Nesbitt—you and I have had many exchanges before—if I say this is a rather loaded question. Perhaps I should answer it.

I think the first part of my answer would have to be that I cannot imagine any businessman degrading and destroying a service on which he was making money.

Mr. Nesbitt: He might make money on the operation, but he might be able to make more money if the equipment was being used for other purposes.

Mr. Pickersgill: Well, I do not know that railway passenger equipment is very saleable anymore. Mostly they seem to want it for museums here and there, whenever something goes out of operation.

Quite frankly, I have no detailed knowledge of whether or not a railway sets out deliberately to get a bad reputation in order to encourage people not to patronize it, in order to get rid of the service. But I suspect that the railway companies are not really any more insensitive, and probably are much more sensitive, to public opinion than most other businesses in this country, and that they do not really feel that it helps them very much to get a bad name. This would be my own feeling.

Mr. Nesbitt: Well, when there are only two you can travel on, it does not matter much, does it?

Mr. Pickersgill: No, but the plain fact is that between here and Montreal—I know, because a rather close relative of mine happens to live in Montreal and wants to come home quite often for the weekend. She makes a most careful scrutiny not merely of the timetables, but of the relative costs, and all the other advantages of travelling by either railway or travelling by bus. It seems to me that there is a pretty considerable measure of choice in that particular area, and I would be surprised if, in fact, the railways set out deliberately to do those things, but I do not know.

Mr. Nesbitt: Well, the reason I asked the question—there are several reasons. I have had it suggested to me on a number of occasions over the last couple of years, and by people who had some reason to have some knowledge of this, that this is the case.

• 1155

I do not always refer to newspaper columnists, Mr. Pickersgill, in this regard, but here is one from the *Toronto Telegram* of Wednesday, November 27 last. Mr. Ron Haggart has a column entitled "Arranging rotten service". It refers to the Canadian Pacific Railway and it is a very interesting column. One cannot always disregard the fourth estate, because they do a lot of digging into these things too, and I perhaps might refer it to the Transport Commission for reference to have a look at this article.

I will not waste time by quoting it into the record at the present time, but it is certainly very interesting as to what was done by the Canadian Pacific Railway to the Toronto-New York passenger service. But in any event there is perhaps some suspicion in some cases that both of the major railways are anxious to get rid of passenger service in certain instances. When applications are made to the Commission—perhaps Mr. Jones would be better to answer this—would an eye be kept on this aspect of things in the future when the accounting procedures indicating that the railway is losing so much money are presented to the Commission?

Mr. Jones: Well, Mr. Nesbitt, the application of a railway company to discontinue a passenger train, as you know, eventually comes to a hearing, with all that that entails. The moment the Commission receives an application or even a notice of intention to make application one of the very first things that is done is an inspection. This inspection is carried out by the inspectors on the staff of the Commission. These inspectors ride the train in question, talk to the passengers, find out what they think, and this is all part of the material that we consider.

• 1200

Mr. Nesbitt: But this practice varies.

Mr. Jones: This is our invariable practice.

Mr. Pickersgill: I can supplement what Mr. Jones said. I travelled on one of the trains. Perhaps I should not admit this but I did travel on the train between Toronto and Ottawa not very long ago, and it seemed to me there was some little question that possibly not enough attention was being paid to the comfort of the passengers and Mr. Jones arranged to have his inspectors travel on the train and look into it. I think this is done for every complaint you get, or even any observation when it is not a complaint. Mine was not a complaint; I was just a little concerned about the appearance of one or two things.

The Chairman: Have you a supplementary, Mr. Serré?

Mr. Serré: Yes, Mr. Chairman. It is a supplementary related to Mr. Nesbitt's line of questioning. I believe it might also be considered a point of order.

At the beginning of our Committee meeting last Thursday members of the Opposition spent over an hour requesting the presence in Committee of the Vice-President of the Transport Commission and the Chairman of the Railway Transport Committee in order to answer questions regarding accounting procedures with relation to the $400,000 deficit —which was, I believe, one of the reasons that the railway line in Newfoundland was abandoned. This point was by-passed by Mr. Nesbitt in his question a while ago. The same members who were obstructing last Thursday are here this morning and they have not asked this question of the officials of the Transport Commission or the Railway Commission. The main reason for putting their motion last Thursday was that the officials were not here. I feel that if they were very concerned about the abandonment of this railway service they would have put this question this morning. They have not done so. My feeling is that they were not so concerned after all about this problem and I feel that the members should take this into account in assessing the validity of their motion.

An hon. Member: We could be here for the next three days.

Mr. Nesbitt: Mr. Chairman, since we are starting the acrimony all over again, I would say that there was some question of some members of the Committee being taken by surprise for one reason or another. I suggest that there was no motivation in this—it was a misunderstanding. This morning the officials are here. However, if one is going to ask questions on details of accounting procedure it does take a little homework. I intended in my next question to ask some questions, not with respect to Newfoundland railways but with respect to some other types of accounting procedures that I am interested in. You will recall that last Thursday, by arrangement, this Committee sat for four hours because we were trying to get some work done. I understand that in order to set proper attendance at committees the Co-ordinator of committees has arranged that Committees sit for a period of one and a half hours. Last Thursday was an exception. Several members of our group who are members of this Committee had to be at certain other meetings after eleven o'clock. However, this is a matter for the Co-ordinator of Committees.

I think perhaps Mr. Serré's observations are not entirely in order. The main reason is that we have been somewhat taken by surprise by having the officials here so promptly this morning—it was not expected.

Mr. Lessard (LaSalle): You must have known about it, Mr. Nesbitt.

Mr. Nesbitt: I knew about it this morning when I looked at the notice on my desk.

• 1205

Mr. Lessard (LaSalle): You were on the steering committee, were you not?

Mr. Nesbitt: Now, now, that time was to be arranged. We are not getting into that. It was a misunderstanding.

The Chairman: I think we have discussed this before. Mr. Skoberg, you have a supplementary question.

Mr. Skoberg: I am quite amazed that the member opposite would suggest that we were obstructing. I thought it constructive, not destructive or obstructive.

The point I wish to make is supplementary to Mr. Nesbitt's point. It is fine to have people riding these trains after the application for abandonment has been made, Mr. Pickersgill, but the downgrading has already been effective—and quite effective. I think you are well aware that it is too late after the application has been made.

Mr. Pickersgill: The point I was trying to make was that it was not confined at all. Mr. Jones will correct me if I am wrong, but I am sure that if anybody makes any suggestion about any specific train, offers any kind of

concrete evidence at all and writes a letter to Mr. Jones or to the Secretary of his Committee, that that matter will be inspected now whether or not there is an application for abandonment. I would suggest that if there are any members of the Committee who feel that way with respect to any particular service that they make a specific complaint.

Mr. Skoberg: Mr. Chairman, may I ask a very pointed question? In the event that both railway companies downgrade their service to the extent that it is impossible to get accommodation this then contributes to the over-all loss of that service; it gets down to the stage where the train is running half empty and you cannot get accommodation. This is fact, not fiction. I am sure many of the members of this Committee are well aware of this.

Mr. Pickersgill: I suggest that if that is a fact that it be brought to Mr. Jones' attention. I can assure you he will lose no time investigating it.

Mr. Skoberg: Thank you, Mr. Chairman.

The Chairman: Is it a supplementary, Mr. Givens?

Mr. Givens: Yes, Mr. Chairman.

Has any consideration been given to a Rapido-type train from Toronto to Ottawa so that the shorter distance can be covered in a shorter time than it is now, from 5 o'clock to 10 o'clock? Since the Rapido is coming off and that new Turbo job is going on between Toronto and Montreal, could the roadbed and the facilities be adjusted to handle that kind of service between Ottawa and Toronto?

Mr. Jones: Well...

Mr. Givens: Your hesitation answers the question.

Mr. Jones: No, I am afraid it does not, Mr. Givens, for this reason. Mr. Pickersgill spoke a moment ago about some of the prerogatives of railway management, and the decision to implement a passenger service is theirs. What the Canadian National has in mind for the Ottawa-Toronto run I could not tell you, but I can find out for you.

Mr. Givens: I wish you would.

Mr. Jones: The point is that our jurisdiction does not extend to any kind of direction to them as to what trains they will run.

Mr. Givens: Perhaps with a little encouragement from you they would do something. I remember last week there were four or five flights cancelled out in Toronto because of weather conditions. If there were a reliable scheduled run which did not take forever and a day to get there, I think it would be a very popular run. It would be a money-maker. Probably with a little encouragement from you they might look into it. The population around the Toronto area is growing. Within a radius of 50 miles of Toronto they could draw on about 4 or 5 million people. I would say it could be as popular a run as the one to Montreal.

Mr. Jones: I can tell you that the present day passenger train service between Toronto and Ottawa runs at the same speed as the Rapido between Toronto and Brockville. Then it travels over track to Ottawa which is not as capable of such high speeds as the double track main line to Brockville. This has obviously some effect on the speeds which the train can attain.

Mr. Givens: It has some effect on the system!

Mr. Jones: I think the schedule is five hours. I have made the trip myself many times.

Mr. Givens: And you get pretty shook up on the trip too.

Mr. Jones: I have to agree with you—once you leave Brockville. I will be glad to make enquiries, Mr. Givens.

• 1210

Mr. Nesbitt: I have one or two questions I would like to put regarding accounting procedures which I am quite interested in. First of all, is a review or a revision being made of accounting procedures used by railways when presenting briefs to the Transport Commission or making applications to abandon lines or abandon service of one variety or another? Railway accounting is generally recognized in accounting circles as being rather unique. For instance, normal depreciation methods are not used in write-offs of capital equipment. Also, items of costing are rather unique. I do not want to burden the Committee with a great many examples, but I will relate a couple.

I understand that inspectors are required to check the railway lines over which trains move. Let us say that an inspector has to check 10 miles of track, five of which are on a main line of a railway and five of which are on a branch line. His services charges are in

direct proportion to the length of the line to be examined. However, in actual fact, whereas the main line may have 50 trains going over it in a day, the branch line may have only one train. To my mind, the costing method being used is not proper. There are a good many other examples I could give.

Are the costing and depreciation methods, and other accounting procedures presently used by railway companies, being looked into by the Commission with a view to suggesting changes?

Mr. Pickersgill: I think Mr. Jones is the right person to answer that question.

Mr. Jones: Mr. Nesbitt, in answer to your question, last February the Railway Transport Committee undertook an enquiry into the entire question of railway costs.

Mr. Nesbitt: Methods of costing.

Mr. Jones: That is correct. This inevitably involved all of the matters that you have mentioned in the course of your question. That enquiry, as you will appreciate, involved the participation of very highly trained professional people from the railways and other parties who were interested.

When we began in February it rapidly became apparent that this was a matter of widespread, although admittedly technical, interest. It became clear to us that not only the Canadian National and Canadian Pacific railways were going to be involved but also the governments of all of the 10 provinces as well as other organizations—such as the three prairie wheat pools, to name only one. There were others, and I make no invidious comparisons here at all. I should add that from my own province of Manitoba the Branch Lines Retention Association was represented.

The work of the Committee in this area continued until September when we began hearings which continued throughout approximately seven weeks, ending about November 15.

• 1215

We have concluded the public part of our inquiry and are now in the process of working on the new cost regulations which, as you say, will deal with the methods to be applied in future cases of branch-line abandonment, passenger-train discontinuance and the other matters that the railway Act requires us to look at in terms of railway costs, such as whether a freight rate is a legal one, or meets its variable cost, and so on.

That is a rather lengthy answer to your question, for which I apologize. The short answer is that very definitely we have conducted a review; and I am glad to say that the end is now in sight. Just when our new regulation will come out I am afraid I cannot predict.

Mr. Nesbitt: What are the regulations about costing and depreciation methods? These are all varieties of costing, of course, but will they be made available generally?

Mr. Jones: Oh, yes; this will be a public document.

The Chairman: Mr. Benjamin?

Mr. Benjamin: I have just a couple of questions on the Railway Grade Crossing Fund, Mr. Chairman.

I am sure there is a simple explanation for it, but I notice in Vote 60 that $10 million are to be credited to the Railway Grade Crossing Fund. Just prior to that there is a statutory provision of $5 million for the Railway Grade Crossing Fund. Does this mean that $15 million are available for it?

Mr. Pickersgill: That is easy to explain. The regular statute provided for $5 million many years ago. That was regarded as inadequate and, instead of amending the statute, an annual vote was made in the Estimates. It is for exactly the same purpose.

I think when it was first started it was just to save parliamentary time and it was thought that perhaps in two or three years they would catch up and would not need it any longer.

Mr. Benjamin: So that the total amount available is $15 million?

Mr. Pickersgill: Yes; there are $15 million available; but you can be certain of only $5 million until the Estimates come down each year.

Mr. Benjamin: Any other point relates to railway crossings and their protection, so that these problems are not perpetuated. In the case of new construction of rail lines, branch lines, long spur tracks to mine sites, and so forth, does the Railway Committee examine and approve construction plans in terms of grades and future location of crossings, even though none are needed at the moment?

Mr. Jones: Yes, we do.

Mr. Benjamin: I was thinking, for instance, sir, of this new line that is being put in northwestern Alberta where very few people are living. Ten, 15 or 20 years from now there will be concentrations of population. Is that railway being constructed in such a manner that there will be no need for level crossings; that provision of under-passes, over-passes has been thought about and planned in advance?

Mr. Jones: Is that the Great Slave Lake Railway?

Mr. Benjamin: The Bill was passed in the House within the last few weeks. It comes out of northwest Edmonton, and is just now being developed. I am using it as an example. There are others, such as a 15-mile line to a potash mine. There is very little population there now, but in 15 years there will be a large population.

Mr. Jones: The Commission's jurisdiction, of course, extends only to railways that are under the authority of Parliament. I do not know whether the one you are speaking of is a provincial or a federal railway.

Mr. Pickersgill: My recollection is that the Alberta Resources Railway is chartered by the legislature of Alberta.

Mr. Benjamin: You mean, then, that on grade crossings on that kind of railway you would have no authority and could make no provision?

Mr. Pickersgill: If it is a provincial matter...

Mr. Benjamin: If it is either of the major railways...

Mr. Jones: If it is either of the major railways, with which we are concerned practically all the time, and a new spur line, for example, is being constructed, the existing situation is very carefully reviewed when the plans for construction of the railway are under consideration, because we know that the location and the type of protection of any grade crossing, or grade separation, that may result are matters about which we are going to have to make a decision.

I do not think we can predict what will happen 10 or 15 years from now and actually require that a grade separation be built where there is no highway. That is what I understood your question to involve.

Mr. Benjamin: Yes; that is true, to some extent; but I am really referring to long-range planning. Where there is new development, whether it be of mines, or railway lines, or of any kind of resource, or new construction, does not the Committee consult not only with the railways but with municipalities and provincial governments and corporations?

• 1220

Mr. Jones: Absolutely.

Mr. Benjamin: A municipality may say that it intends to build a road in a certain location and is planning to do so in five years. Would you not say, "At that point you will have to make the grade 30 feet high so that there can be an underpass"?

Mr. Jones: I am sorry; I thought you were referring to roads that might just possibly be there some time in the future.

The road authority is very definitely a part of the approval of any system of grade crossings because it is they who are responsible under the law for the building o fthe roads.

Those in the Commission who have responsibility in this area almost invariably work with the provincial road authority, or the city, or town or municipal authority—whoever is responsible for the road—and try to look ahead as far as is reasonably possible to see what the needs are going to be.

By the same token, we have to be careful to ensure that the type of protection meets the requirements in the foreseeable future and that something too big or too expensive is not authorized.

I cannot think of a specific example, but certainly where a new spur line is being built, as I mentioned a moment ago, an effort is made to see whether proposed roads can be so integrated as to reduce the number of crossings. That is one area of concern.

Another would be, where a highway is planned, to ensure that the trackage is so constructed that should a grade separation be necessary at some time in the future provision can be made for it.

Mr. Benjamin: In the case of new construction, where a crossing is going to go in at the same time, cannot protection signals be installed as part of the cost of the contruction of that line, and be done with it, rather than have later requests for protection at that crossing, no matter how little it might be used at the time?

Mr. Jones: Probably where new construction is proceeding a proposed level crossing would have to be treated on the same basis as any other level crossing. It would be fine if we could protect them all, but the law being what it is—and I think it is a sensible one—we can only work towards this objective.

There are many, many hundreds of crossings where the traffic is so light that one could not justify the expenditure of public money to provide automatic protection. On new construction the proposed crossings are looked at on that basis, just as would be a crossing over an existing railway line.

I should, however, add that at least when new construction is proposed we have a chance to look into the future to a greater degree than we have when the line is already built. We certainly try to go that far.

Mr. Benjamin: In the case of construction through a heavy density of population, where there are going to be a number of crossings, because the railway came after the settlement do they qualify for aid from the Grade Crossing Fund?

Mr. Jones: Where the railway is building in a...?

Mr. Benjamin: Say a new piece of construction involving crossings is going through a part of Ottawa. Would the railway not then be required, as a part of the cost of the construction, to install whatever protection was felt necessary, without recourse to the Grade Crossing Fund?

Mr. Jones: A case that might be used as an example—and I am sorry I do not have any details of it—is the relocation of the railway station in Ottawa.

Some new trackage was built, and on the basis of relocation of trackage, involving the elimination of crossings that were to some degree hazardous, contributions from the Railway Grade Crossing Fund were made to the railways to assist in some of this work. There may be other examples, too.

Mr. Benjamin: I was thinking of new construction, and of making sure that we do not perpetuate the problem whenever new rail lines are built.

Mr. Jones: This was new construction. It was in the time of the Board of Transport Commissioners. This construction was a good opportunity for the Board to carry out some elimination while the work was going on, because it was new trackage, to all intents and purposes.

The Chairman: Mr. Nowlan?

Mr. Nowlan: I have just a brief comment and one question.

My comment relates to Mr. Serré's point of order. To clarify any disappointment he may have about the sincerity of any members on this side, and to remove that doubt, I wish to ask—without name-calling or obstruction—if any official with Mr. Pickersgill today is prepared to go any further than was Mr. Pickersgill, and go behind the CTC judgment and give a detailed explanation of the half million dollars that was previously the subject of a good deal of discussion with the man who was properly charged with it, the Chairman—perhaps not his officials; notwithstanding, further, that a motion had been made that we thought had taken care of the problem; and notwithstanding Mr. McGrath's statement that he was not going to question it further because he still thought the motion was valid. Let us just pretend that those two statements and events did not occur.

Is there any official—Mr. Jones, the accountant, or the vice-president—who is going to go behind the CTC judgment and give some detailed breakdown of the half million dollar "inside expenses" that were the subject of some discussion here the other day? I do not imagine they will, but...

Mr. Pickersgill: I think that question could very well be addressed to Mr. Jones.

Mr. Nowlan: Or to Mr. Pickersgill.

Mr. Pickersgill: Oh, no; I answered the question the other day. Mr. Jones is here, and he is one of the authors of the decision.

Mr. Nowlan: Then perhaps I should direct my question to him.

• 1225

Mr. Jones, can you give us a breakdown of the half million dollars that were set out in the working papers as forming the basis of the CTC decision and that were called "inside expenses"?

Mr. Jones: I think, sir, I have to say that this is a decision of the Commission and that it was reached after a hearing by a body that carries out a judicial function. It is my understanding that the time-honoured principle has always been that judicial decisions

are open to appeal where appeals are provided for.

I need not go into the different sections of the Act that give this right of appeal, except to say that they are there and that otherwise the Act goes on to say that the decision of the Commission on any question of this kind is final. I take it you have asked a question about the Newfoundland passenger train.

Mr. Nowlan: This happened to be the case.

Mr. Jones: That, in my opinion, would be one of the kinds of decision I am speaking about. It is a judicial decision, and I do not think it would be proper for me to go beyond what the judgment itself said.

Mr. Nowlan: I can appreciate that answer, although I may not agree with it because basically it was the same answer, almost completely, as Mr. Pickersgill gave which is fine, but I will lead to the second question. This is only prompted by Mr. Serré's comment that you would not see any distinction between a question from any member of this Committee seeking information on some of the evidence that was the basis of the decision, separate and apart from an attack on the decision itself.

Mr. Jones: I wonder if I might go back to a comment you made just before you put your second question. I understood you to say that what I had just said was the same as what Mr. Pickersgill said.

Mr. Nowlan: Basically.

Mr. Jones: I would like to add that I think if that is what he said, then our answers are in accordance with law. That is the position that I am taking. Now if I understand you correctly, Mr. Nowlan, what you would now like to know is whether I would have any objection to making available evidence?

Mr. Nowlan: No, no. Can you, from your position—and this fits in partly with your other answer, I suppose, but then you, from your previous answer, do not see any distinction between a member of this Committee asking about information on evidence that was tendered before the hearing as distinct from an attack on the decision that came from the hearing.

Mr. Jones: I do not see that there is any difference in principle really because, as I said a moment ago, the decision is there for all to read. And that is the decision of the Railway Transport Committee. Whether you attack the conclusion...

Mr. Nowlan: This is the point. I agree basically with what you say about an attack by this group, this Committee or any member of the Committee on the decision itself, but I think there is a distinction between attacking the decision of the CTC and your appeal procedures from that, and asking information about evidence that might have come within our knowledge, rightly or wrongly, but asking information on evidence.

• 1230

I do not want to press this thing now, but if it is only because the thing just came up as a point of order, and just to clarify the record so that there can be no confusion about why questions were not pursued along this line *ad infinitum, ad nauseam,* this is why I am asking you the questions, that I am not attacking the decision of the CTC. I may not agree with it, there may be appeal procedures for it, anything Mr. Pickersgill undoubtedly says on that line is correct. Where I disagree with both Mr. Pickersgill and I think with yourself is that there is a distinction between attacking the decision of the CTC and asking information on a piece of evidence that was before the CTC not saying if they interpret it correctly or incorrectly, but that there was a piece of evidence, and the piece of evidence was half a million dollars named as inside expenses, and the question that came up the other day and comes up now by me directly to you is, what is the breakdown of the half million dollars? How did the CNR calculate it? Because that type of information to me is going to be most relevant when these new accounting procedures come into effect that Mr. Nesbitt talked about to see if, under the new accounting procedures the Newfoundland train and that inside expenses would amount to a half million dollars. That is why to me it is most relevant.

Mr. Jones: Well, if I may make this comment, Mr. Nowlan, what you are saying has a very familiar ring to me because I had occasion to preside over the hearings in this cost inquiry, and one of the main issues before us that we now have before us for consideration and decision is the question of railway calculations of costs and how far these should be made available. Here again I think it would be improper for me, even if I felt I could, which I do not, but even if I felt I was in a position to get into this question, I

think it would be improper for me to deal with it now, when it is a matter which is under judicial consideration with a view to a judgment to be forthcoming.

Mr. Nowlan: My last question on this line, I think, is, then, Mr. Chairman to Mr. Jones, is it possible—and I guess everything is possible—but is it not a conceivable situation that with the revised costing procedures the old costing procedures that developed the million dollar deficit, and particularly the half million dollar inside expense deficit, could be quite different?

Mr. Jones: I am afraid there too, sir, you are asking me almost to predict what our judgment might be and I respectfully must refrain.

Mr. Nowlan: This is why I say, Mr. Chairman, there is a distinction between attacking the decision of the CTC and relevant questions on information that may have been before the CTC because we are going to be faced with this, or could be faced with it when the new revised costing procedures come out, but I do not want to press it any further because I have one question to Mr. Pickersgill, I believe, not on this.

The Chairman: Have you a supplementary, Mr. Benjamin?

Mr. Benjamin: Yes, I will try to be helpful to Mr. Pickersgill and to Mr. Nowlan. I agree fundamentally with what both you and Mr. Pickersgill have said and with what Mr. Nowlan has said, and I do not think either he or anyone else here is asking either of you or any other member of the Committee to express an opinion on the judgment and on the decision itself. This is not really the point. We are not asking you to do that. It would be improper for us to do so.

It seems to me that all he is asking for is some information about that figure of $400,000 or $500,000 inside costs. May I put it to you this way? Did the Committee, in arriving at the decision, and again I am not questioning the decision one way or another, did the Committee investigate these figures of inside costs of $400,000 to $500,000, whatever it was, and did they question the railway? What was the railway's answer as to an explanation of those figures?

Mr. Jones: Before any railway company can apply to discontinue a passenger train service it must demonstrate to the satisfaction of the Commission that there has been an actual loss. "Actual loss" is a term that is defined in Section 42, 314A(a) of the National Transportation Act. It can be read at leisure, but essentially what it means is the excess of the costs over the revenues related to the particular train or branch line, whichever it might be. The railway company, upon filing an application, is required to file a statement of its costs and revenues. As a result of that in the Newfoundland passenger train case—and the Commission issued an order which contained this finding—we determined that there had been an actual loss for the year 1966 of $918,000 in the operation of that passenger train. Taken into account was the item you mentioned. I think I can fairly go that far.

• 1235

Mr. Nowlan: Could I ask a supplementary, then, which will bring this perhaps to the future. If I understand Mr. Pickersgill correctly and yourself correctly today, and if you appear before this Committee next year after the new revised costing procedures are in operation—assume they are—and if we ask you a question relating the new costing procedures to that item, and asking you if it was a half a million dollars or more perhaps, or perhaps a lot less, you would say you could not answer it? And this is no attack or reflection on the CTC's decision made under the existing procedures at the time it was made, because this is what is going to come up, or could come up.

Mr. Jones: I think, Mr. Nowlan, that again I have to go back to this long proceeding that we have just finished...

Mr. Nowlan: Is this the Committee hearing or your CTC hearing? Today's hearing or the CTC?

Mr. Jones: No, no, the CTC hearing. These sections that I have just been referring to and others which go to the very root of this question that you have put were dealt with. We have heard arguments that are very much like what I think you are putting forward. We have heard arguments that are the direct contrary. I do not propose to go into them now for obvious reasons. Again I must say that we have a judgment under consideration, and I do not think it proper for me to predict in advance what our position might be as a result of that.

Mr. Nowlan: Well, let us just assume your judgment is concluded. I do not know how that will be concluded, but surely as mem-

bers of a committee that has as a subject for its consideration the National Transportation Act and costing procedures that Mr. Pickersgill knows well from the hearings of this Committee that were under constant discussion and debate and some criticism at the time, we would be entitled to ask somebody in the CTC if, under the new costing procedures, that item of $500,000 would still be valid.

Mr. Jones: When I said, Mr. Nowlan, that the question you were raising was one that had been before us in this proceeding, I did not mean specifically the question of inside cost, which I think is what you refer to in the Newfoundland case. It was the whole realm of disclosure which the Railway Act and the National Transportation Act deals with and in respect of which we have a duty imposed on us. We have to do the best we can to determine what that duty is. Until that question is answered I am afraid I cannot do any more than go back to what I have said before in answer to yours. I am trying to be as helpful to you as I can, but I am bound by the law and...

Mr. Nowlan: I can appreciate that.

Mr. Jones: ...by principles, I think I can only repeat that it would be improper for me to attempt to get into this area with you. I am sorry.

• 1240

Mr. Nowlan: I can appreciate, Mr. Jones, your problem because Mr. Pickersgill knows well that the disclosure question came up in the committee hearings when we talked about how this costing formula was going to work in the future. But it just so happens that we do have an item that we know about. We may have come across it by subterfuge, or deceit, by chance, but we have it and it is a precise item that was considered by CTC, and this is where I think the problem arises; that we know the item—we should not have known it; perhaps the CNR had no duty to disclose it—but we know about the item. Surely under new costing procedures we are entitled to ask if that item would be valid, and this is where I think it takes it out of the realm of the generality of disclosure and the interest of the railways in not having too much disclosure for their competitive position and all the other reasons. Because there is an item that we know about, and I appreciate that you perhaps cannot go further than you have gone today, this question could very well come up when these new costing procedures are finally developed.

Mr. Allmand: May I ask a supplementary?

The Chairman: A supplementary question by Mr. Allmand.

Mr. Allmand: Perhaps the legal officer will have to answer this question, but could the decision of the Canadian Transport Commission with respect to Newfoundland not now be appealed to the proper body, which is the Governor in Council, on the grounds that the internal accounting procedures of the CNR were misleading and did not actually give a true picture of profit and loss, and that the Canadian Transport Commission was in error in using this type of procedure? Could that be the basis of an appeal to the Governor in Council? In other words, that the decision which the Canadian Transport Commission made with respect to Section 314 as to whether there was a loss or not was incorrect in that they did not consider the proper accounting procedures.

Mr. Taschereau: I take it, Mr. Allmand, you are asking this question of me. This involves Section 53 of the Railway Act, which reads:

> The Governor in Council may at any time, in his discretion, either upon petition of any party, person or company interested, or of his own motion, and without any petition or application, vary or rescind any order, decision, rule or regulation of the Commission...

Mr. Allmand: It is very broad.

Mr. Taschereau: Yes, it is very broad. It is not limited as to grounds or as to time.

Mr. Nowlan: I have a supplementary to Mr. Allmand's question. Regardless of what is done now, would it not be a valid move when the new costing procedures are defined to apply to the Governor in Council on the basis that under the new costing procedures the $1 million—and especially the inside expense item of about a half a million dollars—is no longer valid. That would certainly be legitimate grounds for appeal.

Mr. Taschereau: I am certainly not going to say, Mr. Nowlan, whether it would be legitimate or not. I said there is no limitation as to grounds.

Mr. Nowlan: I will not pursue this line because time is getting on. Research and poli-

cy have been mentioned hand in hand here, and I have certainly learned more about the CTC since Mr. Pickersgill has attended these sittings than I previously appreciated.

My question is in two parts. In future would part of the CTC function in research and in helping to formulate policy be to avoid a problem such as the one that arose in the trucking industry when a 40-hour week was imposed unilaterally across the board and the trucking industry had to apply to get special exemption in the application of the 40-hour week? In other words, would the CTC, in giving advice to the Minister of Transport, say, "The trucking industry is not like a factory, and if you impose a 40-hour week you are going to have a lot more problems than you are going to be able to solve." Would the CTC give advice rather than having the interested parties, such as the trucking associations, make their appeals to the Minister, the Deputy Minister, and so on. Along with that, has the CTC, as far as research is concerned, given any direction or made any recommendation to the Minister on this overhaul base in Winnipeg with respect to the merits as between Winnipeg and Montreal?

• 1245

Mr. Pickersgill: I will answer the second question first, and very quickly. The answer is none whatever. As to the first question, Parliament saw fit—and I was a member of Parliament perhaps before you were—to pass the Canada Labour (Standards) Code, which was introduced by the Minister of Labour and which is administered by the Department of Labour, and this Act applied to all those activities in which people were employed which come under the jurisdiction of Parliament—which, as you know, is not the great bulk of employment in this country—and a large part of what you might call employment under federal jurisdiction is in the field of transport.

The extent to which the Canadian Transport Commission, the Department of Transport or the Minister of Transport would have any influence on that matter is precisely the extent to which they would be listened to, because the duty of enforcing that Act is imposed upon the Minister of Labour and it is carried out by his officials. While we would be very glad to tender advice to them about how this should be done—and I would not like you to even question me very far about whether we have or not because this would be slightly embarrassing to me—the responsibility is clearly and exclusively the responsibility of the Department of Labour.

Mr. Nowlan: I appreciate that, Mr. Pickersgill, and I think you have perhaps answered my second question by your interesting comment. As I understand it, then, unless requested by the responsible minister the CTC would not on its own initiative send a memorandum to the responsible minister saying. "This is a bill, and this bill affects federal employees, the trucking industry and extraprovincial. We have pointed out the positive effect and the adverse effect. You are the Minister, you make the decision." You would not do that on your own initiative?

Mr. Pickersgill: If I conveyed that impression I conveyed a false impression. There is no reason that the Canadian Transport Commission or its officials or members should not tender advice to the Minister of Transport, and he could use his own judgment about talking to his colleagues. I think that would be the proper way to do it.

Mr. Nowlan: Is it fair to ask if this was done in this case? Was it solely the stimulus and the initiative of the trucking industry in appealing directly to the Minister of Transport that amended the...

Mr. Pickersgill: I think that is the kind of thing that ought to be asked of ministers.

The Chairman: If there are no further questions, gentlemen, shall Votes 50, 55, 60 and 65 carry?

Votes 50, 55, 60 and 65 agreed to.

The Chairman: I think that is the end of the vote. Thank you very much.

Mr. Benjamin: Mr. Chairman, this is just a matter of the internal workings of the Committee. May I ask that the name of Mr. Skoberg be substituted for Mr. Schreyer on the steering committee of this Committee?

The Chairman: On the steering committee?

Mr. Benjamin: Yes, on the steering committee.

The Chairman: Yes. I will ask the Clerk to take care of that.

Mr. Benjamin: Temporarily.

The Chairman: Yes, temporarily. Mr. Normand will make a note of that. Some of the personnel on this Committee are not readily available on Thursday, so our next meeting will be on Friday, December 6, at 9.30 a.m., when the Chairman and officials of the National Harbours Board will be back.

APPENDIX "B"

DEPARTMENT OF TRANSPORT
GOVERNMENT OF CANADA
PRESS RELEASE

FOR IMMEDIATE RELEASE
NEW FERRY SERVICE ANNOUNCED
BY TRANSPORT MINISTER
PAUL HELLYER FOR
DIGBY-SAINT JOHN SERVICE

Hon. Paul T. Hellyer, Minister of Transport, announced today the decision to start upgrading ferry services between Digby, N.S. and Saint John, N.B.

The Government of Canada is proceeding without delay with the construction of new terminal facilities at both points, Mr. Hellyer said, while Canadian Pacific has agreed to a new modern ship suitable for this service as quickly as possible.

Arrangements have been made with the Governments of Nova Scotia and New Brunswick to provide access roads and parking facilities for the new and improved car and truck ferry service.

Mr. Hellyer added that agreement on the basis of operation of this service is still being negotiated but he stressed that under the terms of the agreement that has been made with Canadian Pacific these detailed negotiations will not delay action to get the service underway at the earliest date possible.

Designs for the terminal facilities have already been started and tenders will be called for construction within the next few months. Canadian Pacific has advised the Government that it has already commissioned naval architects to design the vessel and to award a contract for construction later this year.

Friday, May 31, 1968.

First Session—Twenty-eighth Parliament

1968

STANDING COMMITTEE

ON

TRANSPORT AND COMMUNICATIONS

PROCEEDINGS

No. 8

FRIDAY, DECEMBER 6, 1968

Revised Main Estimates 1968-1969, relating to National Harbours Board.

ROGER DUHAMEL, F.R.S.C.
QUEEN'S PRINTER AND CONTROLLER OF STATIONERY
OTTAWA, 1968

29493—1

STANDING COMMITTEE

ON

TRANSPORT AND COMMUNICATIONS

Chairman:

Vice-Chairman: Mr. P. M. Mahoney

and Messrs.

Allmand,	Lessard (*LaSalle*),	Pringle,
Carter,	McGrath,	[2] Rose,
Corbin,	Nesbitt,	Serré,
Givens,	Noël,	Skoberg,
Godin,	Nowlan,	Smith (*St. Jean*),
[1] Goode,	[4] Perrault,	Thomas (*Moncton*),
		[3] Woolliams—(20).

(Quorum)

Robert Normand,
Clerk of the Committee.

[1] Replaced Mr. Douglas, on December 3, 1968.
[2] Replaced Mr. Benjamin, on December 3, 1968.
[3] Replaced Mr. Howe, on December 5, 1968.
[4] Replaced Mr. Blouin, on December 5, 1968.

ORDERS OF REFERENCE

HOUSE OF COMMONS
TUESDAY, December 3, 1968.

Ordered,—That the names of Messrs. Goode and Rose be substituted for those of Messrs. Douglas and Benjamin on the Standing Committee on Transport and Communications.

ATTEST:

THURSDAY, December 5, 1968.

Ordered,—That the names of Messrs. Woolliams and Perrault be substituted for those of Messrs. Howe and Blouin on the Standing Committee on Transport and Communications.

ATTEST:

ALISTAIR FRASER,
The Clerk of the House of Commons.

29493—1½

MINUTES OF PROCEEDINGS

FRIDAY, December 6, 1968.
(8)

Pursuant to Notice, the Standing Committee on Transport and Communications met this day at 9.30 a.m.

Members present: Messrs. Allmand, Carter, Corbin, Godin, Goode, Lessard (*LaSalle*), Mahoney, McGrath, Nesbitt, Noël, Nowlan, Perrault, Pringle, Rose, Skoberg, Thomas (*Moncton*), Smith (*Saint-Jean*), Woolliams (18).

Also present: Mr. Tom Bell and The Hon. George Hees.

In attendance: From the National Harbours Board: Messrs. H. A. Mann, Chairman of the Board; L. R. Talbot, Vice-Chairman; L. R. Stratton, Chief Engineer; J. S. Dron, Chief Treasury Officer; J. E. Lloyd, Member of the Board and E. J. Alton, Member of the Board.

The Chairman, Mr. Blouin, having been substituted on the Committee, Mr. Pat Mahoney, Vice-Chairman, was in the Chair. Objection being raised, and a debate arising, the election of an Acting Chairman was requested. The Clerk presided over the election and having called for nominations, it was moved by Mr. Perrault, seconded by Mr. Lessard (*LaSalle*), that Mr. Pat Mahoney be elected Chairman of this Committee.

On motion of Mr. Woolliams, seconded by Mr. McGrath, it was moved that Mr. Nesbitt be elected Chairman of this Committee.

On motion of Mr. Perrault, seconded by Mr. Lessard (*LaSalle*),

Resolved,—That nominations be closed.

On a show of hands, the vote resulted in a tie.

Then, after further debate and on request, Mr. Perrault's motion was put to a recorded vote and the vote was as follows: *Yeas*: Messrs. Allmand, Corbin, Goode, Lessard (*LaSalle*), Mahoney, Noël, Perrault, Pringle, Smith (*Saint-Jean*)—(9); *Nays*: Messrs. Carter, Godin, McGrath, Nesbitt, Nowlan, Rose, Skoberg, Thomas (*Moncton*), Woolliams—(9).

After discussion, no decision having been reached on the main motion and nine members of the Committee having walked out, there being no quorum, the Members present dispersed at 10.15 a.m.

Robert Normand,
Clerk of the Committee.

EVIDENCE

(Recorded by Electronic Apparatus)

Friday, December 6, 1968

• 0938

The Vice-Chairman: I see a quorum. I think firstly I should say that your regular Chairman, Mr. Blouin, entered the hospital in Montreal today for an operation. I am sure you all share with me our hopes for an easy time and a quick and early recovery.

Mr. McGrath: Mr. Chairman, would you entertain a motion that the Committee extend some greetings on behalf of the Committee to our Chairman wishing him a speedy recovery?

The Vice-Chairman: I certainly will.

Mr. McGrath: I would move a motion in that regard.

Mr. Woolliams: Mr. Chairman, in view of that fact and perhaps should be in the hospital. As I understand it on order from the house he was removed from the Committee last evening and of course as a matter of ill health that puts it into a position there is not a Chairman of this Committee and therefore without a Chairman, if I might make the suggestion, the first thing would be to nominate according to the rules of the House and the Standing Committee a new Chairman. The fact now if he was still on the Committee and away ill, then you would have a Chairman and you of course would be properly in the Chair and the jurisdiction of the Committee would be properly formed. But in view of the fact he was removed by an order of the House, may I suggest then before we proceed to make this a proper Committee with a proper jurisdiction that we entertain a motion for a Chairman.

The Vice-Chairman: Fine.

An hon. Member: Mr. Chairman, I would be pleased to nominate...

An hon. Member: We have a Vice-Chairman.

Mr. Woolliams: That does not matter, you have to have a Chairman in every Committee.

Mr. Allmand: Mr. Chairman is it not correct that whenever the Chairman is absent, the Vice-Chairman takes his place?

• 0940

Mr. Woolliams: Yes, but Mr. Mahoney my good friend has missed the point. If he had not come off the Committee, he would still be Chairman. The fact he was taken off the Committee that ends his jurisdiction to act as a Chairman. He is no longer Chairman of this Committee.

Mr. Allmand: It is a Committee without a Chairman. But the Vice-Chairman is taking over as Chairman.

Mr. Woolliams: No.

Mr. McGrath: No, he can only take over in the Chairman's absence. The Chairman has been removed and we have no Chairman.

An hon. Member: He was taken out by a motion of the House last night.

Mr. Woolliams: What your point is, Mr. Mahoney, my good friend's point is that if the President of the United States dies, that the Vice-President could carry on without a new President. I am sure he does not entertain...

Mr. Perrault: I think we are wasting time on a technicality. I nominate Mr. Mahoney to be Chairman of this Committee.

Mr. Woolliams: I nominate Mr....

An hon. Member: I was going to nominate you if you had not been so fast.

Mr. Lessard (LaSalle): I second that.

An hon. Member: I nominate Wally Nesbitt.

The Vice-Chairman: It is moved by Mr. Perrault and seconded by Mr. Lessard (La Salle) that Mr. Mahoney be Chairman. Are there any other motions?

Mr. Woolliams: I would like to nominate Wally Nesbitt.

Mr. McGrath: I will second that motion.

The Vice-Chairman: It is moved by Mr. Woolliams and seconded by Mr. McGrath that Mr. Nesbitt be Chairman. Are there any other nominations?

Mr. Allmand: Mr. Chairman, I still maintain that it is not necessary for us to elect a new Chairman this morning. I am not as experienced as the hon. member here, but I have been at many meetings where the Chairman has even been taken off the Committee periodically and the Vice-Chairman takes his place in the meanwhile and serves as Chairman. I do not know what the purpose of this is.

The Vice-Chairman: I think we have a pretty heavy agenda today and rather than get into a procedural wrangle on this particular point, we might as well do it. It can be reversed immediately Mr. Blouin is returned to the Committee by the House. I do not think we can do any harm by acting on this and perhaps it will save some time.

Mr. Perrault: Mr. Chairman, under normal circumstances I think in most Committees the Vice-Chairman automatically assumes the post of Chairman in an exigency of this kind. I cannot understand frankly why some of the members on this Committee would raise a technicality of this kind when the person sitting in the Chair is occupying it as Chairman. He is perfectly competent, has been a member of the Committee, was duly elected to the position at the outset.

Mr. Woolliams: Well Mr. Chairman I agree that the Vice-Chairman was duly elected, but the fact is that Mr. Blouin was removed from the Committee, therefore he is removed as the Chairman and this Committee is sitting without a Chairman. Committees to be properly formed, according to the jurisdiction, must have a Chairman. It is a matter of form and I am surprised that you take this position. As the Vice-Chairman says rather than get into a big wrangle on some technicality let us get on with the business. There are two nominations and let us have a vote and get the Committee properly formed.

Mr. Allmand: I would suggest again that it is not necessary. We have a Chairman and that we go on with the Vice-Chairman and that when we get into the meeting if it becomes necessary then we will do it, but I do not think it is necessary.

The Vice-Chairman: Well I think rather than risk any chance that the proceedings of the Committee today be invalidated or anything like that, I will accept Mr. Woolliams position on this and we will get on with the business.

Mr. Woolliams: Thank you very much.

Mr. Skoberg: Mr. Chairman, I would say that I am very surprised that you would take the Chairman off of this Committee just because he went to the hospital at this particular time. It shows a lack of competence on the part of the government.

Some hon. Members: Hear, hear.

Mr. Skoberg: I was very, very surprised that they took the Chairman off the Committee.

The Vice-Chairman: That is completely erroneous sir. You are entitled to read into it whatever you wish, but the fact is Mr. Blouin is ill and this is a very important Committee meeting today and the necessity of maintaining representation on it is obvious.

An hon. Member: What point of business are you proceeding to now?

The Vice-Chairman: We are going to proceed with the election of a Chairman. I am going to leave the Chair and turn it over to the Clerk for the purpose of the election.

Mr. Lessard (LaSalle): We have a Vice-Chairman and I do not see the use of this.

Mr. Bell you were aware that last year we had a Committee and the Chairman was absent many times—

An hon. Member: But the Chairman has been removed.

Mr. Lessard (LaSalle): Of course he was removed.

Mr. McGrath: How can you remove the Chairman? This is the point.

• 0945

An hon. Member: He was removed because he went to the hospital.

Mr. Bell: I am sorry I was late. Can I just add that has been removed to take John to the hospital.

Mr. Lessard: He is replaced by someone else for the time he will be in the hospital.

Mr. Bell: Why do—I never heard of it. Just because the poor fellow happened to get sick, you come right in on him and remove him.

Mr. Lessard: We did not ask to remove him. We did not ask—we said this morning, we have a Vice-Chairman, he could act as the Chairman for the time being.

Mr. Woolliams: Well, Mr. Chairman, on all the points that I made, and I repeat it again and I am glad to see the Chairman upheld my position, and I am sorry this man was fired from the Committee.

An hon. Member: He was not fired, he is still Chairman.

• 0946

An hon. Member: He may have requested a removal on his own.

An hon. Member: Be quiet for just a moment.

Mr. Woolliams: The point that I am making is that the Committee would not be properly constituted without a legal Chairman, and so we have asked that elections be called or nominations be called so that a new Chairman be elected, because a man was removed from the Committee. And that is the first order of business and that is what we are proceeding with and the Chairman now has upheld that position. I do not know why there should be further argument on it.

Mr. Perrault: Mr. Chairman, that is merely political mischief to say the man was fired from the Committee. We do not even know the state of his health, he could be seriously ill and he could have requested removal. Now that is a dreadful . . .

An hon. Member: He could have been temporarily removed . . .

Mr. Woolliams: Mr. Chairman, if there is any policy which is coming from Mr. Perrault. I was only pointing out that if he is—on a motion of Mr. Bell, PC, who is trying to run out now.

The Clerk: Gentlemen, please, we have a motion moved by Mr. Perrault, seconded by Mr. Lessard that Mr. Mahoney be elected as Chairman of this Committee. We have an amendment moved by Mr. Woolliams, seconded by Mr. McGrath that Mr. Nesbitt do take the chair as Chairman of this Committee. We will now put the amendment . . .

An hon. Member: It is not an amendment.

Mr. Allmand: I raise a point of order here. You move the first motion, it is not an amendment, then you move the second one.

The Clerk: We will now put the main motion to a vote. Moved by Mr. Perrault, seconded by Mr. Lessard, that Mr. Mahoney be elected Chairman of this Committee. All those in favour?

Please raise their right hand?

An hon. Member: You cannot go right now.

An hon. Member: There is one behind you there too.

An hon. Member: Somebody is behind you.

The Clerk: All those against?

Mr. McGrath: Mr. Chairman, I am going to ask that these proceedings be interrupted.

Mr. Lessard: Call for the vote. The vote is called.

Mr. McGrath: I am raising a point of order, Mr. Chairman.

An hon. Member: There is no point of order—the vote is called.

Mr. McGrath: I am raising a point of order, Mr. Chairman, and my point of order is that this vote be a roll call vote in order to ensure that all the members of the Committee vote.

An hon. Member: Very good. There are too many—

An hon. Member: Carry on.

The Clerk: Roll call please? Mr. Allmand.

Mr. Allmand: I vote for Mr. Mahoney.

The Clerk: Mr. Carter?

Mr. Carter: Against the motion.

The Clerk: Mr. Corbin?

Mr. Corbin: For the motion.

The Clerk: Mr. Givens?

An hon. Member: He is not here.

The Clerk: Mr. Godin? For or against the motion?

Pour ou contre la motion principale?

Mr. Godin: Contre.

The Clerk: Mr. Goode?

Mr. Goode: For the motion.

The Clerk: Mr. Lessard?

Mr. Lessard (La Salle): For the motion.

The Clerk: Mr. Mahoney?

Mr. Mahoney: For.

The Clerk: Mr. McGrath?

Mr. McGrath: Nay.

The Clerk: Mr. Nesbitt?

Mr. Nesbitt: Nay.

The Clerk: Mr. Noël?

Mr. Noël: For.

• 0950

The Clerk: Mr. Nowlan?

Mr. Nowlan: Nay.

The Clerk: Mr. Perrault?

Mr. Perrault: For the motion, oui.

The Clerk: Mr. Pringle?

Mr. Pringle: For the motion.

The Clerk: Mr. Rose?

Mr. Rose: Nay.

The Cerk: Mr. Serré?

An hon. Member: He is not here.

The Clerk: Mr. Skoberg?

Mr. Skoberg: Nay.

The Clerk: Mr. Thomas (Moncton)?

Mr. Thomas (Moncton): I am against it.

The Clerk: Mr. Smith (St-Jean)?

Mr. Smith (St-Jean): I am for it.

The Clerk: Mr. Woolliams?

Mr. Woolliams: Against.

The Clerk: Eighteen members present, for the motion, nine against nine.

Mr. Noël: Mr. Chairman, on a point of order, if you count the members of the Committee. We are supposed to be twenty, only eighteen are present.

The Clerk: Eighteen are present. Mr. Serré is not here along with Mr. Givens.

Mr. Noël: I would ask you to check the last list of the Committee members.

The Clerk: We have the last list.

Mr. Noël: You have the last list.

The Clerk: The latest change was Mr. Perrault for Mr. Blouin. It is up to date.

An hon. Member: That was a phony one.

Mr. McGrath: Mr. Chairman, I move that the Committee adjourn since we are deadlocked on the election of a Chairman.

The Clerk: We have a motion by Mr. McGrath.

An hon. Member: You have requested that the Committee adjourn?

The Clerk: We have a motion by Mr. McGrath that the Committee adjourn, and since the vote...

Mr. Allmand: Wait a minute—who made a motion to adjourn?

The Clerk: Mr. McGrath?

Mr. McGrath: I made it.

Mr. Allmand: Okay, we will vote on that.

I think—we have officials here this morning, we have a Vice Chairman...

An hon. Member: Order.

Mr. Perrault: Mr. Chairman, it is plain to see the motives of some of the opposition members of this Committee. They are trying to pressure the activities of this Committee.

Mr. McGrath: You are the one that is trying to change things and prevent the public business to move ahead, and to rescind the resolution that was duly passed by this Committee a week ago.

The Clerk: We have a motion by Mr. McGrath that this meeting adjourn since this election ended in a tie. We put the motion now, all those in favour please?

An hon. Member: To adjourn against the public interest.

The Clerk: Raise your hand please.

An hon. Member: For the motion to adjourn.

The Clerk: Against?

Six yeas, and 12 nays.

Mr. Pringle: Mr. Chairman, in the interest of expediency I move that Mr. Mahoney be Acting Chairman in his position as Vice Chairman for the purpose of...

An hon. Member: You cannot have an Acting Chairman.

Mr. Pringle: In the interest of expediency... Mr. Chairman I move in the interest of expediency that Mr. Mahoney be declared the Chairman of this Committee.

The Vice-Chairman: Gentlemen, we will proceed with the meeting...

Mr. McGrath: No, no, the meeting was just deadlocked on the election of a Chairman. You have no right to take the Chair.

Mr. Mahoney: As Vice Chairman I am taking the chair.

An hon. Member: No, no, let us get out of here.

An hon. Member: No, do not go.

An hon. Member: It is a poor sign of business...

An hon. Member: You do not take the chair.

Mr. Woolliams: Mr. Chairman, I raise a point of privilege. I challenge your right to sit now and call this meeting to order. The Liberals have not enough members down here to carry a vote, we know exactly why this meeting was called. Now I am going to refer—and I am sorry about my voice this morning—to the *May's Parliamentary Practice* and it says this at page 643 that every Committee must have a Chairman. The Chairman of a Committee is appointed and elected by the Committee itself and that runs into the very root of the jurisdiction of this Committee. It is like sitting in a court without a judge.

• 0955

An hon. Member: Hear, hear.

Mr. Woolliams: You just have no jurisdiction to go ahead, Sir, with the greatest respect to you. And I refer again to page 644 of May's, 17th edition, which says:

> Unless the power of appointing its chairman is withheld from a select committee, its first proceeding is to choose a chairman

to make it legal. Now how can we proceed when your government fired the Chairman by last night by removing him from the Committee. Now if you had left him on the Committee, the Vice Chairman would have the jurisdiction to sit.

Mr. Lessard: On a point of order, the Chairman has not been fired.

Mr. Woolliams: He has no right to sit in the chair, the Clerk should rightfully be in the Chair.

Mr. Perrault: ... because of the tactics of the honourable member...

Mr. McGrath: Well, he knows that this Committee cannot permit the Vice Chairman to occupy the post until even another Committee member comes into the room. You have an obligation to rule on this since there is no Chairman in the Chair. The meeting was deadlocked on the election of a Chairman and this man has no right to take the Chair.

Mr. Wooliams: If the Liberals cannot get their members out to form a quorum that is their problem.

Mr. Allmand: On a point of order. To keep it down to the gentleman opposite, I came to this meeting expecting me to put the motion which I tabled the last day, they are incorrect. I am saving that motion until we consider the report of this Committee to go back to the House. We came to hear the members from the National Harbours Board.

An hon. Member: Hear, hear.

Mr. Allmand: I have no intention of putting my motion.

An hon. Member: It is illegal anyway.

Mr. Allmand: I have no intention of putting the motion, and I do not even intend to deal with it this morning.

An hon. Member: It is not qualified—that is not business.

Mr. Allmand: I have no intention to deal with.

Mr. Skoberg: Mr. Chairman, in regards to exactly what Mr. Allmand...

An hon. Member: Do not talk about hiring nobody, you were speaking out.

Mr. Skoberg: I have the floor. In regard to what Mr. Allmand has just said, I would like to pose one question. The other day we did have a motion that was suppose to go back into the House. Now that has been taken back into the House, but without the motion we have and did pass at this particular meeting. My question now is—is this Committee, is this government, going to move the report that this Committee did pass, including the motion that we had before us, and did pass it

at that particular time. It is my opinion that if this was not taken back to the House, and not passed, there is no earthly use of Committee meetings whatsoever. If this was duly passed, I this meeting.

The Vice Chairman: I have no information at the moment as to whether or not there was a direction from the Committee to report that? Is that correct—that we were to report that last motion? No, there was not.

Mr. Skoberg: Am I to understand then that what we do in this Committee meeting,—everything we pass here should be reported to the House by the Chairman. Is that not right?

The Vice Chairman: No, not automatically, Sir. For example, with the estimates you approve them and then when you get a certain number, the Chairman is instructed to report them to the House.

Mr. Skoberg: Well, then may I ask in regard to the tour of the Atlantic Provinces, Mr. Chairman, that was recorded back to the House without approval and no motion to accept. Now the same thing should have applied to the motion here in so far as that Newfoundland bulletin is concerned.

Mr. McGrath: Which was directly related to the motion to go to the Atlantic provinces, which was reported. Now the Committee had no right in its report to delete that resolution, just as the Committee has no right this morning to nominate you, Sir, to take the Chair because the Committee is without a legal chairman. The Committee was deadlocked on the election of a new Chairman, and in my opinion, the Committee has no alternative but to now retire and report to the House.

Mr. Woolliams: Mr. Chairman, I say the report of the Committee now be referred to an appeal of the Speaker to see if our position in reference to the jurisdiction of this Committee is sound. I submit it is sound, I think the Speaker will uphold us. We have the right to make that kind of an appeal—there is a lot of precedent for it. And it is one where it would have the same rules as the Committee of the Whole of the House of Commons, where we appealed the Chairman's ruling on the Crow's Nest pass last year. And I ask how this Committee—I move that this Committee now adjourn and have an appeal to the Speaker, and find out where we stand as far as this matter is concerned.

The Vice Chairman: Would you cite your authority please for the...

Mr. Allmand: Mr. Chairman, on that point if you refer to rule 68-A where it says:

> Chairman's decisions...subject only to an appeal to the committee

It is at page 65 of the Provisional Reprint of Standing Orders. It says:

> In any standing or special committee of the House questions of order shall be decided by the chairman, subject only to an appeal to the Committee

• 1000

Mr. McGrath: We have no Chairman. Notice was directed to the Clerk of the Committee that the Committee now retire and the Clerk report to the House asking for a ruling.

Mr. Woolliams: I was asked by the Chairman to state my authority, I want to quote from 237 of *Beauchesne's* Parliamentary Rules and Forms, Fourth Edition, 1958. It says:

> 288. Committees are regarded as portions of the House and are governed for the most part in their proceedings by the same rules...

and as that rule applies to Committee as a Whole, the rule applies to this Standing Committee. It goes on:

> Every question is determined in a committee in the same manner as in the House to which it belongs.

I say we have the authority, the authority is in *Beauchesne's*. I say to you now put the motion and that we go now to the Speaker to determine the right and jurisdiction of sitting without a Chairman.

Some hon. Members: Hear, hear.

Mr. Woolliams: How can a Committee—my learned friend over there has admitted that the matter has to be put to a Chairman and he does not even have a Chairman.

Some hon. Members: Hear, hear.

The Vice-Chairman: I rule that the specific general provisions or analogies that may occur.

Mr. Perrault: Are you afraid of hearing the expert witnesses that we have here with us today?

Mr. Woolliams: We are not afraid, but we believe—

An hon. Member: We had better get out of here.

Mr. Perrault: You are bringing this up on a petty legalism and you know it.

Mr. Woolliams: I object to that. My case does not rest on a petty legalism.

Mr. Perrault: It is a pretty tenuous one too.

The Vice-Chairman: The Chair has already ruled on that particular item. Mr. Allmand?

An hon. Member: There is no Chairman and this Committee is not in session.

The Vice-Chairman: Order please.

Mr. Allmand: Yesterday we put on two members from British Columbia, Mr. Perrault and Mr. Goode, because we were going to discuss the this morning and we have these two gentlemen here. We have the National Harbours Board people here and we would like to go on with the discussion, because several members from British Columbia would like to continue this discussion.

The Vice-Chairman: We will proceed.

Mr. McGrath: Mr. Chairman, let the record show that we are walking out, because this Committee is not properly in session.

Mr. Perrault: The television lights are not on so you had better say it again.

Mr. Woolliams: If you want to change a motion that was passed by this Committee that...

Some hon. Members: Oh come on.

Mr. Skoberg: Mr. Chairman—I will not call you Mr. Chairman in case of doubt or uncertainty, but could you get a ruling within 15 minutes from the Speaker? We could adjourn for 15 minutes for that ruling. I would so move.

An hon. Member: I second the motion.

Mr. Allmand: Mr. Skoberg I did not hear your motion.

Mr. Skoberg: That we adjourn for 15 minutes for a ruling from the Speaker on this point in question.

Mr. Allmand: Which point in question?

The Vice-Chairman: It is out of order as far as I am concerned. The Vice-Chairman is the Chairman and since you did not choose to elect a Chairman, the Vice-Chairman is here.

An hon. Member: That is right, let us proceed.

Mr. Nowlan: There is no quorum here. I want the record to show that there is no quorum.

The Vice-Chairman: But there are 12 members in the room at the moment, Mr. Nowlan.

Mr. Nowlan: There are not 12 members of the Committee.

Mr. Perrault: No motion should be entertained in any case. You should sit and listen to these witnesses.

An hon. Member: You know very well it is a big joke, Mr. Nowlan. I know you better than that.

The Vice-Chairman: Would the Clerk please take a roll call of the Committee?

The Clerk of the Committee: Mr. Allmand?

Mr. Allmand: Present.

The Clerk: Mr. Carter?

Mr. Carter: (No answer)

The Clerk: Mr. Corbin?

Mr. Corbin: Present.

The Clerk: Mr. Givens?

Mr. Givens: (No answer)

The Clerk: Mr. Godin?

Mr. Godin: (No answer)

The Clerk: Mr. Goode?

Mr. Goode: Present.

The Clerk: Mr. Lessard (LaSalle)?

Mr. Lessard (LaSalle): Present.

The Clerk: Mr. Mahoney?

Mr. Mahoney: Present.

The Clerk: Mr. McGrath?

Mr. McGrath: (No answer)

The Clerk: Mr. Nesbitt?

Mr. Nesbitt: (No answer)

The Clerk: Mr. Noël?

Mr. Noël: Present.

The Clerk: Mr. Nowlan?

Mr. Nowlan: (No answer)

The Clerk: Mr. Perrault?

Mr. Perrault: Present.

The Clerk: Mr. Pringle?

Mr. Pringle: Present.

The Clerk: Mr. Rose?

Mr. Rose: (No answer)

The Clerk: Mr. Serré?

Mr. Serré: (No answer)

The Clerk: Mr. Skoberg?

Mr. Skoberg: (No answer)

The Clerk: Mr. Thomas (Moncton)?

Mr. Thomas (Moncton): (No answer)

The Clerk: Mr. Smith (St-Jean)?

Mr. Smith (St-Jean): Present.

The Clerk: Mr. Woolliams?

Mr. Woolliams: (No answer)

The Clerk of the Committee: We have nine.

The Vice-Chairman: Gentlemen, I am afraid we do not have a quorum. We must apologize to Mr. Mann and his associates from the National Harbours Board for having you come today under these unfortunate circumstances.

Mr. Allmand: Mr. Chairman, before we leave I would like to say one thing.

Mr. Bell: If you say anything at all over the adjournment motion . . .

Mr. Allmand: You are not a member of this Committee and I would like to say one thing. Number (1) There has been a tradition on these Committees of the House that all the Chairmen of all the Committees except Public Accounts would be from the Government side and Public Accounts would be from the Opposition side. This morning the Opposition tried to violate that understanding. Secondly our Whip and myself last night contacted everyone on our Committee to come and they were all going to be here, but there was a snow storm this morning and this move this morning by the Opposition I find—especially when these gentlemen were on their way here, at least we have word that they are on their way—it a deplorable move.

• 1005

Mr. Bell: Mr. Chairman—Mr. Acting Chairman, I would like to ask: Do not snow storms apply to the Opposition too?

An hon. Member: You are not a member.

An hon. Member: That was a real snow job this morning too.

The Vice-Chairman: Gentlemen, the meeting is adjourned. For those who have remained the next meeting of this Committee is scheduled for Monday morning at 11 o'clock.

STANDING COMMITTEE ON TRANSPORT AND COMMUNICATIONS

Chairman: Mr. H.-Pit Lessard

Vice-Chairman: Mr. Pat Mahoney

and Messrs.

Allmand,	Godin,	Pringle,
[5] Borrie,	Goode,	Rose,
[1] Breau,	McGrath,	Skoberg,
Carter,	Nesbitt,	Smith (*St. Jean*),
[4] Durante,	Nowlan,	Thomas (*Moncton*),
[3] Foster,	[2] Portelance,	Woolliams—(20).

(Quorum 11)

Robert Normand,
Clerk of the Committee.

[1] Replaced Mr. Corbin on December 9, 1968.
[2] Replaced Mr. Noel on December 9, 1968.
[3] Replaced Mr. Serré on December 9, 1968.
[4] Replaced Mr. Perrault on December 9, 1968.
[5] Replaced Mr. Givens on December 9, 1968.

ORDER OF REFERENCE

HOUSE OF COMMONS
FRIDAY, December 6, 1968.

Ordered,—That the names of Messrs. Breau, Portelance, Foster, Durante and Borrie be substituted for those of Messrs. Corbin, Noël, Serré, Perrault and Givens on the Standing Committee on Transport and Communications.

ATTEST:

ALISTAIR FRASER,
The Clerk of the House of Commons.

29495—1½

MINUTES OF PROCEEDINGS

MONDAY, December 9, 1968.
(9)

The Standing Committee on Transport and Communications met this day at 11:00 a.m.

Members present: Messrs. Allmand, Borrie, Breau, Carter, Durante, Foster, Goode, Lessard (*LaSalle*), Mahoney, McGrath, Nesbitt, Nowlan, Portelance, Pringle, Rose, Skoberg, Smith (*Saint-Jean*), Woolliams (18).

Also present: Messrs. Bell, Corbin, Douglas, Forrestall, Givens, Howe, Macquarrie, Ritchie, Whelan.

In attendance: The Honourable E. W. Kierans, Postmaster General; and *from Communications:* Mr. F. G. Nixon, Director, Government Telecommunications Policy and Administration Bureau; Dr. John Chapman, Head of the Planning Group of Communications.

The Clerk attending announced that the first item on the agenda was the election of a Chairman, and having called for nominations,

It was moved by Mr. Mahoney, seconded by Mr. Allmand,

That Mr. H.-Pit Lessard be elected Chairman of this Committee.

On motion of Mr. Nesbitt, seconded by Mr. Carter,

Resolved,—That nominations be closed.

There being no other motion and nominations being closed, the Clerk declared that Mr. H.-Pit Lessard elected Chairman of the Committee.

Mr. Lessard took the Chair, thanked the members for the honour and requested their co-operation during the deliberations of the Committee.

On motion of Mr. Mahoney, it was

Resolved,—That the name of Mr. Allmand be substituted for that of Mr. Serré on the Subcommittee on Agenda and Procedure.

The Chairman then introduced the Honourable E. W. Kierans, Postmaster General who in turn introduced Mr. F. G. Nixon and Dr. John Chapman both from Communications.

Mr. Kierans, speaking from a prepared text, dealt with certain administrative and financial aspects of the operation of Communications.

The Chairman then called item number 1 ($4,971,000) of the Revised Main Estimates 1968-69 of Communications. Mr. Kierans and his officials were questioned.

The questioning being concluded items 1 ($4,971,000); 5 ($3,500,000); and 10 ($509,000) were severally approved.

On motion of Mr. Nesbitt, it was

Resolved,—That the Chairman be instructed to report to the House, the items of the Revised Main Estimates 1968-69 relating to the Department of Transport that have been approved by this Committee.

At 1:05 p.m. the Committee adjourned to the call of the Chair.

Robert Normand,
Clerk of the Committee.

EVIDENCE

(Recorded by Electronic Apparatus)

Monday December 9, 1968

The Clerk: Order please, gentlemen. We have a quorum. As you know, the first item of business this morning is the election of a Chairman. I am now ready to entertain motions to that effect.

Mr. Mahoney: I move that Mr. Lessard be made Chairman of the Committee.

Mr. Allmand: I will second that.

The Clerk: Moved by Mr. Mahoney, seconded by Mr. Allmand.

Mr. Allmand: Is it necessary for us to indicate that he will be put on the Steering Committee, or is that automatic?

The Clerk: No, that is automatically covered. It sets out the Chairman, the Vice-Chairman and members thereof. Moved by Mr. Mahoney, seconded by Mr. Allmand, that Mr. Lessard be elected Chairman of this Committee. Do I hear any more motions, gentlemen?

May I have a motion to close the nominations, please? Moved by Mr. Nesbitt, seconded by Mr. Nowlan.

Is it the wish of the Committee, that the motion now be adopted?

Some hon. Members: Carried.

• 1105

The Chairman: I want to first thank the Committee members for this vote of confidence. That was a very easy election. I hope my future will be the same way!

Mr. Nesbitt: On a point of order, Mr. Chairman—and perhaps it is a point of privilege, or it might better be a combination of the two—so that we can get started on committee work and continue for awhile, there are one or two points I would like to place before the Committee. I might also add that I think some of the difficulties this Committee may have had in the past have perhaps been due to some of the items I am now going to raise, and I will just leave it at that.

First of all, when meetings of the Steering Committee are held in the future I hope, Mr. Chairman, that the decisions reached by the Steering Committee with respect to what witnesses will be called and when they will be called will be carried out. Or, if this cannot be done, that adequate notice be given to members of the Committee, and particularly to those members of the Steering Committee who represent parties other than the government party in the House, because it often occurs that one party wishes to adjust the membership of the Committee when different subjects are being discussed by the Committee, and there has been some difficulty in the past in this regard. It may have been due to misadventure, I am not imputing any motives, but it is a fact that it has occurred. I hope we can avoid future problems, and I think they can be avoided if the instructions of the Steering Committee are carried out as agreed, or in the event they cannot be carried out as agreed, that adequate notice be given other parties.

The second item I want to mention is that it has always been my understanding—and I have been on committees of this House for 15 years—that normally when a committee submits a report it is drafted by the Steering Committee and approved or disproved, as the case may be, by the members of the Committee and then forwarded to the House for final approval. To my knowledge that has not taken place on any occasion since we started, and I hope that does not continue. I think it would avoid a lot of trouble in the future if we followed the procedure I outlined.

The third point of order I intended to bring up this morning had to do with a point of order which was raised by Mr. Allmand. However, in view of the fact that the Postmaster General is going to be before us this morning, I will hold my point of order in abeyance until such time as we are strictly on items of transport again. However, when I say this it is on the understanding that I will have the opportunity to raise it when we return to the transport items. That is all.

The Chairman: I agree with you, Mr. Nesbitt, and I feel that if it is possible the Steer-

ing Committee should meet today to put these things back where they belong. I am not on the Steering Committee and I like to be aware of what is going on, what meeting is coming up and what kind of work we have ahead of us, so if you agree I think it would be a good idea if a Steering Committee meeting was held possibly today or tomorrow to settle this thing once and for all.

Mr. Allmand: With respect to the Steering Committee, Mr. Chairman, last week Mr. Mahoney, the Vice-Chairman, was taken off it when he had to go away, so I would like to move that he put back on. Of course, if it is automatic it will not be necessary.

The Chairman: It was just a temporary motion that was made for the day, Mr. Allmand. I think Mr. Mahoney has come back on again automatically.

Mr. Mahoney: To solve this problem, Mr. Chairman, I move that Mr. Allmand be put on the Steering Committee in place of Mr. Serré, who is no longer a member of the Committee.

Motion agreed to.

Mr. Nowlan: Before we get started, there is a matter I would like to mention. I think perhaps this has been clarified by one of the members, but my point of order is that I did not know about this Committee meeting. I looked at the card I received today and it was put in my box at 5 o'clock on Friday afternoon. I think this is certainly the reason some members who would have liked to have been here are not here; they just did not receive notice. I understand that some time ago there was some discussion about having a meeting on Monday morning at 11 o'clock, and Mr. Nesbitt suggested this was supposed to be last Monday. However, regardless of when it was, it was obviously some time ago, and certainly if there are going to be meetings on Monday mornings I would hope there could be more direct notice given on Friday for that Monday morning meeting. I suggest it is not sufficient to merely drop it in the post office at 5 o'clock, because if the members were here Friday—and I was here—they just do not pick up their mail after 5 o'clock. Perhaps if they were delivered it would at least help to improve the situation.

• 1110

The Chairman: I do not disagree with you at all, Mr. Nowlan. I think this is very fair. I will see that you receive the notice a couple of days before the week-end when we have to sit on Mondays.

Mr. Nowlan: That will be fine.

The Chairman: Gentlemen, on the agenda this morning we have the estimates of the Postmaster General. We have with us this morning the Minister, Mr. Kierans, and I will ask him to introduce his associates. I believe Mr. Nixon and Mr. Chapman are with him. Will you introduce these gentlemen to the Committee, Mr. Kierans?

Hon. E. W. Kierans (Postmaster General): Mr. Chairman, members of the Committee, Dr. John Chapman is Head of the Planning Group of the Department of Communications, and Mr. Gordon Nixon is Director of the Government Telecommunications Policy and Administration Bureau.

Mr. Nowlan: Excuse me, Mr. Chairman if I could interrupt the Minister on a point of order. I would like to resolve this so we will know what we are going to be doing today. I would like to know if we are going to be listening to Mr. Kierans and his officials or are we going to become involved in procedural debates on previous motions late in the morning. If after Mr. Kierans or his officials give evidence we are going to have a procedural point raised that has been sort of tabled, then I think we should know that now, and we might have to resolve it now. I think the Committee starting out fresh on Monday morning should know whether it is going to raise this today or whether it is going to hear evidence today. I would like to hear Mr. Kierans speak, but would also like to know what business is going to be before the Committee this morning. If we are going to get on a procedural wrangle, let us get on it now and get Mr. Kierans and his officials out of here rather than bringing it up at 1 o'clock.

The Chairman: If I could interrupt you, Mr. Nowlan, I think Mr. Macdonald made a declaration in the House on Friday that you will have a chance to discuss the motion of Mr. Allmand when we come to the estimates of the Department of Transport. Today we are discussing the estimates of the Postmaster General.

Mr. McGrath: Mr. Chairman, that is fine for Mr. Allmand's motion but it does not take care of my resolution, which was adopted by this Committee. As I understand it, Mr. Mac-

donald made no such reference. It is my resolution with which the Committee has to deal.

Mr. Woolliams: Mr. Chairman, I think it will clear the trouble away immediately if we can get an assurance from the Chair—I am well aware of the fact there has not been a meeting of the Steering Committee—that the motion that he has discussed will not be discussed today.

The Chairman: We have to go through the estimates.

Mr. Woolliams: Will you give us that assurance?

The Chairman: Yes.

Mr. Nowlan: It would take care of the problem if the Chair does not receive any motion until after the Steering Committee has met.

The Chairman: Does the Committee agree that I should ask Mr. Kierans to give us a short briefing on his estimates, and then to put...

• 1115

Mr. Allmand: I think we should try and be clear on what we are doing. First of all, Mr. Chairman, I would ask you to let us know what item of these Estimates we are discussing so that we know exactly what we are on, and there will be no confusion. It had been my intention once we had passed these Estimates, if we did pass them this morning, to bring up my motion. But if the other side feels that we should have Steering Committee first, I will agree to that and I will not put forward my motion this morning. We will deal only with these Estimates.

Mr. Woolliams: Dealing with the business of the country, if you co-operate a little there is no problem. But if you are going to try to pull tricks...

Mr. Allmand: No, no.

Mr. Woolliams: And play hanky-panky, then there are going to be problems.

An hon. Member: It is a trick that started all this.

The Chairman: We are getting off the subject. We are here this morning to discuss the Estimates, and the first item is communications under the authority of Mr. Kierans.

Mr. Allmand: What item, Mr. Chairman. I would like to know exactly what item we are on.

Mr. Kierans: It is my understanding that we are discussing the communications aspect of the Post Office only today, is that right? And tomorrow we are supposed to deal with the Post Office.

Mr. Allmand: So we are doing item 1 of Communications, General?

Mr. Kierans: On page 44.

Mr. Allmand: Very good.

The Chairman: Mr. Kierans.

Mr. Kierans: Can I clear up one point, Mr. Chairman. If the members feel that they are likely to go on to the Post Office too, I would have to alert the officers in the Post Office, because they are not here today. They were scheduled for tomorrow.

Mr. Skoberg: Mr. Chairman, I was of the understanding that possibly we could deal with both of them this morning. This was suggested.

The Chairman: No, I think we should stick to one item.

Mr. Skoberg: Our Vice-Chairman, I believe, suggested that we might handle both of them.

Mr. Kierans: Mr. Chairman, Members of the Committee, the Revised Estimates for the Department of Communications detail the initial effects of the announcement by the Prime Minister of the government's intention to create a new Department of Communications. The financial consequences are summarized on page 44 of the Blue Book, Part A to show the program added to the Department and Part B to show the total program for the Post Office. I will be discussing Part B tomorrow. This is what I was informed.

Part A is expanded on pages 45 to 47 of the Blue Book to reflect the details of the changes which were authorized by the Order in Council of July 12, 1968. Under this Order in Council, branches of two government departments were designated to be transferred to the Department of Communications. These were elements of the Defence Research Telecommunications Establishment from the Research Board of the Department of National Defence, and the Government Telecommunication Policy and Administration

Bureau, and a portion of the Telecommunications and Electronics Branch of the Department of Transport.

Part A indicates the financial structure consequent upon this initial phase of reorganization. That is to say, 765 man-years and $4,971,100 in Vote 1 to cover Administration, Operation and Maintenance; $3.5 million in Vote 5 for the Research Satellite Program; and $509,000 in Vote 10. These are shown in detail on pages 45, 46 and 47 of the Blue Book. I intend to deal with these two sections in order.

First I will describe the transfer from the Defence Research Board. This consists of $1,997,000 and 26 man-years. Also the whole of the $3.5 million item for the Research Satellite Program. That is what came from there.

I might say at this time that this initial transfer is to be followed shortly by a second transfer which will bring most of the staff and a large part of the research program of the DRTE into my Department. The $1,997,000 is to provide for the salaries of the 26 positions transferred and to cover a number of research projects at DRTE which are deemed to be primarily of civilian interest. The Research Satellite Program is included in its entirety.

You may be interested to know that the ISIS-A, which is the third Canadian-built satellite—the others being Alouette I and Alouette II—and which is the second in this ISIS program, is now undergoing final tests before being shipped to California for launching about the end of January.

• 1120

I would also like to point out that the move of the DRTE establishment to the Department of Communications does not mean that the defence research in telecommunications will cease at the Defence Research Telecommunications Establishment. Officers of my Department and the Department of National Defence are now working out details of an arrangement under which the laboratories will continue to meet the needs of the Department of National Defence for telecommunications research. In the future work will be carried out on agreed military projects at DRTE and the costs will be recovered by my Department from the Department of National Defence.

That summarizes the items in these Estimates which cover the initial transfer from DRB.

The second element to be transferred comes from the Department of Transport. This is the Bureau concerned with the administration and management of telecommunications. The transfer of 760 man-years and $2,974,100—the netting figure—after allowing for estimated revenues of $3,923,000. The Department of Transport resources which have been included in Votes 1 and 10, form the major portion of Vote 1 and all of Vote 10. The increase in positions from 610 to 763 represents in part the growth of the Bureau since its formation in the Department of Transport, but it also represents the acquisition of positions from the Department of Transport and the Defence Research Board for Department of Communications administrative purposes, the building of head office establishment, and to this extent is not really an increase in the overall number of positions among the three Departments.

The Revenue from radio licence fees is shown as $3,923,000. We believe that this amount will be realized this year. That is on page 46. However, because these moneys are due on April 1, the actual amount credited to a particular year tends to depend on the promise of payment. The accounts are due in any event.

On page 46 of the Blue Book the amounts shown for construction and acquisition, apart from the Defence Research Board item, relate to the purchase of electronic measurement apparatus and vehicles in support of radio regulations, ionosphere measurements and monitoring activity. That is the item at the bottom, $512,000.

On page 47, Vote 10 includes payment to the Canadian National Railway Company in support of the extension of their public telecommunications system down the Mackenzie Valley and at Frobisher. The system in the Northwest Territories is earning more revenue than was expected and payments are diminishing, as you can see here. They have gone down considerably.

The Inter-American Radio Office, Havana, is provided for in the North American Regional Broadcasting Agreement, but apparently does not function owing to the present political difficulties. The item of $6,000 is retained for the purpose of meeting outstanding billings.

The Canadian Radio Technical Planning Board which receives a $10,000 annual grant, is a voluntary organization comprised primarily of national associations interested in either the production of radio equipment or the use of radio, for example the Electron-

ic Industries Association, the Canadian Electrical Association, the Railway Association, and so on. There are some 25 or 30 of these associations in all. They perform a very effective advisory role for the Department, developing a wide variety of technical standards and planning for the use of radio. The grant helps to pay secretarial and administrative costs, with the member associations defraying the balance of the costs.

That is all I have to bring up that relates to this, to the communications. There is an additional item that I could speak about that you see elsewhere that would not come up either under communications or under the Post Office. On page 576 there is a loan under Loans, Investments and Advances, and the Item L1 authorizes the loan of $10,500,000 to the Canadian Overseas Telecommunication Corporation for this year. I imagine Mr. Nowlan knows more about this than most of us.

• 1125

This amount, of course, is required for capital investments by the Corporation for the provision of a second earth station at Mill Village in Nova Scotia, designed to meet operational requirements, and for installation of the Bermuda cable and of a cable stationed at Liverpool, Nova Scotia. I simply mentioned that because it seemed to me that it was likely to be a loose end here that we could cover neither under the Post Office nor under the Department of Communications. It is under Item C really.

The COTC as you know is a Crown corporation, a very profitable one with a very high return on its investments. It is certainly an asset to the new Department and will be in all the work that we do, not only in its own technical work but also, because it is a shareholder in INTELSAT, as our means of taking part in international co-operation. That is all I wanted to say at this time.

The Chairman: Any questions?

Mr. Allmand: Mr. Minister, when do you expect the legislation setting up the Department to be presented.

Mr. Kierans: We would hope that it would be in January, and of course it will be a government reorganization bill that will affect other departments as well as our own. All the Ministers concerned—I think there are five—are quite anxious that this legislation be talked as quickly as possible. We would hope that it would be some time in January.

The Chairman: Mr. Borrie.

Mr. Borrie: Thank you, Mr. Chairman. Mr. Minister, at one time consideration was given to ham operators across the country for the eventuality of national emergency and that type of situation. There is nothing in the budget this year to take care of any subsidies or any grants to the ham operator associations.

Mr. Kierans: May I ask Mr. Gordon Nixon to answer this.

Mr. F. G. Nixon (Director, Government Telecommunications Policy and Administration Bureau): No, sir, there is nothing in terms of assistance, and to the best of my recollection such assistance has not in the past been paid.

Mr. Borrie: No, I think it was a concession that was given to them by some means or other.

Mr. Nixon: I am not aware of anything that could be classed as a concession. They have always been in principle encouraged because they do represent a valuable resource, and the activity contributes in terms of self-training to the technical resources of the country.

The Chairman: Does that answer your question?

Mr. Borrie: Yes, thank you.

The Chairman: Mr. Rose.

Mr. Rose: I want to ask the Minister a couple of questions. I would like to ask, since we are discussing communication satellites, if there is any relationship between the satellite which it is proposed will go up in January for various radio communications and telex, and the proposed educational TV satellite that has been mentioned, especially through the Broadcasting Committee and the Department of the Secretary of State?

Mr. Kierans: To answer your question quickly, there is really not much relationship between the two. One is an experimental satellite, this particular one for ionospheric studies and research, and the other would be an operational satellite. But I think that I will ask Dr. Chapman to describe in greater detail the relationship, the advance from one to the other.

Dr. John Chapman (Head of the Planning Group, Department of Communications): The Research Satellite Program which is shown in

Vote 5 is for the scientific satellite, carrying 11 scientific experiments. It is part of the ISIS program, International Satellites for Ionospheric Studies, a joint program of the United States and Canada. It is related to a communications satellite program in the sense that the technology and principle are similar, but the ISIS satellite carries no communications equipment in the sense that it is used in the White Paper. The communications satellite system described in the White Paper carries equipment which operates on a different frequency band and is completely different in design and application than the ISIS satellite. Also, the orbits are completely different.

• 1130

Mr. Rose: In that sense it is not necessarily appropriate to discuss this further here at this time.

Mr. Kierans: The ETV aspect? No, I do not think so.

Mr. Rose: I regret that I do not have the Post Office Department votes before me, but may I ask whether the decision to abandon the Queen Elizabeth II Telescope on Mount Kobaur B.C. has any relationship to this particular Department?

Mr. Kierans: No, nothing at all.

Mr. Rose: That is all, thank you.

The Chairman: Mr. Foster?

Mr. Foster: Mr. Chairman, in your speech in Montreal you mentioned this new domestic telecommunications satellite. You mentioned that it would carry both English and French. Will this be broadcasting just the CBC, will it be carrying just one network's programs or...

Mr. Kierans: You would be using the common carriers, the CBC and others. They would be your customers. Beyond that you would look forward to all of the complications and implications of another satellite that would be able to bypass them and go directly into homes. That would be a second generation satellite, but the first one would be making use of the present common carrier system and the CBC. It would build earth stations of its own, too, to look after the North and places where our microwave system does not serve us at present.

Mr. Foster: It would not be broadcasting directly from the satellite to the individual TV set?

Mr. Kierans: No, no, it would not be doing that. It would be taking advantage of the present network.

Mr. Foster: I see.

Mr. Kierans: There would be a hop-skip there. You go from that directly, probably five years later, even to by passing those systems, or you would be able to bypass them technically. Technically it is feasible now. It is all in the works. Conceptually it is feasible.

Mr. Foster: Conceptually?

Mr. Kierans: Conceptually it is feasible now, but the second step would be to bypass the TV stations and go directly into the homes.

Mr. Foster: Yes, this is what I understood from your speech that if we...

Mr. Kierans: But that would not be the first one.

Mr. Foster: It would not be the first one?

Mr. Kierans: No.

The Chairman: Does that answer your question, Mr. Foster?

Mr. Foster: Yes.

Mr. Goode: I have three questions on the research satellite program. Perhaps I could ask them one at a time. When this refers to a joint program, does that mean the United States is sharing at the same ratio as we are? Is it fifty-fifty?

Mr. Kierans: It is much more complicated than that.

Dr. Chapman: It is a joint program in the sense that the experiments are selected jointly. Canada builds a satellite and the United States launches it. Let me give you an example of how this is done. The United States puts out a call for experiments for this particular satellite, ISIS A or ISIS B whichever one it is in the series, and the Canadian Government puts out a call in Canada. These calls go throughout the world to all scientists who feel they have an experiment that might be incorporated in a satellite of this nature and for this purpose, studies of the ionosphere.

The responses are collected and shared between Canada and the United States and we agree at a joint meeting on which experiments are the most suitable and the best prepared with the scientists most able to

carry out the particular experiments. We agree, therefore, on a joint program; that is, whatever eight or ten or twelve experiments will be carried in the satellite. It is then the responsibility of the sponsoring country—and it could be not only Canada and the United States, but Britain, or Germany or any other country—to provide to us their experimental piece of equipment which we then incorporate in the satellite. With ISIS A, if memory serves me correctly, four experiments are being provided from the United States and seven from Canada.

• 1135

Mr. Kierans: There is another little point. For example, in the preparation of the next ISIS B if it went up, the actual experiments come, as Dr. Chapman has said, from scientists that are engaged, and presently the Canadian government would be considering proposals by the Department of Communications; the University of Saskatchewan and the University of Calgary have scientists that are interested in particular experiments that are carried out. Whether these two projects will be accepted out of...

Dr. Chapman: They have been.

Dr. Kierans: Those two have been accepted for ISIS B? You see, this is how it comes.

Mr. Goode: So the United States really does not spend any allotted amount for the program; they spend it on the launching and supplying the rocket, I take it. Is this correct?

Dr. Chapman: They provide all the costs of launching and they provide all the costs of the experiments that are selected from American scientists.

Mr. Kierans: The University of Vermont, for example.

Mr. Goode: Do we plan more of these next year?

Dr. Chapman: ISIS A is ready for launch now. ISIS B is in the initial development stage.

Mr. Goode: So $3.5 million is spent in all countries.

Dr. Chapman: In Canada; all in Canada.

Mr. Goode: That is fine, thank you very much.

The Chairman: Mr. Skoberg?

Mr. Skoberg: Dr. Chapman and Mr. Kierans, further to that, what amount is really spent in the United States for research which is directly involved in the U.S. as compared to Canada, the amounts of our money that are used down there for research purposes?

Dr. Chapman: There is none of our money. None of this $3.5 million is spent in the United States, except for such things as travel of Canadian engineers to the United States. There is a principle in the joint programs that money does not cross the border. The Americans pay for their part of the program; we pay for our part of the program. There will be items of electronic components such as transistors and items of that nature which we have to procure from the United States because it is the cheapest source and there is no alternative source in Canada, but in principle this $3.5 million is entirely for our part of the program and expenses spent in Canada except for incidental items. I cannot give you an exact figure of how much that is, but it is the amount that is spent either for travel or for the purchase of components.

Mr. Skoberg: Concerning the launching you referred to earlier, Mr. Kierans, what sum would be involved as an over-all rough figure?

Dr. Chapman: The launch vehicle costs about $5 million—that is not a precise figure, but it is somewhere close to $5 million—and after the satellite is launched the United States pays for the operation of its share of the world-wide tracking and telemetry stations which acquire the data and send them back to Canada. This $3.5 million includes the cost of operating the Canadian telemetry and control stations, one at Ottawa and one at Resolute Bay in the Northwest Territories.

Mr. Skoberg: I am just turning to the CN/CP Telecommunications. What control is there on the public purse in the joint private-public enterprise of the CN/CP Telecommunications? Where are the regulations and the control set up; in what field?

Mr. Kierans: Mr. Nixon?

Mr. Nixon: The payment to the CN for the development and maintenance of the system down the Mackenzie Valley, for example, is covered in a contract between the Minister of Transport and the Canadian National Railways.

Mr. Skoberg: What I am trying to get at is what control will the public have on that

communication, the telecommunication as such, once it is established in its entirety?

Mr. Nixon: The control on rates, for example?

Mr. Skoberg: The over-all policy of the communications system.

• 1140

Mr. Nixon: The contract provides for the scope and the nature of the development. The control on public telegraph rates, for example, of course is subject to the Canadian Transport Commission determination.

Mr. Skoberg: Mr. Chairman, I am probably not making myself clear. I am not really concerned, but I am wondering who will have the control? I am concerned that the public must be assured that...

Mr. Kierans: That is really in the Bureau itself. The Director, Mr. Nixon, is responsible to the Deputy Minister or to his Assistant Deputy Minister to develop all of the plans. I will read to you some of his activities and responsibilities:

> ...to develop and recommend telecommunications plans and policies.

That is the function of the Bureau:

> ...both national and international which take cognisance of the public interest and promote the orderly development of communications in Canada.

That is the 700-odd positions that have come over to us from Transport, and that will be the function of the Department of Communications as it was the function of the Department of Transport.

It will be their responsibility to conduct the necessary supporting economic, commercial and technical studies. The commercial ones would be all of the accounting to make sure that included in the rate making were not costs that should be attributed to the actual services.

All of these studies are associated with those responsibilities and his responsibility is also to administer and to manage telecommunications legislation such as the Radio Act, which includes ensuring the efficient and effective use of the radio spectrum itself. Then there is planning and the program and determining the needs for the future for the co-ordinated use of telecommunications throughout the federal government itself and throughout the country as a whole. All of that will be lodged with and will be the responsibility of the Department of Communications.

Mr. Skoberg: Do you have the figure of how much the CPR has invested in this joint venture, the CN/CP Telecommunications?

Mr. Kierans: Would we have that?

Mr. Nixon: This would be, perhaps, the trans-continental microwave of the CN/CP Telecommunications. Taking into account all of the development from perhaps as long ago as 15 years and including the portion in Newfoundland, I would say it would be approximately $70 million. The majority of that would be CN; CP would be the lesser portion.

An hon. Member: Do you have the proportions?

Mr. Nixon: Perhaps two thirds CN and one third CP, but this is right off the top of my head.

Mr. Skoberg: Then, along the same line concerning the control of the policy setting and the regulations, is the proportion the same? Will the CN have the majority of people on the board that will be in charge of the regulations?

Mr. Nixon: The CN or CP as such do not have people on a board. The policy determination vests in the Minister and in the Canadian Transport Commission to the extent that the latter is provided by law to determine rates and other matters.

Mr. Skoberg: I would expect that the CPR would have representatives on some type of board to make sure that its interests are protected.

Mr. Kierans: Are you thinking in that particular operation of the sharing of profits?

Mr. Skoberg: Well, the control and the operation of the over-all...

Mr. Kierans: They are so regulated anyway and the regulations come from the department, so that whether one had a majority or the other, I do not think that would matter much. We would regulate the system as a whole and it conforms to our requirements. Given the figures that Mr. Nixon has given to us, I imagine that the CPR are looking after their own interests in that they have put up two-thirds of the investment.

Mr. Skoberg: Well, as an example, Mr. Kierans, who controls and who makes the decisions as to closing down one location and establishing it at some other place or centralizing their control under the telecommunications?

Mr. Nixon: Well, sir, to take as an example the telegraph office.

Mr. Skoberg: Yes.

Mr. Nixon: Perhaps that would be something you have in mind. As commercial operating companies, they apply to the Canadian Transport Commission for permission to close out offices. This was done a couple of years ago, and they are now engaged in a program, approved by the Commission, for reduction and rationalization of the telegraph office structure in Canada.

• 1145

The Chairman: Mr. Nowlan?

Mr. Nowlan: Yes, Mr. Chairman, I have a couple of questions, one directed to Mr. Kierans initially. Since the Post Office debate, and as Postmaster General, he certainly has developed a reputation as a balance-sheet banker in that the books must balance, a most interesting philosophy with which I am heartily in accord—my own books being an exception. On this whole satellite program—and I am not asking negatively but mainly for information—would it be correct to say that the satellite program, both in the development stage employing Canadian research and Canadian scientists, and in the end product, the actual satellite, is in fact a venture in nationalism, in the sense that, to my limited knowledge, a satellite could cover, with perhaps the exception of the north, almost the whole North American Continent?

In Europe, for instance, does France put up one, Luxembourg put up one, Holland put up one, or do the different countries agree and form a consortium to develop a satellite for Europe? Similarly I understand with the American program, and our very embryonic program, that a satellite could cover certainly the American and the Canadian side of North America. Is that correct?

Mr. Kierans: It is correct that an American satellite could easily cover Canada, if they wanted to build a powerful enough one.

Mr. Nowlan: But in the development of it we give expertise to our Canadian research scientists and the end product will be something—not like the CBC—but for our national existence more than the functional end of the satellite, because as you remarked earlier, there could be a joint satellite between the Americans and the Canadians that would cover almost all North America.

Mr. Kierans: Our purpose in going into this satellite is social objectives; they may be political too, but let us say, social objectives as the way of unifying the country, that that one satellite as far as we are concerned just blankets the whole of Canada. It could blanket Alaska too and there may be some arrangements that would be worked out to look after the American needs in Alaska. That is a social objective leading to a greater unification of the country. That satellite would be devoted to Canadian aims and objectives and will be programmed, I would imagine, in a way that is acceptable by the Canadian people and their cultural requirements or needs.

From then on, I suppose you could build a case that it would be better to rent the space on the American satellite on straight economic grounds. However, I do not think you could even build it on economic grounds, if you take a long-run approach to this rather than a short run. In a short run there will be investment costs, which may include some losses in the operations in the early years, as any corporation going into any kind of field expects that its development and marketing costs, in getting control of a market, will lead to losses. It then incorporates this in the amount of capital it has to set aside in order to make the thing viable.

As far as we are concerned, the economic gains in the long run will more than outweigh the costs, because by our scientists developing programs here in Ottawa in cooperation with industry our manufacturers can easily develop markets with different aspects of the component parts or sub-systems of such a satellite; in other words, their export potential.

Mr. Nowlan: Well, right at the moment...

Mr. Kierans: No, right at the moment, on a given item, it would be cheaper to buy it somewhere else—and on all given items.

Mr. Nowlan: No, no, at the given moment, as I understand it, we are producing some component parts in the American machinery system.

• 1150

Mr. Kierans: And we can only really continue to do that and expand that if we go into the investment in satellites on our own account.

Mr. Nowlan: Coming back not to the cost, but to the purpose, would it be fair to say that the satellite program really has more social justification rather than scientific justification as far as Canada is concerned, social justification being this national purpose and cultural expression, and so on?

Mr. Kierans: Let us put it this way. Perhaps George Ball could build a case for us not going ahead with this, because he does not understand how Canada exists at all.

Mr. Nowlan: Who does?

Mr. Kierans: We do, and we are dedicated to this. Pursuing that, what we are primarily interested in is Canada as a growing, developing nation. Now, when we speak of the development of the North, I think a prerequisite of developing our own country is the fact that there should be communications. If you or I go up to Frobisher or to Haig, one of the things that will make it easier is instant telephone contact, television contact, with Montreal, Toronto or Halifax. This builds if I may use that jingoistic word, the infrastructure of a Canadian nation.

Mr. Nowlan: I appreciate everything you say, Mr. Minister, but in effect this is going to be another cost to Canadian nationalism.

Mr. Kierans: Another overhead cost—like the railways.

Mr. Nowlan: Like the CPR was initially, or like the Post Office used to be.

Mr. Kierans: Or like the Maritime railways, you know, to build a defence.

Mr. Nowlan: Intercontinental.

Mr. Kierans: It was intercontinental to provide for a better defence of Canada.

Mr. Nowlan: That is right. Coming down from the purpose to the project, and this may be too technical and I may not appreciate your opening remarks, and it may be, as Mr. Rose has said, that we have not come this far, but, and this has to do more with the cost, in this experimental satellite program that we are talking about on the estimates, have we decided what prototype of satellite we are going to follow. In other words, as I understand it, there are the stabilized fins, and there is a revolving superstructure up above. Is part of the research to find out which one we want?

Dr. Chapman: If I may clarify one point. The item in the estimates is for the research satellite, the scientific satellite, and it has nothing to do with communications.

Mr. Nowlan: Then, we come on to the communications which is the ultimate objective of this new department, I presume?

Dr. Chapman: The government policy was outlined in the White Paper and we are in the process of studying the needs of the users, the kinds of satellite which will meet those needs in order to define a system and define the satellite. Studies have been performed by industry in order to assist, and to provide information that we will need. There were two studies performed and both of them came forward with proposals which are the kind of satellite you are talking about in which the antennas are fixed—despun as it is called—where the body is rotating in a gyroscopic effect stabilizing the satellite in orbit. If you remember the centre page of the White Paper, it shows a beam on Canada, and that is a vital part of the whole system, an antenna beam shaped to cover Canada, approximately four degrees by eight degrees, and that must be focused on Canada, it being for both receiving from the ground and transmitting back to the ground.

Mr. Nowlan: If I understand your answer, we are still studying what type of satellite we eventually will choose. You nodded in the affirmative; is that correct?

• 1155

Dr. Chapman: That is right. The specifications have not been settled. There are at least three different ways of arranging for beams pointing to the ground. You can have a spinning satellite with a despun antenna, where the antenna is fixed, with the rest of the body rotating. Secondly, you can have the whole thing rotating and what is called an electrically despun antenna which is switched and, as it goes around, the power goes on to the part which is pointing to the ground. There is a third way of doing it, where the satellite is actually fixed in space; the whole thing is fixed and you have either jets or reacting wheels to hold it that way, or possibly a gravity stabilization device. In other words, spinning or de-spinning.

Mr. Nowlan: Well, the two main companies that are developing this satellite program are Lockheed and Hughes, is that not correct? Are those the two companies we are looking after it basically?

Dr. Chapman: The contacts were made with RCA Victor Company Limited in Montreal and the Northern Electric Company.

Mr. Nowlan: Yes, but they have not developed the satellite? Does the actual development stage of the satellite come from Lockheed and/or Hughes Tools?

Dr. Chapman: The RCA Victor Company has an arrangement with TRW, Thompson, Ramo and Wooldridge Inc. in the United States, that built the INTELSAT III satellite, which is the spinning satellite. The Northern Electric Company has a similar arrangement with the Hughes Aircraft Company that built EARLY BIRD, INTELSAT I and INTELSAT II and has a contract for INTELSAT IV. These are all spinning satellites. So, those are the companies which are linked up with Canadian firms and provided an influx of these studies.

Mr. Nowlan: And Lockheed is the one that had the stabilized fins, is that not correct?

Dr. Chapman: Lockheed was not involved in the Canadian studies. Lockheed was involved in the study for INTELSAT on the INTELSAT IV satellite, which is a completely different satellite, a different system. I am not sure whether they ended up coming forward with a proposal for a spinning satellite or not.

After consultation, I think you are right. Our recollection is that Lockheed did come up with the type in which the satellite is not moved, and is not spinning. The Europeans have done similar studies and have come forward with a proposal for a satellite that does not spin but which has torque wheels.

Mr. Nowlan: This is what I was more or less coming to. Is this international consortium—is it INTELTEL or INTELSAT?

Dr. Chapman: INTELSAT.

Mr. Nowlan: INTELSAT, and these are all the countries of the world that are interested in satellites and I appreciate the complicated formula of how you contribute, and the Americans are, I suppose one of the dominant partners or control 50 per cent. Has the European exploration and/or development gone more for the satellite with less spinning parts than the Hughes Tool Company one which was favoured by some Americans which has the spinning parts and which is the one that perhaps we are going to be choosing, or have chosen?

Dr. Chapman: In principle, what you say is correct. The Europeans have tended to favour the type of design with rotating wheels for stabilization rather than spinning the major part of the satellite—but this is only a matter of a difference in degree.

Mr. Nowlan: This is getting too technical so this will be my last question on this. Was not the primary advantage of the fixed fin that you could add another section of fin ad infinitum to blanket the area whereas you are limited in development of the spinning type of stabilizer? Was not the number one advantage of the fixed fins that sit up there stationary that you could just add a section and it would not upset the balance or the beam, whereas when you get more spinning parts—which do wear out, even in the vacuum of space—you also become limited in your expansion program?

• 1200

Dr. Chapman: Well you cannot expand a satellite once you build it. You design it for one particular purpose.

Mr. Nowlan: I appreciate that, but when you send the next one up, instead of changing the revolving wheels and/or the balancing mechanism, you could just add another panel to the wing.

Dr. Chapman: Well these designs which you are talking about are the trade-offs which are made in the engineering design—trying to find out what is the best way of getting what you want for the lowest cost and with the maximum reliability. Different firms or different groups of engineers in different countries will come up with somewhat different views on what is the best way of doing it. The present system, which is used by INTELSAT, is based primarily on the views of the Hughes Aircraft Co. which developed the spinning satellite, in which the whole satellite spun. These SYNCOM satellites were the first synchronous communications satellites, and they worked. Therefore that design seems to be favoured because there is experience and knowledge of how it works. The element that is involved in these spinnings largely comes from the American Orbiting Solar Observatory program in which the body of the satellite was spinning for stability purposes but the telescopes were stopped and pointed at the sun as it went around the earth. The bearings systems were developed and designed and tested in that program, and those are the

bearings which in general are being used in the current designs for this kind of satellite with the de-spun antenna. It is a matter based on what you know, what you think will work and what is already developed.

Mr. Nowlan: Is it correct that we eventually will be buying a basic satellite developed by one of these American companies but modified to our own purposes by our own research facilities?

Dr. Chapman: No, the design will be a Canadian design.

Mr. Nowlan: A separate satellite altogether?

Dr. Chapman: A Canadian design, because no satellite has presently been developed which seems to meet our needs.

Mr. Nowlan: Mr. Minister, did you get a satisfactory answer to your preliminary disclosure on the satellite programs from these two companies that you were asked a few questions about in the House the other day? You said you were going to bring these people to Ottawa and talk to them.

Mr. Kierans: Well I think they were under considerable pressure from their association, the Canadian Aeronautics and Space Institute. They were holding their annual convention and they thought it would be a very good idea if as part of the exhibits of their conference they could show mockups of the two proposals by the company.

Mr. Nowlan: This was the reason?

Mr. Kierans: And I suppose one thought that the other might get ahead of them.

The Chairman: Are you through, Mr. Nowlan?

Mr. Nowlan: Yes, Mr. Chairman.

The Chairman: Mr. Howe?

Mr. Howe: Mr. Chairman, I am not a member of this Committee but I would like to ask a few questions.

One of my questions arises out of the answer Mr. Kierans gave to Mr. Nowlan in connection with the possibility that the United States could build a satellite big enough and powerful enough to cover all of Canada. I see we belong to the International Telecommunications Union in Geneva, Switzerland. Does each country have any set area of control over communications that come into their country? This is a very important field of communication and it could have a tremendous effect on our national feelings. Do we have any control over international bodies that might be trying to influence our thinking in one way or another in this country?

Mr. Kierans: I do not want to take up too much time, but perhaps I could answer this in this way. I am very proud of the senior officers of the new department designate. On the scientific side we have Dr. Chapman. As everyone knows his reputation, let us say that that aspect of the new department is looked after. On the administration, regulations and policy side we have Mr. Bergeron and Mr. Nixon.

• 1205

Precisly the problem that you raised would lead to a conclusion that also in the department there should be someone with an expertise in international negotiations and indeed in federal-provincial negotiations. The Prime Minister, two weeks ago, named as the Deputy Minister designate Mr. A. E. Gotleib from the Department of External Affairs. This was one of the considerations which led the Prime Minister to name him. All of these points that you have raised pose problems for all the international law experts and for the world as a whole. How do you define this? I suppose one of these satellites spinning across the world could cross the frontiers of a country like Uganda in less than a second. What control has a nation like that, under the orbit of this satellite, over what passes from space to the confines of the nation. So all of this is still to be worked out. I think you can start from a predisposition that no matter how powerful some individual nations could be, all of the nations of the world will not allow their country to be tampered with, or to be in the control of, or under the sway of other nations. This has to be worked out on the basis of international negotiations, and the problem it poses is extremely real. It becomes very much more real when the next generation of satellites go up—especially if it is possible at that time for satellites to penetrate into individual home and tell us why another nation has adopted such and such a policy, whether it be on monetary, foreign or military affairs. It poses some severe problems.

Mr. Howe: Generally, when you build something of this nature you would have to build something to counteract the influence of

that. Is there any research being done in Canada or in the world to make it possible to black out the influence? We have heard instances in the last war how they were able to black out certain areas...

Mr. Kierans: Or jam radios.

Mr. Howe: ...or jam radios. Is research going on in this field to ensure that the airwaves of Canada or other nations of the world are not exploited by countries that are not friendly to them, so to speak?

Mr. Kierans: I will ask Dr. Chapman to reply directly to your question. I would think that the better way to do this would be to settle all of this beforehand by international negotiations. This is not going to be used for imperialistic or military purposes; its major impact will be commercial and cultural, and I would think it can be worked out in this way. As to whether you could jam them or not, I will ask Dr. Chapman because that part of it never occurred to me.

Dr. Chapman: Certainly these satellites that we are talking about can be jammed, and that is why it is necessary to have international agreement on their use.

Mr. Howe: They cannot be jammed?

Dr. Chapman: They can be jammed.

We do not, as a matter of principle, jam other people's communications. The key point in all of this from the technical point of view is the radio frequencies which are used. There is a body, the International Telecommunications Union, which is set up for the orderly management and use of the radio frequency spectrum—all parts of the spectrum. The position that we find ourselves in now is that satellites have come along so recently that international procedures have not yet been completely developed to handle all of these procedures. But in principle one would expect that we would go in the same way we have done in the past in the use of frequencies—that is, there would be international agreement on what frequency would be used and allocated for what purpose. Each country would then be obligated to inform the International Telecommunications Union, through the International Frequency Registration Board, the IFRB in Geneva, of the frequencies it intends to use for any purpose. All member countries of the ITU would have the opportunity of protesting if a frequency was to be used for a purpose which was believed to be damaging to the interests of the country concerned. This is the procedure which works now so far as terrestrial use of radio is concerned and we would expect that these procedures would be developed in the same way for the use of radio frequencies in space for broadcasting and other purposes.

• 1210

Mr. Allmand: I have a supplementary question, if you do not mind.

Mr. Kierans, what is the present status of the proposed France-Quebec satellite that was put forward as a possibility last year? Do these two governments still intend to have such a satellite and if so, have they asked permission from the federal government to have this satellite? Also, do they need the permission of the federal government?

Mr. Kierans: There are a number of ways of answering that question. First, France has to get a satellite up there before there can be any question of an agreement. I read an article in *La Presse* where there was supposed to have been an agreement between Germany, France and Quebec to build earth stations here and to beam from a satellite the SYMPHONIE, to Quebec. What is of major concern at the moment in the European space program is the development of their own launching capabilities and this is some several years and nearly $800 or $900 million away. So I think the building of any earth stations in Quebec today would be at least five or six years premature.

Another point that I would like to make clear here, from the point of view of other members of the European space program, is that they are not interested at all in transgressing any Canadian authority or lines of jurisdiction. Now France is interested in expanding its influence through its satellites across what it might call regional areas instead of solely its own country plus areas geographically contiguous. And Germany is interested—Germany plus a small area. France obviously is interested across the Mediterranean—in Algeria and other Francophone countries in Africa, and throughout the world. But all of this has to be worked out by themselves first, because if you permitted that latitude to France you would have to permit the same latitude to Great Britain, which would have the right to beam right across the world—and it would no longer be a regional satellite. Spain and Portugal could also claim various interests. So the thing is very much more complicated than appears at

first sight—not just a direct link between France and Quebec. Before such a satellite, the SYMPHONIE, could beam into Quebec, I would say that they would have to reach some agreement with the Canadian government. Our major objective at the moment is to be up there first by a couple of years and then it would be to everyone's advantage to deal with the Canadian satellite.

Mr. Howe: Mr. Chairman, in that same connection, I understand that recently there was a group of parliamentarians over in France and this is one of the things that they discussed. Did that group go with government sponsorship?

Mr. Kierans: I do not know about parliamentarians.

Mr. Howe: They just came back; one of them is Mr. Laflamme. Mr. Laflamme was on the TV the other night and he said that this was one of the things that was discussed.

An hon. Member: That was the Parliamentary Association of France.

Mr. Howe: This was one of the things. I just wondered whether it was discussed.

Mr. Kierans: We have people attending. Dr. Chapman and Pierre Juneau of CRTC attended the last European Space Conference as observers on behalf of Canada, but these are the people that officially represent Canada, just as your Parliamentary Association in another area on another level represents Canada.

Mr. Howe: Have they discussed with you or your Department what they were going to discuss when they want to France, in connection with the satellite program?

Mr. Kierans: I think that this may have been an informal discussion of what France's plans, or Germany's plans, or Belgium's may have been. I do not know. Or just how they are getting along, on that level. But the official delegations are composed of representatives of the Department of External Affairs, communications, and other areas. These are official delegations that go forward on behalf of Canada.

• 1215

Mr. Howe: One further question. We are still on Item 1, are we?

The Chairman: Yes.

Mr. Howe: I was noticing the $1,577,300, Administrative Services provided by the Defence Research Board. Is that a transfer?

Mr. Kierans: Yes.

Mr. Howe: It is on page 45.

Mr. Kierans: Yes. That is a transfer from the Defence Research Board to ourselves. There is no increase as far as the over-all government expenditure is concerned. It is a subtraction from one and an addition to another.

Mr. Howe: Was the item on Professional and Special Services discussed previously? There is quite an increase there, from $55,000 to $361,600.

Mr. Kierans: Where is that?

Mr. Howe: Page 45, at the bottom of the page, Professional and Special Services.

Mr. Kierans: I will ask Mr. Nixon to deal with that. That is Item 4.

Mr. Nixon: This relates primarily to the establishment of the Telecommunications Policy Bureau within the Department of Transport, and the expanded activity in connection with policy development and studies that were placed upon that Bureau by the government. It is mainly concerned with the employment of consulting services for the purpose of assisting those studies.

Mr. Kierans: This expansion had already taken place within the Department of Transport before it came over to us, is that not right?

Mr. Nixon: That is right, sir.

Mr. Howe: This increase from $55,000 to $361,600, this is people who have been transferred from the Department of Transport?

Mr. Kierans: Yes, that is right. Between 1967-68 and 1968-69 the Department of Transport had already been expanding this area.

Mr. Howe: Well, why would not those people be shown in the administrative and technical field in the Department, rather than just being transferred from one department to another?

Mr. Nixon: The increase, if we are still speaking of the Professional and Special Services, relates to payments to consultants outside the Department, and this relates again to the formation of the Bureau which really was

pursuant to recommendations of the Royal Commission on Government Organization, the Glassco Commission, and again to certain recommendations that there should be more emphasis by the government on using outside consulting services. So it is coupled to those recommendations.

Mr. Howe: Are those firms or individuals?

Mr. Nixon: They are both firms and individuals.

Mr. Howe: Could we have a breakdown on that?

Mr. Nixon: I have not got a breakdown with me. It could be provided.

Mr. Howe: I would appreciate it. That brings up another question, Mr. Chairman. The other day when Mr. Pirckersgill, Chairman of the Transport Commission, was here, I asked him for a breakdown of the same type in his Estimates, and I have not received that yet.

The Chairman: I will take note of that, Mr. Howe, and I will see that you receive that.

Mr. Howe: Thank you very much.

The Chairman: Mr. Mahoney.

Mr. Mahoney: If we could retrieve the communication system from outer space and get it back to earth for a minute here, on page 49 of the White Paper, of which I see Mr. Kierans has a copy, there is the dark grey area indicating the extent of the existing coverage in Canada. What percentage of the population of the country are presently accessible to this communication system?

Mr. Kierans: About 95 per cent are covered there.

• 1220

Mr. Mahoney: So the new system will supplement that to the extent of providing communication services for about five per cent of the population. Now, what is the cost going to be to the country to extend this service in this way? The White Paper, on page 44, says it is going to cost perhaps only $100,000 per receiving station in various locations to utilize this facility. What is it costing us? What is it going to cost us to extend this service to the other five per cent of the population?

Mr. Kierans: It is not only the cost. There will be better service...

Mr. Mahoney: I appreciate that.

Mr. Kierans: ...for the people who are at present covered. The cost has not really been determined yet. It depends on what kind of a satellite we put up there. It depends on the format of the corporation itself, whether it be a mixed corporation, and how much private enterprise puts into it.

I think I used the figure in answer to a question on the late show last week, that the cost of this satellite project, the satellite itself, can vary anywhere from $60 million to maybe $150 million or $160 million, but that will be charging for the services rendered, and it will prove, as I am convinced, to be a tremendous boon to the uniting and building together of the nation as a whole. Now, just how you evaluate this in terms of cost, I do not know.

We are going to recover a great measure of cost if the telecommunications industry or electronics industry grasp the nettle and the challenge that is here, and develop the way they can, the way the opportunities are there, their own industry and its export potential. So all of the side effects—this is an imaginative department—a departure for the Canadian people, and I think it is one that is going to prove to be economically justified in the long run.

Mr. Mahoney: The existing system, sir, is owned by the two companies that are largely engaged in communications here today. What incentive is there for them, for example, to utilize this new and imaginative system when they have got one of their own that is covering 95 per cent of the market?

Mr. Kierans: There must be some tremendous commercial incentives because the various Bell groups, the Trans-Canada Telephone System which comprises all the companies, and also CP-CN, are quite willing to undertake this whole project. They want to undertake it themselves entirely, so they obviously see long-run commercial advantages. They would be a little worried if the government decided to develop it entirely by itself, or if the government's concept of a corporation to develop satellite communications were such that they were left only a very small share of the capital invested in such a system. So I think you would have to ask them. Let us say that they probably have decided that financially and economically this is not going to pay off in three to five years, that many of their own investments in the microwave systems might be expected to pay off, but that it is obviously the wave of the future, and the way things are going to be done in the future.

Mr. Mahoney: What will your criteria be, do you suppose, to determine whether or not a ground receiving station will be established in a given location? I was just looking again at this map. Places like Prince Rupert, McMurray, Churchill, and so on, would be obvious places for such a thing, but you have some much tinier locations in the North. Have you established criteria for that?

Mr. Kierans: I will ask Dr. Chapman to give us some of the criteria by which we are going to make such judgments.

Dr. Chapman: I think there is a simple criterion which you apply. It is what is the cheapest way of providing the service. If there is a cheaper way of doing it on the ground, then that is the way it should be provided. For many of the locations off this dark grey area, it will be cheaper to do it by satellite. The figure of $100,000 that you mentioned is for a television-receive-only facility.

Mr. Mahoney: I see. Is it the object then to bring this service to 100 per cent of the Canadian population, regardless of how tiny a community may be? Hopefully you will be able to serve it?

• 1225

Mr. Kierans: That is right. You read almost every day in the newspapers today of breakthroughs like the oil discoveries in Alaska, and the discovery of resources all through the Canadian North. This is obviously going to be a prerequisite for undertaking any serious development of Northern Canada.

Mr. Mahoney: I do not think I would argue with you, sir, that communications, movement of information, is at least as important as the movement of freight today, but we are just trying to get at the—it is a quite large undertaking, and at present I think, quite vague in ultimate cost.

Mr. Kierans: I would agree with you that there is a large area of vagueness between $60 million and $160 million, but we are going to have to make decisions. I think the opposition is going to ask, if we come up with $118 million, why we did not get closer to $60 million. That is their right and their duty, but we will have to be able to justify it, that is all.

The Chairman: Are you through, Mr. Mahoney?

Mr. Mahoney: Thank you.

The Chairman: Mr. Macquarrie?

Mr. Macquarrie: Mr. Chairman, I had a brilliant series of questions all in beautiful sequence, but I have lost my place in the order, not being a member of the Committee, and I do regret that orders of business are referred to committee at such late notice. I understand that the Minister expects the bill to be ready in January, is that right?

Mr. Kierans: I would hope, Mr. Macquarrie. It is not my bill; it is the Prime Minister's bill; and it has to deal not only with my department, but with several others also. It is my understanding that this is a general government reorganization bill.

Mr. Macquarrie: So it is not too far in the future, and we will have a chance in committee then?

Mr. Kierans: That is right.

Mr. Macquarrie: I will endeavour to see if I can get placed on the Committee. I also have the disadvantage of not having an earphone. I have missed many of the brilliant questions already asked, and I do not want to be repetitive. I wonder if the Minister might elaborate on the reply he gave to Mr. Nowlan about the commercial prospects for Canadian manufacturers. I wonder what countries would realistically be potential future markets for these pieces of equipment made in Canada?

Mr. Kierans: If you think of countries that put up satellites alone, there are not that many. There may be India, there may be Australia, nations to whom we could sell a satellite, but that is not really a major sale. But when you think of the components of such a satellite, when you think of the subsystems, and the tremendous other uses to which these component parts can be put, then you can consider that there will be a myriad number of items that can be sold not only for the purpose of incorporating them into satellites, but for many other uses.

I think it was you, Mr. Macquarrie, who asked me a question in the latter part of October which is going to be answered only today or within the next few days. You asked why we had such and such a mission over in Europe. I could have explained immediately why we had the mission over there. But one of your other questions was what was the total cost. In other words, what were the expenses of the members of this mission. As

my people did not come back until the end of October—some of the others did not come back until on into November—we did not have the expenses until the end of November and we only received the figures last Friday.

In one sense you could say that the purposes of that particular mission was simply to explore the sources of supply for component parts of a Canadian satellite and compare them with alternative sources of supply in the United States. However, there was another purpose to that mission. It was to find out just what your competition was in the development of these myriad component parts. If tremendous expertise has been developed in Europe as well as in the United States on a certain item A, we might be better advised to start considering programs which will give a certain amount of expertise to our manufacturers in item B, let us say.

We are very much aware of this and we believe that the developing and building of this satellite in Canada will not only keep the scientists here but it will also develop an expertise in Canada that will enable the corporations for which they work to go out and seek export markets.

Mr. Macquarrie: Are there any areas in the production of component parts where the United States does not have or is likely to retain a comparative advantage?

• 1230

Mr. Kierans: I think we are one of the best countries for this right now. For example, we have this facility in Montreal for building earth stations. We do this quite well. This could develop into much greater export and, indeed, in much more construction and manufacturing activity in Canada alone than probably the actual building of the satellite itself.

Mr. Macquarrie: When you say that they have expertise, do they have expertise in everything?

Mr. Kierans: I do not know. I think that you are going to see a development very shortly here in Canada in which one of our companies, with government assistance, is going to start searching for a billion dollar market in certain micro-electronic items. They may have an expertise in this. The old law of somebody being able to do some things better than other people still prevails.

Mr. Macquarrie: I profoundly hope that you are right and I am certainly not going to prejudge, but there seem to me to be many areas of equipment which are very, very costly; in the military field we have tended to leave the development of these to the United States and I see a sort of countervailing attitude here. Could the Minister indicate how much has been the cost of the various task forces? What I am trying to get at is a general financial picture of this very, very important and new field. How much has already been expended in studying this field?

Mr. Kierans: That is an item which does not appear here and which I did not mention, that is the cost of the project, the task force. I did not mention that and it does not appear here because this was supported by the Privy Council. How much that particular task force has cost to date I do not know. That would come under the examination of the Privy Council, unless one of my colleagues can give me an idea.

Are you also asking how much we have spent on this so far, for example with the development of the Alouettes I and II and the ISIS A?

Mr. Macquarrie: What I am really interested in—and perhaps I can hold this off until the bill comes through—is in knowing what financial outlay has already been made, sort of preliminary to the establishment of this department.

Mr. Kierans: I think, Mr. Macquarrie, that would be mainly the task force in the Privy Council office. They have done a lot of work. You might also want to include whatever studies were behind the drafting of the White Paper. I used the broad expression task forces, I could have said task forces and studies, perhaps.

Mr. Macquarrie: Yes.

Mr. Kierans: You might want to table that as a question in the House and force us to dig it up, because if we try to answer one or two parts of it, there are some other things that we might leave out.

Mr. Macquarrie: We will do something like that, Mr. Minister. The figure of $100 million to $160 million—this you quote after the MacIntosh Report.

Mr. Kierans: No, this is just in discussions with my colleagues. It depends on what you want your first satellite to do. It depends on whether you think your first satellite up there should provide all kinds of services, or perhaps just minimal services and hold most of

your investment until a second generation satellite. That depends on how close you think a second generation satellite with satellite to home communication is. All of these are what that depends on. You could decide to go for perhaps putting up a satellite in space that might provide services for $60 million worth. That is $60 million worth of services. Dr. Chapman, do you want to expand on the range between $60 million and $160 million?

Dr. Chapman: In the White Paper, on page 42, it mentions the satellites, the capital cost of the space segment, between $40 million and $75 million. The difference depends on the number of television channels that you put in the satellite. Obviously the $40 million means a small number of channels, and the $75 million would be a larger number of channels. Besides the cost of the space segment, you have the cost of the ground stations. You obviously have to have a master control, a main control station, at least one of them, that sends the signals, the programs, up to the satellite, and then you have a choice. You can decide how many receiving stations you want and the number could be anything from 10 to 100, so that the range in cost depends upon your choices and the number of television channels you put in the satellite and the number and kinds of ground stations you put on the ground. That is why you have a range of possible cost.

• 1235

Mr. Macquarrie: Have there been any revelations or indications, subsequent to the White Papers, which have caused you to speculate, shall we say, upon a figure substantially higher?

Mr. Kierans: No, I do not think so. Another element in it would be, for example, how safe a system you want up there. You can get away with putting one satellite up there with no back-up, or you can get away with putting one satellite up there and having one back-up satellite, or even two; and I think one of the plans proposed to us had two back-up satellites. All of these are elements in it. I do not think there is anything directly that I have become aware of that would increase these costs dramatically. They are mainly choices that we have to make.

Mr. Macquarrie: Tell me, sir, can we expect that the legislation to establish the satellite corporation will be presented to the House in June?

Mr. Kierans: I would think not. Afterwards the Department of Communications itself would then present a bill incorporating a satellite corporation.

Mr. Macquarrie: So there has not been a delay?

Mr. Kierans: Pardon?

Mr. Macquarrie: There once was a forecast that it would likely be in June.

Mr. Kierans: Next year?

Mr. Macquarrie: June of 1969.

Mr. Kierans: That could still be if the bill comes down organizing the department first, but the satellite corporation bill would be a bill of the department. The first bill is a bill of the—

Mr. Macquarrie: So it might be in June yet?

Mr. Kierans: It could be.

Mr. Macquarrie: But you would not ask us to count on it.

Mr. Kierans: I would say that we have an awful lot of work to do.

Mr. Macquarrie: I see. I do not want to ask too many questions, if someone else wants to—

The Chairman: I have quite a few other members.

Mr. Macquarrie: I will close off with this and perhaps we can get at it again tomorrow, or something like that.

Has there been consultation with any of the provinces on this matter? I read about the programs out of the Province of Quebec. Have you or any of your people been in liaison with Quebec people?

Mr. Kierans: I have not been, but some members of my staff have been. This has not been formal, or as formal as one is entitled to think, and that has mainly been because we have been waiting for the actual make-up of the department itself—the appointment of a deputy minister designate and so on. But at a variety of levels there has been consultation and discussion.

Mr. Macquarrie: So your people are aware of their ambitions and plans and vice versa.

Mr. Kierans: Yes. There are very many indications that indeed, when somebody

leaves CBC he goes to Radio Quebec or something; we generally know that too and we know why.

Mr. Macquarrie: There has been the horrendous suggestion made in the media that there is some effort to short-circuit, by-pass or pre-empt the Province of Quebec in this field.

Mr. Kierans: Not at all.

Mr. Macquarrie: I will pass; thank you.

Mr. Rose: My question, Mr. Chairman, now comes back to the microwave question and I would like to ask either the Minister or Dr. Chapman what are the standards of frequency or power emanating from those towers, particularly in regard to the safety of people and animals. Mr. Pringle might be interested in this because it was brought up by a colleague of mine some time ago.

Mr. Nixon: Mr. Rose, the power from a typical public telecommunications microwave transmitter is of the order of three to five watts. There have been suggestions made recently that certain livestock in the vicinity of microwave towers might be suffering some injurious effects. The Department of National Health and Welfare does at the present time have a study under way in this connection and we in the Department are assisting in the provision of laboratory facilities and equipment.

• 1240

Mr. Rose: I certainly hope that this whole question might be investigated with some thoroughness because of the unknown effects of these transmissions, whether they are just a matter of power or happen to be some sort of radio frequency. I am not familiar with that part of it, but I understand that certain countries operate these towers on approximately one tenth of the power that we do. They do this because of concern for the safety of livestock and humans.

Mr. Nixon: Sir, I have not heard of that opinion. The matter of whether it is operating at one watt or five watts seems to me to be relatively inconsequential in respect of the effect that you are referring to. However, we do not want to be at all uncertain about this and this is the purpose of the study. I might just further comment that the power of radar antennas and transmitters and stations does in fact exceed this by many, many times. I just say that for what it is worth.

Mr. Rose: I appreciate that you would not want to prejudge this matter while the study is being undergone, but I think that the point has been made by my colleague from Selkirk, to the great hilarity of the news media, of its possible effect on chickens. The point is, though, that we just do not know the possible effects of these radiations. Would you accept that?

Mr. Nixon: I think if there is a question at all in anybody's mind, it certainly is something that should be investigated. I will, however, say that it would be rather strange if there was a serious effect determined, given the widespread use of radio in its many forms in Canada and in many other countries today.

Mr. Rose: If you will allow me a moment, Mr. Chairman, I will try to be brief about the $3.5 million to be spent on this experimental satellite as our particular share. I understand from the testimony so far that certain firms in Montreal RCA Victor and Northern Electric, as well as certain suppliers in Europe, are supplying some of the research and some of the component parts, and that this is where our money is being spent. Is that true?

Mr. Kierans: This $3.5 million is our research. This is in-house research. It is for programs in Canada.

Mr. Rose: But I believe the testimony indicated that it is placed with these firms and that they are responsible for the construction of certain portions of this satellite; but the satellite is built here by these firms. Is that so?

Mr. Kierans: Yes.

Mr. Rose: Is it true that both of these firms are American-owned and perhaps directed by American interests?

Mr. Kierans: RCA is American-owned, but Northern Electric is Canadian-owned.

Mr. Rose: Well, the reason I am asking that is because I think the implication was that a great deal of the Canadian public money that was being used for this project was being spent here, and I felt it was implied that it was really being spent for the development of Canadian companies so that they would be able to compete in this particular field. My point here is that they are not, at least RCA is not, and returning to Mr. Macquarrie's question, and also to Mr. Nowlan's, I think

that we tend to be—I hope this is not too strong—misled as to actually where our investment is going.

Dr. Chapman: You are correct when you say that the RCA Victor Company is a wholly owned subsidiary of a United States firm. The RCA Victor has the largest contract under this $3.5 million for the development of these scientific satellites, not communication satellites but scientific satellites. The major part, by far the largest part of this remains in Canada for services procured in Canada for the build-up of facilities and personnel in the Montreal plant.

• 1245

Presumably, a certain part of the profits which would be made on that contract is the only part which would go to the United States, and some part of those profits may be retained by the company. I have no information, myself, as to what the company does with its profits, how it divides it. But all the other items, except the profits, are spent in Canada for the Canadian staff, by the Canadian staff, to build up facilities in that company.

Mr. Rose: My interest in all this is the development—I am certain it is the Minister's interest too—of the kind of technology that hopefully, because I suppose in a sense I am an economic nationalist, we can develop here to be independent, as far as possible, of foreign control in this and other matters. I just felt that this whole thing was being glossed over, somewhat in the way that our foreign aid program was. Much of the money that we had down and which was stated as foreign aid, was actually orders placed in Canada and then shipped abroad.

I personally might not have particular concern about this. I have no particular quarrel with it, but I think that it is fair to say that we, as Canadians with Canadian companies, have not developed the resources or the kind of technology—I am deliberately avoiding the word design because I think it was made quite clear that there was Canadian design here—we have not at the moment the resources to develop this kind of thing without this help.

Dr. Chapman: I do not know if I can really answer that question. As for foreign ownership of these firms, RCA Victor is an example. The parent company has decided that certain types of equipment would be designed, research would be done, the design would be carried out, and the equipment would be manufactured in Canada and sold all over the world.

Now it just so happens that the RCA company, the parent company, has given to the company in Montreal the responsibility for radio relay types of equipment. This means that the Montreal branch gets all the business which the parent company has in that line. This has meant that it has marketed equipment in the Far East and the Middle East which really comes through the parent company. It resulted in RCA Victor being the subcontractor for the relay communication satellite which was an early experimental satellite of NASA, predating the EARLY BIRD.

Mr. Rose: Have we had any examples, sir, of any direct control where the export regulations of the RCA Victor in Canada might run contrary to the policy of the American Department of External Affairs regarding trading?

Dr. Chapman: I personally have no knowledge of any.

Mr. Rose: Has the Minister?

Mr. Kierans: No, I have no knowledge of that. One of their biggest exports is in the provision of earth stations, is it not? I know nothing of that.

Mr. Rose: I would like to leave that, and I have one question and that will be the end of it. Thank you for your assistance on these other matters. You mentioned an international agreement regarding satellites and their frequencies. Because it will become an increasingly complex matter, do you foresee, Dr. Chapman, the time approaching when we will have to limit the number of satellites chasing one another around up in the clouds or beyond?

• 1250

Dr. Chapman: Sir, your question relates to use of radio frequencies, and the radio frequency spectrum is a natural resource which is limited. We can have only so many transmitters operating. Then they begin to interfere one way and another because radio waves travel according to the laws of physics. The consequence of this will, of course, be different in the use of the radio frequency in the satellite which may eliminate a very large part of the earth, compared to the use of the same frequencies on the ground where the

curvature of the earth prevents the signals from being observed or received for more than a few tens or hundreds of miles. So the use of a radio frequency spectrum, its efficient and economic management, is an international problem, a very serious one, and a very real one, which is the main purpose of the International Telecommunications Union, to ensure that we have the best possible use of these frequencies.

We cannot do it unilaterally, because radio does not stop at any border. Radio waves travel across the borders. It must be done internationally by international agreement, and we are working our way through a new set of conditions which are posed by space telecommunications superimposed on our previous experience of earth.

Mr. Rose: I was interested in your answer, sir, but it really was not quite my question. I realize that it is possible that the international group may not have had to face it, or maybe the question is irrelevant, but I was concerned about the number of objects in space and undoubtedly other countries are going to be putting communication satellites up in the air. Has there been any discussion concerning regulations as to their presence, number, altitude, and that sort of thing?

Dr. Chapman: Well, yes. There is a problem. There is a limited number of frequencies, and already there is interference.

Mr. Rose: Thank you.

The Chairman: Mr. Ritchie.

Mr. Ritchie: Is this problem of jamming a relatively simple one? Can a person with the knowledge of a ham radio operator jam a selected area or put a satellite out of commission?

Dr. Chapman: It is only a matter of money and engineering to build a jamming facility which will put as strong a signal in the satellite as the one which is wanted. The technical terms that are used are wanted and unwanted signals. If a country has a transmitter and a ground station, and an antenna which is putting a wanted signal in the satellite because it is carrying television programs, or telephone conversations, or whatever it may be, another country can build another facility of the same nature, working on the same frequency, which will go into the satellite at the same time and jam it. It can be carrying nonsense. So it is just simply a matter of knowledge, of money and engineering.

Mr. Ritchie: At a time of hostilities or something like that, these satellites could easily be put out of commission, is that right? They would become useless as a means of communication, under our present knowledge.

Dr. Chapman: It could be.

Mr. Ritchie: Either a group of people or a small country in the middle of Africa or Central Asia could interfere with the satellite in North America?

Dr. Chapman: There are two kinds of operation, as far as satellites are concerned. There is a commercial, civil, peacetime operation in which economic considerations require that you reach international agreement as to what you do, how you operate your satellites, so that there is neither intentional nor unintentional jamming. The second situation is a wartime, military situation, in which you presume that the enemy will attempt to jam, that they will attempt to prevent you from using the satellite.

• 1255

The design of the satellite and the design of the system is different in these two cases. The military system is, in economic terms, much less efficient than the civil system. But you can design a very large measure of jamming resistance into military systems, and we know how to do that here.

Mr. Ritchie: I think that was all I was interested in. Thank you.

The Chairman: Well, gentlemen, this is the end of the list that I had. Could we adopt Item 1?

Mr. Macquarrie: Could I ask a question . . .

The Chairman: Yes, Mr. Macquarrie.

Mr. Macquarrie: . . .since other people have finished? Could you indicate where and by whom our satellite will be launched?

Mr. Kierans: It depends on when. At the present time there are two launching capabilities, Russia and the United States. There could be a third one in 1972 or 1973, and that would be the ELDO program, the European Launcher Development Organization. Those would be the choices that we have, because I think the government and the Canadian people are not anxious to invest in what it would take to build a launching capability here in Canada. So those would be our three choices.

Mr. Macquarrie: I think you may have answered this before, and therefore it will not take you long to answer it again. What is the additional cost—I think you would have immediate recall of this—what is the difference in cost from using, leasing, cribbing, or what have you, an American satellite and building our own, apart from the subsidiary advantages of markets, and so on? How much more will it cost the Canadian people to have their own made-in-Canada satellite?

Mr. Kierans: Rather than buy one off the shelf?

Mr. Macquarrie: Right.

Dr. Chapman: We do not have an exact figure because there is not a satellite now completed which matches the Canadian requirement completely, and so the answer to that depends upon the ratio between the difference in development costs in the United States and in Canada. There is a difference because we do not have all the facilities here in Canada, the testing facilities for satellites, the thermo-vacuum chambers, the vibration facilities and so on. So that there will be a somewhat less efficient development program in the Canadian case because of the necessity for taking the satellite to a test facility somewhere and then bringing it back again, and so on. We do not have an exact figure as to what the additional cost might be. But in principle it seems to me that the cost of engineering in Canada and the cost of engineering development in the United States is not very different, and we are advised by several of these companies that they can do it as cheaply in Canada as would be done in the United States. That is of course a matter of judgment, whether you accept their views or not.

Mr. Macquarrie: Can we get even a rough figure on this? This, I think, is a very important question. How much is our scientific nationalism going to cost us?

Mr. Kierans: That is a good question.

Dr. Chapman: We hope to have a figure on that, sir. We do not know now.

Mr. Kierans: You are certainly going to ask that question again. So the next time you ask, if you give me enough time, I will probably have the answer.

Mr. Macquarrie: You harken back to the railway, Mr. Minister, and I do think of two things in that connection, that there was a phase when one of your predecessors perhaps built too many railroads. Had we waited until we manufactured the steel rails in Canada we might have been a long time getting them up, or getting them down, and it would have been very costly. But this is a figure that I think we must get, because it is a very important matter. I rejoice in your imaginative projections of what it is going to do. I am all with you, but we do want to know the cost, too.

The Chairman: Do we agree to Item 1?

Mr. Skoberg: I have one short question for the Minister. Which major international countries may not belong to the International Telecommunications Union, that you are referring to? Are there any countries that do not belong to it?

• 1300

Mr. Nixon: The International Telecommunications Union comprises 126 countries in the world. That number exceeds the number in the United Nations. Countries that do not belong, for example, are China—that is, Communist China—East Germany, and you can probably think of a few others of that general nature.

Mr. Skoberg: The USSR belongs to it?

Mr. Nixon: The USSR belongs. All of the countries in the Communist bloc that Canada recognizes belong.

The Chairman: Shall Items 1, 5 and 10 carry?

Items 1, 5 and 10 agreed to.

The Chairman: This completes the Estimates of the Telecommunications. I want to thank the Committee. Could I get someone to move that we report the Estimates of Telecommunications in the House?

Mr. Allmand: Is this separate?

The Chairman: This is separate. Tomorrow morning we will be coming back with the Post Office.

Mr. Allmand: We can move that these estimates go back apart from the Post Office?

The Chairman: That is correct.

Mr. Nesbitt: I so move.

Motion agreed to.

The Chairman: Thank you. The committee will now adjourn to the call of the Chair.

OFFICIAL REPORT OF MINUTES

OF

PROCEEDINGS AND EVIDENCE

This edition contains the English deliberations and/or a translation into English of the French.

Copies and complete sets are available to the public by subscription to the Queen's Printer. Cost varies according to Committees.

Translated by the General Bureau for Translation, Secretary of State.

STANDING COMMITTEE

ON

TRANSPORT AND COMMUNICATIONS

Chairman: Mr. H.-PIT LESSARD

MINUTES OF PROCEEDINGS AND EVIDENCE

No. 10

THURSDAY, JANUARY 23, 1969

Proposed trip to the Atlantic Provinces
Bill S-14 and Bill S-19

APPEARING:

The Honourable James Richardson, Minister without Portfolio

WITNESSES:

From the Department of Transport: Mr. Jacques Fortier, Legal Counsel; Mr. John Ballinger, Chief, Aids to Navigation, Marine Services; Mr. Nicholas Yost, Superintendent of Property Management; Mr. John Gray, Assistant Director, Legal Department, Canadian Transport Commission.

THE QUEEN'S PRINTER, OTTAWA, 1969

29552—1

STANDING COMMITTEE ON TRANSPORT AND COMMUNICATIONS

Chairman: Mr. H.-Pit Lessard

Vice-Chairman: Mr. Pat Mahoney

and Messrs.

Allmand,	Nesbitt,	[5] Serré,
Breau,	Nowlan,	Skoberg,
Carter,	[3] Perrault,	Thomas (*Moncton*),
[4] Corbin,	Portelance,	[1] Trudel,
Godin,	Pringle,	[2] Turner (*London East*),
McGrath,	Rose,	Woolliams—(20).

(Quorum 11)

Robert Normand,
Clerk of the Committee.

Pursuant to Standing Order 65(4)(b) notice was given of change in the membership of the Standing Committee on Transport and Communications

[1] Mr. Trudel replaced Mr. Smith (*St-Jean*), on January 21, 1969.
[2] Mr. Turner (*London East*) replaced Mr. Durante, on January 21, 1969.
[3] Mr. Perrault replaced Mr. Borrie, on January 21, 1969.
[4] Mr. Corbin replaced Mr. Goode, on January 21, 1969.
[5] Mr. Serré replaced Mr. Foster, on January 21, 1969.

ORDERS OF REFERENCE

HOUSE OF COMMONS
FRIDAY, January 17, 1969.

Ordered,—That the Standing Committee on Transport and Communications be empowered to consider and report upon the problems of transportation in the Atlantic Provinces, and that, for the purposes of its inquiry, the Committee be empowered to adjourn from place to place within Canada and the Clerk and the necessary supporting staff be authorized to accompany the Committee.

WEDNESDAY, January 22, 1969.

Ordered,—That the following Bills be referred to the Standing Committee on Transport and Communications:

Bill S-14, An Act to amend the Aeronautics Act; and

Bill S-19, An Act to amend the Navigable Waters Protection Act.

ATTEST:

ALISTAIR FRASER,
The Clerk of the House of Commons.

29552—1½

MINUTES OF PROCEEDINGS

(*Text*)

THURSDAY, January 23, 1969.
(10)

The Standing Committee on Transport and Communications met this day at 9.30 a.m. The Chairman, Mr. H.-Pit. Lessard, presided.

Members present: Messrs. Allmand, Mahoney, Nesbitt representing Mr. Grath, Nesbitt, Nowlan, Perrault, Portelance, Pringle, Serré, Skoberg, Thomas (*Moncton*), Trudel and Turner (*London East*)—(17).

In attendance: The Honourable James Richardson, Minister without Portfolio; *and from the Department of Transport:* Mr. Jacques Fortier, Legal Counsel; Mr. John Ballinger, Chief, Aid to Navigation, Marine Services; Mr. Nicholas Yost, Superintendent of Property Management.

The Clerk read the Third Report of the Sub-committee on Agenda and Procedure for the meeting held on January 21, 1969.

THIRD REPORT

The Sub-committee on Agenda and Procedure of the Standing Committee on Transport and Communications met at 3.30 this afternoon. The Chairman, Mr. H.-Pit Lessard, presided.

Members present: Messrs. Allmand, Mahoney, Nesbitt representing Mr. Thomas (*Moncton*) and Mr. Skoberg.

Your Committee met to study a tentative itinerary for its up-coming trip to the Atlantic Provinces. After discussion, it was agreed that the tentative itinerary prepared by the Chairman, be approved and recommended to the Committee for adoption.

However, your Committee recommends that special provisions be made for the Committee to ride on the "BULLET" in Newfoundland and that arrangements be made to that effect and included in the itinerary for Sunday February 23, 1969. Arrangements should also be made for the Committee to take a ride on the bus system which is scheduled to replace the "BULLET".

Should this be impossible, due to the fact that the train is not in operation, on Sunday, it is recommended that a Sub-committee be formed and authorized to ride the "BULLET" and the bus system on Tuesday February 25, 1969.

At 4.45 p.m., the Sub-committee adjourned.

Respectfully submitted,

H.-Pit Lessard,
Chairman.

Thereupon, on motion of Mr. Mahoney,

Resolved:—That the Third Report of the Sub-committee on Agenda and Procedure be adopted as read.

The members then read the tentative itinerary which was prepared by the Chairman.

After debate thereon, on motion of Mr. Mahoney, it was

Resolved:—That the itinerary prepared by the Chairman for the proposed trip to the Atlantic Provinces, be adopted. However, provisions will have to be made to include in the itinerary a ride on the train in Newfoundland and on the buses which are scheduled to replace train service in that Province. The Chairman is hereby authorized to communicate this itinerary to the Press.

Then Mr. Skoberg insisted that the Committee should hear evidence concerning the claims of the sub-contractors of the Great Slave Railway, filed against the Canadian National Railway.

It was brought to the attention of the Members of this Committee that a Report was tabled in the House seeking that its Order of Reference be enlarged so that it may consider these claims. (Second Report tabled in the House on December 3, 1968).

The Chairman then informed the Committee that he would look into the possibility of moving for concurrence in the Committee's Second Report to the House.

In accordance with the provisions of the new Standing Orders 65(7), it was moved by Mr. Allmand, that the Chairman be authorized to hold meetings, to receive and authorize the printing of Evidence when a quorum is not present.

And debate arising thereon, Mr. McGrath moved in amendment thereto, that the Chairman be authorized to hold meetings, to receive and authorize the printing of Evidence when a quorum is not present, but provided that at least 5 members, including the Chairman, be present.

After further debate, Mr. Skoberg moved as a dilatory superseding motion, that the motion under consideration be left in the hands of the Chairman who is hereby instructed to seek legal advice thereon.

Thereupon, the question being put on the said superseding dilatory motion, it was agreed to unanimously. The Chairman informed the Committee that Bill S-14, An Act to amend the Aeronautics Act, and Bill S-19, An Act to amend the Navigable Waters Protection Act, have been referred to this Committee for consideration.

Mr. James Richardson, Minister without Portfolio, was then invited by the Chairman to make a statement on Bill S-19 and was questioned thereon assisted by some officials of the Department of Transport.

The examination of the witnesses being concluded, they remained in abeyance.

Pertaining to the proposed trip of the Committee to the Maritime Provinces, on motion of Mr. Allmand, it was

Resolved,—That the Committee Clerk be authorized to advertise in the leading newspapers of the Maritime Provinces, the public hearings to be held

by the Standing Committee on Transport and Communications in Fredericton, New Brunswick; Halifax, Nova Scotia; St. John's, Newfoundland and Charlottetown, Prince Edward Island.

At 10:50 a.m., the Committee adjourned until 9:30 a.m. on Friday January 24, 1969.

Robert Normand,
Clerk of the Committee.

EVIDENCE

(Recorded by electronic apparatus)

Thursday, January 23, 1969

• 0939

The Chairman: Good morning, gentlemen. We are here this morning to hear a résumé of the proceedings at the meeting of our steering committee last Tuesday, relative to our trip to the Maritimes.

I hope each member has a copy of the little itinerary that we have had prepared.

• 0940

The members present at that meeting were Messrs. Allmand, Lefebvre, Mahoney and Nesbitt. Mr. Thomas and Mr. Skoberg were absent.

Mr. Thomas (Moncton): Mr. Chairman, I am not actually on the committee.

The Chairman: No.

Mr. Thomas (Moncton): I was just acting as a replacement for one day.

The Chairman: It was agreed in principle that we try to shorten this trip. There are many reasons for that, with which I agree, and you will see in the agenda a résumé of why we should shorten it. The reasons are the weather and the length of time and the expense, and so on.

I will have the Clerk read the report, if that is agreed.

The Clerk: (See Minutes of Proceedings)

The Chairman: Are there any remarks? Mr. Nesbitt?

Mr. Nesbitt: I have a question. The meetings of the Committee are to be advertised in the appropriate newspapers. Does that mean that other groups in the Atlantic Provinces, which might wish to make representations before the Committee and have not already submitted briefs, will have the opportunity of doing so, or what notice will they have to give? What about oral briefs?

The Chairman: They will have until January 26 to notify us that they wish to appear and present a brief in whatever capital we happen to be at that time.

Mr. Nesbitt: January 26?

The Chairman: Yes. We are planning to leave on February 16 and come back about February 25 or 26. Mr. McGrath?

Mr. McGrath: Will priority be given to the briefs already submitted, and will the supplementary briefs take second priority? Will that be the procedure?

The Chairman: Yes. Those who have already submitted briefs will be notified. If they wish to modify their brief by adding to it, or taking away from it, they will have the opportunity to do so.

Furthermore, as soon as we have the consent of this Committee, all the newspapers in each capital will be notified of when the Committee will appear in their capital.

Mr. Pringle: I am glad you mentioned that, Mr. Chairman. I have seen this done relative to a plenary session or a hearing. People take the attitude that they can come and start the brief session all over again, and the unlimited time given to them results in a very disappointing situation. For that reason I think we should make it clear that their time will be limited, and that they must give some advance notice. Otherwise, we could be involved in a very embarrassing situation.

The Chairman: Of course we will have to be so notified. This is mentioned in the résumé of our proceedings which was read this morning. So much time will be allotted for the presentation of each brief, and they will have plenty of time to make up their minds on whether they wish to appear.

Mr. McGrath?

Mr. McGrath: Mr. Chairman, I just have two comments to make. I am looking at this for the first time. I realize that the subcommittee has probably put a lot of thought into it, but my first comment concerns the itinerary itself.

Mr. Chairman, it is a pretty tight schedule that has been set out for us. I am sorry that it is laid out in such a way, because I think that St. John's, Newfoundland, should be visited last. I say that seriously, because it is sometimes difficult to get into and out of St. John's because of weather conditions.

Mr. Allmand: Charlottetown, too.

Mr. McGrath: Not so much Charlottetown.

Mr. Allmand: We were stuck there for six hours.

Mr. McGrath: Yes; but that was in a bus, not flying.

The Chairman: Mr. McGrath, for the benefit of the Committee we have set up a special schedule for St. John's. I know many of us would like to use the "Bullet" train. We have a special note on that which I will ask the Clerk to read.

Mr. McGrath: You are a very wise Chairman. You anticipated my second remark.

• 0945

The Chairman: We are planning to visit that train in Newfoundland. I know many of you would like to have this opportunity. Perhaps the hour will be late, but we do not want to come back and say: "We did not have the chance to go and see what this thing looks like." We will inquire about it in St. John's. We could board the "Newfie Bullet" in St. John's at 11.30 at night and ride in it for 31 miles.

Mr. Thomas (Moncton): On what day, though? Never mind the time—what day?

The Chairman: I beg your pardon?

Mr. Thomas (Moncton): I am not so worried about the time as the day.

The Chairman: That will be on Friday.

Mr. McGrath: Whose side are you on, anyway?

The Chairman: On Friday at 11.30 we could ride in that train for 31 miles.

Mr. McGrath: Mr. Chairman, would you give consideration to taking the train to Gander and boarding our plane there?

An hon. Member: How far is it?

Mr. McGrath: Gander is 200 miles.

The Chairman: That is about 10 hours' travelling.

Mr. McGrath: We would get into Gander in the morning.

The Chairman: The only trouble is that the train does not operate every day; it runs about three times aweek.

Mr. McGrath: Would the train that we take at night be the regular train?

The Chairman: Yes.

Mr. McGrath: The same train that we would take for 30 miles we could take to Gander and join our aircraft.

An hon. Member: How far is it?

Mr. McGrath: Two hundred miles.

Mr. Allmand: Since we are going on a Friday and will be appearing in St. John's on a Saturday we would have to come back to St. John's.

Mr. McGrath: We have to sleep anyway.

Mr. Allmand: We would have to come back to St. John's.

It does not leave the day we leave St. John's—the train does not travel.

An hon. Member: It would be the best thicg that could happen if we are stranded there for four days in the fog.

Mr. Skoberg: Mr. Chairman, what arrival date do you have for there?

The Chairman: It will be Friday, the 21st.

Mr. Skoberg: At what time?

The Chairman: At 11:30 p.m.

• 0950

Mr. Skoberg: There was a suggestion in the Steering Committee that we use Sunday, February 23 to good advantage because there would be so much travelling time. Was that explored any further?

The Chairman: Yes, but on Sunday we cannot get a train.

Mr. Skoberg: There is nothing out of St. John's on Sunday?

The Chairman: No. We did worry about that yesterday. Perhaps some solution will be forthcoming without upsetting the whole schedule.

Mr. Skoberg: Where would you go on Friday, February 21?

The Chairman: Friday, February 21?

Mr. Skoberg: If you leave at 11:30 p.m.?

The Chairman: We will be in St. John's on Friday, February 21 for the whole day. We could sit all day. The Minister intends to have a little party for the members on Saturday night.

Mr. Skoberg: Is it the intention then that we leave there about 11:30 p.m., go out about 30 miles and return?

The Chairman: Yes. We will go about 31 miles on the train. A bus will be waiting there. When we get off the train we will take the bus and come back.

Mr. Skoberg: Will that be one of the buses that is presently used in the transportation system?

The Chairman: Yes.

Mr. Skoberg: Oh, that is fine.

[*Interpretation*]

Mr. Corbin: Mr. Chairman, this is a very important question. We do have interpreters here this morning but we are unable to hear them because there is no audio equipment. Personally I can get by without it. Pardon me, it's working now. Usually we have them on the table.

[*English*]

Mr. Mahoney: Mr. Chairman, may I move that the itinerary as recommended by the Steering Committee be adopted?

Mr. Nesbitt: Mr. Chairman, I am sorry but I have just one comment.

I quite agree with the itinerary; I think it is excellent. I was wondering if at the end of the trip on Tuesday February 25 at Charlottetown, we could perhaps briefly visit Labrador City. Some members have expressed the wish to visit this new city, which I understand is quite large. The purpose of the visit would not be to hear briefs but to have a look at the layout of the place. Could consideration be given to this suggestion?

Mr. Chairman: Mr. Nesbitt, perhaps this matter could be left in the hands of the Steering Committee. I have not had a chance to talk to the Minister about it but I believe he would agree, if there was a possibility, of doing so.

Mr. McGrath: I would just like to add, Mr. Chairman, in support of what Mr. Nesbitt said, that it is inconveivable to me to consider a tour of the Atlantic Provinces without touching on Labrador in some way because this whole territory is so far off the beaten track that it is totally dependent upon transportation for its very existence, for everything that goes in and out of there. This is an area that is under development—quite an extraordinary exciting development and, as Mr. Nesbitt said, if the Committee could just touch in there to get the feel of the isolation of Labrador and the importance of transportation policy generally to the territory, I am sure it would be time well spent.

• 0955

The Chairman: If you will leave it up to me I will talk to Mr. Hellyer about it. Of course there is always the question of weather—we do not know what it will be like.

Mr. Allmand: With respect to some questions that were brought up earlier relating to oral presentations and so forth I think the Steering Committee decided that we would ask those who have briefs prepared not to read them to the Committee because, otherwise, we would never get through our work. We would be expected to read them beforehand.

The Chairman: I think this is our intention.

Mr. Allmand: In other words, all we will do is ask them to give a brief introduction and then we will question them, having already read their briefs.

Mr. Nesbitt: I quite agree.

Mr. Allmand: I suppose if there was time at the end of the day or at the end of the sitting we could hear others but we would have to give priority to the people who have prepared briefs?

Mr. Skoberg: You mentioned the 26th. If these people who want to present briefs write in by the 14th or 15th would that not give them precedence over the ones already there?

The Chairman: Do you mean if they come in after we have gone or before we go?

Mr. Skoberg: What happens if they notify the office here by the fourteenth that they wish to present a brief? Do you have a cut-off time at all?

The Chairman: We will have time.

Mr. Skoberg: Will that be the fourteenth? If not, what will the date be?

The Chairman: We should have a deadline of the fourteenth for receiving briefs so that we can have a chance to look at them.

Mr. Skoberg: And then if there was sufficient time even those who have not asked would be permitted time to present their briefs?

The Chairman: Do we need to have a motion to that effect?

Mr. Skoberg: As long as it is understood.

Mr. Nesbitt: Before the motion is put I have one other question for clarification.

We were discussing the advertisements that would be made in the newspapers. Could the Clerk give us a list of the papers? I understood that perhaps advertisements were to appear only in the newspapers of the capital cities of th provinces. However, there are in some provinces other large centres. For instance, there is Saint John, Moncton and Newcastle in New Brunswick.

Mr. Corbin: There are six dailies in New Brunswick.

Mr. Nesbitt: Yes.

Mr. Corbin: There is Fredericton, Saint John—Yes, I agree with you; this should be advertised throughout.

Mr. Nesbitt: People in Saint John and Newcastle want to be made aware of the fact that the Committee will be there.

The Chairman: If you do not mind, we will give you a resumé of the newspapers.

The Clerk: New Brunswick: *L'Évangéline;* the *Telegraph-Journal; Northern Light;* Moncton *Times-Transcript; Le Madawaska;* the daily *Gleaner* and the *Graphic.* Newfoundland: The *Western Star* and the St. John's daily *News;* Nova Scotia; Truro daily *News,* Post publishing Company.

An hon. Member: You did not mention Halifax. There is the Halifax *Chronicle-Herald.*

Mr. Nesbitt: I think perhaps there ought to be an advertisement in the Sydney and Yarmouth papers.

The Chairman: Mention was made of the Halifax *Chronicle-Herald*? Are there any others?

An Hon. Member: There is the Sydney paper, the *Cape Breton Post.*

Mr. Nesbitt: I was thinking of Yarmouth too.

• 1000

Mr. Thomas (Moncton): Did you mention New Glasgow? There is the New Glasgow daily *News?*

Mr. Nowlan: With respect you have an awful lot of New Brunswick papers that are really quite superficial. You have several more dailies in Nova Scotia, but perhaps you could cover the Halifax *Chronicle Herald* and that shore one. There is the Yarmouth *Herald.*

The Chairman: He only has two in New Brunswick.

Mr. Nowlan: I thought he had the *North Shore Leader* we had the *Evangeline, Le Madawaska* and the *Tribune.*

Mr. Corbin: I think they want to cover all the regions in New Brunswick, because the dailies do not necessarily get everywhere. In my region *Le Madawaska* is the important thing.

The Chairman: Do you want to add Sydney as well?

Mr. Nowlan: No. I presume you have the Sydney *Cape Breton.* There are only two basic dailies, the Sydney *Cape Breton Post* and the Halifax Chronicle *Herald.* I think you show it as the Post Publishing Company. If that is the Sydney *Cape Breton Post,* that covers it, as well as the Halifax *Chronicle Herald.* Then there is the Truro *News,* or whatever it is called, if you want to send it there. If you are going to send it to the Truro *News* you should also send it to the Yarmouth *Herald,* which is at the other end of the province and it is a daily.

The Chairman: We will go over it again if you wish.

L'Evangeline. Agreed?

Some hon. Members: Agreed.

The Chairman: The *Telegraph-Journal*, the *Northern Light*, the Moncton *Times-Transcript*, *Le Madawaska*, *Gleaner* and the *Graphic* at Campbellton. Agreed?

Some hon. Members: Agreed.

The Chairman: In Newfoundland the *Western Star*. Agreed?

Some hon. Members: Agreed.

The Chairman: The St. John's *News*?

Mr. Skoberg: Mr. Chairman, the St. John's *News* is more of a city paper. The *Evening Telegram* would get more circulation outside the city. If you cannot use the two St. John's papers, obviously the preference would have to be for the one with the wider circulation, which would be the *Evening Telegram*.

An hon. Member: With one is Grit and which one is Tory!

The Chairman: We will use them both. It makes no difference whatsoever.

Mr. Perrault: Mr. Chairman, in a major population centre of that kind I think both publications should be used.

The Chairman: We will put them both down.

An hon. Member: It is the same thing with Moncton and St. John's.

The Chairman: What is the name of the paper again?

Mr. Thomas (Moncton): The *Evening Telegram*. It is one of the outstanding newspapers of Canada.

The Moncton Publishing Company publishes the *Times-Transcript* and when you place the ad I suggest it be placed in both papers, because one is a provincial paper and one is a city paper.

Mr. Corbin: (inaudible)

Mr. Nowlan: The Moncton *Times-Transcript* and the *Telegraph-Journal* have the widest circulation in the province.

Mr. Perrault: Is there any publication covering Labrador? I suppose the population is so scattered that they do not have their own publication.

The Chairman: I think we should find out if we will go to Labrador or not before sending any...

An hon. Member: It is part of Newfoundland.

Mr. Perrault: There is no newspaper there.

Mr. Nesbitt: Suppose somebody should want to come to St. John's to present a brief? However, I understand that the St. John's paper is the only one.

The Chairman: So, we were up to the St. John's *News*?

• 1005

Mr. Nowlan: If we are going to start distinguishing between the capital papers and the provincial papers such as the St. John's or the Moncton situation, which I really question, then you have the same situation in Halifax. You have the Halifax *Mail Star*, which is an evening city paper, and you have the Halifax *Chronicle Herald*, which is a daily provincial paper. However, if you put it in the provincial *Chronicle Herald*, it is also read in the city in the morning, and I do not really see the necessity of putting it in both the evening and the morning papers.

Mr. Corbin: It is the same in Toronto or Winnipeg or Vancouver. You would put a formal notice in all the newspapers.

Mr. McGrath: The Committee should not run the risk of showing a preference for one or the other.

Mr. Nowlan: That is right. Then you have to put it in the Dartmouth *Free Press*, which is a daily paper. It is the second largest paper in Nova Scotia.

Mr. Nesbitt: Mr. Chairman, this is just a suggestion but it might obviate a lot of additional steps if after the Committee is closed, if the Committee would authorize it, members of the Committee check with the Clerk to make sure that the newspapers in the areas are covered. We want to be sure that they are all covered.

The Chairman: This way, you see, there will be a standard line of conduct.

There is another one, the Post Publishing Company at Sydney. Is that right?

Mr. Nowlan: That is the Sydney *Cape Breton Post*, I presume.

The Chairman: Yes. There are 15 newspapers.

Mr. Thomas (Moncton): How many do you show for Prince Edward Island? The *Guardian* and the Summerside paper? What do you show for Prince Edward Island?

Mr. Nowlan: Mr. Chairman, in Charlottetown it is the *Guardian* and it is the Summerside *Journal-Pioneer,* in Summerside.

Mr. Thomas (Moncton): Do you show Prince Edward Island at all?

The Chairman: Yes, both papers.

Mr. Nesbitt: I have a suggestion. We should check the list afterwards and then authorize the Committee to put the ads in the appropriate papers. It is better to get them all in than miss some place.

Mr. Breau: Are we coming back on the Bullet? It is going to take four hours from Charlottetown to Ottawa. What type of a plane is this?

An hon. Member: What type of plane is it?

Mr. Breau: What type of plane?

An hon. Member: Vanguard.

The Chairman: We put down a certain time but this is not completed as yet. We were in touch with Air Canada and we will be in touch with them again to have an assurance of that. You will receive another agenda showing the proper dates and hours.

Mr. Mahoney: Would it now be in order to move that the minutes of the steering committee be approved?

The Chairman: Mr. Mahoney, I will ask the Clerk to read the minutes of the steering committee and then you can put your motion.

Mr. Mahoney: Right.

The Clerk: (See Minutes of Proceedings)

Mr. Mahoney: I so move.

Mr. Nesbitt: I second the motion

Motion agreed to.

• 1010

The Chairman: It has been moved by Mr. Mahoney and seconded by Mr. Nesbitt that the minutes of the steering committee be approved.

Mr. Allmand: Did Mr. Mahoney move that the minutes be approved or that the itinerary be adopted?

Mr. Mahoney: I think the itinerary is included in the minutes.

Mr. Allmand: You are satisfied that that is clear now?

Mr. Turner (London-East): Mr. Chairman, will you give us that last date again? Did you say February 28?

The Chairman: February 26.

An hon. Member: If we could not do it while we are there we could . . .

The Chairman: In the arrangements we are leaving an opening between the dates.

Does it meet with the approval of the Committee that the itinerary be approved?

Some hon. Members: Agreed.

Mr. Skoberg: Mr. Chairman, further to that—and we discussed this in the subcommittee—I wish to present the following motion before we get into other business: That this Committee investigate the outstanding claims of certain contractors involved in the construction of the Great Slave Railroad; that representation be requested to be made before this Committee on February 13 and 14, 1969; and that this motion be reported to the House.

The Chairman: Mr. Skoberg, I discussed that with the Minister last night and I understand that that would take an order from the House. We do not have the right to take this action; there has to be an order from the House to receive the representations from the contractors.

The contractors did not deal with the government but with the CNR at the time and if they want a hearing they should ask to appear before the CNR. When we hear the CNR the occasion for the companies who want to be heard by the CNR might be to appear here. It would, however, take an order from the House to have this hearing before the Committee.

Mr. Skoberg: Mr. Chairman, I am suggesting that if this motion were put before this Committee it might initiate the hearings. If it were accepted in the House they could issue this order, as you suggest.

This matter has been dragged out too long. It was previously before this Committee. It was reported back to the House once before and no action was taken on it. We would be doing a good service to these people who have been patiently waiting to be heard.

If we wait until the Canadian National estimates are before us to discuss this matter it will be utterly impossible for us to handle everything. We could devote two days to it now, and if the Minister were agreeable and it were reported to the House by yourself and accepted a motion could be made and the order...

The Chairman: But we have no right to take such a motion.

Mr. Skoberg: Surely this Committee can initiate action. Otherwise, what is the purpose of the Committee? I am referring to initiation. I agree that the final determination will have to be made by the Minister, but somewhere along the line someone has to initiate this; and I presumed that this Committee had already done so when we reported it to the House some time ago.

The Chairman: Mr. Nesbitt?

Mr. Nesbitt: Mr. Chairman, I quite agree with Mr. Skoberg that the claims of the companies who have had an unfortunate experience with this railway in the Northwest Territories should be heard; and I also think that they should be heard at our earliest convenience; but it was my understanding, from informal conversations with the House Leader, that the vehicle for bringing this before the committee would be the reference to the Committee of the annual report of the Canadian National Railways, at which time the railway officials, and others, would be present. Perhaps you could make arrangements with the Minister to have that report at a very early date.

• 1015

The Chairman: Mr. Mahoney?

Mr. Mahoney: In addition to agreeing completely with what Mr. Nesbitt has said may I point out that the urban transportation conference is to be held in Toronto from February 9 to 12 inclusive, and some of us hope to attend it. It is certainly very important to me.

Were we to jam these claims into the very heavy schedule of the trip to the Atlantic Provinces I really feel that we could do less than justice to them.

Mr. Skoberg: Mr. Chairman, I would be quite agreeable to changing the dates, but the question before you, Mr. Chairman, is whether or not we can initiate this action in the House by your reporting in. If this is not possible, and if you rule me out of order on that particular point, I am quite satisfied, but it is my opinion that we can initiate action in the Committee, particularly under the new rules which give more authority to committees.

The Chairman: Mr. Allmand?

Mr. Allmand: Mr. Chairman, we have already requested the House to expand our terms of reference. With all due respect, we can pass the resolution requesting the House to give us certain terms of reference, and we have done that. Our subcommittee on agenda and procedure approved that we hear the Great Slave Railroad claim, and this Committee approved that we send a report to the House requesting that that reference be given to us. That report is now tabled in the House.

Actually, your motion is not necessary, because on the table of the House of Commons is a report requesting that this Committee be given that reference. All that has to be done is for the Chairman to move compliance with the report.

That report also approved our studying problems in the Atlantic area, but we have already accepted that part of the report and it has been referred to us. All we have to do is move the balance of this report and we have it.

Mr. McGrath: That is right.

Mr. Allmand: We have already asked for that reference, and the request has been tabled in the House.

Mr. Skoberg: Mr. Chairman, I move that the balance of the report be moved in the House.

Mr. Allmand: Actually the Chairman would have to move it.

The Chairman: We do not need a motion for that. I could refer it to the House.

Mr. Allmand: Mr. Skoberg, every day you will notice that the Speaker of the House says under motions: "Second report of the Transport Committee, Mr. Blouin". Mr. Blouin has been absent ill, so it has not been moved. That is the report which asks that the reference on the Great Slave Railroad be studied.

Mr. Skoberg: In other words, for clarification—and Mr. Chairman, I am sorry that I have taken up this time—what we do in this Committee means nothing until you move the

report. I suggest that you have a responsibility to move it so that the Committee's part in it is concluded. If the report is not moved no action can be taken.

There would be absolutely nothing wrong in you moving the report, as Mr. Allmand has suggested, and I quite appreciate his comments.

The Chairman: If you will leave it with me I will see the House Leader today and see what I can do.

Mr. Nowlan: The only difficulty—if my memory serves me correctly—is that this report which has not been moved is potentially contentious. It is before the Committee on Privileges and Elections and it is obviously there because of a House order. I really question how—

Mr. McGrath: Yes; but one part of the report has already been—

Mr. Nesbitt: I suggest we leave it with the Chairman.

The Chairman: Yes, leave it with me.

Mr. Nowlan: A simple way to get around it would be to ask for a separate resolution restricted solely to the point Mr. Skoberg has raised.

The Chairman: Is it agreed, Mr. Skoberg, that it be left up to me and I will see what I can do?

Mr. Skoberg: As long as I can be assured that some action will be taken I am quite satisfied.

The Chairman: Yes.

Mr. Skoberg: But let us not leave it in abeyance for ever and ever.

The Chairman: Yes, Mr. Allmand?

Mr. Allmand: Mr. Chairman, we also have to deal with the two bills that were passed by the House of Commons last night, Bills Nos. S-14 and S-19. What plans do we have for dealing with these?

The Chairman: There were brought down this morning and I was asked by the Ministers if we could get started on them. I will ask for a motion.

Article 65, paragraph (7) states:

> ...the chairman to hold meetings to receive and authorize the printing of evidence when a quorum is not present.

• 1020

Mr. Allmand: This is under the new rules?

The Chairman: Yes.

Mr. Allmand: We are allowed to reduce our quorum merely to hear evidence.

I so move.

Mr. Nesbitt: I would like to have some clarification of this matter. I quite agree that it is sometimes unavoidable when our witnesses are from out of town, but could we not perhaps have some agreement about it? We do not want to have the situation where only the Chairman and one of the members could receive evidence. There would have to be a representative group present.

The Chairman: We could carry on our work but there would be no voting.

Mr. McGrath: What constitutes a full quorum?

The Chairman: It consists of 11 members.

Mr. McGrath: Could we not reduce our quorum to five for that purpose?

Mr. Allmand: Perhaps you will so move. I think that is fair.

Mr. Nesbitt: It should be a representative group. For the purpose of hearing evidence ...

The Chairman: I do not think there is any provission for us to reduce the quorum.

Mr. Allmand: Oh, yes, it says right in the rules. In the new rules it states that for the purpose of hearing witnesses, committees may reduce their quorums. I have been to two committees already since the new year started and both committees have done it.

Mr. McGrath: Reduced their quorums for this purpose?

Mr. Allmand: Yes.

Mr. McGrath: I think it is the only safe way to do it, because otherwise the Chairman could hear evidence himself.

Mr. Pringle: Mr. Chairman, do we have the wording of that Standing Order? It seems to me it was read differently in the Agriculture Committee. Just the wording.

The Clerk: Article 65, paragraph (7):

> (7) The presence of a quorum shall be required whenever a vote, resolution or other decision is taken by a standing or a

special committee, provided that any such committee, by resolution thereof, may authorize the chairman to hold meetings to receive and authorize the printing of evidence when a quorum is not present.

Mr. Pringle: I would suggest that does not say we can reduce our quorum. It says that we can operate with less than a quorum. I doubt if that gives us the authority to establish another quorum.

Mr. McGrath: To operate with less than a quorum is the same as reducing a quorum.

Mr. Pringle: It is not unless you specify that there must be at least five. Then you are establishing a quorum which is not the established quorum.

Mr. McGrath: But surely all we are doing is taking precautions to ensure that we shall not hear evidence with just the Chairman in the Chair.

Mr. Pringle: No, no, but do you not think we should have confidence in our Chairman that this would not happen?

Mr. McGrath: Oh, we have all the confidence in the world in him.

Mr. Pringle: Because if we start playing around with five, or six, or four...

Mr. Allmand: Mr. Pringle, I would move that we have a quorum of five just to hear evidence, because I know there are precedents for this.

The Chairman: We cannot do that, Mr. Allmand.

Mr. Allmand: I am positive that we can do it, but you are the Chairman.

Mr. Pringle: Not according to the Standing Orders.

Mr. Allmand: Leave it in abeyance until the next day and check the procedure with Mr. Dubroy.

The Chairman: Mr. Allmand, the idea is that we could study all day long but we are not allowed to take any votes. No decisions can be taken. It is just a matter of carrying out...

Mr. McGrath: Mr. Chairman, perhaps the word "quorum" should not be used.

The Chairman: The minute that you mention "quorum", a vote could be taken with five members.

Mr. McGrath: Perhaps we could get around it this way, Mr. Chairman. Perhaps we could say that evidence will only be taken when there are at least five members present. Of course I know you are not reducing the quorum. It is a legal technicality.

Mr. Nesbitt: The only reason I think might be that somebody from one of the departments might want to ask questions on the evidence or something.

Mr. Pringle: It seems to me that if the Standing Order is well written and well taken, we should accept the resolution according to the Standing Order as established, and we should have confidence in the Chairman that he would not conduct a meeting if it was completely...

Mr. McGrath: He may not be Chairman. We have already had a couple of changes in the Chair.

The Chairman: Perhaps the Clerk could read Article 65, paragraph (7), of the Standing Orders again.

The Clerk: It reads as follows:

(7) The presence of a quorum shall be required whenever a vote, resolution or other decision is taken by a standing or a special committee, provided that any such committee, by resolution thereof, may authorize the chairman to hold meetings to receive and authorize the printing of evidence when a quorum is not present.

Mr. Pringle: Mr. Chairman, if no one else is, I would be prepared to move that as a resolution for the adoption of the Transport and Communications Committee.

• 1025

Mr. Allmand: There is another good point that we overlooked, Mr. Chairman. No meeting should be called unless notices were distributed to all members of the Committee in any case. So the Chairman could not sneak a meeting by us.

Mr. Nesbitt: No one suggested that the Chair could do that.

The Chairman: It is moved by Mr. Pringle and seconded by Mr. Trudel...

An hon. member: What is the motion for?

The Chairman: Could we use the wording of the new rules?

Mr. Pringle: That is my motion.

Mr. McGrath: That is virtually right back to where we were. I would like to move an amendment to that, that we shall only take evidence when there are at least five members present, including the Chairman. Four plus the Chairman.

Mr. Skoberg: I move that this be tabled for further clarification, Mr. Chairman. Let us get on with our...

The Chairman: Just a minute. There are three motions.

Mr. McGrath: No, just one amendment. I move an amendment that at least four members plus the Chairman be present before evidence can be taken.

Mr. Nesbitt: Did you say plus or including the Chairman?

Mr. McGrath: Including the Chairman. No, I mean five members including the Chairman.

Mr. Skoberg: I move we table the motion for further clarification.

The Chairman: You do not agree with the motion of Mr. McGrath?

Mr. Allmand: Mr. Skoberg's motion takes precedence, and I would support Mr. Skoberg so that you could clarify it, Mr. Chairman, with the legal officer of the House, Dr. Ollivier, or the Clerk of the House, Mr. Fraser, to see whether we can do this particular thing.

The Chairman: You are all in favour of the motion of Mr. Skoberg?

Some hon. members: Agreed.

Motion agreed to.

Mr. McGrath: Mr. Chairman, is it your intention to issue a press release today with respect to the itinerary of the Committee for the Atlantic Provinces trip?

The Chairman: It is up to the Committee to decide.

Mr. McGrath: The press are waiting for it. Word got out that there was an itinerary being prepared.

The Chairman: They all know we are all going, but...

Mr. McGrath: I would suggest that the Chairman meet with the press today and release the itinerary and answer any questions they may have in relation to it.

The Chairman: Does the Committee agree?

Some hon. members: Agreed.

The Chairman: Is it agreed that I be authorized to give the newspapermen an agenda of our trip to the Maritimes?

Some hon. Members: Agreed.

Mr. Allmand: Mr. Chairman, just before you brought up the question of the quorum, I asked a question about what we intended to do with Bill S-19 and Bill S-14. Could we decide on that now? What are our plans with respect to these two bills?

The Chairman: There is a copy of these two bills available for each member. The Minister asked me if it would be possible for us to study those bills before the Committee went on their Atlantic Provinces trip. You know, the Committee has to make reports before the estimates come up, so I think it would be a great help if we could start with those two bills.

Mr. Nesbitt: I might say, sir, that I am quite agreeable to that. I would be agreeable to it at this meeting except for one thing. I tried to obtain copies of *Hansard* for the remarks that were made on Bill S-14, but because of the late sitting last night *Hansard* is not yet available. I think in all fairness members should have an opportunity of reading the remarks that were made in the House yesterday before we study the bill. I would be agreeable to meeting at the earliest opportunity after we have had a chance to read the remarks.

Mr. Allmand: Could we leave that with the steering committee, Mr. Chairman, to plan sittings to deal with these bills as quickly as possible?

The Chairman: I think the Committee should look over the matter this morning. We have the Minister here with us this morning, and I think he would be happy to answer your questions.

Mr. Allmand: But, Mr. Chairman, I think Mr. Nesbitt has a point. First of all, we only have a half an hour left in this sitting. While I have read the background material on the

bills and some others might have, I am wondering if it would be in order for us to proceed this morning? I do not know what the Minister thinks, because as the Opposition say, they have not had a chance yet to...

Hon. James Armstrong Richardson (Minister without Portfolio): Mr. Chairman, I left the Cabinet meeting to come here, but I would be glad to go back to it if the Committee would prefer to do this, as Mr. Nesbitt has suggested, at another early meeting. I do not particuly want to defer it.

The Chairman: While we still have half an hour, I wonder if the Committee would agree if the Minister would make a very short briefing of the bills. Then we could adjourn at 11 o'clock and come back this afternoon?

Mr. Richardson: You want to adjourn at 11 o'clock?

The Chairman: Yes. Is it agreed?

Mr. Pringle: I am unable to come this afternoon, Mr. Chairman. I have a previous commitment.

The Chairman: How about tomorrow morning? Tomorrow morning at 9.30?

An hon. Member: Fine.

Mr. Pringle: Is there not another?

The Chairman: No, no, there is nothing tomorrow.

Mr. Pringle: O.K. I am agreeable.

The Chairman: So I will ask the Minister, Mr. Richardson, to give us a brief résumé of Bill S-19.

• 1030

Mr. Nowlan: You said in the morning. Does not the House meet at 10 o'clock in the morning?

An hon. Member: Eleven o'clock.

The Chairman: Is it too much to get up early two mornings in a row?

Mr. Richardson: Mr. Chairman and gentlemen, the officials of the Department are present with me. I understand that at this meeting there may not be much opportunity for detailed questions, but I want you to know that with me are Mr. Fortier, the Legal Counsel of the Department; Mr. Ballinger, (Chief) Aid to Navigation Marine Services; Mr. Yost, Superintendent of Property Management in the Department of Transport; Mr. J. T. Gray, Assistant Director of the Legal Branch of the Canadian Transport Commission; and my executive assistant, Mr. Tom D'Aquino, who has followed this legislation closely.

The Navigable Waters Protection Act is well-named and it is very clear what the purpose of it is. It is to protect navigable water.

I do not need to emphasize to this Committee the importance to shipping of our navigable waters. Shipping is a very important aspect of the whole field of transportation, and if our navigable waters are allowed to become obstructed, or dangerous, it has a damaging effect on our whole transportation system. That is the broad purpose of the bill.

One of the reasons for amending the Act at this time—because that is primarily what this bill is doing—is that in the first instance ships have become larger in recent years, and they draw more water. Therefore, an area that was at one time, safe for navigation is now no longer safe because of the deeper drafts of the bigger ships.

You will note, as we examine the bill, that there are changes which make it an offence to let anything sink into the water below 20 fathoms. The limit is now 12 fathoms. That is a fundamental change in the bill. I will not try to go into the detail at the moment. I am simply pointing out that it relates to the size of ships and their speed. They require a wider channel to move in than they have up until now.

As I have mentioned in the House, by way of background, the kinds of matters which come under this bill are bridges, particularly new bridges, and repairs to old bridges; and pipelines of all kinds and transmission lines. These are not just lines that are under the water, although that is where most of them are, but lines that go across the top of the water. They also can be an obstruction to navigation, and therefore have to have approval. In fact, anything man-made that obstructs navigation will have to be approved under this amended Act.

• 1035

I am sure some of you are in a sense, perhaps more familiar with this Act than I am, but it is in three parts. To give the broad divisions, the first part of the Act deals with man-made obstructions which are created intentionally. Bridges are a good example, or cable lines.

Part II of the Act deals with obstructions which are not intended as obstructions but

which nevertheless, are man-made. They can be solids that are discharged by commercial concerns and which sink to the bottom and form a mound, or an obstruction which was not intended. That, broadly, is the second part.

Part III deals with ferry cables and drawbridges, or swing bridges.

Mr. McGrath: May I ask a question for clarification? You talk of "obstruction." How broadly can that term be defined? For example, would it cover derelicts left on a public beach?

Mr. Richardson: Yes; this is one of the items now included in Part II. Ships that are...

Mr. McGrath: Abandoned?

Mr. Richardson: Abandoned; that is right.

Mr. McGrath: In harbours and on beaches?

Mr. Richardson: That is right. This is what I call the sort of inadvertent, or accidental, obstruction as distinct from the planned obstruction such as the bridge or the cable. It includes those.

In fact, that is a very important amendment to the Act. It provides for the removal of ships or barges that are floating and could become obstructions, for which there is no legislation at the present time.

This whole bill, as I said in introducing it, is designed to bring the Act up to date, to make it easier to administer and to make certain that navigable waters are safe for larger ships.

I do not propose to go into all the details of it without the aid of the officials, but there is a new definition of "a work". That is the common term used throughout the bill to describe what may be a bridge, or a cable, or whatever it may be. It is known as "a work". The definition of a "a work" includes the dumping of fill and the excavation of material from the bed of navigable waters. In other words, we have widened the definition of what is "a work". I understand that the officials will explain this to us in greater detail. There are in Canada today areas where there is dumping and there is nothing under the present Act to enable it to be stopped. This will be done under this amendment to the Act.

Another change that you will note relates to the $5,000 value of any work. The basic amendment there is that we are deleting the $5,000 as one of the criteria that have to be examined. We are concerned only with whether or not something is an obstruction to navigation, not whether it is under or over $5,000 in value.

As I understand it, the present Act, really also covered anything of any value, but it contained a statement which made it appear that the Act would not apply if the work were under $5,000 in value. I understand from the officials that they spent a lot of time arguing with various concerns about whether or not a pier that they were erecting was, in fact, worth less than $5,000; because if it were, perhaps they would not have to ask for approval. We have simply deleted the $5,000, so that if something costs only $50 but may be an obstruction to navigation it has to be approved under the Act.

Another major change will be the right to alter a work, as distinct from having to remove it in total.

• 1040

We also have an item about fees for special trips. This relates to the situation in which someone wants to proceed very quickly with some construction and, in the normal course, the Department cannot get there to give approval in the time that the owner would like. There is provision to have special inspectors sent out and have this charged to the owner—in other words, if he wants a little faster action. I questioned this one a bit myself. I said: "How long does it take you to get there in the normal course?" I was assured that it was not too long, something in the order of six weeks in which they could get approval, but if they want faster approval there is provision to get it.

I have mentioned the no dumping in the water under 20 fathoms and that is the important change. If something is being dumped in the water it must be in water that is deeper than 20 fathoms. Prior to this it could be in water up to 12 fathoms. In other words, you could be dumping something that would be building up on the bottom and as long as it was below 12 fathoms, the way the Act reads at present, that was all right. Now it is illegal to dump that material unless it is below 20 fathoms.

Mr. Nesbitt: Is that, perhaps, to do with future control of pollution and that sort of thing?

Mr. Richardson: No, it is not really related to pollution. I should state there has been a

lot of discussion about that. Pollution is an important problem but it is not dealt with in this Act.

Mr. Nesbitt: Not as such, but I was wondering if this might have been some of the thinking behind this change in the legislation.

Mr. Richardson: No; I believe the thinking is related entirely to depth, to navigation, and there will be other acts, of course, under which pollution is a factor. Pollution did not enter the thinking there, I do not believe, although you are quite right; it can probably have an indirect beneficial effect on the problem of pollution but that is not the reason for it.

Mr. Nowlan: Was that not true in the Toronto situation and the dumping that has been discussed from time to time, perhaps in this Committee and the House, around the Toronto area and the encroachment on the bay or the sea which was up in the air? As I understand it it was questionable whether the government had authority—or if they had authority they were not perhaps executing it—over some of the dump that in and around some of the Toronto area for apartment buildings.

Mr. Richardson: I understand that the Act now will cover those situations. We might cover that in more detail, but I understand that clearly is exactly what will be covered under these regulations.

Mr. Nesbitt: I have one other question, and this is always a subject of some argument and contention in the places I have been and I am sure it has with other members. I was wondering if either you or perhaps one of your officials could give us an interpretation of the term "navigable waters" which includes court decisions, and the like, that have been made in that regard. It is rather a confusing term to many people.

• 1045

Mr. Richardson: I think under that one I should certainly bow to legal advice. Perhaps the officials could come forward, because I think they would be heard much better. Mr. Fortier and Mr. Ballinger, would you please come forward? Tom, do you want to come up here as well?

The Chairman: Would you please introduce the officials.

Mr. Richardson: Yes. Mr. Fortier is in the centre and as I have mentioned he is the legal counsel for the Department of Transport. On his right is Mr. Ballinger who is in the Aids to Navigation Division, Marine Services, Department of Transport; my executive assistant, Mr. Tom D'Aquino, is on his right and Mr. Nicholas Yost who is the superintendent of property management, Department of Transport, is on Mr. Fortier's left. Where is Mr. Gray? He is here, but not coming up until the Aeronautics Bill.

Mr. Fortier, would you attempt an answer on the definition of "navigable waters?"

Mr. J. Fortier (Director, Legal Services & Counsel, Department of Transport): Mr. Chairman and Mr. Minister, I do not believe there is any legal definition of "navigable waters". It is more a question of fact that any particular body of water may be navigated either commercially or for the purpose of pleasure craft. We cannot find any legal definition any place.

Mr. Allmand: Does this include pleasure craft also, sir? In other words, a small lake might be included as navigable waters. Is that correct?

Mr. Fortier: Originally Part 1 of the Act which deals with approval required before a work may be constructed in navigable waters before it could be determined whether a work would obstruct navigation...

The Chairman: Order, please. Would you try to talk a little louder, Mr. Fortier?

Mr. Fortier: Originally, before approval could be given, the question to be determined was whether the work would obstruct navigation and that was meant to cover commercial navigation. However, you will appreciate that in the last few years great interest has been shown in pleasure craft, to the extent that there are perhaps three-quarters of a million pleasure craft licensed in Canada under the Canada Shipping Act. This number increases perhaps at the rate of 50,000 a year so there is every reason and justification for applying Part I of the Act and, when an approval is required, to see whether the work would also be an obstruction to pleasure craft.

The Chairman: Mr. Corbin?

Mr. Corbin: Mr. Chairman, I wonder if Mr. Fortier could not define the term "navigable waters" in relation to the size of the craft

being used, because I think we can go to extremes and any old plank raft, in that case, could be described as a craft on any body of water. Could it not be more easily circumscribed if you set limits on the size of crafts for example pleasure or commercial?

Mr. J. N. Ballinger Chief, Aids to Navigation Division, Marine Works Branch, Department of Transport): The question of the interpretation of "navigable waters" I think is one of fact. If a vessel can float on the water, can move from A to B on the water, then the water is navigable and it has no relationship at all with the size of the vessel. The mere fact that it can navigate from A to B indicates...

Mr. Corbin: What exactly do you understand by "navigate?" Is it controlled progress over a body of water, drifting or what?

Mr. Ballinger: No; If a person like you or me had a rowboat and we rowed from A to B, this would be navigating from A to B; whether we used a chart or not would not much matter.

Mr. Nesbitt: The reason I asked in the first place if the question of what the federal government has jurisdiction over. Are you implying then that the federal government has jurisdiction over all waters on which anything can be floated, no matter how small?

• 1050

Mr. Ballinger: This is correct, yes. I think the federal government has this as a result of the British North America Act where it has the authority for all matters relating to navigation on all bodies of water in Canada.

The Chairman: I think in all fairness we should give the Minister a chance to finish his briefing. Mr. Richardson?

Mr. Richardson: Thank you, Mr. Chairman. I see members of the Committee are anxious to talk with the officials in detail, so I think I could simply sum up this Bill which I have highlighted by saying that it is mainly a Bill to tidy up this legislation. It is not a Bill that really deals with any major matters of policy or principle. I do not want to suggest that it is unimportant, because I think it is a useful and progressive piece of legislation, but I would be leading you astray, I think, to suggest that there was anything extremely fundamental in what we are talking about.

In going through it myself I found that it is more a matter almost of housekeeping, tidying up legislation that is not complete in some areas and, perhaps moving into some areas that may appear to have some importance, such as the one mentioned in Toronto. Generally speaking, the amendments are not of a major nature, and I do not think that we are going to need much time in committee to answer all your questions. I will be in the Chairman's hands as to whether you want me to introduce the aeronautics bill in the same way, or just continue in detail with the bill concerning navigable waters.

The Chairman: I think we should stick to one bill, Mr. Richardson.

Mr. Richardson: Then we should start back in detail with any point that anyone wishes, or start through clause by clause.

The Chairman: Before we start the clause-by-clause study, may I say that we had an understanding that we would adjourn at 11 o'clock. Will you be free tomorrow morning, Mr. Richardson? Tomorrow morning at 9.30? Is the Committee agreed that we should meet at 9.30 tomorrow morning?

Some hon. Members: Agreed.

The Chairman: Before leaving, I would like to have a motion to authorize the Clerk of the Committee to contact the newspapers for the advertising of our trip.

Mr. Allmand: I move that the Clerk of the Committee contact the newspapers for the advertising of our trip.

Mr. McGrath: I second the motion.

Motion agreed to.

The Chairman: This Committee is adjourned until tomorrow morning at 9.30.

First Session—Twenty-eighth Parliament

1968-69

STANDING COMMITTEE

ON

TRANSPORT AND COMMUNICATIONS

Chairman: Mr. H.-PIT LESSARD

MINUTES OF PROCEEDINGS AND EVIDENCE

No. 11

FRIDAY, JANUARY 24, 1969

Problems of Transportation in the Atlantic Provinces.
Bill S-14 and Bill S-19.

APPEARING

The Honourable James Richardson, Minister
without portfolio

WITNESSES:

From the Department of Transport: Mr. Jacques Fortier, Legal Counsel; Mr. John Ballinger, Chief, Aids to Navigation, Marine Services; Mr. Walter J. Manning, Director, Marine Works.

THE QUEEN'S PRINTER, OTTAWA, 1969

29554—1

STANDING COMMITTEE ON TRANSPORT AND COMMUNICATIONS

Chairman: H.-Pit Lessard

Vice-Chairman:

and Messrs.

Allmand,	McGrath,	Pringle,
Breau,	Nesbitt,	[3] Rock,
Carter,	Nowlan,	Skoberg,
Godin,	[4] Penner,	Thomas (*Moncton*),
[2] Harding,	Perrault,	Trudel,
[5] Howard (*Okanagan Boundary*),	Portelance,	Turner (*London East*),
		Woolliams—(20).

(Quorum 11)

Robert Normand,
Clerk of the Committee.

Pursuant to Standing Order 65(4) (b) notice is hereby given of changes in the membership of the Standing Committee on Transport and Communications

[1] Mr. Marchand (*Kamloops-Cariboo*) replaced Mr. Corbin on January 23, 1969.

[2] Mr. Harding replaced Mr. Rose, on January 24, 1969.

[3] Mr. Rock replaced Mr. Serré, on January 24, 1969.

[4] Mr. Penner replaced Mr. Mahoney, on January 24, 1969.

[5] Mr. Howard (*Okanagan Boundary*), replaced Mr. Marchand (*Kamloops-Cariboo*) on January 24, 1969.

MINUTES OF PROCEEDINGS

FRIDAY, January 24, 1969.
(11)

(*Text*)

The Standing Committee on Transport and Communications met this day at 9:30 a.m., the Chairman, Mr. H. Pit Lessard, presided.

Members present: Messrs. Allmand, Breau, Godin, Harding, McGrath, Mahoney, Marchand (*Kamloops-Cariboo*), Nesbitt, Nowlan, Perrault, Portelance, Pringle, Skoberg, Thomas (*Moncton*), Trudel, Turner (*London East*) (17).

Also present: Mr. Rose.

At the meeting held on January 23, 1969, the Honourable James Richardson, Minister without Portfolio, explained Bill S-19.

There being no further questions asked by the Members at this meeting, the Committee proceeded to a clause by clause consideration of the said Bill S-19.

Clauses 1, 2, 3, 4, 5, 6, 7 and 8 were severally carried.

On Clause 9: Mr. Nesbitt was granted leave to read in the records the definition of the word "Vessel", as it appears in the Act respecting the Protection of Navigable Waters, article 12(c), which reads as follows:

> 12 (c) *"Vessel"* includes every description of ship, boat or craft of any kind, whether propelled by steam or otherwise, and whether used as a sea-going vessel or on inland waters only; including everything forming part of the machinery, tackle, equipment, cargo, stores or ballast of such vessel. (R.S., c. 140, s. 13; 1936, c. 34, s. 4)

And consideration of Bill S-19 continuing, Clause 9 was allowed to stand.

Then the Chairman reported to the Committee on the legal advice that, at the last meeting, he was instructed to seek, considering the interpretation of the new Standing Order 65 (7).

It was then moved by Mr. McGrath,

Resolved:—That the Chairman be authorized to hold meetings, to receive and authorize the printing of evidence when a quorum is not present, provided that at least 5 Members including the Chairman be present.

It was then moved by Mr. Nowlan,

Resolved:—That the name of Mr. Nesbitt be substituted for that of Mr. Thomas (*Moncton*), on the Sub-Committee on Agenda and Procedure.

At 11:00 a.m., the division bells ringing, calling the House to order, the Committee adjourned until 3:30 p.m., on Monday, January 27, 1969.

Robert Normand,
Clerk of the Committee.

29554—1½

EVIDENCE

(Recorded by Electronic Apparatus)

Friday, January 24, 1969.

• 0937

The Chairman: Gentlemen, I see a quorum.

Yesterday the Minister gave us a short briefing on this bill, and this morning we intend to carry on clause by clause, if that is possible. If you feel we should leave the first clause for a general debate, we could go on to Clause 2 of the bill. No member indicated to me yesterday that he wanted to speak, but I am now prepared to give the floor to anyone who wishes to speak.

This morning we have with us the same officials who were here yesterday. Mr. Richardson, the Minister, who is responsible for the bill, is present. Also present is Mr. Fortier who is the legal counsel for the Department of Transport. We have Mr. Ballinger, who is the Chief, Aids to Navigation Division, Marine Works Branch, Department of Transport, Mr. N. Yost...

Hon. James Armstrong Richardson (Minister without Portfolio): No, Mr. Manning is here this morning. He is the Director of Marine Works in the Department of Transport. He was not with us yesterday. You have now named all the officials.

The Chairman: Mr. Allmand.

Mr. Allmand: Are you starting with Clause 1?

Mr. Richardson: I think the Chairman wants to start at Clause 2.

The Chairman: We will leave Clause 1 for general debate.

Mr. Allmand: I approve of Clause 2. There is not very much there.

Clauses 2 and 3 agreed to.

Mr. McGrath: Mr. Chairman, before you put the clause, would you give us a chance to read it?

• 0940

The Chairman: Right. We are now on Clause 4. To make it easier for this young lady on the console, yesterday she asked me if I could name every member, because this would be very helpful to her. So that there will not be any confusion, please address me and I will recognize you, and this will make it much easier for her identification.

On clause 4.

The Chairman: Mr. Nesbitt.

Mr. Nesbitt: Mr. Chairman, some of the evidence that was given by the Minister's officials yesterday concerns me, and I have been attempting to obtain some information since then, but without too much time unfortunately. So I would like to ask a few questions of the Minister which apply directly to Section 4, but I refer also to the interpretation section. The interpretation section of the Act apparently is intended to expand the meaning of "navigable water" to include certain other bodies of water. As I recall from questions I asked yesterday, the term "navigable water" seems to be somewhat uncertain.

I would like to ask either the Minister or his appropriate adviser if it is the purpose of section 4 of the Act to place under federal jurisdiction and the Minister's jurisdiction, all waters in Canada which conceivably could include farm ponds and all these small lakes that have cottages on them?

The Chairman: Perhaps either Mr. Fortier or Mr. Manning could answer this for you.

Mr. Walter J. Manning (Director, Marine Works, Department of Transport): This Act is meant to protect navigation, you see; it would apply to any body of water in Canada. But of course it has nothing to do with ownership; it does not give ownership to the Federal government of bodies of water which are the property of the provinces.

Mr. Nesbitt: If that is correct, am I then to understand, because of the additions to this Act which are before us at the moment, that a person who has a summer cottage on a lake would have to get permission from the

Minister to build an addition to his dock or something of that nature?

Mr. J. Fortier (Legal Counsel, Department of Transport): Yes, if it is an important dock, but I do not think it is intended to cover all the small docks made up of a couple of planks.

Mr. Nesbitt: But if a person had a 30 foot cruiser, and this is not uncommon nowadays in parts of Ontario and elsewhere, then that person would have to get permission to build a dock. For instance, this would apply to the Muskoka lakes?

Mr. Fortier: Yes, sir.

Mr. McGrath: And it could include a floating swimming platform as well?

Mr. Manning: Yes, sir.

Mr. Fortier: Under the Act, as it now exists, there was an exemption for works of a value of less than $5,000. This has been removed and, instead of that, in this amendment we leave it up to the Minister to decide in any particular case whether the work would interfere with navigation.

Mr. Nesbitt: I understand that in many of the inland lakes of Ontario—I keep referring to Ontario because that is the area I am most familiar with—which are used for vacation purposes and the like, municipal or provincial administrations in the past have put up markers or buoys to mark channels, rocks and so on. Am I correct that from now on they would have to have permission from the Department to put these markers or buoys on the lakes?

Mr. Manning: There are special regulations for private buoys under the Cahada Shipping Act which would allow yacht clubs and municipalities to put buoys up to indicate obstructions to navigation. That does not come under this Act.

• 0945

Mr. Nesbitt: But because of the way these amendments are worded would not permission of the Minister have to be sought in order to put these on the lakes? There are all sorts of people on the smaller lakes and the larger ones too—like Timagami—who because of reefs and so on, put up their own buoys to warn others of these reefs and rocks. Is it your interpretation that these people would not have to obtain permission to put up these markers?

Mr. Manning: No, I do not think so.

Mr. Fortier: Because there are regulations under the Canada Shipping Act which govern the installation and maintenance of navigation buoys and whether or not navigation should be carried on inside certain limits.

Mr. Nesbitt: Speaking from memory again, I believe it is normally the Federal authorities that prosecute infractions of the Canada Shipping Act. Are these sections to which you refer normally enforced very strongly?

Mr. Fortier: The enforcement of all our regulations under the Canada Shipping Act are the responsibility of the Royal Canadian Mounted Police.

Mr. Nesbitt: Most people are aware that all sorts of these well-meant local aids to navigation are put up and no one seems to care whether or not they are properly marked or painted. On every lake there are different coloured marker buoys.

Mr. Fortier: The Mounted Police is charged with the enforcement not only of the regulations under the Canada Shipping Act but the regulations made under any other statute under the administration of the Department. It may be that they cannot be every place at the same time. They do the best they can to see that the regulations are enforced.

Mr. Nesbitt: I come now to a question that has a great deal of relevance and, indeed, importance to people right in my own part of the country, southwestern Ontario. There have been a number of conservation projects built in this area in recent years—on rivers and elsewhere, which were formerly navigable in the lay sense of the term but have become less so. In my friend, Mr. Turner's area in the city of London, Fanshawe Lake has been artificially created in the Thames River, and it is used for recreational purposes. There also has been created a lake in my city of Woodstock called the Pittock Lake—the Gordon Pittock Lake. There has been some discussion in these and like areas as to the kind of watercraft that will be allowed to use these lakes—whether they be powered mechanically, by sail and so on. I

would take it, from the Navigable Waters Protection Act, that the local authority would not really have the right to decide but, rather, permission must be sought from the Federal authority. Is that correct?

Mr. Fortier: I do not think so.

Mr. Richardson: I do not think, Mr. Chairman, that the kind of boat on the water would come under this Act.

Mr. Nesbitt: The Navigable Waters Protection Act has no jurisdiction over the type of craft that might be used in navigable waters?

Mr. Richardson: That would definitely be my understanding, yes.

Mr. Nesbitt: You could use any kind of craft powered by anything?

Mr. Richardson: Right, as far as this Act is concerned.

Mr. Nesbitt: Does the Navigable Waters Protection Act not have some control or jurisdiction over the speed of craft?

Mr. Fortier: No, sir. That would come under the provisions of the Canada Shipping Act in respect of navigation. The Governor in Council is given the power to make regulations in respect of navigation and in respect of the control and governing of any of the minor waters of Canada which would give him the power to regulate the speed of vessels in certain waters.

Mr. Nesbitt: That is navigable waters?

Mr. Fortier: Oh yes.

Mr. Nesbitt: And navigable waters in effect means almost any waters.

Mr. Fortier: Any waters on which navigation may take place.

Mr. Nesbitt: I remember having a definition of that at our last meeting. Then on both bodies of water to which I refer, the speed and, possibly, the kind of ships that could be used on navigable waters would come under the regulations of the Canada Shipping Act, which of course comes under the Minister.

Mr. Richardson: Yes.

Mr. Chairman, could I answer a question Mr. Nesbitt raised—I think it is of importance to all of us and I have tried to understand it in thinking about this Act—in respect of small docks built on lakes. I do not think that there is going to be an initiative required by the builder; I do not think he is going to have to seek application to build an ordinary little dock anymore than at present, but I would like confirmation of that to the Committee from the officials.

Mr. Nesbitt: This is a pretty disturbing thing, Mr. Richardson.

Mr. Richardson: It was to me and I wanted to make certain that that was not the case. I would like to have a comment on that.

Mr. Manning: If there were complaints from the neighbours that this wharf goes too far out in the lake and causes an obstruction to navigation then we could take action under this Act, but I do not think the Department would take the initiative.

Does that answer your question, Mr. Nesbitt?

• 0950

Mr. Pringle: Yes, Mr. Chairman. Since I asked to be put on the list several of my questions have been answered. However, I would like to state that it seems to me that at the present time we need some type of control on the lakes all over Canada. Although it may be disturbing to some, the use of small boats of up to 40 and 50 feet are appearing in greater numbers on our navigable waters every year, and I think if you were to really delve into it you would find that a lot of local problems are arising with regard to the fact that obstructions are being placed on the shores and that docks which are unfit for use are being used, docks which are actually dangerous. People are trying to avoid the necessary responsibility that goes along with putting out a dock on a lake where in effect it can be used by the public. I would like to state that while it might be disturbing to some I think it is more disturbing the way it is.

Mr. Harding: Mr. Chairman, my question arises out of a matter which was raised in the House by the member for Peace River a couple of days ago. He pointed out that under the Act when a dam was built on a river—and in this case he was referring to the government of B.C.—that permission should have been obtained from the federal government to build this dam. I am talking about

the Peace River dam. Why was federal consent not obtained? Is there any way under this Act that it is possible to insist that permission be obtained? It seems to me that something is missing somewhere in the Act if by itself a province can ignore the legislation which we have laid down and simply proceed and nothing is done. Something must be missing in the legislation somewhere, some method of enforcement which should be there and apparently is not.

Mr. Richardson: Mr. Chairman, I think the answer is that the Act does not apply to the Crown; that is, a province or an agency of the province. There is nothing in the Act that requires a province to make application under the Act.

Mr. Mahoney: Would your solicitor confirm that?

Mr. Richardson: I would hope so. I am sure he will.

Mr. Mahoney: Mr. Chairman, I think the member has raised a very good point. We both served in the British Columbia legislature and questions were asked there about this matter.

• 0955

Mr. Richardson: I would like our legal counsel, Mr. Fortier, to speak to that, but certainly that is the position.

Mr. Fortier: That is right, Mr. Minister. The Navigable Waters Protection Act does not apply to the Crown federally or to the Crown provincially, so that if a province does certain work on navigable waters without seeking the prior approval of the Minister there is no provision in the Act by which we could compel the province either to remove the work, alter it or to meet the specifications imposed by the Department.

Mr. Harding: I have a further question, Mr. Chairman. I understand that B.C. Hydro, because it is a Crown corporation, is perfectly free to place any obstruction it wishes in any navigable stream in British Columbia without intereference from the federal authority. That is my understanding of your statement.

Mr. Fortier: The reason for this is probably that all properties of B.C. Hydro are nested in the Crown in the right of the province.

Mr. Harding: Is there any reason we should not have a tightening up of this legislation? May I just expand on this. I feel that navigable waters really are the concern of everybody in Canada. If it is an inter-provincial waterway such as the Peace River, or an international waterway such as the Columbia River, I think it is to the benefit of all Canadians that we have a set of regulations laid down and I think all the authorities should recognize this. Could we not tighten up this legislation, or is it advisable that we leave it the way it is?

Mr. Fortier: The fact the Act reads that the province is bound by the Act is not the legal reason. Legally it can be done but the decision is not based on a legal point.

Mr. Harding: May I come back to another case in point. A number of years ago the provincial government of B.C. had trouble with Mr. Kaiser—I should not say had trouble with him, but there was talk of putting a dam where the High Arrow Dam is now located and a bill was passed by the federal government which in effect prevented the construction of this dam. It seems to me that federal action was taken in one instance but in the instance in connection with the Peace River nothing was done.

Mr. Richardson: This is quite right. Mr. Chairman, but this is an entirely new subject. The fact is that this is a constitutional problem. It is one of the problems of governing Canada; the relationship between federal and provincial authority. There is nothing in the Act, in the amendments to it or in this bill that covers that problem. You are quite right, though, it is a real problem, but if we had put it in here we would have opened up a further area of constitutional debate. It probably would have had to be a subject for discussion at the Federal-Provincial Conference.

Mr. Harding: May I ask just one more question?

Mr. Richardson: In effect we are tidying up the Act in other ways but not doing that. It still is a failure in that sense.

Mr. Harding: There is nothing in this Act which will cover this problem. Does your Department intend to bring in legislation which will cover this point, in some other act, perhaps, or later on?

Mr. Richardson: Not that is currently under study.

The Chairman: Mr. Nesbitt on a supplementary question.

Mr. Nesbitt: Yes, I have a supplementary question to the question that was just asked by the previous speaker.

• 1000

The Minister's advisers have told us that the amendments to this Act before us do not apply to the Crown in the right of province. Do they apply to creations of the province such as municipalities, which are created, of course, by the province? I have specific reference to a situation in the City of Toronto where there has been talk on different occasions of the city filling in certain areas of Toronto Harbour for the purpose of putting in office buildings or apartment buildings and the like. Would this Act apply to an enterprise like that undertaken by the City of Toronto or the City of Kingston?

Mr. Fortier: Yes sir, it would. The municipalities are not exempted under the same heading that the Crown in right of a province is exempted, as the Act would not apply to the Crown but it applies to municipalities.

Mr. Nesbitt: This does apply, despite the fact they are a creation of the province.

The Chairman: Mr. Nowlan.

Mr. Nowlan: I had not signified my intention, but I will ask a supplementary. Is it that the amendments in this Act will affect that Toronto situation, whereas there was some confusion before as to whether the federal government could enforce regulations?

Mr. Manning: The province will have to submit their projects to the federal government for approval under this Act. If it is not a major obstruction to navigation, it is probable that the project would be approved.

Mr. Nowlan: This is a change from the former Act in that they did not have to submit their project for approval. Is that correct?

Mr. Manning: If the province is doing the work, they would not have to submit their project under this Act for approval. But if the city is doing it, then they would. All the provinces have been applying. I think the Peace River dam is the first case we have where the province did not apply for approval under this Act.

Mr. Nowlan: Well, I am just trying to get the change, if there has been a change. Taking Toronto as the example, do I understand that now Toronto would have to apply, whereas before they did not have to apply?

Mr. Manning: The works that were discussed in the House in the last few years were not undertaken either by the province or by the municipality. They were undertaken by private interests...

Mr. Nowlan: That is correct.

Mr. Manning: . . . who did own the land under water which they were filling up. They had acquired this land from the province, the land under water, and they were filling up on their own property.

Under this Act there was no action that could be taken, and there was no change in this Act to prevent a private developer from reclaiming land on a water lot that he owns.

Mr. Richardson: Mr. Chairman, I can handle Mr. Nowlan's question, I think. There is no change in that the city or a private builder is required to apply under the Act. That is exactly the same. What has changed in the area that you are speaking of, is that in the definition of a work under this Act, or in this amendment to the Act, a work is now something where fill goes into the ground or goes into the lake to fill it up and to create a dock or a new bit of land, or anything. In other words, it has widened the definition of a work to include fill, and that is the thing that now applies to the Toronto waterfront that did not before.

Mr. Nowlan: Since the definition has been widened, I cannot quite understand then why the private developer or Toronto would not have to apply for approval to make the fill.

Mr. Richardson: Well, they would. They would have to apply.

Mr. Nowlan: Now they would have to apply.

Mr. Richardson: Now they would have to.

Mr. Nowlan: Whereas before they did not, so there has been a change.

Mr. Richardson: Right. But it is in the definition of a work that they always had to apply, if what they were doing came under

the Act. For instance, if they were building a dock or putting in a pipeline or something, all the other things, they would have had to apply before. But in filling up areas they did not have to apply, because it was not defined as a work.

• 1005

Mr. Nowlan: So actually, the amendments clarify that contentious issue in the last two or three years.

Mr. Richardson: That is right.

The Chairman: Mr. Mahoney.

Mr. Mahoney: I have a couple of questions that will be supplementary to the line of questioning opened by Mr. Harding. Then I have a fresh subject that I think appropriately comes under this section. Is the Crown in the right of the province exempted because of a specific exemption in the Act, or by law in your opinion.

Mr. Fortier: No sir, the exemption is derived from the section in the Interpretation Act, which is a federal statute, which states that the Crown is not bound by any Act unless that Act specifies that the Crown shall be bound by it.

Mr. Mahoney: Does this exemption extend to Crown Corporations owned by the province?

Mr. Fortier: It would apply to works properties of the Crown.

Mr. Mahoney: Something less than 20 years ago there was a case involving Central Mortgage and Housing Corporation, where it was established that there was a real distinction in law between Crown corporations and the Crown. I think basically there is a tremendous hole in this Act if this is the case, and I appreciate perhaps it is not relevant to the amendments before us.

I am not familiar with the situation in the Maritimes, sir, but certainly from Quebec west, with the exception of the Province of Alberta, hydro electric works are now under Crown corporations of the various provinces. And probably on inland streams at least there is no more likely serious obstruction than a power dam in this part of the world. I should hope that the department would give serious consideration to the desirability of covering this, if it is not.

Opening the new subject which I think comes appropriately under subsection (c), where you establish terms and conditions for approval, say of a power dam, or any other kind of dam, do you make any provisions to require a certain flow? I will admit that I am probably more concerned about this from an easthetic and a conservation point of view than from a navigation point of view, but nevertheless navigation too is affected if the flow of water is not maintained. Do your regulations, in granting a permit for such a work, a dam, purport or attempt to control it to the extent that a reasonable flow of water is continued downstream?

Mr. Fortier: The approval given to the construction of any work may be given subject to conditions.

Mr. Mahoney: Right.

Mr. Fortier: Before the approval is given, the Department will consider what conditions should be imposed in the interest of navigation.

Mr. Mahoney: Would you stipulate conditions of this nature to be sure that navigation, if that is what we are talking about, can be maintained downstream?

Mr. Fortier: That is right. I know of approvals given to works which have been subject to lengthy conditions.

Mr. Mahoney: Including covering this aspect of navigation.

The Chairman: Mr. Perrault, have you a supplementary?

• 1010

Mr. Perrault: Mr. Chairman, I would like to ask a question with respect to definition of work and the circumstances following from that work, including any bridge, boom and dam.

The question was asked earlier about the Peace River dam. I recall when the Peace River dam was in its early stages of construction, that there were protests from the Province of Alberta. They cited the Navigable Waters Protection Act as their justification to demand that negotiations be held by the Province of British Columbia, that there be controlled stream-flow and co-operation with the Province of Alberta, and the rest. Yet, we have heard today, at least the implication is,

that there is nothing under the Navigable Waters Protection Act to protect a province like Alberta, or British Columbia conversely if the water runs the other way.

I would like to know from legal counsel here whether or not in fact the Navigable Waters Protection Act can be exercised in a matter of this kind, because when I contacted the federal government at the time they said that application should have been made by the Province of British Columbia under the terms of this Act before the dam was constructed.

I am rather mystified about the situation. I think the member who spoke earlier asked questions along the same line.

Mr. Fortier: I think the Minister might be able to answer that question, Mr. Perrault.

Mr. Richardson: Mr. Chairman, I think the question really has been answered. I do not think it is entirely satisfactory from the federal point of view, but, as I said, it was considered whether or not we would get into the constitutional aspect in framing the amendments to the Act. It was decided not to do that at this itme. Therefore, in the Bill we are now considering there are no provisions to try to legislate for the provincial requirement to apply under the Act.

Mr. Perrault: A dam constitutes just about the largest obstruction one can place on anything. It seems to me that it should apply to a case of this kind.

In the future, when water is going to be such an important resource and asset—it is going to have to be shared between and among provinces—surely this could be a most important aspect of any future development or extension of this Act. I think it is a very serious matter.

Mr. Richardson: Yes; what you are pointing out—with which I agree—is something that is not in the Bill.

Mr. Perrault: Yet it was cited when the Peace River Dam was being built. People in Alberta, and many alleged constitutional experts were saying: "Oh, no; there is a clear case that under this Act permission should have been sought". But I do not think anyone ever tested whether or not, in fact, this was the case. Has this ever been tested in the courts? Mr. Fortier?

Mr. Fortier: I do not know.

Mr. Richardson: I do not believe so.

[*Interpretation*]

The Chairman: Mr. Godin.

Mr. Godin: The obstacle I am concerned with is rather unusual. It is a boom. To the delight of many, the government has improved most of these wharves throughout the country with the result that for the benefit of motor-boat owners, several places that had been rather quiet for the past twenty years have now become quite busy.

This is true of the wharf I am concerned with, which is on the St. Lawrence, about twenty miles from Quebec City. The owner, somewhat of a hermit, decided to maintain his privacy by building a boom across the river.

At low tide boats can get around this boom but at high tide is it completely hidden by the water so that there is a danger of boats being wrecked against it or capsizing.

Could one legally demand removal of this boom? It has been in existence for two years. I have tried everything but I may not have been trying in the right quarters. To whom should one apply to have such obstacles removed from navigable waters?

Mr. Fortier: The riverside owners could complain to the Department by writing to Mr. Manning or the deputy-minister.

Mr. Godin: Thank you.

The Chairman: Does that answer your question, Mr. Godin?

• 1015

Mr. Godin: Yes, thank you.

The Chairman: Mr. Trudel.

Mr. Trudel: Mr. Chairman, in the amendments we are considering at the moment, provision has been made for the kind of case raised by Mr. Godin. The navigable depth—the depth left free for navigation—has been increased from twelve to twenty fathoms. This amendment directly affects the situation you have just described. Department officials may correct me here but I think the depth is now twenty fathoms rather than twelve.

Mr. Manning: It is twenty fathoms. The previous limit was twelve. Sometimes the holes in the river or lake bed were used to

dump dredgings in. Now with the bigger boats we do not want to have to re-dredge the channels. That is why we have increased the limit to twenty fathoms.

The Chairman: In other words the water level will be higher?

Mr. Manning: Oh no. All that is being done is to fill in the holes in the river or lake bed.

The Chairman: Mr. Allmand.

[*English*]

Mr. Allmand: Mr. Chairman, I want to return to the point raised by Mr. Nesbitt.

I was considerably surprised when I found out that this Act would apply to every pond and little river.

I have the principal Act before me. I see that in Part I of the Act, which applies to construction of works, the reference to navigable waters has no qualifying adjective. However, in Part II section 13(1) states:

> Where the navigation of any navigable water over which the Parliament of Canada has jurisdiction is obstructed...

...and so on. Section 13 seems reasonable to me. I would have thought that this Act would have applied only to those navigable waters over which the Parliament of Canada has jurisdiction.

Why is that qualification not used in Part I, relative to controlling construction of works, and why is it used in Part II? There seems to be an inconsistency in the Act.

Mr. Fortier: In navigation and shipping the Parliament of Canada has jurisdiction over all waters which are navigable in order to control and to regulate navigation. It may have no right of ownership in the water or in the bed, but it has full right and authority to regulate and to control waters for purposes of navigation.

Mr. Allmand: Why, then, in section 13 was it felt necessary to say, "Where the navigation of any navigable water over which the Parliament of Canada has jurisdiction"? That implies that there are certain navigable waters over which the Parliament of Canada does not have jurisdiction. As I say, in establishing the wording of the law they are not consistent throughout.

As a lawyer, I have found sometimes over the years that there are these inconsistencies in statutes which lead to difficulties when you come to interpret them. If this is an inconsistency, I would ask the Department officials and the Minister to give it study and to try to make it consistent. It does seem to indicate that there are certain navigable waters not under the jurisdiction of the Parliament of Canada. Otherwise, why put it in?

Mr. Richardson: Mr. Chairman, that is a valid point. I do not know the legal distinction, but there is a basic difference between Part I and Part II, as you know.

Part I applies to obstructions such as docks which are designed for a specific man-made purpose. Part II deals essentially with obstructions which are inadvertent and which happen as a result of solids sinking to the bottom, and so on.

That probably does not make any serious difference, but I wished to point out that difference between Part I and Part II, although it really does not adequately answer the point you have raised.

Mr. Allmand: I knew there was that difference, Mr. Richardson, but it does not really answer the question of why "navigable water" is qualified in one case and not in the other.

Mr. Fortier: Of course, Part I also applies only to such waters as the Parliament of Canada has jurisdiction over—and that means Canadian waters.

• 1020

Mr. Nesbitt: As distinct from American or some other country's waters.

I have a brief supplementary to Mr. Allmand's question which I think is a very important one. In view of the information which has been given to the Committee by the Minister and his officials concerning the definition, or the application, of the words "navigable waters"—which I think will come as a great surprise to most Canadians, to say the least—could the Minister or his officials give us some instances, in recent years, in which the Department of Transport, or the Minister of Transport, has attempted to enforce certain regulations either under this Act or the Canada Shipping Act, which is of course related, which would indicate that the federal government has, in fact, the power to regulate, while not having the ownership of the waters as was pointed out, but has the

right to regulate the use of waters whether they are owned by the Crown in the right of the federal government or owned by the Crown in the right of the province? Could they give us some reference to any legal decisions or decisions of the court that may have been made in this regard? I think this is important.

Mr. Pringle: I would like to ask just a short question. In the event of an accident or an explosion of a resonably sized boat, which would sink and be in less than 20 fathoms, 60 feet, would it be the responsibility of the owner of the boat to have that removed from the bottom as an obstruction?

Mr. Fortier: Under Part II of the Act, sir, the obligation rests not only on the owner, but on the person responsible for a vessel becoming an obstruction.

The Chairman: Is Clause 4 carried?

Clauses 4 and 5 agreed to.

On Clause 6 *1956, c. 41, s. 5*

Mr. Nesbitt: I think a number of us would allow a number of these sections to go through the Committee here because we are really seeking information in Committee, but I would like to make it very clear that at another stage of the bill, this might not prejudice any right to make appropriate amendments after we have had a chance to consider the information we have received in Committee.

Clause 6 agreed to.

On Clause 7—*Regulations by Governor in Council.*

Mr. Harding: I would like to ask a question on clause 7, which is on page 5, It says here.

> (1) The Governor in Council may make such orders or regulations as he deems expedient for navigation purposes respecting any work to which this Part applies...

Referring to a structure which has been placed in a river, and I am going back to the Columbia River again and back to British Columbia, the High Arrow dam, we have had locks built in this dam, and currently people in the area are very unhappy with the time schedule which has been placed upon the use of the locks.

I put a question on the Order Paper some months ago and finally had it answered by the Mines and Energy Department, and I am wondering how they got into the picture? I think it should have gone to the Transport Department.

The B.C. Hydro pays for the cost of lock operation, and they have limited the use of the locks from 8 o'clock in the morning to 4 o'clock in the afternoon, except on holidays when the whole thing is closed up.

• 1025

The answer to the question was that this was on a year-round basis. If you are going to operate the locks on a time schedule to suit, in this particular case the Celgar pulp mill, and not use them on the week ends when people with a large number of boats below the dam could and should be using them, this surely cannot be classed as year-round service. I am just using this as an example.

Prior to the structure being placed in the river, it was 365 days a year free access up and down. Once in a while the river was frozen over and, of course, if you had an ice boat you might have got through. Who sets these regulations? Is it the Transport Department?

Mr. Fortier: It used to be the Department of Public Works. Part I of the Act was transferred from the Minister of Public Works to the Minister of Transport only recently, in the fall of 1966. In connection with the construction of the Arrow Lakes dam, application was made to the Department of Public Works and the Department of Public Works did give approval for the construction of the works. But in its approval it made this approval subject to many conditions respecting the operation of the locks.

Mr. Harding: I am still not very clear on this. Under whose jurisdiction will the time schedule for the locks be? This is the question I am asking. Who is going to set up the schedule for operating the locks on the Arrow dam?

Mr. Fortier: Under the conditions imposed when approval was given, it would be up to the B.C. Hydro to regulate and control the opening and closing of the locks.

Mr. Harding: Mr. Chairman, do I understand that B.C. Hydro has built the dam, and they are going to call the shot on the scheduling for the use of these locks in this river?

Mr. Manning: This whole matter is at present under discussion in the Department with

B.C. Hydro. These regulations were made by the Department of Public Works at that time when approval was given for construction of the Arrow dam, and we have had meetings with the lawyers of B.C. Hydro to try to arrive at some regulations which would serve the public, so that the locks would be available. I understand B.C. Hydro want to reserve certain hours during the day to be able to allow the logs through for the Celgar plant which is below the dam. Otherwise, I understand we hope to be able to make an agreement with B.C. Hydro so that the locks will be open 24 hours a day during the summer months, and during the winter to suit local navigation.

Mr. Harding: I would like to thank you for the information, but I want to make my position very, very clear. I do not think that B.C. Hydro should be the organization that sets the time schedule for these dams. I think that must be under the control of the Department of Transport, and the public interest should be paramount. In the initial schedule which has been set up the public interest has been disregarded, to all intents and purposes.

This is why I am so alarmed at the wording of this particular bill. I believe there are holes in it that you can drive a horse and carriage through, and this is one of them. I am very, very apprehensive about this. I am not trying to take control away from the provincial authorities, but navigable rivers in my opinion come under the federal authority, and we cannot have this jurisdiction eroded by some Crown corporation or some individual who, for the sake of saving a few dollars, is going to inconvenience the public for months and for years to come.

This is why I have raised the issue, Mr. Chairman. I feel it should be very clear-cut, that we know who is going to do the controlling, who is going to set the regulations so that we can come to the Minister or to the department concerned and ask for a change if changes need to be made.

Mr. Richardson: Mr. Chairman, I think that is a very important point. But certainly it can be argued that control in a local area would be just as appropriate under a provincial authority, and in fact, representations by local people, if there were any, could just as easily, in fact perhaps more easily, be made to that authority than to a federal authority. I think that after all both government will be aiming to work in the public interest, if they can determine it, and there is nothing to say that the federal government could do a better job in that respect than a local government that was more sensitive to local concerns.

• 1030

Mr. Harding: Just one point, Mr. Chairman. Might I just make one more comment on this? B. C. Hydro is faced with the cost of operating the locks, and you can bet your last dollar that they are going to operate those locks just as cheaply as they can. This is understandable, and it is to the benefit of B. C. Hydro to have them operate on a very limited basis. This is why I feel that the jurisdiction should be under the control of the Department and that costs should not be a factor, or should not be the main factor in the use of a lake which is over 100 miles long and where there are literally hundreds of boats down the river below the Arrow Dam which will need the use of these locks or some transportation around them, and particularly in the summer and on week-ends when they go fishing and camping, and so on. This is something we do not want to see interfered with.

Mr. Richardson: Do you believe it is correct that Ottawa would in fact be in a better position to judge the suitability of opening and closing a lock in B.C. than the local authority?

Mr. Harding: No. I think you should consult with B.C. Hydro in the operation of the locks, but I think there must be some insistence that the entire control is not going to lie with this particular Crown corporation. We have also had a host of problems in connection with other matters which obviously I think should be settled.

Mr. Pringle: Mr. Chairman, I have a supplementary question. It has always been my understanding in the operation of boats and marine navigation that they had a priority in travel in any navigable stream, and that lift bridges must be manned 24 hours a day and that no obstructions can be placed to navigation. Am I now given to understand that this is not correct, that somebody can build a dam and put locks in and not open those locks to navigation but restrict navigation on those locks? This is a complete surprise to me.

Mr. Richardson: Mr. Chairman, I am sure Mr. Ballinger could speak to that.

Mr. Manning: When the dam was built one of the conditions of approval was that the B.C. government would put a lock in there to take care of navigation. However, from the B.C. point of view, every cubic foot of water that goes through the navigation canals does not go through the power house. They lose it for power. That is why they want to have control over the operation of the locks. It becomes an economic matter.

Mr. Pringle: Is this a recent change in policy, that it is now possible to dam up a stream and stop navigation at the will of a local authority or a Crown corporation?

Mr. Fortier: That is not possible...

Mr. Pringle: But they are doing it.

Mr. Fortier: ...except, as was pointed out before, that the Act is not binding on a province, with that exception, and there are few cases where the provinces have put up works in navigable waters and refrained from seeking approval from Ottawa.

Mr. Manning: The only one I know of is the Peace River dam.

The Chairman: The Minister has asked if you will excuse him. He has another meeting to attend this morning. Mr. Richardson.

Mr. Richardson: Thank you, Mr. Chairman and gentlemen, for a good discussion of this bill. I am looking forward to continuing it.

Mr. McGrath: Are we going to continue with the bill?

Mr. Richardson: I hope that you will. The officials could continue the discussion until the House sits in about 25 minutes.

• 1035

Mr. Nesbitt: Before we have discussion of the Aeronautics Act perhaps we could have another meeting with the Minister so that he may...

Mr. Richardson: Oh yes, I will introduce the Aeronautics Act when we come to it.

Mr. Nesbitt: Thank you.

Clauses 7 and 8 agreed to.

On clause 9.

Order to remove vessel left anchored.

Mr. McGrath: I wonder if we could have an explanation of this particular section. How does the Department propose to enforce it? In certain parts of the country—certainly in Newfoundland and in some of the Maritime Provinces—there are a number of derelict vessels lying around on beaches, tied up at public wharves and moored in public harbours. I can think of several places in Newfoundland, for example, where a number of old whalers are lying around—they are a general eyesore—which under the terms of this particular section would certainly constitute an obstruction to navigation. On one occasion I tried to have one of these derelict vessels removed because it was a hazard to children playing on the beach, and I was advised by the Department that they did not have the authority to do it. I now presume that under this particular amendment to the Act they do have the authority. I would like to know how this particular section will be enforced.

Mr. Fortier: This section, sir, will be enforced to the same extent as in the case of a ship which has sunk and lies at the bottom. If this is brought to the attention of the Department, under Section 14 of the Act the Minister has to make a decision that it is an obstruction to navigation. The owner is then notified to take action to remove it without delay. If this is not done, the Department then considers calling for tenders and giving out a contract for its removal. When this has been done we usually get after the owner to pay for the cost of removal.

Mr. McGrath: The initiative, though, will not necessarily be taken by the Department. The initiative will have to be taken by somebody who registers a complaint. Is that correct?

Mr. Fortier: Yes, it is.

Mr. McGrath: Perhaps I should amplify that a little bit. It seems to me that it would certainly be worthwhile for the Department to conduct an inspection of our coasts—I do not know about the West Coast—once this particular section is enacted to see what can be done about cleaning it up, without waiting for somebody else to take the initiative.

Mr. Manning: I think it would be a major undertaking to clean up all the beaches in the East or in the West. This is especially true in the West because...

Mr. McGrath: A major but, in my opinion, a worthwhile undertaking because they have

become almost as bad as some of the used car dumps we have in the country.

Mr. J. Ballinger (Chief, Aids to Navigation, Marine Services, Department of Transport): One thing that might be kept in mind is that the Act presently allows for removal of wrecks which are sitting on the bottom provided they are an obstruction to navigation. The amendment to the Act allows for the removal of vessels which are still floating.

Mr. McGrath: What about vessels which are in a state of semi-buoyancy, half on the beach and half in the water?

Mr. Ballinger: This would be covered. They are presently covered under the Act if they are sitting on the bottom.

Mr. McGrath: I do not mean sitting on the bottom, sitting on the beach with the stern in the water. There are a number of those.

Mr. Ballinger: They are covered. Unless it can be shown that they are creating an obstruction to navigation there is no way under this Act of having them removed.

Mr. McGrath: There is no way of having them removed?

Mr. Ballinger: There is no way of having them removed under the Act unless it can be shown that they are an obstruction to navigation.

Mr. McGrath: According to the reply to a question I put yesterday the new definition of an obstruction to navigation would now take in such a derelict on a beach.

Mr. Ballinger: Only if it is an obstruction to navigation.

Mr. McGrath: Who decides whether or not it is an obstruction to navigation?

• 1040

Mr. Fortier: The Minister, under Section 14, which reads:

> 14. The Minister may, if, in his opinion, (a) the navigation of any such navigable water is obstructed, impeded or rendered more difficult or dangerous by reason of the wreck, sinking, partially sinking, or lying ashore or grounding of any vessel, or of any part thereof, or of any other thing.

He may order the removal of the obstruction.

Mr. McGrath: That seems to be a little vague. In reply to this question yesterday it was stated quite definitely that the definition would now cover derelict vessels pulled up on beaches.

Mr. Manning: If they are an obstruction to navigation. If they have been left dry on the beaches they do not come under this Act.

The Chairman: Mr. Nowlan.

Mr. Nowlan: I have a supplementary, and I think this is the place to raise it. You were speaking about vessels on the bottom being an obstruction to navigation. The answer to my particular question may be found in the Act and not in these amendments. Take the case of a barge that is carrying bunker oil and sinks in deep water. It is not an obstruction to navigation for other vessels, although it is broken and sinking and discharging the bunker oil all over the beaches. This happened, of course, in British Columbia in Howe Sound two or three summers ago, and as I remember it there was no action taken for months because there was some question of whose responsibility it was. I would like to be informed on this.

Mr. Fortier: Sir, at the present time there is no provision in any Act in a case such as the one you have just mentioned by which we can compel the owner or the person who causes the oil to spill in the water to take action to remove the pollution, but there is a bill to amend the Canada Shipping Act now before Parliament which contains provision for such cases.

Mr. Nowlan: It is not an obstruction to navigation, but it is certainly a horrible pollution and, in effect, is an obstruction to navigation and the smaller boats because this stuff is clinging to all the boats. This gap is being remedied, not in this Act, but in the Canada Shipping Act?

Mr. Fortier: It is being looked after in the amendment of the Canada Shipping Act.

Mr. Nowlan: In the case I am thinking of I believe the Department finally tried to remove that vessel off Paisley Island on its own. Is that correct?

Mr. Manning: The difficulty was that it was just at the limit where the divers could work in very deep water, and it took some time to get a company interested in tackling this work.

Mr. Nowlan: If I could ask one more question, what is the significance of having this in the Canada Shipping Act and not in the Navigable Waters Protection Act, when we are talking about obstructions, bark and debris in the water? Why would it not logically be...

Mr. Fortier: We already have provisions in the Canada Shipping Act to control pollution of the waters by oil escaping from ships. We provide for that in accordance with an international convention and we provide for prosecuting and penalizing the owners.

Mr. McGrath: Is that not covered in Section 10?

Mr. Manning: The oil in the water is not an impediment to navigation.

An hon. Member: It would have to be an obstruction?

Mr. Manning: It cannot be covered by this Act, but it is being covered under the Canada Shipping Act.

Mr. Nowlan: May I ask one further question, Mr. Chairman? What is the stage of these proposed amendments to the Canada Shipping Act?

Mr. Fortier: The bill, sir, was introduced in the Senate and it was on the Order Paper, I believe, for second reading this week. I have not heard whether it has received second reading.

The Chairman: Does that answer your question, Mr. Nowlan? Mr. Nesbitt?

Mr. Nesbitt: Mr. Chairman, I have just a very brief question to the appropriate official. I do not have the original Act in front of me at the moment—the Navigable Waters Protection Act—but perhaps you could give us an interpretation of the word "vessel", because in view of some of the other definitions...

Mr. Ballinger: I think you will find the definition on the first page.

Mr. Nesbitt: Yes, page four, I see. I think perhaps for the purpose of the record, Mr. Chairman, it might be well just to put this into the record. It might be helpful in reading some of the other evidence. Under Section 12...

• 1045

The Chairman: Is that agreed by the Committee?

Mr. Trudel: Is that part of the Act, Mr. Chairman?

Mr. Nesbitt: It is part of the original Act; it is not part of the amendments to which we are referring. I thought it might be helpful in interpreting some of the questions that have been asked here. In any event, I will put it this way, Mr. Chairman. In view of the fact that the interpretation of the word "vessel" is used in the amendments, in the original Act it reads as follows:

> (c) "vessel" includes every description of ship, boat or craft of any kind, whether propelled by steam or otherwise, and whether used as a sea-going vessel or on inland waters only; including everything forming part of the machinery, tackle, equipment, cargo, stores or ballast of such vessel.

I would take it then, Mr. Chairman, that any kind of barge or raft or anything else could be included under the term "vessel".

Mr. Manning: That is right. I think so, yes.

The Chairman: Mr. Rose?

Mr. Rose: Mr. Chairman, I would like to revert briefly for clarification to the question posed by Mr. Nowlan because of the distinction made by one of the witnesses. It was not really clear to me. I believe the nub of Mr. Nowlan's question was, why is there not some provision within this Act to control such things as oil leakages from sunken barges? We were told it was contemplated that this kind of control is necessary, but will be forthcoming in the Canada Shipping Act now before the Senate. Am I correct up to now? Page six, paragraph 18 deals with the throwing of sawdust, and so forth, and is prohibited because it interferes only with navigation.

My question really is that I have observed that this whole problem of pollution and its control seems to suffer because it is divided among under so many acts—provincial acts, fishing, navigation, shipping—and the water pollution is a very serious thing.

My question is, really, why be half safe? I can see that there are instances when oil leaking from submerged barges, or leaking from vessels, could be a definite threat to navigation of all kinds. I think there have been instances where small boats—and they

are described as vessels, too—have been impeded because of this sort of thing. Really what I am asking is why would it not be possible to include an amendment within this Act to take care of such a possibility? I do not see anything wrong with having legal insurance against this sort of thing and I would like your comments on this, please.

Mr. Fortier: I would suggest that the reason why we deal with this angle of oil pollution in the Canada Shipping Act is because we already have provisions in the Canada Shipping Act in respect of oil pollution. Of course, the jurisdiction of the Parliament of Canada in connection with pollution by oil can only be exercised in respect of oil which comes from ships.

If oil is discharged in the navigable water by pipes, of course, that does not come under the jurisdiction of Parliament; it comes under provincial jurisdiction, perhaps under the heading of health. The jurisdiction of the Parliament of Canada under the British North America Act only deals with navigation and shipping, and pollution caused other than by ships would not be an item that we could legislate on.

The Chairman: Mr. Breau?

Mr. Breau: I have a supplementary for Mr. Fortier. Bunker oil would obstruct a jet propelled unit, would it not?

Mr. Fortier: Bunker oil would?

Mr. Breau: A jet propelled boat or a Sea-Doo or something which has a small jet with a small impeller in it. Surely that is a navigable unit; it is classified as a vessel in this Act because it floats and it is power propelled, and bunker oil would surely obstruct that.

• 1050

Mr. Fortier: Yes, but if bunker oil escapes from the ship and pollutes the waters, that is an item that would have to be controlled, as I said, under the legislation that we are now proposing to Parliament.

Mr. Allmand: Not on the pollution end; he is bringing up the point of obstruction to navigation. He is saying that certain oil will interfere with navigation without any reference at all to its pollutant effect.

Mr. Fortier: The oil itself cannot cause obstruction to navigation.

Mr. Breau: Yes, it can to a jet propelled unit.

Mr. Manning: The ship could operate through the oil; it would be dangerous for that ship to do that.

Mr. Breau: No, not a jet propelled . . .

The Chairman: One at a time please.

Mr. Breau: Mr. Fortier, a jet propelled unit which is a Sea-Doo, is powered by the water that goes through a jet that can be three or four inches wide with a small impeller, and surely bunker oil would obstruct that. I do not know whether you have seen those machines.

Mr. Manning: It will obstruct the engine of the boat, but it would not prevent the boat from floating through.

Mr. Nowlan: Could I ask a supplementary of Mr. Manning? How could sawdust, or edgings, or bark—granted bark can get pretty big—but would sawdust or edgings be any more obstruction to almost any of these vessels, either ocean-going or motor boats, than the bunker oil that I am talking about?

Mr. Manning: In this case this would eventually go to the bottom and raise the bottom. These are solids, sawdust, edgings, laths and bark, and when they float on the surface they would be an obstruction to navigation.

Mr. Nowlan: But it is while they are floating that they are going to interfere with navigation.

Mr. Manning: Yes, while they are floating.

Mr. McGrath: Are we on Clause 10, Mr. Chairman?

The Chairman: We are on Clause 9.

Mr. McGrath: Can we discuss Clause 10 also?

Mr. Nowlan: They are interrelated.

The Chairman: Does Clause 9 carry?

Mr. Nowlan: I appreciate what Mr. Fortier said about the Canada Shipping Act and the discharge of oil. This, I gather, is about ocean-going ships in harbour or going out of harbour that sometimes lighten their load, either accidentally or by design, and this pollutes the harbour.

Mr. Fortier: Discharging oil.

Mr. Nowlan: Discharging oil. I appreciate that section under the Canada Shipping Act, but in the amendment that is going to take care of a barge that is sunk and from which oil is coming out, is there going to be the same procedure? Is the procedure easier or more difficult than under the Navigable Waters Protection Act, or would it be the same to enforce it?

Mr. Fortier: I am sorry I cannot speak from memory, but I believe that what is in the bill is a provision that will provide for a penalty.

Mr. Nowlan: This is what I was wondering. As I understand the Canada Shipping Act, you just penalize the boat or the skipper of the boat for discharging the oil, and he sails merrily on. But here under the Navigable Waters Protection Act, you have a procedure whereby for a derelict which is obstructing navigation you can in effect enforce the removal of the derelict. If they do not remove it, the Department removes it and collects against the owner.

To me, if you have a barge that has sunk and is discharging oil—and we are talking about thousands of gallons of bunker oil on these barges from the West Coast—then a fine of whatever it is, $50 or $250, is not going to help remove that barge that is polluting beaches and is obstructing navigation.

Mr. Fortier: As far as the barge is concerned, we would have authority to enforce the removal. But if the oil escapes and comes up to the surface, that is where we would have no authority to force the removal, because the Minister could not say that this oil is an obstruction to shipping.

• 1055

Mr. Manning: This is under the Canada Shipping Act. The action could be taken under the Canada Shipping Act to remove the oil from that barge, to force the owner to remove the oil, under the new legislation. But I am not competent to discuss this, because it does not come under my branch. This is another branch in the Department of Transport. The Director of marine regulations looks after the Canada Shipping Act and the obstruction by oil. But we are only concerned about solids in this Act.

Mr. Nowlan: I will let further questions on this pass for the moment. Do you have the reference in the Canada Shipping Act for this new amendment?

Mr. Fortier: No. I have not. The bill is a Senate bill.

The Chairman: We are still on Clause 9. In five minutes we will be called to go back to the House, but I would like to get a couple of motions through this morning if possible. We still have Mr. McGrath's motion that we discussed yesterday, that the Chairman be authorized to hold meetings, to receive and authorize the printing of evidence when a quorum is not required.

Yesterday it was suggested that the quorum be reduced to five members. I spoke to the Clerk of the House and he told me he is agreeable to that. Does the Committee agree that we reduce the quorum to five members?

Mr. McGrath: For the purpose of taking evidence only. In other words, there will be at least five members present including the Chairman before evidence can be heard.

The Chairman: That is right.

An hon. Member: There can be no less than five members.

Mr. McGrath: I so move.

Mr. Breau: I second the motion.

Motion agreed to.

Mr. Skoberg: It is understood, Mr. Chairman, that no action can be taken by this number.

The Chairman: That is right. I would also like a motion to replace Mr. Thomas with Mr. Nesbitt on the Steering Committee. This is a formality.

Some hon. Members: Agreed.

Mr. Allmand: Did we agree to a special quorum for evidence-taking also?

The Chairman: Yes.

Mr. Allmand: Good.

The Chairman: Does the Committee agree to sit Monday after Orders of the Day? You know there are many of us who will be leaving to on the trip, and we have these bills.

Mr. Nesbitt: We are agreeable, but do we have the authority to do it?

The Chairman: Yes, we have the authority to do it.

Mr. Allmand: We have the authority under the new rules.

Mr. Nesbitt: All right.

The Chairman: So we will sit Monday afternoon after Orders of the Day.

Mr. Allmand: To look after these bills?

The Chairman: Yes, we have to finish this one and the other bill. Is this agreed?

Some hon. Members: Agreed.

Mr. Harding: Mr. Chairman, are we on Clause 9?

The Chairman: We are on Clause 9. We will meet Monday afternoon.

MINUTES OF PROCEEDINGS

MONDAY, January 27, 1969.
(12)

The Standing Committee on Transport and Communications met this day at 3.30 o'clock p.m. The Chairman, Mr. H. Pit Lessard, presided.

Members present: Messrs. Allmand, Brea, Harding, Howard (*Okanagan Boundary*), Lessard (*LaSalle*), McGrath, Nesbitt, Pringle, Portelance, Rock, Serre, Skoberg, Trudel, Turner (*London East*)—(14).

In attendance: The Honourable James Richardson, Minister without Portfolio; *From the Department of Transport:* Messrs. Jacques Fortier, Legal Counsel; John Ballinger, Chief, Aid to Navigation, Marine Services; Walter J. Manning, Director, Marine, Works; P. Walker, Regulations and Licensing, and Mr. Nicholas Yost, Superintendent of Property Management; *From the Canadian Transport Commission:* Mr. John Gray, Assistant Director, Legal Department.

The Committee resumed its clause by clause consideration of Bill S-19.

Clauses 9, 10, 11, 12, 13, 14, 15 and 16 were severally carried.

On clause 4, sub-section (c), Mr. Harding moved that the following words be added after word "Act",

"including provincial and federal Crown Corporations".

The Chairman ruled that the amendment was out of order since clause 4 had already been carried.

The title carried.

The Bill carried.

The Chairman was instructed to report Bill S-19, An Act to amend the Navigable Waters Protection Act, without amendment.

(*Texte*)

PROCÈS-VERBAL

LE LUNDI 27 janvier 1969.
(12)

Le Comité permanent des transports et des communications se réunit à 3 h. 30 cet après-midi, sous la présidence de M. H.-Pit Lessard, président.

Présents: MM. Allmand, Breau, Harding, Howard (*Okanagan Boundary*), McGrath, Nesbitt, Portelance, Pringle, Rock, Serré, Skoberg, Trudel, Turner (*London-est*), (14).

Aussi présents: L'honorable James Richardson, ministre d'État. *Du ministère de Transports:* Me Jacques Fortier, service du contentieux et avocat-conseil; M. John Ballinger, chef, Division des aides à la navigation; M. Walter J. Manning, directeur, Direction des travaux maritimes.

De la Commission canadienne du transport: M. John Gray, Directeur adjoint, service du contentieux.

Le Comité reprend l'étude du Bill S-19, Loi modifiant la Loi sur la protection des eaux navigables.

Les articles 9, 10, 11, 12, 13, 14, 15 et 16 sont agréés.

Concernant le paragraphe c) de l'article 5, M. Harding propose que soient ajoutés, à la suite du mot Loi, les mots «sociétés de la Couronne tant provinciales que fédérales».

Le président déclare cette modification irrecevable étant donné que l'article 5 est déjà agréé.

Le titre est adopté.

Le Bill est adopté.

Le Comité demande au président de faire rapport du Bill S-19, Loi modifiant la Loi sur la protection des eaux navigables, sans modification.

29689—1½

Then the Honourable James Richardson, Minister without Portfolio, made a statement on Bill S-14, An Act to amend the Aeronautics Act, and was questioned thereon assisted by some officials of the Department of Transport and the Canadian Transport Commission.

Le président invite ensuite l'honorable James Richardson, ministre sans portefeuille, à faire une déclaration concernant le Bill S-14, Loi modifiant la Loi sur l'aéronautique; puis les membres du Comité l'interrogent ainsi que des hauts fonctionnaires du ministère des Transports et de la Commission canadienne des transports.

The Committee then proceeded to a clause by clause consideration of the said Bill S-14.

Le Comité étudie le Bill S-14, article par article.

Clauses 1, 2, 3, 4, 5, 6, 7, 8, and 9 were severally carried.

Articles: 1, 2, 3, 4, 5, 6, 7, 8 et 9 sont agréés.

The title carried.

Le titre est adopté.

The Bill carried.

Le Bill est adopté.

The Chairman was instructed to report bill S-14, An Act to amend The Aeronautics Act without amendment.

Le Comité demande au président de faire rapport du Bill S-14, Loi modifiant la Loi sur l'aéronautique, sans modification.

At 4.50 o'clock p.m. the Committee adjourned to the call of the Chair.

A 4 h. 50 de l'après-midi, le Comité s'ajourne jusqu'à nouvelle convocation du président.

Le secrétaire du Comité,
Robert Normand
Clerk of the Committee.

EVIDENCE

(*Recorded by Electronic Apparatus*)

Monday, January 27, 1969

TÉMOIGNAGES

(*Enregistrement électronique*)

[*Interprétation*]

• 1532

The Chairman: Gentlemen, I see a quorum. We still have the Minister, Mr. Richardson, with us this afternoon as well as some of his staff, including Mr. Jacques Fortier, Legal Counsel. We also have Mr. John Ballinger, Mr. Walter Manning and Mr. John Gray.

When we adjourned last Friday, we were dealing with Clause 9. We have already had some discussion on this clause. Does anyone have any further questions on Clause 9?

Shall Clause 9 carry?

Clause agreed to.

On clause 10—*Throwing sawdust, etc. prohibited*

The Chairman: Are there any questions on Clause 10?

Mr. Harding: Mr. Chairman, I think probably this clause is new. I note that it reads as follows:

> No person shall throw or deposit or cause, suffer or permit to be thrown or deposited any sawdust, edgings, slabs, bark or like rubbish of any description whatsoever that is liable to interfere with navigation in any water, any part of which is navigable or that flows into any navigable water.

I presume this will take care of the problem of solids or debris of any type getting into a small stream which would eventually get into a larger stream.

My question is this: does this mean that the federal authority will be able to check on all these small streams which might have sawmills, logging operations or any other type of operation that might add debris to the water?

• 1535

Mr. McGrath: How is this particular clause enforceable when one considers the number of paper mills in this country with substantial logging operations? I presume this is what it covers.

Le président: Messieurs, nous avons le quorum. Nous avons toujours le ministre d'État, l'Hon. M. Richardson, avec nous cet après-midi, ainsi qu'une partie de son personnel, Me Jacques Fortier, avocat-conseil, M. John Ballinger, M. Walter Manning et M. John Gray.

Quand nous avons levé la séance, vendredi dernier, nous étions rendus à l'article 9. Nous avons déjà discuté un peu de l'article 9. Avez-vous des questions à ce sujet? L'article 9 est-il adopté?

L'article 9 est adopté.

L'article 10—Défense de jeter des sciures, etc.

Le président: Avez-vous des questions au sujet de l'article 10?

M. Harding: Monsieur le président, je crois bien que cet article est nouveau. J'en fais la lecture:

> Nul ne doit jeter ou déposer, ni faire jeter ou déposer, ni permettre ni tolérer que soient jetés ou déposés des sciures, rognures, dosses, écorces, ou *semblables* déchets de quelque sorte *qui sont susceptibles de nuire à la navigation* dans des eaux dont une partie quelconque est navigable ou qui se déversent dans des eaux navigables.

Je présume que cela couvre aussi le problème des solides qui entreraient dans un petit ruisseau, et qui, à la longue, se déverseraient dans un cours d'eau plus vaste.

Voici ma question: Est-ce que cela veut dire que les autorités fédérales pourront vérifier tous les petits cours d'eau le long desquels on pourrait trouver des scieries ou d'autres entreprises du genre qui pourraient nuire à la navigation?

M. McGrath: Comment est-il possible d'insérer cet article, étant donné l'envergure des usines de pâte et de papier dans notre pays? J'imagine que c'est ce à quoi l'on vise par cet article.

[*Text*]

The Chairman: I would ask Mr. Fortier to answer that question.

An hon. Member: I have one further question...

Mr. McGrath: Everything is considered navigable waters now—part of the little duck pond.

The Chairman: One at a time, please. I think Mr. is going to answer the two questions because they are related to this.

Mr. Jacques Fortier (Legal Counsel for the Department of Transport): Mr. Chairman, the enforcement of Section 18 of the amended Act would be conducted by...

Mr. Harding: Mr. Chairman, I am afraid I cannot hear the witness.

Mr. Fortier: The enforcement of Section 18 suggested in Clause 10 would be conducted, I take it, by the RCMP and would be designed to stop operators of paper mills permitting rubbish from their operations being deposited in navigable waters and building up the bottom so that it would interfere with navigation.

The Chairman: Does that answer your question, Mr. Harding?

An hon. Member: Mr. Chairman, may I ask one short supplementary?

The Chairman: Just a minute.

Mr. Harding: The answer is that the RCMP will be the natural agency to enforce these regulations.

Mr. Fortier: The RCMP are charged with the enforcement of all departmental regulations. Now, if a complaint is made to the Department that certain companies are permitting their rubbish from mill operations to build up and obstruct navigation—the Department would conduct an investigation and if it came to the decision that prosecution was in order, then we would ask the Department of Justice to proceed to a prosecution.

Mr. Harding: I have another question on this, Mr. Chairman, while we are dealing with it. Is there not some overlapping with provincial jurisdiction in this field?

Mr. Fortier: Overlapping jurisdiction between...

Mr. Harding: I think there is an overlapping of jurisdiction. I am quite certain that the provincial jurisdictions have regulations governing the pollution of water by this type of debris.

[*Interpretation*]

Le président: Je demanderais à M. Fortier de répondre à la question.

Une voix: J'ai une autre question...

M. McGrath: On peut dire que toutes les eaux sont maintenant navigables.

Le président: A l'ordre. M. Fortier va répondre aux deux questions, car elles se rapportent au sujet.

M. J. Fortier (avocat-conseil, ministère des Transports): Monsieur le président, l'application de l'article 18...

M. Harding: Je m'excuse, monsieur le président, je n'entends pas M. Fortier.

M. Fortier: L'application de l'article 18, relèverait, si j'ai bien compris, de la compétence de la Gendarmerie royale et empêcherait les exploitants d'usines de pâte et de papier de jeter les déchets de leur entreprise dans les eaux navigables, nuisant ainsi à la navigation par un dépôt excessif dans le fond.

Le président: Est-ce que cela répond à votre question, monsieur Harding?

Une voix: J'ai une question supplémentaire, monsieur le président.

Le président: Attendez une minute.

M. Harding: La Gendarmerie sera l'agent naturel pour l'application de ces règlements.

M. Fortier: La Gendarmerie est chargée d'appliquer tous les règlements du Ministère. Si une plainte est formulée auprès du Ministère à l'effet que certaines compagnies nuisent à la navigation par les déchets de leur entreprise il y aurait une enquête. Si, à la suite de l'enquête on voulait prendre des mesures légales, on demanderait alors au ministère de la Justice d'intenter un procès contre ces compagnies.

M. Harding: J'ai une autre question à ce sujet, monsieur le président. Est-ce qu'il n'y a pas chevauchement avec la juridiction provinciale dans ce domaine?

M. Fortier: Chevauchement de juridiction entre...

M. Harding: Je pense qu'il a chevauchement de juridiction. Je suis presque sûr que les provinces ont des règlements au sujet de la pollution de l'eau.

[*Texte*]

Mr. Fortier: You must understand, sir, that this clause is to prevent the building up of the beds of rivers and navigable waters that would endanger or obstruct navigation, but otherwise the pollution of waters is a matter that, as you said, comes under provincial jurisdiction. The jurisdiction of the federal government concerning pollution is only in respect of substances—liquids—that may be dropped into waters from ships, and that jurisdiction is exercised under the Canada Shipping Act.

Mr. Harding: To follow up the question asked just previous to this about pulp mills pouring effluent into streams, this, then comes under this Act? Is that right?

The Hon. James Richardson (Minister without Portfolio): Mr. Chairman, I think the first thing to be said is that this particular Section in the Act as it stood before the amendment applied only to sawmills, and the main purpose of this amendment is to widen the power and have it apply to any plant or any factory or any person; but it applies only to navigation; in other words, it is not related to pollution. It is only when a factory is allowing something to go into the water, which sinks and becomes an obstruction to navigation.

• 1540

The essential difference between the present Act and the act after amendment by this bill is that that ruling will apply to any person, or any factory, and not just to a sawmill.

Mr. Harding: Mr. Chairman, I do not want to skip any clauses, but a little farther down we are removing a couple of sections from the old Act. One of them in section 21, dealing with the right of fishery officials to check for sawdust, and so on, in navigable waters. I think the two are very, very closely related.

Why should you remove a check by one of our agencies on this type of pollution? You say you are strengthening the Act. Where in the new act does this new power of checking appear?

Mr. Richardson: Mr. Chairman, I believe the purpose is to try to contain within this bill to amend the Act only matters that affect navigation. We could have touched things that affect the health of fish, or we could have gone into pollution, but other acts deal with those. That is why that was taken out of these amendments. Therefore, if it does not affect navigation it is not here.

[*Interprétation*]

M. Fortier: Vous devez comprendre que cet article veut empêcher que l'on dépose trop de choses dans le fond des rivières et des eaux navigables et que cela nuise à la navigation. Mais, la question de la pollution des eaux relève de la compétence provinciale. La compétence fédérale, en ce qui concerne la pollution, s'exerce seulement à l'égard des substances, des liquides, qui pourraient être déversés dans les eaux par les navires. Cette compétence s'exerce en vertu de la Loi sur la marine marchande du Canada.

M. Harding: La question au sujet des usines de pâte et de papier qui déposent leurs déchets dans les cours d'eau relèverait de cette Loi, n'est-ce pas?

L'hon. J. Richardson (ministre d'État): Monsieur le président, la première chose à dire au sujet de cet article de la loi, tel qu'il existait avant la modification, c'est qu'il ne s'appliquait qu'aux scieries. Maintenant, nous voulons que l'article s'applique à toute usine ou à toute personne en ce qui concerne la navigation seulement. En d'autres mots, il ne s'agit pas de pollution des eaux. Cela s'applique seulement lorsqu'une usine jette quelque chose dans l'eau et nuit ainsi à la navigation.

La différence essentielle entre la loi actuelle et ce qu'elle sera après modification, c'est que cela s'appliquera à toute personne ou à toute usine, et non pas tout simplement à une scierie.

M. Harding: Je ne voudrais pas passer à un autre article, mais plus loin nous annulons certains articles de l'ancienne Loi. Entre autres, il y a l'article 21, qui a trait à la compétence des fonctionnaires des Pêcheries de vérifier la présence de sciure dans les eaux navigables. Je crois que les deux sont interreliés. Pourquoi enlever cette possibilité de vérification par nos agents sur ce genre de pollution? Vous prétendez renforcer la loi, mais où trouve-t-on ce pouvoir de vérification dans la nouvelle Loi?

M. Richardson: Je crois, monsieur le président, que l'objet est de maintenir dans le présent bill seulement ce qui a trait aux obstacles à la navigation. Nous aurions pu parler de ce qui menace la santé des poissons ou autre chose, mais on l'a déjà fait dans d'autres Lois. C'est la raison pour laquelle nous n'en parlons pas dans les présents amendements. Si une chose ne constitue pas un obstacle à la navigation, elle ne se trouve pas dans le présent bill.

[*Text*]

Mr. Harding: Sawdust getting into the river and eventually sinking is one thing that will affect navigation.

Mr. Richardson: That is right.

Mr. Harding: Yet you have taken out the check by the Fisheries Department on the amount of sawdust which can get into these navigable waters. What is the reason for this? Mind you, this section is a little farther down, but the two are linked and I will not be questioning on it later. Why should it be removed from the old Act when there is no method of checking in the legislation we now have before us?

Mr. Richardson: Mr. Chairman, I think it is covered under clause 10 in this bill.

Mr. Harding: You think this gives you sufficient coverage without specifically naming some department to do the checking; is that it?

Mr. Richardson: That would be right, yes; that would be my understanding.

The Chairman: Mr. Pringle?

Mr. Pringle: My question has been partially answered, but I will be very brief. I wish to refer to logging operations on navigable waters, where we have situations involving deadheads. When they come down with log booms on whom does this bill place the responsibility for those deadheads? Is this covered?

Mr. Fortier: Sir, the new section 18 will apply only to the items which are listed—sawdust, edgings, slabs or like rubbish. To the extent that a deadhead could be considered to constitute rubbish it would come under that section. Otherwise logs and log booms are not covered by this bill.

Mr. Pringle: Thank you.

The Chairman: Mr. Rock?

Mr. Rock: I have had a property on Lake St. Francis for the past twenty years. Since the use of the Seaway by larger ships I have noticed that there are more floating weeds. These are a danger to the navigation of pleasure craft—and I will not mention the pollution aspect of them. I have noticed this for many years, and it has increased year by year as ships have become larger.

During the three weeks of the Seaway strike last year there was not a weed floating on Lake St. Francis or Lake St. Louis.

[*Interpretation*]

M. Harding: Les sciures qui entrent dans les rivières pourraient affecter la navigation.

M. Richardson: C'est exact.

M. Harding: Mais vous avez quand même enlevé la vérification de la part du ministère des Pêcheries sur la quantité de sciure qui se trouve dans ces eaux navigables. Quelle est la raison pour cela? Cet article est un peu plus loin, mais je crois que les deux sont interreliés. Pourquoi l'a-t-on enlevé de l'ancienne Loi, sans laisser une méthode de vérification dans le bill actuel?

M. Richardson: Je crois que tout cela se trouve dans l'article 10.

M. Harding: Vous croyez avoir suffisamment de pouvoirs sans être obligés de préciser un ministère quelconque?

M. Richardson: Oui. C'est ce que je comprends de la Loi.

Le président: Monsieur Pringle.

M. Pringle: La réponse à ma question a été donnée en partie. Je voudrais parler justement des opérations forestières sur les eaux navigables où nous avons des billots égarés. De qui relève la compétence de ces billots égarés? Est-ce que cela est visé par la Loi?

M. Fortier: Le nouvel article 18 ne s'applique qu'aux articles qui sont énumérés: les sciures, rognures, dosses, écorces, ou semblables déchets. Nous pourrions peut-être considérer que les billots sont de semblables déchets, autrement les billes et les billots ne sont pas couverts par la loi.

M. Pringle: Merci.

Le président: Monsieur Rock?

M. Rock: Monsieur le président, j'ai une propriété sur le lac Saint-François depuis vingt ans, et j'ai constaté que le trafic sur la voie maritime du Saint-Laurent est de plus en plus grand et que les navires qui empruntent cette voie sont d'un tonnage toujours plus fort, sans parler des mauvaises herbes flottant à sa surface. Ceci constitue un danger pour la navigation des yachts de plaisance et pollue les eaux. C'est un fait que j'ai constaté au cours des dernières années avec l'accroissement du trafic maritime.

L'an dernier, au cours de la grève de la Voie maritime du Saint-Laurent, aucune

[*Texte*]

I immediately brought this to the attention of one of your departmental employees and I received an answer, but I am not satisfied with their excuse. I have not had time to reply to it. It was that the weeds did not come down because the locks were closed. They did not seem to realize that there is also an electric power plant there, through which the water flows. There were still no floating weeds.

I have been told of this by many people on Lake St. Francis. There is a 27-foot deep channel and beside it there are perhaps two or three feet of water containing weeds. The turbulence from the propellors of these large ships uproots tons and tons of these weeds and beds of them float downstream and deposit themselves in many parts of the lake or rivers and on the shores. They then decompose and cause pollution.

I have not really had an answer, and I have been asking your department and the Seaway people to investigate this.

• 1545

I just wish to warn you, Mr. Richardson, that if it is actually the turbulence from the propellors that causes this then we, the government, through one of our agencies, the Seaway Authority, may be creating more of an obstacle to the navigation of, say, pleasure craft than are all the sawmills in Canada.

I merely want to bring to your attention that by this act we may be enacting laws which will have a great effect on our own agency, the Seaway Authority, because of its having allowed this to happen.

There may be another answer, but if this is the case these ships may have to proceed at slower speeds through these channels. I am still pursuing an investigation of this matter, and I thought I would bring it to your attention.

The Chairman: Shall clause 10 carry?

Mr. Harding: I have another question on this clause. If this is not the correct clause, Mr. Chairman, perhaps you could direct me to the proper one.

A little earlier on in the bill it is stated that artificial lakes formed behind dams will come under the jurisdiction of this act? Is that so?

Mr. Fortier: That is right, sir, because of the new definition that is included in clause 1A(b):

> "navigable water" includes a canal and any other body of water created...as a result of the construction of any work.

[*Interprétation*]

herbe ne flottait sur le lac Saint-François et le lac Saint-Louis. J'ai immédiatement porté ce fait à l'attention de vos employés et on m'a répondu, mais je ne suis pas satisfait de la raison donnée. Je n'ai pas eu le temps d'y répondre. On nous a dit que c'était parce que les écluses étaient fermées que les herbages n'étaient pas parvenus jusqu'à nous. Ils ne paraissaient pas savoir qu'il y a aussi une usine hydro-électrique, d'où l'eau s'écoule et, néanmoins, il n'y avait pas d'herbes flottantes.

On m'a dit qu'il y a un chenal d'une profondeur de 27 pieds. Au fond, pour une profondeur de deux ou trois pieds, il y a des herbes que les hélices de ces navires détachent et amènent à la surface où elles flottent, pour ensuite se déposer à différents endroits du lac ou des rivières et des rivages. Elles se décomposent alors et causent ainsi une pollution.

J'ai demandé à votre ministère et à la Voie maritime de faire une enquête, mais la réponse que j'ai eue ne me satisfait pas et je ne peux l'accepter.

Je voulais tout simplement vous prévenir, Monsieur Richardson, que si, en fait, cet état de choses est dû à l'action des hélices des navires, nous du gouvernement, par le truchement de la Voie maritime du Saint-Laurent, allons nuire davantage à la navigation des bateaux de plaisance que toutes les scieries au Canada. Je voulais simplement vous faire remarquer que par cette loi, nous allons établir des règles qui auront une grande portée en regard de la voie maritime qui a permis que de telles choses se produisent.

Il y a peut-être une autre réponse, mais si tel est le cas, il se peut qu'ils aient à ralentir dans le chenal. Je voulais tout simplement attirer votre attention à ce sujet.

Le président: L'article 10 est-il adoptée?

M. Harding: Si ce n'est pas le même article, monsieur le président, vous pourriez peut-être m'indiquer celui dont il s'agit. Plus tôt dans le projet de loi on dit que les lacs artificiels qui se sont formés en amont des barrages relèveront de cette loi. Est-ce vrai?

M. Fortier: C'est exact, en raison de la nouvelle définition incluse dans l'article 1Ab):

> «eaux navigables» comprend un canal ainsi que toute autre étendue d'eau créés ou modifiés par suite de la construction d'un ouvrage.»

[*Text*]

Mr. Harding: I presume that will cover the lakes formed in the reservoir basins behind the dams involved in the Columbia River Treaty projects—the Arrow Dam, the Duncan Dam, the Mica Dam, which is being built; and the Libby Dam, being built in the United States, which will flood 40 miles into Canadian territory. Will the reservoir basins in these areas be under the jurisdiction of this Act, Mr. Chairman?

Mr. Fortier: For navigation purposes they will come under the jurisdiction of this Act.

Mr. Harding: I have another point I would like to bring to the attention of the members, and on which I would like a little advice.

In some of these basins an improper job of clearing has been done. There is absolutely no doubt about that. For example, because of floating debris and the fact that the timber has never been cut, one could not take a boat up 85 per cent of the upper part of Duncan Lake, and it comes under this bill. These have created navigational hazards. You would be in direct conflict with one of the Crown corporations in British Columbia—in this case B.C. Hydro—and with the provincial government relative to the clearing of these reservoir basins, but here you have a clear case of federal jurisdiction, I presume, and this debris is still allowed to remain there. Could the clearing of these reservoir basins be enforced under this new act?

Mr. Fortier: I do not know that I can give you a definite answer on that. If it is a case where, at the time of the work being constructed the land-owners whose lands were to be flooded were approached and gave to the constructors easements to flood their land up to a certain elevation, and if before the land was flooded as the result of the construction of the work the land was not cleared to the extent that the trees may have been cut but the stumps were not removed—the stumps are still imbedded in the land—I doubt that there is any provision in Part I which would govern the removal of those stumps. They would not come under the heading of rubbish because they are objects of natural growth which are still there. They have been partly removed only.

• 1550

Mr. Harding: Mr. Chairman, getting back to the clearing problem, I think anyone would concede that the leaving of short stumps might be considered as debris. This is logical

[*Interpretation*]

M. Harding: Alors, je présume qu'elle comprendra les lacs qui sont formés dans les bassins de réservoirs le long des barrages inclus dans les projets consécutifs au Traité du fleuve Columbia, comme le barrage du lac Arrow, du lac Duncan, du lac Mica, que l'on est en train de construire, de même que celui du lac Libby, aux États-Unis, qui va déverser jusqu'à 45 milles dans le territoire canadien. J'imagine que les réservoirs relèveront de cette loi. Ai-je raison, monsieur le président?

M. Fortier: Aux fins de la navigation, cela relèvera de la présente loi, oui.

M. Harding: Il y a un autre point sur lequel je voudrais attirer l'attention des députés et avoir leur point de vue.

Dans certains de ces bassins, on n'a pas nettoyé suffisamment. Il n'y a aucun doute à ce sujet. Par exemple, à cause des débris flottants, il est impossible de faire remonter un bateau à plus de 85 p. 100 de la partie supérieurs du lac Duncan, qui tombe sous le coup de cette loi. Et voilà des obstacles à la navigation. Vous seriez alors en conflit direct avec l'une des sociétés de la Couronne de la Colombie-Britannique, dans le cas qui nous occupe, l'Hydro de la Colombie-Britannique, et avec le gouvernement provincial en ce qui concerne le nettoyage de ces bassins de réservoirs. Nous avons là un très bel exemple de la compétence fédérale, et on laisse quand même ces débris.

Est-ce que nous pourrions appliquer cette loi à cet égard, pour nettoyer les bassins de réservoirs?

M. Fortier: Je ne sais pas si je peux vous donner une réponse définitive à ce sujet. Si ce qui s'est produit est qu'au moment où l'ouvrage a été construit, les propriétaires dont les terres devaient être inondées ont donné la permission d'inonder leurs terres jusqu'à une certaine hauteur, et si, avant que l'on n'inonde les terres en vue de la construction de l'ouvrage, le terrain n'a pas été nettoyé suffisamment—c'est-à-dire que l'on a coupé les arbres, mais que l'on a laissé les souches dans le sol—il n'y a rien dans la partie I qui oblige à enlever ces souches. Car, il ne s'agit pas vraiment de déchets mais de croissances naturelles qui sont toujours là car on n'en a enlevé qu'une partie.

M. Harding: Monsieur le président, pour en revenir à cette question de déblaiement, j'ai l'impression que tout le monde admettrait que des courtes souches peuvent être considérées

[*Texte*]

and sensible, I believe, when clearing costs come into the picture, but how about the position where trees were never cut and allowed to stand, many over 100 feet high? These are the ones I am concerned about—this type of debris. Now what would be the position of the federal government under the regulations we have here now? Could they force the clearing of the shorelines?

Mr. Fortier: Approval would have been obtained and would have been given to construct the dam. Once the work was finished the water would be raised to create this lake and it would be created with the obstruction, with the stumps, as they existed before the water was raised, before the lake was created. In those circumstances, I cannot see any provision in Part I which would apply so as to give jurisdiction to the Crown to enforce the removal of those stumps.

Mr. Harding: The point I am making is this: We are in the process of building Mica dam on the Columbia River to form a lake 125 miles long. The plan is not to clear it properly—it will only be partially cleared. There will be millions of feet of timber flooded. Some of it will be at great depths, some will be at lesser depths. The present plan is only to cut navigational channels through.

Now, really this is a disgraceful way of handling natural resources. It has nothing to do with the federal government at this stage, but it seems to me that there is going to be a clash of jurisdictions. This Act should cover it—it is a navigable lake, a navigable waterway, and there will be hundreds of thousands of trees that are never cut—they will be standing, unless plans change within the next few months. What would be the position of the department in regard to this?

This must be classed as litter and debris under the meaning of the Act.

Mr. Fortier: Debris is understood to apply to...

Mr. Harding: Floating...

Mr. Fortier: ...objects other than trees which are in their prime state, which have not been cut, which have not been removed, which are still standing. Whether it is a full tree or whether it is a stump, if it is still standing I do not see how it could come under the heading of debris or rubbish.

It may actually be an obstruction to navigation; however, once it becomes a lake, the navigators or the persons interested in navigation must take it in the condition in which it was first created.

[*Interprétation*]

comme des débris. Cela est logique, je crois, quand on tient compte des coûts du déblaiement. Mais que dire des arbres qui n'ont jamais été coupés, que l'on a laissés sur pied, et dont beaucoup ont plus de 100 pieds de hauteur? C'est cela qui me préoccupe—ce genre de débris. Quelle serait l'attitude du gouvernement fédéral en vertu des réglements que nous avons devant nous? Pourrait-on imposer le déblaiment des berges?

M. Fortier: L'approbation aurait été donnée pour la construction du barrage. Une fois la construction de l'ouvrage terminée, le niveau de l'eau serait élevé pour créer le lac, avec cette entrave, avec les souches qui étaient là avant. Dans ces conditions, je ne vois pas de disposition dans la partie I qui donnerait à la Couronne le pouvoir d'imposer le déblaiement de ces souches.

M. Harding: Ce que je veux dire, c'est ceci. La construction du barrage Mica, sur le Columbia, est commencé, et l'on compte former un lac de 125 milles de long. On n'a pas l'intention de déblayer complètement. Il y aura donc des milliers de pieds de bois inondés, à des profondeurs plus ou moins grandes. A l'heure actuelle, on veut tout simplement établir des chenaux de navigation.

C'est une façon honteuse de traiter les ressources naturelles. Cela ne relève pas du gouvernement fédéral, pour le moment, mais il me semble qu'il va y avoir conflit de juridiction. Cette Loi devrait couvrir ce genre de situation: c'est un lac navigable, une voie d'eau navigable, et il y a des centaines de milliers d'arbres qui ne seront jamais coupés, qui resteront debout, à moins que les plans ne soient modifiés dans les mois à venir. Quelle serait l'attitude du ministère à cet égard?

Il faut classer cela dans les débris dans l'interprétation de la Loi.

M. Fortier: Le terme «débris» est interprété, comme englobant les objets...

M. Harding: Flottants...

M. Fortier: ... autres que des arbres à l'état naturel, qui n'ont pas été coupés ni enlevés, qui sont toujours sur pied. Qu'il s'agisse d'un arbre entier ou d'une souche, si l'arbre est toujours debout je ne vois pas comment on pourrait le classer comme débris ou déchet.

Il peut en fait être une entrave à la navigation; mais, une fois le lac créé, ceux qui naviguent ou ceux qui s'intéressent à la navigation doivent le prendre dans l'état où il était au début.

[*Text*]

The Chairman: Mr. Nesbitt?

Mr. Nesbitt: I have a brief question. The question was brought up the other day and again this afternoon about the matter of artificially created lakes by means of dams and other things. Now, many of these bodies of water thus created are probably narrow and normally do not have a very strong sea on them so to speak; in other words, you do not have waves.

• 1555

However, when you put power craft on these lakes—and I alluded briefly to this the other day—particularly going along the shore there is no doubt at all that they erode the shoreline, and I am referring again particularly to Southern Ontario, the Fanshawe Dam in London, the Pittock Dam in my city, Woodstock, and many others, where there are mud banks. If ships or boats are permitted to go at high speeds in these areas there is a great chance that they will cause erosion and the filling up of the dam.

Is there any provision in this Act that would prevent this from taking place? In other words, I realize that regulation of the speed of ships, as I think was pointed out the other day, comes under the Canada Shipping Act and I suppose perhaps the Canada Shipping Act could be applied to these navigable waters as well, but do you think the question of having these lakes filled up by too speedy craft operating on them could come under this Act rather than under the Canada Shipping Act?

Mr. Richardson: I do not know whether the officials have any view on that; I do not see that there is anything in the Act that would cover that.

Mr. Nesbitt: I will refer you to the clause under discussion, Clause 10, and the proposed Section 19, Throwing stone, etc. prohibited:

> No person shall throw or deposit or cause, suffer or permit to be thrown or deposited any stone, gravel, earth, cinders, ashes...

It would clearly seem to me that if the activities of people were causing the banks of one of these lakes to erode and fall into the lake that would be causing it to be deposited or filled up. This is a matter of considerable importance in certain areas of Canada, and I think perhaps if we get some clarification it might save a lot of trouble later, that is all.

Mr. Fortier: As you said, sir, there are provisions in the Canada Shipping Act that

[*Interpretation*]

Le président: Monsieur Nesbitt.

M. Nesbitt: J'ai une brève question à poser. On a déjà parlé l'autre jour et cet après-midi du cas des lacs créés artificiellement, au moyen de barrages ou autres. Bon nombre des voies d'eau aussi créées sont sans doute étroites, et il ne doit pas y avoir de vagues.

Mais à partir du moment où vous mettez des bateaux à moteur sur ces lacs, en particulier le long du rivage—comme je l'ai mentionné brièvement l'autre jour—il ne fait aucun doute qu'il y a érosion de la rive. Et, je songe particulièrement au sud de l'Ontario—le barrage Fanshawe à London, le barrage Pittoch dans ma ville, le barrage Woodstock, etc., où vous avez des bancs de boue. Et, si on permet aux bateaux de faire la grande vitesse, il se peut qu'il y ait érosion et, par conséquent, remplissage du barrage.

Est-ce qu'il y a une disposition de la loi qui empêcherait cette situation? Je comprends que la vitesse des navires, comme vous l'avez fait remarquer l'autre jour, relève de la *Loi sur la navigation*. Et, la *Loi sur la navigation* pourrait peut-être être appliquée vis-à-vis de ces eaux navigables. Mais, il y a aussi la question de remplissage de ces lacs par les navires ou les bateaux qui sont trop rapides et qui relèverait plutôt de la présente loi, plutôt que de la Loi sur la navigation?

M. Richardson: Je ne sais pas si les fonctionnaires ont une opinion à ce sujet, mais je ne vois rien dans la loi qui couvrirait cette situation.

M. Nesbitt: J'aimerais vous indiquer l'article 10, et l'article 19, tel qu'il est proposé:

> Nul ne doit jeter ou déposer, ni faire jeter ou déposer, ni permettre ni tolérer que soient jetés ou déposés de la pierre, du gravier, de la terre, des cendres etc.

Il me semble donc que si l'activité des gens permettait l'érosion du sol ou des berges, il me semble que cela relèverait de cette partie-ci.

C'est une question très importante dans certaines parties du Canada. Nous pourrions peut-être avoir un éclaircissement maintenant qui nous épargnerait beaucoup de temps plus tard.

M. Fortier: Comme vous l'avez dit, il y a des dispositions dans la *Loi sur la navigation*

[*Texte*]

give authority to make regulations to govern any part of what we call the minor waters in Canada, which would be all these rivers and lakes and navigable waters, and under this particular section of the Canada Shipping Act there are regulations made with respect to the speed of vessels.

Mr. Nesbitt: Have they been applied, do you know, to some of these artificially created lakes? I refer particularly again to the ones in the Province of Ontario, but I am sure there are probably some elsewhere.

Mr. Manning: Regulations under the Canada Shipping Act can be made at any time they are required by local residents.

The Chairman: Mr. Harding?

Mr. Harding: Mr. Chairman, just as a point of clarification, I do know that on the Fraser River the speeds of the boats going up and down are limited. I think it must be a federal regulation. I do not know what the speed is, but I do know it is regulated for the very problem that Mr. Nesbitt has raised.

Mr. Richardson: Yes, Mr. Chairman, but surely that is under other legislation.

Mr. Harding: It must be, yes.

Mr. Richardson: I think it would be a matter of legal interpretatioh, but our amendment says that these deposits must be thrown or deposited. You would have to go before a court to decide whether a boat going down the way was, in fact, throwing or depositing, but I do not think it is the intent of this amendment to protect navigable waters from that particular type of hazard.

Mr. Nesbitt: One further question, and this is all I have to ask. The definition of navigable waters is somewhat enlarged for the purposes of this Act. Navigable water under, say, the Canada Shipping Act has a different interpretation. Would you get a conflict between the two acts this way?

Mr. Fortier: I do not believe there is any definition of navigable waters in the Canada Shipping Act. There is a reference to ships and how they must be navigated, operated and inspected, but there is nothing that touches this particular item.

• 1600

Mr. Nesbitt: Just one further question—I am sorry to keep pursuing this but I think it

[*Interprétation*]

qui nous donnent le pouvoir d'édicter des règlements pour ce que nous appelons les eaux secondaires au Canada; ce qui comprendrait toutes ces rivières, ces lacs et eaux navigables.

En vertu de cette disposition particulière de la *Loi sur la navigation,* il y a certainement des règlements au sujet de la vitesse des navires.

M. Nesbitt: Est-ce qu'ils ont été appliqués à ces lacs artificiels? Je pense, en particulier, à ceux de l'Ontario mais il y en a d'autres ailleurs, bien sûr.

M. Manning: Des règlements peuvent être établis à la suite de demandes des habitants de la région.

Le président: Monsieur Harding.

M. Harding: Je voudrais un éclaircissement, monsieur le président. Sur la Fraser, on limite la vitesse des navires qui montent et qui descendent. Je crois que c'est un règlement fédéral. Je ne sais pas quelle est la vitesse mais je suis certain qu'il y a un règlement à ce sujet, qui concerne le problème précis abordé par M. Nesbitt.

M. Richardson: Monsieur le président, il s'agit d'une autre loi qui s'applique ici.

M. Harding: En effet.

M. Richardson: Il s'agit, en fait, d'interprétation légale, comme c'est souvent le cas. Mais notre amendement dit que ces dépôts doivent être déposés ou jetés. Il faudrait donc faire appel à un tribunal qui déterminerait si ces déchets ont été jetés ou déposés par un bateau allant vers l'aval. Mais je ne crois pas que cet amendement a pour but de protéger les voies navigables contre ce genre de danger en particulier.

M. Nesbitt: Une autre question indispensable. Donc, les eaux navigables sont définies de façon assez vague en vertu de cette loi. Dans la *Loi sur la navigation,* il y a une autre interprétation des eaux navigables. Y aurait-il conflit entre les deux lois?

M. Fortier: Dans la *Loi sur la navigation* je ne crois pas qu'il y ait une définition des eaux navigables. Elle touche les navires, la navigation, l'opération et l'inspection, mais il n'y a rien qui se rapporte à cette question particulière.

M. Nesbitt: Je crois que la question est pertinente, ici. Et, en application, d'après la

[*Text*]

has some relevance. Under the Canada Shipping Act, what is the interpretation section, or the clause that gives jurisdiction of the Act over what waters?

Mr. Fortier: Well, the Canada Shipping Act applies to all waters in Canada over which ships may be operated.

Mr. Nesbitt: That is analogous to the navigable waters section in the interpretation section of this statute, then?

Mr. Fortier: Of course, the Canada Shipping Act deals with the operation of ships. This Act deals in Part I with approval for construction of works in navigable waters, and in Part II, with the removal of obstructions, the forcible removal of obstructions from navigable waters. It seems to me that those are separate subject matters.

The Chairman: Does that answer your question, Mr. Nesbitt?

Mr. Nesbitt: Not entirely, but however.

The Chairman: Does Clause 10 carry?

Mr. Rock: Mr. Chairman, two fast questions. Let us clarify one thing here. It is anything that flows and that interrupts or causes interruption of navigation indirectly. In other words, just because this part of water is a part of a big lake, but the navigational part of it is in the centre, if something is deposited on the shoreline—suppose a man is filling in his area which was eroded or something—this does not have any effect on the navigable portion of the lake and therefore he has the right to do so, has he not, especially if the land underneath belongs to him and was eroded?

Mr. Richardson: In that case, Mr. Chairman, it would be a matter of interpretation by the Department as to whether or not it did, in fact, impede navigation. If it did not, there would be no reason to have to apply under the Act, but if it did impede navigation, then it would have to be approved under this Act.

Mr. Rock: I see.

The Chairman: Does Clause 10 carry?

Clauses 10 to 16 inclusive agreed to.

The Chairman: We now come back to Clause 1. Mr. Harding?

Mr. Harding: I know we passed Clause 4, but there is an amendment I would suggest to

[*Interpretation*]

Loi sur la navigation, quel est l'article donnant la juridiction à la loi sur certaines eaux?

M. Fortier: La Loi sur la navigation s'applique à toutes les eaux du Canada ouvertes au transport Maritime.

M. Nesbitt: Elle est donc analogue à la section sur les eaux navigables dans l'interprétation de ce statut, n'est-ce pas?

M. Fortier: La Loi sur la navigation porte sur la navigation maritime. La Partie I de celle-ci se rapporte aux travaux de construction dans les voies Maritimes et la Partie II à la suppression des obstructions dans les eaux navigables. Donc, il s'agit de deux problèmes bien distincts.

Le président: Est-ce que cela répond à votre question, M. Nesbitt?

M. Nesbitt: Pas vraiment, mais enfin...

Le président: L'article 10 est-il adopté?

M. Rock: Une dernière question. Je voudrais un éclaircissement. Il s'agit d'un cours d'eau quelconque et tout ce qui interrompt la navigation directement ou indirectement. Autrement dit, si une nappe d'eau fait partie d'un lac où la navigation est restreinte à un tracé au centre et qu'un propriétaire remplisse une partie où l'érosion a fait des dégâts. Si ce travail n'imfluence en rien la navigation, il a le droit de le faire, n'est-ce pas? Surtout si le terrain érodé lui appartient.

M. Richardson: Ce serait alors une question d'interprétation. Le ministère devra décider si la navigation est entravée ou non. Si tel n'est pas le cas, la loi ne s'applique pas. Mais si, au contraire, il entrave la navigation, il devra être approuvé en application de la loi.

M. Rock: Je vois.

Le président: L'article 10 est-il adopté?

(Les articles 11 à 16 inclusivement sont adoptés.)

Le président: Nous revenons à l'article 1. Monsieur Harding?

M. Harding: Nous avons adopté l'article 4, mais je proposerais au comité une modifica-

[*Texte*]

the Committee. I do not know if you will accept it or not. On page 3, 5(c) it states:

> order any person to refrain from proceeding with the construction of the work...

I would suggest that we include the words "including provincial and federal Crown corporations". The reason I offer this amendment is that I think it is very foolish for us to force organizations, companies and individuals in Canada to live up to certain regulations which we draft and then exempt Crown corporations. I believe that earlier on it was pointed out to us that the Crown, whether provincial or federal, was exempt from some of the previous regulations under the old Act. I am convinced that these regulations should apply to everyone in Canada and they should include our Crown corporations, whether they are federal or provincial.

The Chairman: Mr. Allmand.

Mr. Allmand: Mr. Chairman, this is a point of order and I do not mean it in any way to be malicious towards Mr. Harding, but we have passed all these clauses now and if we accept the principle that we will allow subsequent amendments, Mr. Harding may have one on Clause 4, Mr. Portelance may have one on Clause 7 and someone else may have one on Clause 15 and we would keep repeating our work. The new rules provide that if you wish to make an amendment to any clause, you can do it on the report stage in the House.

• 1605

Mr. Harding's proposed amendment is quite a serious substantive amendment. Maybe it would have the approval of both the Minister and the House, but I think this is the wrong time to make it, because our procedure would become very disorganized. I submit that we should carry on with our work in an orderly fashion. If he wishes to make his amendment, the rules provide for him to do it after the report stage when we report this bill back to the House.

The Chairman: Is that agreeable to you, Mr. Harding?

Mr. Harding: I realize it should have been moved earlier and possibly the member is quite in order in suggesting that we not proceed with it. I think it is something that the members here should discuss and if we feel that these provincial and federal Crown corporations should be included we should so recommend. We should not hesitate. In this Committee I presume we are non-political, or

[*Interprétation*]

tion. Je ne sais pas si on l'acceptera ou non. A la page 3, alinéa 5, à la partie c):

> c) ordonner à toute personne de s'abstenir de poursuivre la construction de l'ouvrage lorsque,

Je pense que nous devrions rajouter «y compris les sociétés de la Couronne provinciales et fédérales». Je crains qu'il est ridicule de notre part de forcer les organismes, les sociétés et les individus au Canada à respecter certains règlements que nous rédigeons, et ensuite exempter les sociétés de la Couronne. On nous a fait remarquer que la Couronne, de droit fédéral ou du droit provincial, était exemptée de certains règlements sous l'ancienne loi. Je suis d'avis que ces règlements devraient s'appliquer à tous, y compris les sociétés de la Couronne.

Le président: M. Allmand.

M. Allmand: Monsieur le président, j'invoque le règlement ici. Je n'ai pas l'intention de faire preuve de malveillance à l'endroit de M. Harding. Cependant, si une fois les articles adoptés, nous acceptons le principe de permettre des amendements ultérieurs, M. Harding en a un pour l'article 4, M. Portelance peut en avoir un sur l'article 7, quelqu'un d'autre peut en avoir sur l'article 15 et nous répéterons notre travail. D'après le nouveau règlement, si l'on veut proposer un amendement à un article, on peut le faire lors de la présentation du rapport à la Chambre.

L'amendement de M. Harding est important. Nous pourrions peut-être nous mettre d'accord avec la Chambre et le ministre à ce sujet, mais ce n'est pas le moment de le faire car la procédure ne serait pas très bonne. Nous devons poursuivre notre travail et si M. Harding veut proposer un amendement, le règlement prévoit qu'il le fasse au moment où l'on fera rapport à la Chambre.

Le président: Vous êtes d'accord, monsieur Harding?

M. Harding: Je me rends compte que j'aurais dû le proposer plus tôt et le député a sans doute raison de dire que je ne devrais pas le faire maintenant. Je crois cependant que nous devons en discuter et si nous sommes d'avis que les sociétés de la Couronne, fédérales et provinciales, devraient tomber sous le coup de la loi, nous devrions le recommander, et sans hésiter. Dans un

[*Text*]

should be, and we are trying to get good legislation. We are trying to tighten up any of the laws which we bring in and this is my view in presenting this amendment.

Mr. Rock: Mr. Chairman, may I add something here? I am not a lawyer, but I have always felt that unless you exclude an agency, department or another government or a municipality, everyone is included. In this case you do not have to include anyone, because automatically everyone is included unless you specifically mention that you are excluding any department of the federal government. Therefore they are all included.

Mr. Harding: We were told the other day that they were not.

Mr. Rock: I was not here then, but as I said I am not a lawyer.

The Chairman: I think we should agree that this clause has already been passed. Mr. Harding, you can raise your amendment in the House. I think you should wait to put your amendment, if you intend to put one, until the proper time when this bill is referred back to the House. This is my ruling.

Mr. Skoberg: Mr Chairman, I would like to suggest that before we agree to report this bill back in, if these amendments are included at this particular time, then the ministers in the departments have an opportunity to look at the amendments to see whether or not in fact they are acceptable. I really cannot see us worrying about being too technical, whether we are dealing with 1 or 10 when the original or final amendment comes to report back in with amendment, if it is agreeable to the Committee. I think we can really get bogged down with technicalities if we get too serious in the so-called democratic process. We have agreed on these amendments and passed them, but we have not yet agreed to report them back in.

The Chairman: I think the Minister has taken note of your amendment and I think if he feels in the House that there should be an amendment, he will allow the amendment to go through.

Mr. Harding: Mr. Chairman, I would be very, very happy to have the Minister bring in the amendment himself. It is not that I desire to bring it in. Any other member of the Committee could do it if he feels that it will tighten up the legislation. I will leave it at that.

The Chairman: Mr. Richardson, please.

[*Interpretation*]

comité, nous devrions être au-dessus de la partisanerie politique et essayer de rédiger de bonnes lois. Nous essayons de rectifier les règlements et les lois et c'est le but de mon amendement.

M. Rock: Je voudrais poser une question. Je ne suis pas avocat, monsieur le président, mais j'ai toujours cru qu'à moins que l'on exclue un organisme, une municipalité ou un service de l'État, tout le monde est inclus. Il n'est pas nécessaire d'inclure qui que ce soit car automatiquement, la loi s'applique à tous à moins qu'on précise des exceptions, comme certains services de l'État. La loi s'applique donc à tous.

M. Harding: On nous a dit l'autre jour que ce n'était pas le cas.

M. Rock: Je n'y étais pas et je répète que je ne suis pas avocat.

Le président: Cet article a été adopté. M. Harding, vous pourrez proposer votre amendement à la Chambre. Je vous demanderais donc d'attendre au moment opportun, lorsque nous ferons rapport à la Chambre. Telle est la décision du président.

M. Skoberg: Je voudrais vous dire qu'avant de faire rapport du bill, si les amendements sont introduits, les ministres ont la possibilité de les étudier pour voir si, en fait, ils sont appliquables. Je ne pense pas que nous devrions être trop techniques à savoir s'il y a un ou dix amendements lorsque nous ferons rapport avec amendements, si le comité est d'accord. Je pense que nous nous embrouillerons dans des problèmes d'ordre technique, si l'on prend trop au sérieux la démocratisation de notre procédure. Nous avons adopté ces amendements, mais nous ne sommes pas encore tombé d'accord pour en faire rapport.

Le président: Le ministre prend note de votre amendement et s'il juge à la Chambre qu'il doit y avoir un amendement, il ne soulèvera pas d'objection.

M. Harding: Monsieur le président, je serais très heureux que le ministre propose l'amendement lui-même. Je n'ai pas particulièrement l'intention de le parrainer. N'importe quel membre du comité pourrait proposer cet amendement pour améliorer la loi. Je n'irai pas plus loin.

Le président: M. Richardson.

[*Texte*]

• 1610

Mr. Richardson: Mr. Chairman, this point that has been raised is probably one of the most important ones this Committee has to consider. If it is to be left to me to decide, then I would appreciate the opportunity to have further views of the Committee. I think that we have a very serious difficulty here, as I explained when we talked about this matter last week. It was considered before the amendments were suggested and brought forward for consideration. Can we have your permission to discuss this? I may be out of order here in the face of your ruling, but . . .

The Chairman: I think my ruling should stand, because if we start to amend clause by clause this Committee will get nowhere. You will have the opportunity to move an amendment in the House and I believe the Minister will have time to look at this amendment to approve or refuse it.

Mr. McGrath: Mr. Chairman, I suggest that if this amendment were discussed in the Committee, I think you would find there would be substantial agreement to it. It is merely the point of procedure that we are disagreeing with. Perhaps the Minister could take into consideration that the Committee did consider this and that there is some concern expressed over the way the present amendment is worded in that it does not include Crown corporations, federal and provincial. Perhaps he can take this under advisement with his officials, and who knows, perhaps out of it may come a further amendment when the bill is before the House.

The Chairman: Mr. Pringle?

Mr. Pringle: My question is more of legality. It is my understanding that there already is in an Act, or there is an Act excluding Crown corporations. Can we pass an amendment which is in direct opposition to a statute?

Mr. Fortier: The Interpretation Act provides that no statute is binding on the Crown unless that particular statute states that it is binding.

Mr. Pringle: Well, that is different.

Mr. Richardson: Mr. Chairman, what this comes down to is that this is a relatively simple bill making some amendments to the Navigable Waters Protection Act. If you introduce an amendment of the kind that you are talking of, important as it may be, and right as it may be, then you change the whole nature of this bill and you make it into a

[*Interprétation*]

M. Richardson: Le point qui a été soulevé est sans doute un des points les plus importants que ce comité aura à prendre en considération. Si c'était à moi d'en décider, j'aimerais avoir la possibilité d'entendre les points de vue des membres du comité à ce sujet. Il s'agit d'une difficulté très grave comme je l'ai signalé lorsque j'ai traité de cette question la semaine dernière. On en a parlé avant que les amendements n'aient été proposés. Est-ce que vous nous autorisez, monsieur le président, à discuter de la question? Peut-être que je viole le règlement, d'autant plus que vous avez déjà pris une décision à ce sujet?

Le président: Je crois que vous devrez respecter ma décision, car si nous commençons à modifier article par article, le travail du Comité n'avancera pas. Vous aurez l'occasion de proposer des amendements à la Chambre et entre temps, le ministre aura la possibilité d'étudier l'amendement et de voir s'il est en faveur ou contre.

M. McGrath: Monsieur le président, je pense que si cet amendement était discuté au comité, vous constateriez qu'il est appuyé par la plupart d'entre nous. Nous ne sommes pas d'accord uniquement en ce qui concerne la procédure. Le ministre pourrait tenir compte du fait que le comité a étudié la question, et qu'une certaine inquiétude a été exprimée au sujet du bill et de l'amendement. On s'inquiète un peu du fait que la loi ne s'applique pas aux sociétés de la Couronne provinciales et fédérale. Peut-être pourrait-il étudier toute l'affaire avec ses fonctionnaires, et qui sait, peut-être en sortira-t-il un autre amendement lorsque le bill sera soumis à la Chambre.

Le président: Monsieur Pringle?

M. Pringle: Si j'ai bien compris, il y a déjà dans une loi ou plutôt il y a une loi qui fait une exception pour les sociétés de la Couronne. Est-ce que nous pourrions vraiment adopter un amendement qui serait en contradiction directe avec une loi?

M. Fortier: La Loi d'interprétation prévoit qu'aucune loi n'engage la Couronne, à moins que cette loi ne prévoit qu'elle engage.

M. Pringle: Ce qui n'est pas la même chose.

M. Richardson: Monsieur le président, tout cela se ramène à une seule chose. Il s'agit d'un bill assez simple qui modifie la Loi sur la protection des eaux navigables. Si vous introduisez un amendement comme celui dont vous parlez, même s'il est très important, même s'il est parfaitement approprié, vous changez entièrement la nature du bill et vous

[*Text*]

major constitutional question which, in the opinion of counsel and other ministers, would really involve being considered at the Federal-Provincial Conference. It would almost constitute another item for the agenda of that Conference on which there are now a lot of items. So that is the degree of the difficulty. We are clouding a relatively simple bill with a major issue.

The Chairman: Mr. Nesbitt, on a point of order.

Mr. Nesbitt: I was just going to say: when we are dealing with a statute such as this one, or perhaps the Aeronautics Act and some others we will be dealing with in the Committee, I want to make it quite clear that I have every sympathy with the amendments that you suggest and the type of change, but I suggest that in the Committee here when we are dealing with pretty technical matters which may involve legal opinions and one thing and another, if an amendment along certain lines is suggested, it be brought to the Minister's attention. Then the Minister and the officials have a chance to go into it and see if such an amendment is feasible. Then, of course, it could be noted on the record—it is already noted on the record of the proceedings here. That is what I had in mind. I, for instance, intend making an amendment at the next stage in the House concerning this question of obstructions and works with respect to private docks and that sort of thing. I think it is something that requires some considerable...

The Chairman: As I said a minute ago, if there was no other opportunity then I would say that we will take the matter up now but you will have another opportunity to bring it up in the House, so my decision is that it is out of order at this time.

Shall Clause 1 carry? Yes, Mr. Skoberg?

Mr. Skoberg: With the discussion that we have had in dealing with Clause 1, I wonder whether the Minister and his Department will take into consideration the "half safe" portions of the proposed amendments in this Act and try to make it all safe for those who are really concerned. I think we realize now that the Act itself with the amendments is still leaving a broad area open and people across Canada generally, and in particular provinces, are really concerned about the lack of jurisdiction in a particular field. They would rather have a common and a federal jurisdiction than a lot of hodge-podge provincial acts

[*Interpretation*]

en faites une question constitutionnelle essentielle ce qui, de l'avis du Conseil et d'autres ministres, devrait être étudié à la conférence fédérale-provinciale. En fait, c'est presque un autre point de l'ordre du jour de cette conférence et je crois qu'il y a déjà suffisamment de points à cet ordre du jour. Donc voilà la difficulté, nous proposons un bill assez simple et nous ne voulons pas soulever une question aussi grave.

Le président: Monsieur Nesbitt, pour un rappel au Règlement.

M. Nesbitt: Je veux dire que lorsqu'il s'agit d'une loi comme celle-ci, ou encore de la Loi sur l'aéronautique, ou d'autres lois que nous allons étudier, je suis plutôt en faveur de votre amendement. Je suis plutôt en faveur de ce genre de modification, mais je pense que le Comité, lorsque nous étudions des questions assez techniques qui soulèvent des problèmes juridiques, etc., et lorsqu'un amendement est proposé, attire l'attention du ministre sur cet amendement. Ainsi, le ministre et ses fonctionnaires ont la possibilité de l'étudier et de voir s'il est opportun d'introduire un tel amendement. Cela pourrait alors figurer au compte rendu, ce qui est déjà fait. Et ensuite, à la Chambre, j'ai l'intention de proposer un amendement sur la question de l'obstruction, des travaux relatifs aux bassins privés, etc. Je crois qu'il faudra beaucoup...

Le président: Comme je viens de le dire, s'il n'y avait pas d'autres possibilités, vous pourriez quand même soulever la question en Chambre, donc la décision est que cela est irrecevable pour l'instant.

L'article 1 est-il adopté?
Oui, monsieur Skoberg?

M. Skoberg: J'ai une réserve à faire en ce qui concerne l'article 1; je me demande si le ministre et le ministère étudieront le fait qu'il y a une seule partie consacrée à la sécurité alors que tout devrait être consacré à la sécurité. Nous nous rendons compte maintenant que la loi, avec ses modifications, laisse tout un domaine qui n'est pas couvert, et les Canadiens, en particulier les provinces, éprouvent des inquiétudes en ce qui concerne l'absence de juridiction dans ce domaine qui est laissé ouvert. Il devrait y avoir une loi fédérale, plutôt qu'une pagaille de lois provinciales assez disparates. Le ministre devrait

[*Texte*]

and regulations. I wonder if the Minister would give some assurance that he and his Department will definitely look at the over-all amendments that have been brought back in?

Mr. Richardson: Yes. On this point of jurisdiction, yes. This is why I said that I do not know the full feelings of the Committee but I think I am beginning to sense them now. Certainly it will be given every possible consideration.

• 1615

The Chairman: Shall Clause 1 carry?

Clause 1 agreed to.

Preamble agreed to.

Title agreed to.

Shall I report the bill?

Some hon. Members: Agreed.

The Chairman: We have another bill here —Bill S-14. I think we will proceed as we did the last time and I will call upon the Minister, Mr. Richardson, to give us a brief resume of the bill. Mr. Richardson?

Mr. Richardson: Thank you, Mr. Chairman. Mr. Fortier will be staying with me here along with Mr. Gray, who is here as Assistant Director of the Legal Department of the Canadian Transport Commission, Mr. Walker, who is the Superintendent of Regulations and Licensing in the Department of Transport, and Mr. Yost, who is the Superintendent of Property Management in the Department of Transport.

This is a bill that is in many ways similar to the one that we have just been dealing with in that it consists of amendments to the Act. In this case it is the Aeronautics Act and I expect that some of you, as with the other bill, are much more familiar with this as an Act than others. But to highlight it, the purpose of the Act which we are amending is to regulate and control civil aviation in Canada.

Part I of the Act is administered by the Minister of Transport and deals generally with licensing and the operation of aircrews, aircraft and airports. Essentially Part I deals with safety, as distinct from Part II, which deals largely with economic considerations. Part II comes under the jurisdiction of the Canadian Transport Commission and deals with licensing and operating of commercial air services. As I say, it is in the economic sphere. Part III applies generally to employees who administer the Act and also with prosecutions for violations of the Act.

[*Interprétation*]

nous donner l'assurance que le ministère étudiera l'ensemble de ces modifications.

M. Richardson: En ce qui concerne cette question de juridiction, comme je l'ai dit, nous n'avons pas l'opinion de l'ensemble des membres du Comité, mais je commence à avoir une petite idée de ce que vous pensez et nous étudierons l'ensemble de cette question.

Le président: L'article 1 est-il adopté?

L'article 1 est adopté.

Le préambule est adopté.

Le titre est adopté.

Dois-je faire rapport du bill?

Des voix: D'accord.

Le président: Nous avons un autre bill ici, le bill S-14; comme la dernière fois, je vais appeler le ministre, M. Richardson, qui nous expliquera le bill.

M. Richardson: Merci, monsieur le président. M. Fortier restera avec moi, M. Gray également, qui est ici à titre de directeur du contentieux de la Commission canadienne des transports, M. Walker qui est le surintendant des règlements et des permis du ministère des Transports et M. Yost qui est surintendant de la gestion des biens du ministère des Transports.

C'est un bill qui est assez comparable à celui que nous venons d'étudier, et les amendements qui sont proposés s'appliquent à la loi actuelle. Il s'agit de la Loi sur l'aéronautique. Je pense que vous connaissez beaucoup mieux ce bill que l'autre, vous êtes beaucoup plus au courant, certains connaissent mieux la loi que d'autres, mais en fait, il s'agit de réglementer et de contrôler l'aviation civile au Canada.

La partie I de la loi est appliquée par le ministre des Transports et se rapporte à l'exploitation des avions et des aéroports. Il s'agit de sécurité, essentiellement. La partie II se rapporte aux facteurs économiques; elle tombe sous le coup de la juridiction de la Commission canadienne des transports. Il s'agit de l'octroi de permis et de l'exploitation des services aériens; comme je l'ai dit, il s'agit du domaine économique. La partie III se rapporte aux employés qui appliquent la loi et aux poursuites à la suite d'infractions à la loi.

[*Text*]

I will highlight the amendments that we are proposing in this bill and then we can have discussion and comments from the officials. There are different officials for each one of these amendments. The first one is Clause 2 of the bill. It enables the Governor in Council to authorize the Minister of Transport, subject to conditions and in lieu of the Governor in Council, to prescribe charges for the use of facilities and services. I think you will want to discuss that at some length, but that is the first main amendment. That includes all of the charges at airports, and the example that I used in the House was a parking. Quite often there has to be a change in the parking fee and at the present time that has to be passed by Order in Council, which is a bit cumbersome. So the purpose of this amendment is to enable the Governor in Council to give the authority to the Minister to make those changes.

Clause 3 is again a passing of authority, but in this case it is authority from the Minister to the Deputy Minister, and the authority given to the Deputy Minister under this amendment relates to the restricting of navigation of aircraft over specified areas. This has nothing to do with noise or anything of that kind—this was asked in the House. It has to do only with military exercises and these take place on a regular basis. As far as I can tell these are mechanical, but you may want to satisfy yourselves about that by talking with the officials. The purpose of the amendment is to let the Deputy Minister sign the order instead of its having to go to the Minister's desk.

• 1620

The next major amendment comes in Clause 4, which is Section 1, and also Clause 9, which amends the definition of an aircraft. The main purpose of this change or amendment is to exclude hovercraft from the definition of an aircraft because it has been determined that a hovercraft is not an aircraft for the purposes of the Aeronautics Act. We are going to regulate hovercraft under the Canada Shipping Act. We can talk about that, but it is fairly straightforward.

Clause 4, subclause (2) amends Section 6 of the Act to authorize the Canadian Transport Commission to issue temporary licences. These are seasonal licences, emergency licences, and so on.

Clauses 5 and 6, another amendment make it clear that the Commission's authority is confined to Part II of the Act and not the whole Act. I think that is the only change there.

[*Interpretation*]

Je vais vous donner une idée des grandes lignes des modifications, puis les fonctionnaires vous donneront une idée des amendements, chacun des fonctionnaires vous parlera des différents amendements.

Le premier est l'article 2 du bill, qui permet au gouverneur en conseil d'autoriser le ministre des Transports à établir des règlements, à prescrire certaines taxes pour l'utilisation des services. Il s'agit des taxes d'aéroport pour le stationnement d'appareils; lorsqu'on veut modifier les frais de stationnement, il faut faire un décret ministériel, ce qui est un peu difficile. Cela permet au gouverneur en conseil d'autoriser le ministre à effectuer ces modifications.

A l'article 3, il s'agit d'une délégation de pouvoirs; cette fois-ci, c'est le ministre qui délègue ses pouvoirs au sous-ministre. On autorise le sous-ministre, en application de cet amendement, à limiter la navigation des avions au-dessus de certaines régions spécifiées. Cela n'a rien à voir avec le bruit, il ne s'agit que des exercises militaires et cela se produit de façon assez régulière, assez fréquemment, à ma connaissance au moins. Il s'agit de dispositions à peu près automatiques, mais vous pourrez en parler aux fonctionnaires. En fait il s'agit d'autoriser le sous-ministre à signer des interdictions et de ne plus demander au ministre de le faire.

Modification suivante, article 4, paragraphe 1 et article 9, définition d'un avion. Le but de cette modification, ou amendement, est d'exclure les aéroglisseurs de la définition des avions, car ces aéroglisseurs ne sont pas des avions, aux fins de la Loi sur l'aéronautique. Mais nous allons faire un Règlement sur les naviplanes dans le cadre de la Loi sur la marine marchande du Canada. L'article 4, alinéa 2 modifie l'article 6 de la Loi pour autoriser la Commission canadienne des transports à émettre des permis temporaires, c'est-à-dire des permis d'urgence ou des permis saisonniers.

Aux articles 5 et 6 d'autres modifications, précisent que la Commission n'a autorité qu'en application de la partie 2 de la loi et non de l'ensemble de la loi. C'est la seule modification.

[*Texte*]

Clause 7 is the one that there may be most reason to look at. This clause amends section 13. It clarifies the power of the Canadian Transport Commission, allowing them to make regulations of a general application with respect to all commercial air services. But this is without prior approval of the Governor in Council. However, I think you will want to assure yourself, in connection with this clause, that the Governor in Council can in fact rescind the regulations or vary the regulations after they have been put into effect, if they are not considered for any reason appropriate. There are a lot of regulations there but we will go through them when we have clause by clause study.

The last amendment is in clause 8. It really provides for proof of documents—that copies of documents certified by the Secretary of the Department of Transport are in fact true copies of the original documents. This, I think, is routine. This authority was there before but, as I understand it, it was lost in the shuffle at the time the Transportation Act was going through. We are simply putting back in a power that was left out.

Those are the main amendments, Mr. Chairman. I think they are all desirable improvements in the Act. None of them really alter the underlying purposes of the Act. They are relatively unimportant, but they should still be examined carefully by the Committee.

Mr. Nesbitt: There are two things upon which I want to comment, one of which the Minister has already alluded to with respect to clause 7. I am referring particularly to clause 2 here. The amendments to the Act give a great deal of power to the Governor in Council to make regulations—and I quite agree that this is necessary—and also to the Canadian Transport Commission, as they see fit.

I understood the Minister correctly, he suggested that perhaps the regulations passed by the Canadian Transport Commission might be reviewed by the Governor in Council from time to time. Is that correct?

Mr. Richardson: Mr. Chairman, not actually reviewed, but the Governor in Council would have the authority—the same authority as in the Railway Act, to rescind or to alter regulations. But I would assume that it was only in a case where there was some complaint or appeal. In other words, the Transport Commission is not the final authority; it is after the regulation rather than before that the Governor in Council steps into the picture, and that is the main difference.

[*Interprétation*]

L'article 7 est sans doute celui que nous devons examiner le plus à fond. L'article 7 modifie l'article 13 de la Loi et il précise les pouvoirs de la Commission canadienne des transports. Elle l'autorise à émettre des règlements en ce qui concerne tous les services aériens commerciaux. Mais c'est sans approbation préalable du gouverneur en conseil. Cependant, je pense que vous voudriez vous assurer que le gouverneur en conseil peut en fait annuler des règlements une fois qu'ils ont été mis en vigueur, si pour une raison ou pour une autre il juge qu'ils ne sont pas acceptables. Je pense que nous étudierons les règlements une fois que nous étudierons le bill, article par article.

Dernière modification, article 8: il s'agit de la production de documents certifiés qui sont des copies authentiques des documents originaux. Il s'agit d'une question de routine. C'est un pouvoir qui existait déjà mais qui s'est perdu lorsque la Loi sur les transports a été adoptée. En fait, nous rétablissons un pouvoir qui a été oublié.

Voilà les modifications principales, monsieur le président, et comme je l'ai dit, je crois que cela constitue des améliorations souhaitables à la Loi, mais aucun d'entre eux ne modifie l'objectif principal de la Loi. Ce sont des amendements assez mineurs mais il faut tout de même les étudier assez sérieusement au Comité.

M. Nesbitt: Je voudrais relever deux points. Un point dont le ministre a déjà parlé, à propos de l'article 7; il s'agit de l'article 2. La modification donne de grands pouvoirs au gouverneur en conseil qui peut rédiger des règlements. Je suis d'accord. Cela est nécessaire également à la Commission canadienne des transports.

Selon le ministre, donc, les règlements promulgués par la Commission canadienne des transports pourraient être revus par le gouverneur en conseil. Est-ce exact?

M. Richardson: Non, pas vraiment revus, mais le gouverneur en conseil aurait pouvoir, le même qu'en ce qui concerne la Loi des chemins de fer, d'annuler ou de modifier les règlements. Je pense que cela ne se ferait que dans un cas où il y aurait des plaintes ou un appel. Autrement dit, la Commission canadienne des transports n'est pas la dernière autorité. Le gouverneur en conseil intervient plutôt après que le règlement a été rédigé plutôt qu'avant. Voilà la différence essentielle.

[*Text*]

• 1625

Mr. Nesbitt: That clears that matter up.

Mr. Allmand: In the notes it says that you can also appeal the regulation to the Supreme Court of Canada.

Mr. Nesbitt: I noticed that, Mr. Allmand, but sometimes those are rather costly proceedings—unless some rather large corporations are involved.

I was going to suggest that perhaps the Minister might give consideration between now and the next stage of this bill to making some additional amendment which would provide for Parliament or perhaps, more appropriately, a Committee of Parliament such as this one, to review from time to time any regulations that were passed by the Governor in Council.

Mr. Richardson: You mean passed by the Commission?

Mr. Nesbitt: No, the ones under clause 2 particularly—that the Governor in Council may make regulations, and so on. I was suggesting that this or some other appropriate Committee should have an opportunity of reviewing the regulations passed under these amendments every two or three years. In this way, complaints coming to members of the House of Commons could be brought, without the great expense of going to the Supreme Court, before this or some other appropriate Committee of Parliament—but I think this would be the appropriate one. Then anybody who is a member of the House of Commons, under our rules of course, could come before this Committee and make suggestions. I agree that for practical purposes you would not want to do it all the time, Mr. Minister, but I think a review once every two or three years would be appropriate. I think that is something the Minister might give consideration to. With the growth of government—and it happens in all government departments—somebody has to have the power to make regulations in a hurry. I know that you cannot refer everything to Parliament—I have been here for quite a while and I know that that would be impractical—but I would suggest that an opportunity be given of reviewing these regulations at certain periods of time.

Mr. Richardson: Are you speaking of clause 7?

Mr. Nesbitt: No, I was referring to clause 2.

Mr. Richardson: That is what I wanted to be clear about because clause 2 is authority to put fees in for services—authority given to the Minister as distinct from the Commission.

[*Interpretation*]

M. Nesbitt: Bien.

M. Allmand: Dans les remarques, il est dit qu'on peut également faire appel à la Cour suprême du Canada.

M. Nesbitt: Oui, mais parfois, ces procédures sont assez coûteuses et il n'y a que les grosses Sociétés qui peuvent se le permettre.

D'ici la prochaine étape de l'étude du bill, nous pourrions présenter les amendements qui permettraient au Parlement ou à un comité du Parlement, comme celui-ci, d'étudier des règlements adoptés par le gouverneur en conseil.

M. Richardson: Adoptés par la Commission?

M. Nesbitt: Non, non, non. Je pense à l'article 2. Le gouverneur en conseil peut faire des règlements, etc. Et tous ces règlements, un Comité ou un autre aurait la possibilité de les étudier, disons, tous les deux ans, de façon que si des plaintes étaient adressées aux députés, sans grandes dépenses, et sans s'adresser à la Cour suprême, je pense que les gens pourraient s'adresser à ce Comité, et tous les députés. On ne le ferait pas tout le temps, évidemment, mais des gens pourraient s'adresser, de temps à autre, tous les deux ans, tous les trois ans, enfin, au moment où cela s'imposerait, et on pourrait étudier ces règlements.

Je pense que le ministre pourrait envisager cette possibilité. Comme le gouvernement croît tout le temps, il faut que certains services prennent des décisions, rédigent des règlements, et je pense que l'on devrait avoir la possibilité d'étudier ces règlements de temps à autre.

M. Richardson: Vous parlez de l'article 7?

M. Nesbitt: Non, je parlais de l'article 2.

M. Richardson: C'est l'article 2 dont vous parlez, n'est-ce pas?

[*Texte*]

Mr. Nesbitt: Oh, yes.

Mr. Richardson: So it is clause 2 that you are speaking about?

Mr. Nesbitt: Yes, I am referring to those, and I would hope that perhaps the same line of reasoning might be applied to regulations passed by the Commission and that there might be some opportunity to review them at appropriate times.

There is another matter on which I wanted to comment. I realize that part of the Aeronautics Act comes under the Canadian Transport Commission and that Part I, which deals with safety regulations, comes under the Minister of Transport. While it might be a pretty extreme amendment to make at this time, and I would frankly have some hesitation about doing so on this bill, might I suggest—and I believe this was suggested by another member on second reading of the bill—that perhaps some of the safety features of the Aeronautics Act be brought under the Commission, particularly those that deal with the actual operation of aircraft as distinct from airports.

I refer to matters on which some reference has been made in the House recently—the hours that a pilot has to work and this sort of thing. Certain information has been given to me which I believe to be true. I am given to understand that some pilots in Air Canada for instance are on duty 17 hours without any respite. On one occasion I understood that on flights from Canada to the Caribbean area jet pilots on Air Canada were on duty for 21 hours without any respite. I am informed that on one particular occasion one of the pilots actually went to sleep during the takeoff of a jet aircraft. I think this sort of thing is pretty dangerous. It is not just a matter of giving the pilots adequate rest; it is a matter of the safety of the passengers.

Mr. Chairman, I do not intend to propose an amendment at this time but I do think that is something the Minister might give consideration to. Quite frankly, while I have not always agreed with the present head of the Canadian Transport Commission I have a great deal of regard for his administrative ability, and I do think that something of the nature of what I have suggested might be good. Perhaps this is something the Minister would like to give consideration to.

• 1630

The Chairman: Mr. Allmand?

Mr. Allmand: I just want to deal with the first remarks made by Mr. Nesbitt. It is my understanding, Mr. Nesbitt, if my memory

[*Interprétation*]

M. Nesbitt: Oui.

M. Richardson: Vous parlez de l'article 2.

M. Nesbitt: Je parle de cet article. Mais je pense que le même raisonnement pourrait s'appliquer aux règlements adoptés par la Commission. On aurait la possibilité de temps à autre de les étudier. Il y a autre chose, je sais qu'il s'agit d'une partie de la Loi sur l'aéronautique. La partie 1 s'applique aux conditions de sécurité et relève du ministre alors que l'autre partie, la partie 2 relève de la Commission canadienne des transports. J'ai quelques hésitations à agir, à proposer quelque chose à propos de ce bill. Je pourrais suggérer, proposer, lors de la deuxième lecture du bill, nous pourrions peut-être—peut-être que certains articles se rapportant à la sécurité aérienne pourraient être confiés à la Commission canadienne des transports. En particulier en ce qui concerne l'exploitation des aéronefs et non des aéroports, les heures de travail des pilotes.

D'après certaines données qui m'ont été transmises et que j'ai toute raison de croire authentiques, certains pilotes sont en service 17 heures, sans aucun repos, et dans un certain cas, au cours d'un vol du Canada aux Caraïbes, un pilote d'Air Canada avait travaillé pendant 21 heures, et on m'a dit que dans un certain cas, un des deux pilotes s'est endormi pendant le décollage de l'avion à réaction, et cela me semble assez dangereux. Je pense qu'il faut que les pilotes se reposent pour que les voyageurs soient en sécurité. Je ne propose pas un amendement, mais je pense que le ministre devrait étudier cette question. Sans être toujours d'accord avec lui, j'ai un grand respect pour les capacités administratives du président de la Commission canadienne du transport. Je suis sûr qu'il étudiera cette question qui est très importante.

Le président: M. Allmand?

M. Allmand: Un mot sur les premières observations de M. Nesbitt. Si j'ai bien compris, si ma mémoire est fidèle, le gouverne-

[*Text*]

serves me correctly, that the government introduced a motion just before Christmas to set up a Committee to study certain proposals for the review of all Orders in Council on a periodic basis.

That Committee is now sitting and studying an institutionalized way of reviewing all orders in Council and regulations. That Committee has not reported to the House yet. However it is an all-party Committee of the House and if the proposals of the government are accepted Orders in Council under all Acts would be subject to periodical review. We could check tonight what the progress is.

Mr. Nesbitt: Precisely; we do not wish to make new amendments at this stage because such things, of which everybody is not aware, come up sometimes, or something may be in process. I merely made it as a suggestion.

The Chairman: Mr. Fortier wishes to answer some of your questions, Mr. Nesbitt.

Mr. Fortier: On the questions about the hours of work and safety in the operation of aircraft, I would point out that the Aeronautics Act originally give to the Air Transport Board, now the Canadian Transport Commission, jurisdiction under section 13.

> Subject to the approval of the Governor in Council, the Board...

...now the Commission...

> ...may make regulations:
>
> (1) Prescribing maximum hours and other working conditions for pilots and co-pilots...

In 1966, when the Aeronautics Act was amended, that particular provision was taken out of Part II and brought under Part I, under the jurisdiction of the Minister of Transport.

Perhaps Mr. Walker can give us an explanation, but I believe the reasoning was that questions of safety came under the jurisdiction of the Minister rather than that of the Board and its successor, the Commission.

The Chairman: Mr. Walker?

Mr. Walker: That is quite right.

Mr. Fortier: I wish to speak to the other point you raised, sir that of having the regulations which would be made under section 3 reviewed from time to time.

[*Interpretation*]

ment avait présenté une résolution ou une motion à cet effet un peu avant Noël, et avait établi un Comité pour revoir les décrets ministériels, périodiquement.

Ce Comité étudie maintenant la façon de revoir tous les drcrets ministériels et les règlements. Il n'a pas encore fait rapport à la Chambre. Cependant, il s'agit d'un comité où tous les partis sont représentés, et si les propositions du gouvernement étaient acceptées, ces décrets seraient soumis à des examens périodiques.

M. Nesbitt: Nous n'avons pas l'intention de proposer des amendements, mais parfois, certaines choses de ce genre sont suscitées. Les gens ne sont pas toujours au courant de ce qui se passe et je voulais tout simplement formuler la suggestion.

Le président: Monsieur Fortier désire répondre à certaines de vos questions.

M. Fortier: En ce qui a trait à cette question de l'opération des avions, des questions de sécurité, je voulais dire que la loi sur l'aéronautique donnait au départ, à la Commission des transports aériens, qui est maintenant, le Commission canadienne des Transports, l'autorité nécessaire en vertu de l'article 13:

> Sous réserve de l'approbation du gouverneur en conseil, la Commission des transports aériens...

Maintenant la Commission des transports,

> peut établir des règlements
>
> *a*) établissant les heures maximums et autres conditions de travail des pilotes et des co-pilotes.

Ces dispositions particulières, lorsque la loi sur l'aéronautique a été modifiée en 1966, ont été retirées de la partie II et insérées dans la partie I sous la compétence du ministre des Transports. M. Walker pourrait peut-être nous donner l'explication, mais je crois que c'est parce que les questions de sécurité relevaient de la compétence du ministre plutôt que de la Commission et de son successeur, la Commission des Transports.

Le président: Monsieur Walker.

M. Walker: C'est exact, monsieur le président.

M. Fortier: Puisse-je maintenant faire une remarque sur l'autre point que j'allais soulever. Cette question des règlements qui seraient édictés en vertu de l'article 3 et qui

[*Texte*]

I would point out that this is not the only case in which the Minister is authorized by the Governor in Council to take certain actions. There is, for instance, a general authority of the Governor in Council authorizing the Minister of Transport to enter into leases of departmental property without further reference to the Governor in Council. The Minister fixes the rental, the terms and all the conditions of these leases. There is no requirement to go to the Governor in Council, nor is there any provision that these leases are subject to review from time to time by the Governor in Council.

Mr. Nesbitt: I understand. I am glad you brought that to my attention. I was merely saying in my remarks that perhaps I had misunderstood the Minister. I was not referring just to any regulations that might be passed under this Act, but I hoped that all regulations under this Act, as amended, or any part of it, might be given that treatment. However, as Mr. Allmand has pointed out perhaps some arrangement is being made for this very purpose. I was not referring only to regulations to be made under these amendments, but to the whole bit.

Mr. Rock: Mr. Chairman, can Mr. Richardson tell us whether there are any sections of any acts covering rockets? Reading clause 4(1) (a) it could actually cover a machine called a rocket. The interpretation of the purpose of these amendments is not usually included in the Act after it is printed. I am not sure whether there is anything covering rockets. This could be interpreted to cover the shooting of rockets in the air. They create an air cushion, and possibly it could be dangerous to navigation and be against the Act without its being realized. Could this not be misinterpreted to cover rockets...

• 1635

> ...does not include a machine designed to derive support in the atmosphere from reactions against the earth's surface of air expelled from the machine;

Someone could interpret a rocket as that type of machine.

Mr. Fortier: Sir, on the question of rockets and balloons I must call your attention to the amendments that were made in 1966 to the Aeronautics Act, which gave the Governor in Council the power to make regulations respecting

> ...the use and operation of rockets, moored balloons and kites that, in the opinion of the Minister, are hazardous to air navigation;...

[*Interprétation*]

serait revus de temps à autre. Ce n'est pas le seul cas où le ministre est autorisé par le gouverneur en conseil à prendre une mesure quelconque; par exemple, nous avons l'autorisation générale de la part du gouverneur en conseil autorisant le ministre des Transports à signer des baux sans avoir à référer la question au gouverneur en conseil. C'est le ministre qui établit les conditions, la durée des baux ainsi que le coût de location. Rien n'exige non plus que ces baux soient revus de temps à autre par le gouverneur en conseil.

M. Nesbitt: Je comprends et je suis très content que vous ayez soulevé ce point. Mes remarques signifiaient que j'avais peut-être mal compris le ministre. Je ne parlais pas uniquement des règlements qui pourraient accompagner ce projet de loi mais de tous les règlements relatifs à cette loi, telle qu'amendée, ou à toute partie de cette même loi. Mais comme l'a dit M. Allmand, il y a peut-être des dispositions qui sont prises à cette fin. Je ne parlais pas uniquement des règlements en vertu de cette loi mais de tous les règlements.

M. Rock: Monsieur le président, j'aimerais bien poser une question à monsieur Richardson. Y a-t-il des dispositions quelconques visant les fusées? On pourrait croire que l'article 4 *a*) i inclut les fusées. L'interprétation du but poursuivi lors de la présentation de l'amendement n'est pas incluse lors de l'impression du texte de loi. J'ignore si l'on prévoit le cas des fusées. L'interprétation donnée à cet article pourrait inclure les fusées et leur lancement dans l'espace. En raison du déplacement d'air elles pourraient être dangereuses pour l'aviation et leur lancement pourrait violer la loi sans que quiconque le réalise. Ne pourrait-on pas mal interpréter ce texte et croire qu'il touche les fusées.

> ...n'inclut pas un appareil qui se maintient dans l'atmosphère par les réactions que l'air qui provient de l'appareil produit au niveau du sol;

Quelqu'un pourrait peut-être conclure que la fusée est une machine de ce genre.

M. Fortier: En ce qui concerne les fusées, M. Rock, je dois attirer votre attention sur les modifications apportées en 1966 à la loi de l'aéronautique et qui donnaient au Gouverneur en conseil le pouvoir d'édicter des règlements concernant...

> L'utilisation et la mise en service de fusées ainsi que de ballons et cerfs-volants captifs qui, de l'avis du ministre, constituent des dangers pour l'aviation.

[*Text*]

The Chairman: Shall clause 1 carry?

Mr. Harding: I wish to ask a question, not under Clause 1, Mr. Chairman, but under regulations generally. Should I wait?

The Chairman: Yes, you had better wait.

Mr. Harding: I do not know whether it comes under Clause 2 or Clause 7. I will bring it up under Clause 7.

Clauses 1 to 6 agreed to.

The Chairman: On Clause 7?

Mr. Harding: May I get a little information from the Minister or from one of the staff, about chartered trips? I understand that when an aircraft is chartered by an organization the present regulation is that those making the chartered flight must come from within a 40-mile radius of the centre from which the application comes. Any alteration in this would, I presume, go to a council, or to a committee, or perhaps to the Minister or the Deputy Minister, and they would review the case and might grant an extension to cover perhaps a whole area, or a province. I can think of a host of organizations the members of which are drawn from a very wide area.

Why should it be confined to this 40-mile radius? Has this particular regulation been altered by the amendments before us?

Mr. Richardson: Mr. Chairman, Mr. Gray, of the Canadian Transport Commission, can probably best answer that question.

Mr. Gray (Assistant Director, Legal Department, Canadian Transport Commission): Mr. Chairman, the principle that was being followed in adopting the 40-mile radius rule was that the members of the association wishing to charter the aircraft should come from the same community.

The rule as it now stands includes an opportunity for the Air Transport Committee to make an exception where an organization can make a case for an area larger than the 40-mile radius.

I can also say that this 40-mile-radius rule is under reconsideration at the present time and there is a probability that a revision of it will be issued before very long. I cannot go beyond that.

Mr. Harding: But it is not changed by any regulation in this bill?

Mr. Gray: No, sir.

[*Interpretation*]

Le président: Est-ce que l'article I est adopté?

M. Harding: Je désire poser une question, non pas en vertu de l'article I mais en vertu des règlements, est-ce que je devrais attendre?

Le président: S'il vous plaît.

M. Harding: J'ignore si elle tombe sous l'article 2 ou 7. Je la soulèverai à l'article 7.

Les articles 1 à 6 sont adoptés.

Le président: Au sujet de l'article 7?

M. Harding: J'aimerais bien avoir des renseignements soit de la part du ministre, soit de la part des fonctionnaires en ce qui a trait aux voyages nolisés? Je crois comprendre que lorsqu'un aéronef est nolisé par un organisme ou une société, les règlements actuels veulent que ceux qui prennent part à l'envolée doivent demeurer dans un rayon de 40 milles de l'endroit d'où vient la demande. Toute modification à ce règlement, je suppose, doit être soumise à un comité, ou au ministre ou au sous-ministre pour obtenir que puissent y prendre part les personnes qui, habitent une région ou une province donnée.

Je songe à tous ces organismes dont les membres sont recrutés dans un très vaste territoire et alors pourquoi doit-on se limiter à ce rayon de 40 milles. Est-ce que l'on a modifié ce règlement par les modifications que nous avons présentement devant nous?

M. Richardson: Monsieur le président, monsieur Gray de la Commission canadienne des transports peut répondre à cette question.

M. Gray (directeur adjoint, service du contentieux, C.C.T.): Monsieur le président, je crois que le principe que l'on suivait en utilisant le rayon de 40 milles c'est que les membres de l'organisme qui voulaient noliser l'avion devraient venir de la même collectivité. Je crois que le règlement, tel qu'il existe à l'heure actuelle, permet au comité des Transports aériens de faire une exception dans le cas des organismes qui désirent éliminer ce rayon de 40 milles. Je devrais peut-être aussi ajouter que le règlement en question est à l'étude, à l'heure actuelle, et qu'il est possible qu'il soit revisé avant trop longtemps. Je ne peux pas aller plus loin que cela toutefois.

M. Harding: La modification n'est pas prévue dans ce bill?

M. Gray: Non monsieur.

[*Texte*]

Mr. Harding: I see. I have just one further question on this. It seems logical to me that there should be an extension of this area, unless there is some specific reason, perhaps related to fares. I really cannot think of any.

An organization charters a plane. They may have to bring members from two or three provinces. It may be one of the lodges, or the Legion. They charter quite frequently. Permission is granted for these flights, and their members cover very, very wide areas. I do not see why it should not be written into the Act.

• 1640

Mr. Gray: Mr. Chairman, I think the basic reason for having any rules at all about the size of charter groups, or the radius from which their members can be drawn, was to attempt to make sure that the rule would not become so loose that charter operators would be operating charters with great regularity and would have a really disastrous impact on the operations of the scheduled carriers; so that the time might come when you would only have the scheduled carriers operating, perhaps, one flight a day, when now they have four. It was really an attempt to have some sort of an enforceable rule which would impose some restriction on charter operations and still allow some reasonable amount of freedom.

There are some types of organizations to which it is only common sense to allow greater than a 40-mile radius; for example, the association of mayors. You would have a very difficult time getting a charter group of mayors unless you gave them all of Canada. And there are other quite legitimate cases. But I have said before, this whole question, the 40-mile radius question in particular, is under reconsideration at the moment.

Mr. Harding: I would like to thank Mr. Gray for his explanation.

The Chairman: Shall Clause 7 carry? Mr. Portelance.

M. Portelance: Monsieur le président, je ne sais pas si ma question se rapporte à l'article 7, car, malheureusement, je n'ai pas eu le temps de le lire au complet. Lorsqu'on donne une concession à une compagnie quelconque pour desservir l'aéroport, on doit tenir compte de ce bill. Est-ce que cela se fait par soumission publique?

Je pourrais citer le cas Murray-Hill, à l'aéroport de Montréal; on en parle beaucoup. Murray-Hill signe un contrat avec le gouver-

[*Interprétation*]

M. Harding: Monsieur Gray, j'ai une autre question à ce sujet. Il me semble logique qu'il doit y avoir une modification du règlement concernant le rayon de 40 milles à moins qu'il n'y ait une raison spéciale qui en empêche la modification. Mais je n'en vois pas. Un organisme nolise un avion. Les membres sont répartis dans deux ou trois provinces. C'est, par exemple, le cas de la Légion qui nolise fréquemment des appareils. Pourquoi ne pas prévoir le cas dans la loi?

M. Gray: Monsieur le président, je crois que la raison fondamentale qui a présidé à l'établissement de règlements relatifs à l'importance des groupes ou à leur lieu de résidence c'est de s'assurer que le règlement ne soit pas si vague que les noliseurs fassent des nolisements de façon régulière, et influe énormément sur l'exploitation des transporteurs autorisés; de sorte que peut-être, les transporteurs à horaire régulier n'auraient qu'une envolée par jour alors que maintenant ils en ont quatre. C'était réellement une tentative d'avoir un règlement quelconque qui limiterait les nolisements et qui leur permettrait en même temps une certaine mesure de liberté.

Il existe certains genres d'organisations, l'Association des maires par exemple, auxquelles il ne serait que raisonnable d'accorder un rayon de plus de 40 milles. Il serait difficile d'avoir un nolisement de maires à moins de donner une expansion par tout le territoire canadien. Et il existe d'autres cas légitimes. Comme je l'ai déjà dit, cette question du rayon de 40 milles, en particulier, est à l'étude à l'heure actuelle.

M. Harding: Je vous remercie, monsieur Gray.

Le président: L'article 7 est-il adopté? Monsieur Portelance.

Mr. Portelance: Mr. Chairman, I do not know whether my question refers to Clause 7, as I have not had time to read it completely. When you give a concession to a company for the purpose of servicing an airport, this Bill must be taken into account. Is this done by public tender?

I might perhaps quote you the example, at Montreal airport, of the Murray Hill Limousine Service Ltd. which is much discussed. Murray Hill has a contract with the govern-

[*Text*]

nement pour fournir les services à l'aéroport. A chaque fois que ces contrats sont donnés, est-ce qu'il y a des soumissions publiques?

M. Fortier: Ces contrats ne sont pas donnés en vertu de l'article 13, mais tombent sous la juridiction du ministre. Ils ne concernent pas la Commission des transports. Des soumissions peuvent être appelées, mais pas dans tous les cas. Il n'y a pas d'obligation légale de faire l'appel de soumissions pour ces concessions. Dans le cas de Murray-Hill, je ne me souviens pas si on a fait l'appel de soumissions. La concession a été donnée à bail, sous l'autorité du Conseil du Trésor et du gouverneur en conseil.

Le président: Je crois, monsieur Portelance, que cette question ne concerne pas les amendements apportés dans le bill.

M. Portelance: Le bill n'a donc rien à faire avec ce cas?

M. Fortier: Non, cela tombe sous l'autorité du ministre qui peut émettre des baux. Il y a des règlements, *Government Airport Operations Concession Regulations*, qui autorisent le ministre à donner ces genres de concessions.

Le président: Monsieur Pringle.

Mr. Pringle: Mr. Chairman, with regard to private flying there are some very rigid restrictions with regard to any possibility that there may be a tendency for the pilot or the owner of a private airplane to be partially commercial. In the old days, if I may be permitted to say the "old days", I think it was really justified because this was a very serious thing as the airlines were just getting started with respect to their various routes and they required all the passengers that they had.

I am wondering if there is anything in this Act which could possibly have a loosening effect on the situation. For example, if you take a group of people who belong to an organization, three or four of you, it is illegal to in any way share the expenses of the operating of that airplane. Yet it is being done all the time in automobiles. I just toss that in. I am not asking a specific question at this time. I am just suggesting that maybe there might be room for a little more flexibility in this regard so that the operators could operate strictly within the law and it would be a little easier with regard to private flying.

Mr. Fortier: In so far as private aircraft operations are concerned, these would come

[*Interpretation*]

ment to service the airport at Dorval. Each time that such contracts are given, is there a call for tenders?

Mr. Fortier: These contracts are not given under Clause 13, they come under the jurisdiction of the Minister and not of the Canadian Transport Commission. Tenders may be called but they are not called in every case. There is no statutory obligation to call tenders for these contracts. In the case of Murray Hill, I do not recall whether there were tenders called or not. The concession was given through a lease given under the authority of the Treasury Board and the Governor in Council.

The Chairman: I do not think, Mr. Portelance, that this question relates to the amendments to the Bill.

Mr. Portelance: Thus the Bill is not related to this case?

Mr. Fortier: No, it comes under the authority which the Minister has to sign leases. There are regulations which are called the Government Airport Operations Concessions Regulations which authorize the Minister to give out this type of concession.

The Chairman: Mr. Pringle.

M. Pringle: Monsieur le président, en ce qui concerne l'aviation privée, il y a des restrictions très rigides en ce qui a trait à la possibilité qui puisse exister que le pilote ou le propriétaire ait à se priver d'avoir une exploitation en partie commerciale. Auparavant, ou si je puis dire «dans le bon vieux temps», je crois que cela était vraiment justifié, car c'était une question très sérieuse étant donné que les lignes aériennes commençaient à peine leur exploitation en ce qui concernait leurs différentes routes, ils avaient vraiment besoin de tous les passagers possibles.

Je me demande si dans le bill il y a quelque chose qui améliorerait la situation. Par exemple, prenez un groupe de gens qui font partie d'un organisme quelconque, par exemple trois ou quatre de vous, ce n'est pas possible pour vous de partager les frais d'exploitation de l'aéronef privé, mais on le fait tout le temps pour une automobile. Je ne pose pas de questions précises, mais je suggère que peut-être ce serait loisible de donner un peu plus de souplesse à ces règlements, afin que les exploitants puissent agir en stricte conformité de la Loi, mais qu'ils aient un peu plus de facilité quand il s'agit des aéronefs privés.

M. Fortier: En ce qui concerne l'exploitation d'aéronefs privés, cela relève de la partie

[*Texte*]

under Part I, and under Part I there are provisions for licences to be issued to aircraft pilots. There are various kinds of licences. There are licences which are called "private pilot" and some licences are endorsed to permit the pilot to conduct commercial operations—operations for gain—and any pilot of an aircraft can conduct only such operations as his licence authorizes him to conduct.

• 1645

The Chairman: Does that answer your question?

Mr. Pringle: I understand that that is true under the Act. I realize that, but I was just wondering if it is possible for the Commission to take a look at this Act a little more closely because I think it really is very rigid and there may be room for some improvement with regard to an amendment to the regulations.

Mr. Fortier: It would be an amendment to the regulations of Part I, because in so far as Part II is concerned the Commission is concerned only with commercial air services.

The Chairman: Shall Clause 7 carry? Mr. Harding.

Mr. Harding: Mr. Chairman, this again is on regulations and I am not too sure whether it applies to this particular Act. I received a number of complaints over the use of aircraft for hunting. I presume this is mostly helicopters, where they have gone up and chased some of the game around and then landed the hunters down in a certain spot. It is not very sporting but, as I presume, this has happened. Who would make the regulations to stop this? Would it come under this Act, or would it have to come under the game act of the provincial authorities, or is there anything in the regulations preventing this?

Mr. Richardson: Mr. Chairman, I do not believe there is anything here covering that. That would be under the game laws, as far as I am aware; not under the Aeronautics Act. But I could be corrected on that if I . . .

Mr. Gray: No, Mr. Minister. I think that is correct. If the person operating the aircraft is being paid by the hunter he is hauling, then he would require a licence from the Air Transport Committee, but neither the Air Transport Committee nor the Canadian Transport Commission has any rules about whether you can hunt from an aircraft or not,

[*Interprétation*]

1. En vertu de la partie 1, il y a des dispositions prévoyant l'émission de permis aux pilotes. Et, évidemment, il y a différentes catégories de permis. Il y en a qui sont appelés «pilote privé», d'autres qui sont endossés pour permettre au pilote d'avoir une exploitation commerciale, une exploitation lucrative. Et le pilote ne peut avoir que le genre d'exploitation autorisée par son permis.

Le président: Cela répond-il à votre question?

M. Pringle: Je comprends que cela est vrai en vertu de la Loi, mais je me demandais si ce serait possible que la Commission examine la Loi un peu plus attentivement, car c'est vraiment très rigide. Il y aurait peut-être moyen de l'améliorer à cet égard, en modifiant les règlements.

M. Fortier: Ce serait une modification aux règlements de la partie 1, car en ce qui concerne la partie 2, la Commission ne s'intéresse qu'aux services commerciaux, services aériens commerciaux.

Le président: L'article 7 est-il adopté? Monsieur Harding?

M. Harding: Monsieur le président, encore une fois, il s'agit de règlements, mais je ne suis pas trop sûr si cela relève de la présente Loi ou non. J'ai reçu un certain nombre de plaintes en ce qui concernait l'usage d'aéronefs pour faire la chasse. Je présume qu'il s'agit surtout d'hélicoptères, des hélicoptères qui font la chasse et qui ensuite font atterrir les chasseurs. Je présume que cela se produit. Qui alors édicterait les règlements pour empêcher cela? Et est-ce que cela relève de la présente Loi ou est-ce que cela relève du gouvernement provincial, en vertu des règlements de la chasse? Est-ce qu'il y a quoi que ce soit dans les règlements qui empêcherait cette situation?

M. Richardson: Monsieur le président, je ne crois pas qu'il existe quoi que ce soit ici qui viserait cette situation. Cela relèverait à ma connaissance des règlements de la chasse et non de la Loi sur l'aéronautique. Si j'ai tort, qu'on me corrige.

M. Gray: Je crois que c'est exact, monsieur le ministre. Si la personne qui exploite l'aéronef est payée par les chasseurs qu'il transporte, cela nécessite une licence du Comité des transports aériens, mais ni le Comité des transports aériens, ni la Commission canadienne des transports n'ont de règlements quant à savoir si l'on peut faire la chasse à

[*Text*]

although I might say, just for the information of the Committee members, that the Air Transport Committee co-operates on request with the enforcement officials of the provinces and sometimes we have joint patrols of our own inspectors and game wardens and sometimes immigration officials.

Mr. Harding: You do have patrols?

Mr. Gray: From time to time...

Mr. Harding: I see.

Mr. Gray: ...for this purpose. We try to co-operate as much as possible with the Fish and Wildlife Branch of Ontario, for example, if they ask us.

Mr. Harding: There is no objection to flying hunters into base camps. This is quite all right, but chasing the animals or hunting from the air I think should certainly be outlawed. I am very pleased to hear that patrols are flown. This would be under what department again?

Mr. Gray: The federal authorities have co-operated among themselves and with some provincial game departments and carried out joint patrols to ensure that, for example, foreign hunters who are hunting in Canada have licences to ensure that aircraft owners are not carrying hunters for hire and reward without a licence. In other words, a joint enforcement effort.

Mr. Harding: Thank you.

The Chairman: Shall Clauses 7 to 9 carry?

Clauses 7 to 9 agreed to.

Preamble agreed to.

Title agreed to.

Shall I report the bill?

Some hon. Members: Agreed.

The Chairman: I want to thank the Committee for their great support. I do not believe we will have a sitting for a few days. In any case you will be advised in due course of the next sitting. We may have a steering committee meeting next week, Monday or Tuesday.

Mr. Serré: That means, Mr. Chairman, we do not sit tomorrow?

The Chairman: No. This is finished. Thank you very much, all the members, for your great support.

[*Interpretation*]

bord d'un avion. Je peux vous dire toutefois que le Comité des transports aériens collabore sur demande avec les fonctionnaires quant à l'application de la Loi de la province et parfois, nous avons des patrouilles conjointes comprenant nos propres inspecteurs et des gardes-chasse et parfois des fonctionnaires de l'Immigration.

M. Harding: Vous avez des patrouilles?

M. Gray: De temps à autre...

M. Harding: Je comprends.

M. Gray: A cette fin, nous essayons de collaborer le plus possible avec le ministère de la Chasse et de la Pêche de l'Ontario, par exemple, si on nous le demande.

M. Harding: Aucune objection à transporter les chasseurs jusqu'à leur camp, mais l'histoire de la chasse à partir de l'avion ou de l'hélicoptère devrait être réglementée. Je ne savais pas qu'il y avait des patrouilles qui existaient. Et, sous quel ministère, encore une fois?

M. Gray: Les autorités fédérales ont collaboré entre-elles et avec certains ministères de la Chasse et de la Pêche provinciaux, pour avoir des patrouilles conjointes pour assurer par exemple que les chasseurs étrangers qui font la chasse au Canada ont un permis valide pour assurer que les propriétaires d'aéronefs ne transportent pas des chasseurs à forfait et à profit sans permis. En d'autres termes, c'est une application conjointe de la Loi.

M. Harding: Merci.

Le président: Les articles 7 à 9 sont-ils adoptés?

Les articles 7 à 9 sont adoptés.

Le préambule est adopté.

Le titre est adopté.

Le président: Dois-je faire rapport du bill?

Des voix: D'accord.

Le président: Je veux remercier les membres du Comité de toute cette aide. Je crois que nous n'aurons pas de séance d'ici quelques jours. De toute façon, on vous avisera en temps et lieu. Il y aura peut-être une réunion du Comité de direction la semaine prochaine, lundi ou mardi.

M. Serré: Mais rien demain?

Le président: Non, tout est fini, maintenant. Je vous remercie beaucoup, messieurs les membres, de votre grande aide.

STANDING COMMITTEE ON TRANSPORT AND COMMUNICATIONS

Chairman: Mr. H.-Pit Lessard

Vice-Chairman: [1]Mr. Pat Mahoney

and Messrs.

Allmand	[4]Horner
Breau	McGrath
Carter	Nesbitt
[2]Corbin	Nowlan
Godin	[3]Perrault

Pursuant to Standing Order 65 (4) (b) notice was given of changes in the membership of the Standing Committee on Transport and Communications.

[1]Mr. Mahoney replaced Mr. Penner, on February 4, 1969.

[2]Mr. Corbin replaced Mr. Howard (*Okanagan Boundary*), on February 4, 1969.

[3]Mr. Perrault replaced Mr. Serré, on February 4, 1969.

[4]Mr. Horner replaced Mr. Woolliams, on February 6, 1969.

[5]Mr. Rose replaced Mr. Harding, on February 10, 1969.

COMITÉ PERMANENT DES TRANSPORTS ET DES COMMUNICATIONS

Président: M. H.-Pit Lessart

Vice-président: [1]M. Pat Mahoney

et MM.

Portelance	Thomas (*Moncton*)
Pringle	Trudel
Rock	Turner
[5]Rose	(*London East*)
Skoberg	

Suivant l'article 65(4)(*b*) du Règlement, avis fut donné de modifications dans la composition du Comité des transports et des communications.

[1]M. Mahoney remplace M. Penner, le 4 février 1969.

[2]M. Corbin remplace M. Howard (*Okanagan Boundary*), le 4 février 1969.

[3]M. Perrault remplace M. Serré, le 4 février 1969.

[4]M. Horner remplace M. Woolliams, le 6 février 1969.

[5]M. Rose remplace M. Harding, le 10 février 1969.

REPORT TO THE HOUSE

WEDNESDAY January 29, 1969

The Standing Committee on Transport and Communications has the honour to present its

FOURTH REPORT

Your Committee has considered Bills S-14, An Act to amend the Aeronautics Act, and S-19 An Act to amend the Navigable Waters Protection Act and has agreed to report them without amendment.

A copy of the Minutes of Proceedings and Evidence relating to these Bills (Issue No. 12) is tabled.

Respectfully submitted,

RAPPORT À LA CHAMBRE

Le MERCREDI 29 janvier 1969

Le Comité permanent des transports et des communications a l'honneur de présenter son

QUATRIÈME RAPPORT

Le Comité a étudié les bills S-14, Loi modifiant la Loi sur l'aéronautique et S-19, Loi modifiant la Loi sur la protection des eaux navigables, et est convenu d'en faire rapport sans modification.

Un exemplaire des procès-verbaux et témoignages à ces bills (*fascicule n° 12*) est déposé.

Respectueusement soumis,

Le président,
H.-Pit Lessard,
Chairman.

29690—1½

ORDERS OF REFERENCE

HOUSE OF COMMONS
FRIDAY, January 17, 1969.

Ordered,—That the Standing Committee on Transport and Communications be empowered to consider and report upon the problems of transportation in the Atlantic Provinces, and that, for the purposes of its inquiry, the Committee be empowered to adjourn from place to place within Canada and the Clerk and the necessary supporting staff be authorized to accompany the Committee.

WEDNESDAY, January 22, 1969.

Ordered,—That the following Bills be referred to the Standing Committee on Transport and Communications:

Bill S-14, An Act to amend the Aeronautics Act; and

Bill S-19, An Act to amend the Navigable Waters Protection Act.

ATTEST:

ORDRES DE RENVOI

CHAMBRE DES COMMUNES
Le VENDREDI 17 janvier 1969

Il est ordonné,—Que le comité permanent des transports et des communications soit autorisé à examiner et à rendre compte des problèmes de transport des provinces de l'Atlantique, et que, aux fins de son enquête, le comité soit autorisé à se rendre à différents endroits au Canada et que le greffier ainsi que le personnel de soutien nécessaire soient autorisés à accompagner le comité.

Le MERCREDI 22 janvier 1969

Il est ordonné,—Que les bills suivants soient déférés au comité permanent des transports et des communications:

Bill S-14, Loi modifiant la Loi sur l'aéronautique;

Bill S-19, Loi modifiant la Loi sur la protection des eaux navigables.

ATTESTÉ:

Le Greffier de la Chambre des communes

ALISTAIR FRASER

The Clerk of the House of Commons

[*Text*]

MINUTES OF PROCEEDINGS

THURSDAY, February 13, 1969.
(13)

The Standing Committee on Transport and Communications met this day at 9:40 a.m. *in camera*, the Chairman, Mr. H.-Pit Lessard, presiding.

Members present: Messrs. Allmand, Breau, Corbin, Godin, Lessard (*LaSalle*), Mahoney, McGrath, Nowlan, Perrault, Pringle, Rock, Skoberg, Thomas (*Moncton*), Turner (*London East*). (14).

It was moved by Mr. Allmand, seconded by Mr. Nowlan,

Resolved,—That Mr. Pat Mahoney be elected Vice-Chairman of this Committee.

It was moved by Mr. Pringle,

Resolved:—That nominations be closed.

The Chairman then declared Mr. Mahoney elected Vice-Chairman of this Committee.

Then on motion of Mr. Allmand, it was

Resolved:—That the members of the Committee restrain themselves to a 10-minute questioning period of the witnesses appearing before the Committee during its tour of the Atlantic Provinces.

The Clerk then proceeded to the distribution of wallets which had been prepared for the trip to the Atlantic Provinces.

On motion of Mr. Allmand,

Resolved:—That the following documents be made available to the members of this Committee:

1. The Canadian Railway Act.
2. The Maritimes Freight Rates Act.
3. The Canadian Transportation Act.
4. Summary of briefs as prepared by the Department of Transport

[*Traduction*]

PROCÈS-VERBAUX

Le JEUDI 13 février 1969
(13)

Le Comité permanent des transports et des communications se réunit ce matin à 9 h 40, *à huis clos*, sous la présidence de M. H.-Pit Lessard, président.

Présents: MM. Allmand, Breau, Corbin, Godin, Lessard (*LaSalle*), Mahoney, McGrath, Nowlan, Perrault, Pringle, Rock, Skoberg, Thomas (*Moncton*) et Turner (*London-Est*) (14).

Sur une proposition de M. Allmand, appuyé par M. Nowlan,

Il est décidé—Que M. Pat Mahoney soit élu vice-président du Comité.

Sur une proposition de M. Pringle,

Il est décidé—Que les mises en candidature soient closes.

Le président déclare M. Mahoney dûment élu vice-président du Comité.

Ensuite, sur la proposition de M. Allmand,

Il est décidé—Que les membres du Comité limitent à 10 minutes leur interrogatoire des témoins qui comparaîtront devant le Comité au cours de sa tournée des provinces atlantiques.

Le secrétaire distribue les trousses préparées en vue du voyage aux provinces atlantiques.

Sur une proposition de M. Allmand,

Il est décidé—Que les documents suivants soient mis à la disposition des membres du Comité:

1. La loi sur les chemins de fer.
2. La loi sur les taux de transport des marchandises dans les provinces Maritimes.
3. La loi sur les transports.
4. Le résumé des mémoires établis par le ministère des Transports.

[*Text*]

After further debate, on motion of Mr. Breau, it was

Resolved:—That the briefs received by the Standing Committee on Transport and Communications and not yet printed in the records, be printed as appendices to this Committee's Minutes of Proceedings and Evidence during its tour of the Atlantic Provinces.

The Chairman informed the Committee that a motion is needed to allow the printing of the Minutes of Proceedings of this meeting since the Committee is sitting *in camera.*

Thereupon, on motion of Mr. Carter,

Resolved:—That the minutes of the present meeting be printed.

At 10:10 a.m., the Committee adjourned to the call of the Chair.

[*Traduction*]

Sur la proposition de M. Breau,

Il est décidé—Que les mémoires reçus par le Comité permanent des transports et des communications et qui n'ont pas encore été consignés en appendice au compte rendu le soient au cours du voyage.

Le président signale au Comité qu'il est nécessaire de présenter une motion tendant à l'impression du compte rendu de la présente séance vu que le Comité siège *à huis clos.*

Alors, sur la proposition de M. Carter,

Il est décidé—Que le compte rendu des délibérations de la présente séance soit imprimé.

A 10 h 10 du matin, le Comité s'ajourne jusqu'à nouvelle convocation du président.

Le secrétaire du Comité,
Robert Normand,
Clerk of the Committee.

MONDAY, February 17, 1969.
(14)

The Standing Committee on Transport and Communications met this day at Fredericton, N.B. at 9:30 a.m., the Chairman, Mr. H.-Pit Lessard, presiding.

Members present: Messrs. Allmand, Breau, Carter, Corbin, Godin, Horner, Lessard (*LaSalle*), McGrath, Mahoney, Nesbitt, Nowlan, Perrault, Portelance, Pringle, Rock, Rose, Skoberg, Thomas (*Moncton*), Trudel, Turner (*London East*).—(20)

Also present: Mr. T. M. Bell, M.P.

Witnesses: Representing McCain Foods Limited: Mr. Dan Swim, Traffic Manager; *representing Atlantic Provinces Soft Drink Association:* Mr. John Reynolds, President; Mr. Robert Lynch, Vice-President; *from the City of Saint John, N.B.:* Mayor J. A. MacDougall, M.D., Mr. Dino Pappas, Common Clerk and City Solicitor; *from the Saint John Board of Trade:* Mr. James M. Crosby, President; Mr. Gordon H. Lummis, General Manager; *from Irving Oil Limited:*

Le LUNDI 17 février 1969
(14)

Le Comité permanent des transports et des communications se réunit aujourd'hui à Fredericton (N.-B.) à 9 heures et demie du matin, sous la présidence de M. H. Pit Lessard.

Présents: MM. Allmand, Breau, Carter, Corbin, Godin, Horner, Lessard (LaSalle), McGrath, Mahoney, Nesbitt, Nowlan, Perrault, Portelance, Pringle, Rock, Rose, Skobert,Thomas (*Moncton*), Trudel et Turner (*London-Est*)—(20).

Aussi présent: M. T. M. Bell, député.

Témoins: de McCain Foods Limited: M. Dan Swim, directeur de la circulation; *de l'Atlantic Provinces Soft Drink Association,* M. John Reynolds, président et M. Robert Lynch, vice-président; *de la ville de Saint-Jean* (*N.-B.*), le maire, M. J. A. MacDougall, M.D., et M. Dino Pappas, greffier et chef du Contentieux municipal; *de la Chambre de Commerce de Saint-Jean,* M. James M. Crosby, président, et M. Gordon H. Lummis, directeur général;

[*Text*]

Mr. K. C. Irving, Chief Executive Officer; Mr. A. L. Irving, Director and Executive Officer; Mr. G. B. Lawson, Assistant to the President; *from the Maritime Transportation Commission:* Mr. Ramsay Armitage.

The Chairman made a general statement regarding the Committee's terms of reference relating to the transportation problems of the Atlantic Provinces.

McCain Foods Limited presented a summary of their brief and were questioned thereon.

The witness undertook to obtain additional information for the Committee.

On behalf of the Atlantic Provinces Soft Drink Association, Mr. Reynolds and Mr. Lynch summarized their brief and were questioned thereon.

Mr. Pappas presented a brief on behalf of the City of Saint John, followed by a brief on behalf of the Saint John Board of Trade. (*See appendix C*).

Mr. K. C. Irving, Chief Executive Officer of the group of companies, read at length the brief presented to the Committee. (*See Appendix "D" for the appendices to the Irving Oil brief*)

At 12:30 p.m. the meeting adjourned until 2:00 o'clock p.m. this day.

[*Traduction*]

de la société Irving Oil Limited, M. K. C. Irving, administrateur en chef, M. A. L. Irving, directeur et membre du comité d'administration, et M. G. B. Lawson, adjoint du président; *de la Commission du transport maritime,* M. Ramsay Armitage.

Le président fait un exposé général des attributions du Comité, en ce qui concerne les difficultés du transport dans les provinces atlantiques.

La société *McCain Foods Limited* soumet un résumé de son mémoire et son représentant est interrogé à ce sujet.

Le témoin s'engage à obtenir des renseignements supplémentaires pour le Comité.

MM. Reynolds et Lynch, parlant au nom de l'*Atlantic Provinces Soft Drink Association,* résument leur mémoire et sont interrogés à cet égard.

M. Pappas soumet un mémoire au nom de la ville de Saint-Jean, après quoi un mémoire de la Chambre de commerce de Saint-Jean est également soumis. (*voir l'appendice C*)

M. K. C. Irving, administrateur en chef représentant le groupe de sociétés, fait lecture du texte intégral du mémoire soumis au Comité. (*voir l'appendice «D» en ce qui concerne les annexes au mémoire de la société Irving Oil*).

A midi et demi, la séance est suspendue jusqu'à 2 heures.

Le secrétaire du Comité,
Robert Normand,
Clerk of the Committee.

AFTERNOON SITTING
(15)

The Standing Committee on Transport and Communications met this day in Fredericton, New Brunswick, at 2:15 p.m., the Chairman, Mr. H.-Pit Lessard, president.

Members present: Messrs. Allmand, Breau, Carter, Corbin, Godin, Horner, Lessard (*LaSalle*), Mahoney, McGrath, Nes-

SÉANCE DE L'APRÈS-MIDI
(15)

Le Comité permanent des transports et des communications se réunit aujourd'hui à Fredericton (Nouveau-Brunswick), à 2 heures et quart de l'après-midi, sous la présidence de M. H.-Pit Lessard.

Présents: MM. Allmand, Breau, Carter, Corbin, Godin, Horner, Lessard (*LaSalle*), Mahoney, McGrath, Nesbitt, Now-

bitt, Nowlan, Perrault, Portelance, Pringle, Rock, Rose, Skoberg, Thomas (*Moncton*), Trudel, Turner (*London East*)—(20).

Also present: Mr. Thomas Bell, M.P.

Witnesses: From the Irving Group of Companies: Mr. K. C. Irving; Mr. G. B. Lawson. *From the Saint John Port and Industrial Association:* Mr. Philip W. Oland, Chairman of the Commission; Mr. John P. Mooney, Vice-Chairman, Alderman; Mr. W. Alliston, member; Mr. Stewart MacDonald, Executive Director; Mr. Murray McCavour, Assistant Executive Director. *Representing the Government of the Province of New Brunswick:* The Honourable Robert J. Higgins, Minister of Economic Growth; Mr. R. E. Tweedale, Deputy Minister; *Representing the Maritime Co-operative Services Limited:* Mr. W. D. Dernier, General Manager. *From T. Eaton Company Limited:* Mr. W. R. Sparks, Traffic and Customs Manager; Mr. R. E. Lockhart, Eastern Catalogue Operating Manager. *From the Maritime Provinces Board of Trade:* Mr. B. W. Isner. *From the Maritime Transportation Commission:* Mr. J. M. Crosby, Chairman; Mr. Craig S. Dickson, Executive Manager; Mr. R. M. S. Armitage, Assistant Manager; Mr. Maurice Cormier, Research Economist.

The members resumed their questioning of the Irving Oil Officials.

Officials of the Saint John Port and Industrial Commission were questioned.

The Honourable R. J. Higgins, presented a summary of the New Brunswick provincial brief and was questioned thereon.

Mr. W. D. Dernier summarized the recommendations contained in the brief of the Maritime Co-operative Services Limited and proceeded then to answer questions of the members of the Committee.

The Committee recessed for ten minutes.

[*Traduction*]

lan, Perrault, Portelance, Pringle, Rock, Rose, Skoberg, Thomas (*Moncton*), Trudel et Turner (*London-Est*) (20).

Aussi présent: M. Thomas Bell, député.

Témoins: pour le groupe des sociétés Irving: M. K. C. Irving et M. G. B. Lawson; *de la Saint John Port and Industrial Association:* M. Philip W. Oland, président de la commission, M. John P. Mooney, vice-président, échevin, M. W. Alliston, membre, M. Stewart MacDonald, administrateur en chef, et M. Murray McCavour, adjoint de l'administrateur en chef; *du gouvernement de la province du Nouveau-Brunswick:* l'honorable Robert J. Higgins, ministre de l'Expansion économique, et M. R. E. Tweedale, sous-ministre; *de la Maritime Co-operative Services Limited:* M. W. D. Dernier, directeur général; *de la société T. Eaton Limited,* M. W. R. Sparks, directeur de la Circulation et du Service douanier, et M. R. E. Lockhart, directeur des opérations de la publication du catalogue pour l'Est du Canada; *de la Chambre de commerce des provinces maritimes*: M. B. W. Isner; *de la Commission des transports maritimes:* M. J. M. Crosby, président, M. Craig S. Dickson, directeur de l'exécutif, M. R. M. S. Armitage, directeur adjoint, et M. Maurice Cormier, économiste et spécialiste en recherche.

Les membres du Comité continuent à interroger les représentants de la société *Irving Oil.*

Les représentants de la *Saint John Port and Industrial Commission* sont interrogés.

L'honorable R. J. Higgins soumet un résumé du mémoire de la province du Nouveau-Brunswick et il est interrogé à ce sujet.

M. W. D. Dernier résume les recommandations contenues dans le mémoire de la *Maritime Co-operative Services Limited,* puis il répond aux questions posées par les membres du Comité

La séance est suspendue pendant dix minutes.

[*Text*]

After recess, questions were asked of the officials of T. Eaton Company.

Mr. B. W. Isner representing the Maritime Provinces Board of Trade summarized his brief and was questioned thereon.

Mr. J. M. Crosby presented a summary of the Maritimes Transportation Commission and Officials answered questions.

At 6:00 p.m., the Committee adjourned until 8:00 p.m. this day.

EVENING SITTING
(16)

The Standing Committee on Transport and Communications met this day in Fredericton, New Brunswick at 8:00 p.m. the Chairman, Mr. H.-Pit Lessard, presiding.

Members present: Messrs. Allmand, Breau, Carter, Corbin, Godin, Horner, Lessard (*LaSalle*), Mahoney, McGrath, Nesbitt, Nowlan, Perrault, Portelance, Pringle, Rock, Rose, Skoberg, Thomas (*Moncton*), Trudel, Turner (*London East*)—(20).

Witnesses: From the City of Moncton: Mayor L. C. Jones; Deputy Mayor J. P. Leblanc and Mr. H. A. Fredericks, Consultant. *From the Grand Manan Board of Trade:* Mr. Lawrence Cook, President; Mr. Sam Guptill, member. *From the Fredericton Junior Chamber of Commerce:* Mr. Jack Lamey. *From the City of Fredericton:* Mr. John Brander, Professor, University of New Brunswick; Mayor W. T. Walker; Mr. Louis Seheult, Councillor. *From the Enterprise Foundry Company Limited:* Mr. Maurice P. Fisher, Vice-President Purchasing. *From the Opposition Members of the New Brunswick Assembly:* Mr. Fred McCain, MLA; Mr. Lorne McGuigan, MLA.

The Chairman introduced the witnesses who gave an oral summary of their brief and answered questions thereon.

[*Traduction*]

La séance étant reprise, les représentants de la société *T. Eaton* sont interrogés.

M. B. W. Isner, représentant la Chambre de commerce des provinces maritimes, résume son mémoire puis il est interrogé à ce sujet.

M. J. M. Crosby soumet un résumé du mémoire de la Commission des transports maritimes et il répond aux questions posées à son sujet.

A 18 h. la séance est suspendue jusqu'à 20 h.

SÉANCE DU SOIR
(16)

Le Comité permanent des transports et des communications se réunit aujourd'hui à Fredericton (Nouveau-Brunswick) à 8 h. du soir, sous la présidence de M. H.-Pit Lessard

Présents: MM. Allmand, Breau, Carter, Corbin, Godin, Horner, Lessard (*LaSalle*), Mahoney, McGrath, Nesbitt, Nowlan, Perrault, Portelance, Pringle, Rock, Rose, Skoberg, Thomas (*Moncton*), Trudel et Turner (*London-Est*) (20).

Témoins: de la ville de Moncton: le maire L. C. Jones, son adjoint, M. J.-P. Leblanc, et M. H. A. Fredericks, expert-conseil; *de la Chambre de commerce de Grand-Manan:* M. Lawrence Cook, président, et M. Sam Guptill, membre; *de la Chambre de commerce des jeunes de Fredericton:* M. Jack Lamey; *de la ville de Fredericton:* M. John Brander, professeur à l'université du Nouveau-Brunswick, le maire W. T. Walker, et M. Louis Seheult, conseiller municipal; *de l'Enterprise Foundry Company Limited:* M. Maurice P. Fisher, vice-président, division des achats; *de l'Opposition de l'assemblée législative du Nouveau-Brunswick:* M. Fred McCain et M. Lorne McGuigan, députés.

Le président présente les témoins et ceux-ci résument leur mémoire de vive voix, puis ils répondent aux questions qui leur sont posées à cet égard.

[*Text*]

The Chairman thanked the witnesses and the Committee adjourned until 9:30 a.m., February 18, 1969.

[*Enregistrement électronique*]

Le lundi 17 février 1969

• 0833

The Chairman: Ladies and gentlemen, members of the Committee, I would like to welcome you to the first meeting of the Transport Committee here this morning.

I took the opportunity to invite the CBC and the newspapermen and allowed them to take pictures. I took that upon myself to do. I hope this is satisfactory to the Committee.

Before starting, may I take this opportunity to inform the public that the Standing Committee on Transport and Communications of the House of Commons is regarded as a portion of the House of Commons. Therefore, the Committee is governed for the most part in its proceedings by the same rules which prevail in the House of Commons, by Article 65 (10) of the Standing Orders of the House of Commons.

The Committee has received a great number of briefs concerning transportation problems of the Atlantic Provinces and the Committee is anxious to hear everyone who has submitted a brief to us. Therefore, we have asked everyone to comply with the request to supply the Committee with an official typewritten list of the names of those persons who form the delegations appearing before the Standing Committee on Transport.

I would also ask those who present a brief—I am sorry to say this—to be as brief as possible because our agenda is pretty well loaded. We have a very, very tight schedule, so I would ask them to limit the length of their presentations.

This morning we are starting with a brief from McCain Foods Limited, and I would ask the gentlemen who are going to present the brief to come forward, please.

We have a new procedure this morning. You will be talking direct to Ottawa via two lines of the Bell Telephone Company. I would ask all members of the Committee, if possible, whenever you want to speak to raise your hand and wait until I name you so that there will not be any mistake.

I would like to present to you Mr. Dan Swim: of McCain Foods from Florenceville.

Le président: Mesdames et messieurs, membres du Comité. Je vous souhaite la bienvenue ce matin à la première réunion du Comité des Transports.

J'ai saisi l'occasion d'inviter Radio-Canada ainsi que les journalistes et je leur ai permis de prendre des photographies. J'ai pris la liberté de le faire, et j'espère que le Comité est consentant.

Avant de commencer, puis-je dire au grand public que le Comité permanent des Transports et des communications de la Chambre des communes est considéré comme une partie de celle-ci. Par conséquent, le Comité est régi pour la plus grande partie par le Règlement de la Chambre des communes, par l'article 65(10).

Le Comité a reçu un très grand nombre de mémoires au sujet des problèmes du transport dans les provinces de l'Atlantique. Le Comité a hâte d'entendre tous ceux qui ont présenté des mémoires. Par conséquent, nous avons demandé à tous de bien vouloir donner au Comité une liste officielle, dactylographiée, des noms des personnes qui font partie de la délégation qui comparaît devant le Comité permanent des Transports.

Je demande aussi à ceux qui présentent un mémoire, et je regrette infiniment d'avoir à le faire, d'être aussi brefs que possible car notre programme est très chargé. Je leur demanderais donc de limiter leur exposé, car nous sommes très pressés.

Ce matin, nous commencerons donc par le mémoire de la *McCain Foods Ltd.* Je demanderais à ceux qui doivent présenter le mémoire de bien vouloir venir à l'avant.

Nous avons une nouvelle procédure, ce matin. Vous parlerez directement à Ottawa par le truchement de deux lignes de la compagnie de téléphone *Bell.* Je demanderais aux membres du Comité, quand ils veulent parler, de lever la main et d'attendre que je les nomme afin qu'il n'y ait pas d'erreur.

Je vous présente M. Dan Swim de la *McCain Foods,* de Florenceville.

[*Text*]

Mr. Dan Swim (McCain Foods Limited, Florenceville): Good morning, gentlemen of the Committee. We would like to discuss very briefly what we have in our brief.

Our company, McCain Foods, is about 12 years old and is one of the largest processors of frozen products in Canada. Indeed, we are one of the largest in the world. The matter of freight rates is very important to our company, both at the present time and for the future. Nearly all of our sales are outside of the Province of New Brunswick and our business could not exist as such were it not for Ontario and Quebec and being competitive in those places.

About 80 per cent of our business is done in the provinces of Ontario, Quebec and the Maritimes, that is east of the Manitoba border, and this movement is almost entirely by truck. We supply the Prairie Provinces and British Columbia by rail. This brief will cover principally the 80 per cent of our sales now handled by motor transport.

First, I would like to point out that our customers in Quebec and Ontario do require these over-the-road carriers. The reason for this is that many do not have sidings; therefore they have to have carriers to drop. Many of them are not full truckloads as well.

Over the years we have been plagued by a shortage of good refrigerator trailers to get our goods to the market and, of course, on many occasions our business has suffered because of this poor service. In other words, there just do not seem to be enough refrigerated trucks willing and able to carry our goods which we feel we could afford to pay. We are still straining at the moment to supply this service.

Just recently we accepted a small rate increase, the first in the history of the company of McCain Foods. We have vigorously resisted these higher rates and we have done this by, loading around the clock, seven days a week, as well as going to the individual carriers and making an agreement with them to load their vehicles to capacity. In other words, we have done everything we can to keep our costs down.

What we would suggest, what we would petition you for, gentlemen, is this: that you recommend to the Government of Canada that the subventions as laid down in the MFRA apply to the motor transport industry. We believe that the MFRA makes an important and necessary contribution to the economy of the Maritimes. The reason for this Act, of course, is well known, but we feel the

[*Interpretation*]

M. Dan Swim (McCain Foods Limited, Florenceville): Bonjour, messieurs les membres du Comité; nous voudrions brièvement exposer ce que porte notre mémoire.

La compagnie *McCain Foods*, date d'environ douze ans. C'est l'un des plus grands apprêteurs de produits congelés au Canada, et même dans le monde. La question des taux de transport de marchandises est très importante pour notre compagnie, actuellement et pour l'avenir. La plus grande partie de nos ventes se font à l'extérieur du Nouveau-Brunswick et nous n'existerions pas si ce n'était la concurrence de l'Ontario et du Québec.

Environ 80 p. 100 de nos affaires se font dans l'Ontario, le Québec et dans les provinces des Maritimes, soit à l'est de la frontière du Manitoba, et le transport se fait presque uniquement par camion. Quant aux provinces des Prairies et à la Colombie-britannique, nous y assurons le transport par voie de chemins de fer. Nous allons nous contenter de vous parler du transport routier.

Nos clients du Québec et de l'Ontario ont besoin de ce transport par camion. La plupart d'entre eux, justement, n'ont pas d'embranchements ferroviaires et, par conséquent, doivent avoir des services de camions. Nos ventes se font dans une grande partie à raison de moins qu'une charge de camion. Il y a déjà eu un grave manque de remorques frigorifiques et nos ventes ont souffert en raison de ce manque de service. En d'autres termes, il ne semble pas y avoir suffisamment de camions frigorifiques pour transporter nos produits aux taux que nous pouvons payer. A l'heure actuelle, nous nous forçons d'assurer ces services quand même.

Tout récemment, nous avons accepté une augmentation du taux de transport, pour la première fois dans l'histoire de la *McCain Foods*. Nous avons résisté vigoureusement à cette augmentation en expédiant sept jours par semaine, 24 heures par jour, et en demandant à chaque compagnie de camionnage de mettre la plus grande quantité de marchandise possible dans leurs camions. En d'autres termes, nous avons tout fait pour réduire nos frais.

Ce que nous vous demanderions, messieurs, c'est ceci: que vous recommandiez au gouvernement du Canada que les subventions qui s'appliquent selon la *Loi sur le taux de transport des marchandises dans les provinces maritimes* s'appliquent aussi au transport routier. Nous croyons justement que cette Loi contribue beaucoup et est indispensable à l'économie des Maritimes. La raison d'être de

[*Texte*]

spirit of the Act is not being carried out as it was intended.

We feel the spirit of this Act was to assist products from the Maritimes to be sold competitively both inside and across Canada at prices which are competitive. The purpose of this Act we believe is sound, but today we feel it just cannot accomplish its purpose unless it is applied to the motor transport industry.

We feel that the people who enacted this MFR Act were not too much worried about the railways, but were concerned with the competitive position and the economic well-being of the Atlantic region. We believe this is still the case today. Therefore, we feel that this should be extended to the motor transport industry. This would immediately place us in a better position competitively if it was carried out. We would then look to the motor transport industry to expand enormously and offer the kind of equipment—trucks, reefers, etc., that would then put us in a position to service especially the areas east of the Manitoba border.

Gentlemen, that pretty well covers our brief.

The Chairman: Thank you very much. If you would like to remain here I believe there are a few members who would like to ask questions. Mr. Nesbitt.

Mr. Nesbitt: I have two brief questions. The first one is: why do you find it more advantageous to ship your products by interprovincial motor transport rather than by refrigerated railway car?

Mr. Swim: That was partly covered, sir. The first reason is that most of our customers east of the Manitoba border do not have rail sidings. The second point would be that a good number of our customers require multi-drops which are quite impossible with rail because it would take such a long period of time between one siding and another siding.

Mr. Nesbitt: You have spoilage problems, I suppose, if the products get out of refrigerated cars.

Mr. Swim: Yes, they are very perishable.

Mr. Nesbitt: The second question is: how do transport costs by rail under the existing Maritime Freight Rates Act compare to transport costs by truck? Have you any figures

[*Interprétation*]

cette loi est parfaitement connue, mais nous estimons qu'on n'a pas traduit en actes l'esprit de la Loi.

L'intention était d'aider à vendre les produits des maritimes à des prix concurrentiels, à l'intérieur et à l'extérieur du Canada. L'objet de la Loi est très sage, mais nous estimons que de nos jours la Loi ne peut atteindre son but à moins qu'on l'applique au transport routier.

Nous pensons que les rédacteurs de la Loi ne se préoccupaient pas tellement des chemins de fer, mais voulaient surtout assurer une économie concurrentielle aux Maritimes. Nous croyons que c'est toujours le cas, d'ailleurs. Nous estimons donc qu'on devrait étendre la portée de la Loi pour couvrir l'industrie du transport routier, ce qui nous placerait immédiatement dans une meilleure situation de concurrence. Cela permettrait aussi de développer l'industrie du transport par camion et d'offrir le genre de service et de matériel, de camions, de wagons frigorifiques qui nous permettraient alors de mieux desservir les régions à l'Est de la frontière du Manitoba. Messieurs, voilà le résumé de notre mémoire.

Le président: Merci beaucoup. Monsieur, si vous voulez rester ici, je crois qu'il y a certains députés qui aimeraient vous poser des questions. Monsieur Nesbitt.

M. Nesbitt: J'ai deux questions, très brèves; premièrement, pourquoi trouvez-vous qu'il est plus avantageux d'expédier vos produits par transport routier interprovincial plutôt que par wagons frigorifiques du chemin de fer?

M. Swim: J'en ai donné une explication partielle. D'abord, la majorité de nos clients, à l'est du Manitoba, n'ont pas d'embranchements ferroviaires. Deuxièmement, une bonne partie de nos clients ont besoin de livraisons multiples, ce qui consommerait un temps considérable entre un embranchement et un autre.

M. Nesbitt: Vous avez des problèmes quant à la conservation, je suppose, si les produits ne sont pas expédiés par véhicules frigorifiques.

M. Swim: Oui, ces produits sont très périssables.

M. Nesbitt: Deuxième question: comment comparer le coût du transport par camion et le coût du transport ferroviaire aux termes de la Loi sur les taux de transport des mar-

[*Text*]

you could give us, either now or perhaps later?

Mr. Swim: I could give you some later. I could not at the moment.

Mr. Trudel: I would like to ask the witness about the multidrops and less-than-carload rates. Do you have distributors at the ultimate end who receive your products or do you make distribution yourself on a door-to-door basis?

Mr. Swim: We do—to warehouses.

Mr. Trudel: You do yourself?

Mr. Swim: Yes. To the warehouses, that is to the wholesalers; not to the retailers.

Mr. Trudel: Thank you. That is all, Mr. Chairman.

Mr. Nowlan: I have three questions. I would like to compliment the witness in being so brief in his brief.

The Economic Intelligence Unit Study last year suggested that transportation cost was vastly overrated and that only 5 per cent was really transportation cost as against distribution cost. Does the witness have any idea of the transportation cost of his manufactured product?

Mr. Swim: The main point covered by our company, that is the distribution point, is Toronto. We will take that one as an example. The cost of our product per pound would be approximately 13 or 14 cents. This will only be an approximate figure, sir. Therefore, paying a rate of about $1.05 to $1.10, it would work out to about 8 per cent.

Mr. Nowlan: Are you aware of the Economic Intelligence Unit Study commissioned by the Atlantic Development Board last year?

Mr. Swim: I have heard tell of it, sir, but I am not completely familiar with it.

Mr. Nowlan: According to your brief, 80 per cent of your goods are sent east of the Ontario-Manitoba border. At present how much of that goes by a Canadian route and how much of that goes through Maine? And would a Maine corridor give you any advantages?

Mr. Swim: I will answer your last question first. We feel that the corridor road would

[*Interpretation*]

chandises dans les provinces maritimes? Avez-vous des données sur cela?

M. Swim: Je pourrai répondre plus tard, mais pas à l'heure actuelle, je le regrette.

M. Trudel: Vous avez parlé de livraisons multiples et des taux de moins d'une charge. Avez-vous des distributeurs à la destination ou si vous assurez la distribution vous-mêmes, «de porte en porte»?

M. Swim: Nous le faisons nous-mêmes aux entrepôts.

M. Trudel: Vous le faites vous-mêmes?

M. Swim: Oui. Aux grossistes et non pas aux détaillants.

M. Trudel: Merci, monsieur le président.

M. Nowlan: J'aurais deux ou peut-être trois questions, et je félicite le témoin d'avoir été aussi bref dans son mémoire.

Première question: L'étude faite par la sous-section de renseignements économiques a suggéré qu'on avait grandement exagéré les frais de transport et, qu'en fait, il n'y avait que 5 p. 100 en cause pour le transport en comparaison des frais de distribution. Est-ce que le témoin aurait une idée de ce que sont les frais de transport pour ses produits manufacturés?

M. Swim: Le principal point de distribution pour notre compagnie, c'est Toronto. Prenons donc Toronto comme exemple. Le coût de notre produit par livre serait environ 13c. ou 14c., la livre. C'est un chiffre approximatif, monsieur. Par conséquent, si nous payons $1.05 ou $1.10, cela équivaudrait peut-être à 8 p. 100.

M. Nowlan: Êtes-vous au courant de l'étude de la sous-section de renseignements économiques qui a été demandée l'an dernier par l'Office d'expansion économique de la région de l'Atlantique?

M. Swim: J'en ai entendu parler, mais je ne la connais pas tout à fait.

M. Nowlan: Dans votre mémoire, vous prétendez que 80 p. 100 de vos produits se dirigent à l'est de la frontière de l'Ontario et du Manitoba? Quelle proportion par la voie canadienne, et quelle proportion est distribuée grâce à une route américaine, et est-ce qu'un corridor passant par le Maine serait un avantage?

M. Swim: Je répondrai d'abord à votre dernière question. Nous croyons que ce serait

[*Texte*]

give us an advantage in that it would reduce the mileage by approximately 180 miles between here and Montreal. It would be advantageous because we could then deliver our products more conveniently and in less time.

Mr. Nowlan: What way do your truck goods go now?

Mr. Swim: They move mainly now via motor transport.

Mr. Nowlan: Through Maine and the United States or an all-Canadian route?

Mr. Swim: An All-Canadian route mainly, with possibly an exception in the spring.

Mr. Nowlan: If there was a Maine corridor, you might be lured to the Maine corridor route?

Mr. Swim: I am sure our carriers would be, yes.

Mr. Nowlan: The last question, Mr. Chairman. You mentioned that trucks should be included under the MFRA as are trains. Do you go another step and say that payment should be to the carrier rather than to the shipper?

Mr. Swim: I believe we covered that just slightly in our brief, sir.

Mr. Nowlan: You feel that the shipper should receive at least a portion of this, so you are not completely for the MFRA as constituted at present.

Mr. Swim: That is right.

Mr. Nowlan: Thank you.

The Chairman: Mr. Skoberg.

Mr. Skoberg: Thank you, Mr. Chairman. You mentioned that you use trucks because of a lack of rail sidings. I presume that a large portion of your shipments go directly to the larger centres. Could you give me an indication of what areas do not have railway sidings to facilitate your business at this time?

Mr. Swim: We would service possibly two dozen accounts in Toronto, that is individual wholesalers to whom we sell, and of those two dozen accounts there probably would not be more than three or four which would have rail sidings.

[*Interprétation*]

un avantage s'il y avait un corridor à travers le Maine; cela réduirait le millage d'environ 180 milles d'ici Montréal. Oui, ce serait certainement avantageux puisque nous pourrions alors livrer nos produits beaucoup plus facilement en moins de temps.

M. Nowlan: Quelle est la route suivie par vos produits livrés par camions à l'heure actuelle?

M. Swim: A l'heure actuelle, c'est surtout par le transport routier.

M. Nowlan: Par le Maine et les États-Unis ou par les routes canadiennes?

M. Swim: Principalement, par route entièrement canadienne, excepté au printemps.

M. Nowlan: S'il y avait un corridor à travers le Maine, cela vous attirerait?

M. Swim: Oui. D'accord.

M. Nowlan: Une dernière question: vous avez mentionné que les camions devraient être inclus dans la Loi sur les taux de transport de marchandises dans les Maritimes. Est-ce que vous voudriez aussi que le paiement soit fait au transporteur plutôt qu'à l'expéditeur?

M. Swim: Je crois que nous en avons parlé brièvement dans notre mémoire.

M. Nowlan: Vous croyez que l'expéditeur devrait en recevoir au moins une partie. En d'autres termes, vous ne voulez pas que la Loi s'applique telle qu'elle existe à l'heure actuelle?

M. Swim: C'est exact.

M. Nowlan: Merci.

Le président: Monsieur Skoberg?

M. Skoberg: Comme vous l'avez mentionné, c'est en raison du manque de voies de garage ferroviaires que vous vous servez de camions. Je présume qu'une grande partie de vos expéditions se font directement vers les centres les plus considérables. Pourriez-vous m'indiquer quels seraient les endroits qui n'auraient pas de voies de garage ferroviaires pour faciliter vos affaires à l'heure actuelle?

M. Swim: Nous pourrions desservir environ deux douzaines de clients à Toronto, c'est-à-dire des grossistes particuliers à qui nous vendons. De ce nombre, il n'y aurait probablement pas plus que trois ou quatre qui auraient des voies d'évitement ferroviaires.

[*Text*]

Mr. Skoberg: When you have used refrigerated rail cars, have you had difficulty in obtaining a sufficient number of rail cars for your business?

Mr. Swim: We did at one time, yes. This would be up until about possibly a year and a half or two years ago. Then the Canadian Pacific Railway built a large number of rail cars and this has more or less eliminated the problem of obtaining rail refrigerated cars.

Mr. Skoberg: Has your company any interest in any truck lines whatsoever?

Mr. Swim: I have heard, sir, that they have an interest in a truck line.

Mr. Skoberg: Do you not know?

Mr. Swim: I do not know. No, I do not know.

Mr. Skoberg: Could you find out? Mr. Chairman, respectfully I would ask that this information be made available.

Mr. Swim: Yes, we could do that.

The Chairman: Mr. Rock.

Mr. Rock: Thank you, Mr. Chairman. You mentioned that your main sales are to Quebec and Ontario and you stress the need to apply MFRA to trucking in order to be more competitive. What I would like to know is, competitive with whom? With other Canadians or with foreign markets?

Mr. Swim: With other Canadian markets.

Mr. Rock: Where are the other Canadian markets? Where are the potatoes growing outside of this area here?

Mr. Swim: Our competitors, of course, are spread across Canada. One of the largest that we have is centered in Manitoba. There are several in Ontario and the surrounding Toronto areas.

Mr. Rock: Is there that much of a potato industry in Ontario?

Mr. Swim: They produce French fries there so I believe there must be, sir.

Mr. Rock: You are not sure yourself, then, whether Ontario and Quebec import most of

[*Interpretation*]

M. Skoberg: Une autre question, monsieur le président. Lorsque vous employiez les wagons frigorifiques du chemin de fer, aviez-vous de la difficulté à obtenir suffisamment de wagons pour vos affaires?

M. Swim: A un moment donné, oui. Jusqu'à un an et demi ou il y a deux ans, et ensuite la compagnie des chemins de fer Pacifique-Canadien a fait construire beaucoup de wagons, ce qui a éliminé une grande partie du problème d'obtenir les wagons frigorifiques des chemins de fer.

M. Skoberg: Ma dernière question, monsieur le président. Est-ce que votre compagnie a un intérêt dans des sociétés de camionnage?

M. Swim: J'ai entendu dire que c'est le cas.

M. Skoberg: Vous ne le savez pas?

M. Swim: Non, je ne le sais pas.

M. Skoberg: Respectueusement, je demanderais qu'on nous fournisse ce renseignement, monsieur le président.

M. Swim: Oui, nous pourrions le faire.

Le président: Monsieur Rock?

M. Rock: Oui, monsieur le président, j'aimerais demander au témoin, vous avez mentionné avant que la plus grande partie de vos ventes se font au Québec et dans l'Ontario, et vous avez aussi insisté sur le besoin d'appliquer la Loi sur les taux de transport marchandises aux Maritimes pour que la situation soit plus concurrentielle: avec qui? Avec d'autres marchés canadiens ou avec les marchés étrangers?

M. Swim: Avec les autres marchés canadiens.

M. Rock: Où se trouvent les autres débouchés canadiens? Où les pommes de terre poussent-elles en dehors de cette région?

M. Swim: Nos concurrents se trouvent à travers le Canada, mais un des plus grands se trouve au Manitoba, ainsi que plusieurs dans l'Ontario, dans la région de Toronto.

M. Rock: Y a-t-il vraiment une grande industrie de la pomme de terre en Ontario?

M. Swim: Elles produisent des frites, alors je le crois.

M. Rock: Vous n'êtes pas sûr. Donc, si le Québec et l'Ontario importent la plus grande

[*Texte*]

their potatoes possibly from the United States and they receive a lot of them from New Brunswick. You are not sure whether . . .

Mr. Swim: No, I am not sure of those market areas with regard to fresh potatoes.

Mr. Rock: Do you not think it would make a difference in your request here if you would find out whether Ontario and Quebec receive a lot of their potatoes from the United States and directed more of your attention to the fact that possibly there is too much importation into Canada and maybe there should be an effort to reduce this importation? You say competitive. Competitive with whom? This is what I am trying to find out. You are not sure yourself.

Mr. Swim: Competitive with the central Canadian producers. Possibly that would not clarify it.

Mr. Rock: Yes, but you are not sure whether there is very much of this production in Ontario and Quebec. You see, there may possibly be only a week or two's supply in Quebec and Ontario. I am not sure myself, but I find that you are just striking on this MFRA without actually having investigated whether the competition is really Canadian competition. If it is American competition, this would shed a different light on your objection.

Mr. Swim: I am not sure where those potatoes originate, sir.

The Chairman: Mr. Horner.

Mr. Horner: Do the railroads own most or much of the long-haul trucking industries in New Brunswick and in the Maritimes?

Mr. Swim: No, I do not believe so.

Mr. Horner: You do not think it would be in the same proportion as they do in the rest of Canada?

Mr. Swim: I am not that familiar with the rest of Canada, but in New Brunswick this is not the case to any large extent.

Mr. Horner: Have you made any attempt to sell your products to the United States in any way?

Mr. Swim: Yes, they have, sir.

[*Interprétation*]

partie de leurs pommes de terre des États-Unis, mettons, et ils en reçoivent beaucoup du Nouveau-Brunswick? Vous n'êtes pas sûr?

M. Swim: Je ne suis pas sûr de ces régions pour ce qui est des pommes de terres fraîches.

M. Rock: Est-ce que cela ne ferait pas une différence très grande dans votre demande si le Québec et l'Ontario recevaient beaucoup de leurs pommes de terre des États-Unis et concentraient davantage votre attention sur le fait que peut-être il y a trop d'importations au Canada, et qu'on devrait peut-être réduire ces importations. Quand vous parlez de concurrence, de qui parlez-vous, et vous n'êtes pas sûr vous-même.

M. Swim: Une situation concurrentielle vis-à-vis des producteurs du centre du Canada. Il est possible que cela ne corrige pas la situation.

M. Rock: Oui, mais vous n'êtes pas sûr qu'il y ait vraiment une grande production dans le centre de l'Ontario et au Québec. Il se peut, par exemple, qu'il n'y ait qu'une réserve d'une semaine ou deux dans l'Ontario. Je n'en suis pas sûr moi-même, et vous-même vous attaquez la Loi, sans avoir fait enquête suffisamment sur le fait si la concurrence est vraiment canadienne ou non. S'il s'agit d'une concurrence américaine, évidemment, votre objection apparaîtrait sous un éclairage différent.

M. Swim: Je ne sais d'où viennent ces pommes de terre.

Le président: Monsieur Horner?

M. Horner: Est-ce que les chemins de fer sont les propriétaires de la plus grande partie ou d'une grande partie de l'industrie du camionnage dans les Maritimes ou au Nouveau-Brunswick?

M. Swim: Non, je ne le crois pas.

M. Horner: Pas dans la même proportion que dans le reste du Canada?

M. Swim: Je ne connais pas tellement le reste du Canada, mais au Nouveau-Brunswick, pas dans une très grande mesure. Non.

M. Horner: Avez-vous essayé de vendre vos produits aux États-Unis?

M. Swim: Oui, on l'a essayé.

[*Text*]

Mr. Horner: Do you know what percentage of your products?

Mr. Swim: Very small.

Mr. Horner: Very small. Could you give the Committee some idea as to why this is? Is it competition?

Mr. Swim: Yes. We cannot be competitive for various reasons, one being that there are very few carriers that cross the international border. The rates, of course, are rather high; and Maine, our next-door neighbour, is a very large producer of potatoes and this places them very favourably in the markets. So we just cannot be competitive.

Mr. Horner: You are not asking for the MFRA to apply to goods transported into the United States?

Mr. Swim: No, sir.

Mr. Horner: Have you considered the possibility of air freight in any way?

Mr. Swim: It has been considered, but due to the high cubic volume of our products, it has been virtually eliminated.

The Chairman: Mr. Allmand.

Mr. Allmand: Mr. Swim, you say in your brief that 80 per cent of your business is done east of the Ontario-Manitoba border. What percentage of your business is done in Ontario and Quebec? I ask that question because the National Transportation Act only gives its jurisdiction over trucking to interprovincial operations and not to operations wholly within a province. Even if we were to amend the Maritime Freight Rates Act to include trucking, it seems that we could only do it for interprovincial operations.

Mr. Swim: I would say about 60 per cent.

Mr. Allmand: Sixty per cent of the 80 per cent or 60 per cent of your total business?

Mr. Swim: Sixty per cent of the total business, sir.

That would be broken down to approximately 40 to 45 per cent.

Mr. Allmand: You are talking about Quebec and Ontario.

Mr. Swim: Yes.

[*Interpretation*]

M. Horner: Savez-vous quelle proportion de vos produits?

M. Swim: Très petite.

M. Horner: Très petite proportion. Pourriez-vous donner une idée au Comité de la raison pour cela? Est-ce la concurrence?

M. Swim: Oui, nous ne pouvons pas être concurrentiels justement pour diverses raisons, l'une d'entre elles étant qu'il y a très peu de transporteurs qui traversent la frontière internationale. Il y a très peu de transports qui peuvent le faire, les taux sont plutôt élevés; puis, ensuite, l'État du Maine, notre voisin, est un grand producteur de pommes de terre, ce qui les place dans une situation très favorable auprès des débouchés. Nous ne pouvons pas soutenir la concurrence.

M. Horner: Vous ne demandez pas tout simplement que la Loi s'applique aux produits transportés aux États-Unis?

M. Swim: Non, monsieur.

M. Horner: Avez-vous songé aux transports aériens?

M. Swim: Nous avons songé à cela, oui, mais en raison du fort cubage requis par nos produits, on l'a presque éliminé.

Le président: Monsieur Allmand.

M. Allmand: Vous dites dans votre mémoire, vous dites que 80 p. 100 de vos produits se vendent à l'est de la frontière du Manitoba et de l'Ontario. Quel pourcentage de vos affaires se font dans l'Ontario et au Québec? Je pose cette question, parce que la Loi sur les transports n'étend sa juridiction qu'aux sociétés de camionnage interprovinciales et non pas aux sociétés entièrement intraprovinciales. Même si nous devions amender ou modifier la Loi sur les taux de transports des marchandises dans les provinces maritimes pour y inclure le transport par camion, il semble que nous ne pourrions seulement le faire que dans le cas des exploitations interprovinciales.

M. Swim: Je dirais environ 60 p. 100.

M. Allmand: Alors, 60 p. 100 des 80 p. 100 ou 60 p. 100 du total?

M. Swim: 60 p. 100 du total, ce qui voudrait dire environ 40 ou 45 p. 100 des 80.

M. Allmand: Dans l'Ontario et le Québec?

M. Swim: Oui.

[*Texte*]

Mr. Allmand: This is further to the question Mr. Skoberg asked. He asked if your company had any interest in a trucking company. Does your company itself own any trucks?

Mr. Swim: No, we do not. We used to, sir, but we found that it was just not paying for us. It just did not pay its way.

Mr. Allmand: How many companies with refrigerated trucks would compete for your business?

Mr. Swim: Usually we have to call for them—generally speaking, sir.

Mr. Allmand: For Maritime trucking companies?

Mr. Swim: Yes, that is right. There would be possibly five or six in this area; that would be within the Province of New Brunswick.

Mr. Allmand: In your brief you say there is a shortage of good refrigerated vehicles to serve you. Have you called for a bid for trucking companies outside of New Brunswick, from Quebec?

Mr. Swim: Yes, we have. We still find there is a shortage.

Mr. Nowlan: May I ask a supplementary?

The Chairman: If Mr. Allmand is through.

Mr. Allmand: Yes.

Mr. Nowlan: I wonder if the witness knows if the Ontario trucks are getting preferential rates for the same type of business in Ontario and Quebec to what you are paying them here?

Mr. Swim: No, I am sorry but I am not familiar with that. Possibly they are.

The Chairman: Mr. Allmand.

Mr. Allmand: You were also asked about routes. At the present time do you use, for the most part, the Trans-Canada Highway going north out of Florenceville into Quebec and Ontario? Is this the route you use?

Mr. Swim: Yes, just north of Florenceville.

An hon. Member: Is that finished?

Mr. Swim: No, it is not. That is just what I was going to say. There is no Trans-Canada Highway until you get to Perth, I believe.

[*Interprétation*]

M. Allmand: Pour faire suite à la question posée par M. Skoberg, à l'effet de savoir si votre compagnie avait des intérêts dans une société de camionnage, est-ce que votre compagnie est propriétaire de camions?

M. Swim: Non. Autrefois, oui, mais nous avons trouvé que cela n'était pas payant en ce qui concernait. L'affaire ne faisait pas ses frais.

M. Allmand: Combien de sociétés possédant des camions frigorifiques vous feraient concurrence?

M. Swim: Normalement, il faut que nous les demandions nous-mêmes.

M. Allmand: Des sociétés de camionnage des Maritimes?

M. Swim: Oui, c'est exact il y aurait peut-être 5 ou 6 compagnies dans cette région, cela veut dire dans l'intérieur de la province du Nouveau-Brunswick.

M. Allmand: Dans votre mémoire, vous dites qu'il y a un manque de bons camions frigorifiques pour desservir les régions. Avez-vous demandé des appels d'offres à l'extérieur du Nouveau-Brunswick, au Québec?

M. Swim: Oui. Nous croyons qu'il y a encore pénurie.

M. Nowlan: Puis-je poser une question supplémentaire?

Le président: Si M. Allmand a terminé.

M. Allmand: Oui.

M. Nowlan: Je me demande si le témoin sait si les camions de l'Ontario donnent des taux préférentiels au même genre d'affaires dans l'Ontario et le Québec, des taux préférentiels par rapport à ce qu'ils vous demandent ici.

M. Swim: Non, je regrette, je ne connais pas la situation. Peut-être le font-ils?

Le président: Monsieur Allmand.

M. Allmand: Vous avez aussi dit qu'à l'heure actuelle vous employez la route transcanadienne au nord de Florenceville pour entrer dans le Québec et l'Ontario. Est-ce la route que vous employez?

M. Swim: Oui juste au nord de Florenceville.

Une voix: Est-ce que la route est terminée?

M. Swim: Non, j'allais justement dire que la route transcanadienne n'est pas encore terminée jusqu'à Perth, je crois.

[*Text*]

Mr. Allmand: But you do use the Canadian route. When do they expect to finish that road? Do you know?

Mr. Swim: Hopefully—we have had a bridge there now for about a year—it should be finished very quickly.

Mr. Allmand: Thank you.

The Chairman: Mr. Perrault.

Mr. Perrault: Mr. Chairman, I would like to ask this question. In the brief that this company submitted to the committee in March 1968, they said this in the final paragraph:

> The extension of subsidy to the motor transport industry on the same basis as is now paid to the railroads is a progressive, positive and genuinely practical step . . .

If this subsidy is extended it is going to improve this company's competitive position.

In view of the fact that McCain Foods seems to be engaged in successful competition in the British Columbia market at the present time, where they sell a great deal of their goods, if this subsidy is extended will they be shipping more of their products by truck instead of rail shipment? You indicated today that penetration in Western Canada has not reached the national level because you are not able to offer truck delivery. Would it still improve your competitive position in the British Columbia market, the 20 per cent which lies beyond Ontario, if the truck industry were granted these additional subsidies? You seem to be doing very well in the West at the present time.

Mr. Swim: Actually that is rather difficult to state, sir. I would say that no doubt it would improve indirectly, but as the 20 per cent of business that we do west of the Manitoba border is almost exclusively rail, I do not see where it would possibly create any large improvement in British Columbia.

Mr. Perrault: Would it enable you to convert to truck shipment beyond Ontario? This is the question I am asking.

Mr. Swim: Over the years this has not been possible and I still do not think it would be possible.

[*Interpretation*]

M. Allmand: Mais vous utilisez la route canadienne. Quand est-ce qu'on s'attend de finir la route Transcanada? Le savez-vous?

M. Swim: Un pont existe depuis un an, alors la route devrait être terminée sou peu. Nous l'espérons.

M. Allmand: Merci.

Le président: Monsieur Perrault?

M. Perrault: Monsieur le président, je voudrais poser la question suivante. Dans le mémoire présenté par cette compagnie, en mars 1968, voici ce qu'on disait au dernier paragraphe:

> Étendre à l'industrie du transport routier les subventions dont bénéficient actuellement les chemins de fer constitue une initiative concrète véritablement pratique et marquée vers un esprit progressiste.

Si la subvention est étendue, cela améliorerait la situation concurrentielle de cette compagnie.

Vu le fait que la McCain Foods semble être engagée dans une situation concurrentielle réussie dans le marché de la Colombie-Britannique, à l'heure actuelle, où ils vendent une bonne partie de leurs produits, si cette subvention est étendue, est-ce qu'ils expédieront plus par camion que par chemin de fer? Vous avez indiqué aujourd'hui que la pénétration dans l'ouest du Canada n'est pas à l'échelle nationale, parce que vous êtes incapables d'en assurer la livraison par camion. Est-ce que cela améliorerait votre situation concurrencielle aux débouchés de la Colombie-Britannique, par exemple? Les 20 p. 100 qui existent au-delà de la frontière de l'Ontario, si l'industrie du camionnage reçoit ces subventions. Votre situation semble bonne dans l'ouest à l'heure actuelle.

M. Swim: Il serait plutôt difficile de le dire catégoriquement, monsieur. Je dirais indirectement, la situation s'améliorerait sans doute, mais comme les 20 p. 100 de nos affaires, à l'ouest de la frontière du Manitoba, se trouvent desservis presque exclusivement par chemin de fer, je ne vois pas du tout où ou comment cela pourrait améliorer grandement la situation de la Colombie-Britannique, par exemple?

M. Perrault: Est-ce que cela vous permettrait d'employer les camions au-delà de l'Ontario? C'est la question que je pose.

M. Swim: Au cours des années, cela n'a pas été possible. Je ne crois pas que ce le soit encore.

[*Texte*]

Mr. Perrault: If a subsidy were paid to the motor industry.

Mr. Swim: On a long haul it appears that the transport just cannot compete with rail.

The Chairman: Are you finished, Mr. Perrault?

Mr. Perrault: I would like to know where your main competition is at the present time. In both the central market and the western market, where does the area of competition originate?

Mr. Swim: I believe just inside the Manitoba border; that would be Carnation Co. Limited probably. I am just not familiar enough with sales to quote you any more of our competitors' names.

Mr. Breau: Mr. Chairman, there is a point that I would like the witness to clarify. Some of my colleagues have mentioned that this company might have an interest in trucking or something of the sort. I would like to pursue the point from a different angle. Even if your company owned their own trucks and delivered your own products it really would not make any difference. Could you tell us how good a service the CNR gives you now?

Being from New Brunswick I know that for many shippers, many manufacturers, even if they did want to ship by rail, it is practically impossible because of the shortage of cars. It probably takes a long time to travel from Florenceville to Toronto, while covering it by truck you would make it to Toronto in one day. So supposing you were to ship by rail, regardless of who owns the trucks, would there be a backlog in your distribution?

Mr. Swim: Yes, it would be much slower.

Mr. Breau: So then you people have to ship by truck?

Mr. Swim: Yes, in order to service our customers.

Mr. Breau: Not only for you, but it is a known fact in New Brunswick, is it not, that it is better to ship by truck anything you manufacture here because it is quicker?

[*Interprétation*]

M. Perrault: Oui, mais, s'il y avait une subvention au transport routier?

M. Swim: A la longue, à longue échéance, sur un long parcours, il semble que les camions ne peuvent pas concurrencer les chemins de fer.

Le président: Est-ce que c'est tout monsieur Perrault?

M. Perrault: Je voudrais savoir où se trouve votre concurrence principale à l'heure actuelle, dans le marché central et dans le marché de l'ouest. D'où procède-t-elle?

M. Swim: J'ai l'impression que juste à l'intérieur de la frontière du Manitoba, la compagnie Carnation, probablement. Je ne connais pas suffisamment le domaine des ventes pour vous donner les noms de nos autres concurrents.

M. Breau: Il y a une question pour laquelle j'aimerais avoir un éclaircissement. Il y a certains de nos collègues qui ont mentionné que cette compagnie pourrait avoir des intérêts dans l'industrie du camionnage ou quelque chose du genre. J'aimerais donc insister un peu plus sur un autre aspect. Même si votre compagnie avait ses propres camions, et si vous assuriez la livraison de vos propres produits, à mon sens, cela ne ferait aucune différence. Pourriez-vous nous dire alors quel genre de service le CNR vous donne maintenant.

Venant du Nouveau-Brunswick, je sais que plusieurs expéditeurs, même s'ils voulaient expédier par chemin de fer ne pouvaient pas le faire. C'est partiquement impossible en raison, tout d'abord, du manque de wagons et, deuxièmement, cela prend beaucoup de temps d'aller de Florenceville à Toronto, alors que, par camion, vous vous y rendez dans une journée. Alors, en supposant que vous expédiez pas rail, peu importe qui est propriétaire des camions, vous auriez un retard dans votre distribution?

M. Swim: C'est exact, ce serait beaucoup plus lent.

M. Breau: Alors, il vous faut expédier par camions?

M. Swim: Oui, c'est exact. Afin de desservir nos clients.

M. Breau: Non seulement pour vous, mais c'est un fait connu au Nouveau-Brunswick, n'est-ce pas, qu'il est préférable d'expédier par camion tout ce qui est fabriqué ici, car c'est plus rapide?

[*Text*]

Mr. Swim: It is quicker, yes.

Mr. Breau: Could you tell the Committee what other companies do? Do they usually ship by rail or by truck?

Mr. Swim: Well, of course, there again that depends on the points to which you are shipping, but into Ontario I feel that with a product of our type the transport is the answer mainly because of the reasons you have pointed out. Time, especially.

Mr. Breau: There are many other products shipped by truck.

Mr. Swim: Yes.

Mr. Breau: For example, Christmas trees. We ship a lot of them by truck and we ship a lot of other stuff by truck from New Brunswick.

Mr. Swim: That is right.

The Chairman: Mr. Horner, a supplementary question?

Mr. Horner: Yes, I wonder if we could be told just how many carloads of freight or how many truck-loads of freight your company would handle within a year. You have given us some figures of 80 per cent and 20 per cent. Eighty per cent of what? Have you any figures?

Mr. Swim: I have a breakdown, gentlemen, if it would be of interest, of the various provinces to which we shipped last year. If you have time I can list them off. Would that be of interest?

Mr. Horner: Go ahead.

Mr. Swim: It will take a few minutes.

Mr. Horner: You might give us an idea as to the total amount of shipments. How many carloads are we speaking of, or how many truckloads?

Mr. Swim: We are talking about 65 million pounds in the year 1968. Cars out west, 120,000 pounds. On a day-to-day basis I can tell you very much closer, sir. We ship on the average about eight to ten trucks and trailers per day, as well as about one railcar per day to the Western provinces.

Mr. Horner: To the Western provinces. To Central Canada, too, or is that more?

[*Interpretation*]

M. Swim: Oui, c'est exact. C'est plus rapide.

M. Breau: Oui, mais pourriez-vous dire au Comité ce que font les autres compagnies? Est-ce qu'ils expédient d'habitude par chemin de fer ou par camion?

M. Swim: Encore une fois, cela dépend de la destination. Mais, j'estime que, dans l'Ontario, pour un produit comme le nôtre, le transport par camion, c'est la réponse. Tout principalement pour la raison que vous avez donnée, soit le temps en cause.

M. Breau: Oui, il y a plusieurs autres produits qui sont expédiés par camion de toute façon.

M. Swim: Oui.

M. Breau: Oui, par exemple, les arbres de Noël, et plusieurs autres produits sont expédiés par camion du Nouveau-Brunswick?

M. Swim: C'est exact.

Le président: Monsieur Horner, une question supplémentaire?

M. Horner: Oui, je me demande si on pourrait savoir combien de chargements de wagons ou combien de chargements de camion votre compagnie fait dans une année. Vous nous avez dit, 80 p. 100, 60 p. 100, 20 p. 100 de quoi? Avez-vous des chiffres?

M. Swim: J'ai le détail, si cela pouvait vous aider pour les diverses provinces, en ce qui concerne nos expéditions l'an dernier. Si vous avez le temps, je pourrais vous les citer. Cela vous intéresse-t-il?

M. Horner: Allez-y.

M. Swim: Ça prendra quelques minutes.

M. Horner: Et alors, pourriez-vous me donner une idée de la totalité des expéditions? Combien de wagonnées ou combien de camions?

M. Swim: 65 millions de livres dans l'année 1968. Il s'agit là de livres. Et maintenant, en ce qui concerne les wagonnées pour l'ouest, jour par jour, je pourrais vous le dire de façon beaucoup plus précise. Nous expédions de huit à dix camions par jour en plus d'une wagonnée de chemin de fer en direction des provinces de l'Ouest.

M. Horner: Jusqu'à l'Ouest ou pour le centre du Canada aussi?

[*Texte*]

Mr. Swim: No, this would be the motor carriers, the highway carriers going to Central Canada.

Mr. Horner: The eight to ten trailers would be to Central Canada?

Mr. Swim: Right. The Atlantic, Quebec, Ontario. Rail would be west of the Manitoba border.

Mr. Horner: Most of your shipments, then, would be by truck?

Mr. Swim: Yes.

Mr. Horner: This is why you feel the MFRA would be better applied to motor transportation. You would then be benefiting more from it than you are today.

Mr. Swim: That is correct.

The Chairman: Mr. Portelance.

M. Portelance: Pouvons-nous nous exprimer en français ou devons-nous le faire en anglais?

Le président: Certainement, nous avons des interprètes. Si vous voulez attendre une minute, je vais leur demander d'interpréter pour vous.

M. Portelance: Lorsqu'on fait le transport par train, souvent on voit aussi des camions sur les trains. Utilisez-vous ce moyen de transport?

Le président: Vous parlez du service rail-route.

Mr. Swim: We have used this.

M. Portelance: À ce moment-là, les prix sont-ils réduits ou si vous obtenez le même prix? Ou accordez-vous le même rabais que par train?

Mr. Swim: It is very similar; very much the same.

Mr. Corbin: Mr. Chairman, I think the witness mentioned the figure of about 180 miles as being the distance saved if the product went through the Maine corridor route. Is that the figure you mentioned?

Mr. Swim: Yes, that is my information from a press release, sir.

Mr. Corbin: You have not calculated the actual saving yourselves.

Mr. Swim: No.

[*Interprétation*]

M. Swim: Non, les camions se rendent dans la partie centrale du Canada.

M. Horner: Les huit ou dix seraient destinés au centre du Canada?

M. Swim: Les provinces de l'Atlantique, l'Ontario et le Québec; le chemin de fer, va à l'ouest du Manitoba.

M. Horner: La plus grande partie de vos expéditions se font par camions donc.

M. Swim: Oui.

M. Horner: C'est donc la raison pour laquelle vous trouvez que la loi devrait s'appliquer à l'industrie du camionage? Vous pourriez en profiter plus qu'à l'heure actuelle.

M. Swim: C'est exact.

Le président: Monsieur Portelance.

Mr. Portelance: Can we speak French, or do we have to speak English?

The Chairman: Yes, certainly, you may speak French. We have interpreters here. If you want to wait just a moment, please, I shall ask them to interpret for you.

Mr. Portelance: With regard to railway transportation, we often see trucks on the trains. Do you use this method of transportation?

The Chairman: You mean the piggy back service.

M. Swim: Oui, nous l'avons déjà employé.

Mr. Portelance: In this case, are prices reduced or do you get the same price or do you grant the same discounts as you would by train?

M. Swim: Cela se ressemble beaucoup.

M. Corbin: Monsieur le président, je crois que le témoin a mentionné qu'une distance de 180 milles serait épargnée si le produit employait un corridor par l'État du Maine. Est-ce bien le chiffre?

M. Swim: Ce sont les renseignements que j'avais d'après un communiqué de presse, monsieur.

M. Corbin: En d'autres termes, vous n'avez pas calculé cette épargne vous-même.

M. Swim: Non.

[*Text*]

Mr. Corbin: This would be through what port of entry into Maine and out of what port at the Quebec border?

Mr. Swim: I believe that would be St. Stephen to Sherbrooke. I believe it was, sir.

Mr. Corbin: I see. I missed some of the questions put to you earlier. Did you say that you were in the trucking business yourselves?

Mr. Swim: No, our company is principally in frozen foods.

Mr. Corbin: Not McCain Foods, but do you have a subsidiary in the trucking business?

Mr. Swim: No, we do not.

Mr. Corbin: I see. In your opinion would the completion of the Trans-Canada Highway between the New Brunswick border and Quebec City improve conditions to a very great extent?

Mr. Swim: Oh, I believe it would, yes.

Mr. Corbin: And would the improvement of the existing Trans-Canada Highway in New Brunswick now to a four-lane route improve your transportation still more?

Mr. Swim: Yes, I believe it would.

Mr. Perrault: Mr. Chairman, it may not be technically a supplementary, but it is a question about the McCain operation that I would like to ask, if I may.

This company is attempting to hold the line in the matter of transportation costs. This seems to be the intent of the submission. They seek a subsidy for truckers from the taxpayers of Canada. What has been the percentage increase in costs and prices in other areas of the McCain operation in the past five years? Is there an attempt here to hold the line in the matter of transportation at taxpayer expense while your other costs—labour, production—have been rising? The second supplementary question is: What has been your annual increase in sales over that same period by years? Is it not a fact that your company has been a very successful company during these 10 years?

Mr. Swim: I believe it has been a successful company, sir. Now in answer to our holding the line on costs, of course, you cannot

[*Interpretation*]

M. Corbin: Et alors, par quel point d'entrée dans l'État du Maine et à quel point à la frontière du Québec?

M. Swim: Je crois qu'il s'agit de Saint-Stephen en passant par Sherbrooke. Je le crois.

M. Corbin: J'ai manqué certaines des questions qui vous ont été posées un peu plus tôt. Avez-vous dit que vous étiez dans l'industrie du camionnage vous-même?

M. Swim: Non. Notre compagnie a des produits congelés.

M. Corbin: Non pas McCain Foods, mais vous avez une subsidiaire dans l'industrie du camionnage.

M. Swin: Non.

M. Corbin: A votre sens, est-ce que, si on terminait la route Trans-Canada entre la ville de Québec et la frontière du Nouveau-Brunswick, la situation serait améliorée de beaucoup?

M. Swim: Je le crois, oui.

M. Corbin: Et alors, est-ce que l'amélioration de la route Trans-Canada, à l'heure actuelle, dans le Nouveau-Brunswick, et en faisant une route à quatre voies, améliorerait sensiblement votre transport?

M. Swin: Oui, je le crois.

M. Perrault: Une question complémentaire, monsieur le président. Ce n'est peut-être pas vraiment une question complémentaire, mais il s'agit d'une question quant aux opérations McCain, si on veut bien me permettre une telle question.

Cette compagnie essaie de maintenir les frais de Transport au même niveau. Cela semble être la portée de votre mémoire. Vous essayez d'obtenir une subvention pour le camionnage à partir des contriblables. Quelle fut l'augmentation en pourcentage quant au coût et aux prix pour les autres secteurs des opérations McCain au cours des cinq dernières années? Est-ce qu'on a essayé ici de maintenir les coûts de tranport aux dépens des contribuables ou est-ce que les autres coûts, main-d'œuvre, production, ont aussi augmenté? Et la deuxième question complémentaire: quelle fut votre augmentation annuelle des ventes pour cette même période par année? N'est-il pas vrai que votre société a très bien réussi au cours de ces dix dernières années?

M. Swim: Oui, je crois que notre compagnie a très bien réussi, oui. Et maintenant, la réponse pour ce qui est de maintenir la situa-

[*Texte*]

hire men today for what you could hire them 10 years ago.

Mr. Perrault: Can you pay the cost of running a railway, can you hold the line in the matter of rail costs and other shipping costs when you are unable to hold the line in other labour costs involved in the direct production of chips? Are not increasing costs a fact of the economy from coast to coast?

Mr. Swim: It appears they are.

The Chairman: Mr. Horner, a supplementary?

Mr. Horner: Yes. You have suggested that you have been plagued with difficulties in delivering refrigerated goods. Has your company attempted to buy refrigerator vehicles and rent them to the truckers? You can buy old refrigerator trailers and rent them to the truckers.

Mr. Swim: I believe that was explored at one time, sir, but it appeared to the company that this would not be the wise thing to do.

Mr. Horner: I think it would.

The Chairman: Mr. Allmand.

Mr. Allmand: Mr. Portelance asked about piggyback service. Do I understand that even if there was this piggyback service into the Maritimes it would not be a feasible means of transport and that it would still be better to go all the way by truck right from your factory?

Mr. Swim: We feel it would be. Number one, there is not a piggyback terminal right close. It would be about 30 miles south of us and time would be involved in getting from our plant to the piggyback terminal.

Mr. Allmand: Where is the piggyback terminal here in New Brunswick?

Mr. Swim: There is one at Woodstock.

The Chairman: Well, gentlemen, this is the end of the question period.

Mr. Rock?

Mr. Rock: Has it been understood that the witness will give us some information tomorrow?

The Chairman: Yes.

[*Interprétation*]

tion quant aux coûts: bien entendu, on ne peut avoir les mêmes coûts cette année qu'il y a dix ans.

M. Perrault: Est-ce que vous pouvez payer les coûts d'exploitation d'un chemin de fer? Est-ce que vous pouvez maintenir les prix quant aux coûts d'expédition par rail ou autre? Est-ce que vous pouvez vous maintenir pour ce qui est des autres coûts dans la main-d'œuvre entraînés dans la production directe, disons, des chips? Est-ce que l'augmentation des coûts n'est pas un fait de l'économie d'un océan à l'autre?

M. Swim: Il semble qu'il en est ainsi.

Le président: Question supplémentaire, monsieur Horner?

M. Horner: Question complémentaire. Vous dites que vous éprouvez des difficultés pour ce qui est d'obtenir des camions réfrigérés. Est-ce que vous essayez d'en acheter pour en louer aux camionneurs? Vous pourriez acheter de tels camions réfrigérés et les louer aux cammionneurs.

M. Swim: Je crois que nous avons étudié la possibilité à un moment donné, mais il a semblé à la compagnie que ce ne serait pas sage de procéder ainsi.

M. Horner: Je crois que ce le serait.

Le président: Monsieur Allmand?

M. Allmand: M. Portelance vous a demandé ce qu'il en était quant au service rail-route. Si je comprends bien, même s'il y avait un excellent service rail-route pour les Maritimes, ce ne serait pas un moyen possible de transport. Ne serait-il pas toujours préférable de le faire exclusivement par camions à partir de votre usine?

M. Swim: Oui, c'est notre avis. Tout d'abord, nous n'avons pas un terminus rail-route tout près. Ce serait environ trente milles au sud, ce qui entraîne du temps, soit pour le transport de l'usine au terminus rail-route.

M. Allmand: Où se trouve-t-il au Nouveau-Brunswick?

M. Swim: Il y en a un à Woodstock.

Le président: Messieurs, voilà la fin de la période de questions. Monsieur Rock.

M. Rock: Est-ce qu'il a été convenu que le témoin nous donnera des renseignements demain?

Le président: Oui.

[*Text*]

Mr. Rock: Would he also add to that their profits in the past years of operation.

Some hon. Members: No.

The Chairman: Mr. Rose.

Mr. Rose: This is supplementary to Mr. Nowlan's question. I do not believe the distinction was made by the witness between the transportation and the distribution costs from a particular point, say, the Toronto market. I wonder if the witness would be kind enough to bring in some figures when he makes his submission. I am asking him to add the transportation costs and distribution costs separately as they apply per pound to his product, as a percentage of gross sales and also as a percentage of the cost of the product per pound. Thank you.

The Chairman: I will see that you get that information, Mr. Rose. Mr. Breau.

Mr. Breau: Mr. Chairman, could the witness make clear, maybe by finding out, just what the difference in time would be between shipping by rail and by truck? It seems to me that that is the big advantage. Would the railways give you adequate service? Could you obtain that information for us?

Mr. Swim: I believe I could answer that. The highway transports go from our plant to Toronto, which is the main centre of distribution, in 20 to 24 hours.

Mr. Breau: How long does it take by rail?

Mr. Swim: By rail there would be at least a third morning delivery.

Mr. Breau: Mr. Chairman, did I understand that they have to show their profits for the last years? I do not think this is necessary.

The Chairman: No.

Mr. Breau: Because if they run effectively and make a profit it does not necessarily mean that the transportation policy should be different.

The Chairman: Mr. Rose.

Mr. Rose: I wonder, too, if the witness could give us, in the costs that I asked for, the

[*Interpretation*]

M. Rock: Tel que prévu il y a un instant, et aussi nous dira ce qu'il en est quant aux bénéfices qu'ils ont faits pour leurs opérations ces dernières années?

Des voix: Non.

Le président: Monsieur Rose?

M. Rose: C'est une question complémentaire à la question posée par M. Allmand. Je ne crois pas qu'une distinction fut faite jusqu'ici par le témoin entre les coûts de transport et les coûts de distribution à partir d'un point donné, disons le marché de Toronto. Le témoin serait-il assez bon maintenant de nous donner la statistique lorsqu'il présentera un fait donné? Est-ce qu'il ne pourrait pas aussi nous dire ce qu'il en est des coûts de transport et des coûts de distribution de façon distincte, par livre pour ces produits comparativement à l'ensemble des ventes et aussi du coût du produit par livre?

Le président: Oui. Je verrai à ce que vous obteniez ces renseignements, monsieur Rose. M. Breau?

M. Breau: Est-ce que le témoin ne pourrait pas établir clairement, peut-être en se renseignant, la différence de temps qui existe entre l'expédition par rail et l'expédition par camion? A mon avis, le temps semble être le grand avantage. Est-ce que le service ferroviaire vous donnerait un service satisfaisant et suffisant? Pourriez-vous nous avoir ces renseignements?

M. Swim: Je pense pouvoir répondre à votre question. Le transport routier va de notre usine à Toronto, qui est le principal centre de distribution, en 20 à 24 heures.

M. Breau: Et combien de temps faut-il par rail?

M. Swim: Au moins le tiers de plus.

M. Breau: Monsieur le président, est-ce vrai qu'il ont à révéler leurs profits pour les dernières années? A mon avis, ce n'est pas nécessaire.

Le président: Non, non.

M. Breau: Parce que si leur opération est efficace et qu'ils ont un bénéfice, et je ne crois pas que cela signifie nécessairement que la politique des transports doive être différente.

Le président: Monsieur Rose.

M. Rose: Est-ce que le témoin ne pourrait pas aussi nous donner les coûts que j'ai

[*Texte*]

various comparisons of five years ago and ten years ago so that we can have an idea of the trend.

The Chairman: Are there any more questions? This will complete the question period. I want to thank you, Mr. Swim. Mr. Swim is the traffic manager of his firm. I want to thank you very much.

Mr. Swim: Thank you, gentlemen.

The Chairman: For the next item on the agenda I will call upon the Moncton Board of Trade. The Moncton Board of Trade?

An hon. Member: They will not appear this morning, Mr. Chairman.

The Chairman: They will not appear?

The Atlantic Provinces Soft Drink Association. Will you come forward, please? Page 706. Mr. John Reynolds. May I call upon Mr. John Reynolds to sit at the head table.

May we have a resumé of your brief?

Mr. John Reynolds (President, Atlantic Provinces Soft Drink Association): Mr. Chairman and members of the Committee, our brief is concerned with a fairly simple problem, as you would expect, but it is nevertheless one that derives in part from the operation of the Railway Act and the Freight Rates Reduction Act. These acts operate to the significant advantage of large bottlers in Quebec and, by the same token, to the disadvantage of the small bottlers down here in the Atlantic Provinces.

Finished beverages, that is bottled goods or canned goods ready to drink, are shipped into the Maritimes by the carload at freight rates which are lower today than they were in 1958. I emphasize that. During this same period, rather in the last three years, we have had our empty bottle rates increased twice: by 10 per cent in October 1966 and by amounts varying between 3 per cent and 6 per cent in September 1967. The effect of these circumstances is to produce rates which seem to us to be enormous.

For example, if a 50,000-pound carload of empty bottles is shipped from Montreal to Sydney to my colleague, Mr. Lynch, he pays $1.12 per 100 pounds. If these bottles are filled up in Montreal, the rate drops to 78 cents per 100 pounds, which is just over 30 per cent less. I operate in Halifax amongst other places. Similarly, I ship a carload of empty bottles from Montreal and I pay $1.09

[*Interprétation*]

demandés: les différentes comparaisons entre il y a cinq ans et il y a dix ans pour que nous puissions avoir une idée de la tendance actuelle?

Le président: Avez-vous d'autres questions à poser? Alors nous terminons la période de questions. Je désire vous remercier, monsieur Swim. M. Swim est le directeur de l'expédition pour *McCain Foods*. Merci beaucoup.

M. Swim: Merci messieurs.

Le président: Maintenant, nous passons à l'ordre suivant, soit le *Board of Trade* de Moncton.

Une voix: Ils ne seront pas présents ce matin, monsieur le président.

Le président: Ils ne seront pas présents? *Atlantic Provinces Soft Drink Association* veuillez vous présenter s'il vous plaît.

Page 706. M. John Reynolds. Puis-je demander à M. John Reynolds de prendre place au bout de la table.

Donc, je vous demanderais de nous présenter un bref résumé de votre mémoire.

M. John Reynolds (président de Atlantic Provinces Soft Drink Association): Monsieur le président, membres du Comité, notre mémoire vous parle d'un sujet très simple. Mais c'en est un qui découle en partie des opérations de la Loi sur les chemins de fer et de la Loi sur la diminution des Taux de Transport des marchandises. Ces lois fonctionnent à l'avantage des embouteilleurs importants de la province de Québec, et donc au désavantage de petits embouteilleurs qui se trouvent ici dans les provinces de l'Atlantique. Les boissons en bouteilles ou en boîtes sont expédiées dans les Maritimes en wagonnées, suivant les tarifs des marchandises qui sont moins élevés aujourd'hui qu'ils ne l'étaient en 1958. Je vous signale ce fait: pendant la même période plutôt qu'au cours des trois dernières années, nous avons eu le taux de bouteilles vides qui fut augmenté à deux reprises dans une proportion de 10 p. 100 au mois d'octobre 1966, et de 3 p. 100 à 6 p. 100 au mois de septembre 1967. Ces circonstances ont eu pour effet alors d'entraîner des taux qui nous semblent énormes.

Ainsi si une wagonnée de 50,000 livres de bouteilles vides est expédiée de Montréal à Sidney, à mon collègue M. Lynch; il doit payer $1.12 le 100 livres. Si ces bouteilles sont remplies à Montréal, le taux passe à 78c. les 100 livres, soit environ 30 p. 100 de moins. De la même façon, je fais aussi affaire avec Halifax, parmi d'autres villes. Je vous envoie une wagonnée de bouteilles vides de Mont-

[*Text*]

per 100 pounds. If these are filled by one of my competitors in Montreal and they happen to be given a rate of 76 cents per 100 pounds, this is not quite so pronounced in the case of New Brunswick destinations. It is 89 cents for empty bottles and 72 cents if they are filled up.

With your permission, Mr. Chairman, I know you do not want me to read anything, but I cannot improve on the conclusion that I wrote. May I have your permission?

> Our conclusion is that we say that 37 Maritimes bottlers of soft drinks operating over 40 small plants are highly vulnerable to competition from the large bottlers in Quebec because of the advent of non-returnable bottles—you have all heard about those—and the ready acceptance of this disposable package by the grocery supermarkets. This vulnerability is increased by the present freight rates structure and unless the competitive position of Maritime bottlers is restored through freight rate changes, the erosion of their businesses will continue and the viability of another Maritimes industry will be in doubt.

> The Association, therefore, recommends the following alternative solution to this problem:
>
> (a) cancel the special rate for finished beverages and extend the tariff for empty bottles to cover the finished beverages, or
>
> (b) introduce carload rates for empty bottles at the rates now being charged for finished beverages.

I want to add a word of explanation. Those of you who have read my brief—and I trust you all have—will have noticed that I referred only to the Maritime Provinces rather than the Atlantic. This was because at the time this was done I was not able to collect the data from Newfoundland, but the circumstances are similar in Newfoundland, and we could very well add similar data.

I must not take more of your time, Mr. Chairman, because I know you have many briefs to hear, but I would like my colleague, Mr. Lynch, to give you one or two practical

[*Interpretation*]

réal à un autre endroit, et je paie $1.09 le 100 livres. Si ces bouteilles sont remplies par un de mes concurrents à Montréal, et s'ils reçoivent un taux de 76c. le 100 livres, ce n'est pas aussi marqué, dans le cas du Nouveau-Brunswick. C'est 89c. pour les bouteilles vides et 72c. si elles sont remplies.

Avec votre autorisation, monsieur le président, je sais que vous ne voulez pas que je vous lise quoi que ce soit, mais je ne saurais améliorer les conclusions que je vous ai écrites. Est-ce que vous me permettez d'en faire lecture?

> Voici notre conclusion, nous disons: que les 37 embouteilleurs de boissons non-alcoolisées qui exploitent au-dessus de 40 petites usines dans les Maritimes sont fortement menacées par la concurrence de leurs importants rivaux du Québec, à cause de l'instauration du système de bouteilles non récupérables dont vous avez entendu parler, et à cause de la faveur que connaît, auprès des supermarchés de l'alimentation, cette nouvelle formule d'emballage. Le barème actuel des frais de transport les rend encore plus vulnérables à cette menace. Il faudra modifier ces barèmes si on veut restaurer sur le plan de la concurrence, la position des embouteilleurs des Maritimes, faute de quoi leurs affaires continueront à péricliter et il faudra, une fois de plus, remettre en question la viabilité d'une industrie dans les Maritimes.
>
> Pour répondre à ce problème, l'Association recommande donc l'une ou l'autre des solutions suivantes: (a) annuler le tarif spécial pour les boissons, présentées sous forme de produits finis et étendre aux boissons finies le tarif présentement appliqué aux bouteilles vides ou (*b*) instaurer pour les bouteilles vides les tarifs présentement en vigueur pour le transport des boissons présentées sous forme de produits finis.

Je voudrais ajouter une explication. J'imagine que vous avez tous lu mon mémoire et vous remarquerez que je n'ai parlé que des provinces Maritimes plutôt que des provinces de l'Atlantique. Cela est dû au fait qu'au moment où nous avons rédigé ce mémoire, je n'ai pu obtenir les données de Terre-Neuve, mais les circonstances sont les mêmes qu'à Terre-Neuve et on pourrait y ajouter des données analogues.

Afin de ne pas prendre plus de votre temps, monsieur le président, parce que je sais que vous avez bon nombre de mémoires à entendre, mais je voudrais que mon collè-

[*Texte*]

examples of how this curiosity works in Sydney.

The Chairman: Thank you. Mr. McGrath?

Mr. McGrath: Could you have the witnesses identify themselves, their names, their capacities, whether they are lawyers, whether they directly represent those making the submission.

The Chairman: I was going to do that at the end of Mr. Lynch, but I could do it right away. As a matter of fact, I would like to clear something here myself because I have had a note this morning that Mr. John Reynolds is the president and here only in last year's letter it is marked executive vice-president. Which one is he?

Mr. Reynolds: Well, sir, I have to explain that that was written on my company notepaper. However, I have on my other hat this morning. I am the President of the Atlantic Provinces Soft Drink Association.

The Chairman: Mr. Lynch, you are the Vice-President?

Mr. Lynch (Vice-President, Atlantic Provinces Soft Drink Association): Thank you. Gentlemen and Members of the Committee, I will not take up a lot of your time. I would just like to point out how this special rate given to these full non-returnable bottles coming into our area works out, first of all, financially for the CNR.

In our business, Ideal Beverages Ltd., we had for two years the Canada Dry franchise. When we got into it first we did not have a labeller in order to put out these non-returnable quart bottles, so for a period of about a year and a half we brought these in full and we made good and full use of this wonderful 78 cent freight rate. However, in shipping these non-returnable bottles, if the car exceeds by very much 30,000 pounds in weight there is an awful lot of breakage with the result that we found we had damage claims on just about every carload that came in. So it worked out, as far as we could see in actual practice, that the CNR was losing money right down the line on this particular product. Whereas we would have a claim on just about every carload of full product coming in, with the empty bottles coming in there was never a claim.

We have never had a claim for broken bottles since 1949, which is a long time. So, it is not a profitable rate for the CNR. The rate certainly is not serving today any useful pur-

[*Interprétation*]

gue, M. Lynch, vous donne un ou des exemples d'ordre pratique pour nous montrer comment cette réalité se présente à Sidney.

Le président: Merci. Monsieur McGrath.

M. McGrath: Est-ce que les témoins ne pourraient pas s'identifier? Donner leur nom, leur titre, indiquer s'ils sont avocats, s'ils représentent ceux qui présentent la requête.

Le président: Je voulais le faire à la fin de la présentation de M. Lynch, mais je peux le faire tout de suite. Je voudrais préciser quelque chose ici même, j'ai reçu un avis ce matin me disant que M. John Reynolds est président, alors que dans sa lettre de l'année dernière, c'était indiqué vice-président exécutif. Lequel est-il?

M. Reynolds: Je dois vous expliquer. C'était écrit sur ma papeterie. Je suis président de l'Association des fabricants de boissons non alcoolisées des provinces de l'Atlantique.

Le président: Monsieur Lynch, vous êtes le vice-président?

M. Lynch (Vice-président de l'Association des fabricants de boissons non alcoolisées des provinces de l'Atlantique): Merci. Messieurs, membres du Comité, je serai bref. Je voudrais tout simplement vous signaler comment ce taux spécial qui est donné pour les bouteilles non-récupérables qui nous sont expédiées, se présente, d'abord, sur le plan financier, pour le National-Canadien.

Notre entreprise *Ideal Beverages Ltd.*, a eu, pendant deux ans la franchise de *Canada Dry*. Au début, nous n'avions pas un étiqueteur pour ces bouteilles non-récupérables, donc pendant un an et demi, nous les amenions ainsi et nous les utilisions pleinement au taux de fret de 78c. Mais lorsqu'on expédie ces bouteilles non-récupérables, si le poids du wagon est de plus de 30,000 livres, alors il y a beaucoup de bouteilles brisées, avec le résultat que dans chaque wagon qui nous parvient, il y a des réclamations pour dommages. En pratique, donc, le National-Canadien se trouve à perdre de l'argent partout avec ce produit. Alors que nous avions une réclamation pour chaque wagon plein qui nous arrivait, il n'y en a jamais eu dans le cas des bouteilles vides qui nous arrivaient.

Nous n'avons jamais eu de réclamation pour bouteilles brisées depuis 1949, ce qui est une longue période. Donc, ce n'est pas un taux rentable pour le National-Canadien. Ce

[*Text*]

pose except to give the Quebec bottler an advantage in the Maritimes over the small bottlers. It is really an unfair rate because we have to pay a freight rate on all ingredients, on the crowns, the glass, the sugar and everything, while all these rates are higher than the 78 cent rate. So we are getting competition from Quebec which really we should not have.

The CNR is subsidizing the bigger bottlers up the line to the detriment of those in the Maritimes. I think it is quite unfair and should not be permitted to continue. Thank you very much.

The Chairman: Thank you very much. Mr. Lynch. Mr. Thomas.

Mr. Thomas (Moncton): I would like to ask Mr. Reynolds about this curious anomaly in rates which the brief refers to, that you can ship full bottles from Montreal cheaper than you can ship empty bottles. Now, this was aggravated back in 1958, was it not, and there was a reduction made. At one time there was a 17 per cent...

Mr. Reynolds: There was the rollback of the—I am not very good on technical questions.

Mr. Thomas (Moncton): No.

Mr. Reynolds: But I think I would be right in saying there was the rollback in 1958, Mr. Armitage?

Mr. Armitage: Right.

Mr. Reynolds: Of 1960? It went up in 1958 and rolled back in 1960.

Mr. Armitage: Right.

Mr. Thomas (Moncton): Now, Mr. Reynolds, as I understand it, the National Transportation Act of 1967 will aggravate this problem because filled bottles are classed as non-competitive so the rates will be frozen.

Mr. Reynolds: That is right; that is correct.

Mr. Thomas (Moncton): Now, empty bottles—

Mr. Reynolds: For some curious reason are regarded as competitive.

Mr. Thomas (Moncton): But up until now you have been relieved of this because of the two-year freeze on carload rates. In other

[*Interpretation*]

taux n'est pas utile maintenant, sauf pour donner à l'embouteilleur du Québec l'avantage dans les Maritimes sur les petits embouteilleurs des Maritimes. C'est un taux injuste, parce qu'il nous faut payer les tarifs du fret pour tous les ingrédients: pour les couronnes, pour le verre, pour le sucre, enfin pour tous les éléments de fabrication, alors que tous ces taux sont plus élevés que celui de 78c. Il y a donc une concurrence qui nous vient du Québec qu'on ne devrait pas avoir.

Le National-Canadien se trouve donc à subventionner les plus grands embouteilleurs au détriment, des Maritimes. C'est injuste, à mon avis, et ne devrait pas se poursuivre. Merci beaucoup.

Le président: Merci beaucoup, monsieur Lynch. Monsieur Thomas.

M. Thomas (Moncton): Monsieur le président, je voudrais questionner M. Reynolds, au sujet de cette anomalie qui se présente dans les taux mentionnés dans son mémoire, c'est-à-dire qu'on peut expédier des bouteilles remplies à partir de Montréal à un coût moins élevé que des bouteilles vides. En 1958, la situation a empiré et il y a eu une diminution de faite. A un moment donné, il y avait 17 p. 100...

M. Reynolds: Il y avait la réduction de...mais je ne suis pas très bon sur les questions techniques.

M. Thomas (Moncton): Non.

M. Reynolds: Mais je pense que j'ai raison de dire que c'est le recul de 1958, Monsieur Armitage?

M. Armitage: C'est vrai.

M. Reynolds: De 1960? Il a augmenté en 1958 et a diminué en 1960.

M. Armitage: C'est juste.

M. Thomas (Moncton): Monsieur Reynolds, si j'ai bien compris, la Loi nationale sur les transports de 1967 se trouvera à aggraver ce problème, parce que les bouteilles remplies seront classées comme non-compétitives, donc le taux sera fixe.

M. Reynolds: C'est exact, c'est juste.

M. Thomas (Moncton): Alors, les bouteilles vides...

M. Reynolds: Pour une raison quelconque sont considérées comme compétitives.

M. Thomas (Moncton): Mais jusqu'ici, vous en avez été soulagés car il y a eu ce gel de deux ans. Autrement dit, ces taux n'augmen-

[*Texte*]

words, these rates will not increase until March 23. So, when this Act goes into effect your problem will be aggravated because then you will get new carload rates on your empty bottles. Is that right?

Mr. Reynolds: Our empty bottle rate is a competitive rate now and has been increased twice in the past three years. It can be increased again at any time, and it would not surprise me if it were. However, the commodity rate for the full bottles, by some curiosity which I do not understand—and I admit that quite freely—is a frozen rate and, as I said, is lower today than it was in 1958.

Mr. Thomas (Moncton): And nothing has been done to increase it in the Act of 1967?

Mr. Reynolds: Nothing can be done to increase it because of the Railway Act last year. I have been after the railways about this, but they say, "Well, we have no power until Parliament moves."

The Chairman: Are you through, Mr. Thomas? Mr. Trudel.

Mr. Trudel: I would like to ask a question of Mr. Reynolds, Mr. Chairman. Could you give us the percentage of the over-all business you are doing now in non-returnable bottles in the soft drink industry out of New Brunswick?

Mr. Reynolds: I am afraid I cannot give you a figure for the industry, but it would be 20 per cent for my own company, and I would think it would be more like 15 per cent for the industry as a whole down here.

Mr. Trudel: Now, another question, Mr. Chairman. At the present time you are talking about 40 bottlers in the area competing with the Quebec market. Are these bottlers not franchised operators bottling goods that are manufactured in Quebec and shipped down here? Are the bottlers not able to obtain franchises of the main bottling plants and process the goods here?

Mr. Reynolds: Yes, this is true. Almost all the bottlers in the Maritimes do have one of the main franchises, such as Coke, Pepsi and Seven-Up, but the price at which the non-returnable bottles are shipped down here is so attractive to the supermarkets that although they have not got Coke or Pepsi or Seven-Up written on them, the price is so good and they can make such a handsome mark-up that

[*Interprétation*]

teront pas avant le 31 mars. Donc, lorsque cette Loi entrera en vigueur, ce problème se trouvera d'autant plus grave, parce qu'alors vous aurez de nouveaux taux pour les bouteilles, n'est-ce pas?

M. Reynolds: Ce taux pour bouteilles vides est un taux concurrentiel maintenant et il a été augmenté deux fois, au cours des trois dernières années. Il peut être augmenté de nouveau à n'importe quel temps, et je ne serais pas étonné qu'il le soit. Mais le tarif préférentiel pour la bouteille pleine, pour une raison curieuse que je ne comprends pas du tout, est un taux qui a été fixé, et il est moins élevé aujourd'hui qu'il ne l'était en 1958.

M. Thomas (Moncton): Rien n'a été fait pour l'augmenter dans la Loi de 1967?

M. Reynolds: Rien ne peut être fait pour l'augmenter à cause de la Loi sur les chemins de fer de l'année dernière. Je m'en suis pris aux chemins de fer à ce sujet, mais ils répondent: «Nous n'avons aucun pouvoir avant que le Parlement n'agisse».

Le président: Vous avez terminé? Monsieur Trudel.

M. Trudel: Je voudrais poser une question à M. Reynolds, monsieur le président. Pourriez-vous nous dire le pourcentage, quel est l'ensemble de votre chiffre d'affaires pour les bouteilles non-retournables pour le Nouveau-Brunswick?

M. Reynolds: Je ne pourrais vous donner le chiffre pour l'industrie, mais ce serait 20 p. 100 pour notre propre société, et j'imagine que ce serait 15 p. 100 pour l'ensemble de l'industrie dans notre région.

M. Trudel: Une autre question, monsieur le président. En ce moment vous parlez de 40 embouteilleurs de la région qui font concurrence avec le marché du Québec. Ces embouteilleurs ne sont-ils pas des sociétés en franchise qui font l'embouteillage de produits qui sont fabriqués au Québec, et expédiés ici? Est-ce que les embouteilleurs ne peuvent pas obtenir une franchise des principales usines de mise en bouteilles et en faire la production ici même?

M. Reynolds: Oui, c'est juste. A peu près tous les embouteilleurs dans les Maritimes, ont une des principales franchises, comme le *Coke*, le *Pepsi* et le *Seven-Up* disons, mais le prix pour lequel ces bouteilles vides non-retournables sont expédiées ici, est tellement intéressant pour les supermarchés, bien que les noms *Pepsi, Coke* et *Seven-Up* ne sont pas écrits, le prix est tellement bon et on

[*Text*]

these are the things that will get the display space and these are the things that are eroding our business. What we are concerned about is that the volume is already hurting us, and if nothing happens, we can see that over the next several years, of course, it will become drastically worse. You pay so much for Coke, but if you see a bottle of cola that looks pretty goods and is substantially cheaper, you are going to buy it.

Mr. Trudel: In other words, Mr. Chairman, I believe what the witness is saying is that the private labels, or off-brands, if I may use that term, is what we are concerned about mainly here.

Mr. Reynolds: Right, sir.

The Chairman: Mr. Horner.

Mr. Horner: Mr. Reynolds, you believe that the full bottle rates from Montreal are not compensatory with the costs the railways must have in shipping them in here? Is this true?

Mr. Reynolds: I do not know anything about the railway business so I would not presume to express an opinion, but when Mr. Lynch is able to tell us that on every load of non-returnable bottles that he has brought in from Montreal a year or so ago—I believe it was 18 months that he mentioned—there was a substantial claim for breakage, and he could have added, I think, that the CN has found itself selling off remnants to local wholesalers in order to get rid of the stuff that the consignee would not accept—then I have pretty good reason to suspect that it is not profitable for the CN.

Mr. Horner: Has your company or your association at any time applied before the old Board of Transport Commissioners or the new Board?

Mr. Reynolds: Yes, sir, I took this question up with the railways some three or four years ago with the help and advice of the Maritimes Transportation Commission and more recently again with the two railways and with the new Canadian Transport Commission. I have had an exchange of letters with them, but, of course, all they can do is point out to me that until Parliament changes the legislation nothing can be done.

Mr. Horner: How do you suggest that Parliament should change the legislation?

Mr. Reynolds: Well, so long as the freeze is on, the commodity rate cannot change. I have

[*Interpretation*]

peut faire une telle augmentation dessus, que voilà les articles qui prennent la place sur les étalages et qui minent nos affaires. Ce qui nous préoccupe c'est que le volume nous est dommagable déjà, et que si rien ne se produit, on peut voir qu'au cours des prochaines années, la situation s'aggravera d'autant plus. Vous payez, tant, pour le *Coke*, mais si vous voyez une bouteille de cola qui semble assez bon et est moins cher, alors, vous allez l'acheter.

M. Trudel: En d'autres termes, monsieur le président, je pense que ce que le témoin dit ici, c'est que les étiquettes privées, ou les marques secondaires, si je peux les appeler ainsi, sont ce qui nous préoccupe essentiellement ici.

M. Reynolds: C'est juste.

Le président: Monsieur Horner.

M. Horner: Vous dites, monsieur Reynolds, que le taux, pour les bouteilles pleines venant de Montréal ne compense pas les frais d'expédition pour les chemins de fer? Est-ce vrai?

M. Reynolds: Je ne connais rien aux chemins de fer, je ne veux donc pas formuler d'avis ici, mais lorsque M. Lynch est en mesure de nous dire que pour chaque wagon de bouteilles non-retournables, qu'il a fait venir de Montréal, il y a un an environ, je crois même qu'il a dit dix-huit mois, il y avait de nombreuses réclamations pour les bouteilles brisées, et il aurait pu ajouter, je pense, que le National-Canadien s'est trouvé à vendre des restants grossistes locaux, afin de se débarasser des expéditions que le destinataire ne voulait pas accepter. Ce n'est donc pas rentable pour le National-Canadien.

M. Horner: Est-ce que votre société ou votre Association, à un moment donné, a demandé à l'ancienne Commission des transports ou à la nouvelle Commission?

M. Reynolds: Oui, j'en ai saisi les chemins de fer, il y a trois ou quatre ans, avec l'aide et les conseils de la Commission maritime des transports et plus récemment encore, auprès des chemins de fer, et la nouvelle Commission des transports. J'ai correspondu avec ces derniers, mais on me dit que tout ce qu'ils peuvent faire c'est de me signaler que tant que le Parlement ne change la Loi, rien ne peut être fait.

M. Horner: Comment le Parlement peut-il modifier cette Loi?

M. Reynolds: Aussi longtemps que les taux sont gelés, le taux préférentiel peut changer.

[*Texte*]

already said I do not understand how this curiosity arose, but those commodity rates that apply to beverages are frozen rates.

Mr. Horner: Are the rates only frozen on commodities going out of the Maritime area and not on commodities coming into the Maritimes?

Mr. Reynolds: No, no, no, certainly this rate is frozen and it only relates to goods coming into the Maritimes.

Mr. Lynch: May I make a point? Another curiosity about that rate is that the way it is written up in the CNR rate book it applies on full goods coming from the Montreal area east. If I was to put in a larger plant and start trying to ship non-returnable bottles towards the Quebec market, I cannot get that rate. This is a one-sided rate, to me.

Mr. Horner: Mr. Lynch, you are familiar with Bill C-231 in which the position of the captive shipper was outlined together with the procedure a captive shipper might take to apply for a special rate. Would your industry consider itself sort of captive in the Maritimes?

Mr. Lynch: I am not familiar...

Mr. Reynolds: I do not think we are familiar with that expression in this connection.

Mr. Horner: Well, I will let the question go, then.

The Chairman: Mr. Mahoney.

Mr. Mahoney: Could the witness tell us whether or not there is any move afoot in the provincial jurisdiction here to inhibit or even ban the use of disposable bottles?

Mr. Reynolds: Mr. Chairman, I could speak for about 10 minutes on this subject. I do not think any such legislation is at all likely. All bottles are disposable today, unfortunately, as we are finding that there are more so-called returnable bottles thrown away than there are non-returnable bottles. We have conducted a number of surveys: we did one in Halifax not too long ago on a mile of the Bedford Highway, and while I cannot quote you the figures from memory, certainly there were more returnable bottles discovered along the highway than there were non-returnable bottles. The children are not interested in the 2 cents, and our bottle loss

[*Interprétation*]

J'ai déjà dit que je ne comprends pas comment il se fait que cette situation se soit présentée, mais les taux préférentiels pour les boissons sont gelés.

M. Horner: Est-ce que les taux sont gelés simplement pour les denrées qui sont expédiées à partir de la région des Maritimes et non pas pour les denrées qui y sont expédiées?

M. Reynolds: Non, non, ce taux est gelé, et il ne touche que les denrées qui sont expédiées dans les Maritimes.

M. Lynch: Si on me permet une observation, une autre anomalie quant à ce taux, est la façon que c'est inscrit dans le manuel des taux du National-Canadien, qui s'applique pour toutes les denrées complètes qui viennent de Montréal vers l'est. Si je veux établir une plus grande usine et recommencer à expédier des bouteilles non-récupérables vers le marché du Québec, je ne peux pas obtenir un tel taux. D'après moi, c'est un taux à un côté.

M. Horner: Monsieur Lynch, vous connaissez le bill C-231 dans lequel on a indiqué la situation de l'expéditeur captif de même que la porcédure à suivre pour demander un taux spécial. Est-ce que votre industrie se considère comme captive ici dans les Maritimes?

M. Lynch: Je ne connais pas...

M. Reynolds: Nous ne connaissons pas cette expression à cet égard.

M. Horner: Eh bien, je laisserai tomber la question.

Le président: Monsieur Mahoney.

M. Mahoney: Monsieur le président, le témoin pourrait-il nous dire si, en ce moment, la province essaie de mettre fin à l'utilisation des bouteilles non-récupérables?

M. Reynolds: Monsieur le président, je pourrais vous en parler pendant un bon dix minutes. Je ne crois pas qu'une telle législation soit présentée. Toutes les bouteilles sont à jeter; malheureusement, nous nous apercevons qu'il y a plus de bouteilles récupérables qui sont jetées que les bouteilles non récupérables. Nous avons fait un certain nombre de relevés: nous en avons fait un à Halifax, il n'y a pas tellement longtemps, sur une distance d'un mille du Bedford Highway et quoique je ne peux vous donner les chiffres de mémoire, il semble que plus de bouteilles récupérables s'y trouvent le long de la route que de bouteilles non-récupérables. Les

[*Text*]

is much monstrous; they are just throwing them all away.

Mr. Mahoney: Thank you.

The Chairman: Mr. Skoberg.

Mr. Skoberg: Mr. Chairman and Mr. Reynolds, that answers a question I had in mind. I would like to have an expression of opinion on the littering that occurs with these non-returnables, but I realize that would be a lengthy question.

Do all the manufacturers in your association have non-returnable bottles now?

Mr. Reynolds: I should think every company today because all supermarkets insist on having non-returnable bottles.

Mr. Skoberg: At this particular time do you ship your bottles by rail and truck?

Mr. Reynolds: Mostly by truck. We do use the railroad, but mostly by truck.

Mr. Skoberg: Are you satisfied with the rates at this particular time?

Mr. Reynolds: Well, of course, one is never satisfied with the rates, but I think they are reasonably competitive. There is good competition for intra-Maritimes trucking.

The Chairman: Mr. Breau.

Mr. Breau: Mr. Chairman, could one of the witnesses tell us what percentage of their production goes into cans and what percentage goes into bottles?

Mr. Reynolds: Well, there are only two companies at the present time producing cans in the Maritimes, so you will not find great enthusiasm among the 40-odd other bottlers for selling cans.

Mr. Breau: What is the percentage in the rest of Canada, and what is the percentage in the Atlantic provinces?

Mr. Reynolds: I am sorry, I could not give you an answer.

Mr. Breau: Would you have the same problem with empty cans? Is there the same difference in the rates for the full cans?

[*Interpretation*]

enfants ne s'intéressent plus au deux cents, donc les pertes que nous avons en bouteilles sont très grandes. On les jette tout simplement.

M. Mahoney: Merci beaucoup.

Le président: Monsieur Skoberg.

M. Skoberg: Monsieur le président, monsieur Rynolds, cela répond à la question que j'avais en tête. Je voulais savoir ce qui en était quant aux bouteilles qui étaient jetées le long des routes, mais je vois que ce serait trop long.

Est-ce que tous les manufacturiers de votre Association ont les bouteilles non-récupérables maintenant?

M. Reynolds: Je pense que chaque société, aujourd'hui, les utilise vu que les supermarchés insistent pour avoir des bouteilles non-récupérables.

M. Skoberg: En ce moment, est-ce que vous expédiez vos bouteilles par rail et par route?

M. Reynolds: La plupart du temps par camions. Nous avons recours au service ferroviaire mais nous le faisons plutôt par le route.

M. Skoberg: Est-ce que vous êtes satisfait du taux en ce moment?

M. Reynolds: Évidemment, on n'est jamais satisfait des taux, mais enfin je pense qu'ils sont raisonnablement concurrentiels. Il y a une excellente concurrence pour le camionnage dans les Maritimes.

Le président: Monsieur Breau.

M. Breau: Monsieur le président, est-ce qu'un des témoins pourrait nous dire quel pourcentage de leur production s'est fait en canettes et en bouteilles?

M. Reynolds: Il n'y a que deux sociétés qui font la production de canettes dans les Maritimes, donc il n'y a pas tellement d'enthousiasme pour ce qui est des 40 autres embouteilleurs pour vendre des canettes.

M. Breau: Quel est le pourcentage dans le reste du Canada et quel est le pourcentage des provinces de l'Atlantique?

M. Reynolds: Je regrette, mais je ne pourrais pas vous donner la réponse.

M. Breau: Est-ce qu'il y aurait le même problème avec les canettes vides? Pour les canettes remplies, est-ce qu'il y aurait le même écart de taux?

[*Texte*]

Mr. Lynch: Yes there is, but we are relieved of it in that case because the can companies pay part of the freight. Because there was a can-manufacturing plant in Halifax, they so-called equalized the freight from Halifax.

Mr. Breau: One of you gentlemen mentioned that you are getting unfair competition when the supermarkets order soft drinks which are not under franchise. What would be the difference in the cost between, say, a plant in Moncton and a plant in Montreal for the same soft drink? What would be the difference in cost? Is there a disparity there?

Mr. Reynolds: I would like to refer to my brief there, I think. A company which produces, say, 5 million cases per year for its local market can produce an additional 50,000 to off-load in the Maritimes for a very small amount of money. It is marginal cost, is it not? You have covered your overhead; it is going to cost you 3 or 4 cents a case in labour, so why not?

Mr. Breau: Now, there is one point I think you are getting at there. What you are looking at is, if the freight rate were increased from Montreal down, could these private labels be produced by local industry, by the bottlers, or would they still be coming in?

Mr. Lynch: I would say that if the freight rate were increased—I know I can speak for our own company—that then we would be able to do custom bottling for Sobeys, for IGA or for someone else and give it to them at a price very, very close to what they are paying now, and we would get the business in the Maritimes. Right now we cannot compete with the big firms in Quebec as long as this subsidized freight rate is in existence.

Mr. Breau: Is it only because of the freight rate or . . .

Mr. Lynch: It is only because the freight rate that tips the scale, and we cannot do a thing about it.

Mr. Breau: Could you tell the Committee if the production cost at your plant is exactly the same as the production cost in Montreal? The other witness said there was a disparity there. What I am trying to find out is, if you are getting that competition, would a change in the freight rate offset everything or would it just offset it a little bit?

[*Interprétation*]

M. Lynch: Oui, mais nous en sommes soulagés dans ce cas car les sociétés de canettes défraient une partie du fret.

Puisqu'il y avait une usine de fabrication à Halifax, il y avait, pour ainsi dire, égalisation des taux à Halifax.

M. Breau: Un d'entre vous a mentionné que vous avez une concurrence injuste lorsque les supermarchés commandent des boissons non-alcoolisées qui ne sont pas sous franchise. Quelle serait la différence dans le coût disons à une usine de Moncton et une usine à Montréal, pour la même boisson non-alcoolisée? Quel serait l'écart du coût de production? Est-ce qu'il y a une disparité?

M. Reynolds: Je voudrais me reporter à mon mémoire, je pense. Une société qui produit, disons, 5 millions de caisses par année pour le marché local peut en produire 50 mille de plus afin de les écouler à bon marché dans les Maritimes. C'est un coût marginal, n'est-ce pas? Vous avez récupéré vos frais généraux; ça vous coûtera trois ou quatre cents par caisse pour la main-d'œuvre. Alors qu'importe?

M. Breau: Il y a un point où vous en venez. Ce qui nous intéresse, c'est si le taux de transport des marchandises était augmenté à partir de Montréal, l'industrie locale pourrait produire ces marques privées, ou est-ce qu'elles continueraient à être expédiées aux Maritimes?

M. Lynch: Je dirais que si ce taux était augmenté, je peux parler au nom de ma société, alors nous serions en mesure de faire l'embouteillage pour *Sobeys,* pour *I.G.A.* ou d'autres et les leur donner à peu près le prix qu'ils paient maintenant, et nous aurions le commerce des Maritimes. En ce moment, nous ne pouvons concurrencer avec les grandes entreprises du Québec aussi longtemps que ces tarifs susmentionnés sont en vigueur.

M. Breau: Est-ce simplement à cause du tarif?

M. Lynch: Non, c'est seulement à cause du tarif du transport qui fait pencher la balance, et nous n'y pouvons rien.

M. Breau: Est-ce que les frais de production, à votre usine, sont exactement les mêmes que les frais de production à Montréal? L'autre témoin a dit qu'il y avait une différence. Ce que j'essaie de savoir, c'est si vous subissez cette concurrence, est-ce qu'un changement dans le tarif de transport changerait tout cela ou est-ce que cela la réduirait un peu?

[*Text*]

Mr. Lynch: Let me explain it again to you. You are talking about production cost of a commodity like a soft drink which naturally depends upon, number one, the size of your plant: so many bottles a minute. It is going to cost you more to produce a case of soft drinks if your machine is turning out 50 or 60 bottles a minute than it does if it is running at 300 or 400. However, there is no reason why the companies in the Maritimes cannot put in this machinery that runs 300 or 400 bottles a minute. We have done it in Sydney in our own plant. We have other costs that the Quebec bottler does not have. For instance, it costs us money to bring the empty bottle into our plant, the crown into our plant, the syrups, the concentrates: we have to pay freight on everything. They are right next to these producers and they do not have to pay freight.

Outside of the freight rates, what I am saying is, adding everything together, if the 78 cent freight rate was put up to...

Mr. Breau: $1.12.

Mr. Lynch: At least $1.12—it should be higher because it is a finished product coming into our territory. Raw materials to be used in the production of goods should come in at a lesser rate. If this were so then we could handle all this private label bottling in the Maritimes in our own smaller plants throughout the Maritimes, in so-called depressed areas like our little island of Cape Breton, it would keep these people working.

Mr. Breau: Mr. Chairman, I have one more question. You still have to increase the volume of production, if you want to compete with them.

Mr. Lynch: We have done that, sir.

Mr. Breau: I heard that there were some countries in the world where because the water was not suitable, their soft drinks had to be finished in Canada and shipped there. Is this true and how does this affect you? Does it help you at all in, say, selling soft drinks to South America or some other countries?

Mr. Reynolds: Yes, there are one or two cases. One is Nassau, which is a fairly small market, and the other is Bermuda. Bermuda is presently serviced from the U.S.A. If it were possible by ocean freight to get soft drinks in cans into, say, the Caribbean,

[*Interpretation*]

M. Lynch: Laissez-moi vous l'expliquer encore une fois. Vous parlez des frais de production d'une denrée comme les eaux gazeuses qui, évidemment, dépendent, tout d'abord, de l'ampleur de votre usine: tant de bouteilles par minute. Cela vous coûtera plus de produire une caisse si votre machine produit 50 ou 60 bouteilles à la minute que si elle produit 300 ou 400. Mais il n'y a aucune raison pour laquelle les sociétés, dans les Maritimes, ne pourraient pas installer la machinerie qui produit trois ou quatre cents bouteilles à la minute. Nous l'avons déjà fait à Sydney dans notre propre usine. Mais nous avons d'autres frais de production que l'embouteilleur du Québec n'a pas. Par exemple, cela nous coûte de l'argent pour rapporter la bouteille vide à l'usine, faire venir les capsules, l'essence, les concentrés: il nous faut payer le transport pour tout, alors qu'eux sont juste à côté du producteur, ils n'ont pas ces frais à payer.

A part les tarifs de transport, ce que je dis, c'est que si nous ajoutons tout cela, si le tarif de 78c., le tarif marchandise était augmenté au moins à . .

M. Breau: $1.12.

M. Lynch: Au moins $1.12, il devrait être plus élevé car c'est le produit fini qui vient ici dans notre territoire. Les matériaux bruts devraient bénéficier d'un tarif moins élevé. Si c'était le cas, nous serions en mesure de nous occuper de la mise en bouteilles pour les marques privées par nos propres petites usines dans toutes les Maritimes, et dans les régions les moins favorisées comme l'Ile du Cap Breton, les gens travailleraient.

M. Breau: Une autre question. Il faudrait tout de même augmenter votre volume de production si vous voulez leur faire concurrence.

M. Lynch: Nous l'avons déjà fait.

M. Breau: J'ai entendu dire qu'il y avait certains pays dans le monde où, en raison de l'eau pas convenable, ils étaient obligés de faire terminer leurs liqueurs douces du Canada. Est-ce vrai et comment cela s'applique-t-il dans votre situation? Est-ce que cela vous aide, par exemple, pouvez-vous vendre des boissons gazeuses en Amérique du sud ou en d'autres pays?

M. Reynolds: Il n'y a que deux endroits, l'un c'est Nassau, débouché plutôt restreint, et l'autre ce sont les Bermudes. A l'heure actuelle, les Bermudes sont desservies par les États-Unis. Si c'était possible de transporter, par mer, les liqueurs douces en canettes, dans

[*Texte*]

Venezuela or Mexico or any of these places, of course they would very quickly slap on a tariff. They have all sorts of people they are desperately trying to employ and they are not going to allow us to ship in soft drinks. This is one thing they can do for themselves. The two exceptions are Bermuda and Nassau.

Mr. Breau: Do not forget St. Pierre.

Mr. Reynolds: St. Pierre and Miquelon.

The Chairman: Mr. Nesbitt.

Mr. Nesbitt: The questions I had have been answered, thank you.

The Chairman: Mr. Perrault.

Mr. Perrault: I would like to ask the witnesses if the provincial governments in the Maritimes have taken any action to discourage the use of disposable bottles. This has been done in some provinces, not by edict or by law, but the provincial governments have suggested, as a matter of making tourist facilities more pleasant, that disposible bottles not be used, and the bottlers have cooperated in at least one province of which I have knowledge. Has anything been done in the Maritimes on that?

Mr. Reynolds: We have had no official requests from provincial governments, either in Newfoundland, Prince Edward Island, Nova Scotia or New Brunswick. There has, of course, been a good deal of correspondence in the newspapers, but it is a lost cause. It is all going to be disposable containers. Maybe it will not be just like it is now.

Mr. Nesbitt: But there is public acceptance and this is the final criterion, then?

Mr. Reynolds: Yes. In this town you would have a job to buy something in a returnable bottle.

Mr. Nesbitt: May I ask this question, because the matter of the shipment of bottles seems to be a key issue here and I think you have produced some very interesting statistics. Have there been any feasibility studies with respect to the possibility of manufacturing bottles in the Maritimes and assistance to the establishment of an industry of this kind?

Mr. Lynch: Yes, indeed. A Finnish company, with the support of the New Brunswick Development Corporation, is presently build-

[*Interprétation*]

les Caraïbes, au Vénézuela, au Mexique, ou ailleurs, évidemment, on imposerait très vite un tarif. Ils ont toutes sortes de gens qu'ils essaient désespérément d'employer; par conséquent, on ne nous permettrait pas d'expédier des boissons gazeuses puisqu'ils peuvent le faire eux-mêmes. Les deux exceptions sont Nassau et les Bermudes.

M. Breau: N'oubliez pas Saint-Pierre.

M. Reynolds: Saint-Pierre et Miquelon.

Le président: Monsieur Nestbitt.

M. Nesbitt: Ma question a déjà reçu réponse de la part du témoin. Merci

Le président: Monsieur Perrault.

M. Perrault: J'aimerais demander aux témoins si les gouvernements provinciaux des Maritimes ont pris des mesures pour décourager l'emploi des bouteilles non-récupérables. Cela a été fait en certaines provinces, non par voie de législation, mais les gouvernements ont suggéré comme moyen d'avoir des commodités plus agéables pour les touristes, qu'on n'emploie pas ces bouteilles non-récupérables et les embouteilleurs ont collaboré au moins dans une province que je connais. Est-ce qu'on a fait quelque chose de ce genre dans les Maritimes?

M. Reynolds: Nous n'avons pas reçu de demandes officielles de la part des gouvernements provinciaux, d'aucune des quatre provinces de l'Atlantique. Evidemment il y a eu beaucoup de correspondance dans les journaux, mais la cause est perdue d'avance. Tous les contenants seront non-récupérables. peut-être que les choses ne seront pas comme elles le sont maintenant.

M. Nesbitt: Mais il y a accueil favorable de la part du public, et c'est le dernier critère, n'est-ce pas?

M. Reynolds: Oui. Ici vous auriez beaucoup de difficultés à obtenir une boisson gazeuse dans une bouteille récupérable.

M. Nesbitt: Puis-je poser cette question-ci, car il semble que l'expédition de ces bouteilles soit le facteur le plus important et je pense que vous avez produit des chiffres très intéressants. Y a-t-il eu des études de rentabilité faites quant à la possibilité de fabriquer des bouteilles, dans les Maritimes, et de l'aide pour l'établissement d'une industrie de ce genre?

M. Lynch: Oui, certainement. Une société finlandaise, avec l'aide de la *New Brunswick Development Corporation* construit une usine

[*Text*]

ing a glass plant at Scoudouc just outside Moncton, and they are hoping to get this thing into production by mid-summer of this year or thereabouts.

Mr. Nesbitt: Will this assist you with your problem?

Mr. Reynolds: This is certainly going to be a great help to us, but, of course, one does not know to what extent they can cover the wide range of bottles.

Mr. Nesbitt: Yes, it depends on volume again, does it not?

Mr. Reynolds: Right.

Mr. Nesbitt: Now, may I ask you this question: I notice that you have many members in your association; there are many people, despite its vicissitudes, interested in participating in this industry. There are a number of firms in New Brunswick and the other provinces. What is being done to make the industry more competitive, apart from the fight for a better freight rate deal? Do you have a specific program in which your association is engaged? Do you have the trading of information or formulae.

Mr. Reynolds: I think it would be stretching a point to say we have a specific program, but we do, in fact, meet two or three times a year in local areas and discuss common problems and, of course, the biggest problem is the distribution cost.

Mr. Nesbitt: My final question, Mr. Chairman, is this: I notice reference was made to the cost of sugar. What about these low calorie drinks? Has that improved your competitive situation by bringing in Sucaryl or some other substance?

Mr. Lynch: No, the wildly optimistic forecast about the proportion of the business that would go to the so-called "no cal" drinks has proved to be erroneous. I think in the Maritimes the share of the market presently would be something less than 6 per cent, and it is not growing. I think children want sugar, God bless them, and I think most people prefer sugar to Sucaryl.

Mr. Nesbitt: Have your production costs increased measurably in this industry in the last five years?

Mr. Reynolds: By 50 per cent.

Mr. Nesbitt: By 50 per cent?

[*Interpretation*]

de fabrication du verre à Scoudouc à l'extérieur de Moncton, et on espère pouvoir commercer la production à la mi-été.

M. Nesbitt: Est-ce que cela résoudra votre problème?

M. Reynolds: Cela nous aidera évidemment, mais on ne sait pas dans quelles mesures on pourra fabriquer toute la gamme des bouteilles.

M. Nesbitt: Cela dépend du volume encore une fois, n'est-ce pas, monsieur Reynolds.

M. Reynolds: Oui.

M. Nesbitt: Est-ce que je pourrais vous poser cette question-ci: j'ai remarqué que vous avez plusieurs membres dans votre Association; malgré les vicissitudes il y en a plusieurs qui s'intéressent à participer à cette industrie. Il y en a au Nouveau-Brunswick et dans les autres provinces. Qu'est-ce que l'on fait pour rendre l'industrie plus concurrentielle, à part cette lutte pour obtenir un tarif de transport plus juste? Avez-vous un programme précis dans lequel s'engage votre Association? Avez-vous un échange de renseignements ou de formules?

M. Reynolds: Il serait exagéré de dire que nous avons un programme précis, mais, en fait, nous nous réunissons deux ou trois fois par année dans certaines régions pour discuter de nos problèmes communs et évidemment, le plus grand problème ce sont les frais de distribution.

M. Nesbitt: Une dernière question, monsieur le président. J'ai constaté qu'on avait mentionné le coût du sucre. Qu'est-ce qui en est au sujet des boissons avec peu de calories? Est-ce que cela améliore votre situation compétitive quand on emploie *Sucaryl* ou un autre élément?

M. Lynch: Les prévisions très optimistes se sont révélées erronées au sujet de la proportion du commerce qui va aux boissons appelées «sans calorie». Je pense que dans les Maritimes la part du marché à l'heure actuelle serait de moins que 6 p. 100 et cela n'augmente pas. Les enfants veulent du sucre et la plupart des gens préfèrent le sucre au Sucaryl.

M. Nesbitt: Est-ce que vos coûts de production ont augmenté considérablement depuis cinq ans dans cette industrie?

M. Reynolds: De 50 p. 100 je dirais.

M. Nesbitt: De 50 p. 100?

[*Texte*]

Mr. Reynolds: That is about right.

Mr. Nesbitt: Labour and materials?

Mr. Reynolds: Trucks and tires, cartons and glass and freight—you name it.

Mr. Nesbitt: Thank you, Mr. Chairman.

The Chairman: Mr. Godin.

M. Godin: Une simple question au sujet du tarif pour les bouteilles vides et le produit fini. Un des témoins pourrait-il nous dire si ces tarifs s'appliquent spécialement aux eaux gazeuses et nous dire également, quel sort est réservé aux embouteilleurs de bière et aux distillateurs, dans le cas des bouteilles vides, afin de nous permettre de faire des comparaisons?

Mr. Reynolds: Yes. I apologize for my inability to reply in French. The answer is that this tariff applies only to soft drinks. Is that correct, Mr. Armitage?

The Chairman: Mr. Allmand.

Mr. Allmand: Most of my questions have been answered, but I have one question. I find it surprising that you say in the Maritimes it is hard to find drinks in returnable bottles, because in Montreal I find it hard to find them in disposable bottles. Actually, I asked the manager at the supermarket where I shop in Montreal if I could get drinks in disposable bottles and he said that very few people want them because of the price. He said that drinks in returnable bottles are cheaper. Now, that is supposed to be a rather affluent area.

We often hear stories in Central Canada that people in the Maritimes have a harder time making ends meet, so I find it difficult to understand why a more expensive soft drink would be in greater demand than one that is cheaper.

Mr. Reynolds: Well, the answer to that is quite complex. In Montreal, you have about 1.8 million people living within a very short distance of where the soft drink is made. In the Maritimes we have about 1.5 million in a parish that is approximately the size of England and half of Europe. We have many trucks that drive 25,000 miles a year in order to sell 30,000 or 32,000 cases of soft drinks. Our distribution cost is double or more the

[*Interprétation*]

M. Reynolds: C'est à peu près exact.

M. Nesbitt: La main-d'œuvre et les matériaux?

M. Reynolds: Les pneus et les camions, le verre, les caisses, le transport—n'importe quoi.

M. Nesbitt: Merci, monsieur le président.

Le président: Monsieur Godin.

Mr. Godin: Just one simple question regarding the tariff on empty bottles and the finished product. Could one of the witnesses tell us whether these tariffs apply specifically to soft drinks and also what is in store for beer bottlers and distillers, in the case of empty bottles, so that we can make valid comparisons?

M. Reynolds: Oui. Je m'excuse de ne pas pouvoir vous répondre en franaçis. La réponse est que le tarif s'applique seulement aux boissons gazeuses. Ai-je raison monsieur Armitage?

Le président: Monsieur Allmand.

M. Allmand: On a répondu à la plupart de mes questions, mais j'aimerais en poser une autre. Je trouve étonnant que vous dites, dans les Maritimes, qu'il est difficile de trouver des boissons en bouteilles récupérables, car à Montréal, je trouve très difficile de les trouver en bouteilles non-récupérables. J'ai demandé au gérant du supermarché où je fais mes épiceries, si je pouvais obtenir les boissons gazeuses en bouteilles non-récupérables et il m'a répondu que très peu de personnes en veulent en raison du prix, que les boissons en bouteilles récupérables sont moins chères. Et la région est censée être plutôt d'abondance.

On nous dit souvent dans le centre du Canada que les gens des Maritimes ont beaucoup plus de difficultés à rejoindre les deux bouts de leur budget, alors je comprends difficilement pourquoi une boisson gazeuse plus coûteuse serait plus en demande qu'une qui coûte moins cher.

M. Reynolds: La réponse est un peu compliquée. Y Montréal, vous avez environ 1.8 million de personnes qui se trouvent juste à côté de l'endroit où se fabriquent ces boissons gazeuses. Dans les Maritimes, nous avons peut-être 1½ million de personnes dans un territoire qui serait à peu près l'étendue de la Grande-Bretagne et de la moitié de l'Europe. Nos camions doivent parcourir 25,000 milles par année, afin de vendre 30 ou 32 mille

[*Text*]

distribution cost in Montreal, so our selling price is higher.

This means that the spread between the returnable and non-returnable bottles does not appear to be as much and, of course, as soon as we go into non-returnable bottles, we can carry approximately twice the quantity of goods on the same truck and the salesman can service twice the number of accounts because he does not have to spend all his time down in the basement finding empties and sorting them into Cokes and Pepsis and so on. The spread is not as much as it would be in Montreal.

Mr. Allmand: Yes, a very good answer.

A further question. You state that part of your high production costs is due to the fact that you have to bring in many materials to make the drinks. Has your Association taken steps to try and have these things produced at a central point such as Halifax or Moncton so that more will be produced here and less will have to be brought in?

Mr. Reynolds: Well, I think the answer is that it would not be economical. It is all quite interesting. I was asked about glass just now. The New Brunswick Development Corporation had this idea of getting glass produced in the Maritimes and I think it must have originated at least four or possible five years ago.

Now the two Canadian companies, Consumers Glass Company, Limited and Dominion Glass Company Limited, both looked at this very hard and very long. And there were some attractions like the old RCAF hangers which could be acquired at a nominal cost. But these two large companies had to say, "No, it is not economical." I think the answer would be the same if we looked at any of the others.

Mr. Allmand: What about the syrups for the drinks?

Mr. Reynolds: Well, in that regard you are in the hands of the franchised companies. Some companies in fact mix up their own flavours. Mine does. But of course of the coke people, you know, would not let you mix up theirs; they have a secret and they are going to hold on to it.

The Chairman: Mr. Rose.

[*Interpretation*]

caisses de boissons gazeuses. Nos frais de distribution sont donc le double ou plus que ceux de Montréal. Par conséquent, notre prix de vente est plus élevé.

Cela veut dire que l'écart entre les bouteilles récupérables et non-récupérables ne semble pas être aussi élevé et alors, du moment qu'il s'agit des bouteilles non-récupérables, nous pouvons transporter, environ, deux fois la quantité dans le même camion. Le vendeur peut donc traiter avec le double des clients, car il n'a pas à passer tout son temps à trouver ses bouteilles récupérables et à les trier selon qu'elles sont des *Cokes,* des *Pepsis,* et autres. Par conséquent, les frais ne seraient pas aussi élevés qu'à Montréal.

M. Allmand: Excellente réponse. Une autre question maintenant. Vous avez dit qu'une partie des frais élevés de production sont dus au fait qu'il vous faut importer beaucoup de matériaux afin de fabriquer votre boisson gazeuse, est-ce que votre Association a pris des mesures pour essayer de produire quelque chose à un endroit local et central ici-même. Par exemple, Halifax ou Moncton, afin qu'une production accrue prenne place ici et que vous soyez en mesure d'en importer moins.

M. Reynolds: Je crois que la réponse est qu'il ne serait pas économique ou profitable de le faire.

On m'a posé une question au sujet des bouteilles tout à l'heure. L'Office du développement du Nouveau-Brunswick avait eu cette idée de fabriquer du verre aux Maritimes et je crois que l'idée a été lancée il y a quatre ou cinq ans.

Les deux compagnies canadiennes, la *Consumer Glass* et la *Dominion Glass,* ont examiné la question très attentivement pendant longtemps. Il y avait un certain attrait, par exemple, les vieux hangars de l'ARC qu'on aurait pu obtenir à des coûts minimes, mais les deux grandes compagnies ont dû refuser parce que ce n'était pas économique ni rentable. On pourrait dire la même chose au sujet des autres éléments.

M. Allmand: Et qu'est-ce que vous pensez du sirop?

M. Reynolds: En fait, il ya plusieurs compagnies qui mélangent leur propre sirop mais évidemment vous êtes entre les mains de la Coca Cola qui a une formule secrète.

Le président: Monsieur Rose.

[*Texte*]

Mr. Rose: Most of my questions have been answered, Mr. Chairman, so I will be very brief.

I sympathize with the problems of the industry here and the competition from Quebec, especially in the non-returnables. It looks to me that either it is going to drive you to drink, and I am not referring to soft drinks, or you are going to have to join them—in other words you are going to go on with the non-returnables, as you have explained here rather thoroughly this morning.

My personal view is that these bottles are a menace and that perhaps we should be looking into a means other than glass for containers. I was interested in your survey statistics. I was wondering on the same topic of litter whether or not you found more returnables along the roadside because there are more of them, especially in soft drinks.

Mr. Reynolds: This could well be, but it would not be true of cans—and there were more cans than anything else.

Mr. Rose: Yes, but I do not believe they are really a menace. They are litter but they are not the menace. I want to ask a question similar to the one I asked the last witness. Our topic is transportation costs. I would like to have a comparison between ten years ago, five years ago and now on the percentage of your transportation costs compared with gross sales, because I would like to see in what direction it is going.

Mr. Reynolds: I have said that I can supply that. I can supply it for my own company without any difficulty.

Mr. Rose: Well perhaps from your company then—unless yours is a special situation, sir.

Mr. Reynolds: No, I should think ours would be typical.

Mr. Rose: My final question. Do these companies have no protection, because of the franchises they hold, from various imports? For instance, does not the Coca-Cola franchise protect importation into certain areas?

Mr. Reynolds: Yes.

Mr. Rose: Well what are we talking about then? We are not talking about the big names.

[*Interprétation*]

M. Rose: La plupart de mes questions ont trouvé leurs réponses alors je serai très bref. Je sympathise avec les problèmes de l'industrie ici et la concurrence de la part du Québec, surtout en ce qui concerne les bouteilles non-récupérables, j'ai l'impression que cela va nous conduire à boire d'autre chose s'il n'est pas possible justement d'éliminer ce problème, nous allons tout simplement nous joindre à eux, si vous ne réussissez pas à éliminer le problème des bouteilles non-récupérables.

Si ces bouteilles sont une menace, comme vous l'avez dit ce matin, nous devrions peut-être examiner une autre solution que des contenants de verre, au sujet de l'étude que vous avez faite, cela n'a intéressé quant à la quantité. Est-ce que vous avez trouvé beaucoup plus de bouteilles non-récupérables que de bouteilles récupérables le long de la route?

M. Reynolds: C'est peut-être le fait, mais il y a beaucoup plus de canettes.

M. Rose: C'est exact mais elles ne constituent pas vraiment un danger.

Je voulais poser une question semblable à celle que j'ai posée au témoin précédent, j'aimerais avoir une comparaison, puisque nous traitons des frais de transport, je voudrais avoir une comparaison entre les chiffres d'il y a 10 ans, 5 ans et les chiffres actuels des frais de transport comparés aux ventes brutes. J'aimerais voir quelle est la tendance.

M. Reynolds: Très bien, j'ai dit que je pourrais donner cette liste, je peux donner ces chiffres pour ma propre société et cela sans difficulté.

M. Rose: Pour votre société, à moins que votre situation soit une situation particulière?

M. Reynolds: Je ne le crois pas.

M. Rose: Une dernière question. Est-ce que ces compagnies n'ont aucune protection pour les franchises qu'elles détiennent, aucune protection contre les diverses importations. Par exemple, la franchise du Coca Cola, est-ce que cela ne protège pas l'importation dans une région en principe?

M. Reynolds: Oh oui.

M. Rose: Mais alors, de quoi parlons-nous? Nous ne parlons pas des grandes fabriques?

[*Text*]

Mr. Reynolds: We are talking about these private labels and somebody was kind enough to use the expression "off brands".

Mr. Rose: Supermarket labels?

Mr. Reynolds: Right.

Mr. Rose: Thank you.

The Chairman: Mr. Nowlan.

Mr. Nowlan: My questions have just about all been asked, especially the one put by Mr. Horner. You said this problem on rates had been taken up with the Board of Transport Commissioners and the present Canadian Transport Commission and the latter said that you cannot move until parliament moves. But have you had any indication that the anomaly of charging more for empties than for full bottles is going to be changed, and are you preparing a brief of your own to the Canadian Transport Commission for adjudication when this freeze ends—at the moment it is in March?

Mr. Reynolds: We had a meeting with the two railways in Montreal in November, as I recall, and they readily agreed that these commodity rates would be increased if the freeze came off or if it were possible for them to do it in some other way. They would not say that it would go up to the same rate they were charging us on empty bottles.

Mr. Nowlan: So you already have an indication from the railways that as far as the number one problem in your brief is concerned, this may be taken care of, regardless of anything else, by the railways once the freeze comes off?

Mr. Reynolds: If the freeze comes off or if they are free in some way to adjust that rate, which they are not at the moment.

Mr. Nowlan: Just to clarify the record, all your business is within this select area, is it not? I mean it is all within the Atlantic Provinces or the Maritimes?

Mr. Reynolds: Yes.

Mr. Nowlan: So you do not have the transportation problem out of the select area, which I think makes more relevant the obtainment of distribution and transportation cost figures.

Mr. Reynolds: Our freight bills are all inward.

Mr. Nowlan: Yes.

[*Interpretation*]

M. Reynolds: Nous parlons des étiquettes privées.

M. Rose: Les étiquettes des supermarchés?

M. Reynolds: C'est exact.

M. Rose: Merci.

Le président: Monsieur Nowlan.

M. Nowlan: Presque toutes mes questions ont été posées, une spécialement par M. Horner.

Vous dites que cette question du tarif marchandise a été étudiée par la Commission canadienne des transports et on vous a répondu qu'on ne peut rien faire avant que le Parlement n'agisse. Mais avez-vous eu un indice que normalement on charge plus pour les bouteilles pleines que pour les bouteilles vides et qu'on allait changer cela? Est-ce que vous préparez votre propre mémoire pour la Commission canadienne des transports lorsqu'on enlèvera le tarif fixe à la fin de mars?

M. Reynolds: Nous avons rencontré les deux compagnies de chemins de fer à Montréal, en novembre si je me souviens bien. Elles ont été d'accord que les frais de transport de ces denrées seraient augmentés lors du dégel du tarif, ou s'il était possible d'agir autrement et de contourner le problème. Les compagnies de chemins de fer n'ont pas voulu dire qu'on les augmenterait jusqu'au taux que nous payons à l'heure actuelle pour les bouteilles vides.

M. Nowlan: Ainsi, les chemins de fer vous ont déjà indiqué qu'en ce qui concerne votre principal problème, dans le mémoire, du moins, que cela serait réglé par les chemins de fer peu importe les autres questions.

M. Reynolds: Si les chemins de fer sont libres d'ajuster leur taux, mais ils ne sont pas libres de le faire à l'heure actuelle.

M. Nowlan: Votre rayon d'achat se trouve dans les Maritimes et alors vous n'avez pas le problème du transport en dehors de cette région choisie.

M. Reynolds: Oui.

M. Nowlan: Ainsi, vous n'avez pas de problème de transport en dehors de la région précitée, ce qui je crois justifie les chiffres des frais de transport et de distribution.

M. Reynolds: Toutes nos factures de transport portent sur les marchandises reçues.

M. Nowlan: Oui.

[*Texte*]

The Chairman: Mr. Rock.

Mr. Rock: Mr. Reynolds, does shipping by piggyback qualify through MFRA and does your Montreal competition ship by piggyback?

Mr. Reynolds: I believe some of them do, yes—not all but some. I think it depends on the destination. I think it depends on the railway sidings. We are back to the same old point: if there is a railway siding, it is a rail car and, if there is not, it is piggyback.

Mr. Rock: Mr. Reynolds, you mentioned in your statement unfair competition but, in doing so, you specified just the one area, supermarkets. In other words, are you saying there is no other competition in the soft drink industry except from supermarkets?

Mr. Reynolds: Yes, there is. I mentioned the supermarkets because, as you know, that is the floor under the business. I do not want to name names.

Mr. Rock: No.

Mr. Reynolds: But what happens is that the large companies have a broker in Halifax and in Saint John who acts strictly as a broker. He is going around and if there is a carload he brings it down—500 cases there and 800 there and so on. This is the way it operates.

Mr. Rock: Do you not believe that supermarkets sell soft drinks as loss leaders in the same manner as they do in the sale of bread?

Mr. Reynolds: I think they do that with their own brands. They certainly do not do it with ours.

Mr. Rock: Yes, I understand. I say this from experience, because I run a place called Lancaster Park and during the summer time I send out a truck for soft drinks. I have proven this to be the case.

The Chairman: We will charge you money for advertising.

Mr. Rock: The point is that I found this out through the company. I received soft drinks at exactly the same price as did the supermarket, yet the supermarket sold them cheaper than I could get them for.

Mr. Reynolds: That is right. It is a loss leader.

[*Interprétation*]

Le président: Monsieur Rock.

M. Rock: Monsieur Reynolds, est-ce que le transport rail-route aurait droit à la subvention de la Loi sur les tarifs marchandises des Maritimes et est-ce que votre concurrent de Montréal expédie par rail-route elle aussi?

M. Reynolds: Certains, oui, je le crois. Pas tous, mais certains. Je crois que cela dépend de la destination. Nous en revenons au vieux problème de savoir s'il s'agit de transport par chemin de fer ou par camion.

M. Rock: Vous avez mentionné dans votre déclaration, la concurrence injuste, mais vous avez mentionné une seule région ou un seul domaine, c'est-à-dire les marchés géants. En d'autres termes, il n'y a pas d'autre concurrence défavorable dans l'industrie des boissons gazeuses sauf dans le domaine des marchés géants?

M. Reynolds: Oui, il y en a certainement mais j'ai mentionné les marchés géants, car il s'agit du véritable problème de cette affaire. Je ne voudrais pas nommer les noms.

M. Rock: Non.

M. Reynolds: Mais les grandes compagnies ont un agent à Halifax, et à Saint-Jean, qui agit strictement comme agent. S'il a un changement disponible, il distribue 500 caisses ici, 800 caisses là, etc...

M. Rock: Ne croyez-vous pas que les marchés géants vendent les boissons gazeuses à perte tout comme ils le font pour le pain par exemple, afin d'attirer la clientèle?

M. Reynolds: Je crois qu'ils le font effectivement avec leur propre marque mais ils ne peuvent pas le faire avec les nôtres.

M. Rock: Oui, pendant l'été, je suis gérant de *Lancaster Park* et j'envoie un camion chercher des boissons gazeuses.

Le président: Nous allons vous faire payer la publicité.

M. Rock: Mais le point, c'est que j'ai découvert, grâce à la compagnie, que je recevais les boissons gazeuses au même prix que le supermarché, mais le supermarché vendait à un prix inférieur au mien.

M. Reynolds: Vous avez raison.

[*Text*]

Mr. Rock: Are there any canned soft drinks shipped into the Maritimes from Montreal?

Mr. Reynolds: Yes, and they come under the same commodity rate.

Mr. Rock: They do?

Mr. Reynolds: Yes, the same commodity rate.

The Chairman: Mr. Pringle.

Mr. Pringle: I have a very short question. We seem to be getting into the economics of the soft drink business. I thought maybe we should stick to transportation.

I was interested in the statement that the cost of transportation into the Maritimes appears to be less than out of the Maritimes, which brings up the problem of getting a product which is processed in the Maritimes to the markets in central Canada and in some cases in the West? Do we need to do something in this connection?

Mr. Reynolds: No, sir, we are not contemplating exporting our finished goods to what we refer to as "Upper Canada".

Mr. Portelance: What percentage of the soft drink business would you do here, even though there is competition from Quebec and the other provinces?

Mr. Reynolds: Our association?

Mr. Portelance: Yes.

Mr. Reynolds: Our association does around 8.5 million cases. What we are looking at at the moment is perhaps only 200,000 or 250,000 cases. We do not really know because we do not have any statistics. What we know is that it was not there at all three years ago, and we know it will tend to grow more and more if nothing is done about it.

The Chairman: Mr. Allmand.

Mr. Allmand: Sir, you are probably aware that the maritime premiers have asked for an extension of the freeze. What you want is an exception to what most maritimers seem to want.

[*Interpretation*]

M. Rock: Y-a-t-il des boissons gazeuses en canette qui sont expédiées vers les Maritimes à partir de Montréal?

M. Reynolds: Oui et au même tarif.

M. Rock: Ils font cela?

M. Reynolds: Au même taux.

Le président: Monsieur Pringle.

M. Pringle: Une très courte question. Il semble que nous nous dirigeons dans le domaine économique de l'industrie mais nous devrions peut-être revenir à la question des transports.

Le point qui m'intéressait, c'était une déclaration à l'effet que ce sont les frais de transport vers les Maritimes qui semblent être moins élevés qu'en allant à l'extérieur des Maritimes ou vers l'extérieur des Maritimes et alors le problème serait-il l'expédition vers les débouchés ou les marchés dans la partie centrale du Canada ou dans certains cas, dans l'Ouest? Pourriez-vous alors nous faire une déclaration à cet égard afin de savoir si nous devons agir?

M. Reynolds: Non, monsieur. Nous n'envisageons pas l'exportation de nos produits finis vers ce que nous appelons le Haut-Canada.

M. Portelance: Quel pourcentage de vos affaires dans les boissons gazeuses feriez-vous ici même s'il y a concurrence de la part du Québec ou d'ailleurs?

M. Reynolds: Notre Association?

M. Portelance: Oui.

M. Reynolds: Notre Association aurait une production d'environ 8 millions et demi de caisses, mais le cas que nous examinons à l'heure actuelle, vise 200,000 ou 250,000 caisses, nous ne le savons pas exactement, car nous n'avons pas de chiffres à ce sujet. Tout ce que nous savons, c'est que ce cas n'existait pas il y a trois ans. Nous savons que cela va augmenter de plus en plus si on ne fait rien à ce sujet.

Le président: Monsieur Allmand?

M. Allmand: Monsieur, vous savez probablement que les premiers ministres des Maritimes ont demandé le prolongement du gel des taux de transport; est-ce que vous voulez, c'est une exception plutôt à ce que la plupart des gens des Maritimes veulent?

[*Texte*]

Mr. Reynolds: Mr. Chairman, I am very conscious, indeed, that we are perhaps in the unique position of a minority of one.

Mr. Allmand: With respect to legislation, your case would have to be given very special consideration if you were to take exception. I am looking at the particular section in the law that now applies the freeze and wondering how we would work it out for people like you.

Mr. Reynolds: I realize that it would be very difficult, extremely difficult.

Mr. Horner: If the freeze were to remain on the MFRA and not remain on the Freight Rates Reduction Act would this be beneficial to you people?

Mr. Reynolds: I would like to refer that, if I may, to Mr. Armitage, my technical expert. May I do that, Mr. Chairman.

The Chairman: It would be a pleasure.

Mr. Armitage: Perhaps I should first interpret the question, Mr. Chairman, if I may. This would simply mean that the freeze would then remain westbound from the Atlantic Provinces to other parts of Canada and also on traffic within the region, but it would disappear in so far as traffic coming into the region was concerned. Now I think I would prefer to leave the answer to the question to Mr. Renaud because he is speaking on behalf of the soft drink industry.

I am sorry but I just interpreted the question as meaning that the freeze would disappear on eastbound but would remain in so far as traffic within the region is concerned and traffic westbound from the region to other parts of Canada, Now I think I would prefer, if it is all right with you, to leave the answer to you because you, after all, are speaking on behalf of the bottlers of soft drinks.

Mr. Reynolds: Certainly that would meet our problem.

Mr. Horner: Would you give the Committee some idea of the per cent of your market you have lost because of the freeze and the competition from Montreal?

Mr. Reynolds: I quoted these figures just now and they are off the top of my head. The total market in the Maritimes is of the order of 8.5 million and the goods coming in are of the order of 200,000 to 250,000. So it is not a

[*Interprétation*]

M. Reynolds: Monsieur le président, je sais très bien que nous sommes probablement dans une situation minoritaire.

M. Allmand: En ce qui concerne la Loi ou la législation, ce serait peut-être nécessaire d'étudier très attentivement votre situation particulière si vous voulez faire exception au gel car j'examine justement la Loi à cet égard, à l'égard du gel, et je me demande comment nous résoudrions le problème, ce serait difficile?

M. Reynolds: Extrêmement difficile, je suis d'accord.

M. Horner: Si le gel demeurait sur la Loi sur les tarifs marchandises des Maritimes et non pas sur le restant, qu'est-ce qui arriverait?

M. Reynolds: J'aimerais bien que M. Armitage y réponde, c'est mon spécialiste, en la matière technique.

Le président: Avec plaisir.

M. Armitage: Je devrais peut-être commencer par interpréter la question, si vous me le permettez monsieur le président. Cela voudrait dire tout simplement que le gel demeurerait sur le trajet vers l'Ouest, à partir des provinces de l'Atlantique vers les autres provinces du Canada et aussi pour ce qui est de la circulation à l'intérieur de la région concernée mais cela serait éliminé en ce qui concerne le trafic qui vient vers les Maritimes. Je préfère laisser répondre M. Reynolds à cette question car il parle au nom de l'industrie des boissons gazeuses. Est-ce que cela vous va M. Reynolds?

Je m'excuse, j'ai tout simplement interprété la question qu'en voulant dire que cela signifierait tout simplement que le gel disparaîtrait en ce qui concerne le trafic allant vers l'Est mais demeurerait en ce qui concerne le trafic interprovincial et vers l'Ouest du Canada. Je préférerais vous laisser répondre étant donné que vous parlez au nom des fabricants de boissons gazeuses.

M. Reynolds: Cela répondrait certainement à notre problème.

M. Horner: Et alors, à l'appui de ce problème, pourriez-vous nous dire quel pourcentage de votre marché auriez-vous perdu, en raison du gel et de la concurrence de Montréal?

M. Reynolds: Je vous ai donné ces chiffres tout à l'heure de mémoire mais le marché total dans les Maritimes est d'environ 8 millions et demi de caisses alors que les importations sont d'environ 200 ou 250,000 caisses, ce

[*Text*]

significant volume at this time; it displaces maybe 15 or 20 men. But it is the fact that it has grown from nothing to that figure over two years that one sees the trend, and what concerns us is that more and more of these perishing things are appearing on shelves all over the place.

Mr. Horner: You are fearful of the future if inbound traffic continues?

Mr. Reynolds: That is right.

Mr. Horner: Thank you.

The Chairman: Mr. Thomas.

Mr. Thomas (Moncton): Mr. Chairman, I have a supplementary question. I think we should clear the air on this matter of what the Maritimers want in respect of the freeze on freight rates. I agree with the four premiers, that this freeze on freight rates must continue. The problem here is not so much that you are in an awkward position because of the freeze but because bottled beverages have been classed as non-competitive and the rate has not been increased.

Mr. Reynolds: Right.

Mr. Thomas (Moncton): Now empty bottles have been classed as competitive and the rate is not frozen. Therefore I think that bottled beverages and empty bottles should be classed in the same category.

Mr. Reynolds: Right.

Mr. Thomas (Moncton): It is not a matter of taking off the freeze; it is a matter of putting the proper classification on bottled beverages. It is ridiculous that you can ship bottled beverages cheaper than you can ship empty bottles. We want the freeze to stay on.

Mr. Reynolds: Yes, sir, I am sure I do and I am sure all my colleagues and friends around would curse me into a heap if I said otherwise. But I can only quote, you see. I do not understand how on earth full beverages came to be regarded as non-competitive...

Mr. Thomas (Moncton): That is the point in a nut-shell, yes.

Mr. Reynolds: ...and empty bottles came to be regarded as competitive and subject to increase. It is beyond my comprehension. I write to your new commission.

[*Interpretation*]

qui veut dire qu'il n'y en a pas tellement à l'heure actuelle, le volume n'est pas tellement grand. Cela a mis en chômage peut-être 15 ou 20 hommes mais c'est le fait que toute cette histoire n'est partie de rien jusqu'à ce chiffre au cours d'une période de deux ans et qu'on voit justement une tendance se dessiner.

M. Horner: Vous craignez l'avenir donc si ce trafic continue vers les Maritimes.

M. Reynolds: Vous avez raison.

M. Horner: Merci.

Le président: Monsieur Thomas.

M. Thomas (Moncton): Une question complémentaire. Je crois que nous devrions peut-être régler la question de ce que veulent les gens des Maritimes en ce qui concerne le gel sur les tarifs marchandises. Je suis du même avis que les quatre premiers ministres, qu'on doit continuer ce gel du tarif marchandise. Le problème, ce n'est pas que votre situation soit fixée en raison du gel mais plutôt en raison du fait que les boissons gazeuses en bouteilles sont censées être non-concurrentielles et que le taux n'a pas été augmenté.

M. Reynolds: Oui.

M. Thomas (Moncton): Les bouteilles vides ont été classées comme concurrentielles et le tarif n'est pas gelé, par conséquent notre problème, à mon sens, c'est que les boissons en bouteilles et les bouteilles vides devraient être dans la même catégorie.

M. Reynolds: Vous avez raison.

M. Thomas (Moncton): Il n'est pas question d'éliminer le gel mais tout simplement que la classification soit la même pour les deux catégories. C'est ridicule de voir qu'on peut avoir deux tarifs différents pour des bouteilles vides ou pleines.

M. Reynolds: Oui, je suis sûr que personnellement, je le veux et les autres autour de la table m'en voudraient si je le niais. Je ne puis que citer, je ne connais pas tous les points techniques. Comment a-t-on pu considérer les bouteilles pleines comme étant non-concurrentielles.

M. Thomas (Moncton): C'est là le point critique.

M. Reynolds: Alors que les bouteilles vides sont censées être concurrentielles et par conséquent sujettes à une augmentation, je ne comprends vraiment pas. Par conséquent, j'écrirai à la nouvelle Commission canadienne des transports.

[*Texte*]

Mr. Thomas (Moncton): Your position has been aggravated by the fact that they class bottled beverages as non-competitive?

Mr. Reynolds: Right.

Mr. Thomas (Moncton): Which is ridiculous. I just wanted to clarify that.

Mr. Nowlan: I have a supplementary question. Surely the CTC has power to reclassify this anomaly regardless of the freeze.

Mr. Reynolds: I have been corresponding with Mr. Hellyer's executive assistant and he assures me that he has not.

Mr. Nowlan: I do not care about Mr. Hellyer's executive assistant—there is a new one there right now—and we do not even know where Mr. Hellyer is most of the time. But have you been corresponding with the CTC, Mr. Pickersgill?

Mr. Reynolds: I understand my correspondence was sent across to the expert of the CTC and it was their reply that I got.

Mr. Nowlan: You got a reply from the CTC?

Mr. Reynolds: No sir, I got a reply quoting the CTC.

Mr. Nowlan: On a point of order, Mr. Chairman, is there a CTC observer in this room right now?

The Chairman: Not that I know of, Mr. Nowlan.

Mr. Nowlan: There are other observers from other interested bodies. Do you mean to say that there is no observer from the Canadian Transport Commission at these proceedings in the Atlantic area?

The Chairman: Not to my knowledge.

Mr. Nowlan: I could make a comment about that, but I wonder, Mr. Chairman, if we could get this anomaly corrected. Regardless of the production of soft drinks and all the other problems in the Atlantic area I, for one, would be interested in the copy of the letter you got from the Minister. I think a letter should have come from the CTC and that there should have been a CTC ruling on it. I think, further, Mr. Chairman, that there should be some missive from this Committee stating that the CTC should have an observer. If other people can take the time to sit here for X number of hours at some of the meetings of this Committee, I do not know why they cannot. I think this is a real omission.

[*Interprétation*]

M. Thomas (Moncton): Votre situation est pire du fait qu'on classe les bouteilles vides comme non-concurrentielles.

M. Reynolds: Oui, c'est exact.

M. Thomas (Moncton): C'est une chose que je ne comprends aucunement, je voulais tout simplement éclaircir le point.

M. Nowlan: Question supplémentaire. La Commission a sûrement le pouvoir de reclasser cette question, peu importe le gel.

M. Reynolds: J'ai eu un échange de correspondance avec l'adjoint exécutif de M. Hellyer qui m'assure que ce n'est pas vrai.

M. Nowlan: Peu m'importe l'adjoint exécutif, il a été remplacé et il y en a un nouveau et la plupart du temps, nous ne savons pas où se trouve M. Hellyer. Mais avez-vous communiqué avec la Commission, avec M. Pickersgill?

M. Reynolds: Ma correspondance, si j'ai bien compris, a été transmise aux experts, aux spécialistes de la Commission et c'est la réponse que j'ai reçue de la Commission.

M. Nowlan: Vous avez reçu une réponse de la Commission?

M. Reynolds: Non, j'ai reçu une réponse citant la Commission.

M. Nowlan: Est-ce que je pourrais avoir un renseignement? Est-ce qu'il y a des observateurs de la Commission à l'heure actuelle?

Le président: Pas à ma connaissance.

M. Nowlan: Il y en a des autres partis, mais voulez-vous dire qu'il n'y a pas d'observateurs de la Commission au cours de nos séances dans la région de l'Atlantique?

Le président: Pas que je sache.

M. Nowlan: Je pourrais peut-être formuler un commentaire à ce sujet-là mais je me demande, monsieur le président, si on peut corriger cette anomalie. Peu importe la production des boissons gazeuses, et les problèmes de la région de l'Atlantique, personnellement, j'aimerais bien voir une copie de la lettre que vous avez reçue du ministre qui à mon sens aurait dû venir de la Commission. Il aurait dû y avoir une décision de la part de la Commission et de plus, le Comité devrait dire à la Commission qu'elle envoie un observateur, s'il y en a d'autres qui prennent le temps de siéger pendant X nombre d'heures, la Commission devrait avoir un observateur. C'est un véritable manquement.

[*Text*]

The Chairman: I think it will be in our report, Mr. Nowlan. You can rest assured of that.

Gentlemen, this is the end of the question period. I would like to thank Mr. Reynolds and Mr. Lynch for the way they have answered the questions.

Mr. Reynolds: Thank you very much for giving us so much time. Shall I send a copy of that correspondence to our Chairman?

The Chairman: Yes.

Gentlemen, our next brief will be from the City of Saint John and I would like to call upon the delegation from that city. We have with us His Worship Mayor Joseph A. MacDougall and Mr. Pappas.

I will now call upon His Worship to give us a briefing.

His Worship Joseph A. MacDougall (Mayor of the City of Saint John, N.B.): Mr. Chairman and members of the Committee. I would like to say at the outset that we are grateful, finally, for the opportunity of appearing before the Committee. Because our particular brief is primarily to do with the Freight Rates Reduction Act and so on I have asked our Common Clerk, who is also a lawyer, to present this brief so that he would be able to answer any technical problems with respect to the questions.

Now at the outset I would say that we, as a city, substantially endorse the brief of the Saint John Port and Industrial Development Commission and, again, substantially the Board of Trade of the City of Saint John. We are perhaps a little bit more general than the Board of Trade in so far as we support them in all the remarks they have made or will make with the possible exception that we are a little more general in our request for an international airport, basically southwestern New Brunswick, to service all the people in that area—cities like Fredericton, Saint John, Sussex, St. Stephen, St. George and so on. We take in perhaps a little broader area than was mentioned in the brief by the Board of Trade.

I will now ask Mr. Pappas, our Common Clerk, to present the brief on behalf of the city.

Mr. D. Pappas (Common Clerk of the City of Saint John, N.B.): Thank you, Mr. Chair-

[*Interpretation*]

Le président: La Commission sera au courant de ce qui se passe. Voici la fin de la période des questions, je voudrais remercier M. Reynolds et M. Lynch de la façon qu'ils ont répondu à nos questions.

M. Reynolds: Merci beaucoup.

Est-ce que je peux envoyer une copie de cette correspondance au président?

Le président: Oui. Messieurs, maintenant, nous entendrons le mémoire de la Ville de Saint-Jean et je demanderais donc à la délégation de la Ville de Saint-Jean de venir se présenter. Son Honneur le maire M. Joseph A. MacDougall, M. Pappas, M. Stanley Rice. Je demande donc à Son Honneur le maire de nous présenter son mémoire.

M. MacDougall (maire de Saint-Jean, N.B.): Monsieur le président, membres du Comité, je voudrais vous dire tout d'abord que nous sommes heureux enfin d'avoir une occasion de comparaître au Comité et vu que notre mémoire traite essentiellement de la Loi sur les tarifs ferroviaires et ainsi de suite, j'ai demandé au greffier, qui est aussi avocat, de vous présenter ce mémoire pour qu'il soit en mesure de répondre à tout problème d'ordre technique qui pourrait se poser quant aux questions que vous aimeriez nous présenter.

Tout d'abord, je vous dirais qu'en tant que représentants de notre ville, nous appuyons vraiment le mémoire de la *Saint John Port and Industrial Development Commission* et une fois de plus aussi, nous appuyons le mémoire de la Chambre de commerce de la ville de Saint-Jean. Nous sommes peut-être un peu plus général que la Chambre de commerce mais nous appuyons tout de même toutes les observations que cet organisme a faites ou fera et aussi peut-être avec cette exception que nous avons une représentation plus générale pour l'obtention d'un aéroport international dans le Sud-Ouest du Nouveau-Brunswick pour desservir toute la population de cette région, les villes de Fredericton, de Saint-Jean, Sussex, Saint-Stephen, Saint-George et ainsi de suite.

Nous incluons donc peut-être une région un peu plus vaste que celle qui est mentionnée dans le mémoire de la Chambre de commerce.

Donc je cède la parole à M. Pappas, notre greffier, afin qu'il vous présente le mémoire au nom de la Ville de Saint-Jean.

M. Pappas (Greffier de la Ville de Saint-Jean, Nouveau-Brunswick): Merci beaucoup

[*Texte*]

man. What we have pointed out in our brief is that the lower rates provided for in the Maritime Freight Rates Act is intended to give an advantage to the Maritime Provinces over comparative rates in other parts of Canada. However we feel that the introduction of competition to the railways by other forms of transport has to a certain extent destroyed these advantages.

We have also referred to the National Transportation Act in which it states that the national policy in connection with transportation is to relate the total costs in order to maintain economic well-being.

We also mention that the Maritimes are still in the position of being required to pay more to transport their goods to the markets in Central and Western Canada because of the greater distances involved from those markets, and we also feel that for this reason the national policy does not take into account these geographical differences.

We have also pointed out that Section 1 of the National Transportation Act refers to situations where all modes of transport are able to compete. It is our submission in this respect that in order to give effect to this national policy it therefore becomes necessary to re-examine the Maritime Freight Rates Act and apply the subsidies contained therein to other forms of transport. I believe the 1960 report of the Economic Intelligence Unit relating to the Atlantic and Maritime transportation studies also makes reference to this as well.

Our second point is that under the Railway Act, as amended by the National Transportation Act, certain fixed rates are set in relation to flour and grain which are shipped to the eastern ports. Obviously the purpose of this section is to encourage the continued use of the eastern ports for the export of grain and flour.

Just briefly, under the scheme the Governor in Council is authorized to pay to a railway company that carries this flour and grain to the eastern ports at these fixed eastern rates an amount equal to the difference between the amount received and the rate that would normally have been charged. We make reference to the fact that the eastern ports, particularly the one in Saint John, have the facilities for transporting, shipping and loading all types of commodities in addition to flour and grain.

For this reason, it is our submission that in order to make greater use of these existing port facilities and to effectively assist trans-

[*Interprétation*]

monsieur le président. Ce que nous exposons dans notre mémoire, c'est le fait que le taux inférieur prévu par la Loi sur les taux de transport dans les Maritimes donne un avantage aux provinces Maritimes comparativement aux autres tarifs dans les autres régions du Canada. Cependant, nous sommes d'avis que la concurrence apportée par les autres modes de transports se trouve à annuler ces avantages dans une certaine mesure.

Nous parlons ici de la Loi nationale sur les transports où l'on déclare que la politique nationale à l'égard du transport doit rattacher l'ensemble des coûts afin de maintenir un bien-être sur le plan économique.

Nous parlons aussi du fait que les Maritimes se trouvent dans la situation où elles doivent toujours payer davantage pour l'acheminement de leurs denrées vers les marchés du Canada central et de l'Ouest, et donc pour cette raison, la politique nationale, à notre avis, ne tient pas compte de ces écarts géographiques.

Nous signalons de même qu'à l'article Un de la Loi nationale sur les transports, on parle d'une situation où tous les modes de transport sont comparés et nous sommes d'avis que pour mettre en vigueur cette politique, il est donc essentiel que les subsides soient aussi consentis pour les autres modes de transport. Nous savons aussi que dans le rapport de 1966 de l'*Economic Intelligence Unit* ayant trait à l'étude sur le transport dans les Maritimes on parle aussi de cet aspect de la question.

Deuxièmement, en vertu de la Loi sur les chemins de fer modifiée par la Loi nationale des transports, certains taux fixes sont établis par rapport aux céréales, à la farine qui sont expédiées vers les ports de l'Est.

De toute évidence, ces dispositions ont pour but d'encourager l'utilisation soutenue des ports de l'Est pour l'acheminement de la farine et des céréales.

Donc, en vertu de ce programme, le gouverneur en Conseil est autorisé à payer à la société ferroviaire qui fait le transport des céréales ou de la farine vers les ports de l'Est, un montant égal à la différence entre le montant reçu et le taux qui aurait été exigé normalement.

Nous parlons du fait que les ports de l'Est surtout celui de Saint-Jean, ont les installations de transport et de chargement de tous

[*Text*]

portation in the Atlantic Provinces, the provisions of the Railway Act be enlarged so that eastern rates be applied to a variety of commodities in addition to grain and flour. And we make this submission solely on the assumption that no competitive mode of transport to the eastern ports is available for these other commodities.

The final point we make is that since it is evident under the National Transportation Act that shippers are encouraged to use facilities at the ports of Saint John and Halifax, there may be situations arise which have the direct effect of lessening the use of these two major ports.

We suggest that some measure of control be imposed on the planning and establishment of harbour facilities in the Maritimes. This may be prompted by a maritime or some form of regional harbour control board given adequate powers to consider applications for new ports as they are presented to them. We feel that the proper planning of ports in this way could achieve economies and generally upgrade the efficiency of transportation in the Maritime Provinces. Thank you.

The Chairman: Mr. Breau, do you have a question?

Mr. Breau: I have just one short question. The mayor mentioned the feasibility of an international airport at Saint John. Would this be located in Saint John or would it be outside?

Mr. MacDougall: I did not use the word "Saint John" as such. I said "to serve the people in the entire southwestern area".

Mr. Breau: Would this include Moncton.

Mr. MacDougall: Yes.

Mr. Breau: Have you any idea where a suitable location would be?

Mr. MacDougall: I have ideas on areas, yes.

Mr. Breau: Do you mind telling the Committee? Has it not been made public yet?

Mr. MacDougall: No.

[*Interpretation*]

genres de denrées en plus de chargement des céréales et de la farine dans cette région.

Nous sommes d'avis que pour mieux utiliser ces installations portuaires et pour vraiment aider au système des transports dans les provinces de l'Atlantique, les dispositions de la Loi doivent être modifiées pour que le taux de l'Est s'applique à tout un ensemble de denrées, en plus des céréales et de la farine.

C'est là notre recommandation, simplement, en partant du fait qu'il n'y a pas de mode concurrentielle pour le transport de ces autres denrées vers l'Est.

Une dernière observation que j'aimerais faire, c'est qu'en vertu de la Loi nationale des transports, les expéditeurs sont encouragés à avoir recours au service des ports de Saint-Jean et d'Halifax, et que la situation qui se présenterait alors serait que nous aurions des services portuaires faisant double emploi et qui ne seront pas utilisés vraiment efficacement.

Nous proposons donc qu'il y ait un certain contrôle sur l'aménagement, le service portuaire dans les Maritimes, ce qui pourrait être fait par une Commission des ports nationaux sur le plan régional qui étudierait les demandes de nouveaux aménagements portuaires au fur et à mesure où ces dernières seraient présentées.

Nous sommes d'avis qu'une planification appropriée pour les ports servirait mieux l'économie afin d'améliorer l'efficacité du rendement du transport dans les Maritimes.

Merci beaucoup.

Le président: Monsieur Breau, avez-vous une question?

M. Breau: J'ai une question très brève.

Le maire MacDougall a parlé, je pense, de la possibilité d'avoir un aéroport international à Saint-Jean, est-ce que ce serait à Saint-Jean ou à l'extérieur?

M. MacDougall: Non, je n'ai pas parlé de Saint-Jean comme tel, j'ai parlé d'un aéroport pour desservir la population du Sud-Ouest.

M. Breau: Cela inclurait Moncton?

M. MacDougall: Oui.

M. Breau: Quel serait le meilleur emplacement d'après vous?

M. MacDougall: J'ai des idées quant à cet emplacement.

M. Breau: Auriez-vous la possibilité de nous dire ce qu'il en est? Est-ce public?

M. MacDougall: Non, pas encore.

[*Texte*]

Mr. Breau: Would it be in Saint John? Can you answer that?

Mr. MacDougall: No, I do not think so. We are not considering the possibility of an airport in Saint John because of the problems that we have had with weather and so on. We do not feel, after the years that we have had a port there, that it would be feasible to have an international airport because of our weather conditions.

Mr. Breau: We have read a lot in the press about the possibility of Chatham being used as an international airport. Would this serve you in Saint John?

Mr. MacDougall: Not too well.

Mr. Breau: What about Moncton? How far is it from Moncton to Saint John?

Mr. MacDougall: About 90 miles.

The Chairman: Mr. Bell.

Mr. Bell: Mr. Pappas, I understand that you feel that the principle of assisting flour and grain through Maritime ports, which has been established for quite some time now and re-instituted into the National Transportation Act, should be applied to other commodities?

Mr. Pappas: I am sorry, Mr. Bell, I did not hear the last part of your question.

Mr. Bell: You feel that this principle, which has been established for some time and has been reinstituted into the new National Transportation Act, of assisting certain commodities to use the ports of Halifax and Saint John could be well applied to other commodities.

Mr. Pappas: Yes, we do. It would have to be seriously looked at. We do not have the facilities ourselves to make any sort of study in depth, so to speak, but we feel that it warrants perhaps further investigation. We are not suggesting to you what sort of commodities might be involved here. We also have to consider the manufacturers in the Maritimes when you consider subsidizing commodities that are brought here, or that are brought into the Maritimes from the outside. But simply for the purpose of utilizing the facilities of the ports, say, for export shipments, it could very well be applied to certain commodities.

[*Interprétation*]

M. Breau: Est-ce que ce serait à Saint-Jean? Pouvez-vous nous répondre?

M. MacDougall: Non, je ne crois pas. On ne songe pas à la possibilité d'avoir un aéroport à Saint-Jean. Je pense que les problèmes météorologiques que nous connaissons nous indiquent qu'il serait impossible d'avoir un aéroport international.

M. Breau: Nous avons beaucoup entendu parler dans les journaux, je ne sais pas si cela est vraiment pertinent ici, mais on a parlé de la possibilité d'utiliser l'aéroport de Chatham pour un aéroport international qui desservirait Saint-Jean.

M. MacDougall: Pas tellement.

M. Breau: Combien de milles y a-t-il de Saint-Jean à Moncton?

M. MacDougall: 90 milles.

Le président: Monsieur Bell.

M. Bell: Je voudrais simplement demander à M. Pappas: êtes-vous d'avis que le principe voulant que l'on aide au transport des céréales et de la farine pour leur expédition par les ports des Maritimes est établi depuis un certain temps et nous l'avons inséré dans la nouvelle loi sur les transports et cela devrait s'appliquer aux autres denrées.

M. Pappas: Je m'excuse monsieur Bell, je n'ai pas entendu la dernière partie de votre question.

M. Bell: Ce principe que vous prétendez être établi depuis un certain temps visant à aider au transport de certaines denrées pour qu'on utilise les ports de Saint-Jean et Halifax, ces denrées auxquelles on songe maintenant sont la farine et les céréales, trouvez-vous que cela pourrait s'appliquer aussi dans le cas d'autres denrées?

M. Pappas: Oui, c'est là notre avis. Il faudrait vraiment étudier la question. On ne pourrait avoir les services nous-mêmes pour faire une étude sérieuse sur la question mais nous sommes d'avis que cela mériterait d'être étudié plus longuement. Nous ne suggérons pas quel genre de denrées pourraient être visées par ces dispositions, mais nous avons aussi songé aux fabricants dans les Maritimes si vous reconsidérez la possibilité de subventionner les denrées qui sont acheminées vers les Maritimes, simplement aux fins d'utiliser les services portuaires, disons pour l'expédition des exportations, cela pourrait aussi s'appliquer pour certaines autres denrées.

[*Text*]

Mr. Bell: You have not had a chance to study some sort of arrangement with the New England States for the transfer of commodities of this nature? I am thinking of the motor car agreement that we have in Southern Ontario, which is definitely a certain type of arrangement. Do you not agree that something could be done, on a reciprocal basis, with the products of the Atlantic area and the New England States?

Mr. Pappas: I think you are quite right there. I think the natural market for the Maritimes is north-south as opposed to east-west. Perhaps this is one of the things that was given up when the Maritimes agreed at the time of Confederation. In a distance of not more than 300 to 400 miles, we have markets of many many millions of people—probably more than the entire population of Canada. I think you are quite right, that perhaps some arrangements could be made on an exchange with the Eastern States of the United States.

Mr. Bell: I wish to ask Mayor MacDougall one final question. We have been successful in having a new CPR service with Digby almost in our hot little fists. Does he now give top priority to the new airport for southwestern New Brunswick that has been mentioned by him and by the other Saint John briefs we are going to hear? Would you put it in first place? That is what I am asking.

Mr. MacDougall: No, I would not necessarily put it in first place. I believe on the long-haul, yes, it would be number one; but I feel that the stepping up of port facilities, which, in my opinion, is long-overdue, would be in first place, because this is a must and is needed yesterday.

Mr. Bell: On this matter of port facilities, do you have any complaints, from a Saint John standpoint, about the railways having given any preference in rates, or any other extra consideration, to Halifax? I do not want to get into the Halifax-Saint John argument in any way, but are you fully satisfied, as the Mayor of Saint John, that in the negotiations for containers and the like in the two ports the railways have shown any par-

[*Interpretation*]

M. Bell: Vous n'avez pas eu l'occasion de faire une étude afin de voir si on ne pourrait pas prendre des dispositions avec les États de la Nouvelle-Angleterre pour le transfert de certaines denrées. Je songe, disons, à l'entente pour les véhicules moteurs, que nous avons pour le sud de l'Ontario et qui constitue certainement un certain type d'entente. Ne convenez-vous pas alors que quelque chose de ce genre, pourrait être fait sur une base réciproque pour les produits de la région atlantique et des États de la Nouvelle-Angleterre?

M. Pappas: Je pense que vous avez tout à fait raison, là. Le marché naturel pour les produits des Maritimes se fait du nord au sud plutôt que de l'est à l'ouest. C'est peut-être là une des choses auxquelles on a renoncé lorsque les Maritimes ont convenu d'adhérer à la Confédération. Dans une distance d'au plus trois à quatre cents milles, nous avons des débouchés possibles d'un bon nombre de millions de personnes, peut-être plus que toute la population du Canada. Vous avez tout à fait raison. Je pense que certaines dispositions pourraient être prises en vue d'entreprendre des échanges entre les États de l'est et les États-Unis.

M. Bell: Je voudrais, donc, poser une dernière question, au maire MacDougall. Nous avons presque réussi à obtenir un nouveau service du Pacifique-Canadien à Digby. Donne-t-il à présent la première priorité à l'aménagement du nouvel aéroport pour desservir la région du sud-ouest du Nouveau-Brunswick, comme il l'a mentionné, et comme l'indiquent les autres mémoires de Saint-Jean que nous entendrons plus tard.

Est-ce que vous établissez cette première priorité pour l'aéroport?

M. MacDougall: Non, je ne pense pas que c'est vraiment là la première priorité, mais je crois qu'à long terme, oui, ce serait la principale priorité, et je dirais que l'accélération des travaux d'aménagements portuaires qui, à mon avis sont dus depuis longtemps, occuperait la première priorité, parce que c'est essentiel, et que nous en avions besoin, depuis longtemps.

M. Bell: Pour ce qui est des aménagements portuaires, est-ce que vous avez des plaintes, des griefs, du point de vue de Saint-Jean, du fait que les chemins de fer aient donné un traitement préférentiel quant aux taux ou toute autre considération à Halifax. Et je ne veux pas soulever une controverse entre Saint-Jean et Halifax. Est-ce que vous êtes vraiment sûr, en votre qualité de maire de Saint-Jean, qu'au cours des négociations qui

[*Texte*]

ticular preference? Have there been complete fairness and impartiality in the negotiations with the railways relative to your responsibilities?

Mr. MacDougall: Sticking strictly to my own responsibility, in which I was very closely associated with the negotiations, I can only repeat what I said publicly, that we were prepared to guarantee a reduction of the cost of shipping a container from a given stand point in England into Montreal, Toronto, Detroit, or Chicago via Saint John, as against Halifax. We were prepared to put a reduction in writing and guarantee it. We lost it.

I have yet to have anybody explain this to me. Therefore, I cannot say "unfair"; I do not know. But we were prepared to put this in writing, and we lost it. Indeed, the federal government's studies, both the Atlantic Development Board one and the second study, confirmed what we were offering a cheaper cost of putting a container through from a given point in England to those given points of Montreal, Toronto, Detroit and Chicago.

That held up in the first group, but in the last, in Chicago, it dropped somewhat due to the fact that, going through Saint John on the CPR line, they would, for a certain leg of the journey, have to farm this out because they had to lease the railroad for a short portion of the road. Therefore, a little of it was lost there. But, in any case, there was a guarantee of less cost into all of those areas.

Just what happened, or how this is explained, I do not know, and I cannot say "unfair". I can say that in fact it did happen, and we just do not know the answer.

Mr. Bell: All I can say, Mr. Chairman, is here is item No. 2 for the Canadian Transport Commission to investigate. Thank you very much.

The Chairman: Mr. Perrault?

Mr. Perrault: Mr. Chairman, I wish to ask His Worship and his colleague a question. I am interested in the recommendation in their brief that subsidies be paid to all modes of transport. One modification in the brief

[*Interprétation*]

ont eu lieu, disons, pour les *containers* et ainsi de suite, entre les deux ports, les chemins de fer ont fait preuve de préférence? En ce qui vous concerne, croyez-vous que les négociations avec les compagnies de chemins de fer ont été complètement honnêtes et impartiales?

M. MacDougall: Pour ce qui est de ma propre responsabilité, ayant étroitement participé aux négociations, je ne peux que répéter ce que j'ai déclaré au public. Nous étions prêts à garantir une diminution du coût d'expédition de *containers*, à partir d'un point donné en Angleterre vers Montréal, Toronto, Détroit, Chicago, par Saint-Jean, comparativement à Halifax. Et nous étions prêts à consentir, par écrit, une réduction et à la garantir. Nous l'avons perdue.

Personne ne me l'a expliqué encore, et par conséquent, je ne puis dire, «injuste». Je n'en sais rien. Mais, nous étions prêts à nous engager, par écrit, à maintenir une garantie. Nous avons perdu, et les études effectuées par le gouvernement fédéral sur l'Office du développement de l'Atlantique, puis la deuxième étude qui a aussi confirmé le fait que nous offrions un prix inférieur pour l'expédition de *containers* à partir d'un point donné en Angleterre vers ces points de Montréal, Toronto, Détroit, Chicago.

Pour premiers groupes, is l'ont maintenu, mais pour le dernier, à Chicago, cela a baissé quelque peu, dû au fait qu'en passant par Saint-Jean, la ligne du C.P.R. devrait, pour une partie du trajet, avoir recours, disons, aux services ou faire la location de services ferroviaires pour une petite portion de la route. Par conséquent, nous avons perdu quelque peu de ce côté, mais de toute façon, on était sûr que le coût serait moins élevé, pour toutes ces régions à partir de Saint-Jean.

Alors, que s'est-il produit? comment peut-on l'expliquer, je n'en sais rien. Je ne saurais vous dire qu'il est injuste. Je puis vous dire que cela s'est produit, mais nous ne savons pas du tout quelle en est la réponse.

M. Bell: Tout ce que je puis dire, monsieur le président, c'est le poste n° 2 que la Commission canadienne des transports doit examiner. Merci beaucoup.

Le président: Monsieur Perrault?

M. Perrault: Monsieur le président, j'aimerais poser une question à Son Honneur et à ses collègues. Ce qui m'intéresse, ce sont les recommandations qu'ils formulent dans leur mémoire, soit que des subventions soient

[*Text*]

recommends that this be done to achieve the original purposes of the MFRA.

Now, subsidies are costing the Canadian taxpayer millions of dollars a year all across this country, and my question is: At what point will it be possible to remove subsidies in this area?

Is this recommended as a policy in perpetuity? Should not the object of subsidies be to enable a certain area, or industry, to achieve a competitive position?

Have you established any targets which would enable the federal government to remove the need to subsidize the Maritimes? I am not being critical of the Maritimes because I know that many other parts of the country are being subsidized, as well—indeed, all provinces, in some form.

Mr. MacDougall: I have a definite point in time. It would be at the time that those who talked us into Confederation were to see to it that we were given back all of the things we had prior to Confederation, and that we were to be on a parity with Central Canada. That is the exact time.

Some hon. Members: Hear, hear.

Mr. Perrault: It is still an indeterminate date, Mr. Chairman, but His Worship's observation is quite interesting.

Relative to a subsidy, has any dollar estimate been prepared by the City of Saint John on the effect of subsidizing all modes of transport from the Maritimes to Central Canada? How much will it cost the Canadian taxpayer to do this?

Mr. MacDougall: No, we have not done a study on that. I believe, though, if you are interested in that particular point, that a study is being done, or is being completed, and is being presented to the federal government.

Mr. Perrault: Thank you.

The Chairman: Mr. Horner?

Mr. Horner: Just to clarify it in my mind, Mr. MacDougall, there has also been a suggestion that the MFR rates should be applied to products coming into the Maritimes for Maritime consumption. You are not in any way suggesting that? You are merely suggesting that the proposed rate that is now

[*Interpretation*]

payées à tous les modes de transports et une modification qui se trouve dans le mémoire recommande qu'il en soit tenu compte afin de réaliser les objectifs initiaux de la Loi sur les taux de Transports des marchandises dans les provinces Maritimes. Les subsides coûtent présentement aux contribuables canadiens des millions de dollars par année, à travers le Canada et la question que je voudrais poser est la suivante: à quel point serait-il possibe de faire disparaître les subsides dans cette région?

Cette politique s'applique-t-elle indéfiniment? Le but des subsides n'est-il pas d'aider un certain secteur ou une industrie à atteindre une position compétitive? Avez-vous établi un objectif qui permettrait au gouvernement fédéral de faire disparaître cette nécessité de subventionner les Maritimes? Je ne critique pas les Maritimes, parce que je sais que bon nombre des autres régions du Canada reçoivent aussi des subventions. Toutes les provinces, d'ailleurs.

M. MacDougall: Oui. J'ai établi un objectif. Ce serait au moment où ces personnes qui nous ont convaincus d'entrer dans la Confédération, devraient s'assurer que nous récupérions tout ce que nous avions avant d'entrer dans la Confédération et que nous soyons sur un pied d'égalité avec le centre du Canada. Voilà le moment exact.

Des voix: Bravo, bravo.

M. Perrault: C'est donc une date imprécise, indéterminée. Mais l'observation de Son Honneur le maire est assez intéressante. En ce qui concerne une subvention, la Ville de Saint-Jean a-t-elle jamais prévu ce que seraient les répercussions financières de subventionner tous les modes de transports des Maritimes vers le centre du Canada? Combien en coûterait-il aux contribuables canadiens pour le faire?

M. MacDougall: Non, nous n'avons pas fait une telle étude. Mais, seulement, je pense que si vous êtes intéressés à connaître ces données, on est en train de faire une étude, ou sur le point de la terminer et de la présenter au gouvernement fédéral.

M. Perrault: Merci.

Le président: Monsieur Horner?

M. Horner: Monsieur MacDougall, voici: on a dit que les taux du transport des marchandises dans les Maritimes, devraient aussi s'appliquer pour ce qui est expédié dans les Maritimes, pour la consommation dans les Maritimes. Ce n'est pas du tout ce que vous dites. Vous dites simplement que les taux

[*Texte*]

applicable to flour and grain for export be applied to other commodities for export, for the better use of the ports, not for the consumption?

The Chairman: Mr. Mahoney?

Mr. Mahoney: Perhaps I should tell the witness that those who are recording the proceedings are having a difficult time recording nods and shakes of the head.

The Chairman: Mr. Mahoney, will you talk into your mike, please?

Mr. Mahoney: I thought perhaps the witness might record his answers to the last two questions before I started.

Section 329 deals with two rather specific classes of commodities at the present time, and also with commodities originating elsewhere in Canada where it seems to be in the national interest that a subsidy be paid so that the eastern ports be used. I question, however, that it was designed primarily to subsidize the eastern ports. I suggest it was rather to allow of continuity in transport and in export.

Do you not feel that in presenting this proposal to the Committee for its serious consideration it would be incumbent on you, if not now, at some later date, to supplement your brief by suggesting certain specific classes of commodities that should be treated in the same way as grain and flour?

The Chairman: Mr. MacDougall?

Mr. MacDougall: I am going to hand that one to Mr. Pappas.

Mr. Pappas: First I must say that we have as yet made no studies along the line you have suggested. We believe that there are organizations which can produce these sorts of recommendations. We are not saying we are the ones who can do it, but we would be prepared to examine it in further detail for the Committee and perhaps arrive at something more definite than is set out in the brief.

Mr. Mahoney: In other words, the essence of your recommendation is that there must be other commodities that perhaps should be treated the same as grain and flour, and that someone should study the situation?

[*Interprétation*]

suggérés applicables présentement à la farine et aux céréales d'exportation s'appliquent aussi aux autres denrées d'exportation pour une meilleure utilisation des installations portuaires et non pour la consommation?

Le président: Monsieur Mahoney?

M. Mahoney: Je dois attirer l'attention du témoin sur le fait que les préposés à l'enregistrement des comptes rendus ne peuvent enregistrer des signes de la tête.

Le président: Monsieur Mahoney, voulez-vous parler dans le micro s'il vous plaît?

M. Mahoney: Le témoin voudrait-il enregistrer ses réponses aux dernières questions avant que je ne commence.

L'article 329, traite à l'heure actuelle de deux catégories bien précises de denrées, et aussi, de denrées provenant d'autres points du Canada, où il semble être dans l'intérêt national de verser des subsides pour qu'on utilise les ports de l'Est. Je me demande si cela a été essentiellement conçu pour subventionner les ports de l'Est. Je pense que c'était plutôt pour permettre une solution de continuité dans les transports et les exportations.

N'êtes-vous pas d'avis qu'en présentant cette proposition au Comité pour étude sérieuse, il vous incombait, sinon présentement, du moins à une date ultérieure, de proposer que certaines catégories spécifiques de denrées devraient recevoir le même traitement que la farine et les céréales?

Le président: Monsieur MacDougall?

M. MacDougall: Je cède la parole à M. Pappas.

M. Pappas: Tout d'abord, je dois vous dire que nous n'avons pas encore fait d'études selon la proposition que vous avez faite. Nous sommes d'avis qu'il y a des organismes qui peuvent donner de tels renseignements ou fournir de telles recommandations. Nous ne disons pas que nous sommes des spécialistes pour le faire, mais j'ajouterais que nous serions prêts, disons, à étudier la question dans ses détails pour la gouverne du Comité et peut-être vous présenter des propositions plus précises que celle que nous avons faites en suivant le mémoire.

M. Mahoney: En d'autres termes, vos recommandations veulent essentiellement qu'il y ait d'autres denrées qui devraient être considérées sur un pied d'égalité avec la farine et les céréales et que quelqu'un devrait étudier la situation?

[*Text*]

Mr. Pappas: To be a little more specific, we are saying that other commodities should come under this policy, but we are not quite sure which ones.

Mr. Mahoney: Secondly, in advocating an international airport do you have any figures available to indicate whether, in fact, there are sufficient off-loading passengers and off-loading air freight in the southwestern New Brunswick region to justify the maintenance of 24-hour immigration, customs and health services at an airport?

Mr. Pappas: First of all, I want to make it clear that the presentation of that particular item is under the Saint John Board of Trade.

Mr. Mahoney: I will save that question for them.

Mr. Pappas: I say that what we did in Saint John was to farm out the particular things to each group. We reviewed these and then stated that we were prepared to back up the recommendations of the Port and Industrial Development Commission, as well as those of the Saint John Board of Trade, with the one qualification I gave you.

Mr. Mahoney: Thank you.

The Chairman: Mr. Thomas?

Mr. Thomas (Moncton): Yes, Mr. Chairman. Mr. MacDougall, I understand that this winter has been a reasonably good one for the port of Saint John relative to cargo shipments in and out, or mainly coming in?

Mr. MacDougall: Yes.

Mr. Thomas (Moncton): I am happy that you have had a good year but have you had any problems with rail transportation, that is, in getting sufficient boxcars to move your export shipments rapidly across the country?

Mr. MacDougall: We have had some problems, but in fairness to both railroads we would have to say that although there was a very sharp increase in the volume of traffic the railroads co-operated very well, and, by and large, did an excellent job.

There were problems—let us not try to put those under the rug—because when you are talking ordinarily of 20 cars and all of a sudden you need 100, 120 or 200, you are not

[*Interpretation*]

M. Pappas: Nous disons, pour être plus précis, que les autres denrées devraient être aussi visées par cette même ligne de conduite, mais nous ne savons pas au juste lesquelles.

M. Mahoney: Deuxièmement, en proposant un aéroport international, avez-vous des chiffres qui indiqueraient qu'il y a réellement assez de passagers ou de marchandises qui seraient déposés dans la région du sud-ouest du Nouveau-Brunswick, pour justifier le maintien de services de santé, de douane et d'immigration dans un aéroport?

M. Pappas: Tout d'abord, je veux vous dire bien clairement que la présentation de cette rubrique en particulier sera faite lorsqu'il sera question de la Chambre de commerce de Saint-Jean.

M. Mahoney: Je garderai la question pour plus tard.

M. Pappas: Ce que nous avons fait à Saint-Jean, c'est que nous avons demandé à chaque groupe d'étudier un aspect. Ensuite nous avons revisé le tout et avons dit que nous étions prêts à appuyer et nous sommes prêts à appuyer les recommandations de la *Port and Industrial Development Commission,* ainsi que celles de la Chambre de commerce de Saint-Jean, avec la seule réserve que je vous ai donnée.

M. Mahoney: Merci beaucoup.

Le président: Monsieur Thomas?

M. Thomas (Moncton): Oui monsieur le président. M. MacDougall, si je comprends bien, cet hiver fut assez bon pour Saint-Jean en ce qui concerne le mouvement des marchandises à l'arrivée et au départ.

M. MacDougall: Oui.

M. Thomas (Moncton): Je suis heureux d'apprendre que l'année a été bonne, mais avez-vous connu des problèmes par rapport au transport ferroviaire, c'est-à-dire si vous avez obtenu suffisamment de wagons pour expédier assez rapidement vos marchandises d'exportation à travers le pays?

M. MacDougall: Nous avons connu certains problèmes, mais, en toute justice, à l'égard des deux Sociétés ferroviaires, nous devons ajouter que, dû à une augmentation marquée, quant au volume de trafic, les chemins de fer ont vraiment très bien collaboré, et ont fait un excellent travail. Nous avons connu des problèmes, n'essayons pas de les cacher. Lorsque vous parlez habituellement, disons, de vingt wagons et que soudainement vous en avez

[*Texte*]

always able to have these at a snap of the finger. However, in fairness to the railroads and to the port and to the workers, and so on, they all did an excellent job in handling the excess traffic that we had through the port of Saint John this winter. Certainly, some extra machinery would have gone an awful long way in helping us out.

Mr. Thomas (Moncton): In the same vein, sir, if the port should be successful in the next few years in increasing the exports coming through it, will it be necessary for the railways to update their facilities or to increase their facilities to handle this movement of freight coming in by water or across the country?

Mr. MacDougall: Yes.

The Chairman: Mr. Nesbitt?

Mr. Nesbitt: I have a very brief question, Mr. Chairman, that I would like to direct to His Worship.

In the event of expanded facilities for export by water from the port of Saint John, would there be an adequate supply of pilots available for the increase in the amount of shipping?

Mr. MacDougall: I think we can supply the necessary pilots for any increase that takes place. I do not think this should be a problem at all. I have talked with one or two of the pilots on this particular matter and they assure me that this is not a problem.

Mr. Nesbitt: I am glad to have got that straight, Mr. Chairman, because I know this is a particular problem at the port of Saint John.

Mr. MacDougall: Yes.

The Chairman: Mr. Allmand?

Mr. Allmand: Your Worship, in your brief you say that you support the Saint John Board of Trade in what they say on highways. Does this mean that you support the proposal for the corridor road, or an interstate highway system, which would go, I suppose, from Saint John through Maine up towards the Quebec border?

Mr. MacDougall: That is right.

Mr. Allmand: I just wanted to know whether you supported them fully on that point.

[*Interprétation*]

besoin de cent ou cent vingt ou deux cents, il n'est pas toujours facile de les obtenir sur-le-champ. Cependant, je suis d'avis, en toute justice à l'égard des deux Sociétés ferroviaires et du Port et des employés, qu'ils ont tous fait un excellent travail pour la manutention du trafic excédentaire que nous avons eu dans le Port de Saint-Jean cet hiver. Sûrement, un équipement additionnel aurait beaucoup aidé dans une telle circonstance.

M. Thomas (Moncton): Donc, alors, si le port doit réussir au cours des prochaines années, à augmenter son commerce d'exportations, ou, le mouvement de marchandises qui passent dans ce port, les sociétés de chemins de fer devront-elles améliorer ou augmenter leurs services, afin de pouvoir suffire à la manutention des marchandises qui arrivent par bateaux ou à travers le pays?

M. MacDougall: Oui.

Le président: Monsieur Nesbitt?

M. Nesbitt: Une question très brève, monsieur le président, que je voudrais poser à Son Honneur le maire. Au cas où les services et installations portuaires s'élargiraient, y aurait-il suffisamment de pilotes pour faire face à l'augmentation du mouvement maritime?

M. MacDougall: Oui. Nous aurons suffisamment de pilotes pour toute augmentation qui se présenterait. Je ne crois pas que ce soit un problème. J'en ai parlé à un ou deux des pilotes et ils me donnent l'assurance que ce n'est pas là un problème.

M. Nesbitt: Je suis heureux d'avoir reçu une réponse précise car je sais que c'est un problème surtout en ce qui concerne le port de Saint-Jean.

M. MacDougall: Oui.

Le président: Monsieur Allmand?

M. Allmand: Votre Honneur, dans votre mémoire, vous dites que vous appuyez la Chambre de commerce de Saint-Jean à l'égard de ce qu'ils disent à propos des autoroutes. Cela signifie-t-il que vous appuyez la proposition pour la route corridor ou un réseau routier inter-état qui partirait de Saint-Jean, traverserait le Maine et irait jusqu'à la frontière du Québec?

M. MacDougall: Oui, c'est juste.

M. Allmand: Je voulais simplement savoir si vous les appuyez entièrement, à cet égard.

[*Text*]

Mr. MacDougall: On all points of both groups, with the exception that we are a little more general on the international airport.

The Chairman: A supplementary question, Mr. Nowlan?

Mr. Nowlan: A supplementary question to His Worship on that.

Mr. Mayor, you are familiar with the Economic Intelligence Unit Study on the corridor road. Do you think their estimate of the cost versus the benefits is fairly accurate? In other words, it is going to be quite an undertaking for the Canadian taxpayer to pay for the road. On the basis of their preliminary traffic surveys is there sufficient traffic to justify it?

Mr. MacDougall: Speaking in general terms, I am convinced, without any question or doubt, that all good roads and good bridges will justify themselves in Canada over the next 50 years.

Mr. Nowlan: Specifically, if you are familiar with it do you think their estimate of cost versus the benefit of the Maine corridor is realistic?

Mr. MacDougall: Yes, I am familiar with it, but I cannot be all that sure about how realistic it is. I think it is a projection, and on that basis I support it because I believe that is so; but it is not supported in fact.

The Chairman: Mr. Corbin?

Mr. Corbin: This is a supplementary to Mr. Bell's question to His Worship, the Mayor. In connection with the establishment of container facilities at the port of Saint John, I do not believe, sir, that you hinted in any way that the National Harbours Board was to blame for losing these facilities, but I wonder, as well, if you are aware that the role of the National Harbours Board is not to dictate to any company, private or otherwise, but to help, aid and suggest, and that the final decision of any company, be it private or public, to use the ports of Saint John, Halifax, or Quebec City, is one that they themselves make and that the government has little to do other than to suggest and help, if such assistance is required?

Mr. MacDougall: Are you suggesting that the only influence the government may, or

[*Interpretation*]

M. MacDougall: Oui, tous les points de deux groupes, sauf que nos vues diffèrent au sujet de l'aéroport international.

Le président: Question complémentaire, monsieur Nowlan?

M. Nowlan: Question complémentaire adressée à Son Honneur à cet égard.

Monsieur le maire, pour ce qui est de ces études économiques sur cette route corridor, qui furent faites, croyez-vous que le facteur coût, comparativement aux avantages qu'on pourrait en tirer, est assez précis? En d'autres mots, cette route sera tout un fardeau pour le contribuable canadien. D'après les enquêtes préliminaires effectuées sur la circulation, est-ce que cela justifie une telle dépense?

M. MacDougall: Dans l'ensemble, je vous dirai que je suis convaincu que toutes les bonnes routes et tous les bons ponts se justifient d'eux-mêmes, au Canada, au cours des cinquante prochaines années. Il n'y a pas l'ombre d'un doute.

M. Nowlan: D'après vous, l'évaluation du coût par rapport aux avantages que l'on retirerait de ce corridor est-elle réaliste?

M. MacDougall: Oui, je les connais, mais je ne suis pas tout aussi sûr quant à l'aspect réaliste. Je pense que c'est une évaluation, une projection. Je l'appuie, parce que je crois que c'est une projection mais on ne peut pas dire que je l'appuie effectivement.

Le président: Monsieur Corbin?

M. Corbin: Question complémentaire à celle de M. Bell, à l'endroit de M. MacDougall. En ce qui a trait à l'établissement de dispositions pour les *containers* au port de Saint-Jean, je ne crois pas, monsieur, que vous ayez laissé entendre que le Conseil des Ports nationaux fut à blâmer pour la perte de ces installations portuaires, mais, je me demande aussi si vous êtes au courant que le rôle du Conseil des Ports nationaux n'est pas de s'imposer à qui que ce soit, à n'importe quelle compagnie, privée ou autre, mais d'aider et de proposer, et que la décision finale d'une compagnie, qu'elle soit privée ou publique, d'établir ou d'employer un port plutôt qu'un autre, en est une qui est prise par la compagnie même et que le gouvernement n'a pas grand chose à y voir, sauf de suggérer ou d'aider si une telle aide est requise.

M. MacDougall: Est-ce que vous suggérer alors, que la seule influence que le gouverne-

[*Texte*]

may not, have had in this decision was solely through the National Harbours Board?

Mr. Corbin: No, I am not; but I would tend to believe that the National Harbours Board was one of the principal intermediaries in these negotiations.

Mr. MacDougall: The cost of putting a container terminal in the port of Saint John was cheaper than it was to do so in Halifax.

Mr. Corbin: Then you still do not know why the companies involved chose another port?

Mr. MacDougall: And for the carriers to take these containers through to the given points I mentioned it was was significantly cheaper to come through the port of Saint John.

Mr. Corbin: According to your figures?

Mr. MacDougall: According to the federal government's figures.

Mr. Corbin: What figures are these?

Mr. MacDougall: The Atlantic Development Board's figures, put out by them; and they are confidential to the federal government. We received a copy of this particular brief through the Port and Industrial Development Commission, and those figures are available.

Mr. Corbin: On what date were these put out?

Mr. MacDougall: I cannot give you that, but I can give you a supplementary, to give you the exact date and page of the two studies carried out by the federal government.

Mr. Corbin: Thank you.

The Chairman: Mr. Skoberg.

Mr. Skoberg: Mr. Chairman, I want to ask His Worship whether or not some of the non-confidential correspondence from your city to the National Harbours Board and to the railway companies involved could be supplied to this Committee? I ask, because I would like to have your opinion on whether there were co-operation and co-ordination between the various departments involved in determining the location of this containerization port.

Mr. MacDougall: Let me say that although I do not agree with the policies of the

[*Interprétation*]

ment puisse ou ne puisse pas avoir pour cette décision, c'est grâce au Conseil des Ports nationaux seulement?

M. Corbin: Non. Mais, j'aurais tendance à croire, toutefois, que le Conseil des Ports nationaux était l'un des principaux intermédiaires dans ces négociations.

M. MacDougall: Les installations relatives aux *containers* dans le port de Saint-Jean ont coûté moins que celles de Halifax.

M. Corbin: Et alors vous ne savez pas pourquoi la compagnie en cause ou les compagnies en cause ont choisi un autre port?

M. MacDougall: Pour transporter ces *containers* aux divers points que j'ai mentionnés, cela aurait coûté beaucoup moins de le faire via Saint-Jean.

M. Corbin: Selon vos chiffres?

M. MacDougall: Selon les chiffres du gouvernement fédéral.

M. Corbin: Quels sont ces chiffres?

M. MacDougall: Ce sont les chiffres de l'Office d'expansion économique de la région de l'Atlantique, qu'ils ont eux-mêmes mis à notre disposition; et ces chiffres sont confidentiels pour le gouvernement fédéral. Et nous avons reçu une copie de ce mémoire par l'entremise de la Port and Industrial Development Commission.

M. Corbin: Et à quelle date les chiffres vous ont-ils été donnés?

M. MacDougall: Je ne connais pas la date exacte, mais je pourrais vous donner les copies supplémentaires, pour que vous sachiez la date exacte et la page des deux études effectuées par le gouvernement fédéral.

M. Corbin: Merci.

Le président: Monsieur Skoberg.

M. Skoberg: Monsieur le président, je voudrais demander à Son Honneur s'il lui est possible ou non de nous remettre une partie de la correspondance qui s'est effectuée entre la Ville d'une part et le Conseil des Ports nationaux et les compagnies de chemins de fer d'autre part. Je pose cette question parce que j'aimerais que vous me disiez s'il y a eu collaboration et coordination entre les divers ministères en cause, pour déterminer l'emplacement des *containers* dans le port.

M. MacDougall: Permettez-moi de dire que même si je ne suis pas d'accord avec la

[*Text*]

National Harbours Board—and have stated so publicly on more than one occasion—in this particular instance I do not think that the National Harbours Board could have been fairer.

We can supply this Committee with whatever information we had on this, and I can assure you, if you want to check with the members of the National Harbours Board, as well as the Chairman, that they are as puzzled as we are.

Mr. Skoberg: Is it your opinion, Your Worship, that there is co-ordination between those who are concerned in the location of this port? I refer particularly to the railway companies, the National Harbours Board and the CTC. Are you satisfied, in your mind, that there is co-ordination, and are you able to present your briefs to those authorities which are responsible in that particular field?

Mr. MacDougall: You are able to present them, but I think they act as separate entities; and when you ask about co-ordination, I say no, I do not think there is any co-ordination.

The Chairman: Mr. Tom Bell?

Mr. Bell: Before that subject is dropped may I just repeat what I said previously, and what Mr. Nowlan brought up, that I really feel—and I say this sincerely—that the Canadian Transport Commission has a responsibility to investigate any of these matters that arise here affecting the railways. We had the first example brought forward by the bottlers, on whether or not these rates are compensatory, and certainly they should be involved in that in some way.

Second, I do not say they are charges, but some indefiniteness and questions have been raised about the railways and their rates. I am not taking this opportunity to take any cheap swipes at the Canadian Transport Commission—we can all do that—but they have a good staff and have capable men. I really feel that an effort should be made tonight to get one or two of their experts to join us for the rest of this trip, even to protect their own interests.

Would you agree to convene this Committee for five minutes in closed session at noon today to discuss this very fact?

An hon. Member: The steering committee can deal with it.

[*Interpretation*]

politique du Conseil des Ports nationaux, et je l'ai déjà dit en public, à plus d'une occasion dans ce cas particulier, je ne crois pas que le Conseil des Ports nationaux aurait pu être plus honnête. Nous pouvons fournir à votre Comité tous les renseignements voulus au sujet de ce que nous avions à cet égard. Je puis vous assurer, et si vous voulez vérifier auprès des membres du Conseil des Ports nationaux, ainsi qu'auprès du président, ils sont aussi perplexes que nous.

M. Skoberg: Êtes-vous d'avis, Votre Honneur, qu'il y a eu coordination entre ceux qui s'intéressent à l'emplacement de ce port? Je parle surtout de la compagnie de chemins de fer, du Conseil des Ports nationaux et de la Commission des Transports? Êtes-vous sûr qu'il y ait eu coordination et êtes-vous en mesure de présenter vos mémoires aux autorités responsables dans ce domaine particulier?

M. MacDougall: Vous êtes capables de les présenter, oui. Mais je crois qu'ils agissent séparément et quand vous parlez de coordination, je dis non, je ne crois pas qu'il y ait eu coordination.

Le président: Monsieur Tom Bell?

M. Bell: Avant de passer à un autre sujet, est-ce que je pourrais répéter, encore une fois, ce que j'ai dit et ce que M. Nowlan a soulevé. Je crois et je dis sincèrement que la Commission des Transports, à mon sens, a une responsabilité de faire enquête sur ces questions qui sont soulevées ici, relativement aux chemins de fer. Nous avons eu un premier exemple donné par les usines d'embouteillage quant à savoir si les taux étaient compensatoires ou non, et l'on devrait certainement les intéresser dans une certaine mesure à ce sujet.

Deuxièmement, je ne dis pas qu'il y a des accusations, mais il existe un certain doute et des questions se sont posées quant aux chemins de fer et leurs taux. Je ne saisis pas l'occasion pour essayer d'accuser la Commission, nous pouvons tous le faire, mais leur personnel est bon, et ont des hommes capables et compétents. Je crois sincèrement qu'on devrait faire un effort, ce soir, pour essayer d'obtenir la présence d'un ou deux experts de la Commission, pour protéger leurs propres intérêts à cet égard.

Je me demande si vous pourriez convoquer ce Comité pendant cinq minutes, cet après-midi, à huis clos, pour discuter de ce fait?

Une voix: Le comité de direction peut s'en occuper.

[*Texte*]

The Chairman: Well, as this is the end of our...

Mr. MacDougall: Mr. Chairman, perhaps I could make just one further point relative to these questions that have been asked. It will be very brief and it is also public, therefore it is not something that I am pulling from here, there or anywhere.

At Atlantic Development port day, held in Halifax on December 1, a panel submitted an excellent presentation. Number one on the panel asked why the carrier, namely, the steamship line, could make maximum one profit by virtue of going into port A, which we will say is the competing port with Saint John, and the second man made the point that the railroad could also make maximum profits by virtue of pulling out of that particular point on a unit train basis. You can check the records. I asked the following question, and it was not answered: In that case, why does the taxpayer have to be subsidizing? At no time was that question answered. The chairman of the panel came down and shook hands and admitted to me that this question had not been answered, and the Chairman of the Harbours Board commission also said that this question had yet to be answered.

The Chairman: Thank you, Mr. Mayor. Mr. Nowlan?

Mr. Nowlan: I have a supplementary on this question of ports, although not directly relative to which was chosen between Halifax and Saint John; that perhaps raises a conflict of interest with me. But on the general proposition, and the last recommendation, Mr. Mayor, in your brief, suggesting a Maritimes harbour control board, are you advancing that in lieu of the National Harbours Board, as a decentralized agency of the National Harbours Board, or as an independent agency separate and apart from the National Harbours Board?

Mr. MacDougall: It could be associated with the National Harbours Board, or it could be independent. What we are primarily concerned about is this: Let us say an industry sets up somewhere down the coast between Saint John and St. Stephen and we put in a harbour and certain facilities there. What we are suggesting here is that with the two national ports of Halifax and Saint John so designated in the Atlantic

[*Interprétation*]

Le président: Comme c'est la fin de nos questions...

M. MacDougall: Monsieur le président, je me demande si je pourrais ajouter quelque chose relativement aux questions posées. C'est aussi du domaine public, par conséquent, ce n'est pas quelque chose que je tire de l'air.

Lors de la journée pour la mise en valeur des ports de l'Atlantique, tenue à Halifax le premier décembre, un «panel» a soumis une excellente présentation. Le premier membre du «panel» a demandé pourquoi le transporteur, c'est-à-dire la compagnie maritime, pourrait-il faire un bénéfice maximum sur le transport du minerai en passant par le port A, qui, par exemple, ferait concurrence au port de Saint-Jean, et le deuxième membre a signalé que les chemins de fer pourraient aussi faire des profits maximums, en organisant les départs d'un point proprement dit sur la base d'un train homogène. Vous pourrez le vérifier. J'ai posé la question suivante qui n'a pas reçu de réponse: Dans ce cas, pourquoi le contribuable doit-il subventionner? On n'a jamais donné de réponse à cette question. Le président du séminaire m'a donné la main. Il m'a avoué qu'on n'avait pas donné réponse à la question. Le président de la Commission des Ports a aussi dit qu'on n'avait pas encore répondu à cette question.

Le président: Merci beaucoup, monsieur le maire. Monsieur Nowlan?

M. Nowlan: Question supplémentaire au sujet des ports, qui n'est pas tout à fait pertinente au choix effectué entre Saint-Jean et Halifax; cela soulève peut-être un conflit d'intérêt, en ce qui me concerne en tous les cas. Mais au sujet de la recommandation générale, la dernière recommandation dans votre mémoire, monsieur le maire, proposant la création d'une commission de contrôle pour les ports des Maritimes, est-ce que vous proposez cela pour remplacer le Conseil des Ports nationaux, c'est-à-dire comme organisme décentralisé du Conseil des Ports nationaux ou comme un organisme indépendant et tout à fait distinct du Conseil des Ports nationaux?

M. MacDougall: L'organisme pourrait être associé au Conseil des Ports nationaux ou il pourrait être indépendant. Ce qui nous préoccupe le plus, disons que c'est le fait qu'une industrie s'établit quelque part le long de la côte, entre Saint-Jean et Saint-Stephen, et décide d'y établir un port et certaines installations portuaires. Ce que nous disons, alors, c'est qu'avec les deux ports nationaux ainsi désignés dans la région de l'Atlantique, ceux

[*Text*]

area we believe that further harbour facilities for so-called ports should not be instituted unless some board takes a look at the over-all economy so that we can make maximum use of the existing facilities.

Mr. Nowlan: At the moment, with the various boards that we have in the Atlantic area, some perhaps in a state of temporary flux, but including the National Harbours Board, there have been no over-all studies in relation to say, the Saint John and Halifax future potential?

Mr. MacDougall: I know of none, Mr. Nowlan.

Mr. Nowlan: This is not a facetious question, but is the fact of a Maritime harbour control board just further confirmation of the fact—one more nail in the box—that the Maritimes should come together to help resolve their own problems, or where they want perhaps more than they have in the last 100 years?

Mr. MacDougall: I think that it is almost self-evident.

The Chairman: Thank you, gentlemen; and I want to thank His Worship the Mayor, and all his staff. Thank you very much.

The next item on our agenda is the brief from the Saint John Board of Trade and I would like to call upon Mr. Crosby and Mr. Lummis. Mr. Crosby is the President and Mr. Lummis is the General Manager. You have all received a copy of the brief from Board of Trade so I will ask you, Mr. President, if you would make a short statement on that.

Mr. James M. Crosby (President, Saint John Board of Trade): Yes, Mr. Chairman. It was not our original plan that I would deliver this brief from our Board because it was developed primarily by a committee of our Board which spent a lot of time developing it, and the chairman of that committee was originally to deliver the brief. However, I have summarized the brief which you have before you on page 689, and Mr. Lummis, as General Manager of the Board, will be prepared to answer some of the questions which I cannot handle which you may happen to submit with reference to our proposition.

In addition, I would like to mention at this time that we have a supplemental submission to present to you with regard to air transport matters and an international airport for

[*Interpretation*]

d'Halifax et de Saint-Jean, nous croyons, que l'on ne devrait pas prévoir d'autres installations portuaires pour des prétendus ports, à moins qu'il n'y ait un office qui examine l'économie dans son ensemble pour pouvoir employer au maximum les dispositions portuaires actuelles.

M. Nowlan: A l'heure actuelle, avec les diverses commissions que nous avons dans la région de l'Atlantique, certaines d'entre elles dans un état de fluctuation temporaire, mais comprenant le Conseil des Ports nationaux, il n'y a pas eu d'études d'ensemble en ce qui concerne, par exemple, les possibilités futures de Halifax et de Saint-Jean?

M. MacDougall: Je n'en connais pas, monsieur Nowlan.

M. Nowlan: Ce n'est pas pour être drôle, mais la création d'une commission de contrôle des ports des Maritimes ne constitue-t-elle pas une autre preuve que les Maritimes devraient collaborer plus étroitement pour régler leurs propres problèmes, plus qu'ils ne l'ont fait depuis cent ans!

M. MacDougall: Je pense que çà se voit de soi.

Le président: Je vous remercie messieurs. Je voudrais remercier son Honneur le maire ainsi que ses collaborateurs. Merci beaucoup. Et maintenant, nous avons au programme, un mémoire du *Saint John Board of Trade*. J'aimerais donc donner la parole à M. Crosby et à M. Lummis. M. Crosby est le président et M. Lummis, le directeur général.

Vous avez tous reçu le mémoire de la Chambre de commerce. Je vous demanderais donc, monsieur le président, si vous voulez faire une brève déclaration à ce sujet.

M. James M. Crosby (président de la Chambre de commerce de Saint-Jean): Oui, monsieur le président. Je n'avais pas l'intention de présenter personnellement le mémoire au nom de notre Chambre de commerce, car un comité de notre Chambre a passé beaucoup de temps à le rédiger et le président de ce comité devait d'abord présenter le mémoire. J'ai résumé le mémoire que vous avez devant vous, et qui se trouve à la page 689. M. Lummis, directeur général de la Chambre de commerce, est prêt à répondre à certaines questions auxquelles je ne pourrais pas répondre, et que vous pourriez poser au sujet de notre mémoire.

Nous avons aussi un autre mémoire à vous présenter en ce qui concerne les questions de transport aérien et en ce qui concerne un aéroport international pour le sud-ouest du

[*Texte*]

southwestern New Brunswick, as referred to by our Mayor a short time ago. This is a supplemental submission to what we had originally put in our brief with reference to air matters, and I understand that your Committee will take this under consideration.

In reviewing our brief very shortly, I would like to say that it is based on the premise of stressing the growth centre concept for regional development which requires an efficient, of course, and effective transportation system. We feel that our city, as the largest city in New Brunswick and the largest industrial centre in the Atlantic Provinces, is worthy of carrying out this concept. We have a population in the greater Saint John area of over 100,000 people. You have been made aware of this concept by a number of agencies who have studied the matter during the past few years and most recently reference was made by the Hon. Jean Marchand in the House of Commons to the application of this concept in order to develop the eastern portion of our country.

On pages 690 and 691 our brief includes comments on highway improvements which we feel are essential to the area, especially where Saint John is not located on the Trans-Canada Highway system and, therefore, it is essential that we have feeder roads in all directions to connect with this system and also with the U.S. border.

We also refer in our brief to the east-west interstate highway which is a slightly different concept fom the corridor road one that was mentioned earlier this morning. We can elucidate on this further, but as far as we are concerned, the way that we see it is that as far as the government is concerned, it would only mean a question of upgrading the road from Saint John to St. Stephen if this concept were put into effect. The rest of the development would have to come from across the border.

We stress the necessity for all-weather highways of an adequate capacity and they are required in three directions from our city: east towards Moncton to connect with the Trans-Canada Highway; north towards the City of Fredericton, our provincial capital, also to connect with the Trans-Canada Highway, and west to St. Stephen to the U.S. border. We were very pleased to see that the connection to the south of our city by the institution of the new Bay of Fundy Service will be maintained and will be much more efficient and effective, we hope, with the introduction of the new ferry on that run.

With regard to our air transport matters, the brief which we have submitted here was

[*Interprétation*]

Nouveau-Brunswick, comme l'a mentionné notre maire il y a quelques instants. Il s'agit d'un mémoire supplémentaire à celui que nous avions présenté en ce qui concerne le transport aérien. Si j'ai bien compris, votre Comité doit étudier cette question.

Pour passer en revue notre mémoire, je pourrais vous dire qu'il est fondé sur la croissance des centres d'expansoin régionale, ce qui exige des moyens de transport efficaces. Nous croyons que notre ville, étant donné quelle est la plus grande ville du Nouveau-Brunswick et le centre industriel le plus considérable de la région de l'Atlantique, mérite justement de faire l'objet de ce concept. Nous avons plus de 100,000 personnes dans la région de Saint-Jean. Il y a plusieurs organismes qui ont étudié la question depuis quelques années et qui nous ont fait part de leurs conclusions. L'honorable Jean Marchand, à la Chambre des communes récemment, a parlé de l'application de cette idée afin de développer la partie Est de notre pays.

Aux pages 690 et 691, nous parlons justement de l'amélioration du réseau routier, qui est essentielle, surtout parce que Saint-Jean ne se trouve pas sur la route Transcanadienne, il est donc essentiel que nous ayons des routes pour relier tout le réseau ainsi que la frontière américaine.

Nous parlons aussi, dans notre mémoire, de la route inter-États est-ouest qui est un peu différente de l'idée du corridor de l'État du Maine qu'on a mentionnée ce matin. Nous pourrions peut-être expliquer un peu plus en détail, mais en ce qui nous concerne, la façon dont nous entrevoyons le problème c'est que, en ce qui concerne le gouvernement, il ne s'agirait que d'améliorer la route entre Saint-Jean et Saint-Stevens, si on appliquait cette idée. Le reste du développement évidemment devrait se faire de l'autre côté de la frontière.

Nous avons aussi insisté sur la nécessité d'avoir des routes bonnes en tout climat, qui seraient nécessaires en trois directions vers l'est, en direction de Moncton, vers le nord, jusqu'à la ville de Fredericton, pour être reliée à la route Transcanadienne, et à l'ouest vers Saint-Stevens et à la frontière américaine. Nous avons été très heureux de constater que les liens vers le sud de notre ville seraient garantis par le maintien du transbordeur de la Baie de Fundy et avec le nouveau traversier qui doit être installé bientôt.

En ce qui concerne le transport aérien, dans le mémoire supplémentaire que nous

[*Text*]

an enlargement of our original premise with the necessity to have in our general area in southwestern New Brunswick a really effective international airport. We foresee that when the Viscount and the Vanguard aircraft are phased out it will become uneconomic for main-line carriers to serve two cities of Saint John and Fredericton, and it is vital that both these cities and the area of southwestern New Brunswick have this type of service, both from the point of view of air freight and passengers.

We feel that Saint John, as the industrial centre of New Brunswick and the Maritimes, warrants an airport of this calibre somewhere near or fairly accessible to the city. Also, Fredericton, as the capital city of our province, could combine with us in this effort and could make very good use of this facility.

Another point is that if it were established it would mean that the Gagetown military area would have the services of this same airport. So, we have three areas which would benefit from it. We feel the population of the general area to be serviced would run to 250,000 people.

In view of these situations we recommend in our brief that the Government of Canada initiate immediately a technical study to establish a suitable location which is readily accessible to Saint John, Fredericton and the areas in south-western New Brunswick for the construction of an airport of international standards. These reasons as presented in the supplementary brief, we feel, bear out the need for this technical study.

We make reference in our brief to the Maritime Freight Rates Act and the L.C.L. freight rate matter which was very contentious, and also the matter of the freeze which has been discussed here and they will be taken up, we understand, in the brief from the Maritimes Transportation Commission. These matters are also of extreme interest and urgency to our Board and, as pointed out by our Mayor, we are wholeheartedly behind him for these improved developments.

In our brief reference is also made to the construction of the Chignecto Canal which we feel would be a natural extension of the St. Lawrence Seaway and provide low-cost water rates on bulk commodities to the Great Lakes and also from the northern part of our province to the southern part of our province.

Last year's comments regarding our port, for the most part, are still valid. Despite a sustained effort by our Port and Industrial Commission and our city which we thor-

[*Interpretation*]

avons donné, nous insistons pour la région générale du sud-ouest du Nouveau-Brunswick. Cela nous prend nécessairement un aéroport international. Quand le *Viscount* ou le *Vanguard* n'existeront plus, il ne sera pas profitable pour les grandes lignes de desservir Saint-Jean et Fredericton, et pour ces deux villes, et la région du sud-ouest du Nouveau-Brunswick, il est essentiel d'avoir ce genre de services du point de vue du transport des marchandises et des voyageurs.

Nous trouvons que Saint-Jean, comme centre industriel du Nouveau-Brunswick et des Maritimes, a besoin d'un aéroport de cette nature, à un endroit qui soit accessible à la ville. De même, Fredericton, à titre de capitale, pourrait peut-être se joindre à nous pour pouvoir employer ces dispositions.

Autre chose, si on l'établissait, cela voudrait dire aussi que la région militaire de Gagetown pourrait profiter du même aéroport. Il y aurait donc trois régions qui pourraient en profiter. Nous croyons que la région générale compte environ 250,000 habitants. Vu cette situation, dans notre mémoire nous recommandons que le gouvernement du Canada commence une étude technique, immédiatement, pour déterminer un emplacement qui serait accessible à Saint-Jean, à Fredericton et aux régions du sud-ouest du Nouveau-Brunswick, pour la construction d'un aéroport international. Les raisons que nous avons données dans notre mémoire supplémentaire indiquent qu'une telle étude serait nécessaire.

Nous mentionnons aussi la Loi sur les taux de transport des marchandises dans les Maritimes ainsi que les taux visant les chargements incomplets, question très controversée, de même que la question du gel qu'on a discutée ici. Si nous avons bien compris, ces questions seront soulevées auprès de la Commission des transports des Maritimes. Ces questions sont urgentes pour notre Chambre de Commerce, comme l'a dit le maire, et nous l'appuyons pour obtenir ces améliorations.

Nous avons aussi mentionné la construction du Canal de Chignectou qui serait une extension naturelle de la Voie maritime du Saint-Laurent et qui donnerait accès aux Grands lacs, ainsi qu'une voie d'accès du nord vers le sud de notre province.

Les commentaires que nous avions faits, l'an dernier, au sujet de notre port, sont toujours valides. Malgré les efforts faits par la Commission du port, et la ville, nous esti-

[*Texte*]

oughly commend, little real progress, we feel, has been made in obtaining special facilities which are required to service existing and potential traffic. The need for these facilities and the upgrading of general cargo facilities is most apparent. A busy season like we have been fortunate to enjoy during the past few weeks, I might say, when the port's capacity is taxed to the full, points out the need for this type of improvement.

Since this brief was prepared, strenous efforts have been made to attract container traffic to the port of Saint John with some success, but final results depend on the availability of container crane facilities, that these are not, of course, presently, available and the Board maintains that the National Harbours Board policy of not providing these facilities until the traffic materializes should be altered. We feel that the basic infrastructure must be available so that container traffic can be attracted to the port.

With regard to super port matters, we understand a study is still going on in this respect for the construction of a port to handle ships of up to 500,000 tons and we wish to remind your Committee of the positive advantages in locating a port such as this in our city and the advantages of this type of facility are outlined in our brief.

To conclude, we feel that all these things should be made on a long-range basis, but the top, immediate priorities, as stressed by our Mayor, too, are an immediate improvement in our port facilities to handle container traffic and to handle the traffic that we feel should be developed through the port; and the construction of an international airport so that we can benefit from the many advantages offered by this type of facility and enable our city and province to keep pace with developments in the rest of our country.

That, gentlemen, is a synopsis of the brief which you have before you which was prepared a year or so ago.

The Chairman: Thank you very much. Mr. Nesbitt.

Mr. Nesbitt: Mr. Chairman, there is one observation I would like and it is this: my questions are going to be confined to the supplementary submission by the Saint John Board of Trade, particularly with reference to airports and airlines. I would refer to page

[*Interprétation*]

mons qu'il y a eu très peu de progrès pour obtenir des dispositions spéciales pour desservir le trafic actuel et éventuel. Le besoin de telles installations et l'amélioration des dispositions pour les marchandises sont essentiels. Depuis quelques semaines, nous avons vu que lorsque le port est rempli, il y a un argument de plus pour obtenir ces améliorations.

Depuis la rédaction du mémoire, il y a eu des efforts concentrés pour essayer d'attirer les conteneurs vers le port de Saint-Jean avec un certain succès, mais tout dépend de l'existence des installations voulues. La Chambre de commerce maintient qu'à l'heure actuelle nous ne les avons pas à notre disposition. Nous croyons donc que la politique du Conseil des ports nationaux n'aime pas les prévoir jusqu'à ce que le trafic qui les justifie, devrait être modifié. Nous croyons que l'infrastructure de base doit exister pour justifier et attirer le trafic.

En ce qui concerne l'aspect des grands ports, si nous avons bien compris, il y a des études qui se poursuivent dans ce domaine, en vue de la construction de ports pouvant desservir des navires de 500,000 tonnes. Nous voulons rappeler à votre Comité les avantages qu'il y aurait à avoir l'emplacement d'un tel port dans notre ville, ainsi que les avantages inhérents à ce genre d'installations, dont nous avons fait mention d'ailleurs dans notre mémoire.

En conclusion, nous croyons que toutes ces choses devraient être faites ou mises en vigueur à long terme, mais en ce qui concerne les priorités immédiates, comme l'a souligné notre maire, il faudrait améliorer les installations portuaires en vue du trafic des conteneurs, et d'attirer aussi le trafic qui devrait être assuré par le port, ainsi que construire un aéroport international afin que nous puissions profiter de tous les avantages offerts par ce genre d'installation, pour permettre à notre ville et à notre province de marcher au pair avec les développements qui se produisent ailleurs dans notre pays.

Voilà, Messieurs, un résumé du mémoire que nous avions présenté, il y a un an, et que vous avez devant vous.

Le président: Merci beaucoup. Monsieur Nesbitt.

M. Nesbitt: Monsieur le président, il y a une observation que j'aimerais faire. Je me limiterai dans mes questions au mémoire supplémentaire présenté par la Chambre de commerce de Saint-Jean, tout particulièrement en ce qui concerne les aéroports et les

[*Text*]

3 of the supplementary submission where it mentions that it is expected that a new three-level policy will be created with respect to airlines. It is my understanding, Mr. Chairman, that when the Canadian Transport Commission appeared before our Committee a short while ago, this Committee was informed that a policy almost identical to the one suggested by the Saint John Board of Trade has, in fact, been instituted and is the policy of the Commission.

For that reason I think I would like to make an observation at this point, Mr. Chairman. That is just one more reason why a member or representative of the Canadian Transport Commission should be, at least as an observer, at this meeting because these are matters that directly refer to the Commission.

There are one or two questions I would like to put to the witness who is representing the Saint John Board of Trade. The first question is this: there was a great deal of emphasis by him that the Government of Canada should initiate a technical study to establish the appropriate location of an airport in southwest New Brunswick. I note in the submission that specific emphasis was placed on the location of this airport apparently somewhere between the City of Saint John and the City of Fredericton. Just from an outsider's point of view, I am curious as to why an area equidistant, say, from Saint John, Fredericton and perhaps Moncton was not proposed. I am curious as to why Moncton was omitted from this brief. Can you answer that question?

Mr. Crosby: Saint John and Fredericton are only about 60 miles apart. Moncton is 95 miles from Saint John and 125 miles from Fredericton. So, on airport midway between them would not be of any advantage to the three cities because it would be too far from all of them.

Mr. Nesbitt: Mr. Chairman, I appreciate that point of view. I am quite familiar with this part of the province, I might say, from previous experience and I would just like to say this. There is a great deal of emphasis placed on the fact, as I gather from the supplementary submission, that there be one large international airport in the area for jets, and that other supplementary air services be carried by other carriers, but surely it would not be feasible to have more than one major international airport in southwestern New Brunswick, would it?

[*Interpretation*]

lignes aériennes. Je me réfère donc à la page 3 de son mémoire supplémentaire où on dit qu'on s'attend qu'une nouvelle politique à trois niveaux soit mise en vigueur en ce qui concerne les lignes aériennes. Si j'ai bien compris, quand la Commission canadienne des transports a comparu devant notre Comité, il y a peu de temps, notre Comité a su qu'une politique presque identique à celle proposée par la Chambre de commerce de Saint-Jean a en fait été instituée et fait partie de la politique de la Commission.

Par conséquent, j'aimerais formuler notre réaction maintenant, monsieur le président. Il s'agit d'une raison de plus, si je me souviens bien, pour laquelle un membre de la Commission devrait assister à nos séances, à titre d'observateur au moins, car ce sont là des questions qui les intéressent directement.

J'aurais maintenant une ou deux questions directes à poser au témoin qui représente la Chambre de commerce de Saint-Jean. Ma première question est la suivante: vous avez beaucoup insisté sur le fait que le gouvernement du Canada initie une étude technique pour établir l'emplacement approprié d'un aéroport pour le sud-ouest du Nouveau-Brunswick. Je vois dans le mémoire que vous insistez un peu sur l'emplacement de cet aéroport qui devrait être établi entre la ville de Saint-Jean et la ville de Fredericton. Du point de vue d'un étranger, et par pure curiosité, je me demande pourquoi un emplacement a égale distance entre Saint-Jean, Fredericton et Moncton, peut-être, n'a pas été proposé. Pourquoi avez-vous laissé tomber Moncton? Pouvez-vous répondre à cette question?

M. Crosby: Saint-Jean et Fredericton ne sont qu'à soixante milles de distance l'une de l'autre. Moncton se trouve à quatre-vingt-quinze milles de Saint-Jean et à 125 milles de Fredericton. Alors, un aéroport à mi-chemin entre elles ne serait d'aucun avantage pour les trois villes, car il serait trop éloigné des trois.

M. Nesbitt: Je comprends très bien ce point de vue. Je connais cette partie de la province, dois-je ajouter, parce que j'y suis déjà venu. Si j'ai bien compris, votre mémoire supplémentaire vous avez besoin d'un grand aéroport international pour les avions à réaction. Et les services aériens supplémentaires seraient assurés par d'autres transbordeurs aériens, mais il ne serait pas rentable d'avoir plus d'un aéroport international dans le sud-ouest du Nouveau-Brunswick, n'est-ce pas?

[*Texte*]

Mr. Crosby: You mean southwestern New Brunswick and none for the rest of the province?

Mr. Nesbitt: Are you suggesting two large jet airports, one somewhere in the Fredericton—Saint John area and one in the Moncton area?

Mr. Crosby: No, we are suggesting one in southwestern New Brunswick which would service approximately half the province. As I say, it is part of our growth centre concept that this type of airport should be made available to build a growth centre around the city.

Mr. Nesbitt: With respect to regional carriers which, of course, is the policy of the Canadian Transport Commission and the supplementary work they can do to the mainliners, so to speak, other than Eastern Provincial Air Lines are there any other regional carriers now available who could take on some of these services?

Mr. Crosby: No. There may be E.P.A., but they do not service our airport.

Mr. Nesbitt: I wondered if in your investigations, when looking into the question of regional carriers in New Brunswick, if you discovered any regional carriers available now, who are in business at the moment, who should be able to expand their service?

Mr. Crosby: The substance of our brief was to have an airport that would be able to handle large jet aircarft. We do not envisage that our present airport would be capable of expansion and performing this job.

Mr. Nesbitt: I am very sorry; perhaps I did not phrase my question correctly. As I gather from your supplementary submission, you anticipate regional carriers doing a lot of the local service in New Brunswick and adjacent Atlantic Provinces?

Mr. Crosby: We did not want to lose what we already had, in other words.

Mr. Nesbitt: No, but I say that in addition to the increase in the main line jet traffic to the proposed major airports, that the local work and the local services to other areas in New Brunswick and, indeed, the other Atlantic Provinces, would be done by regional carriers. The question I have in mind is, other than the Eastern Provincial Air Lines which is a regional carrier, are there any other companies that you know of in exist-

[*Interprétation*]

M. Crosby: Vous voulez dire dans le sud-ouest du Nouveau-Brunswick et pas ailleurs?

M. Nesbitt: Est-ce que vous devriez avoir deux aéroports pour les gros avions à réaction, un dans la région de Fredericton-Saint-Jean et l'autre dans la région de Moncton?

M. Crosby: Non, nous en proposons un seul dans le sud-ouest du Nouveau-Brunswick, qui pourrait desservir à peu près la moitié de la province. Comme je l'ai ajouté, cela fait partie de l'idée des centres de croissance, que nous puissions avoir un tel aéroport, pour construire un tel centre autour de la ville

M. Nesbitt: Quant aux transbordeurs régionaux qui font partie de la politique de la Commission canadienne des transports, ainsi que le travail supplémentaire qu'ils pourraient effectuer pour les transbordeurs de lignes principales, est-ce qu'il y a d'autres transbordeurs régionaux, en plus de Eastern Provincial Air Lines, qui pourraient assurer ces services à l'heure actuelle?

M. Crosby: Non, il y aurait peut-être E.P.A., mais ils ne desservent pas notre aéroport.

M. Nesbitt: Alors que vous faites enquête sur cette possibilité, au Nouveau-Brunswick, est-ce qu'il y a des transbordeurs régionaux qui seraient disponibles à l'heure actuelle, qui font affaire à l'heure actuelle, et qui pourraient étendre leurs services jusque-là?

M. Crosby: Notre mémoire précisait que nous devrions avoir un aéroport qui serait capable de recevoir ces gros avions à réaction; nous ne croyons pas que l'aéroport actuel puisse être développé à ce point-là.

M. Nesbitt: Je m'excuse, je me suis peut-être mal exprimé. Si j'ai bien compris votre mémoire supplémentaire, vous vous attendez qu'il y ait des transbordeurs régionaux qui assurent les services locaux au Nouveau-Brunswick et dans les provinces voisines.

M. Crosby: En d'autres termes, nous ne voulions pas perdre ce que nous avions déjà.

M. Nesbitt: Oui, mais vu l'augmentation du nombre des gros avions à réaction vers les aéroports principaux, le service local pour les autres endroits du Nouveau-Brunswick et les autres provinces de l'Atlantique serait assuré par les transbordeurs régionaux. Et alors, la question à laquelle je songeais était celle-ci: est-ce que, à part Eastern Provincial Air Lines, qui est une ligne régionale, il y a d'autres compagnies, à l'heure actuelle, qui

[*Text*]

ence at the moment which would be able to carry out these functions of a regional carriers.

Mr. Crosby: No, I could not answer that question.

Mr. Nesbitt: I gather it is anticipated that any regional carrier, Eastern Provincial or any other air lines that might be formed, would require some kind of assistance, no doubt. In your studies have any recommendations been made as to whether the type of assistance that might be necessary for regional carriers be in the nature of subsidy for equipment such as aircraft or the granting of routes now available to the mainline carriers, such as Air Canada, or is it a question of rates? Has any work been done on this?

Mr. Crosby: No.

The Chairman: Mr. Mahoney.

Mr. Mahoney: I, like Mr. Nesbitt, will restrict myself to the air transport problems you have raised. I am not interested really in lecturing, but it seems to me that there is a tremendous amount of confusion in the area of what is an international airport and a tendency to perhaps equate "international airport" with "big airport".

I hope you will appreciate, sir, that an international airport is one at which 24 hours a day, 7 days a week service is provided by the Immigration Department, the Customs Division and the Department of National Health and Welfare. Have you any figures to indicate whether or not an international airport, in fact, is justified?

Mr. Crosby: We want an airport of international standards, not necessarily an international airport.

Mr. Mahoney: Well, you do in one place, but you wind it up by calling it an international airport. "Fredericton, as the capital of the province, should be served by an international airport." There may be more compelling reasons ...

Mr. Crosby: It has to be international anyway, if it is going to develop traffic. If there are going to be large planes, they have to come from outside the country.

Mr. Mahoney: What information do you have? Do you have figures indicating the amount of international traffic that is terminating or wants to terminate in southwestern New Brunswick?

[*Interpretation*]

pourraient assurer les services d'un transbordeur régional?

M. Crosby: Non. Je ne pourrais pas répondre à cette question.

M. Nesbitt: Si j'ai bien compris, vous vous attendez qu'un transbordeur régional, que ce soit *Eastern Provincial* ou un autre qui serait établi, aurait sans doute besoin d'assistance. Dans vos études, est-ce que vous avez formulé des recommandations quant au genre d'assistance ou d'aide qui serait peut-être nécessaire pour le transbordeur régional, que ce soit sous forme de subventions pour le matériel ou les avions, par exemple, les aéronefs, ou que l'on accorde des routes qui sont actuellement desservies par Air Canada, par exemple, ou est-ce qu'il s'agit des taux? A-t-on étudié ces aspects de la question?

M. Crosby: Non.

Le président: Monsieur Mahoney.

M. Mahoney: Comme M. Nesbitt, je vais me limiter aux problèmes de transport aérien que vous avez soulevés. Encore une fois, je ne veux pas vous faire la leçon, mais il me semble qu'il y a une certaine confusion qui existe en ce qui a trait à la définition d'un aéroport international. Nous avons peut-être tendance à faire l'analogie entre un «grand aéroport» et un «aéroport international».

Vous savez sans doute, Monsieur, qu'un aéroport international attire les services des douanes, de l'immigration, de la santé, vingt-quatre heures par jour, sept jours par semaine. Avez-vous des chiffres pour indiquer si oui ou non un aéroport international serait justifié dans cette région?

M. Crosby: Nous voulons un aéroport répondant aux normes internationales, pas nécessairement un aéroport international.

M. Mahoney: C'est ce que vous voulez, selon votre mémoire, mais vous voulez l'appeler aéroport international. Fredericton, à titre de capitale de la province, devrait être desservie par un aéroport international. Il y a peut-être d'autres raisons plus fortes...

M. Crosby: Il faudrait qu'il soit international, de toute façon, s'il veut avoir un certain trafic. S'il doit y avoir de gros avions, ils doivent venir de l'extérieur du pays.

M. Mahoney: Quels sont les renseignements que vous avez à votre disposition? Avez-vous des chiffres pour indiquer quelle serait la quantité de trafic international qui devrait se terminer dans le sud-ouest du Nouveau-Brunswick?

[*Texte*]

Mr. Crosby: We feel that our part of the country is going to grow enough that it should have this type of airport and it is this type of airport that has been established in other parts of the country.

Mr. Mahoney: I think that is a feeling, sir, if I may say with respect, that would be shared by almost any metropolitan area of more than 50,000 or 60,000 people. For example, Calgary, does not have an international airport in spite of the fact that the traffic at that airport is perhaps six times the volume of the Edmonton international airport.

The Chairman: Are you finished, Mr. Mahoney?

Mr. Mahoney: No, I have another question, sir. You point in your brief to cargo handling and cite in your original brief figures showing 30 to 40 per cent increase per year since 1960 in cargo handling. In your supplemental brief you cite that air cargo has been growing at the rate of 25 per cent per year. Are those, again, local figures or are they national averages or what?

Mr. Crosby: They are national figures.

Mr. Mahoney: Thank you.

Mr. Corbin: My questions refer to the highways problems brought up in your brief and I am particularly interested in what you term the east-west interstate highway plan. In some connections this has a great deal of similarity with the proposed Maine Corridor route.

Mr. Crosby: Yes. I might ask Mr. Lummis, the General Manager, who is more familiar with this to comment on that for you.

Mr. Corbin: Do you envisage this type of project as a long-term project or is this up for immediate consideration?

Mr. Lummis: Perhaps if I gave a little bit of background it might be helpful. Several years ago there was a committee organized in the United States that proposed an east-west interstate highway; that is, a highway of interstate standards—a double-barrelled highway.

Mr. Corbin: What states were represented on this committee?

Mr. Lummis: The committee included people all the way from the New York Thruway, Amsterdam, New York, right through to Calais including Saint John. It originated in the area of Bangor and was to be a highway to go directly west from Calais to the New York Thruway. It would serve the more

[*Interprétation*]

M. Crosby: Nous estimons que notre partie du pays va se développer suffisamment pour justifier ce genre d'aéroport qu'on a construit dans d'autres parties du pays.

M. Mahoney: Je pourrais peut-être dire que toutes les régions métropolitaines ayant plus de 50 ou 60,000 personnes ont le même problème. Calgary, par exemple, n'a pas d'aéroport international, malgré le fait que le trafic de cet aéroport est peut-être six fois celui d'Edmonton.

Le président: Avez-vous terminé, monsieur Mahoney?

M. Mahoney: Non, monsieur. J'ai une autre question à poser. Dans votre mémoire, vous parlez des marchandises et vous dites qu'il y a eu une augmentation de 30 ou 40 p. 100 depuis 1960. Dans votre mémoire supplémentaire, vous parlez du transport-marchandises qui augmentait de 25 p. 100 par année. Encore une fois, s'agit-il de chiffres locaux ou des moyennes nationales, ou quoi?

M. Crosby: Des chiffres nationaux.

M. Mahoney: Merci.

M. Corbin: Mes questions ont trait aux problèmes des routes, que vous avez soulevés dans vos mémoires. Et je m'intéresse surtout à ce que vous appelez le réseau inter-États est-ouest. En somme, ce réseau ressemble beaucoup à celui qu'ils ont proposé pour le Maine.

M. Crosby: M. Lummis, à titre de directeur général, est peut-être plus au courant de la question, et il pourrait sans doute vous répondre.

M. Corbin: Songez-vous à ce genre de projet comme étant un projet à long terme, ou est-ce que vous voudriez que cela soit étudié immédiatement?

M. Lummis: Si je vous donnais quelques détails, cela aiderait peut-être. Il y a plusieurs années, une commission a été établie aux États-Unis et a proposé une route inter-États est-ouest, c'est-à-dire une route à voies divisées.

M. Corbin: Quels États étaient représentés au sein de ce comité?

M. Lummis: Le comité comprenait des représentants du *New York Thruway,* Amsterdam, New York, jusqu'à Calais et Saint-Jean. La route commencerait dans la région de Bangor, irait directement vers l'Ouest, de Calais jusqu'au *New York Thruway,* et desservirait les régions les plus populeuses de

[*Text*]

populated areas of Maine following almost U.S.2. It would have a turnpike presently constructed going down to Boston; it would have a spur off it that would go up to the autoroute near Sherbrooke, P.Q. This committee feels this is the most practical because it would serve the populated areas of the United States whereas a more northern route would be through more of a wilderness area. The difference in mileage, we understand, is insignificant.

The Chairman: Does that answer your question, Mr. Corbin?

Mr. Corbin: No, it certainly does not.

Is this project up for immediate consideration or is this looked upon as a long-term project—and I am talking in terms of 10, 20 or 30 years?

Mr. Lummis: I think the people in the United States who are advocating this say it is needed immediately. It has been studied recently by a commission in Maine. I do not know their findings as yet. I understand they are in the process of completing their study and part of that is in the study. Does that answer your question?

Mr. Corbin: Well, it is a vague answer but it answers...

Mr. Lummis: It is not the type of thing that is expected to be completed right away, if that is what you mean.

Mr. Corbin: Certainly not in 10 years.

Mr. Lummis: No.

Mr. Corbin: In terms of immediate benefit to Canada, and we are mainly concerned here with New Brunswick and you yourself are concerned with Saint John, what can we expect from this highway? You have things in your brief; you have some conclusions, but I do not entirely agree. If you will let me go on for a minute, I think it is fine to find solutions to your problems in your area of the province, in your part of Canada, but at the same time you are creating an enormous problem along the traditional routes of the flow of traffic from the Maritimes to Central Canada, and it is along these routes that we have hundreds of services which cater to the transport industry. What will happen to them?

Have you looked at this problem in terms of the depressing effect it will have on all

[*Interpretation*]

l'État du Maine, en longeant la route U.S. 2. Vous auriez donc une autoroute qui est en voie de construction, jusqu'à Boston, et qui aurait un embranchement qui se rendrait jusqu'à l'autoroute, près de Sherbrooke, dans le Québec. La commission estime que cela serait la route la plus pratique, car elle desservirait une région populeuse des États-Unis, alors qu'une route passant plus au nord desservirait une région quasi désertique. La différence, en milles, est très peu significative, si nous avons bien compris.

Le président: Est-ce que cela répond à votre question, monsieur Corbin?

M. Corbin: Non, certainement pas. Est-ce que le projet est à l'étude à l'heure actuelle, ou est-ce qu'on estime qu'il s'agit d'un projet à long terme, et je parle de dix, vingt ou trente ans?

M. Lummis: Je crois que les gens, aux États-Unis, qui voudraient voir achever le projet disent que cela est nécessaire immédiatement. Une commission de l'État du Maine l'a étudié récemment, mais je ne connais pas leurs conclusions. Si j'ai bien compris, on est en voie de terminer une étude, et une partie de cela se trouve dans cette étude. Est-ce que cela répond à votre question?

M. Corbin: C'est une réponse vague, oui, mais une réponse...

M. Lummis: Ce n'est pas le genre de chose qu'on s'attend de voir terminée immédiatement. C'est cela que vous voulez dire?

M. Corbin: Certainement pas dans dix ans.

M. Lummis: Non.

M. Corbin: Sous forme d'avantages immédiats pour le Canada, ainsi que pour le Nouveau-Brunswick, et vous-même vous estimez que ce serait des avantages pour Saint-Jean, que pouvons-nous attendre de cette autoroute? Vous avez certaines choses dans votre mémoire et dans vos conclusions, mais je ne suis pas tout à fait d'accord. Si vous me permettez de poursuivre pendant une minute ou deux, je crois que c'est très bien de vouloir trouver des solutions à vos problèmes, dans votre région de la province, dans votre partie du Canada, mais en même temps vous créez un problème énorme le long des routes tarditionnelles du trafic des Maritimes vers le centre du Canada. Et c'est le long de ces routes, de ces réseaux, que nous avons des centaines de services pour l'industrie des transports, qu'est-ce qu'il leur arriverait à eux?

Avez-vous songé à ce problème, en fonction des résultats déprimants que tout cela aurait

[*Texte*]

this area, let us call it from Saint John through Edmundston until you get on the route to Quebec City to Montreal?

Mr. Lummis: You mean the Trans-Canada Highway route?

Mr. Corbin: The Trans-Canada Highway route.

Mr. Lummis: The effect it would have? I think the traffic continues to grow. I do not see this as a project to be completed within two or three years. It takes many, many years to build this kind of a route, and over the long term I do not see it having a tremendous detrimental effect with the increase in traffic that is occurring.

Mr. Corbin: Perhaps not in 30 years from now, but would you not agree that if we were to go about constructing such a route, or at least our end of it, tomorrow morning and have it completed in two years that it would certainly be detrimental to the traditional routes?

Mr. Lummis: I do not know.

Mr. Corbin: You have not studied the...

Mr. Lummis: We have not studied how it would be detrimental. We believe there would be many advantages to the Maritimes with a shorter route...

Mr. Corbin: To parts of the Maritimes, you mean?

Mr. Lummis: I think it covers a pretty big part.

Mr. Corbin: Yes, perhaps, in terms of the population it covers, but I would tend to conclude that it would mainly benefit the southwestern portion of New Brunswick and not the Maritimes as a whole, because there are other routes and if they were to be completed to Trans-Canada Highway standards they would serve the Maritimes equally as well as the proposed Maine Corridor route.

The Chairman: Mr. Corbin, I think we are running quite a lot behind.

Mr. Corbin: That is all for now.

The Chairman: We are behind our scheduled time and I would ask the members to please be brief, if they can. Mr. Skoberg.

[*Interprétation*]

pour toute la région de Saint-Jean à Edmundston, à Québec, à Montréal?

M. Lummis: Vous voulez dire la route Transcanadienne?

M. Corbin: En effet.

M. Lummis: L'effet que cela aura? Je pense que le trafic augmente toujours et ce projet ne sera pas terminé avant deux ou trois ans. Il faut bon nombre d'années pour aménager une telle route, et à long terme, je ne crois pas que cela soit vraiment nuisible, vu l'augmentation de la circulation.

M. Corbin: Peut-être pas dans trente ans, mais ne convenez-vous pas que, si vous aménagez une telle route, ou du moins notre tronçon, dès demain matin, et que vous la terminez en deux ans, cela aurait des effets nuisibles, disons, pour la route traditionnelle?

M. Lummis: Je n'en sais rien.

M. Corbin: Vous n'avez pas étudié la...

M. Lummis: Nous n'avons pas étudié jusqu'à quel point cela serait nuisible. Nous croyons que les avantages seraient nombreux pour les Maritimes, avec une route moins longue...

M. Corbin: Pour une partie des Maritimes?

M. Lummis: Je pense que cela comprend toute une région assez grande.

M. Corbin: Oui, peut-être, pour ce qui est de la population, cela comprend une assez grande population, mais en ce qui me concerne, je serais porté à conclure que cela serait à l'avantage essentiellement de la région du sud-ouest du Nouveau-Brunswick et non pas de l'ensemble des Maritimes, parce qu'il y a d'autres routes, et si on devait les terminer pour les mettre suivant les normes de la Transcanadienne, elles pourraient desservir les Maritimes aussi bien que ce projet de route vers le Maine.

Le président: Monsieur Corbin, je pense que nous avons dépassé l'heure de la séance.

M. Corbin: C'est tout pour l'instant.

Le président: Nous sommes en retard, et je demanderais donc aux membres du Comité d'être aussi brefs que possible. Monsieur Skoberg.

[*Text*]

Mr. Skoberg: I notice you did suggest that it was your opinion that the National Harbours Board should provide the facilities for containerization traffic. In the event that the railway companies do not intend running unit trains from that harbour should the National Harbours Board still provide that facility to handle the containers?

Mr. Lummis: We feel that the National Harbours Board should provide the facilities. They say, "You get the traffic and we will provide the facilities," but it is awful hard to get the traffic without the facilities. So, we feel that the facilities should be provided so that we can attract the traffic.

Mr. Skoberg: In other words, then the facilities should be provided at every port by the National Harbours Board...

Mr. Lummis: No, not at every port.

Mr. Skoberg: ...which may use this type of traffic. You could use the same argument.

Mr. Lummis: Well, it may. I think we have a pretty good argument for utilizing our port. I do not think it should be provided to every port.

Mr. Skoberg: For the major ports, though, that are going to be used by containerization traffic, that facility should be provided by the National Harbours Board?

Mr. Lummis: We have had projections of 80 per cent of the traffic. The general traffic may be handled in this method and we understand that Saint John is the largest handler of general traffic on the east coast; it handles more general traffic than Halifax. Therefore, if general traffic is going to swing over to containerization, we should be equipped to handle containerization. Otherwise we are going to be left out of a field we are normally in and one which we have proven we are in a good position to handle.

Mr. Skoberg: Well, regardless of ports, sir, do you believe that these facilities should be provided at the major ports?

Mr. Lummis: Definitely.

Mr. Skoberg: Have you made any representation to the Minister of Transport in regard to the airport you are referring to and, if so, when did you make it?

Mr. Lummis: No. This concept was developed only in the last few months.

[*Interpretation*]

M. Skoberg: Je vois que vous avez proposé, qu'à votre avis, l'avis du Conseil des ports nationaux devrait prévoir des installations pour le transport des conteneurs. Si les sociétés ferroviaires ne prévoient pas un certain nombre de trains homogènes à partir de ce port, est-ce que le Conseil des ports nationaux devrait toujours assurer ces services pour le transport des conteneurs?

M. Lummis: Nous sommes d'avis que le Conseil des ports nationaux devrait fournir les installations. Il dit: «vous avez le trafic et nous fournirons les installations», mais ce doit être assez difficile d'avoir le trafic sans les installations. Donc, les installations devraient être fournies, pour que nous puissions alors encourager le trafic à y venir.

M. Skoberg: Donc, les installations devraient être fournies dans tous les ports, par le Conseil des ports nationaux...

M. Lummis: Non, pas dans tous les ports.

M. Skoberg: ...qui pourrait avoir un tel trafic. Vous pourriez utiliser le même argument?

M. Lummis: Peut-être, mais je pense que nous avons un assez bon argument à présenter pour l'utilisation de notre port. Je ne crois pas qu'on doit l'assurer à tous les ports.

M. Skoberg: Dans les principaux ports, si on les utilise pour les conteneurs, ces services devraient être alors assurés par le Conseil des ports nationaux?

M. Lummis: Nous avons prévu 80 p. 100 du trafic. Le trafic général peut être fait suivant cette méthode, et Saint-Jean, je pense, est le principal centre du trafic de la côte est, et il y a plus de trafic qu'à Halifax. Donc, si on passe au système des conteneurs, on devrait être équipé pour le service des conteneurs, autrement, nous ne serons pas dans une situation favorable.

M. Skoberg: Peu importe les ports, vous croyez donc que ces installations devraient être fournies aux principaux ports?

M. Lummis: Oui, sûrement.

M. Skoberg: Est-ce que vous avez présenté des instances au ministre des Transports à l'égard de cette aérogare dont vous parlez? Si oui, quand?

M. Lummis: Non. Ce concept fut mis au point au cours des derniers mois seulement.

[*Texte*]

The Chairman: Mr. Nowlan.

Mr. Nowlan: Mr. Chairman, my question is a single one as to the people who are on the scene because I am interested in the comprehensive brief which covers a multitude of interests ranging from the concept of the international airport which the witness says has been developed in the last two or three months to the historic Chignecto Canal which has been on the agenda for many years before this Committee was ever formed. As practical men on the scene, if you had your wish, and we had the power, which of these many interests would you rank first in your list of priorities?

Mr. Lummis: I think in my summary I mentioned port facilities first, and the international airport second. This is what the Board feels and I am only speaking for the policy of the Board.

Mr. Nowlan: So the Maine Corridor and the Chignecto Canal come further down the list, as far as the Board is concerned?

Mr. Lummis: Yes.

The Chairman: Mr. Pringle.

Mr. Pringle: I notice the statement says that the airport at Fredericton cannot be expanded. I agree it could not be expanded to meet the standards of an international airport, but in the interim why could the airports at Fredericton or Saint John not be expanded to take care of our national airlines rather than our international so they could service cross-Canada flights without being deemed to be of a regional nature. Then at some time in the future one international airport might be put in the blueprints.

In other words, an international airport of the size that you suggest would require quite a heavy amount of traffic in order to justify it. However, if you state that the airport at Fredericton cannot be expanded to meet the conditions, you might be in a reasonable position here for a number of years, but not able to handle the properly classed national traffic and thus be dependent on Montreal for feeder lines. I just wonder if you have given any consideration to that?

Mr. Lummis: Our major premise is that we feel that this is something that is going to develop and we should really start planning ahead. We have taken the present inadequacies as we see them or as our committee sees them of our present airport facilities and have tried to work out some solution that

[*Interprétation*]

Le président: Monsieur Nowlan.

M. Nowlan: Monsieur le président, il y a une question que je voudrais poser aux gens qui sont sur place, parce qu'un mémoire général comprend un certain nombre d'intérêts qui vont du concept de cet aéroport international, qui, selon le témoin, a été mis au point au cours des deux ou trois derniers mois, au canal de Chignectou qui est à l'ordre du jour depuis bon nombre d'années, même avant que ce comité soit constitué. Alors, je me demande, si vous le vouliez et si nous pouvions le faire, quels seraient les intérêts pour lesquels vous établiriez la première priorité?

M. Lummis: Je pense que j'ai parlé des aménagements portuaires et ensuite de l'aéroport international. C'est ce que le Conseil croit, et je ne parle qu'au nom de la politique du Conseil.

M. Nowlan: Donc, la route du Maine et le canal de Chignectou ne sont pas une des toutes premières priorités, pour ce qui est du Conseil?

M. Lummis: Oui.

Le président: Monsieur Pringle.

M. Pringle: Je vois que dans votre déclaration, vous dites que l'aéroport de Fredericton ne peut être agrandi. Donc, je conviens qu'on ne peut l'agrandir pour répondre aux normes d'un aéroport international, mais entre temps, pourquoi les aéroports de Fredericton ou de Saint-Jean ne seraient-ils pas agrandis pour desservir nos lignes aériennes nationales, plutôt qu'internationales, pour qu'ainsi, on puisse desservir les vols canadiens plutôt que d'être simplement de nature régionale? A un moment donné, dans l'avenir, un aéroport international pourrait être prévu.

En d'autres mots, ce que je vous propose, c'est qu'un aéroport international de l'envergure proposée exigerait un trafic très intense pour que ce soit justifié. Mais, si vous dites que l'aéroport de Fredericton ne peut être agrandi, pour répondre aux exigences, peut-être seriez-vous en mesure, pendant un certain nombre d'années, mais vous ne seriez pas équipés pour le trafic national et vous devriez compter sur Montréal pour la ligne d'alimentation. Est-ce que vous y avez songé?

M. Lummis: Les prémisses, c'est que nous avons là une chose qui va se présenter et dont nous devrions prévoir la planification dès maintenant. Nous tenons compte des déficiences actuelles, telles que nous les concevons, ou telles que notre Comité les voit, des aménagements de notre aéroport actuel,

[*Text*]

might be valid in the years ahead. We have tried to get with it now, as it were.

Mr. Pringle: Yes, I agree with that, but I just wondered if maybe it was a little overstatement that the airports at Saint John and Fredericton could not be expanded in the interim to take care of—

Mr. Lummis: I would not have the technical information to answer the question.

The Chairman: A very short question, Mr. Allmand?

Mr. Allmand: It deals with this international airport and with respect to the questions that Mr. Nesbitt and Mr. Pringle were asking. From looking at your map it would seem to me that to make the best use of a large airport it should be located somewhere in the area of Sussex because I think with good roads it would be less than an hour from Moncton, Fredericton and Saint John. I wonder if you have given thought to that because the proposed international airport, for example, around Montreal could be 80 miles from the city, but that is only about an hour with good roads—an hour, more or less. How far would Sussex be respectively from Moncton, Saint John and Fredericton?

Mr. Lummis: It is about 80 miles from Fredericton, I think, and about 45 miles from Saint John.

Mr. Allmand: And how far from Moncton?

Mr. Lummis: About 45, say, from Moncton.

Mr. Allmand: Because your proposal to put an international airport merely to serve Fredericton...

Mr. Lummis: We are proposing a technical study to look into this situation.

Mr. Allmand: I see.

Mr. Lummis: If they will come up with some assessment like that...

An hon. Member: If we are going to try to cover this brief before noon.

The Chairman: This finishes the questioning on this brief. I want to thank the two gentlemen, Mr. Crosby and Mr. Lummis, for their co-operation.

Our next brief will be presented by Mr. K. C. Irving from Irving Oil. Mr. Irving will you step forward, please? I think you all

[*Interpretation*]

et nous essayons de trouver des solutions valables pour les années à venir, et nous essayons de voir ce qui en est maintenant.

M. Pringle: J'en conviens, mais est-ce que ce n'était pas un peu trop que de dire que les aéroports de Fredericton et de Saint-Jean ne pourraient pas être agrandis entre-temps, pour...

M. Lummis: Je n'ai pas les renseignements et les données techniques pour répondre à cette question.

Le président: Une question très brève, monsieur Allmand?

M. Allmand: Pour ce qui est de cet aéroport international, à l'égard des questions posées par M. Nesbitt et M. Pringle, en voyant la carte du Nouveau-Brunswick, il me semble que pour mieux utiliser un grand aéroport, ce serait plutôt dans la région de Sussex qu'on devrait l'aménager, car, s'il y avait d'excellentes routes, cela prendrait moins d'une heure pour venir de Moncton, de Saint-Jean et de Fredericton. Y avez-vous songé, parce qu'un aéroport international, disons près de Montréal, se trouvera peut-être à 80 milles de la ville, mais ce n'est qu'à une heure avec une excellente route, une heure plus ou moins. Alors, Sussex se trouve à combien de milles de Moncton, de Saint-Jean et de Fredericton?

M. Lummis: A environ 80 milles de Fredericton, et 45 milles de Saint-Jean.

M. Allmand: Et de Moncton?

M. Lummis: Environ 45 milles peut-être.

M. Allmand: Votre proposition visant à aménager un aéroport international simplement pour desservir Fredericton...

M. Lummis: Nous proposons qu'on fasse une étude technique de la situation.

M. Allmand: Je vois.

M. Lummis: Si on faisait une telle évaluation...

Une voix: ...si nous voulons finir l'étude de ce mémoire avant midi.

Le président: Nous terminons la période des questions, et je désire remercier les deux témoins, MM. Crosby et Lummis, pour leur bonne collaboration.

Le prochain mémoire sera celui de M. K. C. Irving, de *Irving Oil*. Monsieur Irving, voulez-vous avancer, s'il vous plaît?

[*Texte*]

received a copy of the brief from Irving Oil this morning. I have on my immediate right Mr. K. C. Irving; next to him is another Mr. Irving—Mr. A. L. Irving—and then Mr. G. B. Lawson. I will ask Mr. K. C. Irving to read his brief

Mr. Nesbitt: On a point of order.

The Chairman: Yes.

Mr. Nesbitt: I wonder Mr. Chairman, since Mr. Irving has a rather extensive brief—I know most of the members of the Committee would be very interested in hearing his observations—if he could present the brief now and in view of the time—I know he is a very busy man—perhaps he could come back to us after lunch to answer questions because I imagine there will be quite a few questions.

The Chairman: If Mr. Irving could give us a short summary of his brief—we still have about 25 minutes—I believe we could take an extra 5 or 10 minutes. I might as well tell you now that we have an invitation to a reception and luncheon at the hotel at 12.45. I know I might be a little hard on you fellows, but we are a little behind in our schedule and if we want to stick to our schedule I think we should keep going.

An hon. Member: Mr. Chairman, perhaps during the lunch hour we could read the brief.

An hon. Member: That is right.

An hon. Member: If we hear Mr. Irving now, we could study the brief during the lunch hour.

The Chairman: We will start by having Mr. Irving read his brief and we will see how it goes.

Mr. K. C. Irving (Chief Executive Officer, Irving Oil Limited): Gentlemen, I appreciate this opportunity to appear before you as a follow-up to my letter of February 12th. Following the pattern that has been suggested by the Chairman, I would like to ask Mr. Lawson to read an outline of my views.

Mr. G. B. Lawson (Assistant to the President, Irving Oil Limited): Mr. Chairman and gentlemen, in my letter of February 12, 1969, suggesting I would be prepared to appear before this sitting of the Standing Committee on Transport and Communications of the House of Commons, I made reference to the

[*Interprétation*]

Je pense que vous avez tous reçu, ce matin un exemplaire du mémoire de *Irving Oil*. A ma droite, se trouve M. K. C. Irving, puis un autre M. Irving—M. A. L. Irving—et M. G. B. Lawson. Je demanderai à M. K. C. Irving de nous donner lecture de son mémoire.

M. Nesbitt: J'invoque le Règlement.

Le président: Oui.

M. Nesbitt: Monsieur le président, je vois que le mémoire de M. K. C. Irving est assez long et nous sommes tous intéressés à entendre ce qu'il a à dire, alors, je me demandais si M. K. C. Irving ne pourrait pas présenter son mémoire dès maintenant, vu l'heure. Je sais que c'est un homme très occupé; peut-être pourrait-il revenir après déjeuner pour répondre à nos questions, parce que j'imagine que nous aurons beaucoup de questions à lui poser.

Le président: Peut-être pourrait-il nous donner un résumé de son mémoire. Nous avons encore à peu près 25 minutes à notre disposition. On pourrait prendre 5 ou 10 minutes de plus, parce que notre déjeuner, peut-être aussi bien vous dire, nous avons été invités à déjeuner à l'hôtel à 12 h. 45. J'insiste peut-être un peu trop, mais nous sommes un peu en arrière sur l'horaire prévu; il nous faudra donc nous en tenir à l'emploi du temps.

Une voix: Monsieur le président, pendant l'heure du déjeuner, nous pourrions peut-être lire le mémoire.

Une autre voix: En effet.

Une autre voix: Si nous pouvions entendre M. Irving, dès maintenant, nous pourrions étudier le mémoire pendant le déjeuner.

Le président: Nous entendrons tout d'abord M. Irving, puis nous verrons.

M. K. C. Irving (Directeur général, Irving Oil Limited): Messieurs, j'apprécie beaucoup l'occasion qui m'est fournie de comparaître ici, à la suite de la lettre que je vous ai fait parvenir le 12 février. A la suite aussi de la présentation proposée par le président, je voudrais demander à M. Lawson de vous donner lecture d'un aperçu de mon mémoire.

M. G. B. Lawson (Adjoint au président, Irving Oil Limited): Monsieur le président, Messieurs, dans la lettre que je vous ai adressée le 12 février 1969, dans laquelle je disais être prêt à comparaître à cette séance du comité permanent des Transports et des Communications de la Chambre des commu-

[*Text*]

desirability of incentive rates to encourage industrial development and there is also reference to the need for the greatest possible degree of co-operation between the two railways in the use of existing lines and equipment. I appreciate very much the opportunity of appearing before you today to expand on these points.

I would also like to explain in some detail my concern about what I term as unfair competition and the possibility of unfair competition. It is also my intention to draw certain problems which I believe must be a result of the terms of reference given to top management...

An hon. Member: Could you read a little more slowly?

Mr. Lawson: Certainly, I will slow down for the benefit of the translators. It is also my intention to draw your attention to certain problems which I believe must be a result of the terms of reference given to top management of the Canadian National Railways in the Atlantic region.

Before exploring these matters more fully, I would like to say that a detailed brief on transportation and related economic problems had been prepared last year and it had been my hope to present this information to your predecessor Committee in April 1968. Various matters have changed since that time, but I believe the summary of that brief still is applicable and I leave copies of this summary with you.

In that summary I would like to draw your attention specifically to item number 5 with reference to the designated area under the government's Industrial Incentives Program. If I have correctly interpreted the recent statement of the Hon. Jean Marchand, the government now is prepared to adopt and support the growth-centre principle which presumably will encourage development in major centres. This, in my view, is the role the government should be playing and we are encouraged by the Minister's proposal.

In dealing with some of the transportation problems of the Atlantic Provinces, it is quite possible my remarks might be considered as a reflection on management personnel, especially management personnel of the Canadian National Railways. This is not my intention.

[*Interpretation*]

nes, je vous ai parlé du fait qu'il serait souhaitable d'avoir des taux, afin d'encourager le développement industriel; on y parle aussi de la nécessité d'avoir toute la collaboration voulue entre les deux chemins de fer dans l'utilisation des lignes actuelles et de l'équipement. J'apprécie beaucoup l'occasion qui nous est fournie de comparaître ici afin d'élaborer sur ces deux points.

Je voudrais aussi vous expliquer en détail la préoccupation que je ressens quant à cette concurrence injuste qui nous vient et aussi à cette possibilité de concurrence injuste. J'ai aussi l'intention de vous signaler certains problèmes qui, à notre avis, doivent être le résultat du mandat qui fut donné à la haute administration...

Une voix: Pourriez-vous lire un peu plus lentement?

M. Lawson: Oui, je vais ralentir pour les interprètes. J'ai aussi l'intention de vous signaler certains des problèmes qui, à mon avis, sont le résultat du mandat qui fut donné à la haute administration du National-Canadien dans la région de l'Atlantique.

Mais avant d'explorer toutes ces questions plus en détail, je voudrais vous dire qu'un mémoire détaillé sur les transports et autres problèmes économiques connexes, avait été rédigé la semaine dernière et j'osais espérer pouvoir vous donner ces renseignements au comité qui vous a précédés au mois d'avril 1968. Différentes questions sont modifiées depuis lors, mais je pense qu'un résumé de ce mémoire vaut toujours et je vous laisse copie de ce résumé.

Dans ce résumé, je voudrais particulièrement vous signaler le point numéro 5, ayant trait aux régions désignées relevant du programme d'encouragement industriel du gouvernement. Si j'ai bien interprété la déclaration faite récemment par l'honorable Jean Marchand, le gouvernement est maintenant prêt à adopter et à appuyer le principe du centre de croissance qui encouragerait les développements principaux dans les grands centres. Cela, à mon avis, est le rôle du gouvernement et le rôle qu'il doit assumer et nous sommes vraiment encouragés à la suite de cette proposition du ministre.

En traitant de certains des problèmes de transport des provinces de l'Atlantique, il est possible que les observations que je vous fasse soient considérées comme étant une réflexion sur l'administration du personnel, tout particulièrement en ce qui a trait au Natio-

[*Texte*]

The CNR has excellent people in the Atlantic region now and has had excellent people in the past.

I do feel they have been handicapped by top level policy, a policy which I have found very difficult to understand and much more difficult to justify. This policy often appears to be designed to cut the price to any level to force out competition and presumably the policy also dictates that losses should be recouped by charging all the traffic will bear in areas where there is no direct competition.

It is necessary for me to go back to 1932 to tell you of my early experience with this policy and how it was put into effect. In 1932 following an increase in rates, I sought from the CNR rates which would make it practical for our company to continue to deliver oil products by rail to these affected areas. The rates quoted were not acceptable. We argued in Moncton for the better part of two years and throughout these discussions I made it clear to the CNR that I would be forced to go to coastal tanker delivery unless the rates were re-adjusted.

In 1934 I was told to go to water transportation. In July of that year I bought a tanker in Scotland and put it into operation in the fall of 1934. During 1934, 1935 and 1936 our company built numerous water terminals and purchased equipment to facilitate delivery by coastal tanker.

In 1937 I was confronted by the CNR officials—fine gentlemen and some of them even personal friends—who told me I should withdraw the tanker from service. This was no veiled threat by the CNR, it was simply an outright statement. If I did not remove the tanker, the CNR said, it would cut its rates so drastically that my competitors would have an advantage over me in every community where I was shipping by coastal tanker.

When I refused to take off the tanker service which the CNR had forced me into in the first place, the CNR fulfilled its threat and cut freight rate charges to all competitive points by amounts ranging from 28 to 45

[*Interprétation*]

nal-Canadien. Telle n'est pas mon intention. Le National-Canadien a une excellente administration dans la région de l'Atlantique. Maintenant, il y a eu d'excellentes représentations par le passé.

Mais plutôt, je crois qu'il y ait eu un handicap par la politique de la haute administration, politique qui éprouve beaucoup de difficulté à comprendre et, encore plus, à justifier. Bien souvent, cette politique semble être conçue pour couper les prix à tout niveau afin de faire disparaître toute concurrence et alors, cette politique dit que les pertes doivent être récupérées en cherchant toute la circulation qui peut se faire dans les régions où il n'y a pas de concurrence directe.

Je dois donc me reporter à l'année 1932 pour vous faire part de mes premières expériences face à cette politique et la façon dont elle fut mise en vigueur. En 1932, à la suite d'une augmentation des taux, j'ai demandé au National-Canadien des taux qui nous permettraient de toujours faire la livraison des produits pétroliers par le transport ferroviaire dans ces régions affectées. Mais les taux cités n'étaient pas acceptés. Mais pendant deux ans, nous avons prétendu, au cours de ces négociations et de ces pourparlers, ce que j'ai établi bien clairement auprès du National-Canadien, que je devais avoir recours aux services de pétroliers-côtiers, à moins qu'on ne fasse un rajustement des taux.

En 1934, on m'a dit: alors, utilisez le transport maritime. Au mois de juillet de la même année, j'ai acheté un pétrolier en Écosse et je l'ai mis en opération en automne 1934. Pendant les années 1934, 1935 et 1936, notre société a construit plusieurs terminus maritimes et a acheté de l'équipement afin de faciliter la livraison par pétrolier-côtier.

En 1937, je fus confronté par les hauts fonctionnaires du National-Canadien, d'excellents représentants et même des amis personnels, qui m'ont dit que je devrais retirer ce pétrolier du service. Ce n'était pas une menace voilée du National-Canadien, mais c'était seulement une déclaration en bonne et due forme. Si je ne retirais pas le pétrolier, le National-Canadien disait qu'il ferait une telle coupure de ses taux que mes concurrents seraient dans une situation avantageuse dans toute collectivité où je faisais la livraison par pétrolier-côtier.

Lorsque j'ai refusé de retirer ces services vers lequel le National-Canadien m'avait poussé d'abord, le National-Canadien a donc réalisé ses promesses en coupant tous les taux dans les proportions allant de 28 à 45 p.

[*Text*]

per cent. I will leave for your examination copies of the freight rate charges showing exactly what was done.

Incidentally, gentlemen, in connection with the references to material that will be left with you, you will find it all at the back of the brief as an appendage.

Admittedly, the period of 1932-1937 is a long time ago; that was the policy of the CNR then. As you can see it was a tough, even vicious, policy. My concern is whether that policy or any part of it remains in effect today.

I would like to summarize some details we have prepared in connection with transportation costs of chlorine, caustic and wood products. I will give you copies containing more details and I would commend this material to your study. I am sure you will be able to form your own conclusions.

First, let me refer to the freight charges for bringing chlorine from Shawinigan to West Saint John and the rates for movement from Shawinigan to Port Hawkesbury. It is 535 miles from Shawinigan to West Saint John and 760 miles from Shawinigan to Port Hawkesbury. The rates I am going to quote are for 100 pounds.

In December 1960 the Shawinigan to West Saint John rate was $1.26 and had been for some considerable time. In October 1961 we learned that a rate had been established from Shawinigan to Port Hawkesbury at 86 cents. We naturally asked for a rate comparable which, in effect, should have been lower because of the shorter haul. We were refused. Finally in February 1962 we were able to negotiate a rate of $1.04. Port Hawkesbury continued to enjoy its 86 cent rate. It was not until February 1963 that we were able to get the same 86 cent rate even though the haul was more than 200 miles shorter. In January 1967, the rates to Saint John and to Port Hawkesbury were increased to 95 cents. Our current ton-mile rate is 3.5 cents while Port Hawkesbury enjoys a 2.5 cent per ton-mile rate.

While we have not used the service, in April 1968 we were quoted a 63 cent rate from Dalhousie to West Saint John involving a haul of 269 miles. The Dalhousie-Port Hawkesbury rate in 1963 was 45 cents and in 1967 it was 50 cents, covering a haul of 429 miles. The current ton-mile rate would be 4.7 cents to Saint John and 2.3 to Port Hawkesbury.

[*Interpretation*]

100. Je vous laisse donc, pour fin d'étude, copie des taux afin de vous montrer ce qui s'y fait.

En passant, Messieurs, pour ce qui est des données que nous vous laisserons, vous les trouverez en annexe à la fin du mémoire.

A la fin de la période de 1932 à 1937, soit il y a bon nombre d'années, ce fut là la politique du National-Canadien. Comme vous pouvez le voir, c'était une politique vicieuse, très dure; et ma préoccupation est de voir si cette politique ou partie de cette politique est toujours en vigueur de nos jours. Je voudrais donc vous résumer certains des détails que nous avons préparés à l'égard des coûts de transport du chlore, du caustique et des produits forestiers. Je vous fournirai copie contenant plus de détails et je vous demanderais de bien vouloir étudier toutes ces données. Je suis sûr que vous serez en mesure de tirer vos propres conclusions.

Tout d'abord, permettez-moi de vous parler du tarif pour le transport du chlore, de Shawinigan à Saint-Jean ouest, et du taux de transport de Shawinigan à Port Hawkesbury. Il y a 535 milles de Shawinigan à Saint-Jean ouest, et 760 milles de Shawinigan à Port Hawkesbury. Les taux que je vais vous citer sont pour les 100 livres.

Au mois de décembre 1960, le transport de Shawinigan à Saint-Jean ouest avait un taux de $1.26, et depuis assez longtemps. Au mois d'octobre 1961, nous avons appris qu'un taux avait été prévu pour Shawinigan à Port Hawkesbury et il était de $0.86. Donc, nous avons demandé un taux comparable et qui aurait pu être inférieur, vu la distance plus courte. Ce qu'on nous a refusé. Enfin, au mois de février 1962, nous avons été en mesure de négocier un taux de $1.04. Port Hawkesbury a toujours eu ce taux de $0.86. Ce n'est qu'au mois de février 1963 que nous avons été en mesure d'obtenir le même taux de $0.86, bien que le parcours soit de plus de 200 milles plus court. Au mois de janvier 1967, les taux de Saint-Jean à Port Hawkesbury ont connu une augmentation et ont été portés à $0.95. Le taux courant de la tonne-mille est de 3.5 cents, alors que Port Hawkesbury a un taux de 2.5 cents par tonne-mille.

Alors, que nous n'avons pas eu recours à ce service, au mois d'avril, 1968, on nous a donné un taux de $0.63 à partir de Dalhousie à Saint-Jean ouest, sur un parcours de 269 milles. De Dalhousie à Port Hawkesbury, le taux, en 1963, était de $0.45 et, en 1967, il était de $0.50 pour un parcours de 429 milles. Le taux courant de la tonne-mille serait de 4.7 cents à Saint-Jean et de 2.3 cents à Port Hawkesbury.

[*Texte*]

Costs for caustic transportation from Shawinigan were equally disturbing and unrealistic from our point of view. In 1961 we had a rate of 57 cents and in August 1961 a rate of 43 cents was established for Port Hawkesbury. In 1967 our rate was increased to 63 cents while rates of 47 cents and 52 cents, depending on the size of the railcars, were established for Port Hawkesbury. In August 1968 a rate of 44 cents was established for Port Hawkesbury by using 190,000 pound cars. In August 1968 there was no applicable rate for Shawinigan to West Saint John because by that time we had been forced to obtain our caustic from other sources and by other means of transportation.

I would like to bring to your attention the rail rates for pulp transported from Saint John to New Milford, Conn., a distance of 810 miles compared to a rate for pulp transported from Abercrombie, N.S. to Chester, Pa., a distance of 1,720 miles. The current rate on the shorter haul from Saint John to New Milford is $8.56 per ton or $1.05 cents per ton-mile. The rate on Abercrombie-Chester haul is $8.63 per ton or .68 cents per ton-mile. It is quite possible that someone will have an explanation for this policy and for these rates, but quite frankly, gentlemen, both the policy and the rates are beyond our understanding.

I have referred to the need for greater co-operation by the railways within the Province of New Brunswick and I have suggested that more time and energy should be devoted to creating incentive rates to encourage industrial development.

I think our experience in the movement of wood chips is pertinent to your study. The most direct CNR route for the movement of chips from Veneer is via St. Leonard, McGivney, Fredericton to Saint John, a distance of 248.2 miles. The most direct route via CNR to St. Leonard via CPR to Saint John via Fredericton, is a distance of 229.2 miles. The all-CNR route being used is via Moncton, a distance of 315.5 miles. The ton-mile rate is 1.06 cents using the shortest all-CNR route, but the CNR travels an extra 67 miles on its own lines and, as you can see, there would be a saving of approximately 86 miles if the cars were moved over a combination of CNR and CPR lines.

[*Interprétation*]

Le coût pour le transport du caustique de Shawinigan était tout aussi inquiétant et irréaliste, à notre avis. En 1961, nous avions un taux de $0.57 et au mois d'août 1961, un taux de $0.43 fut établi pour Port Hawkesbury. En 1967, notre taux fut porté à $0.63, alors que les taux de $0.47 et de $0.52, suivant les wagons, furent établis pour Port Hawkesbury. Au mois d'août 1968, un taux de $0.44 fut établi pour Port Hawkesbury en utilisant des wagons de 190,000 livres. Au mois d'août 1968, il n'y avait pas de taux valable pour Shawinigan à Saint-Jean ouest, parce qu'alors, nous aurions dû obtenir notre caustique d'autres sources et en vertu d'autres moyens de transport.

Je voudrais vous signaler le taux ferroviaire pour le transport de la pâte à papier à partir de Saint-Jean à New Milford, Connecticut, soit un parcours de 810 milles, comparativement au taux pour le transport du même produit de Abercrombie, Nouvelle-Écosse, à Chester, Pennsylvanie, soit un parcours de 1,270 milles. Le taux pour le parcours moins long de Saint-Jean à New Milford est de $8.56 la tonne ou 1.05 cent par tonne-mille. Le taux pour le parcours de Abercrombie à Chester est de $8.63 la tonne ou de .68 cent par tonne-mille. Il est donc possible que quelqu'un puisse expliquer cette politique et ces taux mais, sincèrement, Messieurs, cette politique et ces taux, nous ne parvenons pas vraiment à les comprendre.

Je vous ai parlé de la nécessité d'avoir une plus ample collaboration des services ferroviaires dans la province du Nouveau-Brunswick, et je vous ai dit qu'on devait consacrer plus de temps et d'énergie afin de créer des taux plus encourageants, afin d'entraîner un développement industriel plus grand.

Je crois que notre expérience pour le transport des copeaux de bois est très pertinente à l'égard de votre étude. Le parcours le plus direct par le National-Canadien, à partir de Veneer, via Saint-Léonard, McGivney, Fredericton, Saint-Jean, ce qui fait un parcours de 248.2 milles. Le parcours le plus direct par le National-Canadien à Saint-Léonard, par le CPR, à Saint-Jean, par Fredericton, donne un parcours de 229.2 milles. La route qui fait exclusivement partie du National-Canadien se fait par Moncton, soit un parcours de 315.5 milles. Le taux tonne-mille est de 1.06 cent, utilisant la route la plus courte du National-Canadien, mais le National-Canadien parcourt 67 milles additionnels le long de sa propre ligne, et comme vous pouvez voir, on pourrait gagner environ 86 milles si les wagons utilisaient les lignes du National-Canadien et du Pacifique-Canadien.

[*Text*]

A similar situation is in existence on shipments from Deersdale to Saint John and I will give you copies of a report containing details on these routes. That, again, is in the appendix to this material, gentlemen.

There are examples in Canada today of unusual and even historic co-operation with industry in order to provide highly attractive transportation rates. For instance, it is my understanding that the Pacific Great Eastern Railway owned by the British Columbia Government follows a freight rate policy to promote development of the interior of British Columbia. Accordingly, pulp mills located at any point along this line pay the same freight rate on shipments to tidewater at Vancouver. The Pacific Great Eastern delivers wood chips from 75 to 150 miles from the mill at a flat rate of $2.31 per unit of chips containing approximately 100 cubic feet of solid wood. This represents a rate ranging from .56 cents to .64 cents per ton-mile on a 150 mile haul.

In New Brunswick the cost of shipping wood chips from Deersdale to Saint John via the shortest all-CN route would be $1.75 per ton-mile. The most direct available route from Deersdale to Saint John on CNR lines is 148.1 miles while the most direct rail route using CN and CP lines is 131.3 miles. The route used via Moncton is 215.4 miles.

However, perhaps the most notable example of co-operation is that which has made possible a rebirth of the coal industry in Alberta and shipment to British Columbia for trans shipment through the soon-to-be-established super port at Roberts Bank to Japan. It is my understanding that special railcars have been designed and are being built for this very purpose and it is also my understanding that the CPR freight rate for coal of $5.00 per ton was considered $1.50 per ton too high for the Japanese steel makers. There were negotiations which led to the establishment of a $3.50 rate. This apparently is equivalent to .5 cents per ton-mile. Jack L. Ashley, President of Kaiser Steel, described the rate as historic. In this section of Canada I think we would describe it as unbelievable.

In my view this is co-operation and incentive at their best. Is there any reason why the same type of co-operation and the same degree of incentive for industry cannot be afforded on the east coast of Canada? Is it

[*Interpretation*]

Une situation analogue se présente pour les expéditions à partir de Deersdale à Saint-Jean, et je vous fournirai copie des rapports qui vous donnent le détail de ces routes. Une fois de plus, cela se trouve en annexe à ce mémoire.

Il y a des exemples au Canada, aujourd'hui, de cette collaboration sur le plan historique avec l'industrie, afin d'assurer des taux de transport vraiment intéressants. Ainsi, si je comprends bien, le Pacific Great Eastern Railway, propriété du gouvernement de la Colombie-Britannique, a suivi une politique du tarif ferroviaire afin d'encourager le développement de l'intérieur de la Colombie-Britannique. En conséquence, les usines de pâte à papier qui sont le long de cette ligne paient le même taux pour les expéditions à Vancouver. Le Pacific Great Eastern Railway fait l'expédition des copeaux à partir d'une distance de 75 à 150 milles de l'usine, à un taux fixe de $2.31 l'unité, contenant environ 100 pieds cubes de bois solide, ce qui représente un taux allant de .56 cent à .64 cent la tonne-mille, pour un parcours de 150 milles.

Au Nouveau-Brunswick, l'expédition des copeaux de bois de Deersdale à Saint-Jean par la route la plus courte du National-Canadien serait de $1.75 la tonne-mille. La route la plus directe disponible de Deersdale à Saint-John par la ligne du CNR est de 148.1 milles, alors que la route la plus directe par rail, utilisant les lignes du National et du Pacifique-Canadien, est de 131.3 milles. La route utilisant le parcours par Moncton est de 215.4 milles.

Mais le meilleur exemple de collaboration est peut-être celui qui a donné lieu à la renaissance de l'industrie des charbonnages de l'Alberta et de leur expédition vers la Colombie-Britannique, une grosse expédition à la suite de l'aménagement du port de Roberts Bank, vers le Japon. Des wagons spéciaux ont été conçus et sont en construction à cette fin. Si je comprends bien, le taux de transport du Pacifique-Canadien pour le charbon est de $5.00 la tonne et fut considéré comme étant de $1.50 trop élevé, par les fabricants d'acier japonais. On a négocié, ce qui a donné lieu à l'tablissement d'un taux de $3.50 ce qui représente .5 cent la tonne-mille. M. Jack L. Ashley, président de Kaiser Steel, a dit qu'il s'agissait là d'un taux vraiment historique. Dans cette région du Canada je pense que nous dirions que c'est à peu près incroyable.

Mais, à mon avis, il s'agit là d'un encouragement, et d'une collaboration vraiment excellente. Alors, pourquoi ne pas avoir ce même genre de collaboration et d'encouragement pour l'industrie le long du littoral est

[*Texte*]

not reasonable that we should expect in this economically depressed section of Canada the same type of imaginative thinking and the same beneficial rates which have been made available to the resource-rich provinces of Alberta and British Columbia, not to mention the Japanese steel makers.

The Chairman: I want to thank you for the comments on your brief. Mr. Skoberg.

Mr. Skoberg: Mr. Chairman, it is 12.30. Do you want to start the questioning now?

The Chairman: One moment, please. May I have a little order, please. What is your point of order?

Mr. Rock: Mr. Chairman, I believe a brief like this does not have much relevance with what we are here for except that this brief—just a minute. Now, wait...

The Chairman: Order.

Mr. Rock: ...is basically a complaint on rates and rates are supposed to be settled by the Canadian Transport Commission. Well, they are supposed to be.

An hon. Member: What are we here for?

Mr. Rock: This Committee is here for a different purpose completely. We are not here to discuss the rates themselves.

The Chairman: Make your point of order, Mr. Rock.

Mr. Rock: Mr. Chairman, we can do nothing about the rates themselves. When anyone has a complaint about the rates he is supposed to make a submission to the Canadian Transport Commission and the matter is settled there.

Mr. Horner: Mr. Chairman, if I may speak on the point of order? This brief is right to the core of the problems that the Maritimes are faced with in the application of Bill C-231. I say this brief is right to the core of the problem.

The Chairman: Gentlemen, I think this is the time to adjourn until after lunch. Just a minute please, before we adjourn, Mr. Craig and Mr. Dickson from the Maritimes Transportation Commission will be with us this afternoon to observe our proceedings. Do not forget we resume at 2.00 o'clock.

[*Interprétation*]

du Canada? Est-ce qu'on ne peut pas aussi s'attendre dans cette région de marasme économique d'avoir la même imagination créatrice et les mêmes taux bénéfiques qui ont été mis à la disposition des provinces riches en ressources que sont l'Alberta, la Colombie-Britannique, pour ne pas mentionner les fabricants d'acier japonais.

Le président: Je désire vous remercier pour votre mémoire. Monsieur Skoberg.

M. Skoberg: Monsieur le président, il est midi et demi. Voulez-vous commercer l'interrogatoire dès maintenant?

Le président: Un instant, s'il vous plaît. Un peu d'ordre s'il vous plaît. Quel est votre rappel au Règlement?

M. Rock: Monsieur le président, je crois que ce mémoire n'a vraiment pas trait à la raison d'être de notre réunion ici. Non...un instant s'il vous plaît...

Le président: A l'ordre.

M. Rock: Il s'agit, au fond, d'une plainte sur les taux, et les taux sont censés être établis par la Commission canadienne des transports. Ils sont censés l'être.

Une voix: Pourquoi sommes-nous ici?

M. Rock: En fait, notre Comité a des objets tout à fait différents, nous ne sommes pas ici pour discuter les taux mêmes.

Le président: Faites votre rappel au Règlement, monsieur Rock.

M. Rock: Monsieur le président, nous ne pouvons rien faire au sujet des taux eux-mêmes. Lorsque quelqu'un a une plainte à faire au sujet des taux, il est censé la faire auprès de la Commission canadienne des transports et c'est là que la question est réglée.

M. Horner: Monsieur le président, puis-je dire quelque chose au sujet de ce rappel au Règlement? Ce mémoire touche à la racine même du problème des transports auquel font face les provinces de l'Atlantique pour ce qui est de l'application du Bill C-231.

Le président: Messieurs, je crois que le temps est venu de lever la séance; nous reviendrons après le déjeuner. Un instant, s'il vous plaît. Avant de lever la séance, M. Craig et M. Dickson, de la Commission des transports des Maritimes, assisteront à la séance de cet après-midi, à titre d'observateurs. N'oubliez pas que la séance reprend à 14 heures.

[*Text*]

AFTERNOON SITTING

The Chairman: Gentlemen, I understand that you would like a little more information on Mr. Irving's brief, so I would ask that he read the summary of it.

Mr. Rock: Mr. Chairman, before you do that and in reference to my earlier point of order...

The Chairman: Order, please. I do not think I recognized your point of order, Mr. Rock.

Mr. Rock: It is actually against my principles to be restricted in any way.

Mr. K. C. Irving: Mr. Chairman, may I ask Mr. Lawson to read the summary of the brief that we proposed submitting last April.

Mr. G. B. Lawson: This is a summary of the brief prepared for submission to the Standing Committee on Transportation and Communications of the House of Commons dated April 26, 1968. Most of the points set out here remain appropriate today. You will recognize that since April, 1968, there have been some changes. In any event, these remain Mr. Irving's views.

1. *Freight Rates.* The Atlantic Provinces are entitled to freight rates which will enable manufacturers to operate within the province and to reach the markets of central Canada at a competitive price. Freight rate adjustments alone will not solve our economic problems. These problems are tied to federal transportation, monetary and tariff policies.

2. *Railway Co-operation.* There should be much more co-operation between the two rialways in the use of existing rail lines in New Brunswick.

3. *Unfair Competition.*

A. While the railway may have to operate at a loss in order to serve some isolated areas the CNR should not be able to use the taxpayers' money to cut rates for the express purpose of forcing railways competition out of business. There is clear evidence the CNR has done just that.

B. When faced with competition from coastal shipping or river shipping CNR rates

[*Interpretation*]

SÉANCE DE L'APRÈS-MIDI

Le président: A l'ordre, messieurs. Je présume que vous aimeriez avoir un peu plus de renseignements sur le mémoire de M. Irving; aussi je lui demanderais de vous en lire le résumé.

M. Rock: Monsieur le président, avant que vous ne le fassiez, et eu égard au point que j'avais soulevé précédemment...

Le président: A l'ordre, s'il vous plaît. Je ne crois pas avoir reçu votre rappel au Règlement.

M. Rock: C'est tout simplement contre mes principes d'être limité; c'est tout.

M. K. C. Irving: Est-ce que je pourrais demander à M. Lawson de vous lire le résumé du mémoire que nous avions l'intention de vous soumettre au mois d'avril dernier?

M. G. B. Lawson: Il s'agit du résumé d'un mémoire à présenter au Comité permanent des Transports et communications de la Chambre des communes, en date du 26 avril 1968.

La plupart des points qui y sont soulevés sont toujours d'actualité. Vous constaterez que, depuis le 26 avril 1968, il y a eu des changements, du moins selon l'avis de M. Irving.

Premièrement, toutes les marchandises des Provinces de l'Atlantique ont droit à un tarif marchandise, qui permettra aux fabricants de fonctionner dans leur province et d'atteindre les marchés du Canada central à des prix compétitifs.

A eux seuls, les ajustements de tarif du fret ne résoudrons cependant pas tous nos problèmes économiques. Ceux-ci sont liés aux transports fédéraux, à la monnaie et à la politique tarifaire.

Deuxièmement, collaboration avec les chemins de fer. Il devrait y avoir une beaucoup plus grande collaboration entre les deux systèmes ferroviaires pour les lignes de chemins de fer existantes au Nouveau-Brunswick.

Troisièmement, concurrence déloyale.

A) Bien que les chemins de fer soient parfois amenés à fonctionner à perte afin de desservir des régions isolées, le CNR ne devrait pas pouvoir employer les fonds des contribuables à couper les prix dans le but spécifique de rendre impossible la concurrence avec les chemins de fer. Il est pleinement évident que c'est justement ce qu'a fait le CNR.

B) Placé devant la concurrence des transports maritimes ou fluviaux, il a réduit ses tarifs

[*Texte*]

have been reduced to meet that competition and to eliminate it. I question whether attempts to eliminate coastal and river shipping is in the public interest, especially when Canadian taxpayers, including those in the Atlantic Region, must finance the CNR's deficit operations.

4. *Harbour Development.* The development of Saint John harbour must be undertaken to assure the future importance and growth of Saint John, New Brunswick's largest city. Consideration should be given to the study of a new breakwater with the aim of greatly expanding the area of the existing harbour and providing protected anchorage area in what is now the outer harbour. The people of New Brunswick should be assured of the development of Saint John harbour to its fullest potential.

5. *Designated Areas.* The cities of Saint John and Fredericton are not included in the governments industrial incentive program for so-called designated areas. In the Atlantic Provinces, long recognized as a depressed area of Canada, the major cities should not be deprived of this growth incentive. The City of Saint John must quickly more than double in size if it is to attain the position that would enable it, on its own, to stimulate its own growth and develop, and in doing so enhance the economy of the province.

6. *Chignecto Canal.*

A. The Chignecto Canal, the long-promised canal through the isthmus of Chignecto close to the New Brunswick-Nova Scotia border, must be built to link the Bay of Fundy area with the St. Lawrence Seaway, creating entirely new traffic and trading patterns involving the industrial centres of central Canada and the United States on the Great Lakes and the Atlantic seaboard. Construction of the canal should be accorded top priority.

B. If the Chignecto Canal had been built as promised at the time of Confederation this section of Canada would still enjoy the thriving economy it then enjoyed. The competition provided by coastal shipping would have kept the rail freight rates in line and provided an alternative means of reaching the central Canada markets at a reasonable cost.

C. Profits. The profit factor cannot be ignored by the railways but we must remember that billions of dollars have been spent in Canada to build a great system of rail lines

[*Interprétation*]

pour pouvoir la supporter, et par là même l'éliminer. Je me demande pourtant si les tentatives d'élimination des transports côtiers et fluviaux servent les intérêts du public, surtout quand les contribuables canadiens, y compris ceux de la région atlantique, doivent financer les déficits du CNR?

Quatrièmement, dispositions portuaires. Le développement du Port Saint-Jean doit être entrepris de façon à ce que soient assurés la croissance et l'importance future de la ville de Saint-Jean, la plus grande du Nouveau-Brunswick. Il y a lieu d'envisager l'étude d'une nouvelle jetée en vue d'étendre la zone portuaire actuelle et d'offrir une aire de mouillage protégée dans ce qui est actuellement l'avant-port. La population du Nouveau-Brunswick doit avoir l'assurance que le développement du Port Saint-Jean sera réalisé au maximum des possibilités.

Cinquièmement, régions désignées. Les villes de Saint-Jean et de Frédéricton ne font pas partie des programmes d'industrialisation du gouvernement s'appliquant aux régions dites désignées. Or les grandes villes des Provinces Atlantiques—depuis longtemps reconnues comme étant une région économiquement faible du Canada—ne devraient pas être privées d'une telle impulsion. La ville de Saint-Jean doit presque doubler de volume en peu de temps pour accéder au niveau à partir duquel elle pourrait, d'elle-même, relancer son propre développement, et ce faisant celui de toute la province.

Sixièmement, le canal de Chignecto. Ce canal à travers l'isthme de Chignecto près de la frontière de la Nouvelle-Écosse, doit être construit pour relier la région de la Baie de Fundy à la Voie maritime du Saint-Laurent, créant ainsi un courant de circulation entièrement nouveau ainsi qu'un système d'échanges commerciaux touchant le centre industriel du Centre du Canada et des États-Unis, grand lac de la côte Atlantique, c'est donc une haute priorité qui devrait être accordée à la construction du canal.

B) Si le canal de Chignecto avait été creusé comme promis au moment de la Confédération, cette partie du Canada jouirait encore de l'économie florissante qu'elle connaissait à ce moment-là.

Sous l'influence de la concurrence de transports maritimes, les tarifs du fret ferroviaire fussent demeurés normaux, doublant la possibilité d'atteindre les marchés centraux moyennant un coût raisonnable.

C) Profits. Le facteur «profit» ne peut être délaissé par les compagnies ferroviaires, mais il faut bien se rappeler que des milliards de dollars ont été dépensés au Canada pour

[*Text*]

and canals. Under these circumstances the Atlantic provinces must not be told that because of rail costs we cannot have access to the markets of central Canada.

D. Economic climate. The economic climate of New Brunswick must be changed to encourage new industry, growth and population which in turn will create more traffic for the railways and other forms of transport. That is the foundation on which the elimination of existing disparity with central Canada must rest.

The Chairman: Thank you very much.

Mr. Portelance: Mr. Irving, according to this brief you had to pay more for transportation than other places. During this period of time did your firm guarantee certain minimums in respect of transportation, once you had a price from the CNR? Also, do you figure the bottom price was offered to you or did you get just the regular rate for non-guarantee arrangements?

Mr. Irving: Well, we were told it was the best price they would give us. We knew it was not their best price because other places were being accorded much better treatment. So they were giving better rates to other areas even within the Atlantic provinces. It was just a matter of them not applying the lower rates to our area.

Mr. Portelance: And would not the main reason for this, Mr. Irving, be that perhaps other firms were guaranteeing a minimum of transportation...

Mr. Irving: I could not tell you the reason. It never made any sense to me. Although we had much discussion on the various points and rates, I never got a satisfactory answer. If they could give a more attractive or lower rate in one section why could they not give it to us, particularly when the haul was shorter?

Mr. Portelance: Well, as an example, would your own firm offer incentive quantity discounts to your customers across the country?

Mr. Irving: Well I have always advocated that you could not sell to one customer at a lower price than another for the same type of delivery. I have always advocated that but sometimes competitors will force you to do things that make you feel rather cheap.

[*Interpretation*]

construire un vaste système de chemins de fer et de canaux.

Ce qui fait qu'on ne peut dire aux Provinces Atlantiques que l'accès au centre du Canada nous est interdit du fait du coût élevé du transport par rail.

D) Climat économique. Le climat économique du Nouveau-Brunswick doit être changé afin d'encourager de nouvelles industries et un accroissement de la population, ce qui donnerait plus d'activité aux chemins de fer et aux autres moyens de transport. C'est sur cette base que repose la suppression de la disparité existante avec le centre du Canada.

Le président: Merci beaucoup.

M. Portelance: Monsieur Irving, aux termes de ce mémoire, vous avez dû payer plus pour les transports qu'en d'autres endroits. Durant cette période, avez-vous fermement garanti des minimums sûrs en ce qui concerne le transport une fois les prix fixés par le CNR? Considériez-vous que le tarif minimum vous était offert, ou était-ce le tarif normal sans garantie?

M. K. C. Irving: On nous a dit que c'étaient le meilleurs prix qui pouvait nous être faits. Nous savions que ce n'étaient pas leurs meilleurs prix, car d'autres se voyaient bien mieux traités. C'est ainsi qu'ils accordaient de meilleurs tarifs à d'autres régions, même à l'intérieur des provinces de l'Atlantique. C'est tout simplement qu'elles n'appliquaient pas les tarifs réduits à notre région.

M. Portelance: Et la raison principale de cet état de choses, ne serait-ce pas que d'autres compagnies garantissaient peut-être un minimum de transport?

M. K. C. Irving: Je ne pourrais vraiment vous en donner la raison; cela n'a jamais eu beaucoup de sens pour moi. Bien que vous ayons souvent discuté de ces différents points et des tarifs, je n'ai jamais eu de réponse satisfaisante. S'ils étaient à même d'accorder un tarif préférentiel, pourquoi ne pas nous le donner à nous, spécialement quand le camionnage était réduit?

M. Portelance: Est-ce que vous auriez donné des escomptes avec vos clients à travers le Canada?

M. K. C. Irving: J'ai toujours prétendu qu'il était impossible de vendre à un client à un prix réduit par rapport à un autre avec le même type de livraison. C'est toujours ce que j'ai prétendu, mais il arrive que des concurrents vous forcent à agir de façon plutôt mesquine.

[*Texte*]

Mr. Portelance: But you do not offer volume discounts?

Mr. Irving: Oh, yes. In respect of oil, for instance, you have different types: you have tanker rates, pipeline rates, tank car rates, truck rates; tank wagon rates and service station rates, and the charges for the same product all differ because there is a different method of delivery. Different expenses are involved so different prices are justified.

Mr. Portelance: Thank you.

The Chairman: Mr. Skoberg.

Mr. Skoberg: Mr. Chairman and Mr. Irving, of course I realize that the major industrialists as well as the railways in the province should be primarily concerned about the provinces they are in and working out of, but is it your opinion that railways should receive a heavy subsidization in order to create the incentive that you refer to in your brief?

Mr. Irving: Well, you know, it is just a matter of business. First, you should operate as economically as possible, and after you have done your best—taken your shortest line haul, made the best arrangements you can as far as costs and various expenses are concerned—and found that you are still unable to operate then I would say, yes, you might be justified in subsidization or something of that kind. But, basically, first get your costs down to as low a figure as possible, and then after you do that you could get a subsidy or whatever may be necessary.

Mr. Skoberg: What amount of shipping do you do by rail at this particular time?

Mr. Irving: What amount?

Mr. Skoberg: Yes.

Mr. Irving: Oh, considerable.

Mr. Skoberg: I notice in your brief—and that is why I raise the question—that you refer to the wood chips and lumber and the availability of cars. I am wondering whether you have found the same trouble to date with the shipping that you have entered into with the railroads?

Mr. Irving: Yes. I can take Chipman, CPR, and there is no problem. They have a sawmill there and a chipmill. About 70 miles away at Deersdale, a CNR point, we have experienced some problems in getting wide-doored cars and lumber cars.

[*Interprétation*]

M. Portelance: Mais le volume, un escompte pour le volume?

M. K. C. Irving: Oui, certainement, mais vous avez des tarifs de toute sorte: Vous avez les taux pour les pétroliers pour les pipe-lines, pour les camions-citernes, les wagons-citernes, vous en avez pour les stations-services, et les frais pour un même produit diffèrent tous car les moyens de livraison ne sont pas les mêmes. Des frais variés sont encourus, ce qui explique la diversité des prix.

M. Portelance: Merci.

Le président: M. Skoberg.

M. Skoberg: Je comprends évidemment que les principaux industriels ainsi que les chemins de fer de la province devraient en premier lieu s'intéresser aux provinces où ils se trouvent et travaillent, mais êtes-vous d'avis que les chemins de fer devraient se voir largement subventionner afin de promouvoir la relance dont vous faites mention dans votre mémoire?

M. K. C. Irving: Savez-vous, c'est juste une question d'affaires. Tout d'abord, vous devriez procéder de la façon la plus économique possible, et une fois que vous avez fait de votre mieux, réduit le camionnage et pris les meilleures dispositions pour abaisser les diverses dépenses, si vous vous trouvez toujours incapable d'exploiter votre affaire, je dirais oui, vous êtes justifié de recevoir une subvention ou une chose du genre. Mais, avant tout, il vous faut réduire les frais au minimum; après quoi il vous serait loisible de voir à une subvention ou à tout autre moyen nécessaire.

M. Skoberg: Quelle est la quantité d'expéditions par rail que vous faites à l'heure actuelle?

M. K. C. Irving: La quantité?

M. Skoberg: Oui.

M. Irving: Elle est considérable.

M. Skoberg: J'ai remarqué dans votre mémoire que vous parlez de copeaux de bois, de bois d'œuvre et des wagons disponibles. Et, je me demande si, jusqu'ici, vous avez éprouvé les mêmes difficultés à l'égard de vos expéditions par chemin de fer?

M. Irving: Oui. Je pourrais dire qu'actuellement il n'y a aucun problème. A 70 milles d'ici, à Deersdale, desservi par le CN, nous avons éprouvé certains problèmes, pour obtenir des wagons à portes larges et les wagons destinés au transport du bois.

[*Text*]

Deersdale is not too bad but up at Veneer where we have a hardwood mill, a softwood sawmill and a chipmill we have been experiencing great trouble. The CNR is unable to supply us with cars of the right quantity or type. In fact, I do not think they have any chain binder cars which are the modern type of cars for shipping lumber. At least, if they have we get very few of them if any.

When it comes to chips I think there are supposed to be 80 cars in that service, but about 10 of them as a rule are in the shops for repairs; we are short. To remedy our shortage we are trucking much of our lumber across to Van Buren and loading it on the Bangor Aroostock railway and shipping it down to Boston and the United States by that method. To get rid of our lumber we have also been forced, within the last two or three months, to buy several trucks and trailers to haul lumber to the U.S. Right now we are very short of cars.

Mr. Skoberg: You have made representations to the management of the CNR to no avail?

Mr. Irving: Oh, yes. They are doing the best they can. They should be allotted more money to buy some new cars for use in this part of the country.

Mr. Skoberg: I have another question, Mr. Chairman. It is noted that on page 2 of the brief of February 12 there is a statement concerning extensive changing of crews on short provincial hauls and whether this has any bearing, I will ask the question now. You referred to the changing of crews. Has this any bearing on the routing of a shipment within the province and why did you bring that into the picture? I would presume this should be a management-labour consultation.

Mr. Irving: My information on this perhaps is a year old but we will take Deersdale as an example. To ship by way of Fredericton to Saint John I was told that one crew would pick it up at Deersdale; they would change crews at Napadogan; that crew would bring it into Fredericton and another crew would take it from there to Saint John.

That has changed somewhat and perhaps that is one of the reasons they are hauling this 83 miles farther, or whatever the mileage is, to Moncton. They can go right through on their line to Moncton and then haul back but it is a great many more miles. That may be one of the reasons for that.

[*Interpretation*]

A Deesrdale la situation n'est pas trop grave, mais à Veneer où nous avons une usine de bois dur, une usine de bois mou et ensuite une usine de copeaux de bois, nous avons vraiment beaucoup de difficultés. Le CN est incapable de nous fournir la quantité et le genre de wagons nécessaires. En fait, je ne crois pas qu'ils aient les wagons spéciaux qui nous sont nécessaires pour l'expédition du bois. S'ils en ont, nous en obtenons très peu.

Quant aux sciures, je crois que 80 wagons sont prévus pour ce service, mais d'habitude il y en a 10 dans les ateliers de réparation. Pour remédier à cette lacune, il nous faut expédier une quantité considérable de bois par camion jusqu'à Van Buren et ensuite nous l'expédions par le chemin de fer Bangor-Aroostook et par bateau jusqu'à Boston aux États-Unis. Depuis 2 ou 3 mois, afin de nous débarrasser du bois, nous avons dû acheter plusieurs camions et remorques afin d'expédier les sciages aux États-Unis. A l'heure actuelle, il nous faudrait beaucoup plus de wagons.

M. Skoberg: Vous en avez avisé la direction du CN, mais sans succès?

M. Irving: Oui. Mais ils font de leur mieux. Il leur faudrait plus d'argent pour acheter plus de wagons et les mettre au service de cette région du pays.

M. Skoberg: Dans votre mémoire du 12 février, à la page 2, il y a une déclaration visant les répercussions des changements fréquents d'équipes sur les faibles parcours. Je vous demanderais, est-ce que cela a des répercussions sur les expéditions dans la province? Et, alors, pourquoi l'avez-vous mentionné? Cela relève plutôt d'une consultation patronale-ouvrière.

M. Irving: Mes renseignements remontent à un an, mais prenons Deersdale. Si j'ai bien compris, afin d'expédier à Saint-Jean en passant par Fredericton, on nous a dit qu'une équipe prendrait la marchandise à Deersdale; l'équipe serait changée à Napadogan, et se rendrait jusqu'à Fredericton, et une autre équipe se rendrait à Saint-Jean.

Mais, cela a changé quelque peu, et il se peut que ce soit une des raisons pour lesquelles on a prolongé le parcours de 83 milles, jusqu'à Moncton. C'est parce qu'ils peuvent aller directement jusqu'à Moncton et ensuite revenir sur leur route, bien que la distance soit beaucoup plus longue. Voilà peut-être une des raisons.

[*Texte*]

Mr. Skoberg: But in effect, Mr. Irving, the changing of crews really has nothing to do with the distance. This is strictly an internal situation.

Mr. Irving: At the present time?

Mr. Skoberg: The changing of crews no matter where the train may be running does not come into the transportation problem, if I am correct.

Mr. Irving: Well, it is past as far as we are concerned. It is a matter of divisional points. I think in the last year or so there has been some adjustment in these divisional points, but still this matter, if it still remains, and I think it does to some degree . . .

Mr. Skoberg: I would suggest that actually this is a management-labour matter and we will not concern ourselves here today with it. I notice you did make a statement that the CNR was cutting rates to force competition out of business and I would like to know whether this is based on your experience of quite some number of years ago or whether this is current, and whether you really do believe that the CNR is cutting rates to force competitive people out of business.

Mr. Irving: I would say so, yes. That is why I made the statement in the brief. Why do they give rates to Port Hawkesbury much lower than those quoted for Saint John? It must be to compete with water transportation or something like that. We have been given those reasons. How authentic they are I am not sure, but that would be the policy. I think that had a great deal to do with it—at least we were told this.

Mr. Skoberg: You also referred to the fact that the CNR attempted to eliminate coastal shipping. I just wonder whether somewhere in your brief you could indicate in what areas this elimination was entered into and also what shipments it did affect at that particular time?

Mr. Irving: Yes, I can give you a complete list of that.

Mr. Skoberg: If you will just refer to the table that you have there I will look it up at a later time, Mr. Irving.

Mr. Irving: The happening in 1932 was the increasing of the rate from Halifax to points along the south shore of Nova Scotia. . .

Mr. Skoberg: I beg your pardon; may we come up to date? Is this happening today, in your opinion?

[*Interprétation*]

M. Skoberg: Mais, en fait, le changement d'équipe n'a rien à voir avec la distance. C'est une situation interne.

M. Irving: A l'heure actuelle?

M. Skoberg: Le changement d'équipe, peu importe le parcours du train, n'a rien à faire au problème des transports à moins que je me trompe.

M. Irving: Il en fait partie selon nous. C'est une question de points divisionnaires. Depuis environ un an, il y a eu un certain ajustement de ces points divisionnaires. Mais, il reste toujours, que, si cette situation demeure, et elle demeure dans une certaine mesure . . .

M. Skoberg: Je crois qu'il s'agit d'une question de relations ouvrières dont nous n'avons pas à nous occuper. Mais, j'ai constaté que dans votre déclaration vous dites que le CN baisse les prix afin d'éliminer la concurrence. Je me demande si vous vous fondez sur votre expérience d'il y a plusieurs années ou si c'est encore en cours aujourd'hui. Croyez-vous vraiment que le CN réduit ses taux afin d'éliminer les concurrents?

M. Irving: Je crois que oui. C'est la raison pour laquelle j'ai fait cette déclaration dans le mémoire. Pourquoi les taux du CN à Port Hawkesbury sont-ils beaucoup plus bas que ceux de Saint-Jean? C'est probablement pour faire concurrence aux transports maritimes. Ce sont là les raisons qu'on nous a données. Mais je ne suis pas certain si elles sont véridiques. Ce serait leur politique, Du moins, c'est ce qu'on nous a dit.

M. Skoberg: Et, vous avez aussi mentionné le fait que le CN a tenté d'éliminer le transport maritime côtier. Pourriez-vous nous dire dans quelles régions on a procédé ainsi et aussi quelles étaient les expéditions en cause?

M. Irving: Oui, je pourrais vous donner une liste complète.

M. Skoberg: Pourriez-vous me donner la référence du tableau afin que je puisse l'étudier plus tard?

M. K. C. Irving: Oui, en 1932, ce qui s'est produit, c'est que l'augmentation du taux entre Halifax et la côte sud de la Nouvelle-Écosse.

M. Skoberg: Je m'excuse. Mais, est-ce que vous pourriez nous dire ce qui en est aujourd'hui? Est-ce que cela se produit aujourd'hui, à votre avis?

[*Text*]

Mr. Irving: Yes, I would think so. You know, perhaps people do not express themselves as clearly, but I am sure it is.

Mr. Skoberg: Will you substantiate at some later time—possibly in a letter to the Chairman—cases that you know of where this is happening today? I believe it is of great concern to this Committee that we do know of these cases if such exist.

Mr. Irving: All right. I can bring you up to the late thirties, very definitely, right here in Fredericton.

Mr. Skoberg: I am more concerned with the late sixties, Mr. Irving.

Mr. Irving: In the sixties?

Mr. Lawson: There is no question about that. All you have to do to get a better rate is to take it in, say, by transport or take it in by water.

Mr. Skoberg: With all due consideration the statement has been made, and I think it should be substantiated in order that this Committee can look at the facts as they actually are.

I have another question, Mr. Chairman, and I will be very brief. In what form and to what industry should special incentive rates be provided? It is suggested in your submission that special incentives should be provided. I am wondering which industry should be included.

Mr. Irving: Mr. Chairman, in answer to that question I would say the pulp and paper industry. When I say incentive rates there is a good opportunity for multiple car shipments or large quantities in trains, and that sort of thing, and I think those are the kinds of things that should be done so that we can get the raw material to the pulp mills at a better price.

Mr. Skoberg: In your consideration, Mr. Irving, are you in favour of nationalization of the CPR in order to have a co-ordinated transportation policy in Canada?

Mr. Irving: You would not expect me to answer that question!

Mr. Skoberg: I only asked it, Mr. Chairman, because...

Mr. Irving: If I could answer that I would be superhuman.

The Chairman: You had better have a better question, because I am going to cut you off, Mr. Skoberg.

[*Interpretation*]

M. Irving: Je crois que oui. Peut-être que les gens ne s'expriment pas aussi clairement, mais je suis sûr que cela se produit.

M. Skoberg: Pourriez-vous le prouver un peu plus tard, peut-être dans une lettre au président, mentionnant les cas que vous connaissez où cela se produit? Je crois qu'il est important pour le Comité d'être au courant de ces cas, s'il y en a.

M. Irving: Je pourrais vous dire ce qu'il en est jusqu'à la fin des années trente, ici à Fredericton.

M. Skoberg: Les années soixante m'intéressent beaucoup plus.

M. Irving: Les années soixante?

M. Lawson: Il n'est pas question de cela. Pour obtenir un meilleur taux, nous n'avons qu'à recourir au transport maritime.

M. Skoberg: Sauf votre respect, la déclaration a été faite et je crois qu'on devrait avoir les faits à l'appui afin de pouvoir les examiner tels qu'ils existent. Une autre question, monsieur le président, et je serai bref. Quelle forme les taux spéciaux d'encouragement doivent-ils prendre? Vous en avez exprimé le désir dans votre exposé. Dans quelles industries est-ce qu'on devrait appliquer les stimulants?

M. K. C. Irving: Monsieur le président, en réponse à cette question, je dirais l'industrie de la pâte et du papier. Et, quand je parle de taux d'encouragements, c'est une bonne occasion d'obtenir des expéditions de plusieurs wagons ou de grande quantité dans les trains, et ainsi de suite. C'est le genre de choses que nous pourrions faire pour permettre de transporter les matières premières aux usines de pâte et papier, à un meilleur taux.

M. Skoberg: Est-ce que vous êtes en faveur de nationalisation du CP afin d'avoir une politique coordonnée de transports au Canada?

M. Irving: Vous ne vous attendez sûrement pas que je réponde à cette question.

M. Skoberg: Je pose la question, monsieur le président, parce que...

M. K. C. Irving: Si j'étais capable de répondre à cette question, je serais surhumain.

Le président: Si vous n'avez pas de meilleure question, je donne la parole à quelqu'un d'autre.

[*Texte*]

Mr. Skoberg: All right; this is the last one. I am sure the previous questions could be answered if we are interested in the co-ordination of transportation. Concerning the canal, you suggest here that it was promised at the time of Confederation and I would appreciate knowing where I can obtain that in print for my own information.

Mr. Irving: Sir John A. Macdonald confirmed that several times. Bids were called just shortly after Confederation. After Sir John A. Macdonald's first defeat after Confederation he brought this up in the House of Commons. You will find a record of it there. At that time he said this was promised at the time of Confederation. The government went so far as to call for bids and did receive bids for the building of the canal but they never let the contract, and Sir John A. Macdonald was very much put out at that.

Mr. Skoberg: I wonder whether your research people would provide the date for me at a later time, Mr. Irving?

Mr. Irving: Yes, I can get you the date.

The Chairman: Mr. Nesbitt?

Mr. Nesbitt: Mr. Chairman, in view of the very startling information given to us this morning by Mr. Irving in his brief there are one or two questions I would like to ask of him.

How many times in the last five or six years have either you or members of your company made representations to the CNR and the former Board of Transport Commissioners—now the Canadian Transport Commission—or, indeed, the government direct to the Minister of Transport concerning these rate problems you have encountered and also the rate problems that you use as illustrations in your brief?

Mr. Irving: Mr. Chairman, in respect of that question it is a continuous matter of conversation between us and the railways. When it comes to making representations to the government, we have done this on many occasions. I have not been to see the Board of Transport Commissioners but we have gone to all the powers that be to try to have things adjusted.

[*Interprétation*]

M. Skoberg: Une dernière question. Je suis certain qu'on pourrait répondre à la question précédente si l'on s'intéressait vraiment à la coordination des transports. Mais, en ce qui concerne les canaux, vous avez laissé entendre qu'on vous l'avait promis au moment de la Confédération. Je serais curieux de savoir où je pourrais trouver cela par écrit, pour ma propre gouverne.

M. Irving: Sir John A. Macdonald l'a confirmé plusieurs fois. Il y a eu des appels d'offre immédiatement après la Confédération. Et, après la première défaite de Sir John A. Macdonald, après la Confédération, il a soulevé la question à la Chambre des communes. Vous en trouverez certainement la preuve là. A ce moment-là, il a dit que cela avait été promis au moment de la Confédération. Le gouvernement avait même fait un appel d'offre et avait reçu des soumissions pour la construction du canal. Mais en fait, ils n'ont jamais donné le contrat et Sir John A. Macdonald était très mécontent.

M. Skoberg: Est-ce que vous pourriez me donner la date de cela?

M. K. C. Irving: Oui, je pourrais vous donner la date.

Le président: Monsieur Nesbitt.

M. Nesbitt: Monsieur le président, vu les renseignements des plus intéressants et même très étonnants que M. Irving nous a fournis ce matin dans son mémoire, je voudrais lui poser quelques questions.

Combien de fois, au cours des 5 ou 6 dernières années, avez-vous vous-même ou des employés de votre compagnie fait des instances auprès du National-Canadien ou encore à l'ancienne Commission des transports, maintenant la Commission canadienne des transports ou encore directement au gouvernement, à l'égard de ce problème des différences de taux que vous avez constatées ainsi que l'exemple que vous fournissez dans votre mémoire?

M. Irving: Monsieur le président, à l'égard de ces deux questions, je dois vous dire que c'est toujours une question d'entretiens entre nous et les chemins de fer. Lorsque le moment vient de faire des instances auprès du gouvernement, nous l'avons fait à plus d'une reprise. Quant à la Commission des transports, je ne les ai pas rencontrés moi-même. Mais nous sommes allés voir tous les différents organismes afin d'essayer d'avoir un ajustement possible.

[*Text*]

Mr. Nesbitt: So far as you can recall, then, you have not done direct to the Board of Transport Commissioners or its successor, the Canadian Transport Commission.

Mr. Irving: I am not certain of that; personally I have not been, but perhaps some of the others have.

Mr. Nesbitt: When you are dealing with the CNR I take it you deal with very senior officials in Montreal, the President or the Vice President. When would be the last time you spoke to them about these rates?

Mr. Irving: We are talking about rates at the moment in respect of establishing a new industry. We are talking to officials in Moncton. We have been to Montreal many times in respect of some of these matters. They negotiate direct with their people in Montreal and sometimes we do see their officers in Montreal.

Mr. Nesbitt: For the purpose of the record, because some members of the Committee may wish to carry this on when other people are before us as witnesses, could you give us any idea of how recently and how many times, say in the last two or three years, that you or your immediate colleagues in your company have had conversations with people of the presidential or vice-presidential level of the CNR concerning these rates?

Mr. Irving: I have been to Montreal about four or five times in that time. I am sure other members of our organizations have been there several times. We are in constant communication with Moncton, I would say, in respect of rates.

Mr. Nesbitt: What sort of answers would you get from these senior officials—I presume it would be the President or the Vice-President?

Mr. Irving: Oh, a wonderful reception but no action.

Mr. Nesbitt: What kind of explanations, Mr. Irving, if any?

Mr. Irving: The freeze, for instance, that there is on freight rates—we hope it never goes off because we have been told that some of these 11 to 9 cent rates that are in existence now will go up to perhaps 38 to 52—that is right; from 11 to 17 cents to 38 to 52 cents if the freeze goes off. We have been told that.

Mr. Nesbitt: Have they ever indicated that they might be prepared to change some of

[*Interpretation*]

M. Nesbitt: Alors, dans la mesure où vous pouvez vous en souvenir, vous ne vous êtes pas présenté à la Commission des transports ou encore à la CCT?

M. Irving: Non, pas en ce qui me concerne personnellement.

M. Nesbitt: Pour ce qui est du National-Canadien, je pense que lorsque vous les rencontrez, c'est avec les hauts fonctionnaires de Montréal, le président ou le vice-président. Quelle est la dernière fois que vous leur avez mentionné le sujet des taux?

M. Irving: Nous parlons des taux actuellement en vue de l'établissement d'une nouvelle industrie, avec les fonctionnaires de Moncton. Nous nous sommes rendus à Montréal plus d'une fois pour certaines de ces questions. Ils négocient directement avec leurs représentants à Montréal, et parfois nous rencontrons les fonctionnaires de Montréal.

M. Nesbitt: Pour le compte rendu, comme certains membres du Comité voudront peut-être reprendre cette ligne de pensée avec d'autres témoins, pourriez-vous nous dire si vous les avez rencontrés récemment et combien de fois au cours des 2 ou 3 dernières années vous ou vos collègues immédiats de votre compagnie avez eu des entretiens avec le président ou vice-président du National-Canadien à l'égard de ces taux?

M. Irving: Je me suis rendu à Montréal, 4 ou 5 fois. Je suis sûr que d'autres membres de nos organisations s'y sont rendus plus d'une fois. Nous communiquons continuellement avec Moncton, pour ce qui est des taux.

M. Nesbitt: Quel genre de réponse obtiendriez-vous des hauts fonctionnaires, soit du président ou du vice-président?

M. Irving: Une excellente réception mais sans suites.

M. Nesbitt: Mais alors, quel genre d'explications?

M. K. C. Irving: Du gel du tarif ferroviaire. Nous espérons qu'il ne disparaisse jamais, parce que, les taux de 9 cents et 11 cents qui sont présentement en vigueur seront peut-être portés à 38 ou 59 cents, c'est exact, de 11 à 17 cents ils seront portés à 38 et 52, si le gel est enlevé. C'est ce qu'on nous a dit.

M. Nesbitt: Est-ce qu'ils ont indiqué qu'ils seraient prêts à changer certains de ces taux

[*Texte*]

these astonishing rates that you have given us this morning, for instance from Saint John to one point in the United States and another point in the United States, and the port the States have cancelled?

Mr. Irving: I beg your pardon?

Mr. Nesbitt: Have they indicated they might be prepared to make some changes in these very unusual charges that you have given us?

Mr. Irving: Not recently.

Mr. Nesbitt: They have not made any changes. Have you or your officials ever made any representations direct to the Minister of Transport?

Mr. Irving: No; perhaps he has heard our complaints but we have not made representations to him direct.

Mr. Nesbitt: In other words, your chief conversations in this matter have been with the President or Vice-President of the CNR.

Mr. Irving: That is correct.

Mr. Nesbitt: Thank you, Mr. Chairman.

Mr. Nowlan: Mr. Chairman, may I ask a supplementary on this particular point? I wonder, Mr. Chairman, if Mr. Irving or his accountants could figure out what extra cost there has been on the examples he cited in his brief this morning because of this differential rate?

Mr. Irving: Mr. Chairman, we would be very glad to have that figured out and let you know. For instance, we discontinued buying in Canada. We bought in the Gulf of Mexico, brought it in by tanker and now we are bringing it from Europe by tanker. We could not get an adjustment in the rates.

Mr. Nowlan: But in the three or four examples you gave us this morning in your brief there is no over-all total cost nor cost by product of what you had to pay out because of the differential.

Mr. Irving: We could work that out for you very well, but does it matter much? It is all water under the bridge. We have showed a loss or a profit in the past. Pulp and paper is very poor earnings as you know right now, and that applies right across the country pretty much, particularly here where the business has never been very profitable. We have always been working on a close margin here in New Brunswick in the production of pulp.

[*Interprétation*]

plutôt étonnants, que vous avez mentionnés ce matin, par exemple, le Saint-Jean et un autre point aux États-Unis au port que les États-Unis ont supprimé?

M. Irving: Pardon?

M. Nesbitt: Ont-ils indiqué qu'ils seraient prêts à modifier ces taux inusités que vous avez mentionnés?

M. Irving: Pas récemment.

M. Nesbitt: Ils n'ont pas apporté de changements. Est-ce que vous ou vos représentants avez présenté des instances directement au ministre des Transports?

M. Irving: Peut-être a-t-il entendu parler de nos griefs, mais on ne lui a pas présenté des instances directement.

M. Nesbitt: En d'autres mots, vos principaux entretiens ont été avec le président et le vice-président du National-Canadien?

M. K. C. Irving: C'est exact.

M. Nesbitt: Merci beaucoup.

M. Nowlan: Une question complémentaire sur ce point, monsieur le président. M. Irving ou ses comptables pourraient-ils nous dire quels coûts additionnels cela présente pour les exemples qu'il nous a donnés dans son mémoire ce matin, vu le taux différentiel?

M. Irving: Oui, nous nous ferons un plaisir de faire faire ce calcul et de vous en faire part. Par exemple, nous avons cessé d'acheter au Canada. Nous achetons plutôt dans le Golfe du Mexique, et nous faisons le transport par pétrolier, de même que de l'Europe. Il est impossible de rectifier les taux.

M. Nowlan: Mais dans les trois ou quatre exemples que vous nous avez donnés dans votre mémoire ce matin, il n'est pas question de coût global ni de coût par produit de ce que vous devez payer à cause du taux différentiel.

M. Irving: Nous pourrions également faire ces calculs pour vous, mais, est-ce que cela importe tellement? C'est du passé. Nous avons exploité à perte ou à profit par le passé. La pâte et le papier représentent des gains appréciables dans l'ensemble du pays, surtout ici où cette industrie n'a jamais été tellement rentable. La marge des bénéfices de la production de la pâte à papier a toujours été très étroite au Nouveau-Brunswick.

[*Text*]

Mr. Trudel: Mr. Chairman, I would like to ask the witness whether the main area of concern seems to be on wood chips and lumber at present.

Mr. Irving: Yes, that is so; I would say, yes.

Mr. Trudel: This leads to my next question. Where you have tankers that you are using oil, and so on, you are not as much concerned as you would be with this other type of service that you are securing.

Throughout your brief you have been using the example of ton per mile—on a ton per mile basis. In setting up rates I would like to suggest to you, Mr. Irving, that this is not the entire story. If you are going to use that we might as well use unit trains, and so on, because you are now using a service where you are paying the maximum rate that can be obtained for that special service you require. If you are talking about unit trains from these various points you would be in the lower rate that you claim to have been deprived of.

Mr. Irving: Mr. Chairman, we made that very suggestion to the CNR—unit trains to move goods. We have covered that ground thoroughly.

Mr. Trudel: On unit trains I am sure you would not use ton per mile with the same emphasis you give it throughout your brief, because then you would be obtaining the lowest possible rate that is being offered possibly to some of your competitors.

Mr. Irving: Would you repeat that again please?

Mr. Trudel: You are claiming that at the present time on this ton per mile basis you are paying a much higher rate than you should be paying. I suggest to you that unless my interpretation is wrong some of the rates you mention in your presentation as being lower rates are possibly the rates that are being given as unit train rates or on a maximum rate.

Mr. Irving: It could be, but take the Pacific Great Eastern; I do not think that is correct. In any case, we could supply many cars at a time. We could even supply ship and train loads.

Mr. Trudel: This is the point that I was trying to make. I have one more question,

[*Interpretation*]

M. Trudel: Monsieur le président, je voudrais demander au témoin si la principale préoccupation en ce moment est les copeaux et les sciages.

M. Irving: Oui, il en est ainsi.

M. Trudel: J'en arrive donc à mon autre question. Il semble que lorsque vous avez des pétroliers que vous utilisés pour le pétrole, vous n'êtes pas tellement intéressés que vous le seriez pour les autres genres de service que vous obtenez.

Tout au long de votre mémoire vous parlez de tonnes au mille. Je crois que lorsqu'il s'agit d'établir les taux, monsieur Irving, ce n'est pas tout ce qui est en cause. Si on utilise la tonne-mille, alors aussi bien parler de trains unitaires parce que vous utilisez un service pour lequel vous payez le taux maximum qu'on peut exiger pour ce service particulier, dont vous avez besoin. Si vous parlez du train unitaire pour ces différents points, vous auriez alors un taux moins élevé que celui dont vous prétendez avoir été privé.

M. Irving: Monsieur le président, nous avons aussi fait cette proposition au Canadien-National, c'est-à-dire de se servir de trains unitaires pour transporter les marchandises. Nous avons étudié cette question avec soin.

M. Trudel: Pour ce qui est de trains unitaires, je suis certain que vous n'insisteriez pas autant sur les tonnes-milles que vous le faites tout au long de votre mémoire parce que vous auriez alors le taux le moins élevé qui est offert à certains de vos concurrents.

M. Irving: Pourriez-vous répéter une fois de plus?

M. Trudel: Vous prétendez qu'en ce moment, en parlant en termes de tonnes-milles, vous payez un taux beaucoup plus élevé que ce que vous devriez payer. Mais, à moins que mon interprétation soit fausse, je crois que certains des taux dont vous avez dit dans votre mémoire qu'ils sont moins élevés, sont peut-être les taux de trains unitaires ou les taux maximums.

M. Irving: Oui, peut-être, mais pour le *Pacific Great Eastern*; je ne crois pas que ce soit exact. De toute façon, nous pourrions fournir un grand nombre de wagons à un moment donné, et même des navires et des chargements.

M. Trudel: C'est ce à quoi je voulais en arriver. Et, une autre question, si vous me le

[*Texte*]

Mr. Chairman, if you will allow me. You have mentioned various rate structures to different points but are not Veneer and some of your other operations off the main rail line and, therefore, having one or two cars to be picked up would cause a different rate.

Mr. Irving: You might say they are off to some extent, out of St. Leonard about 23 miles, but the INR runs across the top of the province right into St. Leonard so they just pick them up on their way by. At Deersdale we are right on the main through line—the best line in New Brunswick. A 2 per cent grade, or something like that, is the maximum grade they have on the line.

Mr. Trudel: Fine, but if they only stopped to pick up one car you would expect to pay a higher rate than if they had to pick up a unit train or form a unit train.

Mr. Irving: Well, wonderful; if they will give it us on two or three or half a train load or whatever it is, why yes. We have discussed all that with the CNR.

Mr. Trudel: Would you agree, then, that the ton per mile would change if you were using the basis that I have been mentioning?

Mr. Irving: It would change if I had the power to change it but the CNR will not change it.

Mr. Trudel: Well, this is something for us to consider after. Thank you.

The Chairman: Mr. Horner?

Mr. Horner: I understand, Mr. Irving, that these rates you are speaking of are now frozen with regard to caustic and pulp.

Mr. Irving: May I just take a minute? I do not think they are but I would like to check. The rates on chlorine and caustic that we are talking about are not frozen?

Mr. Horner: They are not frozen?

Mr. Irving: That is correct. Possibly the wood rates within the province may be but I am not sure.

Mr. Horner: Then you would suggest, particularly with caustic and chlorine, that there is not enough competition really with regard to the CNR in order to hold their rates on an even keel or in a competitive area?

Mr. Irving: Well, you cannot have the whole province on water. No, I do not think

[*Interprétation*]

permettez. Vous avez parlé des divergences dans la structure des taux entre différents points, mais, est-ce que certaines de vos autres opérations, en Veneer en particulier, ne se trouvent pas loin de la ligne ferroviaire principale, de sorte que le taux serait différent s'il n'y a qu'un ou deux wagons à aller chercher.

M. Irving: Oui, dans une certaine mesure, il se trouve à 23 milles de Saint-Léonard, mais le INR passe au nord du Nouveau-Brunswick pour se rendre à Saint-Léonard et les prend donc en passant. A Deersdale nous sommes directement sur la voie principale, la meilleure ligne du Nouveau-Brunswick, dont la pente est de 2 p. 100 au maximum.

M. Trudel: Excellent, mais si on arrête pour un seul wagon, vous devez vous attendre que le taux soit plus élevé que si vous constituez tout un train ou si on s'arrête pour tout un train unitaire.

M. Irving: Oui, si on nous le donne pour deux ou trois trains ou la moitié d'un train, d'accord. Nous avons discuté toute la question avec le National Canadien.

M. Trudel: Alors, est-ce que vous êtes d'accord que la tonne-mille sera différente si on utilise cette autre norme?

M. Irving: Oui, si je pouvais le faire moi-même. Mais, le National Canadien ne veut pas le faire.

M. Trudel: Alors, on pourra voir ce qu'il en est plus tard. Merci.

Le président: Monsieur Horner?

M. Horner: Si je comprends bien, monsieur Irving, les taux dont vous parlez sont gelés, c'est-à-dire ceux de l'acide caustique, et de la pâte.

M. Irving: Un instant, s'il vous plaît. Je ne crois pas qu'ils le soient, mais je voudrais vérifier. Les taux de l'acide caustique et du chlore ne sont pas gelés.

M. Horner: Ils ne se sont pas gelés?

M. Irving: Non, peut-être que le taux sur le transport du bois à l'intérieur de la province l'est, mais je n'en suis pas certain.

M. Horner: Donc, pour ce qui est du chlore et de l'acide caustique, vous diriez qu'il n'y a pas suffisamment de concurrence pour que le National Canadien maintienne ses taux à un niveau donné ou à un niveau concurrentiel.

M. Irving: Vous ne pouvez pas maintenir toute la province comme cela. Non, je ne

[*Text*]

it is enough competition; it is not enough agreement or understanding.

Mr. Horner: Then why do you suggest in your brief that the rate should be cheaper per ton mile from Port Hawkesbury than it is from Saint John?

Mr. Irving: Well, it is cheaper.

Mr. Horner: Why is it cheaper if it is not competition?

Mr. Irving: Well, competition—now, they tell you water transportation, but you know some of these places are frozen up and the answer is that is a grey area because the Gulf of St. Lawrence is pretty hard to navigate in the winter time and the St. Lawrence River is, too, for barges. So it is very questionable whether they could have water transportation the year round.

Mr. Horner: The two rates that you suggested, through, and the differences are both going into Shawinigan which is in the same area.

Mr. Irving: That is right.

Mr. Horner: It is only the difference in the haul between the length of mileage from Port Hawkesbury as yours is to Saint John. Is there not enough competition in order to lower this? The reason I asked this question is that during the transport committee inquiry into the application of Bill C-231 the CNR and CPR both maintained that in no area of Canada that they could think of was there not effective competition. They excluded, perhaps, the grain question of the West but they said in other parts of Canada and in other commodities there is ample competition to keep rates in line.

Mr. Irving: The rates should be reasonable at all times. If you sell somebody down the street something at a 25 or 30 per cent discount you should be able to sell to his neighbour, who is a little closer to you, for the same price, not charge him more.

Mr. Horner: Or less.

Mr. Irving: Well, you should charge him less.

Mr. Horner: If competition is ample, why is it—and I may be wrong—that you can get

[*Interpretation*]

crois pas qu'il y ait suffisamment de concurrence, ni suffisamment d'entente et de compréhension.

M. Horner: Alors pourquoi dites-vous que le taux par tonne-mille serait moins élevé à partir de Port Hawkesbury qu'à partir de Saint-Jean?

M. Irving: Mais il est moins élevé.

M. Horner: Pourquoi si ce n'est pas à cause de la concurrence?

M. K. C. Irving: La concurrence! On nous parle de transport maritime mais certains de ces endroits sont couverts de glace et de fait c'est une zone grise. La navigation est assez difficile dans le Golfe et le Fleuve Saint-Laurent pour les chalands en hiver. Il est donc douteux qu'on puisse recourir au transport maritime à l'année longue.

M. Horner: Pour les deux taux dont vous parlez et les écarts, il s'agit de transport vers Shawinigan, qui se trouve dans la même région.

M. Irving: Oui, c'est exact.

M. Horner: Ce n'est qu'un écart entre le nombre de milles de Port Hawkesbury, comparativement à la distance entre votre entreprise et Saint-Jean. Est-ce qu'il n'y a pas suffisamment de concurrence pour faire baisser ce taux? La raison pour laquelle je vous pose cette question c'est qu'au cours de l'enquête du Comité des transports sur l'application du Bill C-231 le National Canadien et le Pacifique Canadien prétendaient l'un et l'autre qu'il n'y avait pas, selon eux, de région du Canada où il n'y avait pas de concurrence vraiment efficace. Ils n'incluaient peut-être pas la question des céréales de l'Ouest, mais ils disaient que dans les autres régions du Canada et pour les autres marchandises il y avait suffisamment de concurrence pour maintenir les taux à un niveau normal.

M. Irving: Il faut que les taux soient raisonnables en tout temps. Si vous vendez quelque chose à quelqu'un avec un escompte de 25 ou 30 p. 100, vous devriez être en mesure de vendre à son voisin, qui est plus rapproché de nous, au même prix, et non pas lui réclamer davantage.

M. Horner: Ou à un prix inférieur.

M. Irving: Oui, lui réclamer moins en fait.

M. Horner: S'il y a suffisamment de concurrence, comment se fait-il, et je puis me

[*Texte*]

caustic from Europe cheaper than you can from Quebec? Is this what I understood you to say a little while ago?

Mr. Irving: Yes, we are; 12,000 tons per year—maybe 15,000 tons per year—from Europe.

Mr. Horner: Basically is it the transportation part of it that is cheaper or is it the cost of the caustic at the point of origin?

Mr. Irving: Well, when we were faced with a disadvantage in respect of a competitor who has pulp the same as we to sell, we have to look for some source of supply where we could at least get the same price. By investigating and building tanks and spending money and buying it in large lots of 5,000 tons at a time—which is 10,000 tons of 50 per cent caustic—we are able to get a better price. The freight cost, I suppose is greater, but the basic cost of the caustic is less.

Mr. Horner: The total cost is greater.

Mr. Irving: No; the total cost is less. Transportation might be more but the basic cost of the caustic is less, so it gives us a less finished cost.

Mr. Horner: I meant the cost is greater in Quebec—the total cost. But if you took that same quantity and moved it by boat via the St. Lawrence Seaway, could you then not get it as cheap?

Mr. Irving: Via the Chignecto Canal we might.

Mr. Horner: Without the Chignecto Canal you could not? You are then suggesting that in order for there to be competitive rates into this part of New Brunswick the Chignecto Canal is necessary.

Mr. Irving: I beg your pardon?

Mr. Horner: You are then suggesting that in order for competition to be the full rate-setting force the Chignecto Canal into this part of New Brunswick is necessary.

Mr. Irving: Oh, most essential. It has been for 100 years.

Mr. Horner: If I may ask one or two more questions, Mr. Chairman, I think it is impor-

[*Interprétation*]

tromper, que vous puissiez obtenir de l'acide caustique à un prix moins élevé en Europe qu'au Québec? Est-ce bien ce que vous avez dit il y a un instant?

M. Irving: Oui, nous importons peut-être 12 ou 15 mille tonnes par année de l'Europe.

M. Horner: Mais, au fond est-ce que c'est le coût du transport ou le prix d'achat de l'acide caustique qui est moins élevé?

M. Irving: Lorsque nous nous trouvions en face d'un désavantage vis-à-vis d'un concurrent qui vend du bois de pâte, tout comme nous, nous avons dû chercher une source d'approvisionnement qui nous permettrait de vendre au moins au même prix. Grâce à des études et la construction de réservoirs, en dépensant de l'argent et en achetant par lots de 5,000 tonnes à la fois, soit 10,000 tonnes de bois d'une teneur de 50 p. 100 de caustique, nous avons pu obtenir un meilleur prix. Le coût de transport est plus élevé j'imagine, mais le coût de base de l'acide caustique est moins élevé.

M. Horner: Le coût total est plus élevé.

M. Irving: Non, le coût total est moindre. Les frais de transport sont peut-être plus élevés, mais le coût de base est moins élevé, de sorte que le coût du produit fini est moins élevé.

M. Horner: Je voulais dire que le coût est plus élevé au Québec, le coût total est plus élevé. Mais, si vous preniez la même quantité et que vous la transportiez par navire en empruntant la voie maritime, du Saint-Laurent, est-ce que vous ne pourriez pas l'obtenir à un prix aussi avantageux?

M. K. C. Irving: En empruntant le canal de Chignecto, peut-être.

M. Horner: Mais, sans ce canal vous ne pourriez pas le faire? Alors, vous laissez entendre que pour qu'il y ait des taux concurrentiels dans cette région du Nouveau-Brunswick, le canal de Chignecto est essentiel?

M. Irving: Pardon?

M. Horner: Est-ce que vous dites que pour que la concurrence soit la force qui régisse les taux, le canal de Chignecto est essentiel?

M. Irving: Oui, tout à fait, et depuis 100 ans déjà.

M. Horner: Je voudrais poser une ou deux autres questions de plus que je pense impor-

[*Text*]

tant under this study, because under the new application of Bill C-231 competition alone is the basic rate setter. This is the principle of the Bill. If the Chignecto Canal was necessary 100 years ago it would be more than necessary today under this new rate setting business. Would you agree with that?

Mr. Irving: It is wonderful to hear.

M. Horner: I just wanted to find out your opinion of that. I have one other question. Under the application of the new Bill you suggested in your brief, particularly in the latter part of it, that you believed many of the rates set by the CNR are not compensatory.

In other words, they are not covering the basic cost of moving of the goods; they are doing it at a loss, really, in order to maintain the business they carry on.

Mr. Irving: Well, I would not say that. The lower we sink as far as industrial activity goes here, the less traffic we are going to have. They have the road beds, they have the rights-of-way, and they have all these facilities. If they can increase, then down goes their cost of operation.

Mr. Horner: In the last part of your brief, you said:

> While railroads may operate at a loss in order to serve isolated areas, the CNR should not use taxpayers money to cut rates at the expense of forcing railway competition out of business.

This is what you say and this is what I meant. Do you believe the railroads are, in effect, still doing that?

Mr. Irving: They are on the edge, in certain places.

Mr. Horner: Are you or your company knowledgeable as to the application of a captive shipper clause into the new bill, and your ability to apply for captive shipper's rate?

Mr. Irving: No, I am not sir.

Mr. Horner: Your lawyers are not. I would suggest, as I suggested during the Committee, it would not be of much help. But I was told that it would, and I wondered whether you had actually tried to apply for that clause.

[*Interpretation*]

tantes dans le cadre de cette étude, car en vertu de la nouvelle application du Bill C-231, seule la concurrence régit les taux. C'est le principe du projet de loi. Si le canal de Chignecto était essentiel il y a 100 ans, il est d'autant plus essentiel aujourd'hui dans le cadre du nouveau processus pour établir le tarif. N'est-ce pas?

M. Irving: C'est merveilleux de vous entendre.

M. Horner: Je voulais simplement savoir ce que vous en pensiez. J'ai une autre question à poser. En vertu de l'application de ce nouveau projet de loi, vous laissez entendre dans votre mémoire, et surtout dans la dernière partie que, selon vous, bon nombre des taux établis par le National-Canadien ne sont pas compensatoires.

En d'autres mots, qu'ils ne couvrent pas le coût de base du transport des marchandises. On travaille vraiment à perte de façon à poursuivre leur entreprise.

M. Irving: Je n'irais pas jusque-là. Plus l'activité industrielle sera faible moins il y aura de circulation. Ils ont les structures, ils ont les droits et ils ont les moyens. S'ils peuvent augmenter ils diminuent le coût de fonctionnement.

M. Horner: Dans la dernière partie de votre mémoire, vous dites:

> Bien que les chemins de fer puissent être exploités à perte pour desservir les régions isolées, le National-Canadien ne devrait pas utiliser l'argent des contribuables pour baisser les taux afin de faire disparaître toute concurrence ferroviaire.

Voilà ce que vous dites et c'est ce que je voulais dire. Croyez-vous que les chemins de fer le font toujours?

M. Irving: Ils sont sur le point, pratiquement.

M. Horner: Est-ce que vous ou votre compagnie savez ce qu'il en est de la clause du nouveau bill concernant l'expéditeur captif et votre possibilité de demander le tarif de l'expéditeur captif?

M. Irving: Non, je ne sais pas.

M. Horner: Vos avocats ne sont pas au courant. Je suggérerais, comme je l'ai déjà fait au comité, que cela n'aiderait pas beaucoup. Mais on m'a dit que ça aiderait, et je me demande si vous aviez demandé l'application d'une telle clause.

[*Texte*]

Mr. Irving: Well, we will look into it.

M. Thomas (Moncton): Mr. Chairman, in reading Mr. Irving's letter of February 12th, I was interested in these comments on page 2:

> We should familiarize ourselves with the circumstances surrounding the removal of the Moncton-Buctouche railway.

For the benefit of the members of the Committee who may not know where Buctouche is, I wonder if he could tell us just what assurances were given, and by what levels of government, that an adequate service would be provided as replacement for the rail line which was abandoned. And he also goes on to say that these commitments have not been honoured. Could you enlarge upon that, Mr. Irving?

Mr. Irving: Mr. Chairman, if I may, I would like to just read something on this.

> We were persuaded not to oppose the discontinuance of the operation of the Moncton-Buctouche railway. This was against our better judgment. E. V. Shore, who represented a group of local business people in opposing abandonment of the line, was the area's only spokesman at the second hearing, and the only person who made a determined effort to retain the line. He could not understand why we did not appear at the hearing to voice our opposition to loss of the service.
>
> It was because we had been assured that the area would be placed at no disadvantage and that the CNR would deliver freight at no added cost if the line was discontinued. A commitment was made with full authority, on behalf of the Provincial Government, the parties claiming he was also speaking for the Hon. J. W. Pickersgill, then Minister of Transport.
>
> No sooner was the hearing over, than we were told we would have to pick up our carload shipments at Shediac, Harcourt, or Rexton, which we have been forced to do ever since. This has been a tremendous blow to the community of Buctouche as they now have an added transportation cross barrier which discourages the establishment of a new industry.

This will be corrected only when the CNR provides service equivalent to that which

[*Interprétation*]

M. Irving: Nous verrons ce qu'il en est.

M. Thomas (Moncton): Monsieur le président, à la lecture de la lettre de M. Irving en date du 12 février, je me suis intéressé aux commentaires qu'il a faits, en page 2:

> On devrait se familiariser avec les circonstances qui ont entraîné la disparition du chemin de fer de Moncton-Buctouche.

Pour la gouverne des honorables députés qui ne savent peut-être pas où se trouve Buctouche, pourriez-vous nous dire au juste quelles assurances furent données, et par quel niveau de gouvernement, qu'un service adéquat serait assuré pour remplacer cette ligne qui était abandonnée? Vous poursuivez en disant que ces engagements n'ont pas été honorés. Est-ce que vous pourriez élaborer un peu plus là-dessus, M. Irving?

M. Irving: Monsieur le président, si on veut bien me le permettre, je vais seulement lire quelque chose à ce sujet:

> On nous a persuadé de ne pas nous opposer à l'abandon de la ligne ferroviaire Moncton-Buctouche. C'était contre notre meilleur jugement. E. V. Shore qui représentait un groupe d'hommes d'affaires locaux s'opposant à l'abandon de cette ligne ferroviaire, était le seul porte-parole de la région à la deuxième audience, et le seul qui ait déployé des efforts pour maintenir cette ligne. Il ne pouvait pas comprendre pourquoi nous n'avions pas comparu à cette audience pour faire part de notre position à cette cessation de service.
>
> C'était simplement parce que nous avions reçu l'assurance que cette région ne se trouverait pas désavantagée et que le National-Canadien assurerait la livraison des marchandises au même tarif si la ligne était fermée. Cet engagement avait été fait avec l'autorisation de l'autorité, au nom du gouvernement provincial et on prétendait parler au nom de l'honorable J. W. Pickersgill qui était alors ministre des Transports.
>
> A peine les audiences terminées, on nous a dit que nous devrions aller chercher nos expéditions à Shédiac, Harcourt ou Rexton, ce que nous avons dû faire depuis lors. Ce fut un coup terrible pour la collectivité de Buctouche parce que maintenant il y a cette barrière de l'augmentation du coût de transport qui empêche l'établissement de toute nouvelle industrie.

Ce sera réglé simplement lorsque le National-Canadien fournira un service équivalent

[*Text*]

existed before the line was abandoned, and at no extra cost.

Mr. Thomas (Moncton): Has your company made further representations to the CNR or the Canadian Transport Commission to ask them to honour their commitments to provide this service?

Mr. Irving: Yes, we do have an industry in Buctouche and we do bring many carloads of freight into Buctouche. We have been told by the CNR that if we want our freight, we must pick it up at Rexton, Shediac or Moncton.

Mr. Thomas (Moncton): In other words, they still have not provided the service that you were promised.

Mr. Irving: They have not provided us with the service we were promised.

The Chairman: Mr. Corbin.

Mr. Corbin: I have no question, Mr. Chairman, but this is a point of order of sorts. Just to set the records straight, Mr. Irving in the summary of his brief, in paragraph 5, says:

> Saint John and Fredericton are not included in the federal government designated areas.

But I think they are now, since last fall. I think we should set the records straight on that.

Mr. Irving: Mr. Chairman, may I answer that this way. We were greatly encouraged by what Prime Minister Trudeau told us when he was down here last year. We expected that Saint John would be included.

However, to date, Saint John is not included, as I understand. Our Atlantic Development Board has been cut down. But, Mr. Jean Marchand, the Minister, in his statement last Friday, I think it was, mentioned and referred to this area. That encouraged us greatly. It has been our opinion for four or five years that Saint John should be included in these centres.

The situation is going to change, but it actually has not changed to this moment, as far as I know.

Mr. McGrath: I have one or two questions that have already been answered by Mr. Irving. Perhaps he could answer this one.

[*Interpretation*]

à celui qui existait avant qu'on abandonne cette ligne ferroviaire et sans coût additionnel.

M. Thomas (Moncton): Est-ce que votre Société a présenté d'autres instances au National-Canadien ou à la Commission canadienne des transports pour leur demander d'honorer leurs engagements de fournir ce service?

M. Irving: Oui, nous avons une industrie à Buctouche et nous avons pas mal de transports à assurer. Le National-Canadien nous a dit que si nous voulions avoir nos expéditions, nous devions les prendre à Rexton, Shédiac et Moncton.

M. Thomas (Moncton): En d'autres termes, ils n'ont toujours pas assuré le service qu'on vous avait promis.

M. Irving: Non.

Le président: M. Corbin.

M. Corbin: Je n'ai pas de questions à poser, monsieur le président, mais j'en appelle au règlement, plus ou moins. Simplement pour la clarté du compte rendu, M. Irving, dans le résumé de son mémoire, à l'alinéa 5 dit que:

> Saint-Jean et Fredericton ne sont pas incluses dans les régions désignées du gouvernement fédéral.

Mais je pense qu'elles le sont maintenant depuis l'automne dernier. Je pense que nous devrions rétablir le compte rendu sur ce point.

M. Irving: Monsieur le président, si on veut bien me permettre de répondre à cette observation de la façon suivante. Nous avons été vraiment encouragés par ce que M. Trudeau nous a dit lorsqu'il est venu nous rendre visite l'année dernière. Nous nous attendions à ce que Saint-Jean soit inclus.

Cependant, jusqu'ici Saint-Jean n'est pas inclus dans une telle région désignée. De plus le plan développement de l'Atlantique a été ralenti. M. Jean Marchand, le ministre, dans sa déclaration de vendredi dernier, je pense, en a parlé. Cela nous a vraiment encouragés. Notre point de vue depuis déjà 4 ou 5 ans, était que Saint-Jean soit inclus dans ces centres de régions désignées. La situation va changer, mais elle ne l'a pas été encore jusqu'ici. Du moins, pour autant que je sache.

M. McGrath: Monsieur Irving a déjà répondu à une ou deux questions que je voulais poser. Peut-être pourrait-il répondre

[*Texte*]

What would be the consequences to his organization if the freeze is lifted and the anticipated escalation of rates to which he has already referred takes place?

Mr. Irving: There have been changes in New Brunswick. Mactaquac Dam has been built. We have timber holdings in the State of Maine. That lumber was always processed in Saint John. The Mactaquac Dam has created a 65-mile stretch of dead water. It has affected the flow below the dam to Fredericton. That dam, by the way, is about 12 miles from here up the river. So we have been affected greatly. Would you mind repeating your question?

Mr. McGrath: What consequences to your organization would follow the anticipated escalation of the rates to which you referred, if and when the freeze is lifted?

Mr. Irving: We are being forced now to relocate plants to handle this lumber from the State of Maine. It can no longer come down to Saint John. We have rates now in existence that run from 11 to 17 cents. We understand that if the freeze is lifted—and we have been told this, I believe, or there is good indication—those rates will go from 38 to 52 cents, instead of 11 to 17 cents which now exist. That is very important to us.

Mr. McGrath: My question, sir, is what immediate effect would this have on your operation?

Mr. Irving: It would wreck what we are planning on doing.

The Chairman: Mr. Breau.

Mr. Breau: Mr. Irving, you mentioned in your brief quite a disparity between the rates for pulp and paper from Nova Scotia to a point in Pennsylvania and Saint John to a point in Connecticut. You recall what I mean? Is there a danger that the difference you have to pay in the freight—or maybe you are hauling it some other way—but is danger that the difference in price that you will have to pay would result in a reduction in price paid to the lumbermen?

Mr. Irving: Oh yes, that works right back. Any pulp mill in New Brunswick today, any straight pulp mill, is having great difficulty to operate. We have a mill in Saint John. We have increased its capacity by 700 or 800 per cent since we took it over in 1946. We have not closed a day. And we have operated continuously with the exception of three or four days last week when we had a short-lived strike. But barring that, we have run

[*Interprétation*]

à celle là. Quelles seraient les conséquences pour sa compagnie si le gel était levé et si l'escalade des taux qu'il a mentionné avait lieu?

M. Irving: Il y a eu des modifications au Nouveau-Brunswick. Le barrage Mactaquac a été construit. Nous avons des concessions forestières dans l'état du Maine, du bois qui a toujours été transformé à Saint-Jean. Le barrage Mactaquac a créé un plan d'eau de 65 milles et il a affecté le débit vers Fredericton. Ce barrage se trouve à 12 milles en amont sur la rivière. Nous avons donc été affecté. Pourriez-vous répéter votre question?

M. McGrath: Quelles seraient les conséquences pour votre organisation de l'escalade prévue des taux dont vous avez parlé, lorsque le gel sera levé?

M. Irving: Nous devons maintenant réinstaller nos usines pour s'occuper de ce bois de l'état du Maine. Il ne peut plus venir jusqu'à Saint-Jean. Nous avons maintenant des taux qui vont de onze à dix-sept cents. Si ce gel était levé, c'est ce qu'on nous a dit et je pense, que tout nous indique que ce taux irait de trente-huit à cinquante-deux cents plutôt que de onze à dix-sept cents tel qu'il en est maintenant. C'est très important pour nous.

M. McGrath: Ma question, monsieur, est quel serait les résultats immédiats sur votre exploitation?

M. Irving: Cela ruinerait ce que nous avons l'intention de faire.

Le président: Monsieur Breau.

M. Breau: Monsieur Irving, vous avez mentionné dans votre mémoire, la disparité qui existe dans les taux de la pâte et du papier, entre la Nouvelle-Écosse et un point en Pennsylvanie et Saint-Jean et un point du Connecticut. Vous vous en souvenez, n'est-ce-pas? Y a-t-il un danger que la différence que vous devez payer dans le tarif marchandises, que cette différence dans les prix entraîne une réduction des prix payés aux bûcherons?

M. Irving: Oh oui. Tout cela a des répercussions tout le long de la ligne. N'importe quelle usine de pâte à papier du Nouveau-Brunswick aujourd'hui, n'importe laquelle, a beaucoup de difficultés à fonctionner. Nous avons une usine à Saint-Jean. Nous avons augmenté la capacité de 700 ou 800 pour cent depuis que nous l'avons prise en main en 1946. Nous n'avons pas fermé une seule journée. Notre exploitation a été constante sauf 3

[*Text*]

continuously since 1946 at capacity. We rebuilt the mill and we increased capacity 700 or 800 per cent and never lost a day.

Of course it could have a great effect. The question now is, can we now absorb these freight charges. It is just on the edge, as I said some place here. We work on 1% here, in B.C. on equity. B.C. works on 25 per cent profit.

Mr. Breau: Concerning your retail organization, or the sector retailing your oil business, from many of the briefs we have received this morning, I take it you deliver most of your oil by truck, even outside Quebec? What I am getting at is, supposing that the Maritime Freight Rates Act would apply to other modes of transportation, other than rail, would it help your retail organization to penetrate better in Quebec and Ontario?

Mr. Irving: No, I do not think we could say that that would have any effect as far as oil is concerned, because you either have a change agreement or you transport your oil there by large tankers, and your railway or truck transport would be done from local distributing points in the Province of Quebec.

Mr. Breau: So it would not necessarily result in a better price delivered in Quebec for you.

Mr. Irving: No.

Mr. Breau: Now concerning the Chignecto Canal, I think that about maybe 10 years ago, if I recall, you made some kind of commitment or you said that you would make a commitment if the various governments would make a definite commitment. Would you be ready to tell this Committee, or make public, what your intentions would be, supposing the government would go ahead now? What would you propose?

Mr. Irving: Well, at that time, we said we would spend 100 million on industry. It depends when you draw the line, but that would be so still. Time is running out as far as I am concerned, but that is quite possible, yes.

[*Interpretation*]

ou 4 jours la semaine dernière, où nous avons eu une grève de courte durée. Mais, à cette exception près, nous avons exploité l'usine continuellement depuis 1946 à pleine capacité. Nous avons reconstruit l'usine et nous avons augmenté sa capacité de 700 ou 800 pour cent sans perdre une seule journée.

Évidemment, cela pourrait avoir de grands résultats. La question est de savoir si nous pouvons vraiment absorber ces frais de transport. C'est juste à la limite, comme je l'ai déjà dit. Nous avons une marge d'un pour cent ici tandis que la Colombie-Britannique a une marge de vingt-cinq pour cent de profit.

M. Breau: En ce qui concerne votre organisation de vente au détail ou le secteur qui s'occupe de la vente au détail des produits pétroliers, je crois comprendre, d'après de nombreux mémoires que nous avons reçus ce matin, que la plus grande partie de votre pétrole est livré par camion, même à l'extérieur du Québec. Je veux en venir au point suivant: supposons que la Loi sur les taux de transport des marchandises dans les provinces Maritimes soit modifiée pour inclure les autres modes de transport, en plus du rail, est-ce que cela aiderait votre organisation de vente au détail à mieux pénétrer les marchés du Québec et de l'Ontario?

M. Irving: Je ne crois pas que l'on puisse dire que cela aurait une influence en ce qui concerne le pétrole. Ou bien vous avez un changement dans l'entente, ou bien vous transportez votre pétrole par navires citernes et vous le distribuez ensuite sur le marché de la province de Québec par rail aux camions à partir de centres locaux de distribution.

M. Breau: Alors, cela ne donnerait pas nécessairement un meilleur prix pour le pétrole que vous livrez au Québec?

M. Irving: Non.

M. Breau: Au sujet du canal de Chignecto, il y a environ 10 ans je crois, vous vous étiez engagé ou vous aviez dit que vous vous engageriez, si les divers gouvernements voulaient aussi s'engager. Pourriez-vous révéler à notre Comité ou au public ce que vous entendez faire si le gouvernement se décide à aller de l'avant?

M. Irving: A ce moment-là, nous avions dit que nous dépenserions 100 millions de dollars pour l'industrie. Cela dépend des projets du gouvernement, mais notre proposition tient toujours. Évidemment le temps passe, en ce qui me concerne, mais c'est toujours possible, je crois.

[*Texte*]

Mr. Breau: But you would still invest 100 million dollars?

Mr. Irving: You would have to give me a minute to think that over, how I was going to raise it. But basically that is right. I can almost give you an off-the-cuff answer on that, and the answer would be yes.

Mr. Breau: I saw by some press reports last summer, I think, that you were interested in setting up a super-port in and around Saint John, was it?

Mr. Irving: Correct. It is right in Saint John city now, on the East Side.

Mr. Breau: Hou would this help your transportation by super-tankers from New Brunswick? As far as you are concerned, would it help to alleviate the problems you have had, in maybe importing some raw materials or getting something from Quebec, even if you do not get the Chignecto Canal?

Mr. Irving: Oh yes. It would be a wonderful thing. It would augment the benefit greatly. You see, the reasons for these super-tankers are two. The Suez Canal was closed in 1967, was it not? The first time was in the fall of 1956. But this last time was 1967, right? So, from that time on we have had to come around by the Cape, all around Africa. It has increased the distance from about 8 thousand miles to we will say 12 thousand miles for the haul. So that just rushed the matter of building these super-tankers, because the cost was so great.

I am trying to rush through this; I could tell a whole story. But anyway, you have got to have these larger tankers in order to transport oil from the Persian Gulf to Saint John. In order to bring it to Saint John, you have to have deep water, and we are putting this terminal outside of Saint John, or I guess it is in the city, in a way. We have 130 feet of water, so we have no trouble. That is why we are building.

Mr. Chairman: Mr. Nowlan.

Mr. Nowlan: My questions have been answered, other than the one I am going to ask. May I ask seriously, sir, a supplemental on the Chignecto Canal. Looking at the Atlantic area, is it more economic to join P.E.I. to the mainland, compared to separating Nova Scotia from the mainland?

Mr. Irving: Well, I have many friends in Prince Edward Island, and I will say this. It is most important to the Bay of Fundy and the Gulf of St. Lawrence to have the Chignecto Canal.

[*Interprétation*]

M. Breau: Mais, vous seriez toujours prêt à investir 100 millions?

M. Irving: Il faudrait me donner une minute pour que je sache où je vais les trouver. Mais en principe, oui. Je peux pratiquement vous donner une réponse immédiate et c'est «oui».

M. Breau: J'ai vu dans les journaux, l'été dernier je crois, que vous étiez intéressé à établir un super-port, dans les environs de Saint-Jean, n'est-ce pas?

M. Irving: Oui, à saint-Jean, dans la ville même de Saint-Jean, du côté est.

M. Breau: Comment cela aiderait-il par exemple votre transport par pétroliers géants jusqu'au Nouveau-Brunswick. En ce qui vous concerne, est-ce que cela allégerait le problème que vous avez eu pour l'importation des matières premières du Québec, même si vous n'obtenez pas le canal de Chignecto?

M. Irving: Ah oui, il nous faut l'obtenir. Cela augmenterait beaucoup les avantages. La raison de ces pétroliers géants est double. Le canal de Suez a été fermé en 1967, n'est-ce pas? Une première fois l'automne 1956, mais la dernière fois c'était en 1967, exact? Et alors, à partir de ce moment, nous avons dû faire tout le tour de l'Afrique par le Cap. Ce qui a augmenté la distance de 8,000 milles à 12,000 milles pour un seul parcours. Ce qui a tout simplement fait accélérer cette question des pétroliers géants car le coût était tellement considérable.

Je pourrais vous conter toute une histoire, mais j'essaie de raccourcir un peu. Il faut absolument avoir ces pétroliers géants pour transporter le pétrole du golf Persique jusqu'à Saint-Jean. A Saint-Jean il faut évidemment un port en eau profonde et c'est pourquoi nous construisons ce port. Nous avons maintenant 130 pieds d'eau, il n'y a donc aucune difficulté. C'est la raison pour laquelle nous construisons.

Le président: M. Nowlan.

M. Nowlan: Mes questions ont trouvé réponse, sauf celle que je vais poser. Puis-je poser sérieusement une question à propos du canal de Chignecto. En examinant la région de l'Atlantique, est-ce qu'il est plus économique de relier l'Île du Prince-Édouard à la terre ferme, plutôt que de séparer la Nouvelle-Écosse de la terre ferme?

M. Irving: J'ai beaucoup d'amis à l'Île du Prince-Édouard et je puis dire qu'il est très important pour la baie de Fundy et le golfe du Saint-Laurent d'avoir le canal de Chignecto.

[*Text*]

Mr. Nowlan: But if the Northumberland Strait went ahead, which is a big if, is that going to affect negatively any inland sea routes?

Mr. Irving: Well, it would have to be a tunnel or a bridge, because I think more people than in shipping would be affected. The fisheries, ice, and everything else have to be taken into account. I presume that is all figured out. But I would not want to deprive Prince Edward Island of anything that they want.

Mr. Nowlan: You have a Canso causeway now, linking Cape Breton and Nova Scotia. You have a Northumberland Strait linking P.E.I. and the mainland. This makes a Chignecto canal—each time you have another appendage to the mainland you are going to have more difficulty getting the canal through, are you not?

Mr. Irving: Well, I think we were the only people who opposed the causeway being built as it is. We claimed that it could be left opened, that it should be bridged rather than having a causeway. That has increased our distance getting into the Gulf of St. Lawrence by 160 miles with large ships. You can take up to 10,000 tonners through the canal at Canso. But you cannot take a larger boat. There is also Georges Bay in the north end of the Strait. It freezes up early in the fall generally speaking, although this year has been a good year. And I claimed that the time was going to cut navigation by at least three weeks in the Northumberland Strait in that area. And it has. Some years it has cut it down as much as five weeks.

Mr. Chairman: Mr. Perrault.

Mr. Perrault: Mr. Chairman, this brief suggested that the kind of action required here is the kind that has been taken on the West Coast. Is there any reason why that same type of co-operation with the same degree of incentive for industry cannot be effected on the East Coast of Canada?

Reference is made to the shipment of chips from Northern British Columbia via P.G.E., which is a good railway, and there is reference to the Japanese coal-steel agreement. I would just respectfully point out, Mr. Chairman, that one of the reasons why the Japanese coal-steel agreement is in effect, is not to reap a great profit for the people of Canada—I think it is a very marginal proposition from that standpoint—but precisely because this is one way that we can remove the need for subsidies and all designated area incentives.

[*Interpretation*]

M. Nowlan: Oui, mais si on procédait à la construction du projet du détroit de Northumberland, est-ce que cela affecterait cette route intérieure par mer?

M. Irving: Il faudrait un tunnel ou un pont, car je crois qu'il y aurait beaucoup plus de gens en cause que ceux des transports. Il faudrait tenir compte des pêches, de la glace, et tout le restant. J'imagine qu'on a tenu compte de tout cela. Mais je ne voudrais pas priver l'Île du Prince-Édouard de quoi que ce soit qu'ils veuillent.

M. Nowlan: Vous avez la chaussée Canso à l'heure actuelle visant à relier Cap-Breton à la Nouvelle-Écosse. Vous avez aussi le projet du détroit de Northumberland visant à relier l'Île du Prince-Édouard à la terre ferme. Chaque projet que vous ajoutez diminue les chances d'obtenir le canal, n'est-ce pas?

M. Irving: Je crois que nous sommes les seuls à nous opposer à la construction de la chaussée telle que prévue. Nous avons dit qu'on devrait construire un pont plutôt qu'une chaussée. Cela augmente de 160 milles la distance que les gros bateaux devront parcourir pour se rendre dans le golfe du Saint-Laurent. Par le canal de Canso on peut faire passer des navires de 10,000 tonnes, mais pas plus. Vous avez aussi la baie Georges qui se trouve juste au nord du détroit, la glaciation s'y produit tôt à l'automne généralement. J'avais prétendu, à ce moment-là, que cela réduirait la saison de navigation de trois semaines au moins dans le détroit de Northumberland. Et c'est ce qui est arrivé même jusqu'à cinq semaines.

Le président: M. Perrault.

M. Perrault: Monsieur le président, dans le mémoire on suggère que les mesures nécessaires ici sont du même genre que celles qui ont été prises sur la côte de l'Ouest. Y a-t-il une raison pour laquelle le même genre de collaboration ne pourrait pas avoir lieu sur la côte Est du Canada?

On mentionne les copeaux du nord de la Colombie-Britannique qui sont expédiés par le PGE qui est une excellente compagnie ferroviaire et on parle aussi de l'accord charbon-acier avec le Japon. J'aimerais faire remarquer, monsieur le président, qu'une des raisons pour lesquelles l'accord charbon-acier avec le Japon est en vigueur, n'est pas que cela rapporte beaucoup au peuple canadien, je pense que c'est très marginal, mais précisément parce que c'est un moyen de pouvoir éliminer le besoin de subventions et d'assistance.

[*Texte*]

The coal is coming from British Columbia, not Alberta. Fernie has been a very depressed area in our province. It has now been re-designated and is no longer regarded as a slow-growth area. The facts quoted are not strictly speaking correct. When the steel is put together there will not be any government subsidy paid. The Robert's Bank facility is being built as a result of federal-provincial co-operation, but Vancouver harbour is one of the few facilities in all of Canada which has consistently been showing a profit.

I think it is a good example of how, if we get co-operation on the part of business, government and labour, we can remove the need for subsidies in certain areas. So I would not quote the West Coast as the kind of pattern that the Maritimes should follow, at least in the immediate future.

Mr. Irving: Mr. Chairman, I do not agree with that thinking. Perhaps not subsidy, but get the cost down. Provide us with comparative rates. I think that rate worked out to 66 cents, 67 cents, on the West Coast, per ton mile?

Mr. Perrault: What document are you quoting from? You are talking about the shipment of pulp chips.

Mr. Irving: Yes. $2.31.

Mr. Perrault: That is on the Pacific Great Eastern.

Mr. Irving: Yes, that is correct. That rate runs from .56 to .64 per ton mile. Now, compare that with the rates that we are paying. There is just no comparison at all.

Mr. Perrault: I do not think they are directly comparable though.

Mr. Irving: Oh yes.

Mr. Perrault: There is different typography. All sorts of factors enter into it. The P.G.E. has been extended into Norther British Columbia as a result of the railway's plan to expand. Pulp mills have been established along the right-of-way. It is far easier to load.

Mr. Irving: But...

Mr. Perrault: Mr. Chairman, the second point I was making about this Japanese coal contract is that there is no give-away of the peoples' resources involved in this deal, and I know that my friends from B. C. admit

[*Interprétation*]

Le charbon vient de Colombie-Britannique, pas d'Alberta. Fernie est une région très déshéritée de notre province. Elle n'est plus maintenant considérée comme une région de sous-développement. En fait, ce n'est pas vraiment exact. Lorsque l'accord entrera en vigueur, il n'y aura plus de subventions payées. La coopération fédérale-provinciale a permis la construction de Robert's Bank mais le port de Vancouver est une des rares installations au Canada qui ait toujours été rentable.

Je crois que c'est un excellent exemple de collaboration entre l'industrie, le gouvernement et la main-d'œuvre et grâce à cette collaboration nous supprimons le besoin de subventions dans certaines régions. Par conséquent, je ne donnerais pas la côte ouest comme modèle pour les Maritimes, du moins dans un avenir rapproché.

M. Irving: Monsieur le président, je ne suis pas d'accord avec cette façon de penser. Peut-être non pas des subventions, mais une réduction des coûts tout de même. Nous assurer des taux comparables. Je crois que le taux était de 66 ou 67 cents, par tonne-mille, pour la côte ouest.

M. Perrault: De quel document sortez-vous ces chiffres? Vous parlez des expéditions de copeaux?

M. Irving: Oui, à $2.31.

M. Perrault: Par le *Pacific Great Eastern.*

M. Irving: Oui c'est exact. Le taux par tonne-mille va de $.56 à $.64. Comparez cela aux taux que nous payons. Il n'y a pas de comparaison valable.

M. Perrault: Je ne crois pas que l'on puisse les comparer vraiment.

M. Irving: Oh, si!

M. Perrault: Il y a toutes sortes d'éléments qui entrent en ligne de compte. Les chemins de fer PGE a été étendu vers le nord de la Colombie-Britannique en raison des projets d'expansion des chemins de fer. Les usines de pâte à papier se sont installées le long de la voie et c'est beaucoup plus facile de faire l'expédition.

M. Irving: Mais...

M. Perrault: Mais le deuxième point, monsieur le président, que je voulais soulever au sujet du contrat de charbon-acier avec le Japon, c'est qu'il n'y a pas de ressources que l'on donne dans cette affaire. Je sais que c'est

[*Text*]

it is a pretty slim marginal economic proposition. But at least, it removes the needs for incentives.

Mr. Irving: Mr. Chairman, I am not suggesting a give-away. That is a matter of operation for the CNR to work out, and we are asking for competitive rates. Now do not tell me that we do not have, in the Northern part of New Brunswick, as serious problems as B.C. We have.

Mr. Perrault: Mr. Chairman, I am just simply saying this. I do not think it is wise to suggest that this is the kind of pattern that is required in New Brunswick today, because this is a plan in British Columbia which does not require heavy government subsidies. I think that subsidies are going to be required in the Maritimes for some period to come.

Mr. Irving: Mr. Chairman, regardless of how it comes about, we do require the lower per ton mile rate.

Mr. Chairman: Gentlemen, as you know, we are running about 1 hour and 10 minutes behind our time. Once again I would ask the members to try to be as brief as they can, and I would ask Mr. Irving to be as quick as he can to answer. Mr. Rock.

Mr. Rock: Mr. Irving, first of all, I do not know from where you have your oil shipped, your crude oil. What I want to know from you is have you ever thought of, or have you ever studied the possibility of the pipeline being extended from Toronto through to Montreal and through to here, and getting oil from the western provinces? And secondly, you were talking about chips, pulp chips being shipped. And also there is talk of building pipelines for chips. Have you ever looked into the possibility of building pipelines for the transportation of pulp chips?

Mr. Irving: Yes, we were a party to that experiment. It was on the Pink River, I believe, the Marathon Pulp mill. We were one of the group that carried on some experiments there in respect to the pipelining of chips. We have developed that to a point, and unless the railways do something, maybe that might be the answer. I do not know for sure.

Mr. Horner: Mr. Irving, with regards to maintenance of the Maritimes Freight Rates

[*Interpretation*]

que mes amis en C.-B. disent que c'est une question économique marginale. Mais au moins on enlève le besoin de stimulants.

M. Irving: Monsieur le président, je ne suggère pas du tout qu'on nous subventionne. C'est une question d'exploitation que le National-Canadien doit étudier et nous demandons tout simplement des taux concurrentiels. Ne me dites pas alors que dans le nord du Nouveau-Brunswick nous n'avons pas un problème aussi grave que celui de la Colombie-britannique, nous en avons un.

M. Perrault: Je ne suis pas en désaccord, monsieur le président, je dis simplement que ce n'est pas prudent de suggérer que c'est la seule solution aux problèmes du Nouveau-Brunswick aujourd'hui car, c'est un plan en Colombie-Britannique qui n'exige pas de grandes subventions gouvernementales. Et je crois que les Maritimes, vraiment, auront besoin de subventions pendant un certain temps.

M. Irving: Peut importe comment on procède, nous avons vraiment besoin du tarif par tonne-mille le plus bas.

Le président: Messieurs comme vous le savez nous avons environ une heure et dix minutes de retard sur notre horaire. Encore une fois je demanderais aux députés d'être aussi brefs que possible et je demanderais à M. Irving aussi, de répondre le plus rapidement possible. Monsieur Rock?

M. Rock: Monsieur Irving, tout d'abord, je ne sais pas d'où vous importez votre pétrole brut. Ce que je veux savoir, c'est, est-ce que vous avez déjà songé, ou avez-vous déjà étudié la possibilité d'étendre l'oléoduc de Toronto à Montréal et jusqu'ici, et obtenir le pétrole des provinces de l'Ouest? Et, deuxièmement, vous avez aussi mentionné les copeaux de bois, et la pâte à papier que l'on expédie. Il a aussi été question de construire des conduites pour les copeaux. Avez-vous examiné la possibilité de construction d'une conduite de transport des pulpes?

M. Irving: Oui. En fait, nous participions à cette expérience. C'était à Pink River, je crois l'usine à papier Marathon. Nous faisions partie du groupe qui a fait certaines expériences en ce qui concerne le transport par conduites des pulpes de bois. Nous l'avons développé jusqu'à un certain point et à moins que les chemins de fer ne fassent quelque chose, ce sera probablement la solution. Je n'en suis pas sûr.

M. Horner: Monsieur Irving, en ce qui concerne la Loi des taux de transport des mar-

[*Texte*]

Act, which, in a sense, if it is maintained for years from now, may well be a subsidy to the transportation industry in the Maritimes. I think you will agree with that. Is it not better, from the taxpayers point of view, to pay that subsidy to a specific part of the economy like transportation rather than raise the equalization payments to the Maritimes.

Mr. Irving: Raise the which?

Mr. Rock: The equalization payments between the provinces. For example, we in Alberta get nothing under the equalization grants from the federal gouvernment, but the Maritimes get something. Would it not be better to pay the subsidy to a specific part of the economy rather than holus-bolus to the governments?

Mr. Irving: Well, Mr. Chairman, if I may say in answer to that question, I think how the federal government spends their money is very important; and I think they should study these matters and make sure that they are going to get the best value for what they do spend, and going to get the results they think are needed.

Mr. Horner: From an industrialist like yourself in the development of the Maritimes, surely you would rather see it go to a specific segment of the economy rather than to the government to spend on any project it might like to.

Mr. Irving: It all depends on the government; it depends on the people who have to do with the spending of it. But I could not answer that.

It is very good to have, as far as our rail rates are concerned, and if it takes subsidies to get the rail rates down to earth so that we can carry on and develop industry here, well then it would be great to have the federal government decide that they are going to subsidize us, if that is necessary, to get these rates down to where we can be competitive.

Mr. Chairman: One last question from Mr. Bell.

Mr. Bell: Mr. Chairman, I am encouraged to ask this question because of the support and interest of some of the members in the Chignecto Canal, particularly Mr. Horner, who is one of the leading transportation experts in the House of Commons. I am also anticipating, Mr. Chairman, what one of the Saint John groups has in its brief. But as Mr. Irving has said, time is running out, and I am wondering if Mr. Irving would agree that

[*Interprétation*]

chandises des Maritimes, si on le maintient pendant des années encore, il y aura en quelque sorte une subvention à l'industrie des transports dans les Maritimes. Vous serez d'accord, je pense. Du point de vue du contribuable, est-ce qu'il ne serait pas préférable de subventionner un secteur particulier de l'économie plutôt que d'augmenter les paiements de la péréquation pour les Maritimes.

M. Irving: Augmente quoi?

M. Rock: Les paiements de péréquation entre les provinces. Par exemple, nous en Alberta, nous ne recevons rien en vertu de la péréquation fédérale, mais les Maritimes elles, en reçoivent. Est-ce qu'il ne serait pas préférable de subventioner un secteur de l'économie, plutôt que de tout donner aux gouvernements?

M. Irving: En réponse à cette question, monsieur le président, si vous me le permettez, je dirais que la façon dont le gouvernement fédéral dépense son argent, est très importante. Et je crois que le gouvernement devrait étudier ces questions et s'assurer qu'il va obtenir le meilleur usage des fonds à dépenser et essayer d'obtenir les résultats attendus et nécessaires.

M. Horner: Mais un industriel comme vous, dans le développement et l'expansion des Maritimes, préféreriez voir un secteur particulier de l'économie recevoir la subvention plutôt que voir le gouvernement dépenser les fonds pour n'importe quel projet qu'il désire?

M. Irving: Tout dépend du gouvernement. Tout dépend des gens qui devront effectuer les dépenses. Je ne pourrais pas répondre à cette question.

En ce qui concerne les taux de transport par chemins de fer, si la réduction des tarifs de transport par chemin de fer exige des subventions afin que nous puissions continuer à progresser et développer l'industrie, alors, je serais en faveur des subventions afin de réduire les taux de façon que nous puissions être concurrentiels.

Le président: Une dernière question, monsieur Bell.

M. Bell: Je pose cette question en raison de l'intérêt manifeste de certains membres pour le canal de Chignecto, notamment M. Horner, qui est un des experts en matière de transport à la Chambre. Je prévois aussi, monsieur le président, quelque chose présenté par l'un des groupes de Saint-Jean. Mais comme l'a dit M. Irving le temps passe et je me demande si M. Irving ne serait pas d'accord si ce Comité décidait de formuler une recom-

[*Text*]

this Committee should make as one of its recommendations, after we finish this tour, a final last ditch giant economic survey of the Chignecto Canal to settle once and for all its possibilities and future in the light of all the new aspects of it, the power, the pleasure craft industry, and everything else connected with it.

Would this not satisfy him and his associates from an industrial standpoint?

Mr. Irving: A study?

Mr. Bell: A final up-to-date economic study of some kind in the light of all the new possibilities, if this Committee recommended it.

Mr. Irving: Mr. Chairman, we have had five or six studies now. They have all said it was possible and could very well be built. One or two said that perhaps we are short of money now, and we should build it later. But it has been well studied and it is practical. So I would say, the building of it is the next thing. But if somebody would like to take another look at it, that is alright with me, but let us look at it immediately.

Mr. Bell: This is what they call in Ottawa now a study in depth. It comes after you have had about five ordinary surveys.

Mr. Nowlan: I have a question, not on the subject of the Chignecto Canal, but the M.F.R.A. I do not see it in Mr. Irving's brief and I do not think he has been asked the question. Is he in favor of extending the M.F.R.A. to trucks, the truck industry as a subsidy? And if not, why not?

Mr. Irving: Now, do not ask me to advise you...

Mr. Nesbitt: No, I am only asking because there is an absolute silence in your brief. You have covered a multitude of other areas. You are concerned with the Maritime Freight Rates Act, and I would like to know if you are in favor, from an economic point of view, of extending the benefits, if there are benefits, in that Act to the trucking industry, and if not, why not?

Mr. Irving: I think the people in the trucking business know what they should have, or they should know what they need and if they can justify it, extend it to them. I am not here for the purpose of supporting or being against that because I have not got the

[*Interpretation*]

mandation ou un vœu à la fin de notre tournée, pour essayer de faire une dernière étude économique du canal de Chignecto quant aux possibilités et quant à son avenir à la lumière de tous les nouveaux aspects, du programme hydro-électrique, de l'industrie de plaisance et autres.

Est-ce que cela ne le satisferait pas, lui et ses associés, du point de vue industriel?

M. Irving: Une étude?

M. Bell: Une dernière étude économique à jour, à la lumière de toutes les nouvelles possibilités, si le Comité le recommandait.

M. Irving: Monsieur le président, nous avons eu cinq ou six études jusqu'à ce jour. Toutes les études ont dit que c'était possible, que le canal pourrait très bien être construit. Une ou deux études ont dit que nous manquions peut-être de fonds à l'heure actuelle et que nous pourrions le construire plus tard. On l'a étudié à fond et c'est réalisable. Par conséquent je dirais que la construction doit être la prochaine étape. Mais si on veut l'examiner de nouveau, très bien, je suis d'accord, mais, examinons le tout de suite.

M. Bell: Ce serait ce que nous appelons maintenant à Ottawa, une étude en profondeur. Cela vient après cinq études ordinaires.

M. Nowlan: J'ai une question qui n'a pas trait au canal de Chignecto, mais à la Loi sur les transports des marchandises dans les Maritimes. Je ne le vois pas dans le mémoire de M. Irving et je ne crois pas qu'on ait posé la question. Est-ce qu'il serait en faveur d'étendre la Loi pour couvrir l'industrie du camionnage? Subventionner le camionnage? Et si non, pourquoi?

M. Irving: Ne me demandez pas de conseils.

M. Nesbitt: Je pose seulement la question parce que vous n'en parlez pas dans votre mémoire. Vous avez couvert toute une gamme de sujets. J'aimerais donc savoir si vous êtes en faveur du point de vue économique, d'étendre ces avantages, si avantages il y a, dans la Loi du transport des marchandises par camions et si non, pourquoi pas?

M. Irving: Je pense que les personnes qui s'occupent des transports par camion savent ce qu'il leur faut, ou au moins devraient le savoir; s'ils peuvent le justifier, très bien, étendons la portée de la Loi. Mais je ne suis pas ici afin d'appuyer cela ou de m'y opposer,

[*Texte*]

information on that, but if the people who are in the trucking business say, "Give us the thing" and can back it up with facts and it can be handled in a satisfactory way, then that is all right.

The Chairman: Gentlemen, I think we have had a fairly good debate and I think we want ... Yes, Mr. Nesbitt?

Mr. Nesbitt: Just one supplementary I made a note of. Could Mr. Irving tell us what the approximate cost at the present time would be of the Chignecto Canal?

Mr. Irving: I understood there was a study made four or five years ago and that the estimated cost was $80 million. I think that was for a 27-foot depth of water over the sills and I think that was a one-lock canal. That might not be the price—you might want a two-lock canal. Then, too, there is talk of power development at the head of the Bay of Fundy and this area lends itself. The Cumberland Basin and Shepody Bay are ideal for that sort of development.

I am not sure just what that figure would be today but for a single lock about $80 million was suggested as taking care of it, but it could very well be more than that today.

Mr. Nesbitt: That would be about $80 million or so.

Mr. Irving: It could be over $100 million, well over $100 million, to put in two locks. I am not sure.

Mr. Nesbitt: That would still be about the amount of the recent annual deficit of the CBC.

The Chairman: I want to thank you, Mr. Irving. You have been very kind.

I will call upon the Saint John Port and Industrial Development Commission.

Gentlemen, we have with us here Mr. Oland, Mr. Mooney, Mr. McCavour and Mr. MacDonald.

Now we will have a resume of the brief of the Saint John Port and Industrial Development Commission.

Mr. Philip W. Oland (Chairman of the Commission): Mr. Chairman, the Saint John Port Industrial Development Commission wishes to express its thanks for the opportunity of presenting this brief and appearing before your Committee during your visit to Fredericton.

This Commission, created by an act of the Legislature, is a fully corporate body estab-

[*Interprétation*]

car je n'ai pas les renseignements voulus. Si toutefois ceux qui sont dans l'industrie du camionnage trouvent que c'est là une bonne chose et qu'ils peuvent le soutenir par des preuves et des chiffres, et qu'on puisse le faire de façon satisfaisante, très bien, faisons-le.

Le président: Messieurs, je crois que nous avons eu une discussion utile. Monsieur Nesbitt?

M. Nesbitt: Une question supplémentaire. Monsieur Irving, pourriez-vous nous donner le coût approximatif du canal de Chignecto?

M. Irving: Il y a quatre ou cinq ans, on avait fait une étude et le coût estimatif était de $80 millions. Je crois qu'il s'agissait de 27 pieds d'eau et d'une seule écluse. Mais ce n'est peut-être pas le genre de canal qu'on voudrait maintenant. On voudrait peut-être deux écluses. On parle aussi d'un développement hydroélectrique au fond de la Baie de Fundy, endroit idéal pour ce genre de développement. Le bassin de Cumberland et la baie de Shepody se prêtent aussi à cela.

On m'avait dit qu'environ 80 millions de dollars couvriraient une seule écluse, mais il se peut fort bien que ce soit plus que cela aujourd'hui.

M. Nesbitt: Environ 80 millions de dollars.

M. Irving: Cela pourrait dépasser pour deux écluses, $100 millions. Je n'en suis pas sûr.

M. Nesbitt: Ce serait environ le dernier déficit annuel de Radio-Canada, de toute façon.

Le président: Je veux vous remercier, monsieur Irving. Je demanderais à la *Saint John Port and Industrial Development Commission* de présenter son mémoire.

Messieurs, nous avons comme témoins M. Oland, M. Mooney, M. MacDonald et M. McCavour.

Nous aurons maintenant un bref résumé du mémoire de la Commission du développement industriel et portuaire de Saint-Jean.

M. Philip W. Oland (président de la Commission): Monsieur le président, la Commission du développement industriel et portuaire de Saint-Jean veut exprimer ses remerciements d'avoir eu l'occasion de présenter son mémoire et de comparaître devant votre comité au cours de sa visite à Fredericton.

La Commission, créée par une loi de la législature, est un organisme incorporé établi

[*Text*]

lished in 1961 to improve the maintenance, equipment, administration, development and prosperity of the port and the industrial development and prosperity of the city.

Our brief was submitted more than a year ago and you have it before you. I have also distributed copies of this summary and a map of the Port of Saint John. I am happy to say that two important items contained in our original brief have been resolved within the past year. I refer to designated areas and Saint John is about to qualify for the benefits offered by the Area Development Agency.

The other important item is the recent announcement of a new Saint John-Digby ferry service by the Canadian Pacific Railway and the building by the federal government of modern terminals for this vessel on both sides of the Bay of Fundy.

The most striking needs in transportation are the inadequate facilities of the Port of Saint John. During this current shipping season up to 10 vessels have laid at anchor outside the harbour awaiting a berth. Meanwhile 28 to 30 vessels have been tied up at pierside. There were seven vessels there this morning, gentlemen.

Ships are being seriously delayed...

The Chairman: Please, it is very, very noisy and the interpreters are having a very hard time hearing the speakers.

Mr. Oland: Ships are being seriously delayed in being loaded because a shortage of docks, shed space and suitable cranes and shore handling equipment, particularly for containers. Saint John has had an opportunity to prove its worth during the current shipping season, perhaps because United States coast ports have been tied up with labour unrest and Montreal has been congested and subject to delays because of labour conditions.

The National Harbours Board policy for the construction of wharfs and provision of unloading facilities is hard to believe. For example, Saint John has been requesting unloading equipment for grain and bulk materials for many years. The National Harbours Board say, "You have no record of any volume of bulk commodities being unloaded so there is no need." All export grain comes to Saint John by costly railroad and we are unable to benefit from the St. Lawrence Seaway to bring it more economically from the west.

[*Interpretation*]

en 1961 afin d'améliorer le maintien, l'équipement, l'administration, le développement et la prospérité du port, ainsi que le développement industriel et la prospérité de la ville.

Notre mémoire a été soumis il y a plus d'un an. Vous l'avez maintenant devant vous. J'ai aussi distribué des exemplaires du résumé, ainsi qu'une carte du port de Saint-Jean. Je suis heureux de dire que deux points importants de ce mémoire ont été résolus depuis un an. Je parle des régions désignées et Saint-Jean est à la veille d'être admissible aux avantages offerts par l'Agence de développement régional.

L'autre question importante, c'est la décision récente d'instaurer un service de transbordeur de Saint-Jean à Digby, par le Pacifique Canadien, et la construction par le gouvernement fédéral d'un terminus moderne pour les navires sur les deux rives de la Baie de Fundy.

Les besoins les plus marquants dans le transport viennent des installations insuffisantes du port de Saint-Jean. Au cours de la saison de navigation courante, jusqu'à dix navires ont dû être ancrés à l'extérieur du port en attendant un poste à quai. De vingt-huit à quarante navires ont été retenus au quai. Ce matin, il y avait là sept navires.

Le président: Il y a beaucoup de bruit et les interprètes ont de la difficulté à comprendre celui qui parle.

M. Oland: Il y a beaucoup de retard pour les navires en raison d'un manque de quais, d'entrepôts, ainsi que les grues nécessaires, particulièrement pour les conteneurs. Saint-Jean a eu l'occasion de prouver sa valeur au cours de la saison de navigation actuelle, peut-être en raison du fait que les ports de la côte Est des États-Unis ont connu des grèves, et que le port de Montréal a été très congestionné et a subi des retards en raison des conditions des relations ouvrières.

La politique du Conseil des ports nationaux quant à la construction des quais et des installations de débardage est très difficile à croire. Par exemple, Saint-Jean demande de l'équipement pour décharger le grain et le matériel en vrac depuis plusieurs années. Le Conseil des ports nationaux dit qu'il n'existe pas de rapports sur les marchandises en vrac qui sont déchargées effectivement, et que par conséquent aucun besoin n'existe. Toutes les céréales destinées à l'exportation viennent à Saint-Jean par chemin de fer, ce qui est très coûteux; par conséquent, nous sommes incapables de profiter de la Voie maritime du Saint-Laurent pour le transporter de façon plus économique de l'Ouest.

[*Texte*]

This also applies to feed grains and brewers malt, which are extensively used in the province. The same chicken-or-egg principle applies to the provision of container terminal facilities. The National Harbours Board say, "Guarantee us the business and how the cranes and so forth will be paid for first." The shipping companies say, "We would not send a vessel to Saint John unless the facilities were there."

We believe it is the responsibility of the National Harbours Board to develop fully the Port of Saint John by changing their policy on port facilities. Large ports such as Rotterdam, Antwerp and Hamburg have complete facilities to load and unload ships quickly and efficiently, while in Canada the National Harbours Board expects ships to load and unload with their own ship's gear which, by comparison, is slow and inefficient and normally used only on small islands and outports.

Mr. Mahoney: Mr. Chairman, on a point of order. I wonder if the Committee would prefer to ask questions rather than to have read to them a document that they have in front of them. In any case, we have used up an awful lot of time here today and we do have the document. It is a thing of beauty and I wonder if we should not perhaps get on with the questions.

Mr. Oland: Mr. Chairman, that is fine. This has been distributed and we are ready to answer any questions that you may have.

Mr. Rock: Could I request that that be printed then?

The Chairman: It is printed already. It was distributed. It was printed a year ago.

Mr. Oland: This is a summary printed very recently.

The Chairman: It is just a resumé of the original brief. Are there any questions? Mr. Horner.

Mr. Horner: What is the National Harbours Board's answer? Is it a shortage of cash? Why have they not gone ahead with modernization of the Port of Saint John? What is their reply to your request that you make again in this brief?

Mr. Oland: They allot so much money each year. If you will look at page four, third paragraph of the supplementary document,

[*Interprétation*]

Ceci s'applique aussi à la provende et au houblon, qui sont employés considérablement dans la province. Le même principe s'applique quant aux installations d'arrivée pour les conteneurs. Voici ce que dit le Conseil des ports nationaux: «Garantissez-nous des affaires et un moyen de payer l'équipement.» D'autre part, les compagnies de navigation nous disent qu'elles n'enverront pas de navires à Saint-Jean à moins que les installations ne soient là.

Nous croyons qu'il est du ressort du Conseil des ports nationaux de développer pleinement le port de Saint-Jean, en changeant sa politique quant aux installations portuaires. Les grands ports comme Rotterdam, Anvers et Hambourg ont toutes les facilités voulues pour charger et décharger les navires rapidement et de façon efficace alors qu'au Canada le Conseil des ports nationaux s'attend que les navires chargent et déchargent leur cargaison avec leur propre équipement ce qui, en comparaison, est lent, inefficace et sert normalement seulement pour les petites îles et les ports locaux.

M. Mahoney: Monsieur le président, un rappel au Règlement. Est-ce qu'on ne préférerait pas poser des questions plutôt que tout simplement se faire lire les documents que nous avons déjà devant nous. Nous avons déjà pris beaucoup de temps et nous avons déjà le document devant nous. C'est un beau texte, mais je me demande si on ne devrait pas tout simplement poser des questions.

M. Oland: Très bien. Le texte a été distribué et nous sommes prêts à répondre aux questions.

M. Rock: Nous pourrions peut-être le faire imprimer.

Le président: Cela est chose faite, et depuis un an.

M. Oland: Le texte-ci est un résumé que nous avons fait imprimer tout récemment.

Le président: Il s'agit d'un résumé du mémoire original. Auriez-vous des questions? Monsieur Horner.

M. Horner: Quelle est la réponse du Conseil des ports nationaux? Dit-il qu'il y a insuffisance d'argent. Pourquoi n'a-t-il pas modernisé le port de Saint-Jean? Quelle réponse a-t-on fournie à votre demande?

M. Oland: On prévoit une somme chaque année. Si vous consultez la page 4 du document supplémentaire, au troisième alinéa, on

[*Text*]

they are spending $27 million this year in six ports and Saint John is not even mentioned.

They do it by turn, apparently.

Mr. Horner: When was the last time an expenditure was made on Saint John?

Mr. Oland: Last year and the year before—an extension to one wharf at the cost of $1.2 million.

Mr. Horner: But as yet there is no suggestion that the modernization of the handling facilities at the port will be gone ahead with?

Mr. Oland: They say this is not their responsibility.

Mr. Horner: Have the shipping companies using the port made any suggestion of getting together under an association or a corporation and building the port handling facilities?

Mr. Oland: No, they have not, Mr. Chairman.

Mr. Horner: I will forego any more questions, Mr. Chairman.

The Chairman: Mr. Corbin.

Mr. Corbin: My question concerns the relation that could develop between the corridor road, the main corridor road, and an east-west highway through the States in relation to the development of the Port of Saint John. I wonder, sir, if you would have any comments to make along that line? Would there be advantages or disadvantages?

Mr. Oland: This would be a great advantage, Mr. Chairman. This would be a road right through to Chicago right to the Port of Saint John. This would be a tremendous advantage to the Port of Saint John.

Mr. Corbin: In what way precisely would that be an advantage?

Mr. Oland: It could be a high-speed tractor trailer thoroughfare from Saint John.

Mr. Corbin: Year round?

Mr. Oland: Year round. We have quite a few tractor trailers from the United States right now that come into our port.

Mr. Corbin: Thank you.

The Chairman: Mr. Horner, a supplementary question?

Mr. Horner: Following up the questions I asked earlier, has any request been made or

[*Interpretation*]

y dit qu'on dépense cette année $27 millions dans six ports, et Saint-Jean n'y était pas mentionnée.

Ils le font à tour de rôle, apparemment.

M. Horner: Depuis quand a-t-on fait des dépenses pour Saint-Jean?

M. Oland: L'année dernière et l'année précédente, on a prolongé un quai, pour la somme de $1,200,000.

M. Horner: Mais on n'a pas encore proposé la modernisation des services de manutention au port de Saint-Jean.

M. Oland: Le Conseil dit que ce n'est pas de son ressort.

M. Horner: Est-ce que les armateurs qui ont recours aux services de ce port ont proposé qu'ils pourraient constituer une association ou encore une corporation pour aménager le service de manutention?

M. Oland: Non, monsieur le président.

M. Horner: Je renonce à mes autres questions, monsieur le président.

Le président: Monsieur Corbin?

M. Corbin: Je voudrais poser une question qui a trait au rapport qui pourrait exister entre la route corridor et la route est-ouest par les États-Unis, et le développement du port de Saint-Jean. Est-ce que vous auriez des commentaires à faire sur le sujet? Est-ce qu'il y aurait des avantages ou des désavantages?

M. Oland: Ce serait un très grand avantage, monsieur le président. Il s'agirait d'une route qui irait à partir de Chicago jusqu'au port de Saint-Jean et ce serait un très grand avantage pour le port de Saint-Jean.

M. Corbin: Comment cela serait-il un avantage?

M. Oland: Ce serait une grand'route jusqu'à Saint-Jean pour les camions-remorques.

M. Corbin: A l'année longue?

M. Oland: Oui; nous avons déjà beaucoup de camions-remorques qui viennent des États-Unis jusqu'au port de Saint-Jean.

M. Corbin: Merci beaucoup.

Le président: Monsieur Horner, question complémentaire.

M. Horner: Oui, pour reprendre une des questions que j'ai posées plus tôt, est-ce qu'on

[*Texte*]

any offer of help been made by the provincial government to establish handling facilities at the port?

Mr. Mooney: If I may answer that, Mr. Chairman, at our last meeting with the National Harbours Board on September 23 last, provincial representatives were present at that meeting and the Province of New Brunswick displayed a keen interest in the future of the Port of Saint John. This is the situation at the moment.

We do feel in Saint John that there is a willingness on the part of the provincial government to participate in any arrangements or in any improvements that may come about and which are badly needed at this time, as Mr. Oland has pointed out.

The Chairman: Mr. Mahoney? Mr. Allmand?

Mr. Allmand: Sir, does most of the freight coming into the Port of Saint John come via Canadian Pacific through Maine, or does it come by CNR down from the north of New Brunswick?

Mr. Oland: More comes from the Canadian Pacific, but the Canadian National does participate in about 45 per cent of the traffic, which comes on the Canadian route. The Canadian Pacific uses the Maine Central Railway.

Mr. Allmand: Yes, the Canadian Pacific goes through Maine towards Montreal.

Mr. Oland: That is right.

Mr. Allmand: Since it appears to be a much quicker route, would it be used for more perishable products? How does most of the wheat come to Saint John? Over Canadian Pacific?

Mr. Oland: It comes on both railways. There are both the National Harbours Board grain terminals on the west side of the harbour and the Canadian National terminal on the east side. You can see that on the map which you have before you.

Mr. Allmand: Yes, I was looking at that.

Mr. Oland: The white area that you see on the west side is served by the Canadian Pacific—if you open up the map.

Mr. Allmand: Yes.

Mr. Oland: This white area is all controlled by the National Harbours Board. The Canadian Pacific serve the west side and the Canadi-

[*Interprétation*]

a formulé une demande ou est-ce que le gouvernement provincial a offert de l'aide pour aménager le service de manutention au port?

M. Mooney: Monsieur le président, au cours de notre dernière réunion avec le Conseil des ports nationaux, soit le 23 août dernier, la province du Nouveau-Brunswick a fait preuve d'un intérêt dans l'avenir du port de Saint-Jean. Voici la situation telle qu'elle se présente maintenant.

Nous sommes d'avis, à Saint-Jean, que le gouvernement provincial est prêt à participer à tout aménagement ou amélioration qui pourraient être utiles. C'est ce que M. Oland a dit.

Le président: Monsieur Mahoney. Monsieur Allmand?

M. Allmand: Est-ce que la plupart des marchandises qui arrivent au port de Saint-Jean viennent par le Pacifique-Canadien du Maine ou par le National-Canadien du nord de la province?

M. Oland: Une grande partie par le Pacifique-Canadien, mais le National-Canadien en transporte dans une proportion de 45 p. 100 sur l'ensemble du trafic qui vient le long de la route canadienne. Le Pacifique-Canadien utilise le *Maine Central Railway*.

M. Allmand: Le Pacifique-Canadien passe par le Maine pour aller à Montréal.

M. Oland: C'est cela.

M. Allmand: Vu qu'il semble que ce soit une route beaucoup plus rapide, est-ce que ce serait utilisé plutôt pour les denrées périssables? De quelle façon le blé est-il acheminé à Saint-Jean? Par le Pacifique-Canadien?

M. Oland: Par les deux chemins de fer. Il y a un terminus du Conseil des ports nationaux du côté ouest du port et le National-Canadien a son propre terminus du côté est. Vous pouvez le voir sur la carte que vous avez devant vous.

M. Allmand: Oui, c'est ce que je regardais.

M. Oland: Le secteur blanc du côté ouest est desservi par le Pacifique-Canadien; si vous ouvrez la carte, vous le verrez.

M. Allmand: Oui. M. Oland. Ce qui est en blanc est contrôlé par le Conseil des ports nationaux. Le Pacifique-Canadien dessert la

[*Text*]

an National the east side, but Canadian National cars are unloaded on the west side of the harbour as well.

The Chairman: Mr. Skoberg.

Mr. Skoberg: Mr. Chairman, Mr. Oland, on page 6 in the third paragraph in the middle of the page you suggested the Commission has had this area surveyed by an engineering firm to determine the cost of filling this site. Would you have those figures available—the amount of money that has been spent in this survey—or would you care to divulge that?

Mr. Oland: Yes, I have that figure. It was $530; and I must say that the National Harbours Board paid half of the cost after we approached them.

Mr. Skoberg: On page 8, then, Mr. Oland, in the second paragraph you suggest that will make the procurement of low-cost petroleum products to industry, not only to New Brunswick but also in the Atlantic Provinces. Where do the petroleum products come from now? In what way would they be reduced?

Mr. Oland: It is presumed that if larger shipments of crude oil came in it would lower the cost of petroleum products.

Mr. Skoberg: From overseas?

Mr. Oland: Yes, larger vessels would bring it in at a cheaper rate.

Mr. Skoberg: I expect this would be passed on down the line?

Mr. Oland: This is anticipated, Mr. Chairman.

Mr. Skoberg: Thank you.

The Chairman: Are there any more questions? Mr. Mahoney.

Mr. Mahoney: Mr. Chairman, representations were made in favour of an international airport at Saint John. I do not feel I should discriminate by not asking the same questions I asked the previous two. Have you in fact done any studies, or do you know of any studies having been done to determine the requirement for an international airport in the sense of what an international airport is, with the provision of 24-hour, seven-day-a-week, customs, immigration and health services? Have you any information on that?

[*Interpretation*]

partie ouest et le National-Canadien la partie est, mais le National-Canadien décharge aussi du côté ouest.

Le président: Monsieur Skoberg.

M. Skoberg: Monsieur Oland, à la page 6, 3ème alinéa, vers le milieu de la page, dit que la Commission a fait faire un relevé par une société afin de déterminer le coût du remplissage de cet emplacement. Est-ce que vous pourriez nous dire quel montant a été dépensé?

M. Oland: Oui, j'ai ce chiffre, soit $530.00 mais je dois ajouter que le Conseil des ports nationaux en a payé la moitié lorsque nous leur avons demandé.

M. Skoberg: A la page 8, 2ième alinéa, monsieur Oland, vous dites que cela donnera accès au pétrole a bas prix, non pas simplement pour le Nouveau-Brunswick, mais aussi pour la région de l'Atlantique. D'où viennent les produits du pétrole maintenant? De quelle façon peut-on réduire le coût?

M. Oland: On pourrait conclure que si des expéditions plus grandes de pétrole brut étaient faites, on pourrait ainsi en diminuer le coût.

M. Skoberg: D'outre-mer?

M. Oland: Oui. Des navires plus grands pourraient l'acheminer à un taux moins élevé.

M. Skoberg: Je suppose que ce serait réparti partout.

M. Oland: On s'y attend, monsieur le président.

M. Skoberg: Merci.

Le président: Auriez-vous d'autres questions à poser, monsieur Mahoney?

M. Mahoney: Monsieur le président, on a fait trois demandes pour avoir un aéroport international à Saint-Jean. Je ne crois pas faire de distinction injuste en ne posant pas la même question que j'ai posée aux deux autres. Est-ce que vous avez fait des études ou est-ce que vous êtes au courant d'études qui auraient été faites afin de déterminer les exigences en vue d'y aménager un aéroport international suivant la définition même de l'aérogare internationale, soit un service de vingt-quatre heures de sept jours par semaine, des services de santé, des services douaniers, et autres. Avez-vous des renseignements, monsieur Oland?

[*Texte*]

Mr. Oland: We have not made a detailed study, Mr. Chairman. We know it depends on the amount of traffic and on the availability of suitable quantities of land and upon the weather. We do know that an international airport will be built. We just want to have it as close to Saint John as possible.

Mr. Mahoney: You do know one will be built?

Mr. Oland: We expect and hope one will be built.

Mr. Mahoney: Thank you, Mr. Chairman.

The Chairman: Mr. Bell.

Mr. Bell: Mr. Oland, this seems to be one of the strongest endorsements of a Saint John organization of the Chignecto Canal that I have seen. I realize we have always been in favour of it, but it seems to go even further and more strongly than before and I gather that this is because of the new possibilities that exist. You have referred to some of them. Have you any further thoughts as to what this survey might include or how we should go about it so as to avoid another stall or repetitious survey in that regard?

Mr. Oland: Mr. Chairman, if you look at the last paragraph on page 7, we describe how this might be done. We say that any such survey only needs to compile a list and interview those shipowners to determine the potential use of such a waterway. Then a further and more thorough feasibility study might be made if warranted.

On the next page we say that the Chignecto Canal would place Saint John and American ports 500 miles closer to the large Canadian markets by water.

Mr. Bell: I am not trying to put words in your mouth, but in other words you envisage a sort of immediate task force, possibly in conjunction with the provincial and other bodies, to get moving on it right away.

Mr. Oland: Yes, I do. Mr. Chairman. This could be done very quickly.

Mr. Rock: Is there any objection from the ports of Nova Scotia such as Halifax because they will be bypassed?

Mr. Oland: I cannot say, Mr. Chairman.

The Chairman: Mr. Horner, on a supplementary.

[*Interprétation*]

M. Oland: Nous n'avons pas fait d'étude détaillée, monsieur le président. Nous savons que cela dépend du trafic, du terrain et des conditions du temps; nous savons qu'une aérogare internationale sera aménagée, mais nous voulons simplement qu'elle soit le plus près possible de Saint-Jean.

M. Mahoney: Vous savez qu'un aéroport sera construit?

M. Oland: Nous l'espérons et nous nous y attendons.

M. Mahoney: Merci, monsieur le président.

Le président: Monsieur Bell.

M. Bell: Monsieur Oland, je voudrais simplement faire une observation et vous dire que cela semble être un appui des plus forts qu'une organisation de Saint-Jean puisse donner au canal de Chignecto. Je me rends compte que nous avons toujours été en faveur d'un tel canal, mais je pense qu'on le fait avec beaucoup plus de fermeté qu'autrefois probablement en raison des nouvelles possibilités. Vous en avez mentionné quelques-unes déjà. Avez-vous d'autres pensées à énoncer quant à ce qu'on pourrait inclure dans le relevé ou de la façon dont on pourrait procéder pour éviter de répéter le travail déjà fait ou causer des délais?

M. Oland: Au dernier alinéa de la page 16, où nous décrivons la façon de procéder, nous disons que tout relevé de ce genre n'a qu'à établir une liste et ensuite faire des entrevues avec les armateurs afin de déterminer l'utilisation possible d'une telle canalisation, et qu'ensuite une autre étude plus poussée pourrait être faite si elle était nécessaire.

A la page suivante, nous disons que le canal de Chignecto placerait Saint-Jean et les ports américains à 500 milles plus près des débouchés canadiens.

M. Bell: Je n'essaie pas de vous prêter des paroles, mais vous prévoyez une équipe de travail qui pourrait, de concert avec les organismes provinciaux et d'autres, s'y mettre immédiatement.

M. Oland: Oui. Cela pourrait être fait rapidement.

M. Rock: Est-ce qu'on s'oppose, dans les ports au sud, tel Halifax, parce qu'on n'arrêtera plus à ces ports?

M. Oland: Je ne saurais vous le dire.

Le président: Monsieur Horner, question complémentaire.

[*Text*]

Mr. Horner: My supplementary dealt primarily with the question touched on by Mr. Rock. To your knowledge are both provincial governments, the New Brunswick government and the Nova Scotia government, wholeheartedly behind and prepared to contribute to the building of the Chignecto Canal?

Mr. Oland: I cannot answer that either, Mr. Chairman.

The Chairman: Mr. Rose.

Mr. Rose: My question might be irrelevant, but I notice that there have been a great number of briefs in support of this particular canal and what interested me was the comparison of a possible toll charge through the canal to a ship travelling 500 extra miles.

Of course you would have no way of knowing the precise amount of the toll charges or whatever might be imposed, but I thought that travelling greater distances by water was relatively cheaper and that was one of the reasons that water transportation was used. It seems to me that if you add a toll charge there you might save some in kind, but have you any indication, or has there been any study to indicate that it would in fact be more economical to do it that way?

Mr. Oland: No. I do know that it costs about $2000 a day to run a ship and it is unlikely that the tolls would amount to that. They are based on a tonnage basis—this is the way the Panama Canal operates. But it would be a question of the time saved and the fuel saved and staid economics, Mr. Chairman.

Mr. Rose: Would a different type of vessel have to be built to use this particular canal?

Mr. Oland: No. There would have to be sufficient depth in the canal and it would have to be wide enough to take current vessels. Mr. Irving is here and perhaps he could answer that question. He is a shipowner.

Mr. Rose: I would be interested to know the tonnage. I think the largest ship, bulk carrier, now is about 250,000 tons. They are anticipating them up to 500,000 tons.

Mr. Oland: I do not think the canal could ever handle ships that draw 100 feet of water. Mr. Irving.

Mr. Irving: The most important thing about the building of the Chignecto Canal is that it would permit us to use the laker type

[*Interpretation*]

M. Horner: Je voudrais revenir en partie à la question posée par M. Rock. Est-ce que les gouvernements provinciaux de la Nouvelle-Écosse et du Nouveau-Brunswick sont-ils vraiment prêts à appuyer le projet et contribuer à l'aménagement du canal de Chignecto?

M. Oland: Je ne saurais répondre à cette question, monsieur le président.

Le président: Monsieur Rose.

M. Rose: Ma question n'est peut-être pas pertinente, mais je vois qu'un bon nombre de mémoires sont à l'appui du canal de ce qui m'intéresse, c'est de comparer le coût de péage pour les navires qui emprunteraient ce canal, et le coût de parcourir 500 milles de plus.

Vous ne pouvez pas dire au comité quel serait le péage qu'on pourrait prélever, mais j'ai pensé qu'il était moins cher de parcourir une plus grande distance en mer, et que c'était là l'avantage du transport par mer. On peut épargner un certain montant avec le péage, mais je me demande si une étude a été faite pour indiquer que ce serait plus rentable de procéder ainsi?

M. Oland: Non, mais je sais qu'il en coûte environ $2000 par jour pour exploiter un navire, et j'imagine que le péage n'atteindrait pas cette somme. Cela se fait suivant le tonnage. C'est la façon dont on procède au canal de Panama. Il s'agirait de voir le temps épargné, le pétrole, la bonne économie.

M. Rose: Est-ce qu'on prévoit un différent genre de navire pour utiliser ce canal?

M. Oland: Non, il faudrait que le canal soit assez profond et assez large pour que les navires actuels puissent l'emprunter. Si M. Irving est toujours ici, peut-être pourrait-il répondre. Il est armateur.

M. Rose: J'aimerais connaître le tonnage. Je pense que le plus grand transporteur en vrac est de 250,000 tonnes, mais on prévoit en construire jusq'à 500,000 tonnes.

M. Oland: Je ne crois pas que le canal puisse jamais avoir des navires d'un tirant d'eau de 100 pieds. M. Irving?

M. Irving: Ce qui importe le plus pour ce qui est de l'aménagement du canal, c'est qu'il nous permettrait d'utiliser le genre de navi-

[*Texte*]

of ship. There is just no comparison. A 33,000-ton ship whose dimensions will permit it to go through the Seaway will only carry about 17,000 tons.

Where you build a ship purposely for the Seaway, to navigate the Seaway, it will carry 27,000 tons. There is all the difference in the world and your cost of operating the laker is much less. That is where we were let down in the old days when they had these 258-foot ships, 43 feet 10 inches wide with a 14-foot draught. They could carry through the Lachine Canal, we will say, 2,400 to 2,700 tons, but there was no ocean-going ship which was required to go around Nova Scotia that could carry a payload through the canal.

Mr. Rose: Just for the record, Mr. Chairman, it does anticipate a different type of vessel. You use a laker type vessel—a different type of vessel. Thank you.

Mr. Oland: Mr. Chairman, the fire I referred to which destroyed piers 4, 5, 6 and 7 in Saint John took place 36 years ago and these docks have never been properly restored. They were repaired temporarily at that time. That is also in our supplementary brief. This 31-acre site would make an ideal new location for a container and heavy lift terminal at our Port of Saint John.

Mr. Perrault: Is anyone making money at this port at the present time?

Mr. Oland: No, they are not, Mr. Chairman.

The Chairman: I want to thank you gentlemen for the briefing. Thank you very much.

Our next meeting will be with the Government of the Province of New Brunswick. Mr. Higgins.

Hon. Robert J. Higgins (Minister of Economic Growth, Province of New Brunswick): Thank you, Mr. Chairman. May I introduce Mr. R. E. Tweedale, my Deputy Minister, and Mr. Craig S. Dickson, who is the Executive Manager of the Maritime Transportation Commission. I am Bob Higgins, Minister of Economic Growth of New Brunswick.

The Chairman: I imagine you have a resumé of your brief. As the brief was delivered about a year ago you may want to go ahead with the short version.

[*Interprétation*]

res utilisés dans les Grands Lacs. Il n'y a pas de comparaison possible. Un navire de 33,000 tonnes dont les dimensions pourraient lui permettent d'emprunter la Voie maritime ne peut transporter que 17,000 tonnes.

Si vous construisez un navire prévu pour la Voie maritime, il peut transporter 27,000 tonnes; cela fait toute la différence au monde et les coûts d'exploitation, alors, pour un tel navire, sont beaucoup moins élevé. C'est là qu'était le problème, autrefois, lorsqu'on avait ces navires de 258 pieds de long et de 43 pieds de large avec un tirant de 14 pieds. Ils pouvaient passer, par le canal Lachine portant de 2,400, à 2,500 tonnes, mais il n'y avait pas de navires océaniques qui devaient contourner la Nouvelle-Écosse qui auraient pu passer par le canal Lachine.

M. Rose: Simplement pour le compte rendu, monsieur le président, on prévoit un genre différent de navires. On utiliserait un genre de navires différent de ceux des Grands Lacs.

M. Oland: L'incendie qui a ravagé les quais 4, 5, 6 et 7 à Saint-Jean a eu lieu il y a trente-six ans, et on n'a jamais vraiment très bien restauré ces quais. On a fait que des réparations temporaires à ce moment-là. C'est aussi indiqué dans le mémoire supplémentaire. Cet emplacement serait idéal pour un terminus de containers et de marchandise lourde au port de Saint-Jean.

M. Perrault: Le port est-il profitable, en ce moment?

M. Oland: Non, monsieur le président.

Le président: Je désire vous remercier, messieurs, de votre présentation. Merci beaucoup.

Notre mémoire suivant nous vient du gouvernement de la province du Nouveau-Brunswick. Monsieur Higgins.

L'hon. R. J. Higgins (ministre, ministère de l'Expansion économique du Nouveau-Brunswick): Merci beaucoup, monsieur le président. Je vais vous présenter mes collègues, M. R. E. Tweedale, le sous-ministre; et M. Craig S. Dickson, directeur exécutif de la Commission des Transports maritimes. Je suis Bob Higgins, ministre de l'Expansion économique du Nouveau-Brunswick.

Le président: Vous avez un mémoire très court. J'imagine que la plupart des membres sont au courant du mémoire de la province, parce que ce mémoire nous fut présenté il y a environ un an. Si vous voulez faire un bref résumé.

[*Text*]

Mr. Higgins: I have a few remarks to make to the Committee. First of all I want to welcome you all here to the Province of New Brunswick. It certainly shows the urgency with which you are treating this problem.

A year ago the four Atlantic premiers met with the Hon. Paul Hellyer in Ottawa and presented some views to the federal government. Mr. Hellyer chaired the meeting and it included federal Cabinet ministers.

At that meeting and after we concluded our submission, Mr. Hellyer threw out a challenge to the four Atlantic provinces asking what our views from our point of view would be on a new national transportation act.

That was a little over a year ago and after that meeting the four Atlantic premiers decided that they would propose a joint and hopefully positive submission to Ottawa on the transportation policy, especially as it concerns the Atlantic provinces. It is the type of reaction that I think is forward thinking and it is an answer to the type of comment made this morning by Mr. Pat Nowlan.

As a result of this direction by the four Atlantic premiers, a task force composed of the Maritimes Transportation Commission was formed, which provided the technical input and each province had a full-time official representative on the task force and each province also had an interdepartmental committee—basically highway and economics—to meet continually with the provincial representatives.

This group reported to a ministerial task force composed of all the industry ministers of the four Atlantic provinces. I was the Chairman of that ministerial committee. We submitted our report to the four premiers at their recent Atlantic Premiers Conference in Ottawa and the premiers had a lengthy discussion. The report is now being finalized for the signatures of the four premiers. The premiers have been in touch with Mr. Hellyer, as you perhaps know from the press release this morning, with a view to acquiring a date to present this report.

New Brunswick's final position is contained in this report and, of course, the release of the contents of this report is up to

[*Interpretation*]

M. Higgins: J'aurais quelques observations à faire au comité. Tout d'abord, je désire vous souhaiter la bienvenue ici en la province du Nouveau-Brunswick. Cela nous montre l'urgence que vous donnez à ce problème.

Il y a un an, les quatre premiers ministres des provinces de l'Atlantique ont rencontré l'honorable Paul Hellyer à Ottawa, et lui ont fait part de leurs points de vue au gouvernement fédéral. M. Hellyer présidait la réunion. D'autres membres du Cabinet y participaient.

Au cours de cette réunion, après notre présentation, M. Hellyer a lancé le défi aux quatre provinces de l'Atlantique et a demandé quel était notre point de vue quant à une nouvelle loi nationale sur les transports.

Cela nous a été exposé il y a un peu plus d'un an, et, après cette réunion, les quatre premiers ministres des provinces de l'Atlantique ont décidé qu'ils présenteraient un mémoire solide, au nom des quatre provinces, à Ottawa, en matière de la politique des transports, surtout en ce qui concerne ces provinces. Voilà le genre de réactions qui, à mon avis, sont vraiment progressives et c'est là le genre de commentaires faits ce matin par M. Patrick Nowlan.

Comme résultat de cette politique des quatre premiers ministres de l'Atlantique, une équipe de travail, comprenant la commission des Transports des Maritimes, fut constituée pour assurer la participation technique et chacune des provinces y avait un représentant à plein temps, lequel faisait partie de l'équipe de travail. Chacune des provinces avait aussi un comité inter-ministériel, organisé essentiellement pour l'étude des routes et de l'aspect économique, afin de se tenir constamment en contact avec les représentants des provinces.

Ce groupe faisait rapport à un groupe d'étude comprenant tous les ministres de l'industrie des quatre provinces de l'Atlantique, et je présidais ce comité ministériel. Nous avons présenté notre rapport aux quatre premiers ministres au cours de la conférence des quatre premiers ministres de l''Atlantique, qui s'est tenue à Ottawa. Ils ont longuement débattu la question. On étudie maintenant le rapport pour le faire signer par les quatre premiers ministres provinciaux. Les premiers ministres ont communiqué avec M. Hellyer, comme vous le savez sans doute, à la suite du communiqué de *Presse* reçu ce matin, en vue de prévoir une date pour la présentation de ce rapport.

La décision définitive du Nouveau-Brunswick est établie dans ce rapport et il appartient aux quatre premiers de l'Atlantique

[*Texte*]

the four Atlantic premiers. As a ministerial committee we feel that we have more or less completed our job in submitting this to them and it is now their property, so to speak, and they have made arrangements to present this to the Hon. Mr. Hellyer.

I am sure the meeting will be held with Mr. Hellyer soon. In fact, it has been asked for within a two-week period and we are working towards this end. I am confident we can meet that time schedule and either at that time or before, with the permission of the four premiers, I would be glad to meet with you either at the end of your tour here or in Ottawa at any time together with my colleagues on the ministerial group to discuss our report with you. But, as I say, in the interim our report happened to be completed a week ago Sunday. It is now in the hands of the premiers and it will be going forward to the Hon. Paul Hellyer within a two-week period.

Mr. Allmand: Mr. Chairman, in view of the fact that the province of New Brunswick, along with the other provinces, has prepared what would seem to be an in-depth report on the Maritime transportation problems, and if they are not ready to release it now perhaps we could withhold our questions until the Maritime premiers release their report to the Minister of Transport. I would ask the Minister, who is before us, if he would consider asking the premiers if their report to Mr. Hellyer could not be distributed to the members of this Committee as soon as possible after they give it to the Minister so that we can read it. He said he would be willing to come to Ottawa with a group to discuss it with us. Would you give consideration to this?

Mr. Higgins: I will take it up with the four premiers.

The Chairman: Mr. Corbin?

Mr. Corbin: Mr. Higgins, I realize that road building is within provincial jurisdiction and I realize there is a lot of lobbying going on here today in favour of the main corridor route and I seem to be the devil's only advocate. Can you tell me, speaking on behalf of the Province of New Brunswick, if at this time the province can afford to build or improve the New Brunsiwck end of the proposed main corridor route linking the Maritimes and the Montreal area. Are you in a position to do this?

[*Interprétation*]

d'en faire connaître la teneur. Par la présentation de ce rapport aux premiers ministres, nous croyons avoir terminé notre travail, comme équipe ministérielle, et maintenant ils doivent en assumer la tâche, et ils ont pris les dispositions nécessaires pour le présenter à M. Hellyer.

La réunion avec M. Hellyer aura lieu prochainement, j'en suis sûr. De fait, on a même demandé que cela se fasse d'ici deux semaines. Nous y travaillons et j'ai confiance que nous pourrons le faire d'ici ce temps-là, ou avant, et alors avec l'autorisation des quatre premiers ministres je me ferai un plaisir de vous rencontrer, soit à la fin de votre tournée ici, ou encore à Ottawa, n'importe quand, avec mes collègues du groupe ministériel pour discuter notre rapport avec vous. Mais, entre-temps, notre rapport a été terminé dimanche dernier. Il est en ce moment entre les mains des premiers ministres, il sera remis à l'honorable Paul Hellyer, d'ici deux semaines.

M. Allmand: Monsieur le président, vu que la province du Nouveau-Brunswick et les autres provinces ont préparé un rapport, en profondeur, sur les problèmes des transports dans les Maritimes et qu'ils ne sont pas prêts à nous en faire part maintenant, peut-être, pourrions-nous alors attendre pour poser nos questions tant que les premiers ministres des Maritimes n'auront pas communiqué leur rapport au ministre des Transports et alors je demanderais au ministre, qui est ici présent s'il songe à s'enquérir auprès des premiers ministres si leur rapport, à M. Hellyer ne pourrait pas être distribué aux membres de ce comité le plus tôt possible, après la présentation au ministre, pour que nous puissions en faire lecture. Il dit qu'il est prêt à venir à Ottawa avec un groupe pour en discuter avec nous. Ne pourriez-vous pas y songer?

M. Higgins: J'en discuterai avec les quatre premiers ministres.

Le président: Monsieur Corbin.

M. Corbin: Monsieur Higgins, je me rends compte que la construction de routes relève de la compétence des provinces et je me rends compte aussi qu'il y a beaucoup de pressions qui se font ici en faveur de la route principale du corridor du Maine et peut-être suis-je le seul avocat du diable. Pourriez-vous me dire, au nom de la province du Nouveau-Brunswick, si la province en ce moment peut se permettre de construire ou d'améliorer le secteur du Nouveau-Brunswick pour cette route Corridor reliant les Maritimes au secteur de Montréal?

[*Text*]

Mr. Higgins: The three Maritime provinces met with the Governor of the State of Maine and discussed this problem. We are looking at the economic advantages of this corridor road right now. I can say that it is not the top priority road in the Province of New Brunswick at the present time. I believe it has already been announced by the Minister of Highways that the top priority is Route 11. I do not think I could comment any more than that, except to say that if the United States builds a corridor road right to the border of New Brunswick then I am sure we would accommodate them.

Mr. Nowlan: Mr. Chairman, my question is brief. I first wish to thank the Minister for his preliminary remarks about the state of the provincial premiers task force because a year has gone by and I was wondering if we were going to have any policy from the four premiers. I am glad there is a document before the four premiers and that hopefully this Committee may have a chance to discuss that with them.

However, separate and apart from what is in that task force report I would like to ask the Minister if there was pressure and/or recommendation from this Committee on the Chignecto Canal and if the provincial government would co-operate and/or assist financially in any up to date survey, or does that get close to the task force?

Mr. Higgins: I cannot disclose what is in task force report No. 1. I am going to sound like a politician here.

Mr. Nowlan: If you answer this question we will know...

Mr. Higgins: The Province of New Brunswick does not have the Chignecto Canal as its number one priority right at the present time.

Mr. Nowlan: My question really is if there was a recommendation and/for more briefs and pressure from the interested people and groups in New Brunswick, let alone Nova Scotia. I put Acadia at the last, perhaps. Would the provincial government co-operate and assist financially in an up to date survey on the feasibility of the Chignecto Canal?

Mr. Higgins: I think we are always susceptible to the sensitivities of democracy.

[*Interpretation*]

M. Higgins: Nous avons rencontré les représentants des trois provinces Maritimes ainsi que le gouverneur du Maine et avons discuté le problème. Nous considérons les avantages économiques que présente cette route corridor actuellement. Ce n'est pas une route tout à fait prioritaire pour la province du Nouveau-Brunswick en ce moment. Je crois que le ministre de Wood nous a dit que c'était plutôt la route 11 qui avait droit de priorité et je ne crois pas que je puisse ajouter d'autres commentaires, sauf que si les États-Unis construisent cette route corridor jusqu'à la frontière du Nouveau-Brunswick, alors je suis sûr que nous pourrions leur être utiles.

M. Nowlan: Monsieur le président, ma question sera brève. Je désire d'abord remercier le ministre pour ses premières déclarations quant à l'équipe de travail des premiers ministres provinciaux, car une année s'est passée déjà et je me demandais si les quatre premiers ministres nous établiraient une ligne de conduite. Il me fait plaisir de constater que les quatre premiers ministres sont en possession de ce document et que le Comité espère avoir l'occasion de l'étudier avec eux. Donc, en plus de ce qui se trouve dans le rapport de l'équipe de travail, je voudrais demander à M. Higgins si on a exercé une certaine pression et si on a fait des observations à l'égard du canal de Chignecto. Est-ce que le gouvernement provincial collaborerait ou aiderait financièrement à toute nouvelle étude? Est-ce quelque chose qui peut relever du domaine d'une équipe de travail?

M. Higgins: Je ne puis pas révéler ce que contient le rapport du groupe d'étude n° 1. Vous allez me qualifier de politicien...

M. Nowlan: Si vous nous donniez une réponse, on saurait à quoi s'en tenir.

M. Higgins: La province du Nouveau-Brunswick ne considère pas le canal de Chignecto comme une première priorité maintenant.

M. Nowlan: Vraiment j'aimerais plutôt demander s'il y a eu une recommandation, et ou plus de mémoires ou de pressions qui ont été exercés par les gens ou des groupes intéressés du Nouveau-Brunswick sans parler de la Nouvelle-Écosse. Peut-être que l'Acadie viendrait en dernier lieu. Est-ce que le gouvernement provincial collaborerait ou aiderait, sur le plan financier, à faire un nouveau relevé sur la possibilité d'aménager le canal Chignecto.

M. Higgins: Nous tenons compte des aspects sensibles de toute démocratie.

[*Texte*]

The Chairman: Mr. Rock.

Mr. Rock: Mr. Chairman, from the manner in which the Minister is answering it would seem that the report is more or less secret, so there is no use in my asking him about whether the Saint Johns harbour is in or the international airport, so therefore I will not ask. I will wait for when we receive the report.

Mr. Higgins: In fairness to the people who worked on the report I would not want to give the impression that this is the greatest thing ever written, but it is a point of view from the four Atlantic provinces. It is a joint report and it contains the agreement of the provinces, which is one of the first times we have been able to accomplish this. We will submit it and no doubt with the information that you are getting from a very grass roots level we will be able to come up with something worthwhile.

The Chairman: I think all the members are awaiting this report, Mr. Higgins. We are very pleased to have heard you, and I hope we will have another chance to hear you again in the near future. Thank you.

Mr. Higgins: I might mention that there is an invitation for you all to come to the Lord Beaverbrook Hotel from 5.30 to 7.

The Chairman: Thank you very much, Mr. Higgins.

Mr. Higgins: This not only applies to the members of the Committee but also to all those people who are making submissions in the hope that there will be an informal chitchat.

The Chairman: Our next group will be the Maritime Co-operative Services Limited.

Gentlemen, we have with us Mr. W. D. Dernier. This brief was submitted last year. It appears at page 803 in your book. We will first have a short summary and then you may ask questions.

Mr. W. D. Dernier (Maritime Co-operative Services Limited): Mr. Chairman, there is no change in the original brief. I have a summary here but in the interests of time I will not read all of it. I will read the five recommendations that we have made in the brief.

Number 1:

We recommend the updating of transportation policies toward the region to equalize the cost of movement of goods

[*Interprétation*]

Le président: Monsieur Rock.

M. Rock: Monsieur le président, vu la façon dont répond le ministre, je crois que le rapport est vraiment confidentiel et il est inutile de lui poser des questions quant au port de St-Jean et de l'aérogare internationale. Attendons la réception du rapport.

M. Higgins: En toute justice à l'égard du groupe qui a travaillé à la rédaction du rapport, je ne voudrais pas donner l'impression que c'est une œuvre excellente qui vient d'être accomplie mais c'est l'opinion des quatre provinces de l'Atlantique. C'est un rapport conjoint approuvé par les provinces et c'est la première fois nous avons pu réaliser un tel projet. Nous le présenterons et avec les renseignements que vous obtenez, maintenant, vous pourrez donc avoir quelque chose de vraiment valable et méritoire.

Le président: Je pense que tous les membres attendent la présentation du rapport. Monsieur le ministre, nous sommes très fiers de vous avoir accueilli et nous espérons que nous aurons l'occasion de vous rencontrer d'ici peu. Merci beaucoup.

M. Higgins: Mais je pourrais vous dire que nous vous invitons tous, ce soir de 5h. 30 à 7 heures à l'hôtel Lord Beaverbrook.

Le président: Merci beaucoup.

M. Higgins: Cela s'applique non pas simplement aux membres du comité mais aussi à tous ceux qui présentent des soumissions, dans l'espoir qu'on puisse avoir une rencontre amicale.

Le président: Maintenant nous entendrons la *Maritime Co-operative Services Limited.* Messieurs, nous avons ici M. W. D. Dernier. Le mémoire nous a été présenté l'année dernière, à la page 803, de votre compte rendu. Nous aurons un résumé du mémoire et ensuite vous pourrez poser des questions, ce sera très bref.

M. W. D. Dernier (Maritime Co-operative Services Limited): Monsieur le président, nous n'avons pas du tout modifié notre première présentation. J'ai ici un résumé, mais, pour épargner du temps, je ne lirai que les cinq recommandations exposées dans le mémoire.

Numéro 1:

Nous recommandons que l'on reconsidère la politique en matière de transport et que l'on compense le coût du

[*Text*]

from tariff protected industrialized Central Canada, and of movement into that market by what industry we can develop.

Number 2:

We recommend the continued use of federal funds to assist our provinces in the construction of improved highways, and for incentives for the establishment of secondary industry; as part of the answer to our transportation problem.

Number 3:

We recommend continued use of federal public expenditures for improved port facilities in the Atlantic area as part of the answer to our transportation problem.

Number 4 deals with railway policy:

We recommend: (a) That the M.F.R.A. be amended to place this area competitive with central Canada by covering transportation costs between Montreal and the Atlantic area on both inbound and outbound shipments.

(b) That a substantial downward revision be made in present non-carload rates in the region.

(c) That the optional L.C.L. rates be maintained.

(d) That the M.F.R.A. apply to other modes of transport.

Number 5 deals with transportation assistance on feed grains:

We recommend that vegetable protein feeds of Canadian origin moved to the Atlantic provinces be eligible for transportation assistance on the same basis as grain.

The Chairman: Mr. Pringle.

Mr. Pringle: My first question relates to the last paragraph on page 803 of your brief which reads:

We would submit, however, that to date, equalization grants, A.D.B. projects, A.R.D.A. projects, the Maritime Freight Rates Act, the Feed Freight Assistance Policy, and all other measures for the transfer of funds from the Federal Treasury to the benefit of the Atlantic Area

[*Interpretation*]

transport des marchandises en provenance et en direction des régions industrialisées du Canada central qui bénéficient de tarifs protectionnistes par l'établissement, dans nos régions, de toute industrie susceptible d'y prospérer.

Numéro 2:

Nous recommandons l'usage régulier des fonds fédéraux pour aider nos provinces à construire de meilleures grandes routes, et à encourager l'établissement d'industries secondaires. Ce serait une réponse partielle au problème de nos transports.

Numéro 3:

Nous recommandons l'usage régulier des fonds publics fédéraux pour améliorer les aménagements portuaires dans la région atlantique.

Le numéro 4 traite de la politique des chemins de fer:

Nous recommandons:

a) Que la loi sur les tarifs maritimes soit modifiée afin de placer cette région dans une situation concurrentielle par rapport au Canada central en réglementant dans les deux sens les coûts des transports entre Montréal et la région atlantique.

b) Que les taux de détail présentement appliqués dans la région soient revisés afin de les réduire de façon appréciable.

c) Que le caractère facultatif du choix de ces taux soit maintenu.

d) Que la loi sur les tarifs maritimes soit appliquée à d'autres modes de transport.

Le numéro 5 traite de l'aide en faveur du transport des produits pour l'alimentation du bétail:

Nous recommandons que les aliments à base de protéine végétale, d'origine canadienne, transportés dans les provinces atlantiques bénéficient de la même aide que celle qui est accordée au transport du grain.

Le président: Monsieur Pringle.

M. Pringle: Tout d'abord, je voudrais poser une première question se rattachant au dernier paragraphe de votre mémoire, page 803, qui se lit ainsi qu'il suit:

Nous prétendons toutefois que jusqu'ici les subventions compensatoires, les projets de l'Office d'expansion économique de la région atlantique et ceux de la Loi d'aménagement régional et de développement agricole, la Loi des tarifs

[*Texte*]

have not equalled the price we have paid for tariff protection and added transportation costs...

Have you any figures with regard to that statement? Is it because there is so little production in this area that you are unable to cope with the cost of the product that you are using in this area? Tariffs, of course, must apply to all of Canada and we are now looking at some protection for the agricultural industry and other industries right across Canada. Frankly, I am just a little surprised that all the money which has been transferred in the way of assistance to this area still does not add up to the difference in cost. Could you expand on that for us?

Mr. Dernier: I submit, sir, as we outlined in the brief, that this area not only has to pay the additional cost through tariff protection, which is more of a burden in the area because our natural source of manufactured goods would be the eastern seaboard of the United States and we not only have to pay the same burden as the rest of Canada but the additional transportation costs to bring it into the area. One of the reasons we have so little production in the area for shipment out is the additional transportation in moving our goods out and being competitive in the central Canadian market. Over the years we have seen many secondary industries start in this area and die because on transportation costs alone.

I have no figures but I would suggest that this is dealt with in the Fifth Annual Review of the Economic Council of Canada under their chapter entitled "The Challenge of Growth and Change", and they have, I suggest, substantiated this opinion. It is an opinion.

Mr. Pringle: May I ask just one more question. Do you consider, then, that the additional transportation cost is creating this problem to a greater extent than the tariff protection?

Mr. Dernier: I think it is a problem on top of the tariff protection. We have the extra cost for industrial goods and we have the extra transportation cost as well.

[*Interprétation*]

maritimes, la politique d'assistance aux chargements alimentaires et autres mesures pour le transfert des fonds du Trésor fédéral au bénéfice de la région atlantique n'ont pas compensé le prix que nous avons dû payer à cause des tarifs protectionnistes et de l'augmentation des coûts...

Est-ce que vous avez des données quant à cette déclaration? Est-ce dû à la faible production dans cette région ou au fait que vous n'êtes pas en mesure plutôt de faire face au coût des produits que vous utilisez dans cette région? Les tarifs, bien entendu, doivent s'appliquer pour l'ensemble du Canada et maintenant nous recherchons une protection pour l'industrie agricole et d'autres industries à travers tout le pays? Sincèrement je suis un peu étonné de voir que tout l'argent qui a été ainsi transféré sous forme d'aide, dans cette région, ne comble pas cet écart quant au coût. Pouvez-vous nous donner plus de détails à ce sujet?

M. Dernier: Je prétends, monsieur, comme nous l'avons dit dans le mémoire d'ailleurs, que ce secteur doit non seulement payer des frais supplémentaires pour un tarif protectionniste, car la source naturelle de nos produits fabriqués se trouve sur le littoral de l'Est des États-Unis et nous n'avons pas qu'à assumer le même fardeau que le reste du Canada, mais de plus nous devons assumer les frais additionnels de transport pour les importer dans la région. Une des raisons du peu de production, dans ce secteur, pour l'exportation, ce sont les frais supplémentaires du transport de leurs produits afin de pouvoir faire concurrence à la partie centrale du Canada. Au cours des années, nous avons vu plusieurs industries secondaires, qui ont débuté, dans ce domaine, et n'ont pas survécu seulement à cause des frais de transport.

Je n'ai pas de chiffres à vous donner, mais je puis vous dire qu'il en est question dans le cinquième exposé annuel du Conseil économique du Canada, sous le titre, *Défi posé par la croissance et le changement* et ils prouvent nettement cette opinion. C'est un fait.

M. Pringle: Puis-je poser une autre question? Croyez-vous donc que les frais additionnels de transport créent ce problème d'une façon plus aiguë que le tarif protectionniste?

M. Dernier: Je crois que c'est un problème qui dépasse celui du tarif protectionniste, nous avons le coût additionnel des produits industriels ainsi que celui du transport.

[*Text*]

Mr. Pringle: Would you mind repeating the name of the chapter from the Economic Council of Canada report which you referred to?

Mr. Dernier: It is the chapter entitled "The Challenge of Growth and Change".

Mr. Pringle: The Challenge of Growth and Change. Thank you.

Mr. Dernier: It is at the beginning of the second paragraph.

The Chairman: Are you through, Mr. Pringle?

Mr. Pringle: Yes, thank you, Mr. Chairman.

The Chairman: Mr. Rose.

Mr. Rose: I would like to ask the witness to expand his answer, Mr. Chairman. Are you really saying, sir, that the tariff protection benefits the manufacturing industries in central Canada from which you must purchase rather than protecting you in the Atlantic provinces. Is this really what you are saying?

Mr. Dernier: This is what we submit, yes.

Mr. Rose: You sound like a Westerner!

An hon. Member: We have a lot in common.

Mr. Dernier: If I may be permitted to say so, sir, there is a caricature being made of Canada with plans for the great Canadian cow. The westerners feed the cow and other parts of Canada obtain the milk from the cow, so you can understand what is left for the Maritimes!

Mr. Rose: Well, sir, we have heard a lot of "bull" around here today. I was going to say that one of the chief complaints you hear from time to time is that most Canadians, other than central Canadians, are forced to buy in a protected market and sell in an open one, and this is especially true of the primary industries. You would support this idea?

Mr. Dernier: Yes, because the majority of our exports are raw materials from the primary industries.

The Chairman: Mr. Perrault.

[*Interpretation*]

M. Pringle: Pourriez-vous répéter s'il vous plaît, le nom du chapitre, de l'exposé du Conseil économique du Canada, que vous avez mentionné déjà?

M. Dernier: Il s'agit du chapitre intitulé *Croissance et changement,* au début du deuxième paragraphe.

M. Pringle: Merci, monsieur le président.

M. Dernier: C'est au début du 2e paragraphe.

Le président: Avez-vous fini, monsieur Pringle?

M. Pringle: Oui, merci, monsieur le président.

Le président: Monsieur Rose.

M. Rose: Je voudrais demander au témoin, monsieur le président, d'expliquer sa réponse. Dites-nous, monsieur, qu'en réalité, la protection tarifaire bénéficie les industries manufacturières dans la partie centrale du Canada d'où il vous faut acheter plutôt que d'être une protection particulière pour les provinces de l'Atlantique? C'est cela que vous dites?

M. Dernier: C'est ce que nous prétendons, oui.

M. Rose: On dirait que vous venez de l'Ouest!

Une voix: Nous avons donc beaucoup de choses en commun.

M. Dernier: Si vous me permettez de le dire, monsieur, il y a une caricature du Canada au sujet de la belle vache à lait canadienne. Dans l'Ouest, on nourrit la vache et les autres parties du Canada obtiennent le lait de la vache et par conséquent, vous voyez ce qui reste pour les Maritimes!

M. Rose: Nous avons entendu beaucoup de choses drôles ici, aujourd'hui. J'allais dire qu'une des principales plaintes que nous recevons de temps à autre, c'est que la plupart des Canadiens autres que ceux qui viennent de la partie centrale du Canada, doivent acheter tout d'abord dans un marché fermé et ensuite vendre dans un marché ouvert. Et c'est surtout vrai à l'égard des industries primaires? Appuyez-vous ce principe?

M. Dernier: Oui, parce que la majorité de nos exportations sont des matières brutes qui viennent de l'industrie primaire.

Le président: Monsieur Perrault.

[*Texte*]

Mr. Perrault: Mr. Chairman, I am not unsympathetic to the line of argument advanced by our guest and witness on behalf of the Maritime Co-operative Services Limited. I wanted to question him about the impact of some of these requests. Are you requesting that the same rates be available to Maritime manufacturers who manufacture here and ship to central Canada as are available to those manufacturers who manufacture in Montreal and Toronto and ship to the Maritimes?

This is the kind of request that some of us make in western Canada because it costs more to manufacture in Vancouver and ship to Toronto than it does to manufacture in Toronto and ship to Vancouver. This has been the source of a great deal of unhappiness, as Mr. Rose suggested a few moments ago. Is this what you are asking or are you asking a preferential rate to make it less costly for a Maritime manufacture to manufacture here and sell in Toronto than vice versa?

Mr. Dernier: I do not think it would be reasonable to suggest that we should have a better rate, but we wish to have the injustices of our extra cost of transportation removed so that we do not have that impediment...

Mr. Perrault: You are asking for equality, then?

Mr. Dernier: Right, and I suggest that the MFRA, as it has been operating as a percentage reduction of the rate, is not performing the function that it was originally intended to perform. There must be some other approach.

Mr. Perrault: This is similar to some of the sentiments which exist in the West, of course. Let me ask this question. It is not directly on the subject of transport, but is there any extension of the automotive agreement type pact which would be beneficial to the Maritimes to help with some of your problems? In the West we are talking about a free trade area in wood products, for example, which would give us access to the west coast market of the United States. Do you think that economic policy should be working similarly for some industry in the Maritimes in relation to the Atlantic states?

[*Interprétation*]

M. Perrault: Monsieur le président, je comprends très bien le raisonnement de ce témoin et notre invité, au nom de Maritime Co-operative Services Limited. Je voulais lui poser quelques questions au sujet de la répercussion de certaines de ces demandes? Est-ce que vous demandez que les mêmes taux soient à la disposition des fabricants des Maritimes qui fabriquent ici et expédient dans la partie centrale du Canada qui sont disponibles aux fabricants qui fabriquent à Montréal et à Toronto et qui expédient ensuite aux Maritimes.

C'est le genre de demandes que nous nous faisons dans l'Ouest du Canada, car cela coûte plus cher de fabriquer à Vancouver et d'envoyer à Toronto que de fabriquer à Toronto et d'expédier à Vancouver. Ce qui cause beaucoup de chagrin comme M. Rose l'a suggéré tout à l'heure. Est-ce que c'est ce que vous demandez ou est-ce que vous demandez un tarif préférentiel afin que ce soit moins coûteux pour un fabricant des Maritimes de fabriquer ici et de vendre à Toronto que réciproquement.

M. Dernier: Je ne crois pas que ce soit raisonnable de suggérer que nous voulons un meilleur tarif, mais nous désirons que les injustices de nos frais supplémentaires de transport soient éliminées afin que nous n'ayons pas cet obstacle...

M. Perrault: Vous demandez donc l'égalité?

M. Dernier: C'est exact, et je suggère que la Loi sur les taux de transport des marchandises dans les provinces maritimes telle qu'elle existe, à l'heure actuelle, comme pourcentage de réduction de taux, ne réalise pas l'objectif qu'on avait au tout début. Il doit y avoir un autre moyen de régler la question.

M. Perrault: Cela ressemble à certains sentiments qui existent dans l'Ouest, évidemment. Permettez-moi de vous poser cette question-ci maintenant. Ce n'est pas tout à fait sur le sujet des transports, mais est-ce qu'il y a une extention de l'accord en matière de véhicules à moteur qui pourraient bénificier aux Maritimes afin de vous aider à régler certains problèmes? Dans l'Ouest, nous parlons d'une zone de libre-échange, par exemple, dans le domaine des produits du bois qui nous donnerait accès aux marchés et aux débouchés de l'Ouest des États-Unis. Croyez-vous que la politique économique devrait jouer dans le même sens pour certaines industries des Maritimes en ce qui concerne les États de l'Atlantique?

[*Text*]

Mr. Dernier: I cannot specifically think of any industry. I would think this area should be explored, but I am not prepared to...

Mr. Perrault: Mr. Chairman, just a final question. I wonder if there are any even approximate estimates of the cost involved in these proposals; for example, the proposal with respect to protected tariffs. Is there any estimate on what it would cost in terms of reduction in transport costs? Is there any estimate of the cost of increased or continued highway assistance from the federal government? In other words, has a price tag been put on this program by your organization?

Mr. Dernier: Not by our organization, but I would suggest that some of the studies that have been made, particularly by the Maritime Transportation Commission and the MFRA, would give you a good deal of that information.

Mr. Perrault: Thank you, Mr. Chairman.

The Chairman: Mr. Godin.

M. Godin: Merci, monsieur le président. Premièrement, le témoin pourrait-il nous dire s'il emploie, par exemple, les suppléments protéiques à base animale? Est-ce que ces produits sont subventionnés par le gouvernement fédéral?

Deuxièmement, pouvez-vous nous dire, en chiffres exacts, quelle est la différence entre 100 livres de blé, dont le transport de Port-Arthur à Fredericton est subventionné, et 100 livres de protéines végétales qui ne sont pas sujets aux octrois?

Mr. Dernier: You asked for the difference in rate per hundredweight between animal products and grain. May I ask from where?

M. Godin: En partant de la tête des Grands Lacs, de Port-Arthur à Fredericton pour 100 livres de blé, et de Port-Arthur à Fredericton pour 100 livres de protéines végétales?

Mr. Dernier: First of all, as I understand it the question was are animal products used for a protein supplement. Yes, we use a certain amount of animal products but the basic protein in livestock feed is vegetable protein, largely soybean meal, and there is now a continually increasing amount of rapeseed meal from western Canada, so that your cost is based on the cost of vegetable protein. As far as the rate differential between vegetable protein and grain is concerned, they carry

[*Interpretation*]

M. Dernier: Je ne vois d'une façon précise aucune industrie. J'oserais dire qu'on devrait explorer ce domaine, mais je ne pourrais vous...

M. Perrault: Une dernière question, monsieur le président. Je me demande s'il y a des évaluations approximatives des coûts quant à ces propositions; par exemple, la proposition visant les tarifs protectionnistes. Est-ce qu'on a une idée de ce que cela coûterait sous forme de réduction des frais de transport? Est-ce qu'on a un coût estimatif sur l'augmentation ou le maintien de l'assistance routière donnée par le gouvernement fédéral? En d'autres termes, est-ce que votre organisme a évalué le coût de ce programme?

M. Dernier: Mon organisme ne l'a pas fait non, mais je dirais que certaines études qui ont été faites, surtout par la Commission des transports des Maritimes et la Loi sur les taux de transport des marchandises dans les provinces maritimes vous donnerait ces renseignements.

M. Perrault: Merci, monsieur le président.

Le président: Monsieur Godin.

Mr. Godin: Thank you very much, Mr. Chairman. First, could the witness tell us whether he uses animal protein supplements, for instance, and whether these products are subsidized by the federal government.

Secondly, could you give us the exact figures with regard to the difference between 100 lbs. of wheat the transport of which from Port Arthur to Fredericton is subsidized, and 100 lbs. of vegetable proteins which are not subject to subsidies?

M. Dernier: Vous avez demandé la différence entre les taux par cent livres entre les produits animaux et le blé. Où s'il vous plaît?

Mr. Godin: Let us say from the head of the lakes, from Port Arthur to Fredericton, for 100 lbs. of wheat and from Port Arthur to Fredericton for 100 lbs. of vegetable proteins?

M. Dernier: Tout d'abord, si j'ai bien compris la question, il s'agissait de savoir les produits animaux qui sont employés pour un supplément en protéines. Oui, nous les employons, certainement, mais la protéine de base, pour la graine de provende est la protéine végétale, surtout la farine de soya et on emploie beaucoup plus de farine de graines de colza aussi de l'Ouest du Canada, par conséquent, le coût est fondé sur le coût de cette protéine végétale. En ce qui concerne

[*Texte*]

the same rate, but one is equalized to transportation assistance and the other is not.

M. Godin: Quelle est la différence, dans le transport, entre 100 livres de blé et 100 livres de protéines?

Mr. Dernier: The rate is the same. You want to know the amount that is not subsidized? Just a moment. The average rate in New Brunswick last year was $12.92 per ton. Nova Scotia was approximately $12.00 per ton.

Le président: Est-ce que cela répond à votre question, monsieur Godin?

M. Godin: Oui, merci.

The Chairman: Mr. Horner?

Mr. Horner: Mr. Chairman, I will forego any questions in view of the hour.

The Chairman: Mr. Pringle?

Mr. Pringle: May I ask just one supplementary question. I am interested in finding out, in view of the fact that the Maritimes are endeavouring to build up industry, what industry you would recommend for expansion in New Brunswick without benefit of tariff protection. Would you recommend at the same time that we should endeavour to alleviate tariffs on products which you could get from the United States and which, in my opinion, could immediately be competitive to the industrial products that you would be attempting to produce in the Maritimes? What product would you recommend?

Mr. Dernier: I think the point I was trying to make, sir, is that we not only have to pay the price of the extra cost of tariff protection—and I think in the brief we say that we have no quarrel with this per se—but in addition to that we have to pay the penalty of the additional transportation costs, and as such we feel that some extension of the MFRA is justifiable. However, we are not saying that we have any quarrel with the tariff protection per se.

Mr. Pringle: Then to you the transportation cost is really more the main problem than the additional cost as a result of the tariff.

The Chairman: Are there any further questions?

[*Interprétation*]

l'écart qui existe entre la protéine végétale et le blé, il comporte le même taux, mais il y en a un qui est compensé par une assistance au transport et l'autre ne l'est pas.

Mr. Godin: What is the difference in transportation costs between 100 lbs. of wheat and 100 lbs. of proteins?

M. Dernier: Le taux est le même. Vous voulez savoir quelle est la partie qui n'est pas subventionnée? Un moment. Au Nouveau-Brunswick, le taux moyen, l'an dernier, était de $12.92 la tonne. En Nouvelle-Écosse, c'était environ $12 la tonne.

The Chairman: Does this answer your question, Mr. Godin?

Mr. Godin: Yes, thank you.

Le président: Monsieur Horner?

M. Horner: Je vais m'abstenir de poser des questions vu l'heure tardive, monsieur le président.

Le président: Monsieur Pringle?

M. Pringle: Puis-je poser une question supplémentaire? Je voudrais savoir vu le fait que les provinces maritimes tentent d'accroître leurs industries ici, quelles sont les industries, à votre sens, qui pourraient être étendues ou développées au Nouveau-Brunswick, sans l'avantage d'un tarif protectionniste? Recommanderiez-vous en même temps que nous devrions tenter d'alléger le tarif sur les produits que vous pourriez obtenir des États-Unis et qui, à mon sens, seraient immédiatement concurrentiels aux produits industriels que vous essaieriez de produire ici dans les Maritimes? Quel produit recommanderiez-vous?

M. Dernier: Je crois que le point que j'essayais de soulever, monsieur, c'est que nous devons payer le prix, non seulement, des coûts additionnels du tarif protectionniste, mais je crois que, dans le mémoire, nous disons que nous ne nous opposons pas en principe, mais qu'en plus, nous devons payer les frais de transport supplémentaires, et, par conséquent, nous croyons qu'une extension de la Loi sur les frais de transport de marchandises pour les Maritimes serait justifiable. Toutefois, nous n'avons aucune objection, en principe, au tarif protectionniste.

M. Pringle: En d'autres termes, pour vous, les frais de transport supplémentaires sont pires que le tarif protectionniste?

Le président: Y a-t-il d'autres questions?

[*Text*]

Gentlemen, I want to thank you for presenting your brief.

I wonder if the Committee would agree to a 10 minute adjournment?

It is now 4.10 and we will meet again at 4.20.

The Chairman: Gentlemen, our next brief will be that of the T. Eaton Company Limited. On my immediate right are Mr. Sparks and Mr. Lockhart. We have had their brief for over a year and I presume most of the members are aware of it. These two gentlemen are now ready to answer your questions.

Mr. Thomas (Moncton): Mr. Chairman, I have two short questions for Mr. Sparks. Basically your problem is that as a distribution catalogue mail order centre you are shipping mainly small parcels—small shipments—and therefore everything has to go either by less than carload rail shipment, or by some other means of transportation?

Mr. W. R. Sparks (Traffic and Customs Manager, T. Eaton Company Limited): That is correct.

The Chairman: Mr. Thomas, you will find the brief of the T. Eaton Company on page 826 in your book.

Mr. Thomas (Moncton): Your most serious problem is created by the recent increase in l.c.l. rates, which has jacked up the costs of your shipping?

Mr. Sparks: That is correct.

Mr. Thomas (Moncton): Is there any alternative method of making shipments from your Moncton plant other than by rail?

Mr. Sparks: Not a satisfactory system, no sir.

Mr. Thomas (Moncton): You have not been able to ship, or to get the same service, through road transport?

Mr. Sparks: No, sir.

Mr. Thomas (Moncton): Thank you.

Mr. Horner: Mr. Sparks, although, as Mr. Thomas suggests, you ship your goods in less than cargo lots—small cargoes, part loads, and so on—your biggest trouble arises—and correct me if I am wrong—through the implementation of the density load factor. Is this correct?

Mr. Sparks: This is correct.

[*Interpretation*]

Messieurs, je veux vous remercier de la présentation de votre mémoire.

Je me demande si le comité serait d'accord que nous levions la séance pour dix minutes.

Il est 4 heures et dix, alors à 4 heures 20, nous revenons n'est-ce pas?

Le président: Messieurs, nous entendrons maintenant le mémoire présenté par la compagnie T. Eaton Limited. J'ai ici, à ma droite, M. Sparks et M. Lockhart, Nous avons leur mémoire depuis plus d'un an. Je suppose donc que les membres du Comité en connaissent le contenu. Nos témoins sont donc maintenant prêts à répondre à vos questions.

M. Thomas (Moncton): J'aurais deux brèves questions à poser à M. Sparks. Essentiellement, votre problème vient de ce que, en tant que centre de distribution par catalogue, vous faites l'expédition de petits colis surtout. Vous pouvez donc les expédier en chargement incomplet, ou recourir à d'autres modes de transport.

M. W. R. Sparks (Gérant du service de distribution et des douanes, T. Eaton Company Limited): C'est exact.

Le président: Vous trouverez, monsieur Thomas, le mémoire de la T. Eaton à la page 826 du compte rendu.

M. Thomas (Moncton): En ce moment, votre principal problème vous vient essentiellement de l'augmentation dans les taux qui viennent s'ajouter à vos frais d'expédition.

M. Sparks: C'est exact.

M. Thomas: Y a-t-il une méthode, pour vos expéditions de Moncton, autre que le recours aux chemins de fer?

M. Sparks: Non, pas de systèmes satisfaisants.

M. Thomas (Moncton): Vous n'avez pas été en mesure d'obtenir le même service par l'entremise d'une compagnie de transport routier?

M. Sparks: Non, monsieur.

M. Thomas (Moncton): Merci.

M. Horner: Comme M. Thomas le dit, quoique les marchandises que vous expédiez représentent moins d'un chargement, de petits chargements, et d'autres, votre plus grand problème vient, et rectifiez-moi si j'ai tort, de la mise en vigueur du facteur de densité de chargement. Est-ce correct?

M. Sparks: C'est bien cela.

[*Texte*]

Mr. Horner: Did the railways give you any reason for the—I think it is—10 pounds per cubic foot figure on which they now base their freight rate?

Mr. Sparks: Yes; I attended all the meetings of the committee that the railway set up to establish E.T.A.T. 100, and this is what they needed, in their estimation, to make their rates compensatory.

Mr. Horner: In their estimation?

Mr. Sparks: Yes, sir.

Mr. Horner: These same rates, as on per ton mile—and I do not want to go back to a previous brief—but in the previous brief there was a table which outlined the exact effects of these rates. I ask the Committee to look for a brief moment at page 806. There they outline some rates. For, say, 350 miles in Ontario, the rate per 100 was 49 cents; for 294 miles in the Maritimes the rate with the Maritime Freight Rates subsidy is still 71 cents.

How do they justify one rate as compensatory in one area and not necessarily compensatory in another, per mile of travel?

Mr. Sparks: I have never been able to understand the railway costing system. I would not like to answer that question.

An hon. Member: Join the club.

Mr. Horner: Take the matter of volume. Does your company have any suggestion about an agreed rate for the volume that you must do with the railway company?

Mr. Sparks: We have an agreed rate, yes, sir, for our catalogue houses.

Mr. Horner: For your catalogue houses you have an agreed charge for your shipping?

Mr. Sparks: Yes, sir; we have an exception to the general traffic.

Mr. Horner: And it still takes into consideration the 10 pounds per cubic foot?

Mr. Sparks: No, sir.

Mr. Horner: The agreed charge does not?

Mr. Sparks: No, sir.

Mr. Horner: Is the agreed charge of a ton a mile shipped quite a bit less than the...

[*Interprétation*]

M. Horner: Les compagnies de chemin de fer vous ont-elles dit pourquoi elles avaient eu recours à cette mesure de 10 livres le pied cube pour fixer les taux de transport?

M. Sparks: Oui. J'ai assisté à toutes les séances du comité constitué par les chemins de fer en vue d'établir ces tarifs, qui, disent-ils, sont nécessaires au bon fonctionnement de leur entreprise.

M. Horner: Il s'agit de leur propre opinion?

M. Sparks: Oui.

M. Horner: Quant à ces taux, même si je ne veux pas revenir à un autre mémoire, je signalerai que le mémoire précédent contient un tableau qui indique leurs effets précis. J'aimerais que le Comité jette un coup d'œil à la page 806. On y donne certains taux. Ainsi, en Ontario, le coût de transport sur une distance de 350 milles est de 49 cents les cent livres. Dans les Maritimes, pour 294 milles, le taux bien que subventionné est de 71 cents, en vertu de la Loi sur les taux de transport des marchandises dans les Maritimes.

Comment peut-on justifier qu'un taux soit compensatoire dans une région, et qu'il ne le soit pas nécessairement dans un autre, par mille parcouru?

M. Sparks: Je n'ai jamais été en mesure de comprendre ce système des chemins de fer. Je préfère donc ne pas répondre à votre question.

Une voix: Nous faisons partie du même club.

M. Horner: Question de volume, votre compagnie a-t-elle des suggestions pour le taux qu'elle devrait payer pour le volume de marchandises transportées par chemin de fer?

M. Sparks: Nous avons conclu une entente pour nos comptoirs de ventes par catalogue.

M. Horner: Vous avez convenu d'un tarif?

M. Sparks: Oui; nous avons une exception par rapport au trafic ordinaire.

M. Horner: Tient-on toujours compte de ces 10 livres par pied cube?

M. Sparks: Non.

M. Horner: Le tarif convenu ne tient pas compte de ça?

M. Sparks: Non.

M. Horner: Le tarif convenu pour une tonne le mille expédiée est-il beaucoup moins que le...?

[*Text*]

Mr. Sparks: Should I answer that question?

Mr. Horner: I think you should.

Mr. Sparks: It is a published tariff.

Mr. Horner: Yes; it is published here.

Mr. Sparks: It is a published tariff; and we do not pay on cube or piece.

Mr. Horner: But in the agreed charge you have to ship all your goods.

Mr. Sparks: No, sir.

Mr. Horner: You do not?

Mr. Sparks: No, sir.

Mr. Horner: What does the agreed charge apply to, then?

Mr. Sparks: We present our goods in 1,000 cubic foot lots for pickup.

Mr. Horner: Would a containerization system improve the shipment of your products?

Mr. Sparks: Very slightly; because of the inconsistency of the volume at certain locations you would never have enough volume to use a container.

Mr. Horner: Is it your belief that the railways do not have enough competition from the trucking industry within the Maritimes?

Mr. Sparks: Looking at rates, we feel that the increases in the Maritimes at the time E.T.A.T. 100 was published were quite substantial compared to, say, Western Canada.

Mr. Horner: You thought they were quite substantial.

Mr. Sparks: Yes; in view of the fact that they have much more truck competition in Western Canada than they have in the Maritimes.

Mr. Horner: From the list of rates you have in your brief I imagine your company has already protested to the Canadian Transport Commission about the rates on the density figure?

Mr. Sparks: Not to the Commission; we have dealt with the railways in Montreal.

[*Interpretation*]

M. Sparks: Est-ce que je devrais répondre à cette question?

M. Horner: Je crois que vous devriez y répondre.

M. Sparks: Le tarif est publié.

M. Horner: Oui, il est publié ici.

M. Sparks: Le tarif est publié. Nous ne payons pas d'après le nombre de pieds cubes ni le nombre de colis.

M. Horner: Suivant le tarif convenu, vous devez expédier tous vos colis?

M. Sparks: Non.

M. Horner: Vous ne le faites pas?

M. Sparks: Non.

M. Horner: Alors, à quoi ce taux s'applique-t-il?

M. Sparks: Nous présentons nos produits en lots de mille pieds cubes pour qu'ils soient recueillis.

M. Horner: Est-ce qu'un système de conteneurs pourrait améliorer l'expédition de vos produits?

M. Sparks: Très peu, parce que le volume varie à certains endroits et qu'il serait insuffisant pour qu'il soit avantageux de recourir à ce système.

M. Horner: Est-ce que vous croyez alors que les chemins de fer n'ont pas assez de concurrence de la part de l'industrie du camionnage dans les Maritimes?

M. Sparks: Si nous parlons des taux, nous croyons que lorsque les augmentations ont été rendues publiques elles étaient beaucoup plus substantielles dans les Maritimes que, par exemple, dans les provinces de l'Ouest.

M. Horner: Vraiment?

M. Sparks: Oui, du fait qu'il y a beaucoup plus de concurrence de la part de l'industrie du camionnage dans l'Ouest que dans les provinces des Maritimes.

M. Horner: D'après les taux qui apparaissent dans votre mémoire, je suppose que votre compagnie a déjà protesté au sujet de ces nouveaux tarifs auprès de la Commission des transports du Canada?

M. Sparks: Non, pas auprès de la Commission. Nous avons traité avec les chemins de fer à Montréal.

[*Texte*]

Mr. Horner: You have not protested them to the Canadian Transport Commission?

Mr. Sparks: No, sir.

The Chairman: Mr. Allmand?

Mr. Allmand: Sir, do you use your own trucks at all the Maritimes for delivery of parcels in small lots?

Mr. Sparks: Only in urban centres; not on highways, sir, no.

Mr. Allmand: You would consider this uneconomical?

Mr. Sparks: On all trucking business you need a two-way movement to be economical. What are we going to bring back when we get the trucks out at the end of the route?

Mr. Allmand: I ask because I know that in the city I come from all the Eaton deliveries are by truck. I suppose that is because it is economic in the cities.

Mr. Sparks: Yes.

Mr. Allmand: That is all; thank you.

The Chairman: Mr. Perrault?

Mr. Perrault: Mr. Chairman, I have a brief question. The company states,

> We feel that if the present levels of rates for the Atlantic Provinces are not reduced, it will result in an increase in the cost of living for the consumer and could retard the growth of our Company...

The preceding paragraph suggests that the Catalogue Sales Offices report that service has deteriorated. People still require commodities. Where are they buying their dinette suites and ranges and stoves if they are not buying them from you? They are buying somewhere.

Mr. Sparks: As the prices are going up their dollar is not going as far.

Mr. Allmand: You mean they are no longer buying beds and stoves here?

Mr. Sparks: Oh, yes.

Mr. Allmand: I just wondered what effect it was having on the over-all economy. Perhaps a native, home-based industry is benefiting from your difficulties in bringing materials in from Toronto?

[*Interprétation*]

M. Horner: Vous n'avez pas protesté auprès de la Commission des transports du Canada?

M. Sparks: Non.

Le président: Monsieur Allmand.

M. Allmand: Est-ce que vous utilisez vos propres camions dans les Maritimes pour l'expédition de colis en petits lots?

M. Lockhart: Simplement dans les centres urbains; nous ne les utilisons pas sur les grandes routes.

M. Allmand: Vous trouvez que ce n'est pas rentable?

M. Sparks: Pour toute opération de camionnage, il faut un déplacement de marchandises dans les deux sens pour que ce soit rentable. Que pouvons-nous ramener lorsque le camion est rendu à destination?

M. Allmand: J'ai posé la question parce que je sais que dans la ville d'où je viens, toutes les livraisons de Eaton se font par camion. J'imagine que c'est rentable en ville?

M. Sparks: Oui.

M. Allmand: Merci.

Le président: Monsieur Perrault.

M. Perrault: Voici, monsieur le président. La compagnie déclare:

> A notre avis, si on ne réduit pas les taux actuellement en vigueur dans les provinces de l'Atlantique, il y aura hausse du coût de la vie pour le consommateur, et cela retardera aussi l'essor de notre société...

Ce paragraphe laisse entendre que d'après vos bureaux de ventes par catalogues le service s'est amoindri. On a toujours besoin de marchandises. Où achète-t-on meubles et cuisinières, réfrigérateurs, si on ne les achète pas chez-vous?

M. Sparks: A mesure que les prix augmentent, le dollar va moins loin.

M. Allmand: Voulez-vous dire qu'on n'achète plus de lits ni de cuisinières ici?

M. Sparks: On en achète encore.

M. Allmand: Tout ce que je désirais savoir, c'était l'effet que cela avait sur l'ensemble de l'économie. Peut-être qu'une autre industrie locale bénéficie des difficultés que vous éprouvez à obtenir certains matériaux de Toronto?

[*Text*]

Mr. Sparks: It is possible.

Mr. Allmand: That is my question. Have you any statistics relative thereto?

Mr. Lockhart: Perhaps we could say that from 1966 to 1968 our charges for shipments to customers from Moncton, outgoing, were increased 21.8 per cent. The per pound cost to us of shipping to customers went up from 2.47 to 3.04. This is based on 1,810,000 pounds. That is express freight costs.

The express rate, incoming, from suppliers to our company in Moncton, increased by 76.7 per cent from 1966 to 1968.

In addition I think it would be well for this Committee to realize that this represents about half of our volume. The rest of our shipments are parcel post, and parcel post rates during the same period increased by 19.8 per cent.

Another thing that I think the Committee might be interested in is that on the catalogues that we ship out to our customers in the Atlantic Provinces our postage increased last year. Had we used the same method of distribution that we used in 1966, our cost would have increased by 74 per cent. We found that we were able to reduce this somewhat by finding other means of distributing our catalogues, mainly in the urban centres, through service organizations, and so on, and bringing the books in in bulk.

To get back to your question about what will happen, we have necessarily had to increase the catalogue price of our merchandise to our customers.

We have been able to absorb a certain amount of this increase in rates, but not substantially. The bulk of the increase has to be passed on to the customer. This, I think, is the intention of that particular paragraph in the brief—that the customers are going to pay more. They will probably be able to buy less and in the long run it will reflect, or could reflect, in loss of business to us.

The Chairman: Are there any further questions, gentlemen?

Mr. Trudel: Mr. Chairman, I wish to ask the witness if he has any idea what percentage of their business is done in the urban centres and what it is in the rural sector?

Mr. Lockhart: I can give you a rough guess. It is roughly 45 per cent to the urban centres and 55 per cent rural.

[*Interpretation*]

M. Sparks: C'est possible.

M. Allmand: Voici ma question. Possédez-vous des données à ce sujet?

M. Lockhart: On pourrait peut-être ajouter à cet égard que de 1966 à 1968, nos frais d'expédition de marchandises aux clients, à partir de Moncton, ont augmenté de 21.8 p. 100. Le coût d'expédition, par livre, est passé de 2.47 à 3.04. Ces chiffres sont basés sur un poids total de 1,810,000 livres. Ce sont les frais de transport par exprès.

Les frais de messagerie, pour la marchandise que nos fournisseurs nous ont fait parvenir à Moncton, ont augmenté de 76.7 p. 100 de 1966 à 1968.

Je pense qu'il serait bon que ce Comité se rende compte que cela représente environ la moitié de notre volume. Le reste de nos expéditions se fait par livraison postale. Et les tarifs pour colis postaux ont augmenté de 19.8 p. 100 pour la même période.

Une autre chose qui pourrait peut-être aussi intéresser le Comité, c'est que pour ces catalogues que nous expédions à nos clients dans la région de l'Atlantique, les frais postaux ont connu, l'année dernière, une augmentation. Si nous avions utilisé la même méthode de distribution qu'en 1966, le coût aurait été majoré de 74 p. 100. Nous avons réalisé qu'il était possible de réduire l'importance de cette augmentation en trouvant d'autres moyens de distribution de notre catalogue, surtout dans les centres urbains, par l'entremise de certains organismes et en faisant venir ces catalogues en vrac.

Pour revenir à votre question, ce qui s'est produit, c'est que nécessairement nous avons dû augmenter le coût que paie le client pour la marchandise.

Nous avons pu absorber une certaine partie de cette augmentation, mais pas de façon substantielle. C'est, en grande partie, le client qui paie. Ce que signifie ce paragraphe c'est que les clients devront encore payer davantage. Ils ne pourront sans doute pas acheter autant ce qui, à la longue, signifiera, ou pourrait signifier, une diminution du chiffre de nos affaires.

Le président: Auriez-vous d'autres questions, messieurs? Monsieur Trudel?

M. Trudel: Je désire, monsieur le président, demander au témoin s'il a une idée du partage des affaires que traite sa compagnie entre les centres urbains et ruraux.

M. Lockhart: Je pourrais vous donner une évaluation approximative. Ce serait environ 45 p. 100 dans les centres urbains et 55 p. 100 dans les centres ruraux.

[*Texte*]

Mr. Trudel: Is there any possibility of having a charge, if you were sending goods out of the urban centres, and still using the same price structure, rather than penalize those who reside in the urban centres for the increased transportation cost that you are talking about?

Mr. Lockhart: This would mean a two-price policy, which our company up until now has resisted. We insist on one price to everybody. It would probably mean an additional heavy expense in creating another book with different prices. Our prices are the same, by zones.

Mr. Trudel: Yes; this was what I was thinking about—having one price system, and those within a certain zone would have another charge tacked on to the price for transportation?

Mr. Lockhart: These things have been considered and will be again in the future, I am sure, but at the moment they have decided to operate as usual.

Mr. Trudel: Thank you, Mr. Chairman.

Mr. Sparks: Mr. Chairman, perhaps the Committee would be interested to know that in our business in the Atlantic Provinces 90 per cent of the goods we buy comes from outside the provinces; and, similarly, 90 per cent of what we sell comes in by CNR. We have no CP connection in Moncton. Very little road transport comes through to bring us our merchandise, so it is CN in and CN out, and anything over 25 pounds...

The Chairman: Mr. Horner?

Mr. Horner: Why does the Maritime Freight Rates Act not apply to less than cargo loads? Do you know?

Mr. Sparks: I am not sure of that, no; but I know one thing, and that is that the paper work would be tremendous.

Mr. Horner: If this Committee, after an exhaustive study of the problem, recommended that in setting the freight rates the formula of five pounds per cubic foot be accepted rather than 10 pounds, would you agree?

[*Interprétation*]

M. Trudel: Est-ce qu'il y a possibilité, tout en expédiant votre marchandise des centres urbains et en conservant la même structure de prix, d'imposer des frais pour ces expéditions plutôt que de pénaliser ceux qui habitent les centres urbains pour l'augmentation des frais dont vous parlez.

M. Lockhart: Il s'agirait d'instaurer un double prix, ce à quoi nous avons résisté jusqu'à maintenant. Nous tenons à avoir un seul prix pour tout le monde. Il faudrait sans doute effectuer des dépenses additionnelles d'importance pour imprimer un deuxième catalogue, avec des prix différents. Présentement nos prix sont les mêmes, ils sont fixés par zone.

M. Trudel: C'est ce à quoi je songeais, un système à prix unique et des frais différents suivant une zone donnée pour couvrir les frais de transport.

M. Lockhart: Ils y ont songé et ils y penseront encore, j'en suis sûr. Mais en ce moment, ils ont décidé de maintenir le système actuel.

M. Trudel: Merci beaucoup, monsieur le président.

M. Sparks: Je pense, monsieur le président, que ce Comité serait intéressé à savoir que, par rapport aux transactions que nous effectuons dans les Maritimes, 90 p. 100 des marchandises que nous achetons viennent de l'extérieur des provinces, et de même, 90 p. 100 de ce que nous vendons est livré par le National-Canadien. Il n'y a pas de services du Pacifique-Canadien à Moncton. Il y a très peu de transport routier pour nous apporter nos marchandises de sorte que pour la réception et l'expédition il faut recourir au National-Canadien, et tout ce qui excède vingt-cinq livres...

Le président: Monsieur Horner?

M. Horner: Pourquoi la *Loi sur les taux de transport des marchandises dans les provinces Maritimes* ne s'applique-t-elle pas pour les chargements incomplets? Le savez-vous?

M. Sparks: Je n'en suis pas sûr. Mais je sais que le travail de bureau serait énorme.

M. Horner: Si ce Comité, après avoir étudié le problème à fond, recommandait que l'établissement des taux se fasse d'après la formule de 5 livres au pied cube au lieu de 10 livres, seriez-vous d'accord?

[*Text*]

Mr. Sparks: We would be very happy to hear it.

The Chairman: Mr. Perrault?

Mr. Perrault: This is just a supplementary arising out of the increased cost of bringing goods in from the outside. Has this encouraged you to purchase products manufactured in Nova Scotia, New Brunswick and Prince Edward Island in recent years as a way to cut down on these costs? Do you buy heaters and stoves to a greater extent now, such as the Fawcett stove, from New Brunswick or the Maritimes?

An hon. Member: Do they make any?

Mr. Horner: Yes, they certainly do.

Mr. Lockhart: I cannot answer that. We do buy considerably from some of the eastern Maritime manufacturers, but in the case of ranges I cannot answer the question. Ours are made in Guelph and the buyer probably has reason to believe that he should buy there.

Mr. Sparks: You must remember there are many sources. We are buying on a national basis and we naturally supply all outlets from the same source.

Mr. Horner: I am merely trying to determine, again, whether or not this transportation situation provides certain indirect economic benefits to the Maritimes through your sources of purchase.

Mr. Lockhart: We buy coal and wood ranges from Sackville Foundries.

Mr. Trudel: Are there certain items in your purchasing pattern of which your entire Canadian requirements could be purchased in the Maritimes?

Mr. Sparks: About the only one I can think of offhand might be Mr. Stanfield's underwear.

Mr. Trudel: Thank you.

The Chairman: Gentlemen, there appear to be no further questions. Thank you very much for being here.

The next brief is that of the Maritime Provinces Board of Trade, represented by Mr. Isner. You will find the brief, A-79, on Page 823. We are going to have a short summary of the brief, so I will call on Mr. Isner.

[*Interpretation*]

M. Sparks: Nous en serions très heureux.

Le président: Monsieur Perrault?

M. Perrault: Cette question supplémentaire est reliée au problème de l'augmentation des coûts de transport de la marchandise qui vient de l'extérieur. Est-ce que cela vous a incité à acheter de plus en plus de produits fabriqués en Nouvelle-Écosse et au Nouveau-Brunswick et dans l'Île-du-Prince-Édouard, au cours des dernières années, afin de couper ces coûts? Est-ce que vous achetez plus de cuisinières et de chaufferettes, par exemple, au Nouveau-Brunswick ou dans les Maritimes?

Une voix: Est-ce qu'il s'y en fabrique?

M. Horner: Certainement.

M. Lockhart: Je ne puis répondre à votre question. Nous achetons beaucoup de produits de certains des fabricants de l'est des Maritimes, mais dans le cas des cuisinières, je ne saurais répondre à votre question. Les nôtres sont fabriquées à Guelph et notre acheteur a de bons motifs de croire, je suppose, qu'il doit acheter là.

M. Sparks: Il ne faut pas oublier qu'il y a de nombreuses sources d'approvisionnement. Nous achetons pour l'ensemble de nos magasins et nous les approvisionnons tous de la même source.

M. Horner: Je voulais simplement savoir si, ce problème du transport amène, indirectement, certains avantages économiques pour les Maritimes au moyen de vos sources d'achats.

M. Lockhart: Nous achetons nos cuisinières à bois et au charbon de *Sackville Foundries.*

M. Trudel: Est-ce qu'il y aurait certains produits que vous pourriez acheter dans les Maritimes pour l'ensemble de vos magasins?

M. Sparks: Je pense que le seul article auquel je puisse songer, ce sont les sous-vêtements de M. Stanfield.

M. Trudel: Merci.

Le président: Messieurs, nous n'avons plus de questions à vous poser; je désire vous remercier de votre présence ici. Maintenant, nous entendrons la soumission de la Chambre de commerce des provinces maritimes, représenté par M. Isner. Vous trouverez le mémoire A-79, à la page 823. Monsieur Isner nous le résumera brièvement.

[*Texte*]

Mr. B. W. Isner (President, Maritime Provinces Board of Trade): Mr. Chairman and gentlemen, the brief has been filed with you but I wish to say a few words on it.

Our concern in the Maritime Provinces Board of Trade is, of course, the economic disparity between this region and the rest of Canada. We feel that transportation is very much a key factor in this particular matter.

Prosperity and growth are brought about by a chain of events: the production from primary industry creates basic wealth; the basic dollar is thus created to bring about a demand for the products of secondary industry; this, in turn, creates more dollars and still more demand for the products of secondary industry, with, in turn, still more jobs and still more dollars. It is like a snowball rolling downhill. It gets bigger and bigger.

The problem of the Maritimes is not one of creating the first snowball. We do this very well. The basic dollars derived from our forests, fisheries, mines and agriculture produce a very substantial first snowball. The trouble is that it rolls over bare ground just as soon as it is created.

We do have dollars generated by our primary industry but instead of using these dollars to establish or expand secondary industry we are forced to send them out of the area for goods to satisfy our basic needs—goods which are manufactured in central Canada.

The reason we have no secondary industries is that our market is too small, and we never can have a bigger market without secondary industry. There we have the classic problem—the irresistible force and the immoveable object.

Its solution? The Maritime Provinces Board of Trade believes that economic access to the large central Canadian market is very much a part of its solution. We believe this would enable us to establish and maintain a secondary industry. Unless this is done the Maritimes could well remain forever in the economic ghetto. We suggest that we have a right to this as a tenet of Confederation, and that there is precedent for area-support through transportation already existing in Canada.

We feel that the way to attain this is through the recommendations that we have made which are, first, that the Government of Canada recognize the right of Maritime ship-

[*Interprétation*]

M. B. W. Isner (Président de la Chambre de commerce des provinces maritimes): Messieurs, notre mémoire vous a déjà été soumis mais je voudrais ajouter quelques observations.

Nous nous inquiétons, à la Chambre de commerce des provinces maritimes, de l'écart économique qui existe entre notre région et le reste du Canada. Nous sommes d'avis que le facteur transport est un facteur-clé à cet égard.

Nous sommes d'avis que la prospérité et la croissance sont entraînées par une chaîne d'événements: la production des industries primaires crée la richesse de base; le dollar est ainsi créé et exige la présence d'industries secondaires; ce qui engendre plus de dollars et d'emplois, et une demande plus grande pour les produits de l'industrie secondaire, et de là, d'autres dollars et d'autres emplois. La boule de neige devient de plus en plus grosse.

Notre problème ne vient pas de la fabrication de la première boule de neige. Les dollars que nous tirons de nos forêts, nos pêcheries, nos mines, notre agriculture constituent cette première boule de neige. Le problème vient de ce que cette boule dévale une pente sur laquelle il n'y a pas d'autre neige.

L'industrie primaire engendre des dollars, mais plutôt que de les utiliser pour établir des industries secondaires, nous devons les envoyer à l'extérieur de la région pour des articles qui répondent à nos principaux besoins, pour des denrées fabriquées dans le Canada central.

La raison pour laquelle nous n'avons pas d'industries secondaires, c'est que notre marché est trop petit, et que nous ne pouvons l'améliorer sans industries secondaires. C'est toujours le même problème: une force irrésistible et un objet qui ne peut être déplacé.

Quelle est la solution? La Chambre de commerce des provinces maritimes croit que l'accessibilité aux débouchés du centre du Canada est une partie intégrante de notre solution. Ainsi nous pourrons établir une industrie secondaire et la maintenir. A moins qu'on ne réalise cet objectif, les Maritimes pourraient toujours demeurer dans ces difficultés économiques. Nous croyons que nous y avons droit en tant que membre de la Confédération. Un précédent a été créé qui permet de subventionner une région au moyen du transport déjà en existence au Canada.

Nous sommes d'avis que la façon d'y parvenir réside dans ces recommandations que nous avons formulées, qui sont, premièrement, que le gouvernement du Canada recon-

[*Text*]

pers and consumers to economic access to the central Canadian market as a right of Confederation and as a matter of national public policy; and second, that the Parliament of Canada, after recognizing this, and as a temporary measure, immediately amend the Maritimes Freight Rates Act so that it is restored to the level of its effectiveness in 1927; that the subsidies necessary to do this be paid out of general revenue, and to all modes of transport; and, finally, that the government then await the report of the so-called Interprovincial Task Force about which you have heard today. This has been set up to study, and specifically establish, what economic access actually means in terms of tariffs, freight rates and so on, and the report of this Task Force should be the basis for the revised Maritime Freight Rates Act.

Thank you, Mr. Chairman.

The Chairman: Mr. Breau?

Mr. Breau: Mr. Isner, I have just one question. The feeling I get from reading your brief is that the whole action of government relative to industrial incentives could be in the sector of transportation. I am inclined to agree with you that it would help a great deal if the production of the Maritime Provinces could be sold at a competitive price in, say, Montreal or Toronto, but is it the attitude of the businessmen that the government should restrict their action to a transportation policy which would in some way create industrial incentives which would make the material cheaper to sell in Montreal? Do you think this is what the business community wants in the Maritimes?

Mr. Isner: No, Mr. Chairman, the Maritime Provinces Board of Trade is not seeking a better situation; it is just seeking a competitive situation.

As I said earlier, our market is too small to generate secondary industry on its own and we have to be able to get in on some—a portion of the production must be sold in the central Canadian market—but freight prevents us from doing this effectively, even with equal production costs.

Mr. Breau: Yes; but in some areas of the Maritimes at the moment there are industrial incentives such as ADA in which the government has a 33⅓ investment in the company. This could, in some instances, compensate for the more expensive transportation. Are you

[*Interpretation*]

naisse le droit des expéditeurs et des consommateurs des Maritimes à l'accessibilité économique aux marchés du Canada central comme un droit de par la Confédération et une politique nationale d'intérêt public; et deuxièmement que le Parlement du Canada après avoir reconnu ce droit, modifie la *Loi sur les taux de transport des marchandises dans les provinces Maritimes* pour en faire une mesure aussi efficace qu'en 1927; que la subvention soit payée à tous les modes de transport à même les recettes générales, et, enfin, que le gouvernement attende la présentation du rapport de la soi-disant équipe inter-provinciale spéciale, qui a été constituée pour étudier ce problème et établir de façon plus particulière, ce que signifie l'accessibilité économique dans les domaines des tarifs et des taux de transport et que le rapport de cette équipe spéciale soit à la base de la revision de la Loi.

Merci, monsieur le président.

Le président: Monsieur Breau.

M. Breau: Monsieur Isner, une question. A la lecture de votre soumission, j'ai l'impression que l'action du gouvernement dans le domaine de l'encouragement sur le plan industriel pourrait se faire dans le secteur du transport. Je serais porté à croire, comme vous, qu'il serait utile que les produits fabriqués dans les Maritimes puissent se vendre à un prix compétitif, par exemple, à Montréal ou à Toronto. Mais est-ce que les hommes d'affaires croient que le gouvernement devrait se limiter à établir une politique des transports qui serait, en quelque sorte, un encouragement du point de vue industriel et qui permettrait de vendre ces produits à meilleur marché à Montréal? Est-ce là l'idée de la collectivité industrielle dans les Maritimes?

M. Isner: Non, la Chambre de commerce n'essaie pas d'améliorer la situation. Nous voulons simplement une situation concurrentielle. Comme je l'ai dit plus tôt, le marché est trop petit pour engendrer lui-même des industries secondaires. Il faut donc qu'une partie de notre production soit vendue dans des débouchés plus grands, mais les coûts de transport nous en empêchent même si notre coût de production est le même qu'ailleurs.

M. Breau: Dans certains secteurs des Maritimes, il existe des programmes d'encouragement à l'industrie par lesquels le gouvernement investit un tiers des sommes nécessaires dans une entreprise. En certains cas, cela peut compenser pour le coût supérieur des

[*Texte*]

suggesting that the business community would rather have a transportation subsidy than industrial incentives?

Mr. Isner: No. What you say does not apply to the entire business community. I am referring to the business community to which this does not apply.

Mr. Breau: Pardon me; I do not understand.

Mr. Isner: These incentives do not apply to all the business community. It is the business community to whom these incentives you refer to do not apply that are seeking the transportation benefits.

Mr. Breau: Any producing or manufacturing qualifies for ADA except agriculture and perhaps peat moss. If you manufacture shoes or shirts in New Brunswick you qualify for ADA—anything you want to manufacture—although perhaps not in all areas.

Mr. Isner: You have asked me about a matter with which I am not familiar in complete detail.

Mr. Breau: Perhaps I can make it a little clearer. Do you think that the industrial incentives of the federal government, or the policy it has followed, are not so acceptable to the businessmen as would be a transportation subsidy?

Mr. Isner: Mr. Chairman, I think the answer is that the policies that have been followed have not been effective; that we need something in addition to these. Where no progress has been made relative to economic disparity the gap still exists, and this in spite of the efforts of the past 10 years. There has been no gain—no progress.

Mr. Nesbitt: I have just one question of Mr. Isner. What would be the view of the Maritime Provinces Board of Trade, or perhaps your own, on the idea of a free trade area between the Atlantic Provinces and the New England states in certain specialized commodities such as pulp, paper, lumber products and so on?

Mr. Isner: The Maritime Provinces Board of Trade does not have a view on that, as such, in its policy, but the Maritime Premiers were enthusiastic about this at the recent Constitutional Conference.

[*Interprétation*]

services de transport. Est-ce que vous affirmez que le monde des affaires préférerait une subvention pour les transports à des programmes d'encouragement industriel?

M. Isner: Non. Ce que vous dites ne s'applique pas à l'ensemble du monde des affaires. Et je parle de ce secteur du monde des affaires où cette situation ne s'applique pas.

M. Breau: Je m'excuse mais je ne comprends pas.

M. Isner: Ces programmes d'encouragement à l'industrie ne s'appliquent pas à l'ensemble du monde des affaires. Ce sont ces entreprises qui ne bénéficient pas de ces programmes d'encouragement qui désirent obtenir des subventions dans le domaine des transports.

M. Breau: Toute entreprise manufacturière peut jouir de ces programmes d'aide, sauf le monde de l'agriculture. Si vous fabriquez des chaussures ou des chemises, au Nouveau-Brunswick, vous pouvez en profiter. Ces programmes s'appliquent à tous les produits mais peut-être pas dans toutes les régions.

M. Isner: Vous me posez une question que je ne connais pas dans tous ses moindres détails.

M. Breau: Peut-être pourrai-je éclaircir un peu plus. Croyez-vous que les encouragements industriels établis et mis au point par le gouvernement fédéral, sont acceptés aussi facilement par l'homme d'affaires que le subside des transports?

M. Isner: Je pense que les politiques qui ont été suivies n'ont pas toujours été efficaces. Il faut quelque chose en plus. Il n'y a pas eu de progrès de fait, et l'écart sur le plan économique existe toujours malgré les efforts que vous déployez au cours des dix dernières années. Nous n'avons pas vraiment fait de gain, de progrès.

M. Nesbitt: J'ai une seule question à poser à M. Isner. Quel serait le point de vue de la Chambre de commerce des Maritimes et de vous-mêmes à l'égard d'une zone de libre échange entre les Maritimes et les États de la Nouvelle-Angleterre, pour certains produits, comme la pâte et le papier, les produits forestiers, et autres?

M. Isner: La Chambre de commerce des Maritimes n'a pas de point de vue comme tel pour ce qui est de cette politique qui a soulevé l'enthousiasme des premiers ministres des provinces de l'Atlantique lors de la dernière conférence constitutionnelle.

[*Text*]

Mr. Nesbitt: Do you have any personal views?

Mr. Isner: Actually, I have not studied them in depth, and I could not say. Mention was made a while ago about tariff protection. Not far from here is a community called St. Stephen, New Brunswick. Fifty yards from it, across the way, is the community of Calais, Maine. A Chevrolet automobile in St. Stephen costs $3,260; a Chevrolet automobile in Calais, 50 yards away, costs $2,670.

Mr. Nesbitt: Then there might some considerable interest in products such as that?

Mr. Isner: Oh, definitely; for example, it has been estimated that the Maritimes spend $200 to $300 million additional in car purchase alone in a year. If we could spend the income from our primary industry in the New England States that would automatically increase our standard of living by some 25 per cent.

Mr. Nesbitt: Thank you.

Mr. Chairman: Mr. Perrault?

Mr. Perrault: Mr. Chairman, that was the question I was going to ask.

The brief submitted by the Maritime Provinces Board of Trade is very succinct and to the point but I am rather amazed that they made this forthright statement that unless there is economic access to the central Canadian market all other attempts to stimulate the Maritime economy may well fail.

I came down here in the full belief that we would hear ardent submissions about the extension of free trade on an industry-by-industry basis or by lower tariffs but this submission suggests that the main hope is a lowering of tranportation costs.

I am very interested, however, in your views on freer trade.

Mr. Isner: Mr. Chairman, this matter of transportation costs seems almost to be an obsession with our membership. It seems to be the key to a great many things that happen down here.

Mr. Perrault: But would not the cost to the Canadian taxpayer be infinitely less if, instead of indirectly subsidizing transportation costs, you had access to your natural market along the east coast of the United States, at least to a greater extent? This does not mean absolute free trade, but freer trade in certain areas.

[*Interpretation*]

M. Nesbitt: Est-ce que vous avez une opinion personnelle?

M. Isner: Monsieur, je n'ai pas vraiment étudié la question. Je ne saurais le dire. On a fait une étude sur la protection tarifaire et près d'ici il y a le village de St. Stephen, au Nouveau-Brunswick et cinquante verges plus loin, outre frontière, il y a Calais, Maine. A St. Stephen, une chevrolet coûte $3,260 et à Calais, $2,670.

M. Nesbitt: Donc, il pourrait y avoir un intérêt considérable pour pareils produits.

M. Isner: Certainement. On a calculé, par exemple, que les Maritimes dépensent deux à trois cents millions de dollars de plus simplement pour l'achat de voitures, durant une année. Si on pouvait dépenser le revenu de nos industries dans les états de la Nouvelle-Angleterre, cela automatiquement augmenterait notre niveau de vie dans une proportion de 25 p. 100.

M. Nesbitt: Merci.

Le président: Monsieur Perrault?

M. Perrault: C'est là la question que je voulais poser.

Je pense que le mémoire présenté par la Chambre de commerce des Maritimes est très au point et très résumé. Mais je suis étonné de voir qu'ils fassent la déclaration suivante, qu'à moins d'une accessibilité aux marchés du Canada central, toutes autres tentatives de stimuler l'économie des Maritimes peuvent échouer.

Je suis venu ici dans l'espoir que nous entendrions des présentations passionnées quant au libre échange sur une base d'industrie ou de tarifs moins élevés, mais cette présentation propose que le principal espoir est une baisse des frais de transport.

Je suis vraiment intéressé de savoir ce que vous pensez sur un libre échange.

M. Isner: Monsieur le président, la question des coûts de transport semble être une obsession de la part de nos membres. Cela semble être la clé de bien des choses qui se produisent ici.

M. Perrault: Est-ce que le coût pour le contribuable canadien ne serait pas moins élevé, si, au lieu de subventionner indirectement les frais de transports, vous aviez accès à vos marchés naturels, le long du littoral est des États-Unis, ou du moins dans une plus grande mesure? Cela ne veut pas dire le libre échange absolu, mais des échanges plus libres dans certains secteurs.

[*Texte*]

Mr. Isner: I cannot speak for the Board on that but as an individual I would say so, yes.

Perhaps one of the reasons for the various members of our Board not having come up with this sort of thing is that they rather felt that this was an area much more difficult of correction than is the transportation situation. In other words, it seemed more logical. We already had a Maritime Freight Rates Act; that it could be made an effective instrument under present economic conditions—it is not now, and has not been for some time—and that this might be the better way.

I am sure the organization would embrace with enthusiasm the opportunity of being able to trade more freely with the New England States, which is our natural market.

Mr. Perrault: Mr. Chairman, time is getting on and I do not want to labour this but I am from the West and we know that even if we had absolute equality on the matter of freight rates with Eastern Canada, which we do not have at the present time, we would still labour under a competitive disadvantage because their market is far more populous and is close at hand. We still have a smaller market and we do not achieve the economy of scale in manufacture. One of the greatest hopes for the West Coast is the West Coast of the United States. It seems to me that there should be a considerable degree of effort to try to develop this concept. Perhaps we should be co-operating to a greater extent.

Mr. Isner: There can be no denying the validity of that argument.

Mr. Nowlan: My question is really supplemental to Mr. Perrault's because of the way his questioning developed. You have stated in the conclusion of the brief "and first in the history that the maritimer believes that access to the central Canadian market is every bit as much of a right as the right of Quebec for bilingual rights across the country."

Because certain groups in Quebec are looking elsewhere this is not the very real time for the Atlantic area to look elsewhere for trade and we would have an "Atlantic libre" instead of a "Quebec libre" as far as economic trade is concerned? Do you mean exactly what you say in the conclusion, that you believe it is every bit as much of a right of the Atlantic area man to have access to the Central Canadian market as it is for the

[*Interprétation*]

M. Isner: Je ne peux parler au nom de la Chambre, mais je peux vous dire «oui», à titre personnel. Une des raisons, peut-être, pour laquelle les différents membres de notre Chambre de commerce n'ont pas fait cette proposition, c'est qu'ils sont d'avis que c'était peut-être là une possibilité à laquelle il est plus difficile d'apporter une rectification qu'au problème du transport. Autrement dit, cela semble être plus logique. Nous avions déjà une Loi sur les taux de transport des marchandises dans les Maritimes; qu'elle ait pu être un instrument efficace suivant le contexte économique actuel, elle ne l'est plus maintenant, et ne l'a pas été depuis un certain temps, et que cela était peut-être la meilleure façon.

Je suis sûr que notre organisation saisirait volontiers l'occasion de pouvoir commercer plus librement avec les états de la Nouvelle-Angleterre, notre marché naturel.

M. Perrault: Monsieur le président, l'heure avance et je ne veux pas insister là-dessus, mais je viens de l'Ouest et nous savons, même si nous avions égalité pour ce qui est des tarifs-marchandises avec l'est du Canada, ce que nous n'avons pas en ce moment, que toujours nous devrions faire face à un désavantage sur le plan de la concurrence, parce que leurs débouchés ont une densité démographique beaucoup plus élevée et plus près. Notre marché est beaucoup moins grand et nous n'avons pas une production sur une aussi vaste échelle. Donc, pour l'Ouest, notre principal objectif, c'est le littoral ouest des États-Unis. Il me semble donc qu'on devrait essayer d'élaborer plus ce concept et, peut-être, on devrait s'entendre pour collaborer.

M. Isner: Oui, et c'est juste.

M. Nowlan: J'aurais une question complémentaire à celle posée par M. Perrault, du moins à la façon qu'il a posé ses questions. Vous avez dit, dans la conclusion de votre mémoire, que l'accès aux marchés au centre du Canada se trouve à être un droit aussi valable que les droits linguistiques pour le Québec.

Et je me demande alors si le Québec et d'autres groupes cherchent ailleurs. Est-ce que ce ne serait pas le bon moment pour les Maritimes de chercher ailleurs, en ce qui concerne leur commerce, et que nous ayons une Atlantique libre au lieu d'un Québec libre en ce qui concerne le commerce économique? Je voulais tout simplement demander, monsieur le président, est-ce que vous êtes sérieux, lorsque vous dites, dans votre

[*Text*]

main in Quebec to find access to bilingual institutions across the land?

Mr. Isner: Mr. Chairman, we think that it is implicit in Section 145 of the British North America Act that this is the case.

Mr. Trudel: I do not deny, Mr. Chairman, anything that has been advanced so far but I think that we are getting away from the problem. The problem seems to be that we have a lack secondary industry. Whether we are dealing north and south or east and west, I think we will have to correct that before we do anyghing else.

Mr. Isner: This is the basis of our brief.

The Chairman: Any more questions, gentlemen?

Mr. Rock: We have no information here as to the type of primary industry and secondary industry you have in the Atlantic provinces. When we were speaking to the witnesses from the T. Eaton Company Limited who are purchasing most of their products from, say, Ontario and Quebec, someone asked why they did not purchase their stoves and refrigerators here. All you have to do is put "Eatonia" on them or something and that is it. They said that they do sell stoves manufactured here but they are wood and coal stoves. This puts me in the position of trying to comprehend what has happened in these Atlantic provinces. Do they manufacture a lot of small goods here in the secondary industry that could be sold to this area, or do they not? I am not sure.

The Chairman: I think we are getting away from the subject of transport.

Mr. Rock: No, not necessarily. I am talking about transportation of raw materials for these secondary industries. Do they exist in this area?

Mr. Isner: Mr. Chairman, I can answer that. Generally, first of all, the stoves that are made here are every bit as high in quality and complete in line as those made elsewhere in Canada, but unfortunately we do not have a large secondary industry. You cannot buy the things you might want simply because the industry does not exist.

[*Interpretation*]

conclusion, que vous croyez que c'est d'autant le droit des Maritimes d'avoir un accès aux marchés du centre du Canada que pour le Québécois de trouver des institutions bilingues à travers le pays?

M. Isner: Nous croyons que cela est implicite dans l'article 145 de la Loi de l'Amérique du Nord britannique. Tel est le cas.

M. Trudel: Je ne nie pas, monsieur le président, ce qu'on a avancé jusque-là, mais je crois que nous nous éloignons du problème. Le problème semble être le manque d'industries secondaires. Que nous fassions des affaires du nord au sud ou de l'est à l'ouest, je crois qu'il faudrait corriger cette situation avant de faire autre chose.

M. Isner: Voilà la raison d'être de notre mémoire.

Le président: Y a-t-il d'autres questions à poser, messieurs?

M. Rock: Nous n'avons aucun renseignement ici quant aux genres d'industries primaires et d'industries secondaires que vous avez dans les provinces de l'Atlantique. Quand nous avons parlé aux témoins de la *T. Eaton Company Limited* qui achètent la plus grande partie de leurs produits, mettons, de l'Ontario et du Québec, quelqu'un leur a posé une question quant à savoir pourquoi ils n'achetaient pas leurs cuisinières et leurs frigidaires ici. Ils auraient tout simplement à mettre l'étiquette «Eatonia» et c'est tout. Ils nous ont répondu qu'ils vendaient des cuisinières fabriquées ici, mais qu'elles étaient à bois et à charbon. Ce qui me rend très difficile la tâche de comprendre ce qui se passe dans les provinces de l'Atlantique. Est-ce qu'ils fabriquent beaucoup de produits ici dans l'industrie secondaire, des petits produits qui pourraient être vendus dans la région même, ou est-ce qu'ils ne le font pas? Je ne suis pas du tout sûr.

Le président: Nous nous éloignons un peu du sujet des transports, je crois.

M. Rock: Non, pas nécessairement. Je parle du transport de matières brutes pour l'industrie secondaire. Est-ce que cela existe dans cette région?

M. Isner: Monsieur le président, je peux répondre à cette question. Tout d'abord, les cuisinières qui sont faites ici sont d'aussi bonne qualité que celles qui sont fabriquées ailleurs au Canada. Malheureusement, nous n'avons pas une industrie secondaire. Vous ne pouvez pas toujours acheter ce que vous voulez, tout simplement parce que l'industrie n'existe pas.

[*Texte*]

For example, while we have a very substantial fruit canning industry and the maritimers have been known to make beer down here, we did not have a can manufacturing plant until a couple of years ago. One of the can manufacturing plants that was here found it necessary, in order to have an economic, viable operation to sell a portion of its production in the Quebec market. It just was not possible even in that case to have enough here. So, we lack the secondary industry. Therefore, the advantages that might be derived in a backhand way from the increase in freight rates cannot be taken advantage of because we do not manufacture the things.

Mr. Rose: I would like to ask the witness, Mr. Chairman, if it is not true that the average industrial and commercial wages are a good deal lower here than they are in Central Canada. Is that true, sir?

Mr. Isner: This is correct.

Mr. Rose: How much lower?

Mr. Isner: This is difficult to answer but in a general way I would say it is about the same as the difference in the regional disparity—some 30 per cent.

Mr. Rose: Tell me, sir, is this not in itself to some extent an economic advantage in competing with Central Canada?

Mr. Isner: It would be if it were not for the cost of transportation.

Mr. Rose: You do not feel that one makes up for the other? Not that I would like to see it perpetuated; I think there must be other and better ways.

Mr. Isner: No, I think it is a little difficult to be specific in this instance, but in a general way this at the moment is no advantage to us. If we could get economic access to the Central Canadian market, let us say, ad absurdum, on a postage stamp basis, using the postage system of delivery as a case in point, where delivery costs are the same everywhere, then the wage rate of the maritimes would offer an economic advantage to production costs. However, this would soon be offset because if we had viable secondary industry it is obvious that wages would rise, and rise faster, perhaps, than they would elsewhere. So, we would reach a balanced situation.

Mr. Rose: Of course, too, sir, if you had higher wages and a higher employment level you would probably have a much larger internal market as well.

[*Interprétation*]

Par exemple, bien que nous ayons des conserveries de fruits très considérables et que dans les maritimes aussi on fabrique la bière, nous n'avions pas de fabrique de cannettes jusqu'à il y a deux ans. Une des fabriques de cannettes établie ici, afin d'avoir une exploitation viable, a trouvé nécessaire de vendre une partie de sa production au marché du Québec. Ce n'était tout simplement pas possible de le faire autrement. Par conséquent, il nous manque une industrie secondaire. Les avantages que nous pourrions peut-être retirer du taux de tarif-marchandises, mais ils ne nous sont pas accessibles parce que nous ne fabriquons pas ces marchandises.

M. Rose: Est-ce que je pourrais demander au témoin, monsieur le président, si c'est vrai que la moyenne de vos salaires industriels et commerciaux est beaucoup plus basse que dans le centre du Canada? N'est-ce pas vrai?

M. Isner: C'est exact.

M. Rose: A quel point?

M. Isner: C'est un peu difficile à dire, mais de façon générale je dirais que c'est à peu près la même chose que la disparité régionale environ 30 p. 100.

M. Rose: N'est-ce pas là, dans une certaine mesure, un avantage économique pour la concurrence avec le centre du Canada?

M. Isner: Ce le serait si ce n'était pas des frais de transport.

M. Rose: L'un ne compense pas pour l'autre? Non pas que je voudrais la voir se perpétuer, je crois qu'il doit y avoir d'autres et meilleurs moyens.

M. Isner: Non, je crois qu'il est un peu difficile d'être précis à cet égard mais, de façon générale, je pourrais dire que ce n'est pas un avantage pour nous à l'heure actuelle. Si nous pouvions avoir un accès économique aux marchés du centre du Canada, disons sur la base postale, par exemple, en nous servant des Postes pour la livraison, c'est un exemple, le coût est le même pour les livraisons partout. Alors, le taux des salaires dans les Maritimes offrirait un avantage économique dans les frais de production, mais cela serait compensé immédiatement car, si nous avions des industries secondaires viables, les salaires seraient élevés et nous en arriverions à un équilibre, n'est-ce pas?

M. Rose: Et, alors, si les salaires étaient plus élevés et le niveau d'emplois était plus élevé aussi, vous auriez aussi un débouché plus élevé?

[*Text*]

Mr. Isner: Exactly. Then the snowball would work. We would not run over the bare ground; we would keep on building our markets. We export our young people because there are no jobs for them here. The Maritime Provinces Board of Trade believes if we could get a secondary industry going, then we would provide more jobs and people would stay here and the market would grow, and grow, and grow, until it became self-sufficient. This may be highly oversimplified but...

Mr. Rose: I was going to suggest that that is perhaps true, that it was highly oversimplified, but I think you had to do that to make the point. There are some other things that need to be done as well, you would suggest?

Mr. Isner: Right.

Mr. Rose: And the whole of the problem does not rest upon freight rates, even though it may be a primary cause: would you agree with that?

Mr. Isner: I would agree with you but freight rates and transportation costs are very much a primary factor here.

Mr. Rose: Thank you.

The Chairman: We want to thank you, Mr. Isner, for presenting your brief.

Our next brief will be the Maritime Transportation Commission. On my right is Mr. Crosby; second is Mr. Dickson, then Mr. Armitage and Mr. Cormier. You will find the brief of the Maritime Transportation Commission on page 766 of the Minutes of Proceedings and Evidence, Issue No. 15 of the Standing Committee on Transport and Communications.

Mr. J. M. Crosby (Chairman, Maritime Transportation Commission): This is a brief submitted by the Maritime Transportation Commission which is an agency representing both the governments of the Atlantic Provinces and business and industry in the Atlantic Provinces. The brief, in essence, covers the problems, as we see it, of the whole area without being specific. There are certain policy recommendations in the brief. If you would bear with us we would like to present the summary, which may be fairly lengthy because our original brief was quite lengthy. We feel that the recommendations that we make will be informative to the Committee and useful. Possibly I could start to deliver the brief now and if you find it too cumber-

[*Interpretation*]

M. Isner: Oui. Cela ferait boule de neige. Nous ne serions pas toujours à sec; nous agrandirions nos marchés. Nous exportons nos jeunes, parce qu'il n'y a pas d'emploi ici. La Chambre de commerce des Maritimes croit que s'il y avait des industries secondaires ici, nous pourrions alors fournir plus d'emplois et les gens resteraient ici et le marché augmenterait et s'accroîtrait jusqu'à ce qu'il devienne indépendant. Mais c'est peut-être trop simplifier, mais...

M. Rose: J'allais justement dire que c'était peut-être un peu trop simplifier, mais je crois qu'il vous a fallu le faire pour faire la preuve. Et il y a d'autres choses qui doivent être faites aussi en même temps.

M. Isner: C'est exact.

M. Rose: Mais tout le problème ne réside pas justement dans les tarifs-marchandises, même si c'est là une des préoccupations principales: d'accord?

M. Isner: C'est exact, mais les taux de transport-marchandises et les frais de transport sont des éléments importants.

M. Rose: Merci.

Le président: Nous voulons vous remercier, monsieur Isner, de votre présentation.

Le prochain mémoire nous vient de la Commission des transports des Maritimes. A ma droite, M. Crosby; le deuxième, M. Dickson; ensuite M. Armitage et M. Cormier. Vous trouverez le mémoire de la Commission des transports des Maritimes à la page 766 des procès-verbaux et témoignages, fascicule 15, du Comité permanent des Transports et des Communications.

M. J. M. Crosby (président, Commission des transports des Maritimes): Il s'agit du mémoire présenté par la Commission des transports des Maritimes, une agence qui représente les gouvernements des provinces de l'Atlantique, ainsi que le commerce et l'industrie dans ces mêmes provinces. Par conséquent, le mémoire couvre les problèmes que nous entrevoyons pour la région entière, sans être trop précis. Il y a certaines recommandations, des politiques que nous formulons dans le mémoire. Si vous voulez avoir un peu de patience, nous le résumerons, mais ce sera peut-être assez long, étant donné que notre mémoire original était plutôt long. Nous croyons que les recommandations que nous formulons seront très utiles au Comité. Si je

[*Texte*]

some, you can stop me and we can get on with the questions.

The Chairman: Agreed?

Some hon. Members: Agreed.

Mr. Crosby: Throughout our brief we use the terms "national transportation policy" and "national or public policy". As you may recall, the MacPherson Commission on Transportation drew a clear distinction between national transportation policy and national or public policy using transportation to achieve certain objectives. For example, the Royal Commission said on page 3 of Volume II, and I quote:

> "Our position, however, is that a clear distinction has to be drawn between the objectives of a National Policy which uses transportation to achieve certain ends, and the objective of the National Transportation Policy—which we deem to be efficiency and economy in the transportation system.

While the MacPherson Report did not spell out clearly a definite national transportation policy, it did say that national transportation policy was concerned with the effectiveness of transport itself. As we understand the term,

> "the national transportation policy calls for the operation of a transportation system along straight businesslike lines largely under the control of the free operation of the inter-modal competitive forces."

Any policy or provision of the Act, then, that restricts the free operation of the system, requires the carriers to perform certain duties or responsibilities which otherwise would not be performed, is considered national or public policy. To illustrate, the new national transportation policy has freed the railways from most regulations yet the National Transportation Act requires the railways to carry export grain at a fixed level of rates. It also requires the maintenance of certain branch lines in Western Canada until at least 1975. These are national or public policies using transportation to achieve certain objectives.

The task of your Committee, as we see it, is to propose changes in existing national policies or propose new national policies affecting the Atlantic Provinces to recognize

[*Interprétation*]

commence le résumé à l'heure actuelle et si vous trouvez que c'est trop lourd, vous pourrez peut-être m'arrêter et nous passerons alors aux questions.

Le président: D'accord?

Des voix: D'accord.

M. Crosby: Partout dans notre mémoire, nous employons l'expression «politique nationale en matière de transport» et «politique nationale ou publique». Si vous vous souvenez bien, la Commission royale d'enquête McPherson sur les transports a fait une distinction entre la politique nationale en matière de transport et une politique nationale ou publique utilisant les transports pour atteindre certaines fins. Par exemple, la Commission royale d'enquête a dit à la page 5, du volume 2, et je cite:

> Notre position, toutefois, c'est qu'il faut établir une distinction très claire entre les objections d'une politique nationale, qui emploie les transports pour atteindre une fin précise, et l'objectif d'une politique nationale que nous croyons être efficace et économique dans un réseau de transport.

Bien que le rapport McPherson n'ait pas donné de façon très précise une politique nationale en matière de transport, elle a dit toutefois que:

> «la politique nationale en matière de transport exige un réseau de transport selon le commerce ou les affaires, contrôlées en majeure partie par les forces concurrentielles indépendantes».

Toute disposition de la Loi dans ce cas-là, qui limite cette opération et qui exige que les transporteurs fassent certaines choses qui ne seraient pas faites autrement, est considérée comme étant une politique publique ou nationale. Pour illustrer, la nouvelle politique nationale a libéré les chemins de fer de la plupart des règlements. Mais la Loi nationale sur les transports exige que les chemins de fer transportent le blé, le blé de l'exportation, à des taux fixes. Elle exige aussi le maintien des embranchements dans l'Ouest du Canada au moins jusqu'en 1975. Il s'agit là de politiques nationales ou publiques qui visent certains objectifs.

La tâche de votre Comité, telle que nous l'entrevoyons, c'est de proposer des changements dans la politique nationale existante ou de proposer des nouvelles politiques con-

[*Text*]

the peculiar historic, geographic and economic situation of the region.

On pages 766 and pages 767 of our brief we comment on your terms of reference. It was understood that your terms of reference today are to consider the transportation problems of the Atlantic Provinces, which could be interpreted as restricting the area of your inquiry but as much broader than the original terms, and we accept this.

On page 767 we comment the Economist Intelligence Unit study and I will not take time to repeat our comments verbally today.

On pages 767 and 768 we comment on the creation of the Atlantic Provinces Task Force on Transportation following the invitation of the Hon. Paul Hellyer to the Premiers of the Atlantic Provinces. The Hon. Mr. Higgins referred to this this morning. Mr. Dickson is on that Task Force as well. When the Task Force is completed I understand that it will be placed before the Minister of Transport by the Atlantic Premiers or their representatives.

On pages 768 and 771 of our brief we outline some of the background of the Maritime Freight Rates Act and its application in today's situation.

> "The Maritime Freight Rates Act...is a cornerstone of national policy respecting the transportation for Atlantic Canada. The intent and the objective of the Act and the obligation accepted by the Federal government is as sacred to the Atlantic Provinces as are the Crows Nest Pass rates to Western Canada,"

or as important to the region as the Seaway tolls and the tariff protection which was referred to earlier. I think the point in mentioning the tariff protection was only that if was something we were not able to take advantage of and, therefore, we felt that we were in turn entitled to benefits on our transportation, or to subsidy or protection on our transportation.

In our brief we said that the mechanics of the Act had been unable in the competitive situation of today to maintain the intent of the Act. The failure of the mechanics of the Act to maintain its intent does not imply that the intent of the Act is no longer valid. On the contrary, it is submitted that the primary objective of your Committee is to reiterate and reaffirm the objective of the Maritime Freight Rates Act, namely, to provide and maintain a statutory advantage in rates for

[*Interpretation*]

cernant les provinces atlantiques pour tenir compte de la situation et des divertés régionales, économiques, etc.

Aux pages 766 et 767 de notre mémoire, nous parlons justement de votre mandat. Nous avions compris que votre mandat aujourd'hui était d'étudier les problèmes de transport dans les provinces de l'Atlantique, ce que nous aurions pu interpréter comme limitant le domaine de votre enquête, et nous l'acceptons.

A la page 767, nous commentons justement sur l'étude faite par l'*Economist Intelligence Unit,* et je n'élaborerai pas plus aujourd'hui.

Aux pages 767 et 768, nous commentons sur le groupe spécial des provinces atlantiques chargé d'étudier la question des transports de M. Hellyer, et l'honorable M. Higgins en a parlé ce matin. M. Dickson fait partie de ce groupe d'étude également. Lorsque le groupe de travail aura terminé son travail, j'ai l'impression que le rapport sera présenté au ministre des provinces de l'Atlantique ou leurs représentants.

Aux pages 768 jusqu'à 771, nous donnons l'historique de la Loi sur les taux de transport des marchandises dans les provinces Maritimes, ainsi que son application dans la situation actuelle.

> «La Loi sur les taux de transport des marchandises dans les provinces Maritimes est la pierre angulaire d'une politique nationale à l'égard des transports pour le Canada atlantique. L'objectif de la Loi et l'obligation acceptée par le gouvernement fédéral sont aussi sacrés pour les provinces de l'Atlantique que le sont les taux du Nid-de-Corbeau pour l'Ouest du Canada,»

et tous aussi importants pour la région que ne le sont les péages de la Voie maritime et les tarifs protectionnistes pour l'industrie du Canada central. Nous n'avons pas pu profiter justement de cela, et nous avions droit à certains avantages pour les transports, ou des subventions ou une protection quelconque pour nos transports.

Dans notre mémoire, nous avons dit que la Loi s'est montrée incapable dans les situations concurrentielles d'aujourd'hui de maintenir l'intention de la Loi. Cela n'indique pas que l'objet de la Loi n'est plus valide. Au contraire, nous estimons que l'objectif principal de votre Comité c'est de réaffermir et de réitérer l'objectif de la Loi sur les taux de transport de marchandises dans les provinces Maritimes, soit de maintenir un tarif-marchandises dans un territoire choisi à l'égard

[*Texte*]

shippers in "select territory" relative to shippers elsewhere in Canada. The Economist Intelligence Unit Report stated it as follows:

> The objective of the Act was the fulfilment of the obligation, dating back to Confederation, "to afford to Maritime merchants, traders and manufacturers the larger market of the whole Canadian people instead of the restricted market of the Maritimes themselves." The means by which this objective was to be achieved was by the creation and maintenance of a statutory rate advantage to shippers in an area designated as "select territory" on certain movements defined as "preferred movements"...
>
> 31. It is the submission of this Commission that Parliament intended by the Maritime Freight Rates Act that the Atlantic Provinces' overall effective rate level and specific rates would not again be subject to greater increases than elsewhere in Canada.

I think this point was brought out earlier this morning in some of the briefs you heard.

> 32. Any revision to the Maritime Freight Rates Act must, at least, encompass the principle that the Atlantic Provinces will have a statutory rate advantage in relation to the rest of Canada. This statutory rate advantage is not merely the percentage reduction recommended by the Duncan Commission (in 1927). A second principle which any revision must encompass is the payment of transportation assistance to all carriers or to shippers to remove the discriminatory features of the present Act where the assistance is paid only on rail traffic. This would encourage increased competition thereby contributing to bringing about a lower rate level.

As you will see from our full brief and the few paragraphs I have read, the provisions MFRA have been unable to safeguard the position of the Atlantic Provinces which Parliament intended it should and that our position is that transportation assistance under the Act, or in any revision of the Act, should be available for goods shipped by carriers other than the railway.

On page 772 we express concern that a full implementation of the national transportation policy will have an adverse effect on the region unless appropriate revisions in the Maritime Freight Rates Act are made prior

[*Interprétation*]

d'autres expéditeurs du Canada. Le rapport de l'*Economist Intelligence Unit* disait ainsi que:

> L'objet de la Loi remontait jusqu'à la Confédération et était de donner aux Maritimes une plus grande part du marché du Canada, plutôt que de le restreindre aux Maritimes elles-mêmes. Tout d'abord, le moyen d'atteindre cet objectif, c'était en créant et en maintenant un avantage statutaire pour les expéditeurs de la région désignée comme «territoire choisi» pour certaines expéditions qualifiées de «mouvements privilégiés»...
>
> 31. La présente Commission croit que, par la Loi sur les tarifs marchandises des Maritimes, le Parlement voulait empêcher l'ensemble des taux effectifs et les taux particuliers des provinces de l'Atlantique d'augmenter encore davantage qu'ailleurs au Canada,

Et je crois que ce point a été révélé ce matin, dans certains mémoires que vous avez entendus.

> 32. Toute revison de la Loi sur les tarifs marchandises dans les Maritimes doit, au moins, reconnaître le principe d'un avantage statutaire pour les provinces de l'Atlantique par rapport au reste du Canada. L'avantage tarifaire statutaire n'est pas simplement la réduction procentuelle que recommande la Commission Duncan. (en 1927). La revision doit aussi comprendre un deuxième principe, soit celui de l'aide au transport versée à tous les transporteurs et expéditeurs, pour éliminer les aspects discriminatoires de la loi actuelle selon laquelle l'aide n'est donnée qu'au trafic ferroviaire. Ainsi la concurrence augmenterait, contribuant par conséquent à l'établissement d'un niveau inférieur des taux.

Comme vous le verrez, les quelques paragraphes que je viens de lire, les dispositions de la présente Loi n'ont su empêcher la situation des provinces de l'Atlantique et, par conséquent, l'assistance en vertu de la Loi ou de toute revision de la Loi devrait être mise à la disposition des expéditeurs et de tout autre moyen de transport, sauf les chemins de fer.

A la page 772, nous disons que, si on mettait en vigueur une politique nationale en matière de transport, cela aurait des effets contraires, à moins de faire les revisions appropriées dans la Loi sur les taux de trans-

[*Text*]

to the full implementation of a National Transportation Act.

In our brief we quote from EIU studies as follows:

> "Finally, when the national freight rates policy was declared in 1951, the Atlantic Provinces were exempted from the national policy. This was the equalisation of freight rates policy which was effected on class rates in 1955. As a result of equalisation, the position of the Atlantic Provinces vis-a-vis the rest of Canada with regard to class rates improved. By excluding the Atlantic Provinces from equalisation, the government effectively prevented the considerable rise in freight rates which would have resulted in the region.
>
> Thus it can be argued that the Atlantic Provinces have never been included in national transport policy and have always been accorded special treatment and concessions aimed at reducing the effect of their isolation from the major Canadian markets. There can be little doubt that, in the past, this has been true and that railway rates to and from the Atlantic Provinces have not reflected the distance of the long haul involved.
>
> Under the policy proposed in the National Transportation Bill it is quite possible that this situation will change. The Transport Policy embodied in the Bill lays stress upon the use of the forces of competition as the means for effecting the optimum allocation of transport resources. Under increasing competition, the price of transport services should increasingly reflect the cost of providing those services. Under these conditions, the cost of the long haul to and from the Atlantic Provinces should be reflected in the rate structure; *this is reversal of previous government policy which has been aimed at reducing the effect of distance in Atlantic rates.* If the rate structure gradually evolves so that it does reflect the cost of the long haul to central Canada the implications are clearly that the general level of rates in the Atlantic Provinces will rise, that the Maritime Freight Rates Act will become even more impotent in maintaining a rate advantage for the Maritime shipper, and that increased revenues under the present subsidy system will result in an increased subsidy to the railways."

[*Interpretation*]

port des marchandises dans les provinces maritimes avant la mise en vigueur d'une loi nationale en matière de transport.

Dans notre mémoire nous citons l'étude aussi de l'EIU tel qu'il suit:

> Enfin, quand la politique nationale relative aux tarifs-marchandises a été établie en 1951, les provinces de l'Atlantique ont été exclues de la politique nationale. Ce fut la péréquation de la politique des tarifs-marchandises appliquée aux taux des classes en 1955. Comme résultat de l'égalisation, la position des provinces ce l'Atlantique vis-à-vis le reste du Canada s'est améliorée à l'égard des taux des classes. En excluant les provinces de l'Atlantique de la péréquation, le gouvernement a effectivement empêché la hausse considérable des tarifs-marchandises qui aurait suivi dans la région.
>
> Ainsi, on peut soutenir que les provinces de l'Atlantique n'ont jamais fait partie de la politique nationale des transports et ont toujours joui d'un traitement spécial et de concessions visant à réduire l'effet de leur isolement des grands marchés canadiens. Il ne fait pas de doute que ce fut vrai dans le passé et que les tarifs ferroviaires n'ont jamais reflété la distance sur laquelle le transport s'effectue.
>
> En vertu de la politique que propose le bill des transports nationaux, la situation peut changer. La politique relative aux transports comprise dans le bill met l'accent sur le recours aux forces de la concurrence comme moyen de tirer le meilleur parti des ressources des transports. Sous une concurrence croissante, le prix des services de transport devrait de plus en plus refléter le coût d'exploitation de ces services. Sous ces conditions, le coût du long trajet à destination ou en provenance des Maritimes devrait refléter la structure tarifaire; c'est le renversement de la politique gouvernementale antérieure qui visait à réduire l'effet de la distance sur les tarifs des Maritimes. Si la structure tarifaire évolue progressivement jusqu'à refléter le coût du long parcours jusqu'au Canada central, les effets sont clairement que le niveau général des taux augmentera dans les provinces Maritimes, que la loi sur les taux de transport des marchandises dans les Maritimes deviendra encore plus impuissante à maintenir un avantage tarifaire pour l'expéditeur des Maritimes et que les revenus supérieurs en vertu du régime actuel de subventions produira

[*Texte*]

That was from Volume No. 5 of the Economist Intelligence Unit's report made in 1967.

We then go on to say this section confirms the concern of the Maritimes Transportation Commission over the reversal of Government policy and the implementation of national transportation policy in the Atlantic Provinces.

On pages 772 to 775 we highlight some of the rail transportation problems in Newfoundland. We express our concern that the Terms of Union between Newfoundland and Canada may be further abrogated when the National Transportation Act is implemented in that region unless appropriate machinery is established to protect Newfoundland's position under its terms of reference.

We draw your attention to the rate example on page 774 where the railways quote rates 28 per cent higher than on maritime mainland, because otherwise the rates would be non-compensatory to the railways. Yet the terms of union takes precedence over the railway act. The EIU expressed concern over this matter when it said, and I quote:

> "...under the Terms of Union and the Board of Transport Commissioners' decision in the Newfoundland Rates Case the railways must maintain the rates in Newfoundland at the same level as that in the Maritime Provinces. If this level is non-compensatory for Newfoundland there is a clear contradiction which must be resolved between the terms of Union and the proposed minimum rate regulations in the National Transportation Bill.
>
> If a compensatory rate level is to be introduced in Newfoundland it is clear that an appreciable increase in rates should be expected....To raise the level of rates in Newfoundland above that existing in the Maritimes would be contrary to the Terms of Union."

[*Interprétation*]

une subvention accrue aux chemins de fer.

Ce qu'on trouvait dans le Volume V du rapport de *l'Economist Intelligence Unit* de 1967.

Nous continuons en disant que cette partie confirme l'inquiétude de la Commission des transports des Maritimes quant au renversement de la politique gouvernementale et à la pleine application de la politique nationale des transports dans les provinces de l'Atlantique. Aux pages 772 à 775, nous soulignons certains des problèmes du transport ferroviaire de Terre-Neuve. Nous exprimons notre inquiétude au sujet du fait que les termes d'union entre Terre-Neuve et le Canada pourraient être abrogés lorsque la Loi nationale en matière de transport sera mise en vigueur dans la région, à moins qu'un mécanisme approprié soit établi pour protéger la situation de Terre-Neuve en vertu de ces mandats.

Nous attirons votre attention à l'exemple des taux à la page 774 où les chemins de fer fixent des taux 28 p. 100 plus élevés que sur la terre ferme des Maritimes, parce que autrement les taux seraient non compensatoires pour les chemins de fer. Cependant les Clauses de l'Union prennent préséance sur la Loi sur les chemins de fer. L'EIU a exprimé son inquiétude à ce sujet en disant:

> ...en vertu des Clauses de l'Union et de la décision rendue par la Commission des transports du Canada dans la cause du tarif de Terre-Neuve, les chemins de fer doivent maintenir les taux de Terre-Neuve au même niveau que ceux des Maritimes. Si ce niveau n'est pas compensatoire pour Terre-Neuve, il y a une nette contradiction qui doit être résolue entre les Clauses de l'Union et les règlements sur les taux minimums proposés par le bill national sur les transports.
>
> Si un niveau compensatoire des taux doit être établi à Terre-Neuve, il est clair qu'il faut s'attendre à une augmentation sensible des taux. Terre-Neuve est une des régions du Canada où les chemins de fer exercent encore un certain monopole, et il serait probablement assez facile d'y imposer une hausse générale des taux. Mais l'économie de l'île repose sur l'industrie primaire, dont le coût des transports occupe beaucoup plus d'importance que chez l'industrie secondaire de fabrication. D'où un réel danger que toute augmentation appréciable des taux de transport des marchandises à Terre-Neuve puisse avoir des effets déplorables sur l'économie naissante de la province. Quoi qu'il en soit, hausser le niveau des

[*Text*]

We then state that it is obvious from the foregoing that without the establishment of the necessary machinery to give effect to Term 32 in the rate structure applying from, to and within Newfoundland the intended benefits of the Terms of Union will be further abrogated.

On page 775 of the proceedings we reiterate our submission to the Hon. Paul Hellyer regarding non-carload rate matters. We sought in that submission, firstly:

> "1. that the reduction in intra-Maritime rates referred to in the Minister's announcement of November 9, 1967, be implemented at once".
>
> 2. that the railways be required to withold their application to cancel the existing less than carload freight rates, at least until a new regional transportation policy is developed and implemented;
>
> 3. that the so-called density rule be reduced from one cubic foot equalling ten pounds to one cubic foot equalling five pounds; and
>
> 4. that immediate steps be taken to extend the Maritime Freight Rates Act subsidies to other forms of transport."

The railways have maintained their less than carload freight rates but no action has been taken by the government or the railways on the other three points which we made at that time.

On pages 776 and 777 of the proceedings we discuss the effectiveness of transportation on economic development. We submit that transportation does have a substantial effect on the economic development of the entire region.

On page 775 we draw your attention to the probable effects of the lifting of the freight rates freeze on the area. This freeze, as you know, is provided for by Section 335 of the railway act and will expire on March 23, 1969, unless action is taken to extend it beyond that date. When it expires carload freight rates presently frozen will increase by amounts ranging from 8 to 17 per cent and probably more in most cases. The freeze was established by the government when the

[*Interpretation*]

taux à Terre-Neuve au-dessus de celui des Maritimes serait contraire aux conditions de l'union.

Nous déclarons ensuite qu'il est évident d'après ce qui précède que si on n'établit pas le mécanisme nécessaire pour donner suite à l'article 32 dans la structure des taux s'appliquant au transport des marchandises en provenance ou à destination de Terre-Neuve ou à l'intérieur de la province même, les avantages envisagés dans les conditions de l'union seront diminués davantage.

A la page 775, des procès-verbaux, nous répétons ce que nous avons dit à M. Hellyer au sujet des taux visant les chargements incomplets. Dans cet entretien, nous avons d'abord demandé:

> «1. que la réduction des taux à l'intérieur des Maritimes dont il est question dans votre annonce du 9 novembre soit mise en vigueur immédiatement;
>
> 2. que les chemins de fer soient forcés de retarder leur demande en vue d'annuler les taux actuels de transport des marchandises en chargements incomplets, du moins jusqu'à ce qu'une nouvelle politique régionale des transports ait été élaborée et mise en œuvre;
>
> 3. que la densité exigée soit réduite d'un pied cube égalant 10 livres à un pied cube égalant cinq livres; et
>
> 4. que des mesures soient prises immédiatement pour étendre à d'autres moyens de transport les subventions versées aux termes de la loi sur les taux de transport des marchandises dans les provinces Maritimes.»

Les chemins de fer ont maintenu leurs taux, mais aucune action n'a été prise par le gouvernement sur les trois autres points que nous avions soulevés à ce moment-là.

A la page 776 et à la page 777 des procès-verbaux, nous discutons l'efficacité des transports vis-à-vis le développement économique. Et, nous soutenons justement qu'ils ont de fortes répercussions sur l'économie de la région entière.

A la page 775, nous attirons votre attention sur les effets probables de la suspension du gel des taux de transport des marchandises. Ce gel, comme vous le savez, est prévu par l'article 335 de la Loi sur les chemins de fer et expirera le 23 mars 1969, à moins qu'on prenne des mesures pour l'étendre ou le prolonger au-delà de cette date.

Lorsqu'il expirera, les taux visant les chargements incomplets présentement gelés augmenteront de 8 à 17 p. 100 et probablement

[*Texte*]

National Transportation Act was passed in order to safeguard the position of the region while suitable policies to improve our situation were being developed and made effective.

Due to a number of circumstances, one of which, I suppose, was your Committee's inability to visit the region last year, that policy has not yet been developed and more importantly, cannot now be implemented before the freeze expires. The situation is that justification for the freeze in the first place is just as valid today as it was when the freeze was established. If the Government of Canada should allow the freeze to expire without having effected offsetting transportation benefits for regional industry, then I fear that it will be open to the same wave of public criticism that rolled towards Ottawa and the railways when the non-carload rates were introduced on September 5, 1967.

We strongly urge that the necessary steps be taken to ensure that the freeze is maintained until the regional transportation policies are effected. I understand that representations are being made to the Minister of Transport by the Atlantic Premiers to see that this is done.

Finally, we note, and maybe we are being presumptious in making this comment, that originally Canadian National had indicated its intention to submit its views to your Committee at a hearing to be held in Ottawa after you had concluded your Atlantic Provinces our. We regret that the views of both major railways and all other public carriers serving the region are not available at the Regional hearings. Certainly it would seem that their views and the comments of those who appear before you on the railways' position will be most helpful to you in your study of the region's transportation problems. We would respectfully suggest that all parties who have appeared before you should receive a copy of any views the railways may file with your Committee and a copy of the Minutes of Proceedings and Evidence of presentation of the railways' views. Each party should then be given an opportunity to file any supplemental submission it wishes to make in the light of the further evidence submitted by the railways.

Thank you for bearing with me.

[*Interprétation*]

plus que cela dans la plupart des cas. Le gel a été établi par le gouvernement lorsqu'on a adopté la Loi nationale sur les transports, afin de sauvegarder la position de la situation de la région pendant qu'on élaborait des solutions pour aider notre région.

A cause d'un certain nombre de circonstances, dont l'une était, je suppose, l'incapacité de votre Comité de visiter la région l'an dernier, la politique n'a pas encore été élaborée et ne pourra être mise en vigueur certainement avant la date limite. La situation est que la justification du gel tout d'abord est aussi justifiable qu'elle l'était quand le gel a été établi. Si le gouvernement du Canada permet au gel d'expirer sans avoir pris des mesures pour donner des avantages compensatoires à l'industrie régionale, je crains que des critiques publiques vers Ottawa et les chemins de fer seront les mêmes que lorsqu'on a établi les taux visant les chargements incomplets le 5 septembre 1967.

Nous exhortons donc que les mesures nécessaires soient faites pour assurer que le gel soit maintenu jusqu'à ce que les politiques régionales de transport soient mises en œuvre.

J'ai cru comprendre que les premiers ministres des provinces de l'Atlantique font des représentations au ministre des Transport pour s'assurer que cela se fasse.

Enfin, nous présumons peut-être en faisant le commentaire, mais nous avons noté que, au tout début, le National-Canadien avait indiqué son intention de soumettre son opinion à votre Comité à Ottawa quand vous auriez terminé votre tournée des provinces de l'Atlantique. Nous regrettons que les opinions des deux principaux chemins de fer desservant la région ne sont pas disponibles lors des audiences régionales. Évidemment, leurs opinions et les commentaires de ceux qui y figurent devant vous sur les chemins de fer vous seraient très utiles dans votre étude des problèmes de transport de la région. Nous suggérons donc que toutes les parties qui ont comparu devant vous reçoivent une copie de toutes les opinions émises par les chemins de fer, ainsi qu'une copie des Procès-verbaux et témoignages de la présentation des vues des chemins de fer. Chaque partie devrait alors avoir l'occasion de vous présenter un mémoire supplémentaire à la lumière de la présentation des chemins de fer.

Je vous remercie beaucoup.

[*Text*]

Mr. Nowlan: Really, on a point of order at the moment, Mr. Chairman. This is a most important brief and a very authoritative group of men at the head of the table and I wonder if we are going to be finished with them by 6 o'clock. We have been here three and a half hours. This is the fifth brief this afternoon, and perhaps it would be fair to everybody if we were to break now and come back tonight. Tonight is not all that heavy.

The Chairman: Tonight we have six briefs to hear.

Mr. Nowlan: Yes, but some of them are not that heavy. I am only throwing it open for discussion. It is 5.30 now.

The Chairman: Does the Committee agree that we sit until 6 o'clock?

Some hon. Members: Agreed.

The Chairman: We will resume at 8 o'clock tonight. We will sit until 6 o'clock and then resume at 8 o'clock.

Mr. Nowlan: All right, Mr. Chairman. I wonder, Mr. Chairman, if the witness—I do not know if he referred to it generally in his opening remarks—could advise the present state of this LCL review? As I understand it, the Maritime Transportation Commission was pretty closely involved in some of the protest over the LCL rate and that there is a review of that position; and, secondly, and as a part of that question, just what has to be done to enforce the freeze? Is it a legislative ction on behalf of Parliament, or is it an Order in Council by the Cabinet or a ministerial directive that is necessary to extend the freeze.

Mr. Crosby: Mr. Chairman, I think Mr. Dickson would probably be in a better position to answer Mr. Nowlan's questions.

Mr. Craig S. Dickson (Executive Manager, Maritime Transportation Commission): I will answer the easier part first then, Mr. Chairman. As I understand it, it could be any one of the three alternatives you have mentioned, Mr. Nowlan. It could be an act of Parliament, it could be an Order in Council or it could be a ministerial directive. We do not care which it is as long as it is done.

The first part of your question was the status of the LCL rate matter. I think our opening statement pretty well covered that.

[*Interpretation*]

M. Nowlan: Je voudrais faire un rappel au Règlement, monsieur le président. C'est un mémoire des plus importants, qui fait autorité de la part des spécialistes ici présents et alors je me demande si nous pourrons terminer d'ici 18 heures? Nous sommes ici depuis trois heures et demie. C'est le 5ième mémoire cet après-midi et il serait juste pour tous de lever la séance maintenant et revenir ce soir. Ce soir nous n'en avons pas tant.

Le président: Nous avons 6 mémoires à entendre ce soir.

M. Nowlan: Oui; mais certains d'entre eux ne sont pas aussi longs et aussi substantiels. J'aborde la discussion. Il est maintenant 17h. 30.

Le président: Est-ce que vous conviendriez de siéger jusqu'à 6 heures?

Des voix: D'accord.

Le président: Nous reprendrons à 20 heures ce soir. Travaillons jusqu'à 18 heures et on reviendra à 20 heures.

M. Nowlan: Bon, monsieur le président. Je me demande, monsieur le président, si le témoin, je ne sais pas s'il en a parlé dans l'ensemble de sa première déclaration, mais est-ce qu'il pourrait dire ce qu'il en est des protestations et d'une revision des taux visant les chargements incomplets? Si je comprends bien, la Commission des transports des maritimes y a participé assez étroitement pour certaines de ces protestations faites à l'égard des taux visant les chargements incomplets et, si on revise cette position; et, deuxièmement, qu'est-ce qui doit être fait pour mettre en vigueur le gel? Est-ce une disposition d'ordre législatif de la part du Parlement ou en vertu d'un décret en conseil par le Cabinet, ou encore une directive ministérielle, afin de prolonger le gel?

M. Crosby: Monsieur le président, je pense que M. Dickson serait mieux en mesure de répondre à la question posée par M. Nowlan.

M. Craig S. Dickson (directeur exécutif de la Commission des transports maritimes): Je vais commencer par la première partie qui est la plus facile, monsieur le président. Si je comprends bien, ce pourrait être une des trois alternatives dont vous parlez, monsieur Nowlan. Ce pourrait être une loi du Parlement, un décret en conseil ou une directive ministérielle. Peu nous importe, ce qui compte c'est que ce soit fait.

Pour la première partie de votre question, c'était le statut des taux visant les chargements incomplets. Je pense que dans notre

[*Texte*]

Mr. Nowlan: That was a year ago.

Mr. Dickson: It said, in the submission we had made on behalf of the Atlantic Provinces to the Transport Minister in December of 1967, of the four points made, three of them were to be referred to the railways or the Canadian Transport Commission.

No action has been taken, to my knowledge, on these things. Apparently the CTC are reviewing these but that report, I understand, is not public. I think some of the members have asked for it in the House, Mr. Chairman. We here, in the Atlantic Provinces, have certainly had no indication of that review yielded.

Mr. Nowlan: I wonder if, supplementary to that, I could ask a question as to the action necessary to extend the freeze. Do the authorities in Ottawa, either the CTC or the Minister, agree that it is one of those three procedures or is there any definitive ruling from Ottawa as to what is necessary to extend the freeze, or are you in a position to say?

Mr. Dickson: Mr. Chairman, I do not really know, sir, but it seems to me there was an exchange between some members of this Committee and Mr. Pickersgill when he appeared before you about how this could be done. I am not sure he gave you a clear answer as to which one of the alternatives would be adopted.

Mr. Nowlan: This is why, Mr. Chairman, I was so glad to hear the very definite three alternatives confirmed by Mr. Dickson. I am wondering if that had been blessed by other people who may have to do it.

Mr. Allmand: Mr. Dickson, I am surprised that you say it can be done by some means other than by legislation. I thought the freeze was in effect through Section 335 of the Railway Act, which was amended by the National Transportation Act in 1967. Subsection 4 says that certain provisions of the Maritime Freight Rates Act will be continued until two years after coming into force and then it expires automatically, which would mean that it would require legislation. How do you get the other two possible means of action in order to put these things back into effect and freeze them?

[*Interprétation*]

première déclaration, nous avons inclus cet aspect.

M. Nowlan: Il y a un an.

M. Dickson: Nous avons dit que la présentation que nous avions faite au nom des provinces de l'Atlantique au ministre des Transports au mois de décembre 1967 et les quatre points soulevés alors, dont trois devaient être déférés aux chemins de fer et à la Commission des transports du Canada.

Aucune disposition n'a encore été prise, à ma connaissance, à cet égard. Apparemment, la CTC a fait une étude, mais ce rapport n'est pas encore rendu public. Je pense que certains des membres l'ont demandé à la Chambre, monsieur le président. Nous, dans les provinces de l'Atlantique, n'avons pas eu d'indice des résultats.

M. Nowlan: Je me demande si je pourrais poser une autre question relative aux dispositions à prendre pour prolonger l'imobilisation des taux. Est-ce que les autorités à Ottawa, soit la CCT ou le ministre ont convenu que ce serait une de ces trois méthodes ou encore est-ce qu'il y a des règles définitives qui ont été établies par Ottawa relativement à ce qu'il faut faire pour prolonger le gel? Êtes-vous en mesure de le dire?

M. Dickson: Monsieur le président, je ne sais pas vraiment, mais il me semble qu'il y a eu un échange entre certains membres de ce comité et monsieur Pickersgill, lorsqu'il a témoigné devant votre comité, sur la façon dont on pourrait y parvenir. Je ne suis pas sûr qu'il vous ait fourni une réponse claire quant à la solution qui serait adoptée.

M. Nowlan: C'est la raison pour laquelle, monsieur le président, j'étais si heureux de voir les trois solutions confirmées par monsieur Dickson. Je me demande si cela avait été approuvé par d'autres personnes qui doivent peut-être le faire.

M. Allmand: Je suis étonné de voir, monsieur Dickson, que cela peut se faire par d'autres moyens que par voie d'une mesure législative. Je croyais que le gel était en vigueur, en vertu de l'article 335 de la Loi sur les chemins de fer, loi qui fut modifiée par la Loi nationale sur les transports de 1967. Le paragraphe 4 stipule que certaines dispositions de la Loi sur les taux de transport des marchandises dans les provinces maritimes ne resteront en vigueur pendant les deux années qui suivront leur entrée en vigueur et cesseront d'être en vigueur à la fin de cette période, ce qui implique qu'il faudrait une mesure législative. Comment pou-

[*Text*]

Mr. Dickson: I am not a lawyer, Mr. Allmand, so perhaps I am out of my jurisdiction here, but I am going on past experience. The Freight Rates Reduction Act, which was an Act of Parliament, I think actually expired in 1962 but the rate level did not change until 1966 or 1967. It was either maintained by an Order in Council or by ministerial directive. I think it was probably the latter, although I am not certain. So, presumably if it could be done there it could be done here.

Mr. Allmand: I see. I guess there must be several types of freeze. There is the freeze in Section 335 and there are also the other types.

The Chairman: Are there any further supplementary questions? Mr. Thomas?

Mr. Thomas (Moncton): Mr. Chairman, this is not a supplementary question but it may help to clear the point...

The Chairman: What is it, Mr. Thomas?

Mr. Thomas (Moncton): It is on...

The Chairman: Is it on a point of order?

Mr. Thomas (Moncton): It could clarify this.

The Chairman: All right.

Mr. Thomas (Moncton): The remark was made that someone had asked Mr. Pickersgill about this very matter. I was the person who asked him about this in the Transport and Communications Committee, and he definitely made the statement at that time that this could not be changed by Order in Council. That was his definite opinion. This was an Act of Parliament and it could only be changed by legislation. That was his opinion at that time.

Mr. Nowlan: I will not pursue it any further at this stage. I must say with all deference to Mr. Pickersgill that I do not think the thing is as black and white as his answer to you, and I just wondered if there had been anything further between the MTC and Ottawa. If not, should there not be some letter or recommendation or resolution—or however you do things in communication with Ottawa—to find out definitely what is necessary to extend the freeze which is going to expire on March 23, 1969.

[*Interpretation*]

vez-vous obtenir ces deux autres possibilités d'action de façon à remettre ces choses en vigueur et à les immobiliser?

M. Dickson: Je ne suis pas avocat, monsieur Allmand, cela ne relève pas de ma compétence, mais je me base sur mon expérience. La Loi sur la réduction des taux de transfert des marchandises qui était une loi adoptée par le Parlement a pris fin, je pense, en 1962. Le tarif n'a pas été modifié avant 1966 ou 1967. Il fut maintenu, soit par un décret du conseil ou par une directive ministérielle. Je pense que c'est plutôt cette dernière mais je n'en suis pas certain. On aurait pu, semble-t-il, le faire des deux manières.

M. Allmand: Je vois. J'imagine qu'il y a différents genres de gel des taux. Il y a le gel à l'article 335 et il y en a aussi d'autres sortes.

Le président: Y a-t-il d'autres questions? Monsieur Thomas?

M. Thomas (Moncton): Monsieur le président, ce n'est pas une question complémentaire, mais cela pourrait nous aider à préciser la question.

Le président: De quoi s'agit-il, monsieur Thomas?

M. Thomas (Moncton): Il s'agit de...

Le président: Est-ce une question d'ordre?

M. Thomas (Moncton): Elle pourrait aider à préciser la question.

Le président: Très bien.

M. Thomas (Moncton): Quelqu'un dit qu'on avait interrogé monsieur Pickersgill à ce sujet. Je lui ai posé moi-même la question au comité des transports et des communications et il a alors fait la déclaration que cela ne pouvait être modifié par un décret en conseil. C'était là son avis. Il s'agissait d'une loi du Parlement qui ne pouvait être modifiée que par une autre mesure législative. C'est l'avis qu'il avait alors formulé.

M. Nowlan: Je ne veux pas insister là-dessus. Je dois vous dire, malgré tout le respect que je porte à monsieur Pickersgill que je ne pense pas que la question soit aussi tranchée que celle qu'il vous a donnée, et je me demandais seulement s'il n'y a rien eu d'autre entre la CTM et Ottawa. Dans le cas de la négative, ne devrait-il pas y avoir une lettre ou une recommandation ou une résolution ou enfin quelle que soit la façon dont vous communiquez avec Ottawa afin de voir ce dont nous avons besoin pour prolonger

[*Texte*]

Mr. Dickson: I think we should have Mr. Pickersgill here.

Some hon. Members: No, no.

The Chairman: Are you finished, Mr. Nowlan?

Mr. Nowlan: I am not finished at all, Mr. Chairman. I am asking a question and I have several others to ask on other topics. This is a most important brief. I am saying to the witness, Mr. Chairman, that if there has not been anything of a definite nature with Ottawa, should there not be something definitive with Ottawa from the MTC so that we do not get the run around at any level in order to find out what—whether they are going to do it or not is one thing—procedure is necessary to extend the freeze that is going to expire on March 23, 1969.

Mr. Crosby: Mr. Chairman, in answer to Mr. Nolan's question, we understand that the Atlantic premiers have made representations to the Minister of Transport to have the freeze extended, and what action the Minister of Transport will take we do not know. I am not a lawyer either and I do not know whether it is done on a legal basis or whether it is done by agreement with the railways that they will extend it until the task force report is in and new policies have been created which would make an effective rate base.

The Chairman: Mr. Nowlan, would you permit Mr. Allmand to ask a supplementary?

Mr. Nowlan: Yes.

Mr. Allmand: When we were studying the National Transportation Act last year we sought legal advice and we had a lawyer assigned to the Committee. Perhaps, Mr. Chairman, after we hear the witnesses in the Maritimes that as a Committee in preparing our report we might have to seek legal advice again in order to know exactly what steps to suggest that might be effective.

Mr. Nowlan: That may be a good point to follow, Mr. Chairman. Continuing from the answer of Mr. Crosby, and I think the hon. Mr. Higgins mentioned this, is it expected that the report of the Atlantic premiers task force will be published prior to March 23, 1969?

[*Interprétation*]

l'immobilisation des taux qui prendra fin le 23 mars 1969.

M. Dickson: Alors, je crois que monsieur Pickersgill devrait venir ici.

Des voix: Non, non.

Le président: Monsieur Nowlan, avez-vous terminé?

M. Nowlan: Non, pas du tout, monsieur le président. Je pose une question et j'en ai un bon nombre à poser sur d'autres sujets. Voici un mémoire des plus importants. Je dis au témoin, monsieur le président, que s'il n'y a pas eu quoi que ce soit avec Ottawa. Le CTM ne devrait pas y donner des réponses définitives à Ottawa pour nous éviter de nous adresser à tous les niveaux, afin de découvrir, s'ils vont le faire ou non, quelle procédure sera nécessaire pour prolonger le gel des taux qui doit prendre fin le 23 mars 1969.

M. Crosby: Monsieur le président, en réponse à la question de monsieur Nowlan, les premiers ministres de l'Atlantique ont fait des instances auprès du ministre des Transports pour que ce gel des taux soit prolongé et nous ne savons pas quelles dispositions le ministre des Transports prendra. Je ne suis pas un juriste et je ne sais pas si, sur le plan juridique ou en vertu d'une entente avec les chemins de fer, ils prolongeront le gel des taux jusqu'à ce que le comité d'étude fasse rapport et que de nouvelles lignes de conduite soient mises au point qui établiraient le fondement du taux en vigueur.

Le président: Est-ce que vous permettez à monsieur Allmand de poser une autre question?

M. Nowlan: Oui.

M. Allmand: L'année dernière, nous étudiions la Loi nationale sur les transports et nous avons demandé l'avis d'un avocat. Un avocat a été affecté au service du comité. Après avoir entendu les témoins des provinces Maritimes, le comité aura peut-être besoin de demander à un juriste ce qu'il en est, afin de savoir exactement quelles démarches pourraient être efficaces.

M. Nowlan: Ce serait peut-être une bonne règle à suivre, monsieur le président, et je pense que l'honorable Higgins en a parlé lui-même. La publication du rapport du comité d'étude des premiers ministres de l'Atlantique est-elle prévue avant le 23 mars 1969?

[*Text*]

Mr. Crosby: No. That is why we recommend that the freeze be extended because we are afraid of the implications of...

Mr. Dickson: May I elaborate on that point, Mr. Chairman and Mr. Nowlan? I think the concern is that it will not be effective before March 23. You might have a policy going but it will not be effective. There will be no relief for the shipper in effect on March 23. This is the point. You can have a policy but it might take a year before it is effective. We hope not.

Mr. Nowlan: I appreciate that, Mr. Chairman, but I am just trying to find out the procedures. You say the Atlantic premiers have requested it. As a result of this transportation tour, and certainly from the weight of the evidence so far, the feeling seems to be to extend it. It certainly would not complicate things, would it—and I am asking this question of either of the witnesses—if this Committee decided after hearing all the deliberations to make as part of their recommendation the extension of the freeze? I am afraid there is a gray area here as to who is to take the initiative to extend the freeze, if it is decided to extend it. This is what is giving me some concern.

Mr. Crosby: We would wholeheartedly support that because it is requested in our brief.

Mr. Nowlan: But at the moment the MTC is relying on the joint statement of the premiers that I think was just made yesterday or the day before. Is that correct?

Mr. Crosby: Mr. Chairman, I might interject here. One of the fears that we have, as I mentioned in our brief, is the way the railways reacted on the LCL freight rate matter once they were given the go ahead to create rates, and we have the same fears with regard to them if this freeze is lifted before positive policies are, as Mr. Dickson said, created and put into effect. In the meantime we may get pretty rough treatment down here from a rate standpoint.

Mr. Nowlan: Mr. Chairman, I have other questions on other parts of the brief, not on LCL, so as long as I can come back I will

[*Interpretation*]

M. Crosby: Non. C'est la raison pour laquelle nous recommandons que le gel des taux soit prolongé, étant donné que nous craignons les implications qui . .

M. Dickson: Est-ce que je pourrais élaborer un peu plus là-dessus, monsieur le président et monsieur Nowlan? Je pense que ce qui nous préoccupe c'est que cela n'entre pas en vigueur avant le 31 mars. Vous avez peut-être une ligne de conduite mais elle ne sera pas efficace. Il n'y aura pas d'aide accordée à l'expéditeur à partir du 23 mars. Voilà l'important. Vous pouvez suivre une ligne de conduite mais cela peut prendre un an avant qu'elle soit en vigueur. Nous osons espérer le contraire.

M. Nowlan: Je m'en rends compte, monsieur le président, mais je ne cherche qu'à trouver les manières de procéder. Vous dites que les premiers ministres de l'Atlantique en ont fait la demande. A la suite de cette tournée relative aux transports, et du nombre de témoignages reçus, il semble qu'on veuille le prolonger. Cela ne rendrait pas les choses plus complexes, n'est-ce pas? Je pose la question à l'un ou l'autre des témoins, si le comité décidait, après avoir entendu toutes les délibérations, de recommander entre autres, le prolongement du gel des taux, je crains qu'il n'y ait une ombre, à savoir, qui doit prendre l'initiative pour prolonger l'immobilisation des taux si on décide de le faire. Voilà ce qui me préoccupe un peu.

M. Crosby: Nous vous appuyerions de tout cœur parce que c'est une demande que nous formulons dans notre mémoire.

M. Nowlan: Mais en ce moment, la CTM s'appuie sur la déclaration conjointe des premiers ministres, je crois, qui a été faite hier ou avant-hier. Est-ce juste?

M. Crosby: Si on veut bien me permettre, monsieur le président. Une des craintes qui nous anime, comme je l'ai souligné dans notre mémoire, vient de la façon dont les chemins de fer ont réagi à la question du tarif de transport de chargement partiel de wagon. Une fois, on leur a donné l'autorisation de modifier les taux et nous avons les mêmes craintes à leur égard si on enlève le gel des taux avant que des lignes de conduite réalistes soient adoptées et mises en vigueur, comme l'a dit monsieur Dickson. Entretemps, les difficultés seront peut-être très grandes, du point de vue du taux.

M. Nowlan: Monsieur le président, j'ai d'autres questions relatives à d'autres parties du mémoire, mais non pas au sujet du taux

[*Texte*]

now defer and let someone else take the floor.

Mr. Horner: Mr. Chairman, I would like to direct a question to either Mr. Dickson or Mr. Armitage. Just where in the Maritime Freight Rates Act do the railroads get the authority to increase the freight rates on less than carload lots? I have been reading and studying this and it does not mention anything about less than carload lots.

Mr. Dickson: Mr. Chairman, I will try to answer Mr. Horner, although I may have to be supplemented by Mr. Armitage because it is a good question that he has asked. The Maritime Freight Rates Act applies to LCL freight rates. It does not apply to express rates.

Mr. Horner: Why does it not apply to express rates?

Mr. Dickson: I think it says in one of the sections that it does not apply to express rates.

Mr. Armitage: That is one of the exclusions.

Mr. Dickson: Yes, one of the exclusions.

Mr. Horner: Referring now to the freeze, much has been said in your submission about maintaining the freeze on the Maritime Freight Rates Act. What about the freeze on the products now shipped in and on which the Freight Rates Reduction Act has an effect?

Mr. Dickson: Actually, Mr. Chairman, to answer Mr. Horner, the freeze that we are speaking of in Section 335 of the Railway Act—which was one of the amendments made during the passage of the National Transportation Act—froze the non-competitive carload rates within the maritimes, from the Maritimes and to the Maritimes. As I understand it, the only reason for the reference to the Maritime Freight Rates Act in that section is simply to define the territory to which the freeze applies.

It was not only freezing the rates that were reduced by the Maritime Freight Rates Act but it was also freezing the eastbound rates into the Maritimes, which were not reduced by the Maritime Freight Rates Act.

[*Interprétation*]

de transport de chargement incomplet mais si je peux y revenir, je laisserai la parole à quelqu'un d'autre.

M. Horner: Monsieur le président, je voudrais poser une question à monsieur Dickson ou à monsieur Armitage. Où, dans la Loi sur les taux de transport des marchandises dans les provinces maritimes, les chemins de fer ont-ils l'autorisation d'augmenter le taux-marchandises du transport de chargement incomplet. Je l'ai lu, je l'ai étudié et on ne mentionne rien au sujet d'un chargement de moins d'un wagon.

M. Dickson: Monsieur le président, je vais essayer de répondre à monsieur Horner et monsieur Armitage pourra venir compléter parce que c'est là une excellente question. La Loi sur les taux de transport des marchandises dans les provinces Maritimes s'applique au tarif de transport de chargement incomplet et non pas au tarif-messagerie.

M. Horner: Pourquoi ne s'applique-t-elle pas au tarif-messagerie?

M. Dickson: Je crois qu'on dit dans un des articles que cela ne s'applique pas au tarif-messagerie.

M. Armitage: C'est une des exclusions.

M. Dickson: Oui, une des exceptions.

M. Horner: Bon, pour ce qui est du gel des taux. Alors on parle beaucoup dans votre proposition relative au maintien du gel des taux dans la Loi sur les taux de transport des marchandises dans les provinces Maritimes, mais que dire du gel des taux sur les produits expédiés ici, et sur lesquels la Loi sur la réduction des taux de transport de marchandises s'applique.

M. Dickson: Si on veut bien me permettre de répondre à monsieur Horner, le gel des taux dont nous parlons à l'article 335 de la Loi sur les chemins de fer qui était une des modifications apportées au cours de l'adoption de la Loi nationale sur les transports immobilisait le taux du transport non concurrentiel à l'intérieur des Maritimes, en provenance et à destination des Maritimes. La seule raison pour laquelle on se reporte à la Loi sur les taux de transport des marchandises dans les provinces Maritimes, dans cet article, est simplement en vue de définir le territoire auquel le gel des taux s'applique.

On établissait un gel non pas simplement pour les taux réduits par la loi, sur les taux de transport des marchandises dans les provinces Maritimes, mais elle immobilisait aussi les taux des frontières de l'est à destination

[*Text*]

Mr. Horner: Is it not a fact that the pattern of the horizontal freight rate increases affect the Maritimes far more drastically than even the flat rate increase on a given product or commodity?

Mr. Dickson: I will try to answer that question, Mr. Chairman. The horizontal freight rate increase, because of our greater distances and therefore higher rates, applies more heavily and also because other areas were able to escape either in part or in full the increase that was being applied because of the pervasiveness of their competitive means of transport in those other areas.

Mr. Horner: If the Maritime Freight Rates Act was made to apply on all modes of transportation, including truck transportation, what effect would that have on express rates as we know them, or less than carload lot rates, and so forth? For example, we had evidence today from the T. Eaton Company Limited about the drastic increase in freight rates that has taken place since September 5, 1967. What effect on the increase in rates that Eatons gave in their brief, for example, would the extension of the Maritime Freight Rates Act have on modes of truck transportation?

Mr. Dickson: Mr. Chairman, it is hard to be definitive, but I think there is not doubt that if you extended the application of the Maritime Freight Rates Act so that it applied to traffic carried by modes other than the railway that it surely would have the effect upon the trucking industry of increasing competition for traffic.

It would also be helpful in generating the highway transport service that a company such as Eatons would need and it would perhaps encourage the railways to meet that competition, and it should have a general effect upon holding down or perhaps hopefully reducing rates.

Mr. Horner: Is it not a fact that in 1927 the intent of clause (d) of Section 5 of the Maritime Freight Rates Act was to deal mainly with passenger movement and the goods or commodities a passenger might be carrying

[*Interpretation*]

des Maritimes qui n'étaient pas réduits par cette loi.

M. Horner: Pour ce qui est de l'augmentation horizontale des taux de transport des marchandises, touche-t-elle les Maritimes beaucoup plus que l'augmentation des taux uniformes d'un produit ou service donné?

M. Dickson: Je vais essayer de répondre à cette question, monsieur le président. L'augmentation horizontale du tarif-marchandises vu les distances plus grandes et, par conséquent, les taux plus élevés, est plus lourde, aussi en raison du fait que d'autres régions ont été en mesure d'échapper soit totalement, soit en partie à l'augmentation qui s'appliquait à la suite de la tendance portée vers des moyens de transport concurrentiels dans ces autres régions.

M. Horner: Si la Loi sur les taux de transport des marchandises dans les provinces Maritimes s'appliquait à tous les moyens de transport dans les Maritimes, y compris le camion, quels en seraient alors les effets sur les tarif-messagerie, ou encore comme nous les connaissons, ou sur les taux de transport de chargement partiel de wagon et ainsi de suite. Ainsi, nous avons entendu des témoignages aujourd'hui de la *T. Eaton Company Limited* au sujet des augmentations incroyables des tarifs-marchandises, depuis le 5 septembre 1967. Quels effets sur l'augmentation des taux dont *Eaton* a traité dans son mémoire, par exemple, le prolongement de la Loi sur les taux de transport des marchandises dans les provinces Maritimes aurait sur les modes de camionnage?

M. Dickson: Monsieur le président, il est assez difficile d'être catégorique, mais sans aucun doute si vous prolonger l'application de la Loi sur les taux de transport des marchandises dans les provinces Maritimes de façon à ce qu'elle s'applique aux modes de transport autres que le transport ferroviaire, cela aurait sûrement pour effet d'augmenter la concurrence dans l'industrie du camionnage.

Cela servirait à engendrer un service de transport routier dont une compagnie comme Latan aurait besoin et peut-être à encourager les chemins de fer à faire face à cette concurrence et cela devrait avoir comme effet d'ensemble de maintenir et même peut-être de réduire les tarifs.

M. Horner: N'est-il pas vrai qu'en 1927 le paragraphe *d*) de l'article 5 de la Loi sur les taux de transport des marchandises dans les provinces des Maritimes traitait essentiellement du transport des passagers et des mar-

[*Texte*]

with him, rather than freight movement as we know it today. Let me pose the question in another way. If it was extended to cover truck transportation, would the term "express freight" not become—a shade of gray at least—very difficult to define?

Mr. Dickson: Yes, Mr. Chairman, this is true, and perhaps this is a comment I should have a little earlier in reply to your question, Mr. Horner, but it escaped me at the moment. The rates that are being complained of so much before you today, and will be during the next few days, and which are commonly called ETA-100 or non-carload rates, are they express rates or freight rates? I do not really know. The railways told us when they were putting these in—and Mr. Sparks mentioned being at these discussions and I was also at many of them—that there would be no more express service, no more LCL freight service; there is a new service called non-carload services which encompasses what used to be LCL freight and express.

I have taken their word and assumed that this is a new service. It is a non-carload service; it is neither express nor freight.

Mr. Horner: You state in your brief that the Maritime Freight Rates Act is as sacred as the Crows Nest Pass rates and as sacred as the St. Lawrence Seaway. Do you not believe that in a way, rightly or wrongly, this sacredness is starting to slide away because of the application of the gray area with regard to the express traffic?

Mr. Crosby: The express traffic is one indication of it, but it is an indication that the Maritime Freight Rates Act as presently constituted is outmoded because the original concept was that express would be carried on passenger trains. We cut out the passenger service and the express has disappeared. They do not call it express, they now call it LCL freight. So if the Maritime Freight Rates Act is amended I think one of the provisions should be that it would be applied to LCL freight, because express as such really no longer exists unless it is carrying freight on a passenger train.

[*Interprétation*]

chandises ou denrées qu'un passager pouvait transporter avec lui plutôt que du transport des marchandises qu'on connaît aujourd'hui. Permettez-moi de poser la question différemment. Si le prolongement s'appliquait au camionnage, est-ce que l'expression «tarif-messagerie» ne serait pas alors très difficile à définir?

M. Dickson: Oui, monsieur le président, c'est juste. C'est peut-être un commentaire que j'aurais dû faire plus tôt en réponse à la question que vous aviez posée monsieur Horner, mais cela m'est parti de l'esprit à ce moment-là. Le tarif dont on se plaint tellement aujourd'hui et dont on se plaindra au cours des prochains jours qu'on appelle communément ETA-100 ou tarif de transport de détail. Sont-ils des tarifs-marchandises ou des tarifs-messageries? Je n'en sais vraiment rien. Les compagnies de chemins de fer ont dit lorsqu'elles les avaient mis en vigueur et M. Sparks a mentionné qu'il avait assisté aux débats auxquel j'ai moi-même pris part très souvent. Il n'y aurait plus de service de messagerie, ni de service de transport de détail. C'est un nouveau service appelé service mais c'est autre chose qui comprend, qui remplace le transport de chargement incomplet et les messageries.

J'ai pris leur parole et, j'ai pris pour acquis que c'était un nouveau service. C'est un service de transport de détail, ce n'est pas un service-marchandise ni un service-messagerie.

M. Horner: Vous déclarez dans votre mémoire que la Loi sur les taux de transport des marchandises dans les provinces Maritimes est aussi sacré que le tarif du-Nid-de-Corbeau ou que la Voie maritime du Saint-Laurent. Ne croyez-vous pas d'une certaine façon, à tort ou à raison, que cet aspect sacro-saint semble se détériorer quelque peu à la suite de l'application de cette autre nuance concernant le trafic-messagerie?

M. Crosby: Le trafic-messagerie en est un exemple. Il indique que la Loi sur les taux de transport des marchandises dans les provinces Maritimes, telle qu'elle existe actuellement, est un peu démodée parce que le concept à l'origine voulait que le trasport-messagerie soit fait par les trains de passagers. Nous avons supprimé le service des passagers et le service-messagerie a disparu. Ils ne l'appellent plus maintenant transport-messagerie mais le transport de chargements incomplets. Si la loi est modifiée, je pense qu'une des dispositions de cette loi devrait stipuler qu'elle s'applique au transport de chargements incomplets, parce que le transport-messagerie en tant que tel n'existe plus à

[*Text*]

Mr. Horner: Would it be fair to say that the Maritime Freight Rates Act has not grown with the times?

Mr. Dickson: Oh, definitely.

Mr. Nowlan: If I understood what Mr. Dickson said correctly, and I think I did, if the railways could raise their express LCL rates at any time—as I gathered you said they could—why did they just do it in September of 1967 which, if I remember correctly, was before the National Transportation Act. Was it just a coincidence?

Mr. Dickson: Perhaps I can answer that, Mr. Chairman. Why they chose September 5, 1967, I do not know, but the amendments to the Railway Act that were found in the bill which became the National Transportation Act became effective on March 23, 1967, which was prior to September 5. That would have been Part IV of the National Transportation Act, the old Bill C-231, which became effective. As I recall it, the part that set up the Canadian Transport Commission did not become effective until September 19, or something like that.

Mr. Horner: So the National Transportation Act and LCL are related?

Mr. Dickson: Yes.

The Chairman: Are there any other questions, gentlemen?

Mr. Horner: What reply did you get from Mr. Hellyer to your letter of December 13, 1967, with regard to the four points you suggest on page 775?

Mr. Dickson: Mr. Chairman, the essence of it was that he would take the matter up with the railways; that it was not within his jurisdiction to deal with it.

Mr. Horner: And you had no reply from . .

Mr. Dickson: That is what he told us at that time. We presumed he took it up with the railways and was not able to get any action on it.

Mr. Horner: But you did not forward it on to the CTC?

[*Interpretation*]

moins qu'on fasse le transport par train de passengers.

M. Horner: Il serait juste de dire que la Loi ne s'est pas adaptée à notre époque.

M. Dickson: En effet.

M. Nowlan: Si j'ai bien compris ce que monsieur Dickson a dit de façon très juste, et je pense l'avoir très bien compris, si les chemins de fer pouvaient augmenter le tarif-messagerie de chargement incomplet en n'importe quel temps, comme vous avez dit qu'ils pouvaient, je pense, pourquoi ne l'a-t-on fait qu'en septembre 1967, geste qui, si je me rappelle bien, précédait la Loi nationale sur les transports. Ce n'était qu'une simple coïncidence?

M. Dickson: Monsieur le président, je pourrais peut-être y répondre. Je ne sais pas pourquoi on a choisi le 5 septembre 1967, mais les modifications apportées à la Loi sur les chemins de fer qu'on trouve dans le bill qui est devenu la Loi nationale sur les transports sont entrées en vigueur le 23 mars 1967, soit avant le 5 septembre. Cela aurait été la Partie IV de la Loi nationale sur les transports, l'ancien bill C-231 qui est entré en vigueur. Si je me rappelle, la partie qui a mis sur pied la Commission canadienne des transports n'est pas entrée en vigueur avant le 19 septembre ou à peu près.

M. Horner: La Loi nationale sur les transports et le transport de chargements partiels de wagon sont rattachés l'un à l'autre.

M. Dickson: Oui.

Le président: Y a-t-il d'autres questions, messieurs?

M. Horner: Quelle réponse avez-vous obtenu de monsieur Hellyer à la suite de votre lettre du 13 décembre 1967 au sujet des quatre points que vous présentez à la page 775?

M. Dickson: Monsieur le président, il a dit qu'il en saisirait les compagnies de chemins de fer et que la question ne relevait pas de sa compétence.

M. Horner: Et vous n'avez pas eu de réponse de . .

M. Dickson: C'est ce qu'il nous a dit alors. Nous avons cru qu'il en avait saisi les compagnies de chemins de fer et qu'il n'avait pu en obtenir quoi que ce soit.

M. Horner: Mais vous n'avez jamais soumis la question à la CCT.

[*Texte*]

Mr. Dickson: You asked a question earlier, Mr. Horner, if I may comment on this, Mr. Chaimran.

The Chairman: That is fine.

Mr. Dickson: About appealing these non-carload rates to the CTC. Following the passage of the National Transportation Act, I am not sure what you would hang your appeal on other than public interest.

Mr. Horner: Yes.

Mr. Dickson: Because if they are not below a compensatory level they are not in violation of the Act. If they are not above that ceiling that is set out in the Act, which is so far above a compensatory level that...

Mr. Horner: It is 150 per cent.

Mr. Dickson: ...it is of no use to anybody, I do not believe, then you really have no appeal to the CTC except on the grounds of public interest under Section 16.

Mr. Horner: Yes. All right. Follow Section 16 up on the public interest aspect of it. If it is in the public interest to maintain the Freight Rates Reduction Act—and I would hope it would be, rather than just in the case of a few isolated shippers—then surely it is in the public interest for you people particularly, you are the transportation experts in the Maritime Provinces, to carry this fight a little further and take it to CTC and prove, or attempt to prove, before them that these increased charges on non-carload lots is also detrimental to the public interest.

Mr. Dickson: All right, we have been negligent, Mr. Chairman.

The Chairman: Mr. Bell, a supplementary.

Mr. Bell: Did I understand you to say, Mr. Dickson, that you felt it was possible to circumvent the Maritime Freight Rates Act and raise the LCL express rates?

Mr. Dickson: I am sorry, I did not catch all the question, Mr. Chairman.

Mr. Bell: Did you not tell Mr. Horner a minute ago—and I am only asking this for clarification in order to help me understand it—that in your opinion the railways could

[*Interprétation*]

M. Dickson: Vous avez posé une question un peu plus tôt, monsieur Horner. Puis-je me permettre de faire un commentaire à ce sujet, monsieur le président?

Le président: Allez-y.

M. Dickson: Au sujet de la question d'en appeler de ces tarifs à la CCT: A la suite de l'adoption de la Loi nationale sur les transports, je crois que vous ne pouvez fonder votre appel que sur l'intérêt public.

M. Horner: Oui.

M. Dickson: S'ils ne sont pas au-dessous du niveau compensatoire, ils ne vont pas à l'encontre des dispositions de la Loi s'ils ne sont pas au-dessus de ce plafond prévu dans la loi qui est tellement plus au-dessus du niveau compensatoire que ...

M. Horner: C'est 150 p. 100.

M. Dickson: Cela ne sert à personne. Je ne crois pas, alors vous ne puissiez vraiment présenter une demande à la C.C.T. sauf pour des raisons d'intérêt public, en vertu de l'article 16.

M. Horner: Bon, d'accord. Présentons l'article 16 à la C.C.T. en appuyant sur l'intérêt public. S'il est dans l'intérêt public de maintenir la Loi sur la réduction des taux de transport des marchandises, je crois qu'il serait juste dans le cas de quelques expéditeurs isolés. Naturellement, c'est dans l'intérêt du public, pour vous tout particulièrement, qui êtes les spécialistes en matière de transport dans les provinces Maritimes de lutter un peu plus, d'en saisir la C.C.T., de prouver ou d'essayer de prouver à la Commission que l'augmentation du tarif de détail va aussi à l'encontre de l'intérêt du public.

M. Dickson: Bon, d'accord nous avons été négligents, monsieur le président.

Le président: Monsieur Bell, une autre question.

M. Bell: Si j'ai bien compris, monsieur Dickson, vous avez dit que vous étiez d'avis qu'il était possible de se soustraire à la Loi sur les taux du transport des marchandises dans les provinces Maritimes et d'augmenter le tarif-messagerie pour le transport de chargements incomplets.

M. Dickson: Je m'excuse, je n'ai pas compris toute la question, monsieur le président.

M. Bell: Est-ce que vous n'avez pas dit à monsieur Horner il y a un instant, je vous le demande simplement pour me permettre de mieux comprendre, ne lui avez-vous pas dit

[*Text*]

circumvent the Maritime Freight Rates Act protection and raise the express LCL rates?

Mr. Dickson: No, I hope I did not say it in just that way, Mr. Chairman.

Mr. Bell: How do they get around the Maritime Freight Rates Act and raise the LCL rates, which are protected?

Mr. Dickson: What I think Mr. Bell has interpreted from my comments to Mr. Horner is are the ETA-100 rates express rates or freight rates. No decision has been made by a regulatory body on whether they are express rates or freight rates. So, at the moment nobody quite knows whether they are under the Maritime Freight Rates Act or not.

Mr. Bell: Separate from that, may I ask if it was not a fact that when the railways raised these LCL rates they said it was because of the amalgamation of their express offices and services?

Mr. Dickson: Yes.

Mr. Bell: And it was really separate from anything having to do with the new Transport Act?

Mr. Dickson: I think it was connected, Mr. Chairman. I answered Mr. Nowlan to that effect because they were then under the National Transportation Act and they were free to take action. They were trying to reorganize their business and they tackled the whole railway business. They also tackled the LCL express problem first to try to—as they told us in the discussions they had—put this on a more paying basis.

Mr. Bell: I suggest it is a very strange coincidence, and it happened like that, and I make the charge here now that the railways took advantage of the new Act. They hit the Maritimes again with these extra rates, and we said this at the time the new Act was put in. You are not to blame for it, but we said exactly what was going to happen, and the railways took advantage of the mood of the new Act which was entirely separate from

[*Interpretation*]

qu'à votre avis, les compagnies de chemins de fer pourraient se dérober aux dispositions de la Loi sur les taux de transport des marchandises dans les provinces Maritimes et augmenter le tarif-messagerie pour le transport de chargement incomplet?

M. Dickson: Non, j'espère ne pas avoir dit cela de cette façon, monsieur le président.

M. Bell: Comment alors peuvent-ils contourner la Loi sur les taux de transport des marchandises dans les provinces Maritimes, et augmenter le tarif de transport de chargement incomplet, tarif qui est pourtant protégé.

M. Dickson: Je pense que M. Bell a compris, à partir des commentaires que j'ai donnés à M. Horner, que le taux ETA-100 est le tarif-messagerie ou le tarif-marchandises. Aucun organisme de réglementation n'a encore décidé s'il s'agissait du tarif-messagerie ou du tarif-marchandises. Personne ne sait au juste en ce moment si cela relève ou non de la Loi sur les taux de transport des marchandises dans les provinces Maritimes.

M. Bell: En plus, puis-je demander s'il n'est pas vrai que les compagnies de chemins de fer ont dit en augmentant les taux de chargements partiels de wagons, que c'était dû au fusionnement de leurs bureaux et de leurs services de messagerie?

M. Dickson: Oui.

M. Bell: Et que c'était vraiment distinct de tout ce qui se rapportait à la nouvelle Loi sur les transports.

M. Dickson: Je crois, monsieur le président, que c'était relié. J'ai répondu plus tôt à monsieur Nowlan parce qu'elles relevaient alors de la Loi nationale sur les transports et qu'elles étaient libres de prendre les dispositions voulues. Elles essayaient de réorganiser leurs affaires et elles se sont attaquées à l'ensemble de la question ferroviaire. Elles se sont aussi attaquées au premier problème des tarifs-messagerie de chargements partiels de wagons, afin d'essayer, comme on nous a dit, au cours des débats à cet égard, qu'on a essayé de le rendre plus rentable.

M. Bell: Je dis que c'est une coïncidence vraiment étrange et, cela s'est produit ainsi, et je déclare dans cette enceinte que les compagnies de chemins de fer ont profité de la nouvelle Loi. Une fois de plus, ils s'en prennent aux provinces Maritimes en établissant ces nouveaux tarifs et c'est ce que nous avons dit lorsque la loi a été adoptée. On ne vous en blâme pas, mais nous avons dit exactement ce qui se produirait, et les compagnies

[*Texte*]

their right to change these had they wanted to do so before.

The Chairman: Mr. Rose?

Mr. Rose: Mr. Chairman, I thought Mr. Bell's last remarks would stimulate a whole load of supplementary questions but I see that they have not. Perhaps it is because we are getting close to 6 o'clock.

Nevertheless, I would like to go back to something that Mr. Dickson said earlier, and I would like Mr. Dickson or the other witness to have an opportunity to amplify his remarks in this regard, I am referring to the fear expressed in the reading of the brief that perhaps while the people who have petitioned before us today have laid their cards on the table openly and publicly for everyone to see, there was the possibility of the railway companies having the opportunity to appear either before this committee or the CTC in camera, and that you might not be aware of their petitions and the points they made—or even have the material—soon enough to give you an opportunity to provide a reasonable rebuttal or change your thinking or perhaps make some amendments. Is that not so? Do I express reasonably well what you said?

Mr. Crosby: We thought that they were not appearing as carriers and that perhaps they had a privileged position.

Mr. Rose: Mr. Chairman, this seems to me to be an eminently fair request to make. I do not have sufficient experience with this type of committee to perhaps suggest how we might best allay the fears of the witness, but perhaps there is someone else around the table who could do this. In any event, I am really saying this to underline the point that I think it would be grossly unfair if all the petitioners that have presented briefs have to do so in public, while the railways come in in some sort of an in camera situation and enjoy the advantage of some privileged position. I would like to perhaps get some suggestions from others on how this might be accomplished. It possibly might be part of our report and that is why I want to make certain that a good portion of the minutes concern themselves with this point.

The Chairman: That will be part of our report, Mr. Rose. Mr. Horner.

[*Interprétation*]

de chemins de fer ont profité de la nouvelle loi qui était complètement différente de leur droit de changer les taux, même s'ils l'avaient voulu avant.

Le président: Monsieur Rose.

M. Rose: Monsieur le président, je croyais que la dernière observation de M. Bell déclencherait toute une série de questions, mais je remarque qu'il n'en est pas ainsi. Est-ce parce que nous approchons de 18 heures?

Je voudrais, toutefois, revenir à ce que M. Dickson a dit un peu plus tôt, et j'aimerais que M. Dickson ou un autre témoin ait l'occasion d'élaborer un peu plus les observations qu'il a faites au sujet de la crainte formulée dans la lecture du mémoire, que peut-être les personnes qui nous ont présenté des soumissions aujourd'hui ont mis cartes sur table ouvertement et en public pour que tout le monde soit mis au courant. Il y avait aussi cette possibilité que les sociétés ferroviaires, ayant eu l'occasion de comparaître soit devant ce Comité ou à la CCT à huis clos, et que vous ne soyez peut-être pas au courant de leurs pétitions et des observations qu'ils ont—ou même d'avoir la documentation assez rapidement pour vous donner l'occasion de réfuter, de modifier votre ligne de conduite ou peut-être d'apporter certaines modifications à la loi. N'est-ce pas? Est-ce que j'exprime bien ce que vous avez dit.

M. Crosby: Nous pensions qu'ils ne se présentaient pas en tant que transbordeurs et qu'ils avaient peut-être une situation privilégiée.

M. Rose: Monsieur le président, cela me semble être une demande tout à fait juste à formuler auprès de ce comité. Je ne jouis pas d'une expérience suffisante de ce genre de comité pour vous proposer une manière de dissiper les craintes du témoin ou peut-être quelqu'un d'entre vous pourrait le faire. En tous cas, je vous dis vraiment cela pour signaler le fait que je pense qu'il serait vraiment injuste que tous les pétitionnaires qui ont présenté des mémoires doivent le faire en public alors que les compagnies de chemins de fer jouissent du huis clos et aient l'avantage d'une situation quelque peu privilégiée. Je voudrais entendre les suggestions d'autres personnes sur la manière dont on peut agir. Il se pourrait que cela fasse partie de notre rapport et c'est pourquoi je voudrais m'assurer qu'une bonne partie du compte rendu ait trait à ce point.

Le président: Cela fera partie de notre rapport, monsieur Rose. Monsieur Horner.

[*Text*]

Mr. Horner: Mr. Dickson, in order to make trucking more competitive as a means of transport in the Maritimes, in addition to including trucking under the Maritime Freight Rates Act would there not have to be a substantial improvement in the highway system, especially within the Maritimes and between the Maritimes and the central provinces?

Mr. Dickson: Yes, Mr. Chairman. The extension of the subsidy to apply to traffic carried by trucks is only one of the factors that I hope might be used to stimulate competition. The matter of better roads is certainly another factor.

The third point that I would like to make is that the very best road between Sydney and Montreal is not going to create the same type of competition as there is between Toronto and Montreal because you do not have the same volume of traffic and you have a much longer distance. So, we need the extension of subsidies, we need better highways and we need policies to encourage the volume of freight available for the trucks. This will also help to increase the competition.

The Chairman: Gentlemen, this is the end of our . .

Mr. Nowlan: I do not want to bring these gentlemen back, but I have some further questions. Are they coming back after dinner?

The Chairman: Ask your questions now.

Mr. Nowlan: Then I will have to ask my questions now.

The Chairman: Mr. Nowlan.

Mr. Nowlan: One of the things Mr. Dickson said at the very end leads me to my first question. He spoke about the competitive factors being a little different. We all appreciate that, but has not the basic erosion of the Maritime Freight Rates Act occurred because of these horizontal rate increases, and if you are going to open it up to the trucking industry is the legislator not going to have to do something to protect against these flat horizontal increases right across the board and which are not put into effect in the other parts of Canada because of competition? What are your comments on that?

[*Interpretation*]

M. Horner: Monsieur Dickson, afin de rendre le camionnage plus concurrentiel comme moyen de transport dans les provinces Maritimes en plus d'inclure le camionnage dans la Loi sur les taux de transport des marchandises dans les provinces Maritimes, ne faudrait-il pas améliorer sensiblement le réseau routier, particulièrement dans les provinces Maritimes et entre les provinces Maritimes et les provinces centrales du Canada?

M. Dickson: Oui, monsieur le président, le prolongement des subventions au transport par camion est un seul des facteurs qui, je l'espère, seront utilisés pour encourager la concurrence. L'amélioration des routes est sans aucun doute un autre de ces facteurs. Et la troisième observation que je voudrais faire c'est que la meilleure route qui puisse exister entre Sydney et Montréal ne créera pas le même genre de concurrence que celle qui existe entre Toronto et Montréal, parce que vous n'avez pas le même volume de trafic et que la distance est beaucoup plus grande. Il faut donc plus de subventions, de meilleures routes et une politique conçue pour encourager un volume de marchandises pour le transport par camion. Cela aidera aussi à augmenter la compétition.

Le président: Messieurs, voici la fin de notre . . .

M. Nowlan: Je ne veux pas que ces témoins reviennent mais j'aurais d'autres questions à poser. Est-ce qu'ils reviennent ce soir?

Le président: Posez vos questions dès maintenant.

M. Nowlan: Donc, il me faut poser ces questions dès maintenant.

Le président: Monsieur Nowlan.

M. Nowlan: Une des dernières choses que monsieur Dickson ait dites m'amène à cette première question. Il a parlé de facteurs concurrentiels qui étaient légèrement différents. Nous sommes tous au courant de ces faits mais est-ce que l'érosion de la Loi sur les taux de transport des marchandises dans les provinces Maritimes ne s'est pas produite à cause de l'augmentation uniforme des tarifs et si vous en permettez l'accès au camionnage, est-ce que le législateur ne devra pas faire quelque chose pour mettre à l'abri de ces augmentations uniformes générales contre la commission et qui n'entrent pas en vigueur dans les autres régions du Canada, à cause de la concurrence. Quels commentaires auriez-vous à faire là-dessus?

[*Texte*]

Mr. Dickson: To answer Mr. Nowlan's question, Mr. Chairman, I think the benefits of the Maritime Freight Rates Act have been eroded because of the inflexibility of the present statute.

I am going to be careful here now. It has been a 20 per cent subsidy within the Maritimes. It has been a 20 or 30 per cent subsidy on the portion of the rate earned within the region on traffic westbound. And it has been a fixed amount of subsidy in that sense, a fixed percentage amount of subsidy. It has been inflexible and has not been able to take into consideration the percentages in the transportation climate, the competition, the degree to which competition is effective here, or not effective here, versus the degree to which it is effective elsewhere.

In any revised Maritime freight rates act, there has to be substantially more flexibility to enable the subsidy that may be paid under that act to do the most good and to try to maintain the relative position of the Atlantic Provinces.

Maybe you can measure the whole basket of rates and do it that way. Maybe you should look at each individual commodity and apply the amount of subsidy necessary for it. There are pros and cons for both ways, but there has to be a flexibility here that there has hot been in the existing Act.

Mr. Nowlan: From the experience you have had with the existing Act, and working with the task force, can you confirm my assumption that the provincial Premiers —and there has been unanimous agreement before, Mr. Higgins said—are going to suggest flexible guidelines for the future, for either rail or for trucks, if you are suggesting that trucks be opened up to this assistance?

Mr. Dickson: Yes, you could assume that, Mr. Nowlan.

Mr. Nowlan: I know that is going to be an interesting answer to try to find out, because I guess people have been groping for it for quite a while.

One of my next two questions is very short, and one could open up a whole host of problems. But I will just throw it out and Mr. Dickson or Mr. Crosby may have a quick answer.

Mr. Crosby mentioned it from his position as Chairman of the MTC and in his own capacity as a shipper in this area. Does he agree with the EIU that transport costs have

[*Interprétation*]

M. Dickson: Monsieur le président, pour répondre à la question de monsieur Nowlan, je pense que les avantages de la Loi sur les taux de transport des marchandises dans les provinces Maritimes ont été érodés à cause du manque de souplesse de la loi actuelle.

Je vais faire attention ici. Les Maritimes ont reçu une subvention de 20 p. 100. C'était une subvention de 20 p. 100 ou 30 p. 100 sur le tarif gagné dans cette région pour le trafic vers l'Ouest. La subvention équivalait à un montant fixe. C'était un montant inflexible et on n'a pu tenir compte dans ces pourcentages, du climat de transport, de la concurrence, du degré d'une concurrence efficace ou non à comparer au degré d'efficacité qui existe ailleurs. Dans toutes les révisions de la Loi sur les taux de transport des marchandises dans les provinces Maritimes, il fallait une plus grande souplesse afin de permettre que les subventions qui pourraient être payées au titre de cette loi réalisent vraiment tous les objectifs et maintiennent la situation des provinces de l'Atlantique.

Vous pourriez peut-être considérer la situation dans son ensemble et procéder en conséquence. Peut-être devriez-vous étudier chacune des denrées, et y appliquer le montant des subventions voulues? Il y a le pour et le contre de chacune des méthodes, mais il faut une certaine souplesse, qui n'existe pas dans la loi actuelle.

M. Nowlan: D'après l'expérience que vous avez de la loi actuelle et du travail d'équipe, m'approuveriez-vous si je disais que les premiers ministres provinciaux—et qui ont comme avant l'accord unanime, comme monsieur Higgins l'a dit—vont proposer des lignes de conduite plus souples à l'avenir, pour les chemins de fer ou le camionnage, si vous proposez que l'on permette aux camionneurs de recevoir une telle aide?

M. Dickson: Oui, vous pouvez en conclure ainsi, monsieur Nowlan.

M. Nowlan: Je sais que ce sera une réponse des plus intéressantes d'essayer d'y voir parce que j'imagine que les gens essaient de savoir ce qu'il en est depuis un bon moment.

Mais j'aurais deux questions dont l'une, très brève, qui pourraient donner lieu à tout un ensemble de problèmes, mais enfin, monsieur Dickson ou monsieur Crosby peut sans doute me fournir une réponse rapide.

Monsieur Crosby en a déjà parlé en tant que président de la Commission des transports des provinces Maritimes et à titre personnel, en tant qu'expéditeur dans cette

[*Text*]

been vastly over-rated, and that they are about 5 per cent of the cost involved? I am separating transport cost from the whole distribution cost.

Mr. Crosby: No, I do not.

Mr. Nowlan: Do you think that the EIU have understimated?

Mr. Crosby: Yes, they underestimated. It is a very important factor in my own business. Twenty per cent of our sales dollars pays for transportation costs.

Mr. Nowlan: You are one of the few companies in Saint John that ship across the nation, is that correct? And you would say that the 5 per cent is underestimated by the EIU?

Mr. Crosby: Very definitely.

Mr. Nowlan: The next question is a large general question, and I do not want to provoke this whole group into another item. But what I have never been able to understand, Mr. Dickson and Mr. Crosby, along with everyone else around this table, is why the St. Lawrence ports and the Atlantic ports basically have the same rate structure. In a few simple sentences, can you tell us why we do not have any geographic advantage, being stuck out here in the Atlantic?

Mr. Dickson: No, I cannot.

Mr. Nowlan: Is there an international combine? Who does it?

Mr. Dickson: It is set by the steamship lines in their ocean steamship conferences?

Mr. Nowlan: Is this something that the anti-trust people should look at?

Mr. Dickson: They have.

Mr. Nowlan: When was the last time anyone looked at this?

Mr. Dickson: There is a report by the Restrictive Trade Practices Commision. I think it was tabled sometime in 1967, but I am a little hazy on my dates here.

Mr. Nowlan: Has the MTC done any study on this problem or were they an observer, or

[*Interpretation*]

région. Est-ce qu'il s'accorde avec l'EIU pour dire que les frais de transport sont surévalués, ce qui représente 5 p. 100 du coût en cause. Je fais une distinction entre les frais de transport et les frais de toute la distribution.

M. Crosby: Non.

M. Nowlan: Alors croyez-vous que l'EIU a sous-estimé la situation?

M. Crosby: Oui. Ils ont sous-estimé la situation. C'est un facteur très important dans mon entreprise. 20 p. 100 de nos ventes servent à payer les frais de transport.

M. Nowlan: N'êtes-vous pas l'une des rares sociétés de Saint-Jean qui expédie à travers le pays? Vous dites qu'il y a une sous-évaluation de 5 p. 100 de la part de l'EIU.

M. Crosby: Sans aucun doute.

M. Nowlan: La question suivante est une question d'ordre général. Je ne veux pas provoquer tout ce groupe sur une autre question mais je n'ai jamais pu comprendre, monsieur Dickson et monsieur Crosby comme tous ceux qui sont ici présents, à savoir, pourquoi les ports du Saint-Laurent et les ports de l'Atlantique ont essentiellement la même tarification. En quelques phrases très simples, pourriez-vous nous dire pourquoi nous n'avons pas d'avantages géographiques du fait que nous sommes ici dans l'Atlantique?

M. Dickson: Non, je ne saurais le faire.

M. Nowlan: Est-ce qu'il n'y a pas une coalition sur le plan international? Qui la fait?

M. Dickson: Est-ce décidé par les compagnies de navigation maritime au cours de leurs conférences?

M. Nowlan: N'est-ce pas là une question que les gens qui s'opposent au Trust devraient étudier?

M. Dickson: Ils l'ont fait.

M. Nowlan: Alors quand a-t-on étudié la question pour la dernière fois?

M. Dickson: Il existe un rapport préparé par la Commission des pratiques restrictives du commerce. Je pense que ce rapport a été déposé au cours de l'année 1967. Mais les dates ne me sont pas trop précises pour l'instant.

M. Nowlan: Est-ce que la CTM a fait une étude de ce problème, ou en était-elle obser-

[*Texte*]

did they have a friend in court or wherever his hearing was held?

Mr. Dixon: Along with the Port of Halifax Commission, I appeared before that Restrictive Trade Practices Commission inquiry, and we brought this particular situation you mention to their attention. I must admit not having studied and followed up that Restrictive Trade Practices Commission report as fully as we perhaps should have. If we can get rid of some of the LCL problem and freight rate freezes and so on, perhaps we will have time to look at some of these other things.

Mr. Nowlan: One last question. Is it possible, perhaps not for this present tour, to get copies of the Restrictive Trade Practices Commission report on this question of St. Lawrence ports versus Atlantic ports, and why we charge the same rates?

Mr. Dixon: I have the report in the office. It is available from the Queen's Printer.

The Chairman: Gentlemen, this completes the hearing of the Maritime Transport Commission and I would like to thank them.

For the benefit of the Committee, you know we are still one brief behind, so we will adjourn until 8 o'clock.

EVENING SITTING

The Chairman: Gentlemen, I see a quorum.

Mr. McGrath: Mr. Chairman, I say this with great respect. We have been sitting since 9.30 this morning. We had a long exhaustive day, we heard quite a number of briefs, we had a considerable amount of examination and cross examination of people presenting briefs, we have a very long week ahead of us with many briefs to be heard both here, in Halifax and St. John's, and I submit to you that we should give serious consideration to taking into account the people who have to appear before us and the members of the Committee who have to hear briefs and examine the people who appear before us. I say to you with great respect that the mind can only stand as much as the posterior. We have been sitting a long day and I do feel that we should curtail our hearings considerably. Really, one can only

[*Interprétation*]

vatrice, ou avait-elle un ami au tribunal ou à l'endroit où l'audience a eu lieu?

M. Dickson: De concert avec la Commission du port de Halifax, j'ai témoigné à l'enquête de la Commission des pratiques restrictives du commerce, et j'ai signalé cette situation. Je dois reconnaître que je n'ai pas étudié et suivi le rapport de la Commission comme j'aurais dû peut-être le faire. Si nous pouvions nous débarrasser de quelques problèmes relatifs au transport de chargements incomplets et des immobilisations du tarif-marchandises et ainsi de suite, nous aurions peut-être plus de temps pour nous occuper de quelques autres questions.

M. Nowlan: Une dernière question. Serait-il possible même, peut-être pas maintenant au cours de ce premier tour, d'obtenir des copies du rapport de l'enquête de la Commission des pratiqqes restrictives du commerce pour établir la comparaison entre les ports de l'Atlantique et les ports du Saint-Laurent, et pour voir pour quelle raison nous avons le même tarif.

M. Dickson: J'ai le rapport au bureau. On peut se le procurer chez l'Imprimeur de la Reine.

Le président: Messieurs, ceci met fin à l'audience de la Commission des transports des provinces Maritimes. J'aimerais vous remercier. Pour la gouverne du comité, il y a toujours un mémoire en retard. Donc la séance est levée et nous reprendrons à 8 heures.

SÉANCE DU SOIR

Le président: Messieurs, je vois que nous avons quorum. Oui, monsieur McGrath?

M. McGrath: Monsieur le président, je dis ceci en tout respect, nous siégeons depuis neuf heures et demie ce matin. Nous avons eu une journée très longue, très fatigante. Nous avons entendu un nombre considérable de mémoires. Nous avons subi l'examen et le contre-interrogatoire des témoins qui nous ont présenté des mémoires. Nous avons beaucoup de mémoires qui nous attendent tant ici, qu'à Halifax, et à Saint-Jean, et je prétends donc que nous devrions peut-être augmenter, étudier sérieusement le cas des membres du Comité qui doivent interroger les personnes qui ont comparu devant nous, et je vous dis donc en tout respect que l'esprit et le postérieur ont leurs limites.

Nous avons eu une trop longue journée, et honnêtement, je crois que nous devrions peut-être raccourcir considérablement nos

[*Text*]

absorb so much. If we are to continue all through the week in this manner I feel, with great respect, that we will miss an awful lot of what is being said in the presentation of briefs and the evidence in connection with those briefs.

The Chairman: Thank you, Mr. McGrath. We will take your point of order into consideration.

Mr. Allmand: Mr. Chairman, while I sympathize with the point raised by Mr. McGrath, we have already organized this trip, we have arranged for witnesses to appear in the evening and I do not think we can disappoint any of them. I feel we have to go on.

I would prefer to have our lunch and supper hours free to relax rather than schedule too many events then.

Honestly, I do not see how we can change the schedule. I feel it is set and we have to go through with it as it is.

The Chairman: It would be very difficult to change the schedule because everyone who had a brief to present was notified ahead of time. We are going to ask these people to make a short summary of their brief. I think we should come to an understanding, Mr. McGrath, in that regard. In this way it will be possible to hear them.

Tonight we are going to hear the brief of the City of Moncton. This brief will be presented by His Worship, Mayor L. C. Jones. Mr. Jones has with him a few of the city councillors.

Mayor L. C. Jones (Mayor of the City of Moncton): Mr. Chairman, I have with me Deputy Mayor Jean-Paul Leblanc and our consultant, Mr. H. A. Fredericks, a mining consultant. Several members of our City Council are also present.

The Chairman: I believe Mr. Harvey, Mr. Cormier and Mr. Cyr are also present. We are pleased to have you with us.

Mr. Jones: Mr. Chairman, we prepared and submitted for your examination already a brief in February 1968. I believe you already have included this in the Minutes of your Proceedings and Evidence. But since that time we prepared a summary with additional tables. These are mostly tables that you have. We have revised and up-dated this brief with

[*Interpretation*]

audiences. Évidemment, on ne peut en endurer plus. Si nous devons continuer pendant toute la semaine au même train, j'ai l'impression, qu'en tout respect, nous allons manquer beaucoup de ce qu'on nous dit dans la présentation des mémoires, dans la présentation des témoignages qui se rapportent aux mémoires.

Le président: Merci, monsieur McGrath. Nous allons certainement prendre en considération le point que vous avez soulevé.

M. Allmand: Bien que je sois sympathique avec le point soulevé par M. McGrath, étant donné que nous avons déjà organisé le programme de notre voyage, nous nous sommes entendus pour que les témoins doivent comparaître pendant la veillée, et nous ne pouvons pas les décevoir. Il faut certainement continuer.

Personnellement, j'aurais préféré que nos déjeuners et nos heures de souper soient libres pour nous reposer un peu plutôt que d'avoir des réceptions. Honnêtement, je ne crois pas que nous puissions changer l'horaire. Il est déjà établi et il faut que nous continuions.

Le président: Personnellement, je trouve qu'il serait très difficile de changer notre horaire. Il y a beaucoup de personnes qui ont été prévenues d'avance. Ils sont venus ici, nous leur demandons de résumer leur mémoire, et alors, je crois que nous pourrions peut-être en arriver à une entente avec ces personnes qui ont présenté un mémoire, afin de les raccourcir le plus possible, et ainsi, nous pourrions tous les entendre. Ce soir, nous aurons le mémoire de la Ville de Moncton, mémoire qui sera présenté par son Honneur le maire M. L. C. Jones. Je crois que M. L. C. Jones est ici accompagné de certains conseillers municipaux.

M. L. C. Jones (maire de Moncton): J'ai demandé à notre conseiller, M. H. A. Fredericks de nous accompagner, j'ai aussi certains membres de notre Conseil, dont M. J. P. Leblanc.

Le président: Nous avons aussi M. Harvey et M. Cormier ainsi que M. Cyr. C'est un plaisir de vous avoir parmi nous.

M. Jones: Monsieur le président, nous avons préparé et soumis à votre examen un mémoire en février 1968. Je crois que vous l'avez inclus dans le compte rendu que vous avez déjà devant vous. Mais depuis ce temps, nous avons préparé un résumé avec d'autres tableaux de données statistiques. Nous l'avons revisé, mis à jour avec les renseigne-

[*Texte*]

new information that we have had made available to us. If these could be circulated we could go through this very, very quickly and then if there are any questions I am certain that we will make every effort to answer them as succinctly and clearly as possible.

This presentation this evening will bear heavily on the content of our past brief, but with special emphasis on the major points which we consider pertinent after the passing of another year, and considering the impact of freight policies and costs during that period. It was necessary in preparing our presentation, to up-date the information supporting our previous brief.

In the course of these exercises, we have learned that the inequitable rates in effect last year have, in most cases, increased transportation costs for industries and retail establishments in the Moncton Area, and the dependence of the City on transportation has also increased.

We would be remiss in our public duties if we did not point out to you at this time that the time allowed between the completion of arrangements for your hearings and the deadline for submission of briefs was not sufficient to allow many of the industries in the Moncton area an opportunity to prepare their case. We were only able to prepare our revised information by a continuing staff effort which included evenings and weekends. It is evident to us that much more attention must be given to assessing the impact of present freight costs on the manufacturing and distribution industries in this area.

Incidentally, before proceeding with the additional part of my brief, I should comment that we have heard some of the other presentations today and our City Council has already gone on record as supporting for various reasons, some of which are economic, the Chignecto Canal. We believe this to be one of the most important things for our city and the Atlantic region generally, particularly the Province of New Brunswick.

Some reference was made during the presentations here today to a corridor road. We favour a corridor road but not the particular one mentioned by previous applicants.

1. The City of Moncton, which is commonly called "the transportation center of the Atlantic Region," derived $38.6 per cent of revenue from tax assessments from transportation, manufacturing, and distribution

[*Interprétation*]

ments qui nous étaient disponibles. Si on pouvait en faire la distribution, nous pourrions peut-être le faire assez rapidement. S'il y avait des questions, nous pourrions peut-être y répondre de façon très succincte.

Cette présentation de ce soir influe beaucoup sur le contenu de notre mémoire antérieur, mais surtout avec insistance sur les points les plus importants qui se sont développés depuis une année. Nous considérerons l'influence des taux de marchandise et les frais de transport au cours de cette période.

En préparant notre mémoire, il fallait tenir compte de la date de la préparation de notre ancien mémoire. Au cours de cet exercice, nous avons appris que les taux en vigueur l'an dernier, dans la plupart des cas ont augmenté les frais de transport pour les industries et les détaillants de la région de Moncton. Et la dépendance de la ville sur les transports a aussi augmenté.

Nous manquerions à notre devoir public si nous ne signalions pas à l'heure actuelle que le temps entre la fin des dispositions prises pour votre audience et la présentation du mémoire n'a pas été suffisant pour permettre à plusieurs industries de la région de Moncton de préparer leur cause. Nous n'étions capables de présenter la revision de nos renseignements que grâce à un effort de personnel continu qui comprenait les soirées et les fins de semaine. Il est manifeste aussi que beaucoup plus d'attention doit être donnée à l'évaluation de l'influence des frais actuels de transport des marchandises sur la fabrication et la distribution des industries de cette région. Avant de continuer le mémoire, je devrais peut-être dire que nous avons entendu certaines autres présentations aujourd'hui, et notre Conseil municipal s'est déjà prononcé en faveur, pour de nombreuses raisons économiques, du canal de Chignecto. Nous croyons que c'est l'une des choses les plus importantes pour notre ville et pour la région de l'Atlantique en général, et tout particulièrement pour la province du Nouveau-Brunswick.

On a fait une certaine allusion au cours des présentations de mémoires aujourd'hui, au corridor routier, mais non pas celui qui a été mentionné par ceux qui ont présenté des mémoires auparavant. La ville de Moncton, qu'on appelle communément le centre des transports de la région de l'Atlantique, tire 38.6 p. 100 des revenus de l'évaluation des taxes des industries du transport, de la

[*Text*]

industries in 1968. This compares with 37.8 per cent in the year 1967. (see Appendix I)

2. Of the total wages and salaries earned in the Moncton areas in 1967, 27.9 per cent were earned directly in transportation employment. This compares to 22.3 per cent in 1965.

In the two-year period, total earnings in transportation have increased by some $5.8 million. This is due to a combination of increases in rates of pay by the railway (approx. 72 per cent of the amount) and increased employment in other transportation activities.

3. Total freight and mail handled through the Moncton airport in 1967 amounted to 6.5 million pounds and 1.7 million pounds respectively. This represents an increase in total volume over 1965 of .4 million pounds. Rail freight carload tonnage for the period 1963 to 1967 for Moncton is shown in the chart which we included here:

MONCTON FREIGHT CARLOAD TONNAGE

	Originated	Terminated
1963	73,000	370,000
1964	67,000	380,000
1965	61,000	412,000
1966	62,000	404,000
1967	49,523	379,000

4. The City of Moncton, based on the most recent statistics available for 1967 and 1968 was more dependent on the transportation industries than ever before, and this level of dependence will continue.

TRANSPORTATION POLICIES AND COSTS IN PERSPECTIVE SUMMARY

5. The City of Moncton supports the principle of the Atlantic Provinces Task Force on Transportation which provides a basis for the first time in the Atlantic Region for a coordinated examination of the policies of regional transportation, a national transportation policy as it influences the region, and the transportation network of the region. However, we are at a disadvantage to comment further due to the lack of knowledge of action taken, conclusions reached, or recommendations to be made except as reported by Mr. Higgins today. We certainly have not been consulted in this regard as a municipality.

[*Interpretation*]

fabrication et de la distribution en 1968. Ceci se compare avec 37.8 p. 100 dans l'année 1967, ce qui serait expliqué à l'annexe 1. Du total des salaires gagnés dans la région de Moncton en 1967, 27.9 p. 100 ont été gagnés directement dans le domaine des transports. Ce qui se comparaît à 22.3 p. 100 en 1965.

Au cours de la période de 2 ans, le total des revenus dans les transports a donc augmenté de quelque 5.8 millions de dollars. Ce qui est dû principalement à un combiné des augmentations dans les taux de salaires payés par les chemins de fer, environ 72 p. 100 de la somme, ainsi qu'un emploi accru dans d'autres secteurs des transports.

Le total des marchandises et du courrier manutentionné grâce à l'aéroport de Moncton en 1967, se chiffrait par 6.7 millions de livres et de 1.7 million de livres respectivement. Ceci représentait à la fois une augmentation en volume sur 1965—.4 million de livres.

Le tonnage ferroviaire pour la période allant de 1963 à 1967 pour la ville de Moncton s'établit comme suit:

	Au départ	A l'arrivée
1963	73,000	370,000
1964	67,000	380,000
1965	61,000	412,000
1966	62,000	404,000
1967	49,523	379,000

La ville de Moncton, se fondant sur la statistique récente disponible pour 1967 et 1968 dépendait beaucoup plus sur les industries de transport qu'auparavant. Et ce niveau de dépendance se continuera.

Maintenant, un résumé en perspective de la politique des transports et les coûts. La ville de Moncton appuie le principe de l'équipe de travail sur les transports pour les provinces de l'Atlantique, qui prévoit, pour la première fois, dans la région, un examen coordonné des politiques en matière de transport régional, de la politique nationale en matière de transport, tel qu'elle influence la région, et le réseau de transport de la région. Toutefois, nous sommes désavantagés pour commenter plus à fond en raison du manque de renseignements, les mesures déjà prises, les conclusions auxquelles on est arrivé ou les recommandations qui ont été formulées. Et nous n'avons pas été consulté en temps que municipalité.

[*Texte*]

6. It is clear that the development of competition has completely undermined the rate relationship which the Maritime Freight Rates Act was designed to maintain. The relationship between rates in the Atlantic Provinces and Central Canada has altered in favour of Central Canada.

Thus the Maritime Freight Rates Act has not fulfilled the twin objectives of (a) maintaining a statutory rate advantage in the Atlantic Provinces, and (b) affording to "Maritime merchants, traders and manufacturers the larger market of the whole Canadian people instead of the restricted market of the Maritimes...." Preamble to MFRA, April 14, 1927)

The MacPherson Commission recommended that (a) subsidies on west-bound shipments be extended to all modes of transportation, (b) the subsidy on movements wholly within select territory be abolished, and (c) the subsidy on movements within, to, and from, Newfoundland and select territory be retained.

The National Transportation Act originated directly from the recommendation of the MacPherson Commission. National Transportation Policy may be defined as "making the best use of all available modes of transportation at the lowest possible cost".

While the terms of National Transportation Act follow the MacPherson Commission on railway rate regulations, the protection to shippers in non-competitive areas is not as broad as recommended by the Commission. This protection is of little value as witnessed by the lack of applications to become a "captive shipper" after the legislation has been in effect for two years.

There is increasing evidence that the rate-setting flexibility allowed under the Act will abolish some of the traditional features which have been beneficial to shippers in this area. These features were aimed at reducing the distance and isolation of the Atlantic Provinces from the rest of Canada. The most important one of these features is the system of "arbitraries" on shipments into and out of the region east of Montreal.

11. The National Transportation Act, for the first time, provides a basis for transportation services to reflect, in rates charged, the

[*Interprétation*]

Il est clair que le développement de la concurrence a complètement miné le rapport des taux que la Loi sur les taux de transport des marchandises des Maritimes était destinée à maintenir. Le rapport entre les taux dans les provinces atlantiques et le centre du Canada a été modifié en faveur du centre du Canada.

Donc, la loi n'a pas rempli son double objectif, tout d'abord, maintenir un avantage statutaire des taux dans les provinces atlantiques, deuxièmement, de donner aux marchands des Maritimes, aux manufacturiers et aux commerçants un plus large marché dans l'ensemble du Canada au lieu de restreindre le marché aux Maritimes.

La Commission McPherson recommandait que: a) les subventions sur les expéditions vers l'Ouest soient étendues à tous les modes de transport; b) que la subvention sur les expéditions à l'intérieur du territoire sélectionné soit abolie; et c) que la subvention sur les expéditions à l'intérieur, vers ou de Terre-Neuve et le territoire sélectionné soit conservée. La loi nationale sur les taux de transport de marchandises dans les provinces Maritimes originait directement des recommandations de la Commission McPherson. La politique nationale en matière de transport peut être définie comme visant à employer au maximum tous les modes de transport disponibles au coût le plus réduit possible.

Bien que les termes de la Loi nationale sur les taux de transport de marchandises dans les provinces Maritimes suivent les recommandations de la Commission McPherson en ce qui concerne les règlements au sujet du tarif-marchandises, la protection donnée aux expéditeurs dans les aspects non concurrentiels n'est pas aussi vaste que le recommandait la Commission. Cette protection est de peu de valeur comme en fait foi le manque de demandes pour être un «expéditeur captif» après que la Loi ait été en vigueur depuis plus de deux ans.

Celle-ci voulait diminuer l'isolation des provinces de l'Atlantique du reste du Canada et l'aspect le plus important, c'est le système des expéditions «arbitraires» de et vers une région située à l'est de Montréal. Pour la première fois, la Loi nationale sur les transports reflète ce changement. Et évidemment, la situation économique des fabricants et des distributeurs des provinces de l'Atlantique est désavantagée en comparaison de leurs concurrents du centre du Canada, ce qui est contraire à l'intention au moment de la Confédération et au but de la Loi sur les taux de

[*Text*]

cost of these services. The economic position of the manufacturers and distributors in the Atlantic Provinces is at a disadvantage compared to this competitor in Central Canada. This is contrary to the intent at the time of Confederation and the purpose of the Maritime Freight Rates Act.

12. The two year rate freeze on non-competitive carload class and commodity rates under Section 335 of the Railway Act, which expires on March 23, 1969, will immediately bring about significant increases in these rates in the Atlantic Provinces, not only by adjustments because of the 6 to 12% increases effective elsewhere in Canada on May 4, 1967, the increases of 2 to 5% on class rates effective elsewhere in Canada on May 1, 1968 but other major cost adjustments applicable to the Atlantic Provinces as well. When this freeze expires, all the rates become compensatory under the definitions of the Act, and in the absence of special measures, will bring about major increases in this region.

13. All LCL Rates on goods originating outside the Atlantic Provinces were cancelled on January 1, 1969. These rates based on the previous service are still advantageous to certain manufacturing operations in the region including shoe manufacturers, boat and pleasure craft manufacturers, and luggage manufacturers.

14. Another major influence on rates in this region is the three year phasing out of the so-called bridge subsidy to begin March 23, 1968. Since rates will become compensatory, the application of this loss of revenue, which is $7 million in three years, would be recovered in rate increases. This subsidy was applied to reduce LCL and non-competitive carload rates between Eastern and Western Canada.

15. The influence of transportation policies and costs on the expansion of existing industry and the location of new industry both in Moncton and throughout the region is vital. Attention is directed to the information in our previous brief, especially paragraphs 82, 90, 91, 92, and 93.

16. It is important to emphasize here that the vital significance of a transportation policy to afford access to markets from the Atlantic Provinces as a necessary base to economic activity. In a ten year survey of 6,000 re-located companies between 1953 and

[*Interpretation*]

transport des marchandises dans les provinces Maritimes.

Le gel de deux ans sur la catégorie d'une wagonnée et les taux des denrées en vertu de l'article 335 de la Loi sur les chemins de fer qui expire le 23 mars 1969, apporteraient immédiatement des augmentations considérables dans ces taux pour les provinces de l'Atlantique, non seulement par des ajustements en raison de 6 p. 100 à 12 p. 100 en vigueur dans les autres régions au Canada le 4 mai 1967, l'augmentation de 2 à 5 p. 100 sur les taux de classes à compter du 1er mai 1968 au Canada ailleurs, mais aussi bien sur les accommodements majeurs de coûts applicables aux provinces de l'Atlantique. Lorsque le gel expire, tous les taux doivent être compensatoires en vertu des définitions de la Loi et, en l'absence de mesures spéciales, amèneront des augmentations majeures dans cette région.

Tous les taux de moins d'une wagonnée sur les denrées dont l'origine provient de l'extérieur des provinces de l'Atlantique ont été annulés le 1er janvier 1969. Ces taux fondés sur le service antérieur étaient toujours avantageux pour certaines opérations des industriels de notre région, y compris les fabricants de chaussures, de navires de plaisance et de valises.

Une autre influence majeure sur les taux dans cette région a été l'expiration échelonnée sur trois ans de la subvention pour les ponts à compter du 23 mars 1968. Étant donné que ces taux deviendront compensatoires, l'application de ce manque de revenus, qui est de 7 millions en trois ans, doit être récupéré en augmentations de taux. Cette subvention est applicable pour réduire les taux de wagonnées non concurrentiels, et de moins d'une wagonnée entre l'est et l'ouest du Canada.

Il est important d'insister ici sur la signification vitale d'une politique de transport pour donner l'accès au marché des provinces de l'Atlantique comme étant une base nécessaire à l'activité économique. Dans une étude de dix ans de 6,000 compagnies qu'on a

[*Texte*]

1963 in United States, access to markets by competitive transportation costs and availability of transportation facilities were given priority and placed ahead of such items as financial aid incentives, favourable tax structure, plant site, and an industrial centre of service by the majority of firms.

17. The progress made toward further port development and increased traffic volume since our last brief is recognized. The movement of additional volumes of cargo by rail containers will benefit Moncton, by increased use of present facilities.

18. In summary, present problems being faced by all manufacturers, distributors and retailers in the Moncton area and in the region, continue to cause severe restrictions on economic activity and on the profitability of these enterprises. A solution must be found within our National Transportation Policy.

EFFECTS OF NEW NON-CARLOAD RATES IN INDUSTRIES SHIPPING THROUGH MONCTON

19. In measuring the present impact of the new non-carload rates, consideration has been given to all factors including the optional class rates still available in the region with additional pick-up and delivery charges. However, these represent excessive costs to all the industries in our analysis.

20. The comparative importance of rail LCL services in the Atlantic Provinces is illustrated in Appendix III Revised. The per-capita use of rail LCL services as reported in the 1967 statistics show some major reductions from 1966 across Canada. The reasons are not immediately available because this trend appears to have started before the impact of the new LCL rates. The dependency on LCL services in the Atlantic Provinces is almost double the average for all Canada based on tons per capita. Thus, the impact of these new rates is far greater in this region.

21. The information set out in our previous brief relative to the impact of the new LCL rates still applies. For information we ask you to refer to Table I as revised hereto.

[*Interprétation*]

déménagées entre 1953 et 1963 aux États-Unis, l'accès au marché en raison des frais de transport concurrentiels et la disponibilité des transports ont reçu la priorité et ont été placés avant des stimulants en aide financière, des structures de taxes favorables, des emplacements d'usines.

Ce progrès vers un développement des ports et l'augmentation du trafic depuis notre dernier mémoire est aussi reconnu. Le transport supplémentaire par containers sera bénéfique pour la ville de Moncton.

Pour résumer, le problème actuel de tous les fabricants et distributeurs et détaillants de Moncton et de la région continue à causer de sévères limitations de l'activité économique et sur la rentabilité de ces entreprises. On doit donc trouver une solution à l'intérieur même de notre politique nationale de transport. Notre problème, c'est la création de nouveaux taux de moins d'une wagonnée pour les industries qui expédient en passant par Moncton.

En mesurant l'influence actuelle des nouveaux taux de moins d'une wagonnée ou des lots brisés, on doit étudier tous les facteurs, y compris le choix des catégories qui est toujours disponible dans la région en raison des frais supplémentaires de la livraison et de la cueillette. Toutefois, ceux-ci représentent des frais excessifs pour toutes les industries qui figurent dans notre analyse.

L'importance comparative des services de moins d'une wagonnée à l'annexe 3 revisée. Le per capita des services ferroviaires de moins d'une wagonnée tel que rapporté dans les statistiques de 1967 indique une réduction majeure par rapport à 1966 à travers le Canada. Les raisons ne sont pas immédiatement disponibles en raison du fait que ces tendances semblent avoir commencé avant que l'influence du nouveau taux de moins d'une wagonnée se fasse sentir. Par conséquent, l'influence du service de moins d'une wagonnée dans les provinces de l'Atlantique est presque le double de la moyenne pour tout le Canada en se fondant sur les tonnes par habitant. Ainsi, l'influence de ces nouveaux taux est beaucoup plus grande dans notre région.

Les renseignements donnés dans notre mémoire précédent relatifs à cette influence de ces nouveaux taux continuent à s'appliquer. Pour de plus amples renseignements, voir le tableau 1 revisé.

TABLE I

SUMMARY INFORMATION OF EFFECTS OF NEW NON-CARLOAD RATES ON INDUSTRIES SHIPPING FROM AND THROUGH MONCTON—REVISED

( ) Indicates Regional or National Shipping Cost Problems

No.	Type of Industry	No. of Employees	Market Area	Effect of Non-Carload Rates	Notes of Explanation
1.	Engine Rebuilders..... (Regional)	70	74% sales in N.B., N.S., and P.E.I., 26% in Nfld.	Freight costs to Newfoundland have averaged 7½% of selling price in past years operation, up from 5% the previous year.	Have been forced to absorb the increased cost of freight to Newfoundland in order to maintain sales volume. Cannot increase prices because we must meet competition from Montreal. Freight from Montreal by water is less than by our only means of reaching the market—by rail. We return motor cores by truck because it is cheaper. If freight costs were level with Montreal we could increase our sales volume and employment, and if freight costs were reduced within the Maritimes, we could increase our volume in this area.
2.	Metal Fabrication..... (Regional)	135	N.B., N.S., and P.E.I.	Increased freight on tanks is up on average of 78% to 148%	Tanks account for 50% of production. The increases shown in the original brief are still applicable. We note increased competition from Quebec manufacturers who can ship into the region by pool car at less than our interregional freight costs. This is not only applicable to Newfoundland but the Maritimes as well. Alternative truck services costs are the same as rail. We cannot expand our production under existing conditions.
3.	Distribution of Plumbing & Heating Equipment (National—Regional)	60		Costs remain the same	Conditions are unchanged, except improvement in truck services.
4.	Manufacturers of Luggage	80	Atl. Prov. 25%, Central Canada 75%	Costs increased again in December 1968	The Piggyback rate to Toronto increased again in December, bringing our costs to an average of .20 per unit. This has a direct effect on our ability to compete in that market. We must absorb our trucking costs to the freight shed in addition.
5.	Manufacturers of Electric Ranges	370		Same conditions still prevail	We emphasize our additional burden on raw materials, freight costs, which will increase again this year.
6. to 15.				Same conditions still prevail	
16.	Manufacturers of Wire Fence	36	N.B., N.S., and P.E.I.	Same conditions still prevail	Freight from Montreal to Newfoundland by water has reduced our sales in Newfoundland, we cannot compete.

TABLEAU I

RÉSUMÉ DES EFFETS QUE LES NOUVEAUX TARIFS DES WAGONNÉES INCOMPLÈTES ONT SUR LES INDUSTRIES DONT LA PRODUCTION EST EXPÉDIÉE À PARTIR DE OU PAR MONCTON—RÉVISÉ

La mention entre parenthèses indique s'il s'agit d'un problème de transport à l'échelle de la région ou de tout le pays

Nº	Genre d'entreprise	Nombre d'employés	Débouchés	Effet des tarifs des wagonnées incomplètes	Notes explicatives
1.	Remise à neuf des moteurs (Régional)	70	74 p. 100 des ventes se font au N.-B., en N.-É., et dans l'Î.-P.-É.; 26 p. 100 à Terre-Neuve.	Le tarif du transport des marchandises vers Terre-Neuve équivalait en moyenne à 7½ p. 100 du prix de vente au cours des dernières années, alors que l'année précédente, il représentait 5 p. 100	Nécessité d'absorber la hausse du tarif-marchandises vers Terre-Neuve afin de maintenir le volume des ventes. Impossibilité d'augmenter les prix en raison de la concurrence avec Montréal. Le transport par voie d'eau coûte moins de Montréal que par notre seul moyen d'atteindre le marché, soit le chemin de fer. Nous retournons les moteurs par camion parce que c'est plus économique. Si le tarif-marchandises équivalait à celui de Montréal, nous pourrions augmenter le volume des ventes et la main-d'œuvre, et si le tarif était réduit dans les provinces Maritimes, nous pourrions augmenter notre volume de ventes dans cette région.
2.	Produits en métal..... (Régional)	135	N.-B., N.-É., et Î.-P.-É.	La hausse des frais de transport des réservoirs varie en moyenne entre 78 et 148 p. 100.	Les réservoirs représentent 50 p. 100 de la production. Les augmentations qui figuraient dans le mémoire original s'appliquent toujours. Nous remarquons une concurrence accrue de la part des fabricants du Québec, qui peuvent expédier vers la région au moyen de wagons en commun, à un taux inférieur à notre tarif-marchandises interrégional. Cela ne s'applique pas uniquement à Terre-Neuve, mais aussi aux provinces Maritimes. Les frais de service par camion sont les mêmes que par chemin de fer. Nous ne pouvons pas améliorer notre production dans les conditions actuelles.
3.	Distribution de matériel de plomberie et de chauffage. (National-Régional)	40		Le coût reste inchangé	Les conditions sont les mêmes, à l'exception d'une amélioration des services par camion.
4.	Fabricant des mallettes	80	Provinces atlantiques 25 p. 100; centre du pays: 75 p. 100.	Le coût a encore augmenté en décembre 1968	Le tarif du transport par piggyback jusqu'à Toronto a encore augmenté en décembre, ce qui a porté nos frais à une moyenne de 20 cents l'unité. Cela se répercute directement sur notre pouvoir concurrentiel sur ce marché. Il nous faut absorber en outre nos frais de camionnage vers l'entrepôt à marchandises.
5.	Manufacturier de cuisinières électriques	370		Conditions inchangées	Nous attirons l'attention sur le fardeau supplémentaire que représente le transport des matières premières, dont le coût va encore augmenter cette année.
6. à 15.				Conditions inchangées	
16.	Fabricant de clôtures en treillis	36	N.-B., N.-É. et Î.-P.-É.	Conditions inchangées	Le coût de transport entre Montréal et Terre-Neuve par voie d'eau a fait baisser le volume de nos ventes à Terre-Neuve, de sorte que nous ne pouvons soutenir la concurrence.

No.	Type of Industry	No. of Employees	Market Area	Effect of Non-Carload Rates	Notes of Explanation
17. to 20.				Same conditions prevail	
21.	Home and Institutional Bedding	48	Atl. Prov.	Same cost conditions still prevail	The nature of our business required shipments by L.C.L. to a large extent. On some recent shipments in the Maritimes we have absorbed freight costs of $80.00 on $600.00 in sales. There is no alternative. These costs are far too high to continually absorb. Competition from outside the Maritimes have a freight cost advantage over us by pool car rates.
22. and 23.				Same conditions prevail	

TABLEAU I

RÉSUMÉ DES EFFETS QUE LES NOUVEAUX TARIFS DES WAGONNÉES INCOMPLÈTES ONT SUR LES INDUSTRIES DONT LA PRODUCTION EST EXPÉDIÉE À PARTIR DE OU PAR MONCTON—RÉVISÉ

La mention entre parenthèses indique s'il s'agit d'un problème de transport à l'échelle de la région ou de tout le pays

N°	Genre d'entreprise	Nombre d'employés	Débouchés	Effet des tarifs des wagonnées incomplètes	Notes explicatives
17. à 20.				Conditions inchangées	
21.	Literie pour le domicile ou les institutions	48	Provinces atlantiques	Conditions inchangées	Nos affaires nécessitent beaucoup d'expéditions par wagonnées incomplètes. Pour de récentes expéditions dans les provinces Maritimes, nous avons absorbé des frais de transport de marchandises de $80 pour $600 de ventes. Nous n'avons pas le choix. Ces tarifs sont beaucoup trop élevés pour que nous puissions continuellement les absorber. La concurrence que nous font les autres provinces est favorisée par le fait qu'elles peuvent bénéficier du tarif de transport par wagons en commun.
22. et 23.				Conditions inchangées	

COMPARISON OF THE CARLOAD RAIL RATES ON STEEL BARS FROM AMHERST, N.S., TO QUEBEC CITY WITH THE CORRESPONDING RATES FROM MONTREAL TO QUEBEC CITY

EFFECTS OF CARLOAD RATES ON INDUSTRIES LOCATED IN THE MONCTON AREA

22. Following the background of information contained in the brief of February 1968, Table II has been revised to reflect the changes in freight rates in carloads of three selected products.

23. These are examples of cases which contribute to locational disadvantage of the region for these manufacturing industries. The cost of freight limits expansion and diversification of the activities and employment opportunities.

SUMMARY OF EFFECTS OF NEW NON-CARLOAD RATES ON RETAILERS IN MONCTON

24. Based on the background of information contained in the brief of February, 1968, there is an even stronger case for suspension of the new LCL rates and rules of E.T.A. Tariff 100 until a more equitable formula for non-carload rates can be devised.

The costs attributed to household appliances, furniture, clothing, hardware, drugs, an food items must be passed on to the consumers in the area, and thus accounts for a considerably higher retail selling price on essential goods throughout the Atlantic Provinces, where the average per capita income is the lowest in Canada. The retail sales volume statistics continue to show a healthy retail sales market based on dollars, but we respectfully request Commissioners and members of the Committee to carefully consider the impact of these exorbitant, excessive, unconscionable and inequitable freight costs on the average wage-earners, which constitute the majority of our population. This area, the Atlantic region, is largely rural as compared to the concentrated areas of population and purchasing power in Central Canada.

RECOMMENDATIONS

25. The City of Moncton considers it important to repeat our previous statements contained in paragraphs 135 and 137 in the brief of February 1968, namely

> *"The Atlantic Provinces have never been included in a National Transportation Policy and have always been considered for special treatment and for*

[*Interpretation*]

EFFETS DES TARIFS DES WAGONNÉES COMPLÈTES SUR LES INDUSTRIES SITUÉES DANS LA RÉGION DE MONCTON

22. A la suite des renseignements fournis dans le mémoire de février 1968, le Tableau II a été révisé de manière à indiquer les changements des tarifs du transport par wagonnées complètes de trois produits sélectionnés.

23. Voilà des exemples de cas qui ont contribué à placer les industries de fabrication de la région dans une situation désavantageuse à cause même de l'endroit où elles sont établies. Le coût du transport des marchandises limite l'expansion et la diversification de l'activité et des possibilités d'emploi.

Un résumé des effets des nouveaux taux de moins d'une wagonnée sur les détaillants à Moncton, fondé sur les renseignements contenus dans le mémoire de février 1968, il y a là un cas encore plus sérieux pour suspendre les nouveaux taux de moins d'une wagonnée ainsi que le tarif E.T.A. 100 jusqu'à ce qu'on trouve une formule plus équitable pour les lots brisés.

Les coûts attribués aux appareils ménagers, aux meubles, vêtements, quincaillerie, drogues et denrées doivent être assumés par les consommateurs de la région et donc, représentent un prix de vente beaucoup plus élevé pour les denrées essentielles à travers les provinces de l'Atlantique, dans des régions où le revenu moyen per capita est le plus bas au Canada. Nous demandons aux membres du Comité d'étudier soigneusement l'influence de ces coûts de transport des marchandises qui pèsent sur le revenu moyen, qui constitue le niveau de salaire de la majorité de notre population. Cette région est largement rurale en comparaison des régions où la densité de la population et le pouvoir d'achat sont concentrés, comme au centre du Canada.

Dans les paragraphes 135 et 137 du mémoire de février 1968, vous trouverez ce qu'il y a de plus important dans nos recommandations, soit que les provinces de l'Atlantique n'ont jamais été incluses dans la politique nationale en matière de transport et ont toujours été considérées comme ayant un traitement spécial afin de réduire leur isole-

[*Texte*]

adjustments in efforts to reduce their isolation from central Canada by location and distance.

The National Transportation Act gives emphasis to the use of competition as the primary means for effecting the optimum allocation and use of transport resources. It is assumed that under such increased competition, the freight rates should reflect the costs of services. This being the case, the costs of the haul to and from the Atlantic Provinces should be reflected in the rate structure. *This is a complete reversal of the historic Federal Policy wherein measures were aimed at effectively reducing the distance"*

The evidence shows that the benefits of the Maritime Freight Rates Act were eroded as long ago as 1948, and the statutory advantage clause has never been effective.

Because of these facts and the other evidence contained in this brief and our brief of February 1968, the City of Moncton must point out the urgency of finding solutions to our transportation inequities as part of our National Policy. Transportation policy for the Atlantic Provinces wherein we are afforded the equivalent of the benefits outlined under Confederation are a necessary prerequisite to any further economic development in the Atlantic region.

26. We recommend that the Bulk Density Rule (Tariff E.T.A. 100) based on 10 lbs. per cubic foot and the new non-carload rates be cancelled until a planned transportation system is developed to meet the needs of the region's business enterprises. In studying conditions to form a basis for the planned transportation system much more work is required to examine the problems of industry in order that recommendations made provide a basis for expansion and diversification of our present business enterprises and a basis for location of other manufacturing and processing activity.

27. It is recommended that freight costs to the Atlantic Provinces shipper of shipments to Newfoundland be no higher than the water rate from Montreal to Newfoundland and that freight costs of shipments from Newfoundland to the other Atlantic Provinces be no higher than the costs of shipping by water from Newfoundland to Montreal.

28. It is recommended that immediate attention be given to the creation of a Special Task Force to conduct detailed analyses of

[*Interprétation*]

ment du centre du Canada en raison de la distance et de l'emplacement.

La Loi nationale sur les transports insiste sur l'usage de la concurrence comme étant le moyen principal d'atteindre une meilleure distribution et un meilleur emploi des ressources en matière de transport. Il est présumé qu'en vertu d'une concurrence accrue, les taux de marchandises devraient refléter les coûts de ces services. Si c'est le cas, les coûts à partir des provinces de l'Atlantique devraient se refléter dans la structure des tarifs, ce qui est complètement contraire à la politique fédérale historique qui voulait qu'on prenne des mesures pour effectivement réduire la distance.

Notre mémoire de 1968 l'indiquait. La ville de Moncton doit indiquer l'urgence de trouver des solutions pour les inégalités de frais de transport en raison de la politique nationale. La politique nationale en matière de transports pour les provinces Maritimes, où on nous accorde l'équivalent des avantages décrits pour la Confédération, sont nécessaires pour le développement économique futur de la région.

Nous recommandons que le règlement sur la densité des marchandises transportées en vrac fondé sur 10 livres par pied cube sur les nouveaux tarifs de moins d'une wagonnée soient annulés jusqu'à ce qu'on ait développé un réseau de transport planifié pour répondre aux besoins des régions où sont situées des entreprises commerciales. Afin d'étudier les conditions formant la base d'un réseau de transport planifié, il faudra accomplir d'autres travaux afin d'examiner le problème de l'industrie, pour que les recommandations puissent servir de base à l'expansion et à la diversification de nos entreprises actuelles, et de base à l'implantation d'autres activités de fabrication et de transformation. On recommande que les frais de transport des marchandises à partir des provinces de l'Atlantique ne soient pas plus élevés que le taux des Maritimes de Montréal à Terre-Neuve et que les frais de marchandises pour les expéditions de Terre-Neuve aux autres provinces de l'Atlantique ne soient pas plus élevés que les frais d'expédition par eau de Terre-Neuve à Montréal.

On recommande qu'une attention immédiate soit donnée à la création d'un groupe spécial de travail afin d'obtenir une analyse

[*Text*]

the present costs of freight to our regional manufacturers and distributors based on common terms of reference. The recent studies directed toward finding solutions to our transportation problems have not included adequate attention to these costs and this information is vital to the structure of any plan devised.

29. Since transportation requirements are variable by areas within the region, and different modes of transportation may more adequately and more economically serve the different areas of the region, it is recommended that a Transportation plan be developed around the most economical and best quality service to meet the requirements of each area, both for freight and passenger services.

30. It is recommended that consideration be given to providing special adjustment benefits to all modes of transportation within the region.

31. We recommend immediate attention to defining long term requirements for facilities at the Moncton Airport, considering present quantities of mail and freight, and considering the marked reduction in capacity to carry air cargo to Newfoundland when the Vanguard aircraft are replaced. The Moncton Airport now handles more mail and more air freight than the total volume handled at all other Maritime Airports. It is already used extensively as an alternate landing point to the Halifax International Airport because of more favourable prevalent weather conditions. For example, even the other day an Air France Boeing 707 landed in the Moncton Airport. Therefore, further runway extensions and terminal expansion should be undertaken immediately to bring the Moncton Airport up to international status or standards. We would like to be able, eventually, to handle jumbo jet aircraft by merely extending the existing facilities.

32. While we view the progress in development of Atlantic Ports as encouraging, it is still evident that a policy must be developed at the National level for the long term growth and stability of these facilities.

33. There is deep concern in the region because of the full year of delay in the hearing of the Parliamentary Committee on Transportation and Communications. During this time the application of new non-carload rates and density rules, and the immediate impact of the end of the rate "freeze" in March, 1969, combine to indicate the immediate necessity to take appropriate measures, to

[*Interpretation*]

détaillée des coûts actuels des marchandises à l'égard de nos fabricants et distributeurs régionaux, fondée sur un mandat commun. Les récentes études destinées à trouver des solutions aux problèmes de transport n'ont pas porté suffisamment attention à ces frais, et ces renseignements sont vitaux pour la structure d'un plan.

On recommande donc qu'un programme de transport soit développé afin de refléter la qualité la meilleure et la plus économique pour répondre aux besoins de chaque région en ce qui a trait aux marchandises et aux voyageurs. On recommande qu'un étude soit menée afin de prévoir des ajustement spéciaux à tous les modes de transport à l'extérieur de la région.

Nous recommandons une attention immédiate pour définir les besoins à long terme pour l'aéroport de Moncton, compte tenu des quantités actuelles de courrier et de messageries, et compte tenu aussi de la réduction marquée dans la capacité de transporter les cargaisons jusqu'à Terre-Neuve quand les appareils Vanguard seront remplacés. L'aéroport de Moncton est l'endroit où la manutention du courrier et de cargaisons aériennes est la plus élevée que le volume total manutentionné à tous les autres aéroports des Maritimes. On l'emploie en outre comme une piste d'atterrissage de rechange pour l'aéroport international d'Halifax en raison des conditions atmosphériques plus favorables. Donc on devrait agrandir les pistes d'envol ainsi que les bâtiments immédiatement afin que l'aéroport de Moncton soit conforme aux normes internationales.

Bien que nous considérions le progrès du développement des provinces Maritimes comme étant encourageant, il est toujours manifeste qu'une politique doit être développée à long terme pour la stabilité et la croissance de ces dispositifs. Nous nous préoccupons beaucoup dans la région, en raison du retard d'une année dans les audiences du Comité parlementaire, des transports et des communications. En même temps, la demande pour les nouveaux tarifs de moins d'une wagonnée et les règlements de densité et de capacité ainsi que l'influence immédiate à la fin du gel en mars 1969 se combinent

[*Texte*]

avoid a disastrous economic situation for this region.

34. We trust that the information and recommendations presented here in these briefs will be studied carefully and will contribute to a clear appreciation of the inequities prevalent in the Atlantic Provinces. Immediate solutions must be found within the framework of the National Policy which will remove the limitations on regional development caused by these excessive transportation costs in the Atlantic Region in an attempt to assist reducing regional disparity.

Thank you very much, Mr. Chairman.

The Chairman: Thank you very much, Mr. Mayor. Your brief was well presented.

Mr. Mahoney, have you any questions?

Mr. Mahoney: First Mr. Chairman, I should compliment the Mayor not only on the very fine brief presented here but on the one that was presented a year ago.

Mr. Jones: Mr. Mahoney, I would like to place on record that our Consultant, Mr. Fredericks, along with several members of our council and businessmen of our city assisted in the preparation of our brief. It was a teamwork effort.

Mr. Mahoney: At the conclusion of paragraph 5 when you were discussing the work of the Atlantic Provinces Task Force, you indicated that you as a city had not been consulted by that task force and had no opportunities to make representations to it? Is that correct?

Mr. Jones: Not at this time.

Mr. Mahoney: I guess you are not the right person to ask but I would have to record a question for someone to answer. I would like to know what processes that task force used to arrive at the recommendation that apparently has already been presented to the premiers.

Mr. Jones: Mr. Mahoney, I am not a member of it.

Mr. Mahoney: As I said, you are obviously not the one to answer the question. I am just recording it in the hope of an answer by someone later on.

You referred to runway extensions and so on in paragraph 31. We heard earlier today the possibility of an international airport

[*Interprétation*]

justement pour indiquer la nécessité immédiate de prendre les mesures appropriées pour éviter une situation désastreuse.

Nous croyons que les renseignements et les recommandations seront étudiés soigneusement et contribueront à une meilleure appréciation des inégalités qui prévalent dans les provinces de l'Atlantique. Des solutions immédiates doivent être trouvées à l'intérieur même du cadre d'une politique nationale qui éliminerait les limitations du développement régional causées par les frais de transport excessifs dans la région de l'Atlantique pour aider à réduire les disparités régionales. Je vous remercie beaucoup, monsieur le président.

Le président: Je vous remercie, monsieur le maire, ce fut très bien présenté. Monsieur Mahoney, vous aviez des questions?

M. Mahoney: Oui. Tout d'abord, je dois féliciter le maire sur l'excellence de son présent mémoire, mais aussi pour la soumission que nous avons reçue il y a un an.

M. Jones: Monsieur Mahoney, je voudrais consigner au compte rendu que notre conseiller, M. Fredericks, de concert avec bon nombre des membres de notre conseil et d'hommes d'affaires de notre ville, nous a aidé dans la préparation de notre soumission. Ce fut un travail d'équipe.

M. Mahoney: C'est peut-être quelque chose qui ne fut pas tout à fait mentionné dans votre mémoire, mais à la fin de l'alinéa 5, surtout lorsque vous parlez du travail de l'équipe spéciale des provinces de l'Atlantique, vous avez dit que votre ville n'avait pas été consultée ou n'avait pas eu l'occasion d'y faire des représentations.

M. Jones: C'est juste, pas cette fois-ci.

M. Mahoney: Alors, j'imagine que vous n'êtes pas la personne à qui je dois poser la question, mais je dois poser une question pour que quelqu'un y réponde éventuellement: quel procédé utilise cette équipe spéciale pour en arriver à des recommandations qui, apparemment, ont déjà été présentées aux premiers ministres?

M. Jones: Je n'en fais pas partie.

M. Mahoney: Donc vous n'êtes pas celui qui est en mesure de répondre à la question. Mais je veux simplement poser la question pour que quelqu'un y réponde plus tard.

Vous avez parlé de la possibilité d'avoir un aéroport international dans la région du sud-ouest du Nouveau-Brunswick. Êtes-vous d'a-

[*Text*]

being located in south west New Brunswick. Do you feel that if an international airport is indicated in the Province of New Brunswick, a location in the vicinity, for example, of Sussex would perhaps satisfy the needs of the province better than one located further west?

Mr. Jones: I have not made any survey of the Sussex location but I do know there is a location. Of course, naturally, I am a bit prejudiced and I might as well face it. But we do have an airport which is serving trading area of approximately 270,000 people within a 50-mile radius of the city of Moncton. I think this is a factor that any person locating an airport would take into consideration. There is not just the western part of New Brunswick that has to be considered, there is the north-eastern part of Nova Scotia, the northeasten part of New Brunswick and the Province of Prince Edward Island. We think that we are in a very central location and that possibly there is not the need for new facilities or a new location. The present facilities, with some slight extensions, will do the job. The fact that some of the international aircraft are using our facilities indicates that it must be a suitable location.

An hon. Member: Is it free of fog most of the time?

Mr. Jones: I have never been over there when there is fog.

An hon. Member: Where?

Mr. Jones: Moncton.

The Chairman: Are you through, Mr. Mahoney?

Mr. Mahoney: Are you speaking, sir, of Moncton itself or of the Sussex area?

Mr. Jones: I am speaking of Moncton.

Mr. Mahoney: Suppose such a thing were located in the Sussex area what, roughly, would you say the driving time between Moncton and Sussex would be?

Mr. Jones: The same time as it is from Sussex to Moncton, about 40 minutes. I am told it is one hour and something. I am told that I drive too fast.

An hon. Member: How many miles is it?

An hon. Member: Forty-five miles.

Mr. Mahoney: I have no more questions.

The Chairman: Order please. Mr. Skoberg.

[*Interpretation*]

vis que si un aéroport international est prévu dans la province du Nouveau-Brunswick, disons dans la région de Sussex, par exemple, il pourrait éventuellement répondre aux besoins de la province mieux qu'un aéroport plus à l'ouest?

M. Jones: Je n'ai pas fait d'étude quant à l'emplacement de Sussex, mais je sais, enfin, j'ai mes préjugés, bien entendu—aussi bien être réaliste—mais nous avons un aéroport qui dessert une région commerciale peut-être de 270,000 personnes dans un rayon de 50 milles de Moncton. Toute personne qui devrait décider du lieu où il faudrait établir un aéroport devrait en tenir compte. Il ne s'agit pas simplement de tenir compte de la région sud-ouest du Nouveau-Brunswick. Il y a la Nouvelle-Écosse, le nord-est du Nouveau-Brunswick et l'Île du Prince-Édouard. Et nous sommes d'avis que notre emplacement est plutôt central. Peut-être, qu'il n'y aurait pas nécessité d'avoir de nouveaux aménagements, de nouveaux services, un nouvel emplacement. Les services actuels agrandis pourraient répondre aux exigences, et de fait, certains des transporteurs internationaux viennent déjà chez nous, donc cela devrait être adéquat.

Une voix: L'aéroport de Moncton est-il exempt de brouillard la plupart du temps?

M. Jones: Je n'y suis jamais allé par temps de brume.

Une voix: Où ça?

M. Jones: A Moncton.

Le président: Vous avez terminé, monsieur Mahoney?

M. Mahoney: Est-ce que vous parlez de Moncton ou de la région de Sussex?

M. Jones: Je parle de Moncton.

M. Mahoney: Combien de temps faudrait-il pour aller de Moncton à Sussex en automobile?

M. Jones: Le même temps qu'il faut pour aller de Sussex à Moncton, soit 40 minutes. On m'a dit une heure. Je dois conduire trop vite.

Une voix: Combien y a-t-il de milles?

Une voix: Quarante-cinq milles.

M. Mahoney: Je n'ai plus de question.

Le président: A l'ordre.

[*Texte*]

Mr. Skoberg: Your Worship, I note that throughout the brief Monction is consistently referred to.

Mr. Jones: In most cases when we say Moncton we mean the Moncton area.

Mr. Skoberg: How large a region are you referring to being included with Moncton?

Mr. Jones: The Counties of Albert...

Mr. Skoberg: I mean a radius of how far?

Mr. Jones: Two hundred square miles, I am told—about 200 miles.

Mr. Skoberg: You said that you were not in favour of the Corridor Road that they are referring to. Is there any thought of getting together on this location?

Mr. Jones: There is a corridor road which stays within our country which comes down through Edmundston, Plaster Rock, Newcastle and Moncton. Naturally, I think that this is the better route, and it saves distance and time. It covers not just one portion; it goes through the centre of the province and covers the northeast part of the province as well as the centre area. Incidentally, this road is already in and just needs a bit of widening.

Mr. Skoberg: You refer to the fact of competition between central Canada and the Maritimes and say that this situation has to be rectified. Would you advocate a free trade policy as one of the methods of rectifying this situation?

Mr. Jones: I think it could be considered and should be considered. It could do a great deal towards rectifying the situation.

Mr. Skoberg: Do you think those who you are speaking in the brief for would advocate this free trade?

Mr. Jones: When you represent a council you can only say the things that have been approved by the committee. All I can say is that personally I think it is a good idea and should be considered.

Mr. Skoberg: I also notice, Your Worship, that you refer to a task force. In your opinion, who should make up this task force? We all have seen situations where task forces have been set up without proper representation. Have you any opinions...

[*Interprétation*]

M. Skoberg: Son Honneur le maire pourrait-il nous dire, je vois que dans le mémoire on parle toujours de Moncton, s'agit-il de la région de Moncton?

M. Jones: Nous disons «Moncton», mais dans la plupart des cas, nous parlons de la région de Moncton.

M. Skoberg: La région de Moncton dont vous parlez est-elle très grande?

M. Jones: Nous avons le comté d'Albert ...

M. Skoberg: Je veux dire quel rayon, combien de milles?

M. Jones: 200 milles carrés.

M. Skoberg: Une autre question, votre Honneur. Vous dites que vous n'êtes pas en faveur de la route-corridor dont on a parlé. Croyez-vous qu'on puisse faire l'unanimité sur cet emplacement?

M. Jones: Mais il y a une route-corridor dans notre pays qui passe par Edmundston, Plaster Rock, Newcastle, et Moncton. Évidemment, je trouve que c'est la meilleure route et cela épargne distance et temps. Est-ce que je pourrais ajouter à cela que cette route est déjà aménagée. On n'a qu'à l'élargir. Merci.

M. Skoberg: Vous parlez de la concurrence entre le Canada central et les Maritimes et qu'il faut rectifier la situation comme telle. Est-ce que vous proposeriez une politique de libre-échange comme étant une des méthodes pour rétablir la situation?

M. Jones: Oui, on pourrait en tenir compte et on devrait en tenir compte. Cela pourrait vraiment aider à rectifier la situation.

M. Skoberg: Donc, au nom de ceux dont vous parlez, est-ce que vous proposez ce libre-échange?

M. Jones: Nous représentons un conseil municipal. Vous ne pouvez dire que ce qui a été approuvé par le Conseil. Mais en ce qui me concerne, je pense qu'il faudrait l'étudier car c'est une bonne idée.

M. Skoberg: Vous parlez aussi d'une équipe spéciale. A votre avis, qui devrait constituer cette équipe de travail? Nous avons tous connu des situations où nous avons vu des équipes spéciales constituées sans être vraiment représentatives. Qu'est-ce que vous en pensez?

[*Text*]

Mr. Jones: I do not know if task force is quite the right word. I will ask Mr. Fredericks to answer that one for you.

Mr. H. A. Fredericks (Consultant, City of Moncton): Mr. Chairman, I would answer the question in reference to our recommendations. Representations made to us by the industries, which number about 24, which we examined as part of our analysis to support this brief, indicate a strong feeling that they have not had proper opportunity to present the data which supports their case with regard to the costs involved in both the non-carload and existing carload rates. Our recommendation is that before a decision is made a task force, representative of business people in the Atlantic region who are involved in the manufacturing and shipping of produce, should have an opportunity, based on common terms of reference, to present factual data on a commodity basis and on an industry basis.

Mr. Skoberg: Your Worship, in the event that an international airport was agreed upon, would Moncton agree with one that would serve the three areas that we have been speaking about today?

Mr. Jones: I was not present when the other ones were mentioned.

Mr. Skoberg: Moncton, Saint John and Fredericton. Once again I presume that you are not in a position to answer.

Mr. Jones: Not in a position, Naturally, I believe that the greatest density of population in the Province is in the southeastern area of New Brunswick and it is the natural place for an airport.

Mr. Skoberg: Would you give me your personal opinion in regard to the question I just asked, without being committed...

Mr. Jones: Yes I would. I would think that Moncton would be the best area, and the present location. This comes not from speaking to persons in my own city but speaking with persons who have some knowledge of the requirements of airports—the topology, the nature of the soil, its resiliency and so on —and those who have technical know-how in this seem to indicate that the location presently in Moncton is a darn good one. It was pretty good during the war. It served thousands and thousands of Commonwealth Air

[*Interpretation*]

M. Jones: Je ne crois pas que ce soit tout à fait juste de parler d'une équipe spéciale. Mais je demanderais à M. Fredericks d'y répondre.

M. H. A. Fredericks (expert-conseil, Ville de Moncton): Monsieur le président, je répondrais à la question en me rapportant aux représentations qui nous ont été faites par les industries, au nombre de 24 et que nous avons étudiées dans notre analyse, à l'appui de ce mémoire. Ces représentations nous indiquent qu'ils sont d'avis qu'ils n'ont pas eu l'occasion de présenter les données qui appuient leurs soumissions, pour ce qui est du coût des frais de transport pour des expéditions de lots brisés. Mais avant qu'une décision ne soit prise, une équipe de travail représentant le monde des affaires de la région atlantique qui participe au transport, à la fabrication de denrées, devrait, suivant son mandat, présenter les données selon les industries et les produits fabriqués.

M. Skoberg: Merci beaucoup. Une dernière question, Votre Honneur, si jamais un aéroport international faisait l'objet d'une entente, est-ce que Moncton accepterait un aéroport qui desservirait les trois régions dont nous avons parlé aujourd'hui?

M. Jones: Je n'étais pas là lorsque les autres témoins parlaient de la question.

M. Skoberg: De Saint-John et de Fredericton.

M. Jones: Une fois de plus, je ne suis pas vraiment en mesure de vous le dire. Je pense que là où il y a la plus grande densité de population, ce serait dans le sud-est du Nouveau-Brunswick. Il serait donc naturel que l'on choisisse cette région pour un aéroport.

M. Skoberg: Quel est votre avis personnel, pour ce qui est de cette question?

M. Jones: Oui, je pense que Moncton serait la meilleure région et l'emplacement actuel est adéquat. Je parle non seulement du fait que je me sois entretenu de la question avec des gens de ma ville, mais aussi de l'opinion de personnes qui connaissent vraiment les exigences en matière d'aéroport, vis-à-vis de la topographie et la nature du sol, son élasticité, et je pense que les connaissances techniques semblent indiquer que l'emplacement de l'aérogare de Moncton en ce moment est excellent. C'était le cas durant la guerre:

[*Texte*]

Training Plan people during the war, and I think that it is still a pretty good location.

Mr. Skoberg: Your Worship, I can appreciate the submission that you are making but I come from Moose Jaw, Saskatchewan and we had the same argument that you had regarding the location of an airport. But the fact remains that we have to face reality and I am just wondering whether or not your personal opinion would not be that we must co-operate in this area if such were the case and a decision had to be made.

Mr. Jones: Mr. Chairman, I would like to carry this argument along quite a ways...

Mr. Skoberg: No argument, I am just asking an opinion.

Mr. Jones: My argument for it is that it is not just the City of Moncton area it serves, not just the central part of New Brunswick but the entire Province of New Brunswick and Northeastern Nova Scotia and Prince Edward Island.

Mr. Skoberg: At Moncton.

Mr. Jones: And Eastern New Brunswick as well. This is the majority of the area. This is the central region of the Maritime Provinces. We sometimes refer to it in advertisements as Atlantic Central, and we think that this is a pretty good area. You have a lot of small urban areas—Amherst, Sackville, Bouctouche, all the areas around which you have heard mentioned today.

Mr. Skoberg: To complete the discussion on my part, from what area do you think that an airport such as you are speaking about should draw business—what radius around Moncton as such? Are you suggesting that 200 miles is a logical...

Mr. Jones: In going to some airports I think I have to travel that far to get there. But I think that the Moncton area certainly covers a good population area—and the population density in this area is greater than any area in the Atlantic Provinces.

Mr. Skoberg: Again, I am referring to mileage, not density.

Mr. Jones: You have to include mileage when you are referring to density.

An hon. Member: Mileage is the only question.

[*Interprétation*]

il a desservi des milliers et des milliers de pilotes du Commonwealth qui ont suivi là leur formation pendant la guerre.

M. Skoberg: J'apprécie beaucoup l'observation que vous faites, mais je viens d'une région, à Moose Jaw en Saskatchewan, où nous avons eu exactement les mêmes arguments quant à l'emplacement d'un aéroport. Mais pour faire face à la réalité, je me demande si votre avis personnel n'indiquerait pas qu'il nous faut collaborer activement dans cette région, si l'on doit prendre une décision.

M. Jones: Monsieur le président, je voudrais poursuivre cet argument.

M. Skoberg: Ce n'est pas un argument, je vous ai simplement demandé votre opinion.

M. Jones: Voici, je vous présente mon point de vue. Il n'y a pas simplement le Nouveau-Brunswick et la région de Moncton qui est desservie. Notre aéroport se trouve à desservir toute la province du Nouveau-Brunswick, le nord-est de la Nouvelle-Écosse et l'Île du Prince-Édouard.

M. Skoberg: A Moncton.

M. Jones: Mais aussi l'est du Nouveau-Brunswick: voilà l'ensemble de la région ouverte. C'est là le centre même des provinces Maritimes. Parfois, nous en parlons dans notre réclame: le centre des Maritimes. Nous croyons que c'est une excellente région. Nous desservons un bon nombre de petits centres urbains comme Amherst, Sackville, Bouctouche, tous ces petits centres dont vous avez entendu parler aujourd'hui.

M. Skoberg: Pour reprendre cette ligne de pensée et pour terminer mes questions, monsieur le président. Quelle région devrait être comprise à votre avis, si l'on construisait un aéorport à Moncton? 200 milles? Est-ce là une évaluation logique?

M. Jones: Lorsque je descends dans certains aéroports, je pense au nombre de milles que je dois parcourir pour m'y rendre. Mais je pense que la région de Moncton est sûrement une excellente région quant à la population, et où la densité démographique est la plus grande que dans n'importe quelle autre région des provinces de l'Atlantique.

M. Skoberg: Une fois de plus, je parle de milles et non pas de densité.

M. Jones: Il faut inclure le nombre de milles aussi bien que la densité.

Une voix: Le millage est la seule question.

[*Text*]

The Chairman: Mr. Horner.

Mr. Horner: Your Worship, it has been suggested in the past that the Maritime Freight Rates Act in applying only to railroads has in some way held back the development of the trucking industry within the Maritimes. Coming from the railroad centre of Moncton, would you suggest that there is any foundation at all for that?

Mr. Jones: Mr. Horner, I want to correct you. I come from the railway centre but we are the transportation centre of the Maritimes.

Mr. Horner: Oh, excuse me.

Mr. Jones: We have a lot of trucking firms as well as rail based in our city, and the railway company has gone into the trucking business in certain areas. I suppose what is fair for Peter is fair for Paul, and if the Committee saw fit or legislation was enacted to take cognizance of this, then I certainly would not disfavour it. I represent people from both railways and trucking.

Mr. Horner: I understand that. In the last waybill analysis that I studied—and I am going to go back a few years—in 1964 5.5 per cent of the freight handled within the Maritime Provinces moved under what the railroads classed as "class and non-competitive rates" I suggested that this seemed to me to be a rather high percentage of freight moving by rail on those two rate classes and I was told that because the Maritime Freight Rates Act only applied to rail shipment that in a sense it has held back the development of the private trucking industry or the trucking industry generally within the Maritimes. That is why I asked that question. Do you think that today, in fact, in the last five years, more freight has started to move by truck rather than rail, a greater percentage perhaps than in other parts of Canada.

Mr. Jones: I have no statistics but I believe there is a trend that way. I think there are various reasons for it and do not think I can say what reasons.

Mr. Horner: Yes, there is a trend that way all across Canada but the point I am trying to make is, for example, whether there has been a trend towards greater and greater

[*Interpretation*]

Le président: M. Horner.

M. Horner: Votre Honneur, par le passé, on a laissé entendre que la *Loi sur les taux de transport des marchandises dans les provinces Maritimes* ne s'applique que dans le cas des chemins de fer, et que, dans certains cas, elle a retardé le développement de l'industrie du camionnage dans les Maritimes. Vous venez du centre ferroviaire de Moncton, pourriez-vous nous dire si cette opinion est fondée?

M. Jones: Monsieur Horner, je viens d'un centre ferroviaire, mais nous sommes aussi le centre de transport des Maritimes.

M. Horner: Excusez-moi.

M. Jones: Nous avons bon nombre de sociétés de camionnage dans notre ville aussi bien que des services ferroviaires. Et les sociétés ferroviaires font du camionnage dans certains secteurs. J'imagine que ce qui est juste pour Pierre l'est aussi pour Paul. Et si le Comité a jugé bon de mettre en vigueur certaines législations et si le Comité veut en tenir compte, alors, je ne m'y opposerais donc pas. Je représente une région dont l'industrie principale est le transport par chemin de fer et par camion.

M. Horner: Je comprends très bien. Mais d'après la dernière analyse que j'ai étudiée et qui remonte à 1964, 55 p. 100 du transport de marchandises dans les provinces Maritimes étaient expédiés sous la catégorie considérée par les chemins de fer comme les tarifs de classes et non concurrentiels. Cela me semble un pourcentage fort élevé de marchandises expédiées par chemin de fer pour ces deux catégories de tarifs. Et on m'a répondu alors que la *Loi sur les taux de transport des marchandises dans les provinces Maritimes* ne s'appliquait qu'au transport ferroviaire; cela a retardé en quelque sorte le développement des sociétés privées de camionnage dans les maritimes. C'est la raison pour laquelle j'ai posé la question. Croyez-vous qu'il y a de plus en plus de marchandises qui sont expédiées par camion que par chemin de fer depuis cinq ans, peut-être plus que dans le reste du pays?

M. Jones: Je n'ai pas les données à ma portée, mais je pense que la tendance est de ce côté. Il y a différentes raisons, mais je ne les connais pas.

M. Horner: Il y a une tendance marquée de ce côté, tout à travers le Canada, mais, ce à quoi je veux en venir c'est ceci: est-ce qu'il y a une tendance à la concurrence accrue

[*Texte*]

competition between the trucking industry and the railways in the Maritimes.

Mr. Jones: I could not answer that question.

Mr. Breau: Mr. Chairman, first of all I must ask His Worship, Mayor Jones, to explain to me where he gets—I disagree with him—these 200,000 and some people?

Mr. Jones: Within a 50-mile radius of Moncton? These are statistics which were published by the *Financial Times* in one of their publications about three months ago, based on the Dominion Bureau of Statistics' figures.

I think if you can just imagine an area within a 50-mile radius from Moncton beginning just beyond the Nova Scotia border it would take in the northeastern part of Cumberland County and all of Westmorland County. You will remember that in the last election Westmorland County itself included over 100,000 people.

Mr. Breau: Anyway you take in Prince Edward Island and northeastern Nova Scotia?

Mr. Jones: No, Prince Edward Island is outside of 50 miles. You will have to get that causeway in first.

Mr. Breau: The delegation, I think, from the City of St. John told us this morning that they had the greatest population density.

Mr. Jones: We question that because the statistics are there. Let us face it, if you take an area surrounding any port city, part of the circle will be just water; people do not live in the water.

Mr. Breau: Perhaps you consultant should answer this. The last paragraph of your brief reads:

> Immediate solutions must be found within the framework of the National Policy which will remove the limitations on regional development cause by these excessive transportation costs in the Atlantic Region.

Do you mean that perhaps the federal government should look for industrial incentives in a transportation policy and more or less get away from direct grants for establishment of industries, for example, ADA grants. Do you think this should be designed to help

[*Interprétation*]

entre l'industrie des rouliers et celle des chemins de fer dans les maritimes?

M. Jones: Je ne saurais répondre à votre question.

M. Breau: Monsieur le président, tout d'abord, je dois demander à Son Honneur le maire Jones de nous expliquer où il obtient—non pas que je ne suis pas d'accord avec lui—mais, où obtient-il quelque 200,000 personnes?

M. Jones: Dans un rayon de 50 milles de Moncton? C'est là le chiffre publié dans le *Financial Times,* dans une de ses publications il y a environ trois mois, fondé sur les données du Bureau fédéral de la statistique.

Je pense que si vous pouvez simplement imaginer un rayon de 50 milles autour de Moncton, allant outre-frontière de la Nouvelle-Écosse, le comté Cumberland et le comté Westmoreland y seraient inclus. Vous vous rappellerez qu'à la dernière élection le comté Westmoreland comprenait au moins 100,000 personnes.

M. Breau: Donc, vous incluez l'Île du Prince-Édouard et le nord-est de la Nouvelle-Écosse?

M. Jones: Non, pas l'Île du Prince-Édouard. L'Île du Prince-Édouard se trouve à l'extérieur de ce rayon de 50 milles. Il faudrait d'abord construire la chaussée.

M. Breau: Donc, ce matin, la délégation de la ville de Saint-Jean nous a dit qu'ils avaient la population la plus dense.

M. Jones: Nous mettons cela en doute. Les chiffres sont là pour le prouver. Soyons réalistes; si vous prenez une région qui encercle toute ville portuaire une partie du cercle se trouve à être de l'eau et les gens n'habitent pas dans l'eau.

M. Breau: Dans votre dernier alinéa, vous dites que «des solutions immédiates doivent être trouvées dans les cadres de la politique nationale, qui feraient disparaître les limitations imposées au développement régional, entraînées par le coût excessif du transport dans la région de l'Atlantique».

Est-ce que vous entendez par là que le gouvernement fédéral devrait essayer de trouver des moyens d'encourager l'industrie dans sa politique des transports et renoncer, ni plus ni moins, à subventionner directement l'établissement d'industries, par exem-

[*Text*]

the industry more with its transportation costs?

Mr. Jones: What we mean essentially is that first, we have to get back to the status quo; then they have to establish a national policy, not just a national transportation policy but a national policy. Whether it means subsidization, or new routes down here, or Corridor roads, or Chignecto canals, or free trade, or what have you, these things have to be done in order to assist development. Whether incentives or things of this other nature are continued would be determined as the situation improves.

Mr. Breau: Are you suggesting or recommending that industrial incentives which exist now should be changed towards a transportation policy?

Mr. Jones: We did not study that matter.

Mr. Breau: I wonder if these existing subsidies such as ADA are not primarily capital subsidies, in order to get an industry going. However, in order for the industry to be competitive afterwards we have to have this favourable freight rate.

Mr. Fredericks: Mr. Chairman, I would like to comment just briefly on Mr. Breau's question. The transportation policy which provides, hopefully, equal cost to ship to central Canada is one matter and the regional economic development policy is another. They go hand in hand and in our view the transportation policy must come first. Then we can think in terms of developing an incentive program for industry on an industry-by-industry basis using criteria which can be developed.

The Chairman: Are you finished, Mr. Breau?

Mr. Trudel: Mr. Chairman, I want to address a question to His Worship. You mentioned, I believe, if my memory serves me correctly, that in 1948 the MFRA was already antiquated or outdated. Yet, today in most of the briefs we have heard people say that they would like the freeze to remain. Would you like to make a statement on what you would feel would bring it up to date?

[*Interpretation*]

ple les subventions de l'ADA. Croyez-vous que cela devrait plutôt aider les industries quant aux frais de transport?

M. Jones: Tout d'abord, ce que nous voulons dire essentiellement, c'est qu'il nous faut conserver le statu quo. Il faut de plus qu'on établisse une politique nationale non pas simplement en matière de transport, mais une politique nationale générale. Cela apporterait des subventions, de nouvelles routes, une route-corridor, un canal Chignecto, ou le libre échange, tout ce que vous voudrez. Ces choses doivent être faites pour aider le développement. Que ce soit des encouragements ou des éléments d'autre type cela sera déterminé au fur et à mesure que la situation s'améliore.

M. Breau: Recommandez-vous alors qu'on remplace l'encouragement à l'industrie par une politique des transports.

M. Jones: Nous n'avons pas étudié la question.

M. Breau: Est-ce que ces subventions, telle que l'ADA, ne sont pas essentiellement des subventions en immobilisation pour lancer une industrie. Par contre pour qu'une industrie soit concurrentielle par la suite, il nous faut avoir un tarif-marchandise favorable.

M. Frederick: Monsieur le président, j'aimerais faire quelques brefs commentaires sur cette question. La politique en matière des transports prévoit, j'espère, des coûts égaux pour l'expédition vers le Canada central est une question, et la politique de développement économique régionale en est une autre. Elles vont de pair, à notre avis, mais, tout d'abord, il faut voir à la politique des transports et, ensuite, mettre au point un programme d'encouragement à l'industrie, à chaque industrie individuelle, suivant des critères qui peuvent être mis au point par la suite.

Le président: Avez-vous terminé, monsieur Breau?

M. Trudel: Monsieur le président, je voudrais poser une question à Son Honneur le maire. Vous avez parlé, je crois, si je me souviens bien, du fait qu'en 1948 la *Loi sur les taux de transport des marchandises dans les provinces maritimes* était déjà désuette. Pourtant aujourd'hui, dans la plupart des mémoires, nous avons entendu dire qu'on aimerait bien maintenir le gel prévu par cette Loi. Aimeriez-vous faire une déclaration sur ce qu'on pourrait faire pour la mettre à jour?

[*Texte*]

Mayor Jones: I do not understand your uestion.

Mr. Trudel: Most of the people who have resented briefs today want the freeze to emain as is, but I believe in your statement ou mentioned that the freeze was outdated 0 years ago.

Mayor Jones: Yes.

Mr. Trudel: If we remain at the present tatus, if I read your presentation correctly, ve certainly would have to make several djustments to bring it to today's require- ients. Is that the interpretation we should et from your presentation?

Mr. Fredericks: Yes, Mr. Chairman, I think ve are expressing concern about the fact iat the rate freeze, which has been in effect or two years and will expire March 23rd, gain will provide a basis for increased rates n those areas to which it applies. We are lso expressing concern about the facts—we uote an authority in our previous brief to vhich you may refer—which indicate that he benefits of the Maritime Freight Rates ct per se had eroded as of 1948. There were o continuing benefits after hat. So we are eally talking about two factors. One, the rate reeze as an immediate impact on certain ates; second, the Maritime Freight Rates Act evision, which we recommend, would have n over-all effect on the equal opportunity to hip into central Canada at competitive reight costs.

Mr. Trudel: Thank you, Mr. Chairman.

The Chairman: Are there any more uestions?

Mr. Perrault: I just wanted to ask one or wo brief questions, Mr. Chairman. There are nany statistics in this submission and it has een very well prepared. A question arises ut of the recommendations on page 10 vhich read:

> It is recommended that freight costs to the Atlantic Provinces shipper of shipments to Newfoundland be no higher than the water rate from Montreal to Newfoundland...

It is paragraph 27 on page 10. I wonder vhether any estimate has been prepared of he costs involved here; in other words, in rder to provide that competitive rate by rail r by other means of transportation. You

[*Interprétation*]

M. Jones: Je ne comprends pas tout à fait votre question.

M. Trudel: Dans la plupart des déclarations que nous avons entendues aujourd'hui, on veut maintenir le gel, mais je crois que dans votre déclaration, vous dites que cela était déjà désuette il y a 20 ans.

M. Jones: Oui.

M. Trudel: Si nous laissons les choses comme elles sont, à votre avis, si j'ai bien interprété votre présentation, sûrement alors, il nous faudrait apporter beaucoup d'ajustements pour l'adapter aux exigences actuelles. Est-ce là l'interprétation que nous devons avoir de votre déclaration?

M. Fredericks: Oui. Monsieur le président, nous sommes vraiment inquiets du fait que le gel des tarifs, qui est en vigueur depuis 2 ans et qui prendra fin le 31 mars 1969, est le fondement d'une augmentation des tarifs dans les régions où il s'applique. De même, nous sommes inquiets du fait—et nous avons cité un spécialiste dans cet autre mémoire dont vous avez parlé—que cela indiquait les avantages de la *Loi sur les taux de transport des marchandises dans les provinces maritimes* avaient commencé à disparaître à partir de 1948, et que les avantages n'avaient pas continué après cela. Nous parlons vraiment de deux facteurs qui sont, tout d'abord, que le gel a un effet immédiat sur certains tarifs et que la *Loi sur les taux de transport des marchandises dans les provinces maritimes*, dont nous recommandons la revision, aurait un effet d'ensemble sur la possibilité d'expédier à des prix concurrentiels vers le centre du Canada.

M. Trudel: Merci beaucoup, monsieur le président.

Le président: Auriez-vous d'autres questions à poser?

M. Perrault: Une ou deux questions très brèves, monsieur le président. Nous avons beaucoup de statistiques dans cette déclaration, qui est très bien préparée. Une question au sujet des recommandations, à la page 10:

> Recommande que le coût au transporteur des provinces maritimes des expéditions vers Terre-Neuve ne soit pas supérieur au coût du transport par eau de Montréal à Terre-Neuve.

C'est l'alinéa 27, à la page 10. A-t-on prévu une évaluation du coût en cause ici. En d'autres termes, établir le tarif concurrentiel, par rails ou par d'autres modes de transport? Vous avez bon nombre d'autres chiffres, mais

[*Text*]

have many other statistics worked out here, but what would it actually be estimated in dollars? Do you have an approximate figure? I think ultimately we come down to what it is going to cost.

Mr. Fredericks: Mr. Chairman I must say that we were not able in the time available, nor were we fully qualified ourselves to reach any conclusion in this regard. This is a matter which would require some study in depth, to use the terminology which was used here earlier this afternoon. I will say, however, in direct answer to your question, that there are a number of industries indicated in tables in our brief that find themselves in an extremely difficult position at the moment because they are unable to absorb the additional costs of shipping to Newfoundland, which they feel is a necessary part of their market. Indeed, in order to sustain their present volume and their present establishment and to maintain their present employment, it is a necessary part of their market. There are a number of these in our brief and there are a number of others known to us. This is the basis on which we make the statement that this be given consideration.

Mr. Perrault: My second auxiliary question, Mr. Chairman, is this. The brief suggests on page 4 that the Maritimes are experiencing real competitive problems, yet the statistics with respect to Moncton represent a pretty bustling prosperous community.

Page 2 reads:

> In the two year period, total earnings in Transportation have increased by some $5.8 million.

All of the statistics look very favourable for Moncton. Are you suggesting the difficulty really lies outside Moncton, or are some industries in Moncton having problems?

Mayor Jones: We do not pay the freight cost; the consumer pays it. When these go into force, then we are going to feel the brunt, sir.

Mr. Perrault: But the transportation industry is a major factor in the community. Obviously a great many goods are being brought into the community.

Mayor Jones: This is why we are concerned.

Mr. Perrault: There is a vigorous amount of trade under way, but you are concerned about the future?

Mayor Jones: That is right. "No tickee, no shirtee" and the price goes up; right?

[*Interpretation*]

comment les traduire en dollars? Est-ce que vous avez une idée de ce qu'il en serait? Enfin, nous en viendrons au coût.

M. Fredericks: Monsieur le président, dans le court délai à notre disposition, et avec nos propres qualifications, nous pouvons pas en arriver à une conclusion en cette matière. Il s'agit là d'une question qui exigera une étude en profondeur, suivant les termes employés cet après-midi. En réponse à une question que vous m'avez posée, je dirais qu'il y a un certain nombre d'industries indiquées dans les différents tableaux de notre mémoire qui se trouvent dans une situation vraiment délicate en ce moment, parce qu'elles ne sont pas en mesure de subir les frais additionnels d'expédition vers Terre-Neuve, expéditions à leur avis essentielles pour leurs débouchés. Elles le sont vraiment car elles aident à maintenir l'emploi, le volume et le développement à leur niveau actuel. Il y a un certain nombre de ces entreprises dans notre mémoire et nous en connaissons d'autres. Ceci est la base de la déclaration que nous faisons, soit qu'on tienne compte de ce fait.

M. Perrault: Autre question. A la page 4 on dit que les provinces maritimes éprouvent certains problèmes, mais les chiffres, pour ce qui est de Moncton, semblent indiquer que c'est une communauté vraiment prospère.

A la page 2, vous dites que dans une période de deux ans, l'ensemble des gains avait augmenté de 5.8 millions de dollars. Les chiffres indiquent une situation vraiment favorable à Moncton. Dites-vous que la difficulté vient de l'extérieur de Moncton ou y a-t-il certaines industries de Moncton qui éprouvent des difficultés?

M. Jones: C'est le consommateur qui paie les frais de transport, ce n'est pas nous. Mais, lorsque cela sera mis en vigueur, nous en subirons les conséquences.

M. Perrault: L'industrie du transport est importante, dans votre communauté. Évidemment, la communauté reçoit beaucoup de marchandises.

M. Jones: C'est pourquoi nous sommes inquiets.

M. Perrault: Il y a beaucoup de commerce, en ce moment, mais êtes-vous inquiet au sujet de l'avenir?

M. Jones: Oui, sûrement.

[*Texte*]

Mr. Frederick: There are two points which I want to bring out here on behalf of the Moncton delegation.

First, as we said in our brief, if you look at the sales statistics in Moncton in dollars you will note that they are very healthy; indeed, they are. However, I would ask you to remember to look at our further representation about the noncarload rates and the effect on retailers. This is amplified in our previous brief, which gives concrete examples of the increase in cost of freight by noncarload rates on essential consumer goods, all the way from household goods to drugs. This has a net effect on the people who are earning a much lower per capita income. They are paying a much higher price per unit of commodity, if you will, in this kind of economy, while the sales dollars are continually going up. This is the relationship which, I think, must be borne in mind. It is very important.

The Chairman: This completes the questioning on this brief. I want to thank you, Mayor Jones and also your City Councillors.

Mr. Nowlan: I have a couple of questions. I was going to hold back but the brief is so good that it deserves many more questions really. First, do I understand His Worship to say that as far as the provincial premiers' task force is concerned he or his council have not been consulted at all?

Mayor Jones: No sir, we have not.

Mr. Nowlan: Therefore the flexible response to the Maritime Freight Rates Act which was suggested here earlier in the day is a response that has been gained by experience and which has been prepared in a vacuum. Is that correct?

The Chairman: Would you repeat your question please, Mr. Nowlan.

Mr. Nowlan: It was suggested here earlier today by the Maritime Transportation Commission and others that the recommendations to the provincial premiers were going to present a flexible response to the inflexible Maritime Freight Rates Act structure. My only question is: was that flexible response prepared from the experience of the Maritime Transportation Commission and the history of the Maritimes Freight Rates Act and was it also prepared in a vacuum as far as people within the Maritime provinces are concerned, as far as His Worship is concerned.

[*Interprétation*]

M. Fredericks: Il y a deux points que je désire soulever. D'abord, comme nous l'avons dit dans notre mémoire, si vous consultez les données en dollars pour la ville de Moncton vous verrez que tout va bien. Je vous demanderais toutefois de ne pas oublier de consulter l'autre section du mémoire qui traite des taux pour le transport de détail. Voilà un exemple concret des augmentations du coût du transport par transport de détail des denrées essentielles de consommation à partir des drogues jusqu'aux produits domestiques. Cela affecte les personnes qui ont un revenu par habitant moins élevé; ils paient un prix plus élevé par unité de produits de consommation, avec une telle économie, alors que le dollar de vente augmente toujours. C'est là le rapport dont il faut tenir compte et qui est très important.

Le président: Ceci met fin aux questions portant sur ce mémoire. Je désire remercier Son Honneur, le maire Jones, et les membres du Conseil municipal.

M. Nowlan: J'ai quelques questions à poser. Je voulais m'en abstenir, mais, enfin, votre mémoire est si bien fait qu'il mérite bon nombre d'autres questions, sûrement. Premièrement, si j'ai bien compris, Son Honneur veut dire qu'en ce qui concerne l'équipe spéciale des premiers ministres provinciaux, lui et son Conseil n'ont pas du tout été consultés?

M. Jones: Non, pas du tout.

M. Nowlan: Donc, la réaction devant la *Loi sur les taux de transport des marchandises dans les provinces maritimes* est une réaction qui vient de l'expérience et a été préparée dans un vacuum; c'est juste?

Le président: Pourriez-vous répéter votre question?

M. Nowlan: Plus tôt, aujourd'hui, la Commission des transports des provinces maritimes et d'autres ont laissé entendre que les recommandations formulées aux premiers ministres provinciaux voulaient présenter une réaction très souple devant la structure inflexible du tarif des marchandises dans les maritimes. Voici ma question: ces réactions de souplesse furent-elles préparées à la suite de l'expérience de la Commission des transports et de l'expérience acquise avec la Loi ou préparées dans un vacuum pour ce qui est des habitants des provinces de l'Atlantique et en ce qui concerne Son Honneur?

[*Text*]

Mayor Jones: I cannot answer that because, as I say, I have no knowledge of the proceedings of the Atlantic provinces' task force on transportation. I am sorry I cannot answer your question.

Mr. Nowlan: No, I appreciate that. It may have been a question with a little hooker in it.

Mr. Allmand: May I ask a supplementary? Did you try to approach the task force? You knew the task force had been set up. Did you try to reach their secretary?

Mayor Jones: I did not know they had a secretary.

Mr. Allmand: You did not try to reach anybody on the task force to present your point of view?

Mayor Jones: I think it is a case where the debtor should seek the creditors; we are the people who pay the bills.

Mr. Allmand: I know, but it seems to me it should be a two-way street. Perhaps they are negligent for not contacting you, but I think if you are interested in your area that you might have tried to contact them.

Mayor Jones: We certainly are interested in our area. We must have been or we would not have prepared a volume or volumes of this nature. I would not want any implication that the Mayor of the City of Moncton and his Council were not interested in the area or the citizens of Moncton; we sure are.

Mr. Allmand: However, sir, you have come to this Committee and complained that the Maritime task force...

Mayor Jones: Just a moment, Mr. Chairman, I am here as a witness and I do not think allegations of that nature should be made.

The Chairman: The witness only said he was not consulted, that is all.

Mr. Allmand: I took it to be a sort of complaint. Perhaps it is justified, but I wonder why you did not approach them yourself.

Mr. Nowlan: Mr. Chairman, I have only one more question to His Worship. I compliment him on his brief today and the brief that Moncton presented a year ago that was never heard. My second question does not arise out of any comment about the task force and the lack of communication, although I think this is the fundamental prob-

[*Interpretation*]

M. Jones: Je ne puis répondre, parce que je ne connais rien au sujet des méthodes de travail de l'équipe spéciale des provinces de l'Atlantique. Je regrette de ne pouvoir répondre à votre question.

M. Nowlan: Je sais bien que c'était un peu attrape-nigaud.

M. Allmand: Avez-vous essayé de communiquer avec l'équipe spéciale? Vous saviez que l'équipe spéciale avait été constituée; est-ce que vous avez essayé de communiquer avec leur secrétaire?

M. Jones: Je ne savais même pas qu'elle avait un secrétaire.

M. Allmand: Vous n'avez pas du tout essayé de communiquer avec l'équipe pour faire valoir votre point de vue?

M. Jones: Je pense qu'il s'agit du débiteur qui cherche le créancier et nous, nous payons les comptes.

M. Allmand: Oui, mais ce devrait être une communication dans les deux sens. Peut-être y a-t-il eu négligence du fait qu'ils n'ont pas communiqué avec vous, mais si, par contre vous vous intéressez à votre région, vous auriez dû communiquer avec eux.

M. Jones: Nous aurions dû le faire, autrement, on n'aurait pas préparé ce document. Nous ne voudrions pas laisser entendre que le maire et son Conseil municipal ne s'intéressent pas du tout à leur région ou à leurs citoyens; nous nous y intéressons.

M. Allmand: Mais vous vous présentez ici et vous vous plaignez du fait que l'équipe spéciale des Maritimes...

M. Jones: Un instant, s'il vous plaît. Monsieur le président, je suis ici en tant que témoin et je ne veux pas que de telles accusations soient portées.

Le président: Le témoin a dit qu'il n'avait pas été consulté, c'est tout.

M. Allmand: J'ai conclu que c'était peut-être une plainte. Pourquoi n'avez-vous pas communiqué avec eux vous-même?

M. Nowlan: Je n'ai qu'une autre question à poser à Son Honneur. Je félicite Son Honneur pour le mémoire qu'il nous a présenté aujourd'hui et le mémoire d'il y a un an, que nous n'avons jamais entendu. Voici ma deuxième question, qui ne découle pas d'un commentaire fait au sujet de l'équipe spéciale et du manque de communication; il s'agit bien,

[*Texte*]

lem, frankly, within the Atlantic area, that we do not communicate enough between ourselves. Be that as it may, I want to ask His Worship a question related to a question that was asked by somebody else—I think it was Mr. Horner—about Moncton being the railway centre, or the transportation centre. Sitting where you do, sir, near the boundary of two great provinces of the four...

Mayor Jones: I think you are correct about that.

Mr. Nowlan: Yes, I agree with that. As a Mayor, being involved in transportation and just by the very fact of your brief, do you think there could be a positive benefit economically in the Atlantic area if the four Atlantic provinces could get uniform regulations as far as the trucking industry is concerned, let alone the railway.

Mayor Jones: I will go farther than that, Mr. Nowlan, I think it is darn near time we had a union.

Mr. Nowlan: That completes my questioning, Mr. Chairman, the Mayor and I are on the same side.

The Chairman: Our next brief will be from the Grand Manan Board of Trade. These gentlemen tell me they have a brief which will take just four or five minutes to present, so I think we will hear the brief read.

Mr. Lawrence Cook (Chairman, Transportation Committee, Grand Manan Board of Trade): Mr. Chairman and members of the Committee and those who have recently presented briefs, I want to commend you on your efforts with respect to your various localities. I act as Chairman of the Transportation Committee of the Grand Manan Board of Trade. Mr Guptill is an associated member. We come to you apologetically. I have been out of the country for about a month; our President of the Grand Manan Board of Trade is incapacitated at the moment and our secretary recently suffered a heart seizure, so we are somewhat disorganized.

We do have a few copies of the brief here which need to be updated. Despite our irregularities we do have a need. We might leave with the Committee a few copies of a brief dated February 1968 which we have here. As I said before these briefs need to be updated. As a summary of this brief, I am going to have Mr. Guptill read a synoptic

[*Interprétation*]

toutefois, d'un problème fondamental qui se présente dans la région de l'Atlantique: nous ne communiquons pas suffisamment les uns avec les autres. Quoi qu'il en soit, je voudrais poser une question à Son Honneur à la suite d'une question posée par quelqu'un d'autre, M. Horner je pense, ou quelqu'un d'autre, au sujet de Moncton comme centre ferroviaire, centre des transports. Là où vous êtes, près des frontières de deux grandes provinces...

M. Jones: Vous avez tout à fait raison.

M. Nowlan: Je suis tout à fait d'accord. En tant que maire et intéressé aux problèmes du transport et selon votre mémoire, croyez-vous qu'il pourrait y avoir un avantage réel sur le plan économique pour la région de l'Atlantique si les quatre provinces de l'Atlantique pouvaient établir une loi uniforme du moins en ce qui concerne l'industrie du camionnage, mise à part l'industrie ferroviaire?

M. Jones: Il est grand temps que nous nous réunissions à ce sujet.

M. Nowlan: Nous sommes tout à fait du même avis. Donc, pas besoin de poursuivre ces questions.

Le président: Le mémoire suivant sera celui du *Grand Manan Board of Trade.* Monsieur vient de me dire que son mémoire compte environ 4 à 5 minutes. Alors, je crois que nous allons entendre ce mémoire.

M. Lawrence Cook (président de la Commission des transports de la «Grand Manan Board of Trade»): Merci, monsieur le président. Messieurs les membres du Comité et ceux qui ont présenté des mémoires, je voudrais vous féliciter de tout ce que vous avez fait en ce qui concerne les communautés diverses des Maritimes. J'agis à titre de président du Comité des transports du *Grand Manan Board of Trade;* M. Guptill est membre associé. Nous vous présentons des excuses. Moi-même, j'ai été à l'étranger depuis un mois. Le président du *Grand Manan Board of Trade* à l'heure actuelle est malade, et notre secrétaire a subi une crise cardiaque récemment; nous sommes donc un peu désorganisés.

Nous avons toutefois quelques exemplaires du mémoire, qui devrait être mis à jour. Malgré tout, nous avons vraiment un grand besoin. Nous pourrions peut-être vous donner copie d'un mémoire qui remonte au mois de février 1968 et qui aurait besoin d'être mis à jour, comme je l'ai dit. Pour résumer le mémoire, M. Guptill lira un rapport synopti-

[*Text*]

report covering much of the information contained in our brief and an updated revision which should be contained in our brief to cover today's requirements

Mr. Sam Guptill (Member, Grand Manan Board of Trade): Gentlemen, we have presented a brief, with which you have no doubt familiarized yourself, giving you a small concept of the economy, industry and transportation as they pertain to Grand Manan Island. Economics and industry relate themselves to transportation and any improvement in transportation has a direct bearing on all facets of life on Grand Manan. May we indicate that life on Grand Manan is not as one who has never visited our fair island might expect. May we take this opportunity to invite each of you to visit Grand Manan when occasion and time permit.

What currently concerns us is that transportation might be improved by a greater utilization of the present ferry system, majoring on services which we do not now have. You are possibly aware that this service is underwritten by the federal government to the extent of $200,000, and the provincial government by $100,000, for a total of $300,000 yearly, plus all revenues received for passenger car and truck fares.

At this point we should mention that when the provincial government was requested to do something in the way of having the fares reduced, Coastal Transport Ltd., asked for an additional sum of $50,000 per annum to cover the half-fare reductions for Island residents. This would seem to indicate that the revenue from Island residents still is in the neighbourhood of $50,000, plus the full fare received from non-residents for a grand total of about $400,000. Also, from October 15 to April 15, annually we have accommodation for only 3 per cent of our car population, excluding trucks and visiting cars.

It is our contention that a ferry and terminals representing a capital outlay of some $3½ million should be utilized more than 30 hours per week between the above indicated dates, excepting Christmas and the New Year

[*Interpretation*]

que contenant bien des renseignements qui sont déjà dans notre mémoire et, en plus, une version revisée qui devrait se trouver dans notre mémoire, pour répondre aux besoins d'aujourd'hui, comme je l'ai dit.

M. Sam Guptill (membre associé de la Grand Manan Board of Trade): Messieurs, nous avons présenté un mémoire, que vous connaissez très probablement, vous donnant une petite idée de l'économie de l'industrie et des transports à l'île de Grand Manan. L'économie et l'industrie se rapportent aux transports et toute amélioration qui pourrait être apportée dans le domaine des transports a des répercussions directes sur tous les aspects de la vie dans l'île de Grand Manan.

Pouvons-nous dire que la vie sur l'île de Grand Manan n'est pas du tout de ce que l'on pourrait s'attendre si l'on y est jamais venu. Je profite de l'occasion pour inviter chacun de vous à venir nous visiter sur l'île de Grand Manan, lorsque l'occasion se présentera.

Ce qui nous intéresse à l'heure actuelle, c'est qu'on pourrait améliorer les transports en utilisant beaucoup mieux le système de transbordeurs actuel; il faudrait concentrer sur des services que nous n'avons pas à l'heure actuelle. Vous savez probablement que le service est subventionné par le gouvernement fédéral, jusqu'à concurrence de $200,000, et par le gouvernement provincial jusqu'à concurrence de $100,000, pour un total de $300,000 par année, en plus de tous les revenus pour le service des automobiles et des camions.

Lorsqu'on a demandé au gouvernement provincial de réduire les taux, la *Coastal Transport Limited* a demandé une somme additionnelle de $50,000 par année pour couvrir la réduction de moitié des taux pour les résidents de l'île. Ceci indiquerait que le revenu de la part des résidents de l'île se chiffre encore à $50,000, en plus du taux reçu des non-résidents, ce qui fait un total global d'environ $400,000. Du 15 octobre jusqu'au 15 avril chaque année, nous pouvons servir seulement 3 p. 100 de notre population d'autos, à part les camions et les automobiles en tourisme.

Nous prétendons donc qu'un traversier et un terminus, soit des installations représentant un investissement de $3.5 millions devrait être utilisé plus que 30 heures par semaine, entre les dates ci-indiquées, sauf à Noël et au Jour de l'An, alors que deux

[*Texte*]

when two-trips-daily schedules precede and succeed these holidays.

We further recommend that the transportation and trucking committee of the Grand Manan Board of Trade act as liaison between ferry operators and the federal and provincial governments. I might say that the following recommendation is an updating of the brief we presented originally. We recommend the change in schedule to a minimum of three rounds trips daily from June 15 to September 15, and two round trips daily for the balance of the year.

Gentlemen, that sums up in very brief detail what we have to say about transportation, but we do further recommend that a government survey be made of our airstrip at North Head on the practicability of enlarging the strip to meet the Department of Transport requirement for a licensed airfield.

We thank you very much for listening to this brief which we presented in as little detail as possible in order to use up as little time as possible while still giving a clear view in detail of what we have in mind here tonight.

The Chairman: Gentlemen, I am sorry I did not introduce our two witnesses here tonight. On my immediate right here is Mr. Lawrence Cook, Chairman of the Transportation Committee, and his associate Mr. Guptill. Are there any questions?

Mr. Nowlan: I have a question, Mr. Chairman. I want to compliment the members of the Grand Manan Board of Trade in preparing their brief. In my constituency there is an area quite like Grand Manan. In fact, frankly, the Grand Manan people could stay in Grand Manan as far as I am concerned because they come over to fish some of the fishing areas off Brier Island and Long Island and we wish their draggers would stay in New Brunswick. However, that is getting too parochial and provincial so therefore I will not press that. They are good fishermen and there is also a Mr. Guptill who is with the Acadia University in my home town. Perhaps he is a relative of the Mr. Guptill here at the table.

The Chairman: Mr. Nowlan, I think you are getting away from transport.

Mr. Nowlan: I am. Mr. Chairman, transport is communication and a communion of souls and spirits. The only question I really would like to ask directly relating to their brief concerns proposal number two in the

[*Interprétation*]

voyages par jour sont la règle, avant et après ces fêtes.

Nous recommandons de plus que le Comité du transport et du camionnage du *Board of Trade* de Grand Manan agisse comme agent de liaison entre les transbordeurs et les gouvernements fédéral et provinciaux. La recommandation suivante est faite pour mettre à jour le mémoire d'origine. Nous recommandons un changement d'horaire pour donner un minimum de trois voyages aller-retour, par jour, du 15 juin au 15 septembre et deux voyages aller-retour, par jour, pour le reste de l'année.

Messieurs, cela résume en très peu de détails ce que nous avons à dire au sujet des transports. Mais nous recommandons, en plus, qu'un relevé du gouvernement soit fait de la piste de North Head, sur la possibilité d'élargir la piste d'envol pour qu'elle soit conforme aux exigences du ministère des Transports pour un aéroport enregistré.

Nous vous remercions beaucoup d'avoir écouté notre mémoire. Nous avons présenté le moins de détails possibles pour prendre le moins de temps possible, mais encore pour donner une très bonne idée de ce que nous avions en vue, ce soir.

Le président: Messieurs, je m'excuse, je n'ai pas présenté nos deux témoins ici ce soir. A ma droite immédiatement, M. Lawrence Cook, président du Comité des transports et M. Guptill, son assistant. Y a-t-il des questions maintenant?

M. Nowlan: Oui, j'ai une question, monsieur le président. Je voudrais féliciter les membres du *Board of Trade* du Grand Manan pour leur mémoire. Dans ma circonscription, il y a une région qui ressemble beaucoup à Grand Manan. En fait, les résidents de Grand Manan pourraient demeurer chez eux, car ils viennent pêcher dans nos régions le long de l'île Briar, et nous voudrions donc que leurs chalutiers demeurent au Nouveau-Brunswick, mais c'est un problème régional. Alors, je n'insiste pas. Ce sont de bons pêcheurs. Il y a aussi un monsieur Guptill à l'université *Acadia* tout près de chez nous. Ce doit être un parent de M. Guptill qui est avec nous.

Le président: Vous vous éloignez du sujet, monsieur Nowlan.

M. Nowlan: Les transports, c'est la communication, la communion entre esprits. La seule question que je voudrais donc poser directement en ce qui a trait au mémoire, est relative à la proposition numéro 2 du

[*Text*]

brief prepared a year ago where you mentioned the tourist season and the problem of getting to the Island or off the Island because of the back-up of cars. You suggest that no car be turned away after one bout and this would revive the old reservation system. I would like to ask one of the two gentlemen just in a quick resumé if there was a reservation system in the past? If so, what happened to it and why cannot it be reinstated from your point of view?

Mr. Cook: The most recent ferry which we are deeply proud of since its inception to the Island has never had a reservation system. Previous to that the old ferry system did. It is our contention as a Board that for a more regulated proposition we should have the reservation system, but the operators who have been approached have declined such a move.

Mr. Nowlan: Are these private operators from the provincial department of highways or are they CNR boats?

Mr. Cook: No, it is a private corporation, Coastal Transport Ltd.

Mr. Nowlan: With whom do they make their agreement?

Mr. Cook: I think they contract with the Department of Transport.

Mr. Nowlan: On the old system there was a reservation system in the tourist season?

Mr. Cook: That is right. What would you do with Air Canada; what would you do with the Bluenose; what would you do with any transportation system if it did not have some regulation?

Mr. Nowlan: What answer have you had from the private operator of the boat? In Briar Island and Long Island again there is a private ferry system, which can contract under the Provincial Department of Highways, so I am somewhat familiar with your problem. I am trying to find out who is ultimately responsible for it.

Mr. Cook: The operators.

Mr. Nowlan: There has been a change in operators, is that correct?

Mr. Cook: This is a newly incorporated company, this Coastal Transport Limited. The previous one was another Saint John interest who operated a ferry service.

The Chairman: Any other questions, gentlemen? Mr. Skoberg.

[*Interpretation*]

mémoire présenté il y a un an, lorsque vous avez mentionné la saison du tourisme et le problème du transport de voitures vers l'île et au retour, vu les longues attentes pour la traversée.

Vous avez proposé qu'on ne détourne aucun véhicule-moteur après un voyage; je voudrais donc demander à l'un des deux messieurs, tout d'abord, s'il y a déjà eu un système de réservations, et pourquoi ne pourrait-on pas le rétablir, à votre point de vue?

M. Cook: Le transbordeur le plus récent, dont nous sommes très fiers, n'a jamais eu le système de réservations depuis qu'il a commencé son exploitation dans l'île. L'ancien transbordeur en avait un. Nous prétendons donc, à titre de *Board of Trade* qu'un système de réservations serait nécessaire, mais les opérateurs n'ont pas accepté cela.

M. Nowlan: Est-ce qu'il s'agit d'exploitants du ministère provincial de la Voirie ou de transbordeurs du National-Canadien?

M. Cook: Non, il s'agit d'entrepreneurs indépendants, la *Coastal Transport Ltd.*

M. Nowlan: Qui ont un accord avec qui?

M. Cook: Avec le ministère des Transports, je pense.

M. Nowlan: Y avait-il un système de réservations autrefois durant la saison du tourisme?

M. Cook: Oui, c'est vrai, qu'est-ce que vous feriez d'Air Canada, du Bluenose, de tout moyen de transport, s'il n'y avait pas un moyen de le réglementer?

M. Nowlan: Et, quelle réponse avez-vous reçue de l'entrepreneur privé? A Briar Island et Long Island il y a un transbordeur privé qui détient un contrat du ministère provincial de la Voirie, de sorte que je connais assez bien votre problème. J'essaie de déterminer qui est responsable en fin de compte?

M. Cook: Les entrepreneurs.

M. Nowlan: Est-ce qu'il n'y a pas eu un changement d'exploitants?

M. Cook: C'est une société qui vient d'être constituée, la *Coastal Transport Limited.* C'était une autre société de Saint-Jean qui assurait le service de transbordeur avant.

Le président: Y a-t-il d'autres questions? Monsieur Skoberg.

[*Texte*]

Mr. Skoberg: Mr. Chairman and sir, is the representation you have made for the upgrading of your facilities that you are concerned about in your brief made to Ottawa or to New Brunswick?

Mr. Cook: The participation is two to one. Ottawa is contributing in round figures now $200,000 to subsidize our service and the provincial Treasury we estimate $100,000. I think it is actually about $88,000 a year.

Mr. Skoberg: The question is, do you make representation to New Brunswick here, to the capital here, or do you make it to Ottawa in regard to upgrading...

Mr. Cook: We make it to Ottawa in conjunction with Fredericton.

Mr. Skoberg: You do it in conjunction with...

Mr. Cook: That is right.

Mr. Skoberg: And these representations have been made?

Mr. Cook: Right.

Mr. Skoberg: Do you know when?

Mr. Guptill: I might add that the contract with Coastal Transport is made direct with what was the Maritime Commission in Ottawa. It is now with Water Transport Commission.

Mr. Skoberg: And when was that made? Can you give me an idea?

Mr. Cook: I think the contract dates back to 1965, sir.

Mr. Skoberg: I mean the representation for the upgrading of the facilities.

Mr. Cook: We were assembled here in Fredericton in the month of November last year.

Mr. Skoberg: And it was made then.

Mr. Cook: Right.

Mr. Nowlan: To the Transport Minister?

Mr. Cook: No, not to the Minister himself, but his representative, Captain Balfry.

Mr. Nowlan: Who is that, sir?

Mr. Cook: Captain Balfry of the Canadian Maritime Commission.

[*Interprétation*]

M. Skoberg: Monsieur le président, et monsieur, est-ce que les représentations que vous avez faites pour améliorer les installations dont vous vous souciez dans votre mémoire, sont adressées à Ottawa ou au Nouveau-Brunswick?

M. Cook: La participation d'Ottawa est deux fois plus élevée; Ottawa contribue d'environ $200,000 à notre service alors que le Trésor provincial contribue, selon nos calculs, environ $100,000. Je crois qu'il s'agit en fait de $88,000 par année.

M. Skoberg: Je vous demandais si vous avez fait des représentations au Nouveau-Brunswick, dans la capitale, ou à Ottawa en vue d'améliorer le service...

M. Cook: A Ottawa, de concert avec Fredericton.

M. Skoberg: Vous l'avez fait de concert avec...

M. Cook: Oui.

M. Skoberg: Et vous avez fait ces représentations?

M. Cook: Oui.

M. Skoberg: Savez-vous quand?

M. Guptill: Je pourrais peut-être ajouter que le contrat avec la *Coastal Transport* a été passé directement avec ce qui était autrefois la Commission Maritime à Ottawa et qu'on appelle maintenant le Comité des transports par eau.

M. Skoberg: Et quand l'avez-vous fait? Avez-vous une idée?

M. Cook: Je crois que le contrat remonte à 1965.

M. Skoberg: Je veux parler des représentations pour l'amélioration des installations.

M. Cook: On s'est réunis à Fredericton au mois de novembre l'an dernier.

M. Skoberg: Vous avez fait les représentations à ce moment-là?

M. Cook: Oui.

M. Nowlan: Au ministre des Transports?

M. Cook: Non, à son représentant, le capitaine Balfry.

M. Nowlan: Qui est-ce?

M. Cook: Le capitaine Balfry de la Commission maritime canadienne.

[*Text*]

Mr. Nowlan: What reply did you get?

Mr. Cook: Well, he did not have the capacity, sir, to ... all he could do was recommend. He could not commit the Government.

Mr. Nowlan: Have you had any reply?

Mr. Cook: Not to my knowledge.

Mr. Guptill: I am afraid that he was not in a capacity that he could make any recommendations. He came down here purely to get the facts and figures of why we needed this extra transportation. We do not know what his recommendation was.

Mr. Nowlan: So you have had no official reply.

Mr. Guptill: That is right.

The Chairman: Any other questions, gentlemen? I want to thank you two gentlemen for your briefs. Just a minute, please, I think Mr. Cook has a little reply.

Mr. Cook: Gentlemen, with respect to the previous recommendations which have been made to these submissions, it is a matter purely of economics as it relates to the various localities. The transportation to an island is the lifeline in the existence of the island. You gentlemen might say, well, these people should have their heads examined to live on an island. But we are incorporated there and we are doing our best to improve our transportation links with the island.

Going back some few years in the preparatory stage of the drafting of a ferry service to Grand Manan, to the best knowledge and ability of the Transportation Committee of the Grand Manan Board of Trade, we came up with a ferry approximating 216 feet in length, with a car capacity of 30 vehicles. Somewhere along the line there was a compromise made, so that we eventually wind up with a ferry 174 feet in length, carrying 20 vehicles.

Now, we have proven ourselves to be more on the right side than those who ultimately designed the ferry, because figures relate and I think The Department of Transport has this on file, and I think it is commonplace knowledge, that there is a growth factor of some eight per cent annually with respect to all transportation. In 1965 it was necessary to provide transportation for 20 vehicles. We are now in 1969, and four times eight is 32.

[*Interpretation*]

M. Nowlan: Et qu'est-ce qu'il a répondu?

M. Cook: Il n'avait aucune autorité pour ...il pouvait tout simplement faire des recommandations. Il ne pouvait pas engager le gouvernement.

M. Nowlan: Avez-vous reçu une réponse?

M. Cook: Pas à ma connaissance.

M. Guptill: Je crains qu'il n'était même pas en mesure de formuler des recommandations. Il est venu simplement pour obtenir des renseignements et voir pourquoi nous avions besoin de ces moyens additionnels de transport. Nous ne connaissons pas sa recommandation.

M. Nowlan: Vous n'avez donc pas reçu de réponse officielle?

M. Guptill: C'est exact.

Le président: Avez-vous d'autres questions, messieurs? Je veux vous remercier, messieurs, de la présentation de votre mémoire. Un instant, je crois que M. Cook aurait peut-être une réponse à vous donner.

M. Cook: Messieurs, en ce qui a trait aux recommandations qui ont été formulées à la suite de ces représentations, c'est une question purement d'économie pour ce qui est des diverses localités. Pour une île le transport est vraiment vital à la survie même de l'île. Vous pourriez peut-être dire «Ces gens qui vivent dans une île devraient se faire examiner la tête». Mais notre société y est constituée et nous faisons de notre mieux pour améliorer les moyens de transport avec l'île.

Pour remonter quelques années, lorsqu'on a d'abord songé au service de transbordeur jusqu'à Grand Manan, au meilleur des connaissances et de la compétence du Comité des transports et de la Chambre de Commerce de Grand Manan, nous avons pu trouver un transbordeur d'environ 263 pieds de long et d'une capacité de 30 voitures automobiles. Mais il y a eu un compromis à un moment donné de sorte que nous avons fini par avoir un transbordeur de 174 pieds pouvant transporter 20 véhicules.

L'expérience a prouvé que nous avions plus raison que ceux qui ont de fait tiré les plans du transbordeur, car les chiffres, et je crois que le ministère des Transports l'a dans ses dossiers et c'est d'ailleurs connu, le taux annuel de croissance de tous les moyens de transport est de 8 p. 100. En 1965, il était nécessaire de prévoir du transport pour 20 véhicules. Mais nous sommes maintenant en 1969, et 4 fois 8 c'est 32. Vous avez donc une

[*Texte*]

So you have a 32 per cent growth factor there which we do not have the facilities to supply.

So there is only one alternative at the moment. While it has been suggested by the Chairman of the previous Canadian Maritime Commission, Mr. Alex Watson, that if one ferry of our present denomination was not satisfactory, the most practical thing would be to put on a second ferry. But let me suggest to you, gentlemen, that our Board of Trade goes back to 1946 in its efforts before we finalized the construction and completion of the present ferry. So we have approximated about 19 to 20 years in our efforts to get what we have today. And we are not complaining, gentlemen, with respect to the operators of the present ferry.

It is a regrettable thing that Grand Manan was not consulted when the original contract was drawn up. After all, the ferry primarily serves the Island of Grand Manan, but the contract was drawn without our knowledge of its conditions, so we are not happy from that point of view.

So I say you have a growth factor over the last four years of a 32 per cent increase, and figures confirm this. I think all transportation reflects this 8 per cent annual growth. We still have a 20-car ferry which definitely is not adequate.

It is a matter of dollars and cents. We are bound down by a contract subject to renewal every five years, and this contract dates back to 1965 which is subject to renewal in 1970. It is a matter of finance, because the operators are not going to increase the service unless they are recompensed for it. So I say it is a matter of finance, and we beg your indulgence and your future assistance, because if we could utilize this ferry to its capacity we would have a very favourable situation.

As I said before, we have a unique situation. We live on an island, there is no alternate transportation. In other words, supposing that the access roads to the City of Fredericton were controlled at various points to permit three per cent of the cars in this city to exit the city, and after that you would be refused the right to leave.

In other words, that is what we are doing. When the ferry departs at 8:00 o'clock in the morning, that is it, with whatever she can take. And with a car population in excess of 800 vehicles, just using a capacity of 20 cars you have only 2½ per cent of our car population that can move in any one day. That is

[*Interprétation*]

augmentation de 32 p. 100 pour laquelle il n'y a pas d'installations de prévues.

Il n'y a qu'une seule alternative à l'heure actuelle. Bien que le président de l'ancienne commission maritime canadienne, M. Alex Watson, ait suggéré que si un seul transbordeur comme notre transbordeur actuel n'était pas suffisant, la meilleure chose à faire serait d'en mettre un deuxième en service. Mais permettez-moi de vous dire, messieurs, que les efforts de notre Chambre de Commerce remontent à 1946 avant d'aboutir au transbordeur actuel. Il nous a donc fallu 19 ou 20 ans d'efforts pour aboutir à ce résultat. Et nous ne nous plaignons pas, messieurs, des exploitants du transbordeur actuel.

C'est tout de même regrettable que les gens de Grand Manan n'ont pas été consultés avant de rédiger le contrat initial, parce qu'en fin de compte, c'est surtout l'Île de Grand Manan qui est desservie. Mais le contrat a été rédigé sans qu'on nous mette au courant des conditions du contrat et nous n'en sommes pas du tout heureux.

Je disais donc que nous avons un taux de croissance de 32 p. 100 pour les quatres dernières années et les chiffres le confirment. Je crois que tous les moyens de transport reflètent ce taux de croissance annuelle de 8 p. 100. Et nous avons toujours un transbordeur de 20 véhicules, ce qui est nettement insuffisant.

C'est une question de finances. Nous sommes liés par un contrat renouvelable à tous les cinq ans. Comme ce contrat remonte à 1965 il serait renouvelable en 1970. C'est une question de finances, car les exploitants n'augmenteront certainement pas le service à moins de recevoir une compensation. Nous disons donc que c'est une question de finances. Nous demandons donc votre indulgence et votre aide à l'avenir, car si nous pouvions utiliser le transbordeur à pleine capacité, nous aurions une situation très favorable.

Comme je l'ai dit auparavant, notre situation est unique. Nous vivons dans une île et il n'y a aucun autre moyen de transport. Autrement dit, supposons que les routes d'accès de la ville de Fredericton étaient contrôlées à divers endroits de façon à ne permettre que 3 p. 100 des véhicules qui s'y trouvent à sortir de la ville et qu'on vous refuserait ensuite la permission de sortir.

En d'autres termes, c'est ce que nous faisons. Quand le transbordeur part le matin à huit heures, chargé à pleine capacité, c'en est fait. Étant donné que le nombre de véhicules à moteur est de plus de 800, si la capacité est de 20 automobiles, seulement 2.5 p. 100 des voitures peuvent quitter l'île dans une jour-

[*Text*]

on a one-day trip service. You subtract from that, gentlemen, the commercial vehicles which originate in Saint John, St. Stephen and elsewhere, Boston and what have you, which take space on the ferry, and you reduce our ability to move from Grand Manan to approximately not over two per cent in any one day.

So we feel we are desperately incapacitated, and as I said before, we beg your indulgence. It is a matter of a few extra dollars. We have no personal axe to grind; we are here on behalf of the community. We have a wonderful ferry; we have a wonderful island, known as the Bermuda of the Maritimes. You come down there and you do not see any snow, as you people have here. I think, gentlemen, that pretty much covers my remarks.

The Chairman: Thank you. Our next brief will be from the Fredericton Junior Chamber of Commerce. Mr. Jack Lamey, will you go ahead and make your presentation? Page 727.

Mr. Lamey: Mr. Chairman, gentlemen, I think that probably our brief will be appreciated by one of the members here this evening, anyway, because it is extremely brief. It was brief in the beginning, but then we cut it down again when we realized that we had to have a brief resumé of our brief, so we do have an extremely brief one.

First of all, we of the Frederiction Junior Chamber of Commerce are very interested in the reinstatement of a passenger service to the Fredericton area. We note that we are the only capital city in Canada without a passenger train service. We feel that because of the ever-growing area and increasing population of this city, and the existence of two universities and a teachers' college, plus the Army base at Oromocto, which is one of the largest in Canada, we warrant such a service. The approximate population in the immediate and surrounding twelve miles of the city is estimated at 60,000 persons. This we feel should give an excellent list of prospective passengers.

The Maritime Freight Rates Act in itself is good for our area, but the less than carload service has proved a detriment to local producers. We feel that if the 20 per cent subsidy of tariff was extended to other modes of transportation of goods, it would once again serve a useful purpose and stimulate our trade with the rest of Canada. We understand that there have been recent changes in the last couple of days in carload service, but we have not had a chance to study them. However, any change for the better would be

[*Interpretation*]

née. Le transbordeur ne fait qu'un voyage par jour. Déduisez de cela, messieurs, les véhicules utilitaires qui partent de Saint-Jean, St. Stephen, Boston ou ailleurs et qui prennent beaucoup de place sur le transbordeur, et vous réduisez donc la possibilité que nous avons de partir de Grand Manan à 2 p. 100 au maximum dans une journée. Nous nous trouvons donc nettement désavantagés et nous vous demandons encore une fois d'être indulgents. C'est une question de quelques dollars de plus. Nous n'avons aucun motif personnel; nous sommes ici au nom de la collectivité. Nous avons un très bon transbordeur et une belle île qui est connue du nom des Bermudes des Maritimes. Il n'y a pas de neige comme vous voyez ici. Je crois, messieurs, que c'est tout ce que j'avais à vous dire.

Le président: Merci. Le prochain mémoire est celui de la Jeune Chambre de Commerce de Fredericton. Êtes-vous prêts? Page 727.

M. Lamey: Monsieur le président et messieurs, je crois que notre mémoire sera bien accueilli par un des députés ici ce soir étant donné qu'il est très bref. Il était déjà bref, mais nous l'avons résumé davantage, et c'est, en fait, un résumé de notre résumé.

Tout d'abord, la Chambre de Commerce junior de Fredericton, est très intéressée au rétablissement des services-voyageurs vers la région de Fredericton. Nous constatons que nous sommes la seule capitale canadienne sans service-voyageur par train. Nous croyons que l'expansion de la région et la population croissante, l'existence de deux universités et une école normale, en plus de la base militaire à Oromocto, qui est l'une des plus grande au Canada, justifient une telle demande. La population dans un rayon de 12 milles de la ville est d'environ 60,000 personnes, ce qui permet d'attendre un bon nombre de voyageurs.

La Loi sur les taux de transport des marchandises dans les provinces maritimes est, en soi, un avantage pour la région mais le tarif pour les chargements incomplets est désavantageux pour les producteurs locaux. Si les autres moyens de transport de marchandise bénéficiaient de cette subvention de 20 p. 100 du tarif elle serait de nouveau utile et encouragerait notre commerce avec le reste du Canada. Il semble qu'il y a eu des changements depuis quelques jours pour le service de chargements incomplets, mais nous n'a-

[*Texte*]

very much appreciated and applauded by the Fredericton Jaycees.

So as local Jaycees we urge you to consider requesting the reinstatement of passenger service for our city and amend the Freight Rates Act for the Martimes to include the reduction of tariff on other transportation services, which would afford our area the advantage the rest of Canada enjoys. Respectfully submitted, Jack Lamey, Fredericton Jaycees.

The Chairman: Thank you. Mr. Mahoney?

Mr. Mahoney: Mr. Lamey, just for the record, I think the citizens of Charlottetown and Victoria, British Columbia, would be moderately surprised to hear you say that you are the only capital city without passenger train service. However, other than that, congratulations on the brief.

The Chairman: Mr. Skoberg.

Mr. Skoberg: When was the passenger train service taken off, sir?

Mr. Lamey: I would say it was six or seven years ago now.

Mr. Skoberg: Was vigorous opposition put up by the community here regarding its termination?

Mr. Lamey: I was not present in Fredericton at the time, but from what I can understand there were quite a few people saying that it should not be taken out, although the passenger service at that time was not making money, apparently.

Mr. Skoberg: What would you advocate for reinstituting a passenger service at this time? What type of service would you think would serve Fredericton, and to what point?

Mr. Lamey: I can see that a passenger service in Northern New Brunswick going through Fredericton and also on to Quebec and into the States would help, because of the universities here, and also leading to Quebec to link with Montreal and Western Canada where the families of many people in Base Gagetown live and who visit the Base. Also there are students at U.N.B., St. Thomas, and Teachers' College who happen to make their way home every weekend.

Mr. Skoberg: Would you consider the day-liner type of service sufficient?

[*Interprétation*]

vons pas eu le temps de les étudier. Mais, toute amélioration serait bien vue de la part de la Jeune Chambre de Fredericton. A titre de la Jeune Chambre locale, nous vous exhortons à étudier la possibilité de rétablir le service-passager à Fredericton de modifier la Loi sur les taux de transport des marchandises dans les provinces maritimes de façon à étendre la réduction du tarif aux autres services de transport, ce qui donnerait à notre région les avantages dont jouit le reste du Canada. Respectueusement soumis, Jack Lamey, président de la Jeune Chambre de Fredericton.

Le président: Merci. Monsieur Mahoney?

M. Mahoney: Monsieur Lamey, pour le compte rendu, je crois que les citoyens de Charlottetown et de Victoria en Colombie-Britannique seraient très surpris de vous entendre dire que votre capitale est la seule au pays sans service-voyageurs par train. A part cela, toutefois, je vous dois des félicitations pour votre mémoire.

Le président: Monsieur Skoberg.

M. Skoberg: Quand le service des voyageurs a-t-il été éliminé?

M. Lamey: Il y a environ 6 ou 7 ans, je crois.

M. Skoberg: Est-ce qu'il y a eu des protestations vigoureuses de la part de la population?

M. Lamey: Je n'étais pas à Fredericton à ce moment là, mais d'après ce que j'ai pu comprendre, beaucoup de gens s'y sont opposés, bien que le service-voyageur à ce moment-là n'était apparemment pas rentable.

M. Skoberg: Qu'est-ce que vous proposez pour rétablir le service-voyageur à l'heure actuelle? Quel genre de service devrait désservir Frédericton et vers quels endroits?

M. Lamey: Je vois très bien un service-voyageur vers le nord du Nouveau-Brunswick qui passerait par Fredericton et se rendrait ensuite à Québec et vers les États-Unis, ce qui aiderait en raison des universités qu'on y trouve, et aussi vers Québec pour rejoindre Montréal et l'Ouest Canadien où vivent les familles de beaucoup de gens à la base militaire de Gagetown qui viennent en visite. Il y a aussi les étudiants de l'Université du Nouveau-Brunswick, du Collège St. Thomas et de l'école normale qui se rendent chez eux en fin de semaine.

M. Skoberg: Est-ce qu'un service d'autorail suffirait?

[*Text*]

Mr. Lamey: No, I do not think so. I think you have to consider the evening runs along with day runs.

The Chairman: Mr. McGrath.

Mr. McGrath: Why does the witness feel that the City of Fredericton requires the reinstatement of passenger train service?

Mr. Lamey: Well, I think I have already answered that question by mentioning the large number of new people we have in our city from the colleges and Base Gagetown, which is not far away. I think these people are interested in travel. We see many students hitch-hiking on the week-ends. Also I think we have stimulated our area as far as tourism goes too. I think it will bring more tourists into the city, and this is basically what we are interested in as Fredericton Jaycees. We promote tourism in the community.

Mr. McGrath: If it is any consolation to the witness, Mr. Chairman, I want him to know that the unique distinction he feels Fredericton now enjoys in not having a passenger service will be shared by the Province of Newfoundland if the CNR has its way.

Mr. Lamey: Oh, never.

The Chairman: Mr. Nowlan.

Mr. Nowlan: My question has been already asked.

The Chairman: Mr. Nesbitt.

Mr. Nesbitt: A purely technical question. How far away from Fredericton is the nearest rail connection between Saint John and Montreal?

Mr. Lamey: About 40 miles, 40 to 45 miles.

Mr. Nesbitt: Is there any connection between this rail line and the City of Fredericton at the present time, by bus or some other means of communication?

Mr. Lamey: I did not get the question.

Mr. Nesbitt: Is there any means of communication between the City of Fredericton...?

Mr. Lamey: Oh yes, there is a connection by the local bus service. It goes through Fredericton Junction and McGivney and meets there the train service going to Montreal.

Mr. Nesbitt: And it meets the trains going through regularly.

[*Interpretation*]

M. Lamey: Non, je ne le crois pas, je crois qu'il faut un service du soir de même qu'un service du jour.

Le président: Monsieur McGrath.

M. McGrath: Pourquoi le témoin croit-il que la ville de Fredericton exige qu'on rétablisse le service-voyageurs.

M. Lamey: Je crois avoir déjà répondu à cette question lorsque j'ai mentionné le nombre de nouveaux arrivés dans notre ville qui viennent des collèges et des universités et de la base militaire de Gagetown, qui n'est pas trop éloignée. Tous ces gens désirent voyager. Il y a beaucoup d'étudiants qui font de l'auto-stop en fin de semaine, mais en plus de cela, on encouragerait ainsi le tourisme dans notre région. Je crois que beaucoup plus de touristes viendraient dans notre ville, et, au fond, c'est ce qui nous intéresse, la Jeune Chambre de Fredericton. Nous encourageons le tourisme dans notre ville.

M. McGrath: Si cela peut consoler le témoin, monsieur le président, la distinction unique dont jouit Fredericton en n'ayant pas de service-voyageur, sera partagée par Terre-Neuve, si le National Canadien obtient gain de cause.

M. Lamey: Non, jamais.

Le président: Monsieur Nowlan.

M. Nowlan: On a déjà posé la question que je voulais poser.

Le président: Monsieur Nesbitt.

M. Nesbitt: Une question de détail tout simplement. A quelle distance de Fredericton est le point le plus rapproché sur la ligne ferroviaire entre Saint-Jean et Montréal?

M. Lamey: Environ 40 ou 45 milles.

M. Nesbitt: Est-ce qu'il y a un moyen de transport entre cette ligne ferroviaire et la ville de Fredericton à l'heure actuelle, par autobus ou un autre moyen de transport.

M. Lamey: Je m'excuse, je n'ai pas compris votre question.

M. Nesbitt: Y a t-il un moyen de transport entre Fredericton...

M. Lamey: Oh! oui, par le service d'autobus local. Il passe par Fredericton Junction et McGivney où il rencontre le train vers Montréal.

M. Nesbitt: Et il rencontre régulièrement le train qui passe.

[*Texte*]

Mr. Lamey: Yes.

The Chairman: Mr. Corbin.

Mr. Corbin: How is the bus service in and out of Fredericton?

Mr. Lamey: How is it?

Mr. Corbin: Yes. How good is it? Or how bad is it?

Mr. Lamey: There have been many complaints about the buses. They are not the most modern in the world, and many people who are travelling by train—as a matter of fact one of my company's head men is coming down tomorrow, and I have to go clear to Fredericton Junction to pick him up because he refuses to travel on the bus anymore. The buses are not that good. And they do not have a Sunday day travel. There were many people travelling on Sunday on the trains.

The Chairman: Mr. Perrault.

Mr. Perrault: In its original submission the Junior Chamber of Commerce stated March 1968, and I quote, "Government has gambled in the past with our tax monies and we ask you to once again gamble for the benefit of the people of Fredericton." In other words, in relation to the institution of this passenger service, I think the Government, or people in Government, are interested in perhaps gambling, but they like to know what the odds are. Do you have any more exact statistics about the passenger potential for the Fredericton area if this passenger service is instituted. It seems to me it would strengthen your case if these statistics were made available to the Committee at some point, either while we are here or later in Ottawa.

Mr. Lamey: I agree very much and at the time the brief was made up we did have figures. The figures are not available now because I think they are out of date again, because of the increase in population of the city.

Mr. Perrault: I think it would be useful if these were sent along to the Chairman.

Mr. Lamey: I agree.

Mr. Perrault: That is all I have to ask, Mr. Chairman.

The Chairman: Mr. Allmand.

Mr. Allmand: Does the railway own the bus line?

Mr. Lamey: The bus line is not owned by the CNR.

[*Interprétation*]

M. Lamey: Oui.

Le président: Monsieur Corbin.

M. Corbin: Comment est le service d'autobus aller-retour de Fredericton?

M. Lamey: Comment il est?

M. Corbin: Oui, est-il bon ou mauvais?

M. Lamey: Il y a eu beaucoup de plaintes au sujet des autobus. Ils ne sont pas les plus modernes qui soient et plusieurs personnes qui voyagent en train...en fait, il y a un des dirigeants de ma société qui vient demain, et il faut que j'aille le chercher à Fredericton Junction puisqu'il refuse absolument de prendre l'autobus. Les autobus ne sont vraiment pas très bons et ils ne fonctionnent pas le dimanche. Il y a beaucoup de gens qui voyagent par train le dimanche.

Le président: Monsieur Perrault.

M. Perrault: Dans la présentation initiale, la Jeune Chambre de Commerce a dit en mars 1968, et je cite: «Par le passé, le gouvernement a misé avec l'argent des contribuables, nous vous demandons donc de le faire encore une fois pour les gens de Fredericton». Autrmeent dit, en ce qui a trait à ce service-voyageur, je crois que le gouvernement, ou les fonctionnaires, sont peut-être intéressés à miser, mais ils voudraient savoir quelles sont les chances. Avez-vous des données statistiques plus détaillées et sûres quant au nombre de passagers que Fredericton peut assurer si on rétablit le service-voyageur. Il me semble que votre cause serait d'autant plus forte si vous communiquez ces statistiques au Comité à un moment donné, soit ici, soit plus tard à Ottawa.

M. Lamey: J'en conviens. Nous avions des chiffres, au moment de la rédaction de notre mémoire, mais nous ne les avons pas à l'heure actuelle parce qu'ils ne sont évidemment plus à jour en raison de l'augmentation de la population de notre ville.

M. Perrault: Je crois que ce serait utile si vous les communiquiez au président.

M. Lamey: D'accord.

M. Perrault: C'est tout ce que j'avais à vous demander. Merci.

Le président: Monsieur Allmand.

M. Allmand: Est-ce que c'est le chemin de fer qui est propriétaire du service d'autobus?

M. Lamey: Non. Le service d'autobus n'appartient pas au National-Canadien.

[*Text*]

Mr. Allmand: Who does own it?

Mr. Lamey: I believe it is a local concern.

Mr. Chairman: Mr. Trudel.

Mr. Trudel: Mr. Chairman. Do these buses meet all the train services that you are getting at Fredericton Junction?

Mr. Lamey: They do not meet the Sunday service.

Mr. Trudel: Thank you.

Mr. Lamey: So anybody who did not know and was coming in on Sunday would have a real pleasant surprise to find themselves in the wilderness, without any mode of transportation.

Mr. Corbin: How good is the air service in and out of Fredericton? Are you satisfied with that?

Mr. Lamey: I do not think we are completely satisfied at the moment. However, I have heard that we are getting DC-9's in the spring, so I think this will greatly improve the air service.

Mr. Chairman: Mr. Lamey, it was very pleasant to have you with us.

The next brief will be presented by His Worship, Mayor W. T. Walker. The brief is from the City of Fredericton.

Mayor W. T. Walker (City of Fredericton): Mr. Chairman, a year ago when we had our brief prepared, everyone's crew was quite busy and we arranged through Councillor Seheult, who is the second man on my right, to arrange with a member of the Department of Economics at the University of New Brunswick to prepare our brief. He is Mr. John Brander. Since Mr. Brander prepared this brief, I would ask him, with your permission Mr. Chairman, to read it.

Mr. J. Brander (Professor, University of New Brunswick): Mr. Chairman, the hour is late and I shall summarize it still further. The brief is concerned with four problems really, three of which are in the summary, one of which is not: the provisions of the Maritime Freight Rates Act; the quality of passenger service available at present; the problem created by the proposed consolidation of the railways with their express and less than carload service; and finally the matter of the freeze on certain freight rates in the Atlantic Provinces.

[*Interpretation*]

M. Allmand: Qui en est le propriétaire?

M. Lamey: Je crois qu'il s'agit d'une entreprise locale.

Le président: Monsieur Trudel.

M. Trudel: Monsieur le président, est-ce que ces autobus vont à la rencontre de tous les trains qui passent à Fredericton Junction?

M. Lamey: Sauf le dimanche.

M. Trudel: Merci.

M. Lamey: Alors, quiconque ne le saurait pas et qui arrive le dimanche, serait agréablement surpris de se retrouver dans le bois sans moyens de transport.

M. Corbin: Est-ce que le service aérien est bon. En êtes-vous satisfait?

M. Lamey: Je ne crois pas que nous soyons tout à fait satisfaits à l'heure actuelle, mais j'ai entendu dire qu'on aura des DC-9 au printemps, ce qui améliorera la situation sans doute.

Le président: Nous avons été très heureux de vous avoir parmi nous, monsieur Lamey.

Le mémoire suivant est celui de Son Honneur M. le Maire W. T. Walker. Le mémoire vient de la ville de Fredericton.

Le maire W. T. Walker (Ville de Fredericton): Monsieur le président, il y a un an, lorsque nous avons préparé notre mémoire tout le monde était très occupé et nous avons demandé à mon collègue ici à ma droite, le conseiller Seheult, de demander à M. John Brander du département de l'économie de l'Université du Nouveau-Brunswick de préparer notre mémoire. Vu que M. Brander a préparé le mémoire, je lui demanderai donc, avec votre autorisation, monsieur le président, d'en donner lecture.

M. J. Brander (Professeur, Université du Nouveau-Brunswick): Monsieur le président, il se fait tard et je vais le résumer encore davantage. Le mémoire traite de quatre problèmes essentiellement, dont trois sont mentionnés dans le résumé. Les dispositions de la Loi sur les taux de transport des marchandises dans les provinces Maritimes, la qualité du service-voyageurs actuel et le problème créé par la consolidation envisagée du service ferroviaire rapide et le service de chargements incomplets, et enfin la question du gel de certains tarifs marchandises dans les provinces de l'Atlantique.

[*Texte*]

On the first problem, the brief recommends that the provisions of the Martime Freight Rates Act be extended immediately to cover all modes of transport; that the Act be extended to cover exports to the United States; that the Act be extended to cover west-to-east movements. On the second, the matter of passenger service, the brief in summary states that the capital city has been discriminated against in the providing of service to our city by both railway companies, and urges that consideration be given by the Committee to put the fast-growing City of Fredericton back on the modern transportation map.

In dealing with the third problem, the LCL traffic, the brief suggests that the density rule of ten pounds per cubic foot imposes a penalty rate on those shipping light and bulky commodities and recommends a lighter density rule of five pounds per cubic foot.

Finally, the rate freeze on non-competitive carload rates should be extended until such time as Parliament has had on opportunity to implement a new and effective transportation policy for the Atlantic Region. As you are no doubt aware, the National Transportation Act of 1967, imposed a two-year freeze on rates here, the idea being to give Parliament sufficient time to implement a regional policy. The freeze expires on the 23rd of March and as yet such a policy has not been implemented. For this reason we ask for its extension.

The Chairman: Mr. Trudel.

Mr. Trudel: One question, Mr. Chairman, regarding Article 3, that the provisions of the Maritime Freight Rates Act be extended to cover the west-to-east call. Would this not aggravate the situation that we now find by bringing in manufactured articles into the region, actually harming your own manufacturing industry here?

Mr. Walker: This is a possibility. I have not examined in any depth the net benefit or cost to the region. Extending the subsidy to east-bound would, hopefully, reduce the cost of various articles to the consumer. And there is the penalty, I realize, of making it more difficult for existing industry.

Mr. Trudel: I am not disclaiming your point regarding raw material for your manu-

[*Interprétation*]

Dans le premier de ces problèmes, nous recommandons que les dispositions de la Loi sur le transport des marchandises dans les provinces Maritimes soient immédiatement étendues à tous les modes de transport; que la Loi soit étendue aussi aux exportations vers les États-Unis; que la Loi soit étendue au transport Ouest-Est.

Quant au deuxième point, le service-voyageurs, le mémoire stipule en résumé que le service assuré par les deux sociétés ferroviaires constitue une discrimination à l'égard de la capitale, et exhorte le Comité à songer immédiatement à remettre la ville de Fredericton sur la carte des modes de transport modernes.

Pour ce qui est du troisième problème, soit celui des chargements incomplets, le mémoire propose que la norme de densité qui est de 10 livres par pied cube constitue un désavantage pour ceux qui expédient des marchandises légères et volumineuses, et demande qu'elle soit réduite à 5 livres par pied cube.

Enfin, que le gel sur les taux non-concurrentiels soit prolongé jusqu'à ce que le Parlement ait eu l'occasion de mettre en vigueur une nouvelle politique efficace des transports pour la région de l'Atlantique. Comme vous le savez sans doute, la Loi nationale sur les transports de 1967 imposait un gel de deux ans sur les tarifs, soit pour donner au Parlement le temps d'appliquer une politique régionale. Le gel prend fin le 23 mars et on n'a pas encore mis au point une telle politique. C'est pourquoi nous demandons ce prolongement.

Le président: Monsieur Trudel.

Mr. Trudel: Une question, monsieur le président, pour ce qui est de l'article 3, soit que les dispositions de la Loi sur le transport des marchandises dans les provinces Maritimes soient étendues au transport de l'Ouest à l'Est. Est-ce qu'on ne se trouverait pas à aggraver la situation actuelle en acheminant des produits manufacturés dans cette région, en nuisant effectivement à nos propres industries de fabrication?

M. Walker: C'est une possibilité. Je n'ai pas vraiment étudié la question pour ce qui est des avantages ou du coût net à la région. En étudiant les subventions au transport vers l'Est, nous espérons diminuer le coût de différents articles pour le consommateur. La peine qu'il nous fait payer du fait c'est qu'on rend la situation plus difficile pour les industries déjà installées.

M. Trudel: Je ne rejette pas votre argument vis-à-vis des matières premières pour

[*Text*]

facturing concerns, but I was just trying to underline that there is a possibility that manufactured items might come in and actually hurt your industry.

Mr. Walker: Yes, I recognize this.

The Chairman: Mr. Nesbitt.

Mr. Nesbitt: In the brief you have just presented you have referred to the fact that Fredericton is a very fast-growing city. Could you give us an indication as to the rate of increase of growth, let us say, in the last ten years?

Mr. Louis Seheult (Councillor): The growth in the last ten years is from about 15,000 to 22,000 that is in the immediate vicinity of Fredericton.

Mr. Nesbitt: Have requests been made by the Corporation of the City of Fredericton to either the Canadian Transport Commission or to the Canadian National Railways to renew passenger service and, if so, on how many occasions and when?

Mr. Seheult: On many occasions. I appeared before and presented briefs before the Board of Transport Commissioners in 1961 and in 1959. On one occasion it was the removal of the railway passenger service from Fredericton to Fredericton Junction, and in the other case it was the removal of the train service from Fredericton to Newcastle.

Mr. Nesbitt: Has there been an application to the new Canadian Transport Commission?

Mr. Seheult: Not to my knowledge.

Mr. Nesbitt: Your Worship, I have every sympathy with the view you take on this because Canadian National Railways, I think, is pretty callous in its activities towards many cities, my own included. But I think one just has to keep on making applications to the Canadian Transport Commission.

Mr. Seheult: Mr. Chairman, I might answer the question that the member of the Junior Chamber of Commerce was not able to answer. At the time that we opposed the removal of the train from Fredericton Junction, we did a very deep study on their losses. They were claiming a loss of something like $50,000 but with the City Solicitor we were able to condense it down to about $5,000. We felt that if they did a little promotion like private business does they could have a profitable operation. But what was

[*Interpretation*]

vos industries, mais j'essayais simplement de vous signaler qu'on introduirait peut-être des produits fabriqués qui pourraient nuire à vos industries.

M. Walker: Oui, je le reconnais.

Le président: Monsieur Nesbitt.

M. Nesbitt: Dans le mémoire on parle du fait, que Fredericton est une ville qui croît rapidement. Est-ce que vous pourriez nous indiquer le taux de croissance pour les dix dernières années?

M. Louis Seheult (Conseiller municipal, Ville de Fredericton): Depuis dix ans nous sommes passés de 15,000 à 22,800, soit dans la région immédiate de Fredericton.

M. Nesbitt: Est-ce que la corporation de la ville de Fredericton a demandé à la Commission canadienne des transports ou encore au National Canadien de rétablir son service-voyageurs, et, dans ce cas, quand et à combien de reprises l'avez-vous fait?

M. Seheult: Plus d'une fois. J'ai comparu devant la Commission canadienne des transports à qui j'ai présenté des mémoires en 1961 et en 1959. Dans un cas, il s'agissait du retrait du service-voyageurs entre Fredericton et Fredericton Junction, et la deuxième fois pour le retrait du service-voyageurs entre Fredericton et Newcastle.

M. Nesbitt: Est-ce que vous avez présenté une demande à la nouvelle Commission canadienne des transports.

M. Seheult: Pas à ma connaissance.

M. Nesbitt: Je sympathise vraiment avec votre point de vue à cet égard parce que le National Canadien agit, à mon avis, de façon assez fruste à l'égard de bon nombre de villes, dont la mienne. Mais je crois qu'il faut continuer de présenter demande sur demande à la Commission canadienne des Transports.

M. Seheult: Je pourrais peut-être répondre à la question à laquelle le représentant de la Jeune Chambre de Commerce n'a pu répondre. Au moment où on s'est objecté au retrait du service-voyageurs de Fredericton Junction, nous avons fait une étude sérieuse des pertes. Ils prétendaient avoir des pertes de l'ordre de $50,000, mais avec l'aide de notre avocat nous avons pu les réduire à $5,000. Il nous a semblé qu'avec un peu de publicité, ils auraient sans doute pu le rendre rentable. Mais ce qui est pire, ils prétendaient qu'il

[*Texte*]

worse, they said they required an average of 16 pasengers on a sleeper at night, leaving Fredericton.

Through doing research on their figures, we discovered that they had an average of 12 from here and that did not include those passengers who were embarking at Harvey and Fredericton Junction. So we thought that they were getting the required number.

Mr. Nesbitt: I have one brief further question as a result of the remarks of the mayor. When you made these representations to the former Board of Transport Commissioners concerning discontinuance of passenger service, was it pointed out in the brief that the Canadian National Railways had a duty to provide service perhaps to certain areas of Canada which are not as heavily populated as some others?

Mr. Walker: It has been pointed out from time to time, sir, and we have not been able to get anywhere with them. As a matter of fact, it is strange that at the time we appeared before the Board of Transport Commissioners there were 15 representatives representing the CPR railroad and not one of them used their own railroad coming in.

I pointed that out to them too.

The Chairman: Are there any other questions on this?

Mr. Allmand: Mr. Mayor, to clear up some misunderstanding, when you had the passenger service here was it CPR or CNR?

Mr. Walker: We had both.

Mr. Allmand: I presume the CPR service went down to Fredericton Junction and connected with the line from Saint John to Montreal?

Mr. Walker: Right.

Mr. Allmand: And where did the CNR service run to? Did it run into Moncton?

Mr. Walker: The CNR ran to Newcastle and from there to Moncton in the north.

Mr. Allmand: Which service did you try and maintain? If you could not maintain both which one would you try to maintain?

Mr. Walker: We tried to maintain the CPR because we felt at that time it was a more direct route and more convenient for people to use. But we jointly opposed the removal of

[*Interprétation*]

leur fallait 16 voyageurs en moyenne dans les voitures-lits qui quittent Fredericton.

Lorsque nous avons fait des recherches, nous avons constaté qu'ils avaient une moyenne de 12 passagers qui partaient d'ici, sans compter les passagers qui prenaient le train à Harvey et à Fredericton-Junction. Nous croyions donc qu'ils avaient le nombre requis pour que ce soit rentable.

M. Nesbitt: Une autre question très brève sur les observations que son honneur le maire vient de faire. Lorsque vous avez formulé ces instances auprès de la Commission des transports du temps au sujet de la cessation du service des voyageurs, est-ce qu'on a signalé alors dans le mémoire que le National-Canadien se devait d'assurer un service dans certaines régions du Canada où la densité démographique n'était pas aussi grande qu'ailleurs.

M. Walker: Oui, on l'a fait de temps à autre et nous n'avons pas été en mesure d'accomplir quoi que ce soit. Question de fait, il est assez surprenant qu'au moment où nous nous sommes présentés devant la Commission des Transports, il y avait 15 représentants du Pacifique Canadien et aucun d'entre eux n'avait utilisé ce chemin de fer pour se rendre. Je leur ai fait remarquer.

Le président: Alors, avez-vous d'autres questions, messieurs?

M. Allmand: Monsieur le président, monsieur le maire, afin de faire disparaître toute incompréhension lorsque vous aviez un service-voyageurs ici, est-ce que c'était le CNR ou le CPR?

M. Walker: Nous avions les deux.

M. Allmand: Je vois. J'imagine que le service du CPR allait à Fredericton-Junction et se rattachait à la ligne Saint-Jean-Montréal?

M. Walker: C'est exact.

M. Allmand: Où se rendait le service passager du CN? Allait-il à Moncton?

M. Walker: Le CN allait à Newcastle et de là à Moncton au Nord.

M. Allmand: Je vois. Quel service avez-vous essayé de maintenir, si vous ne pouviez maintenir les deux?

M. Walker: Nous avons essayé de garder le CP parce qu'à ce moment-là nous croyions que le parcours était plus direct et plus commode pour les usagers. Mais nous nous som-

[*Text*]

the other trains to various communities between here and Campbellton.

Mr. Allmand: Which service went first, the CPR or the CNR?

Mr. Walker: The CPR.

Mr. Allmand: The CPR went first, then you had the CNR for a certain period of time?

Mr. Walker: I am sorry—the Canadian National Railways went first.

Mr. Allmand: The Canadian National Railways went first?

Mr. Walker: Yes. The way it was phased out, if I might say, Mr. Chairman, was by a depreciation of the service. From a first class train it went down to a rail line, then it went down to an old steam car and the people would not ride on it. This is the way it was phased out.

Mr. Allmand: This is the CNR train?

Mr. Walker: The CPR.

Mr. Allmand: The CPR?

Mr. Walker: Yes, sir.

Mr. Skoberg: Your Worship, I can certainly appreciate the problem of transportation in so far as passengers are concerned because I have seen the downgrading of the very same train that you have seen.

What is the city's position here in regard to an international airport that would serve the three main centres—Moncton, Fredericton and Saint John?

Mr. Walker: I am in favour of one but I think any one of the three existing ones would be probably more suitable. When I saw on TV last week all the provincial Premiers down on their knees begging money for the various provinces, I wondered where the money is coming from to provide another international airport.

Mr. Skoberg: But you are in agreement that if one was established you would be quite satisfied to have it serve the three areas?

Mr. Walker: I beg your pardon?

Mr. Skoberg: You would agree though that one airport to serve the three areas would be sufficient?

[*Interpretation*]

mes conjointement opposés au retrait des autres trains dans le cas des diverses collectivités établies entre ici et Campbellton.

M. Allmand: Quel service a été instauré le premier, le CNR ou le CPR?

M. Walker: Le CPR.

M. Allmand: Le CPR a été instauré le premier, ensuite le CNR pour un certain temps.

M. Walker: Non, le CNR a disparu le premier.

M. Allmand: Le CNR est disparu le premier?

M. Walker: La façon dont il est disparu, M. le président, c'est à la suite de la dépréciation du service.

Le train de première classe est devenu un train ordinaire. Ensuite nous avons eu une vieille locomotive et les gens refusaient d'emprunter ce service. C'est comme ça qu'il est disparu.

M. Allmand: Vous parlez du train du CN?

M. Walker: Le CP.

M. Allmand: C'est le CP qui a fait cela?

M. Walker: Oui.

M. Skoberg: Monsieur le président, votre honneur, je suis très conscient du problème des transports en ce qui a trait au service de voyageurs parce que j'ai vu cette situation se détériorer tout comme vous. Mais que pensent les gens ici d'une aérogare internationale desservant les trois principaux centres, Moncton, Fredericton et Saint John?

M. Walker: Je serais en faveur, mais je crois que n'importe lequel des trois aéroports existants conviendrait mieux. Lorsque je songe à ce que j'ai vu à la télévision la semaine dernière tous les premiers ministres provinciaux quêtant de l'argent à genoux pour leurs provinces respectives, je me demande d'où vient l'argent qui permettrait d'aménager une autre aérogare internationale.

M. Skoberg: Mais vous êtes d'accord pour dire que si on en construisait une, vous seriez tout à fait satisfait qu'elle desserve les trois régions?

M. Walker: Je vous demande pardon?

M. Skoberg: Vous conviendriez toutefois qu'il serait suffisant d'avoir une seule aérogare pour desservir les trois régions.

[*Texte*]

Mr. Walker: I certainly do—I do not. An international airport, yes.

The Chairman: Order, please. Mr. Nowlan?

Mr. Nowlan: From the summary of the brief that we were given tonight, do I understand, Your Worship, that in view of your recommendation number 2, extending Maritime Freight Rates for exports to the United States, you generally would be in favour of an Atlantic free trade area?

Mr. Walker: I will ask Mr. Brander to answer that since he prepared the brief on freight rates.

Mr. Brander: Yes.

The Chairman: Any other questions, gentlemen. I want to thank you, Mr. Mayor. You have been very kind.

Mr. Walker: Thank you.

The Chairman: The next brief is from the Enterprise Foundry Company Limited. I will call upon Mr. Fisher. The brief is on page 815.

Mr. Maurice P. Fisher (Vice-President Purchasing, Enterprise Foundry Company Limited): Mr. Chairman and gentlemen, I have a summary here of our brief. I realize the hour is getting late. I have been on the go myself since 6 o'clock this morning, have been sitting here most of the day, and being probably considerably more elderly than anyone else in the room perhaps you will give a little consideration to old age.

I feel that the situation which I will go into in connection with our company, which represents also other industries, is somewhat different than other briefs which have been presented to you today.

In our brief we have pointed out that our company is a private family-owned one which has been making cooking and heating equipment since 1872. It is the only private one left manufacturing similar lines in Canada out of a great many some years ago.

We employ 350 to 375 people, which means about 1,400 souls depending directly on the business for their living. This is a large percentage of the population of the town and surrounding communities. The market we cater to is Canada and to do this it is necessary to have 10 distributing warehouses from St. John's, Newfoundland to Vancouver.

[*Interprétation*]

M. Walker: Certainement non, non, pas du tout. Une aérogare internationale, oui.

Le président: A l'ordre s.v.p. M. Nowlan?

M. Nowlan: D'après le résumé du mémoire qu'on nous a distribué ce soir, si je comprends bien, votre honneur, j'ai lu la recommandation numéro 2 pour avoir inclus les exportations vers les États-Unis pour le tarif du transport des marchandises, est-ce que vous êtes en faveur d'une zone de libre échange de l'Atlantique.

M. Walker: Je demanderais, à M. Brander de répondre, vu qu'il a rédigé le mémoire sur le tarif du Transport des marchandises.

M. Brander: Oui.

Le président: Voyez-vous d'autres questions, messieurs? Je désire vous remercier, monsieur le maire, de votre gentillesse.

M. Walker: Merci.

Le président: Le mémoire suivant sera celui de *Enterprise Foundry Company Limited.* Je cède donc la parole à M. Maurice P. Fisher. La soumission est à la page 815.

M. Maurice P. Fisher (Vice-président des Achats): Monsieur le président, messieurs, j'ai le résumé de mon mémoire et ici, je me rends compte que le temps file, il se fait tard, je suis debout depuis 6 heures ce matin. Je suis resté ici presque toute la journée et je suis un peu plus âgé que la plupart d'entre vous ici présent. Donc, tenez compte de mon grand âge, je vous en prie.

Je suis d'avis que la situation dont je vais vous parler et qui se rapporte à notre société, laquelle représente aussi d'autres industries, est quelque peu différente de celle qu'on rencontre dans les autres mémoires qui ont été présentés aujourd'hui.

Dans notre mémoire, nous vous signalons que notre compagnie est une société familiale privée qui fait des appareils de cuisson et de chauffage depuis 1872. C'est la seule société privée qui fait une telle fabrication au Canada à partir d'un très grand nombre qui existait il y a quelques années.

Nous avons de 350 à 375 employés, ce qui représente environ 1,400 personnes qui dépendent directement de notre entreprise pour leur subsistance. Il s'agit d'une importante proportion de la population de la ville et des environs. Notre marché englobe tout le Canada. Pour ce faire, donc il nous faut 10 centres de distribution de Saint-Jean, Terre-

[*Text*]

Most of our business is west of the Atlantic provinces, and it is there where we must look for growth for the continuance of our company.

Increased volume is essential to keep pace with wage and material increases. Transportation is a vital factor in our business. Practically all our raw materials have to be brought in by rail from Ontario, the United States and the Montreal district. This involves a very great expense. Comparing this with our competitors, who are largely situated in the Toronto area, our added costs over the Toronto area competitor means an added expense to us of over $100,000 a year on Tariff number 100 and the present carload rates. Details of this are given in our brief.

On the other hand, we have to compete price-wise and model-wise with these central Canada competitors, which are mostly United States subsidiaries. There are no compensating advantages in our location. We have to pay to get our goods into the Quebec and Ontario markets, absorbing the freights and maintaining costly warehouses to give the necessary service and delivery to customers in those areas.

Tariff 100, effective September 5, 1967, means that the cost of moving our product to our customers is tremendously increased and it has also greatly increased the cost of our incoming raw materials and supplies. This all adds up to greater sales resistance, with a possible loss of business and so of increasing our costs as to make us non-competitive.

The average increase brought about by Tariff 100 in LCL rates from Sackville to 24 destinations throughout the Atlantic provinces for a normal shipment is 123 per cent for the same service as before. That is, this new Tariff 100 would increase our cost of delivery to our dealers at an average of 123 per cent. The average for similar shipments to points in Eastern Quebec is about 76 per cent. In respect of incoming supplies, local freights increased about 70 per cent.

This new Tariff calls for complicated and expensive methods in billing out shipments due to what appear to be many unnecessary detailed measurements, weights and computations.

[*Interpretation*]

Neuve, à Vancouver. La plupart de nos affaires se font à l'ouest des provinces de l'Atlantique et c'est là où nous devons nous tourner pour la croissance pour la survie de notre compagnie.

L'augmentation du volume est essentielle pour aller de pair avec les augmentations des salaires et des matériaux. Le transport est un élément vital de notre entreprise, à peu près toutes nos matières premières doivent être acheminées par rails de l'Ontario, les États-Unis et le district de Montréal. Cela entraîne des dépenses élevées, et, si on compare notre situation à celle de nos concurrents qui se trouvent entre partie dans la région de Toronto, nous rencontrons des frais supplémentaires de plus de $100,000 par année en vertu du tarif 100 et des tarifs actuels par wagon. Je vous donne tous ces détails dans notre mémoire.

D'autre part, il nous faut concurrencer pour ce qui est des prix et des modèles avec ces concurrents du Canada central qui pour la plupart sont des filiales de sociétés américaines. Il n'y a pas d'avantages de compensation pour ce qui est de notre emplacement. Il nous faut payer pour expédier notre marchandise sur les marchés de Québec et de l'Ontario, absorber les frais de transport et maintenir des entrepôts très coûteux pour assurer le service et les livraisons voulus aux clients de ces régions.

Le tarif 100 mis en vigueur le 5 septembre 1967 signifie que le coût de transport vers nos clients est augmenté considérablement. Il a vraiment augmenté le coût de l'approvisionnement en matières premières et en matériaux. Cela produit une plus grande résistance sur le marché des ventes, augmente nos risques de perte. L'augmentation de notre coût nous rend non-concurrentiels.

L'augmentation moyenne entraînée par le tarif 100 avec les taux visait les chargements incomplets, de Sackville à vingt-quatre points dans les provinces de l'Atlantique pour un expédition normal est de 123 p. 100, pour le même service, comparativement à autrefois. Ce nouveau tarif 100 augmenterait nos coûts de livraison à nos détaillants dans ces proportions de 123 p. 100. La moyenne pour des expéditions analogues dans l'est du Québec, est d'environ 76 p. 100. Les marchandises d'approvisionnement, le transport régional par rail, ont augmenté d'environ 70 p. 100

Le nouveau tarif entraîne des méthodes compliquées et coûteuses pour préparer l'expédition, à cause de ce qui semble être des mesures et des calculs de pesanteur détaillés et inutiles.

[*Texte*]

We have found these costs so high on both incoming materials and outgoing shipments that we are having these shipments made under the Class and Commodity Rates which are still in effect. Even these rates were increased on May 4, 1967 by amounts ranging from 6 per cent to 12 per cent. Also, the pickup and delivery services were cancelled.

In spite of these added costs, it is less expensive for us to use the Class and Commodity Rates than the new Tariff 100. The delivery of our shipments to our customers is most discouraging as there are great delays in many cases.

There is one vital point not mentioned in our brief that we wish to refer to, namely the freeze on non-comparative carload rates and the possibility of these rates being materially increased unless the freeze schedules to expire on March 23 is continued. If this change occurs it will add greatly to a lot of our present incoming carloads of material and to outgoing carloads of finished goods to all points in the Atlantic provinces, Quebec and Ontario.

We are already suffering greatly from all these costs, as shown in detail in our brief. It would be disastrous to our company and others to increase the cost of raw materials and supplies and to increase the cost of shipments to branch warehouses.

Our industry is an extremely competitive one price-wise. In our brief we have referred to DBS figures which show, in respect of our single largest product, electric ranges, that the wholesale selling price index has between 1956 and November, 1968 been reduced 16.6 per cent. To put it another way, the net wholesale selling index price on electric ranges is today 16.6 per cent less than it was in 1956. This is almost the greatest reduction, with one or two exceptions as are shown in the DBS Catalogue No. 62-002, and none of our products, or furnaces, show a price reduction in the same period of time of 9.6 per cent.

These percentages have increased during the last 12 months. On the other hand, our raw materials, many of which are listed in this catalogue, show very substantial price increases. An example of this is cold rolled steel sheets, which increased 17.1 per cent. This is our largest single commodity.

Throughout the years many stove plants in the Maritime provinces have had to close up

[*Interprétation*]

Nous trouvons que ces coûts sont tellement élevés pas pour l'approvisionnement en denrées et l'expédition vers l'extérieur que nous faisons ces expéditions en vertu de la catégorie et des taux préférentiels qui sont toujours en vigueur, ces taux ont augmenté le 4 mai 1967 dans des proportions de 6 à 12 p. 100. Aussi, le service de livraison a été annulé. En plus de ces coûts additionnels, il est moins coûteux pour nous d'avoir recours aux taux de catégories de denrées plutôt qu'au nouveau tarif 100. L'expédition de nos livraisons vers nos clients entraîne bien souvent des retards très grands.

Il y a un point essentiel qui n'est pas mentionné dans notre mémoire dont nous voudrions vous parler, soit le gel sur les taux non-concurrentiels des lots privés du fait que ça pourrait être augmenté substantiellement à moins que le gel qui doit prendre fin le 23 mars ne soit maintenu. Si cette modification se produit, cela ajoutera à l'arrivée des lots privés de matériel et à l'expédition de produits finis vers tous les points des provinces de l'Atlantique, du Québec et de l'Ontario.

Nous souffrons beaucoup déjà de tous ces coûts qui se présentent maintenant tel que présentés en détail dans notre soumission. De telles augmentations seraient désastreuses pour notre société et d'autres donc en augmentant le coût des matières premières et des approvisionnements et aussi des expéditions vers nos entrepôts.

Notre industrie est une industrie vraiment concurrentielle quant aux prix. Dans notre soumission, nous nous sommes reportés aux chiffres du Bureau fédéral de la statistique qui démontrent que dans le cas de notre principal produit, soit la cuisinière électrique, l'indice de prix de vente en gros de 1956 au mois de novembre 1966 a connu une diminution de 16.6 p. 100. Autrement dit, le prix de vente en gros suivant l'indice des prix est de 16.6 p. 100 de moins qu'il ne l'était en 1956. C'est à peu près la plus grande diminution sauf dans une exception ou deux, tel qu'on peut le voir dans le catalogue du Bureau fédéral de la statistique, au n° 6202. Aucun de nos produits ou fournaises n'a connu de réduction de prix dans cette même période de temps de l'ordre de 9.6 p. 100.

Ces pourcentages ont augmenté au cours des douze derniers mois mais d'autre part, nos matières premières dont beaucoup sont établies dans ce catalogue, nous font part d'augmentations marquées. Les feuilles d'acier roulées à froid ont connu une augmentation de 17.1 p. 100. C'est l'article que nous produisons le plus. Au cours des années, un bon nombre d'usines ont dû fermer leurs

[*Text*]

and go out of business. The last one was a plant in Moncton three years ago. There were, some years ago, 14 companies making stoves and oil furnaces in the Atlantic prov-

The CNR will always have to maintain operation of its lines through the Maritime provinces. Should they not then do everything they can to stimulate increased traffic in this region? The greater their volume the more helpful it is to their whole operation. A large part of the railway business in the Maritimes is captive business. We have practically no other transportation available. The railways have the long haul in and the long haul out on almost all our tonnage, as well as the local Atlantic provinces haul. We have no other practical means of transportation. Our competitors do have various alternatives.

The sources of this whole difficult situation seems to be, in our opinion, that the National Policy and the National Transportation Policy are operating in opposite directions instead of the National Transportation Policy working in with the National Policy.

Our understanding is that one point in the National Policy is:

> to afford Maritime Merchants, Traders and Manufacturers the larger markets of the whole Canadian people instead of the restricted market of the Maritimes themselves.

In our opinion, the National Transportation Policy should be made up of area policies so that each geographical area gets a square deal. This, we believe, is not the case now. The economy of the Atlantic provinces badly needs secondary industry which provides that great stabilizing influence, the weekly pay envelope which maintains communities in prosperity. Transportation help is needed to relieve the excessive comparative burden which Maritime industries are now struggling under. The question may be asked, "Where will the railway get the money to offset special rates given" as asked for in our brief.

There are four asked for and the ones we would refer to here to cut it down would be the continuance of the Maritime Freight Rates Act, with some revisions to bring it up to date, such as being applicable to movements from the West to the East. The continuance of LCL freight; and the fact that we

[*Interpretation*]

portes, la dernière à Moncton, il y a trois ans. Il y a quelques années, nous avions quatorze sociétés fabricant des cuisinières électriques et des chaudières à l'huile dans les provinces de l'Atlantique et maintenant il n'en reste plus que deux.

Le National Canadien devrait toujours maintenir ses lignes dans les provinces maritimes. Ne devrait-il pas alors faire tout en son possible pour augmenter la circulation dans cette région? Plus le volume est considérable mieux s'en trouve toute l'exploitation. Une bonne partie des entreprises utilisant les chemins de fer aux Maritimes sont des entreprises «captives». Nous n'avons pratiquement pas d'autres moyens de transport. Les chemins de fer font les longs parcours d'approvisionnement et d'expédition de presque tout, ainsi que les parcours régionaux des Maritimes. Nous n'avons pas d'autres moyens de transport pratiques. Nos concurrents disposent de diverses solutions de rechange. La cause de toute cette situation difficile semble émaner, à notre avis, du fait que la politique nationale et la politique nationale en matière des transports, vont en direction opposée plutôt que d'avoir une politique des transports qui travaille de concert avec une politique nationale.

Si nous comprenons bien, il y a un point de la politique nationale qui veut, je cite «fournir aux marchands, aux commerçants et aux fabricants des Maritimes d'avoir ainsi de plus grands marchés formés par l'ensemble de la population canadienne plutôt que d'être restreints au marché des provinces Maritimes elles-mêmes».

A notre avis, la politique nationale des transports devrait comprendre des politiques régionales pour que chaque région géographique soit traitée avec justice. Nous croyons que ce n'est pas ce qui existe maintenant. L'économie des provinces de l'Atlantique a besoin vraiment d'industries secondaires qui sont un grand facteur de stabilisation et qui maintiennent la collectivité dans la prospérité. Nous avons besoin de l'aide des Transports pour soulager les Maritimes du fardeau excessif qui écrase ses industries que nous connaissons ici. On peut se demander alors «où peut-on obtenir l'argent pour les chemins de fer pour se rembourser des tarifs spéciaux accordés?» comme nous le demandons.

Il y a quatre réductions qui sont demandées ici, ainsi que celles dont on parle ici; réduire leur nombre voudrait dire la continuation de la Loi sur les taux de transport des marchandises dans les provinces Maritimes, avec quelques modifications pour la mettre au jour, comme le fait qu'elle s'appli-

[*Texte*]

should be in a position to compete rate-wise in territories west of the Maritimes with the manufacturers situated in Montreal. This is a national problem and whatever financial assistance that is necessary, if any, to the railway to enable Maritime industry to be competitive should be paid from the federal treasury.

I know when you bring up the question of the federal treasury there is a great wringing of hands, but I think these are facts which we must face. In our opinion, such payments would do more good for Canada's economy and prosperity than some of the other and much greater amounts that are expended each year in a vast multitude of ways. Such funds should not be looked on as an expense but as an investment on which the treasury would receive returns through income tax from more prosperous people. We need greater prosperity here in these Atlantic provinces and if we are given the opportunity for a greater amount of business there are going to be greater incomes which will benefit the federal treasury, which takes about half anyway. I am speaking of business; it takes practically half.

In our brief we have pointed out the much larger percentage increase in profit per capita made in Ontario compared with New Brunswick. The gross product per capita in Ontario over New Brunswick is 75.1 per cent; the gross profit per capita in Ontario over New Brunswick is 135 per cent. These figures speak volumes in themselves and show that Maritime people are forced to get along under much more difficult conditions than their fellow provinces. Is this the just society? Is the present regional disparity to continue and to be made more severe?

Mr. Pickersgill, referring to the Transportation Act, *Hansard*, August 29, 1966 page 7745, stated:

> Provisions were made for a method by which a maximum rate could be determined if the shipper was in a captive position, that is, if the railways enjoyed a monopoly with regard to the carriage of his goods.

We are in a captive position. He also stated:

> Where the railways are in a position of exercising a monopoly, a shipper will

[*Interprétation*]

querait aux expéditions de l'ouest à l'est; le maintien du tarif visant les wagons non complètement remplis, et le fait que nous devrions être en mesure de concurrencer au point de vue tarif, dans les territoires à l'ouest des Maritimes, avec les fabricants qui se trouvent dans la région de Montréal. Il s'agit là d'un problème sur le plan national et quelle que soit la nécessité d'obtenir une aide financière s'il y a lieu pour les sociétés ferroviaires afin de permettre aux industries des Maritimes d'être concurrentielles, cela devrait provenir du trésor fédéral.

Je sais que lorsqu'on parle du trésor fédéral, il y a beaucoup de mains qui se tordent, mais je crois que ce sont des faits qu'il faut regarder en face. A notre avis, ces paiements feraient plus de bien à l'économie du Canada et à sa prospérité que certains montants beaucoup plus importants qui sont dépensés chaque année d'une multitude de façons. De tels fonds ne devraient pas être considérés comme une dépense mais plutôt comme un investissement qui rapporterait un certain montant au Trésor, à cause de l'impôt que verseraient les personnes les plus aisées. Il nous faut davantage de prospérité dans les provinces de l'Atlantique; si nous avions la possibilité de développer notre économie, les revenus seraient plus importants, ce qui serait à l'avantage du trésor fédéral, qui en prend la moitié. Il s'adjuge près de la moitié de l'impôt sur le revenu des sociétés.

Dans notre mémoire, nous avons montré que le pourcentage des profits par tête est plus élevé en Ontario qu'au Nouveau-Brunswick. Le produit brut par habitant du Nouveau-Brunswick représente 75 p. 100 de celui de l'Ontario. Le bénéfice brut pour l'Ontario, comparativement au Nouveau-Brunswick, est de 135 p. 100. Ces chiffres sont éloquents; ils nous montrent que dans les Maritimes, les gens doivent se plier à des conditions de vie beaucoup plus difficiles que celles des autres provinces. Est-ce là la société juste? Les disparités régionales doivent-elles se perpétuer et s'aggraver?

Monsieur Pickersgill, parlant de la Loi sur les transports, (*Hansard*, 29 août 1966, p. 7745), déclarait que

> des dispositions avaient été prises pour déterminer un taux maximum de transport advenant le cas où l'expéditeur soit contraint, c'est-à-dire si les chemins de fer avaient le monopole du transport de ses denrées.

Quant à nous, nous sommes contraints. Monsieur Pickersgill a également déclaré que:

> si les chemins de fer étaient en mesure d'exercer un monopole, les expéditeurs

[*Text*]

have the right to have controlled maximum rates.

Another quotation of Mr. Pickersgill's—you all are probably familiar with them—is as follows:

> We require transportation assistance for the movement of inbound materials and outbound finished products to enable us to compete in the larger and faster developing markets. To do this there must be a complete understanding and knowledge of Maritime problems and we feel they can be corrected by bold, farseeing steps.

An hon. Member: A quotation for every stipulation.

Mr. Fisher: Right. We are quoting Mr. Pickersgill.

Gentlemen, in our business—and this applies to some other industries—about 95 per cent of our raw materials and supplies are apt to come in from Ontario, mid-West United States and some Montreal districts. They are manufactured here and shipped out, and the largest part of them go West of the Maritime provinces again. All our competitors are in the densely populated centres of Ontario and Quebec, right next door to their supplies and to their big markets.

Almost 80 per cent of the gas and electric range business is controlled by American subsidiaries.

Thank you.

The Chairman: Mr. Rose?

Mr. Rose: Mr. Fisher, I enjoyed your very comprehensive and interesting brief, as I used to enjoy toasting my shins in your ovens in years gone by.

I think that yours is the kind of industry that we need to encourage in our country, since we see great inroads of American competition and branch planned economy developing all over Canada. In view of all the limitations imposed on you by freight rates, wholesale prices going down and retail costs going up on matters of raw materials, the most obvious question to me, sir, is how do you do it?

Mr. Fisher: It is a great deal of hard work. One has to cut everything to the bone as far as any frills and things of that kind go. We are blessed with a very fine lot of men working with us. Families go back for three and four generations.

[*Interpretation*]

auraient droit à des taux maxima contrôlés.

M. Pickersgill a fait une autre observation que vous connaissez sans doute, lorsqu'il a dit

> qu'il nous faut accorder une aide au transport des matières premières importées et des produits finis destinés à l'exportation si nous voulions soutenir la concurrence sur des marchés en rapide expansion. Pour ce faire il nous faut connaître et bien comprendre les problèmes des Maritimes, qui pourront être réglés par des mesures audacieuses et avisées.

Une voix: Une citation sous toute réserve.

M. Fisher: C'est exact; c'est de M. Pickersgill qu'il s'agit.

Messieurs, dans notre industrie—et cela s'applique à d'autres également—environ 95 p. 100 de nos matières premières et de nos approvisionnements viennent de l'Ontario, du centre-ouest des États-Unis et de certains secteurs de Montréal; ils sont transformés ici et expédiés, en grande partie à l'ouest des Maritimes. Tous nos concurrents se trouvent dans les régions à forte densité de population de l'Ontario et du Québec, tout près des centres d'approvisionnement et des grands débouchés.

Près de 80 p. 100 de l'industrie des appareils fonctionnant au gaz et à l'électricité est contrôlée par des filiales américaines. Merci.

Le président: Monsieur Rose?

M. Rose: M. Fisher, j'ai beaucoup apprécié votre exposé, très complet et intéressant, car j'ai eu l'occasion de me réchauffer les pieds dans le four de vos cuisinières il y a longtemps déjà. Je pense qu'il s'agit là d'une industrie qu'il nous faut encourager dans notre pays, car la concurrence américaine est forte et leurs filiales s'installent partout au Canada. Étant donné toutes les restrictions qui vous sont imposées par le tarif marchandises, la baisse des prix de gros et la hausse des prix de détail des matières premières, la question qui me vient immédiatement à l'esprit est la suivante: comment arrivez-vous à survivre?

M. Fisher: Il nous faut travailler dur. Il nous faut nous en tenir au strict nécessaire et éviter le superflu. Nous avons heureusement de très bons employés qui collaborent avec nous. Certaines familles travaillent chez nous depuis trois ou quatre générations.

[*Texte*]

Mr. Rose: Would you say, sir, that your men are in effect subsidizing your business?

Mr. Fisher: No, not at all.

Mr. Rose: They are paid well, are they?

Mr. Fisher: They are paid well. We have exchanged information for many years with seven or eight companies in Ontario through a central agency—each company was a number—and the results showed that some of our men were the top earners per man per hour in Canada, some were second and some were third.

Mr. Rose: You seem, in contrast to some of the others, from implied or factual information that we have here today, to have solved some of the problems of productivity which seems to be plaguing many industries not only in the Maritimes but in Canada generally.

Mr. Fisher: We have laid great stress on productivity. My son, who is in charge of the plant, and I are through the plant all the time, we know the individuals, we are watching, checking up and encouraging people on an individual basis, and it has brought results.

Mr. Rose: It is my understanding, sir, that while productivity can certainly benefit by a loyal and diligent crew it is often more the responsibility of the kind of machinery and techniques which are kept up to date.

Mr. Fisher: That is quite true. We are continually striving for new techniques and new methods to eliminate the amount of labour so a man can turn out more goods in a given time.

Mr. Rose: Do you turn out a limited number of models, sir, like Volkswagen? Is that one way you solve it?

Mr. Fisher: No, we have a tremendous variety of models, probably the largest variety of models of any plant in Canada in our line of business.

Mr. Rose: Sir, you touched on this but I do not think you gave it to me in great detail. You seem to be able to buy from central Canada, but you said that the bulk of your sales are outside the Atlantic provinces?

Mr. Fisher: Right.

Mr. Rose: What is the percentage in going outside and beyond?

Mr. Fisher: More than half goes outside the Atlantic provinces.

[*Interprétation*]

M. Rose: Diriez-vous que vos employés subventionnent votre entreprise?

M. Fisher: Pas du tout.

M. Rose: Ils sont bien payés.

M. Fisher: Oui. Nous échangeons des renseignements depuis bon nombre d'années avec 7 ou 8 sociétés de l'Ontario par l'intermédiaire d'une agence centrale. Chaque société était représentée par un numéro, et le résultat nous montre que certains de nos employés ont le meilleur salaire horaire par tête au Canada. Certains viennent au deuxième rang, d'autres au troisième rang.

M. Rose: Contrairement à d'autres d'après les renseignements que nous avons ici vous semblez avoir résolu certains des problèmes de productivité qui se posent à bon nombre d'industries, non seulement dans les Maritimes, mais dans l'ensemble du Canada.

M. Fisher: Nous insistons beaucoup sur la productivité. Mon fils, qui est responsable de l'usine, et moi-même, sommes toujours à l'usine; nous connaissons les employés, nous surveillons, vérifions, encourageons les employés personnellement, et cela a donné d'excellents résultats.

M. Rose: Il me semble que même si la productivité a tout à gagner d'un travail consciencieux, elle dépend bien souvent davantage des techniques et de l'équipement modernes.

M. Fisher: C'est juste. Nous essayons toujours d'avoir de nouvelles méthodes, de nouvelles techniques pour réduire la quantité de travail et permettre aux employés de produire plus en moins de temps.

M. Rose: Ne faites-vous que quelques modèles—comme Volkswagen—pour vous faciliter la tâche?

M. Fisher: Non. Nous avons un très grand nombre de modèles différents, probablement la gamme la plus variée qui soit au Canada dans cette industrie-là.

M. Rose: Vous avez tout à l'heure abordé un sujet sans entrer dans les détails. Vous avez dit que vous achetiez du centre du Canada, mais que le gros de vos ventes s'effectue hors des provinces de l'Atlantique.

M. Fisher: Parfaitement.

M. Rose: Quel pourcentage va vers l'extérieur et à l'étranger?

M. Fisher: Plus de la moitié va vers l'extérieur des provinces de l'Atlantique. La plus

[*Text*]

The greatest proportion of our sales go out beyond the Atlantic provinces in Quebec, Ontario and the West.

M. Godin: Merci, monsieur le président, je n'ai que quelques questions. M. Fisher a parlé de voies ferrées; lui serait-il possible de se servir de la voie maritime, soit pour la réception des matières premières ou soit pour l'expédition des produits finis. Je parle par exemple des produits expédiés à Québec, à Montréal, et même à la tête des Grand Lacs.

Mr. Fisher: We have investigated looking into the use of the Seaway and found it not at all practical because of all the handling involved and the delay. Today the merchant wants prompt delivery and for that reason we have to maintain 10 warehouses from coast to coast, with sales staff working out of each one so that he has prompt delivery.

Years ago merchants used to have a warehouse and would have stoves in stock. Now they keep them on their floor and when they sell one they pick up the telephone and want another and you have to get out there quick if you are going to maintain your display on their floors.

M. Godin: J'ai une autre question, qui relève peut-être du secret professionnel. Avez-vous une bonne partie du marché des provinces de l'Est où si la compétition est forte de ce côté-là?

Mr. Fisher: Yes, we get a very good share of the Atlantic provinces. I think I can quite conservatively say we get the biggest share of the Atlantic provinces. We work it intensely and it is our whole market. But we have to go well beyond that. I think we have about one million people here compared to 20 million people in the rest of Canada. Our competitors are people who have made refrigerators, washers and so on. They make up these combination cars send them in here and distribute their products from central points such as Fredericton, Saint John, Moncton, Halifax and so on. We have lots of competition down here.

The Chairman: Mr. Horner?

Mr. Horner: Mr. Fisher, you outlined quite extensively the increase in freight rates, on LCL shipments particularly, and you fear a drastic increase in rates if the MFR is discontinued. Some years ago the CNR particularly broke down their management into five basic regions. Did you notice any differ-

[*Interpretation*]

grande partie de nos ventes va à l'extérieur des provinces de l'Atlantique, au Québec, en Ontario et dans l'Ouest.

Mr. Godin: Thank you, Mr. Chairman. I only have a few short questions to ask. Mr. Fisher spoke a little while ago of railways. Would it be possible for him to use the Seaway either to receive raw materials or to ship finished products. I mean products, for instance, going to Quebec or Montreal and even the head of the lakes?

M. Fisher: Nous avons envisagé d'emprunter la voie maritime et nous avons constaté que ce n'était pas du tout pratique, à cause de la manutention et des retards qui s'ensuivent. Aujourd'hui, les marchands veulent une livraison rapide, et pour cela nous avons dix entrepôts d'un océan à l'autre et un personnel de vente dans chacun d'eux afin d'assurer une livraison rapide.

Il y a plusieurs années, les détaillants avaient un entrepôt où ils entassaient leurs cuisinières. Aujourd'hui, ils les exposent dans la salle de vente et quand ils en vendent une, ils décrochent leur téléphone et en commandent une autre; il faut la leur livrer rapidement si l'on veut garder leur inventaire en ordre.

M. Godin: I have another question that may be subject to professional secrecy. Do you have a good share of the markets in the eastern provinces, or is there stiff competition in that area?

M. Fisher: Oui, nous avons une bonne part du marché des provinces de l'Atlantique. Je pourrais même dire sans exagérer que nous avons la plus grande partie du marché des provinces de l'Atlantique; nous le suivons de près et nous considérons que c'est notre affaire. Mais il nous faut aller bien au-delà de ce marché. Nous avons, je crois, un million de clients ici comparativement à vingt millions dans le reste du Canada. Nos concurrents fabriquent des réfrigérateurs, des lessiveuses, etc. Ils emplissent des wagons de leurs produits, les envoient ici et distribuent leur marchandise à partir de Centres de distribution, comme Fredericton, Saint-Jean, Moncton, Halifax, etc. La concurrence est très forte dans notre région.

Le président: Monsieur Horner.

M. Horner: Monsieur Fisher, vous avez commenté en détail les effets de l'augmentation du tarif marchandises, pour les chargements partiels en particulier, et vous craignez une augmentation excessive si on abolit la Loi sur les taux de transport des marchandises dans les provinces Maritimes. Il y a de ça

[*Texte*]

ence in the setting of rates? In other words, did this breaking down of the management of the CNR in any way facilitate the Maritimes in having a rate set quicker, better, or more in line with other modes of transportation in the Maritimes?

Mr. Fisher: Everything is handled from Montreal. Very little of that is delegated to the regional officers. They are in a rather embarrassing position. They do what they can for us but they have to report to headquarters.

Mr. Horner: I might say, Mr. Fisher, that you and I talked about this during the supper hour. I wanted that question on the record because the CNR will be before us and I wanted them to explain the differences of opinion that exist.

Now to go a little further, have you at any time discussed with the railroads the feasibility of container shipments of your products by rail to your warehouses?

Mr. Fisher: We ship to our warehouses in straight carloads.

Mr. Horner: Straight carloads. Have you ever shipped or attempted to ship any into the State of Maine or the United States?

Mr. Fisher: Yes, we have. Several years ago we made quite a strong survey down as far as Boston and we worked on it for some time. The great difficulty is the American duty going in. You do not know what it is going to be. And when they take delivery of goods and pay a certain amount, they may come back after six months and double that amount. It is a very upset situation.

Mr. Horner: Have you at any time appeared before the Tariff Board? We have just had an agreement on the Kennedy Round tariff negotiations, ratified by Parliament. Did you or your industry present that particular problem to the authorities in Ottawa prior to the Kennedy Round, or since, or at any time in the past?

Mr. Fisher: Not direct but these questions, have been taken up with the Canadian Manufacturers Association.

[*Interprétation*]

quelques années, le National-Canadien a décentralisé son administration en cinq régions principales. Avez-vous remarqué une différence dans l'établissement des taux? En d'autres termes, est-ce que cette mesure de la direction a permis aux Maritimes d'obtenir des ajustements plus rapides et plus convenables, plus conformes aux conditions créées par les autres moyens de transport dans les Maritimes.

M. Fisher: Tout est dirigé de Montréal. Il y a très peu de délégation de pouvoir aux bureaux régionaux. Les fonctionnaires de ces bureaux sont plutôt embarrassés, ils font ce qu'ils peuvent pour nous évidemment, mais il faut qu'ils fassent rapport au bureau principal de la société.

M. Horner: Je pourrais peut-être ajouter, monsieur Fisher, que nous avons discuté de cette question à l'heure du souper. Je voulais que cette question figure dans le compte rendu car le National-Canadien sera aussi appelé à témoigner et j'aimerais qu'ils nous exposent leur point de vue.

Maintenant, est-ce que vous avez discuté avec les sociétés ferroviaires de la possibilité d'expédier vos produits par conteneurs jusqu'à vos entrepôts?

M. Fisher: Nos expéditions aux entrepôts se font par chargements complets.

M. Horner: Avez-vous déjà tenté d'en expédier dans l'État du Maine, aux États-Unis?

M. Fisher: Oui, il y a plusieurs années, nous avons fait une étude plutôt détaillée jusqu'à Boston même. Nous y avons travaillé pendant un certain temps. La grande difficulté ce sont les douanes ou le tarif américain. Vous ne pouvez pas savoir ce qu'il en sera. Lorsqu'on prend livraison des marchandises et que l'on paye un certain montant, on peut revenir six mois plus tard et l'on s'aperçoit que les tarifs ont doublé. C'est une situation plutôt instable.

M. Horner: Avez-vous déjà comparu devant la Commission du tarif? Nous venons tout juste de signer une entente sur les négociations du *Kennedy Round*, qui a été approuvée par le Parlement. Est-ce que votre industrie ou vous-même avez fait part de ce problème particulier aux autorités à Ottawa, avant, ou depuis les négociations du *Kennedy Round*, ou à n'importe quel moment dans le passé?

M. Fisher: Non pas directement, mais ces questions ont fait l'objet de consultations avec l'Association canadienne des manufacturiers.

[*Text*]

Mr. Horner: And to any satisfaction? Apparently none.

Mr. Fisher: None.

Mr. Horner: I notice a location particularly at Sackville. You suggest in your brief too that transportation assistance should be stepped up and provided for raw materials and out-going products both ways. Have you at any time considered that it might be wiser for the Canadian Government, rather than to pay assistance on the transportation, to invest in the development of the Chignecto Canal? Are you an exponent of that canal in any way?

Mr. Fisher: No, I cannot see where it would help us at all.

Mr. Horner: It would not help you, particularly in light of your location, I suppose.

Mr. Fisher: It would be just very close to us, but it would be frozen up most of the year or at least for a large part of the year.

Mr. Horner: Do you use the boat? Looking at the particular location of Sackville, do you use the water transportation?

Mr. Fisher: No, we tried water transportation at Vancouver and it is very expensive in extra additional crating and packaging and wrapping to prevent the moisture, and it is also a tremendous delay.

Mr. Horner: The delay does not appear apparent to me because of the warehousing of your products, in any case, but have you considered the feasibility of the containerization of shipments to Vancouver via the Panama Canal?

Mr. Fisher: No, we have not considered the containerization in that way because it would still be several weeks probably before it would get there. By rail it does it in seven days.

Mr. Horner: What about the water route by the St. Lawrence Seaway and up, which we are told is 500 miles cheaper? We were told earlier that particularly from the point of Saint John the water route would be more competitive with rail transportation through New Brunswick.

Mr. Fisher: We have investigated bringing steel down from Hamilton—that is where most of our steel comes from—and the cost of bringing it by ship. There are very, very rarely any shipments that come. They might come into Saint John but they are few and

[*Interpretation*]

M. Horner: Avec une certaine satisfaction? Aucune, apparemment.

M. Fisher: Aucune.

M. Horner: Je remarque un emplacement, surtout à Sackville. Dans votre mémoire vous proposez aussi que l'aide en matière de transport devrait être augmentée pour ce qui est des matières premières et des produits finis dans les deux sens. Avez-vous déjà songé que plutôt que de subventionner les transports, il serait peut-être préférable pour le gouvernement d'investir au creusement du canal de Chignecto? Est-ce que vous appuyez cette thèse?

M. Fisher: Non, je ne vois pas du tout comment cela pourrait nous aider.

M. Horner: Cela ne vous aiderait pas, en raison de l'emplacement, je suppose.

M. Fisher: Nous serions tout près du canal, mais il serait gelé une grande partie de l'année.

M. Horner: Vous servez-vous des bateaux? Étant donné la situation de Sackville, vous servez-vous du transport par eau?

M. Fisher: Non, nous l'avons essayé à Vancouver, et nous avons constaté qu'il était très coûteux étant donné l'emballage supplémentaire nécessaire pour empêcher l'humidité et le retard considérable que cela provoque.

M. Horner: Le retard ne m'apparaît pas, à première vue, en raison du fait que vous entreposez vos produits de toute façon, mais avez-vous étudié la possibilité d'employer les «*containers*» pour vos expéditions jusqu'à Vancouver via le canal de Panama?

M. Fisher: Non, nous n'avons pas étudié cette possibilité, celle des «*containers*», parce que ça prendrait probablement plusieurs semaines avant que les expéditions ne parviennent à leur destination. Par chemins de fer, ils arrivent en une semaine.

M. Horner: Que pensez-vous du transport fluvial via la voie maritime du Saint-Laurent, ce qui fait, paraît-il, 500 milles de moins. On nous a dit auparavant qu'à partir de Saint-Jean, tout particulièrement, que le transport par eau serait plus compétitif avec le transport ferroviaire à travers le Nouveau-Brunswick.

M. Fisher: Nous avons étudié la possibilité de transporter de l'acier de Hamilton, car c'est généralement de là que provient notre acier; nous avons étudié également le coût du transport de l'acier par bateau. Rares sont les expéditions qui proviennent de là. Il y en a

[*Texte*]

far between. We have to have shipments coming almost weekly.

Mr. Horner: And therefore, because of the infrequency of service, you have to use the rail.

Mr. Fisher: Infrequency of service and the extra handling—time in taking it out of the ship, putting it down, loading it on trucks and bringing it to Halifax, Saint John or Sackville. It would be just as costly and would do more damage.

Mr. Horner: Have you considered Mr. Irving's plan for spending $1 million in the Sackville area with the building of the Chignecto Canal?

An hon. Member: One hundred million.

Mr. Horner: One hundred million, excuse me.

Mr. Fisher: I would like to have $100 million spent in that district.

Mr. Horner: Would this then benefit you by stepping up the frequency of the boat service and perhaps shortening the haul of the iron?

Mr. Fisher: I do not think it would, as far as we are concerned—for our product.

The Chairman: Mr. Perrault.

Mr. Perrault: Mr. Chairman, I would like to ask Mr. Fisher a question. He stated—and I made some notes here—that at least part of the answer to some of his problems and the problems of the Maritimes lies with the federal treasury. He emphasized that point.

I think he presented an excellent paper here tonight. But does not the point arrive in the history of any company when you have to examine your own merchandising and marketing techniques? If you are faced with a difficult competitive situation in Central Canada, should you not begin to consider the establishment of branch plants in Western Canada and branch plants in other parts of the country the way some other companies do when faced with similar marketing problems? Is it realistic to assume that changes in freight rates alone are going to solve the problem for you? Here you are sitting in the Atlantic Provinces saying you want to compete successfully all across the broad Dominion of Canada, right out to Vancouver where you maintain a warehouse.

But should you not be investigating your own marketing and merchandising tech-

[*Interprétation*]

qui arrivent à Saint-Jean mais elles sont rares et très espacées. Il nous en faut presque chaque semaine.

M. Horner: Et, par conséquent, en raison du manque de service, il vous faut utiliser le chemin de fer.

M. Fisher: Le manque de service ainsi que la manutention supplémentaire. Le déchargement des navires, ensuite le chargement des camions et le transport jusqu'à Sackville, ce qui coûterait autant et causerait plus de dommages aux marchandises.

M. Horner: Avez-vous songé que M. Irving compte dépenser un million de dollars dans la région de Sackville pour le creusement du canal de Chignecto?

Une voix: 100 million de dollars.

M. Horner: Je m'excuse, 100 millions de dollars.

M. Fisher: Ce serait très beau de dépenser cent millions de dollars dans notre région.

M. Horner: Cela vous conviendrait-il si l'on augmentait la fréquence du service, mais en réduisant peut-être le parcours?

M. Fisher: Je doute que cela nous convienne pour ce qui est de notre produit.

Le président: Monsieur Perrault.

M. Perrault: Monsieur le président, j'aimerais poser une question à M. Fisher: D'après les notes que j'ai prises, il a affirmé que c'est le Conseil du Trésor qui détient la réponse à quelques-uns de ses problèmes, ainsi que ceux des Maritimes. Il en était sûr.

Je crois qu'il a présenté un excellent document ici ce soir, mais est-ce qu'on n'en arrive pas dans l'histoire d'une société au point où il faut examiner les nouvelles techniques de commercialisation et de mise en marché. Si vous faites face à une sérieuse concurrence dans le centre du Canada, est-ce que l'on ne devrait pas commencer par songer à établir des filiales dans l'Ouest du Canada et dans d'autres parties du pays, tout comme d'autres sociétés le font quand ils font face aux problèmes de commercialisation semblable. Est-il vraiment réaliste de présumer que les changements du tarif marchandise seul, régleraient le problème pour vous? Vous voilà ici, dans les provinces de l'Atlantique, essayant de soutenir avec succès une concurrence sur tout le territoire, et jusqu'à Vancouver où vous détenez un entrepôt.

Est-ce que vous ne devriez pas faire enquête sur vos propres techniques de com-

[*Text*]

niques to examine whether or not the time has arrived, in view of the great population growth of Western Canada, that there should perhaps be a branch of enterprise out in the West? We would be glad to have you out there. But the total solution does not lie, surely, with the federal treasury pumping more money into helping people compete from coast to coast. There are many companies in British Columbia, for example, whose marketing area stops at Winnipeg and they know they cannot compete beyond there unless they put up a plant in Winnipeg.

Mr. Fisher: Then you say if we established a branch plant . . .

Mr. Perrault: I am just saying, have you undertaken any feasibility studies to . . .

Mr. Fisher: Yes, we have done very complete feasibility studies and we have put great emphasis on our marketing. It was done very thoroughly and completely. We have a very large business in the West. We have been warehousing in Vancouver for over 50 years.

Mr. Perrault: But do you think the point will arrive when you are going to have a plant out there—an associate plant with enterprise of the Atlantic Provinces?

Mr. Fisher: I cannot see it for a good many years to come. Because if we are able to get relief on the transportation of our raw materials on the basis of Montreal and going out there again, we can do better, I think, than having a plant in Vancouver.

Mr. Perrault: It seems to me if your sources of raw materials are brought in from other parts of Canada the point arrives, in view of the transportation difficulties, when you have to at least allow for these possibilities of having other plants established.

Mr. Fisher: We have considered it but the way we worked it out, it would not be feasible; it would not be practical. Then you see, if you were speaking of moving our plant. . .

Mr. Perrault: I am not suggesting that because I think there is great potential in the Maritimes, but as a Westerner, I would find it difficult to support a proposition which would provide limitless subsidies for companies in British Columbia to compete right out to Newfoundland because the economics simply do not make it possible because we

[*Interpretation*]

mercialisation et de vente, pour savoir si le moment ne serait pas propice, étant donné l'augmentation démographique dans les régions de l'Ouest, d'y établir une succursale de votre entreprise? Nous serions très heureux de vous accueillir là-bas? Mais la solution totale ne réside certainement pas dans le Trésor fédéral d'aider, à coups de dollars, les gens à se faire la concurrence d'un littoral à l'autre? Il existe plusieurs sociétés en Colombie-Britannique, par exemple, dont le marché s'arrête à Winnipeg, et ils savent qu'ils ne peuvent soutenir la concurrence plus loin, à moins d'établir une usine à Winnipeg.

M. Fisher: Par conséquent, vous dites que si nous établissons une usine. . .

M. Perrault: Non, je demande simplement si vous avez entrepris des études pour connaître les possibilités. . .

M. Fisher: Nous en avons fait des études et nous avons beaucoup insisté sur le côté commercialisation de nos produits. Nous l'avons fait de façon détaillée et de façon complète. Nous avons une très grande entreprise dans l'Ouest, et nous faisons affaire à Vancouver depuis plus de 50 ans.

M. Perrault: Mais auriez-vous, à un moment donné, une filiale là-bas ou une usine associée?

M. Fisher: Je ne vois pas la possibilité d'ici plusieurs années, mais si nous sommes capables d'obtenir une certaine aide pour le transport de nos matières premières à partir de Montréal, par exemple, et encore une fois, nous pourrions peut être mieux réussir dans ce sens-là que si nous avions une usine à Vancouver.

M. Perrault: Si vos matières premières proviennent d'autres régions du Canada il arrive un point où, à cause des difficultés de transport, il vous faut au moins songer à la possibilité d'établir d'autres usines?

M. Fisher: Nous y avons songé, mais ce ne serait pas pratique d'après nous. Si vous parlez de déplacer notre usine. . .

M. Perreault: Ce n'était pas ce que je proposais, car je crois qu'il y a de grandes possibilités dans les Maritimes, mais à titre de personne qui vient de l'Ouest, je trouverais très difficile d'appuyer une proposition qui consentirait des subventions illimitées à des sociétés en Colombie-Britannique pour qu'elles fassent de la concurrence jusqu'à Terre-

[*Texte*]

are closer to Soviet Russia than we are to St. John's.

Mr. Mahoney: Yes, that is what Confederation is all about.

The Chairman: Order, please, Mr. Mahoney.

Mr. Mahoney: Mr. Chairman, my questions have been covered.

The Chairman: Mr. Pringle.

Mr. Pringle: I just have a short supplementary. This matter was closely questioned by Mr. Horner but we have heard a great deal today about the possibility of a free trading area in the Maritimes so that you would concentrate more on trading north and south instead of east and west. Since you are in the manufacturing industry, I would be very interested to know your reaction with regard to this possibility relating to, say, the appliance business or the stove business here in the Maritimes.

Mr. Fisher: If we were able to ship our goods into the Eastern States or the New England States free of duty, we could pick up a lot of business. We have been down through there and have made quite extensive studies and the people in that area are well disposed towards Canadian goods.

Mr. Pringle: You feel that you could compete pricewise?

Mr. Fisher: The manufacturers of cooking and heating equipment in the United States can manufacture more cheaply than we can for many reasons. Their steel, which is a big item, and components, cost them less than they cost us in Canada, even those that are manufactured in Canada. The duty comes in. Then again, in the United States with their tremendous market they are able to specialize. One company will make perhaps three gas ranges in a tremendous volume. Another will make three or four electric ranges in a tremendous volume. We in Canada have to take care of all the peculiarities of the populace from coast to coast. We have to have a variety of models in all these lines in all fuels—electric, gas, oil, coal and wood, in cooking and also in heating and space heaters.

[*Interprétation*]

Neuve. Car la situation économique ne le rend pas possible du tout car nous sommes beaucoup plus près de la Russie soviétique que nous le sommes de Saint-Jean.

M. Mahoney: Oui, voilà ce que c'est que la Confédération.

Le président: A l'ordre s'il vous plaît, monsieur Mahoney.

M. Mahoney: Monsieur le président, mes questions ont été complètement couvertes.

Le président: Monsieur Pringle.

M. Pringle: J'aurais une brève question complémentaire. Les questions de M. Horner ont pratiquement couvert tout le sujet, mais nous avons beaucoup entendu parler aujourd'hui de la possibilité d'une zone de libre échange dans les Maritimes, de sorte que vous pourriez concentrer beaucoup plus d'efforts sur le marché nord-sud plutôt que est-ouest. Étant donné que vous êtes dans l'industrie manufacturière je serais très intéressé de connaître votre réaction en ce qui concerne cette possibilité en ce qui concerne par exemple l'industrie des appareils électriques ménagers ici dans les Maritimes.

M. Fisher: Si nous étions capables d'expédier nos produits vers les États de l'est ou vers les États de la Nouvelle-Angleterre, libres de douanes et de tarifs, nous pourrions certainement nous faire une bonne clientèle. Nous nous y sommes rendus, nous avons fait des études détaillées à ce sujet et les gens de cette région sont très bien disposés envers les produits canadiens.

M. Pringle: Estimez-vous que vos prix sont compétitifs?

M. Fisher: Les fabricants d'articles de cuisine et de chauffage aux États-Unis peuvent fabriquer à un prix inférieur au nôtre pour plusieurs raisons. Leur acier qui est un article très important ainsi que les pièces leur coûtent moins que chez nous, même celles qui sont fabriquées ici au Canada. Il y a encore des tarifs douaniers. D'autre part, aux États-Unis grâce à leur marché considérable les fabricants ont la possibilité de se spécialiser. Une compagnie fabriquera en série peut-être trois sortes de cuisinières. Une autre usine fabriquera trois ou quatre différentes sortes de cuisinières électriques en série. Tandis qu'ici au Canada, il nous faut tenir compte des particularités inhérentes à la population d'un bout à l'autre. Il nous faut offrir une variété de modèles dans chacune de ces lignes, cuisinières électriques, au gaz, au pétrole, au charbon, au bois, de même que pour le chauffage ainsi que les chaufferettes.

[*Text*]

Mr. Pringle: Then taking all those points into consideration there must be some secret here. Is it unit labour cost that makes it possible for you to compete? Just how can you possibly compete with all the advantages that the American manufacturer has, unless it is labour unit cost? If it is labour unit cost then would there not be a danger if you had a free trading area that very shortly you might find parity and wages getting hold of you?

Mr. Fisher: We might be swamped out with the Americans coming in here.

Mr. Pringle: You might be swamped out. Then apparently it must be in your unit labour cost that you make your saving. Is that correct?

Mr. Fisher: No, not in our unit labour costs. Our men's earnings are as high as any. We have checked with others and our men's earnings are well up with any in Canada.

The Chairman: Mr. Nesbitt.

Mr. Nesbitt: I have a very brief question, Mr. Chairman. I think a great many of us have been very impressed by the presentation of Mr. Fisher, and it is my understanding that Mr. Fisher has had a great deal of long experience in the subject of freight rates and I, for one, would like to hear some additional comments and suggestions by Mr. Fisher in relation to this subject. Now it is getting very late, Mr. Chairman, and I would not want to burden Mr. Fisher or other members of the Committee at the present time, but I was wondering if perhaps Mr. Fisher would agree to prepare a further submission on the subject of freight rates in the Atlantic Provinces with some additional comments, sent in the form of a letter to you, Mr. Chairman, of which other members of the Committee could receive copies.

Mr. Fisher: Rates are shown here in this submission which is in the book you have. It says a 123 per cent increase would come into effect if we went from the present tariff rates to Tariff 100. On the next page it shows the similar situation in Quebec. And in Statement "C" it refers to incoming raw materials and what these differences are. It is set out there in the rates that were in effect a year ago and those rates are still in effect on that. I would be glad to endeavour to get any further information that you could suggest

[*Interpretation*]

M. Pringle: Considérant tout cela, il doit y avoir un secret ici. S'agit-il du coût unitaire de la main-d'œuvre qui vous permet de soutenir la concurrence? Comment pouvez-vous maintenir la concurrence contre le fabricant américain avec tous les avantages qu'il détient autrement que par le coût unitaire de la main-d'œuvre? Donc, si c'est le coût unitaire de la main-d'œuvre qui vous avantage, ne serait-il pas dangereux pour vous, si vous aviez une zone de libre échange, que vous soyez soudainement surpris par la parité des salaires?

M. Fisher: Nous pourrions peut-être nous trouver forcés de céder le marché aux américains.

M. Pringle: Vous seriez peut-être balayés. Donc, il est évident que ce sont les coûts unitaires de la main-d'œuvre qui vous permettent d'économiser.

M. Fisher: Non, parce que notre main-d'œuvre nous coûte autant que n'importe qui. Nous avons vérifié cela avec d'autres et nous avons constaté que les revenus de nos salariés sont aussi élevés que n'importe où ailleurs.

Le président: Monsieur Nesbitt.

M. Nesbitt: Une question très brève, monsieur le président, je crois que plusieurs parmi nous sont très impressionnés de la présentation de M. Fisher, et je crois comprendre que, M. Fisher, a une très grande expérience au sujet du tarif marchandise. Personnellement j'aimerais qu'il commente encore plus et qu'il nous formule des suggestions à cet égard. Il se fait tard, monsieur le président, et je ne voudrais pas en imposer à monsieur Fisher, ni aux autres membres du comité, mais je me demande si, M. Fisher, serait disposé à nous préparer un autre document sur les tarifs marchandises dans les Maritimes, avec des commentaires, et vous envoyer le tout sous forme de lettre, dont les copies seraient distribuées aux autres membres.

M. Fisher: Les taux sont indiqués dans la liste qui se trouve dans le compte rendu que vous avez en main. Ce compte rendu indique qu'une augmentation de 123 p. 100 entrerait en vigueur si nous passions du tarif actuel au tarif 100. A la page suivante il montre une situation analogue au Québec. Et dans l'état C il porte sur les matières premières importées et sur ce que ces différences représentent. C'est indiqué par les taux qui étaient en vigueur il y a un an, et les mêmes taux valent aujourd'hui à ce sujet. Je serais, toute-

[*Texte*]

after we have battled this rate thing with Boards—first the Board of Transport Commissioners before which we appeared in 1920, and we have been at it ever since with them, but it has not been too encouraging.

Mr. Nesbitt: It is for that reason, Mr. Chairman, that I suggested Mr. Fisher might perhaps like to make an additional submission to the Committee by way of writing within the next week or two or some time and I would hope that perhaps he might.

The Chairman: Mr. Portelance.

Mr. Portelance: Mr. Fisher, according to this memo from Sackville to Truro you used to pay $2.90 for 440 pounds, and with the new rule you would pay $6.68 for two ranges.

Mr. Fisher: That is right, for two ranges.

Mr. Portelance: What would be the average selling price of one range—$100, $200?

Mr. Fisher: By the average selling price do you mean the consumer's price?

Mr. Portelance: From the store to the consumer.

Mr. Fisher: The average selling price would be in the vicinity of $200.

Mr. Portelance: Two hundred dollars. So this means there would be an increase of $3.34 on that $200 in the selling price and if they take their mark-up it would be an extra $5 to the consumer. So as far as the 123 per cent increase is concerned, it might be a 123 per cent increase on the shipping costs but it is not that same percentage over the counter.

Mr. Fisher: Oh, no.

That is the increase in the shipping cost.

Mr. Portelance: Thank you.

The Chairman: Mr. Nowlan, the last question.

Mr. Nowlan: Thank you. Mr. Chairman, I do not know whether my questions or my voice are going to hold out longer because I have three or four. But the first question to Mr. Fisher, Mr. Chairman, because he ships and competes nationally, is: what relation is the transport cost to his cost? I again go back to the economic intelligence unit report sug-

[*Interprétation*]

fois, heureux d'essayer de vous procurer tout renseignement dont vous aurez besoin, après que nous aurons réglé la question des taux avec les commissions, tout d'abord, la commission canadienne des transports devant laquelle nous avons comparu en 1920, et nous ne cessons de le faire depuis lors, mais les résultats n'ont pas été encourageants.

M. Nesbitt: C'est pour cette raison, monsieur le président, que j'ai suggéré si M. Fisher, voudrait peut-être nous envoyer un document supplémentaire en vous écrivant, d'ici une semaine ou deux, par exemple, et j'espère qu'il le fera.

Le président: Monsieur Portelance.

M. Portelance: M. Fisher, selon les mémoires que vous nous avez donnés, de Sackville à Truro, vous payiez, autrefois, $2.90 pour 440 livres et selon les nouvelles règles vous payeriez $6.68 pour deux cuisinières.

M. Fisher: Oui, c'est pour deux cuisinières.

M. Portelance: Quel serait le prix de vente moyen d'une cuisinière? $100.—$200.?

M. Fisher: Le prix de vente moyen au consommateur vous voulez dire? A partir du détaillant?

M. Portelance: A partir du détaillant.

M. Fisher: Le prix de vente moyen serait dans les $200.

M. Portelance: Dans les $200. Par conséquent, il y aurait une augmentation de $3.34 sur les $200. dans le prix de vente. S'ils prennent leur profit sur les $3.35, cela voudrait dire $5. Mais pour ce qui est des 123 p. 100 d'augmentation cela veut dire peut-être 123 p. 100 sur les frais de transport, mais ce n'est pas nécessairement le même pourcentage pour le consommateur.

M. Fisher: Oh non. C'est l'augmentation sur les frais d'expédition.

M. Portelance: Merci.

Le président: Monsieur Nowlan une dernière question.

M. Nowlan: Merci, monsieur le président. Je ne sais pas si ce sont mes questions ou ma voix qui vont réussir à l'emporter, j'aurais trois ou quatre questions à poser. Mais une question que je voudrais poser, à M. Fisher, étant donné qu'il expédie et fait affaire sur le plan national: quel est le rapport des frais de transport à ces frais à lui, à son coût à lui?

[*Text*]

gesting that 5 per cent was cost of transportation and transportation has been vastly overrated in the Atlantic area. I just wonder what your experience has been, sir. This I presume applies to both incoming and outgoing materials.

Mr. Fisher: I do not quite follow you there.

Mr. Nowlan: I can understand that because you may not be able to hear me too correctly. The survey commission by the Atlantic Development Board suggested that about 5 per cent of the cost of a product was really involved in the transport, separate and apart from distribution costs—the warehouses that you keep open in Vancouver and so on. I just wonder what your experience has been.

Mr. Fisher: I cannot say just what that would be. I can give you some figures. Take steel, for instance which costs about $185 a ton and our steel costs us $16.80 more than our competitors' in Ontario.

Mr. Nowlan: I was going to come to steel, sir. Why is it that you have to get steel from Hamilton and that you cannot get it from Sydney?

Mr. Fisher: Sydney does not make steel sheets.

Mr. Nowlan: That is right.

Mr. Fisher: They are only made in Hamilton and Sault Ste. Marie.

Mr. Nowlan: Has this always been the case in your history?

Mr. Fisher: It has always been the case.

Mr. Nowlan: All right. Now the third question, then, Mr. Chairman. You have been silent on the question of the trucking industry. Is that because you do not use trucks?

Mr. Fisher: We do not use trucks—we use them a little bit but very little. Their rates are just about as high as the Tariff No. 100 now and also they are not too anxious to carry our goods because they can get heavier per-cubic-foot pick-up and usually they load in Moncton and they go through. Time after time we have called up Moncton. Scores of times we have had certain shipments here to go to Truro or Halifax and we have asked them to pick them up. We have waited perhaps two, three or four days and they never came to pick them up.

[*Interpretation*]

Je reviens encore au rapport *Economic Intelligent Unit* suggérant que les frais de transport équivalait à 5 p. 100 et qu'on avait exagéré les frais de transport dans la région de l'Atlantique. Je me demandais quelle était votre expérience dans ce domaine, Monsieur. Je présume que cela s'applique aux matières importées ainsi qu'aux produits exportés.

M. Fisher: Je n'ai pas tout à fait saisi.

M. Nowlan: Je le comprends car vous ne me comprenez peut-être pas. Vous ne m'entendez peut-être pas. L'étude faite par l'Office d'expansion des régions de l'Atlantique a suggéré qu'environ 5 p. 100 du coût d'un produit était vraiment constitué par les frais de transport à part les frais de répartitions représentés par les entrepôts à Vancouver, par exemple. Je me demandais quelle était votre expérience à ce sujet?

M. Fisher: Je ne saurais dire ce que cela représenterait, je pourrais peut-être vous donner des chiffres. Tenez, par exemple, l'acier qui coûte environ $185. la tonne. Notre acier, nous coûte $16.80 de plus que nos concurrents dans l'Ontario.

M. Nowlan: J'en arrivais justement à l'acier. Pourquoi faut-il que vous obteniez votre acier de Hamilton et non pas Sydney?

M. Fisher: Ils ne produisent pas les feuilles à Sydney.

M. Nowlan: C'est juste.

M. Fisher: Elles sont fabriquées seulement à Hamilton et à Sault-Sainte-Marie.

M. Nowlan: Cela a-t-il toujours été ainsi?

M. Fisher: Toujours.

M. Nowlan: Alors ma troisième question, monsieur le président. Vous avez passé sous silence la question de l'industrie du camionnage. Est-ce parce que vous n'employez pas les camions?

M. Fisher: Nous n'employons pas de camions, non. Nous les utilisons, mais très peu. Leurs taux sont environ les mêmes presque aussi élevés que le tarif cent, à l'heure actuelle et d'autre part, ils ne sont pas tellement disposés à transporter nos produits parce qu'ils peuvent obtenir des livraisons beaucoup plus lourdes par pied cube. D'habitude ils chargent les camions à Moncton, et partent directement. Nous avons téléphoné à Moncton, plusieurs fois, pour dire que nous avions certaines livraisons à destination de Truro ou Halifax. Ils nous on dit qu'ils vien-

[*Texte*]

Mr. Nowlan: Well, then, as far as extending the MFRA to the trucking industry, you are neither plus nor minus—you are neuter. Is that correct?

Mr. Fisher: We have been giving all our business to the railways.

Mr. Nowlan: My last question, basically, Mr. Chairman, before my voice gives out, has to do with the submission made by Mr. Fisher a year ago in which he stated that he did not have time to come up with too many remedies in view of the lack of time for research, and I come over to his first recommendation. This is the first recommendation on page 818 of our brief:

> ...must be sufficient to place a maritime Manufacturer on a roughly equal basis, rate-wise, with the Manufacturer situated in Montreal.

Mr. Chairman, I sympathize with and congratulate a man who has been able to persevere through all the ups and downs of the Atlantic enterprise. Along the line of Mr. Nesbitt's question, I, as a layman politician, would like to know if you have any practical recommendations as to how you could equate a Maritime manufacturer with a manufacturer in Montreal in enacting legislation.

Mr. Fisher: We took Montreal without asking too much. We have to compete mainly with the people in Ontario so we say Montreal. Let us equalize with Montreal. Let us come half way. Give us half a chance. We do not ask for the whole thing. We say give us half a chance, equalize us with Montreal and let us go at it from there.

There is one manufacturer in Montreal who is closing up on May 30 of this year.

The Chairman: Mr. Breau, the last question.

Mr. Breau: Mr. Fisher, would you comment on Mr. Perrault's question about having a branch plant? Is it not a fact that in that type of industry, the appliance industry, it is not recommended that plants be duplicated? The Maytag Company in washers and dryers has always been centralized in one place.

[*Interprétation*]

draient les chercher mais après avoir attendu trois ou quatre jours, ils ne sont jamais venus.

M. Nowlan: Si nous appliquions la Loi sur les taux de transport des marchandises dans les provinces maritimes, sur l'industrie du camionnage, vous n'êtes ni en faveur ni contre, vous êtes neutre. N'est-ce pas?

M. Fisher: Nous avons toujours livré nos marchandises par chemins de fer.

M. Nowlan: Ma dernière question au fond, monsieur le président, avant de perdre la voix, a trait à la présentation de M. Fisher, il y a un an, où il déclarait justement qu'il n'avait pas le temps d'en arriver à un remède vu le manque de temps pour les recherches. J'en viens donc à sa première recommandation et c'est la première recommandation qu'il formulait et que l'on trouvera à la page 818 de notre compte rendu:

> ...devrait être suffisante pour que le fabricant des maritimes n'ait pas à assumer des taux plus élevés que son homologue de Montréal.

Et alors, monsieur le président, j'approuve et je félicite quelqu'un qui a su persévérer à travers toutes les vicissitudes d'une entreprise dans l'Atlantique. Dans les mêmes lignes que M. Nesbitt, et à titre de simple homme politique, je voudrais savoir comment vous vous proposez d'insérer cela dans une mesure législative afin que la situation soit la même pour le fabricant dans les Maritimes qu'à Montréal?

M. Fisher: Nous avons pris Montréal sans trop poser de questions. Il nous faut faire la concurrence surtout avec les gens de l'Ontario. Alors nous disons Montréal. Faisons l'égalité avec Montréal, donnez-nous la permission d'y aller, d'aller à mi-chemin, nous ne demandons pas tout, mais donnez-nous une petite chance tout de même, égalisons les chances avec Montréal et ensuite nous nous arrangerons. Il y a un fabricant à Montréal qui doit fermer ses portes le 30 mai de cette année.

Le président: Monsieur Breau, une dernière question.

M. Breau: Monsieur Fisher, est-ce que vous pourriez commenter sur cette question d'avoir une usine filiale. N'est-ce pas un fait que dans ce genre d'industrie, c'est-à-dire l'industrie des appareils ménagers, la duplication des usines n'est pas indiquée? Comment expliquez-vous que la société «Maytag» qui fabrique des lessiveuses et des sécheuses s'est toujours centralisée?

[*Text*]

Mr. Fisher: There are no branch plants in the stove and furnace industry in Canada. There is only one plant. Some American financial corporations own two or three plants but they all work independently.

The Chairman: This is the end of our period of questions. We want to thank you, Mr. Fisher.

Our next witnesses are the Enamel Heating Products Limited.

They are not here. Next we have the Opposition Members of the Legislative Assembly of New Brunswick. Mr. McCain.

Mr. Nowlan: Before you begin, I want to congratulate you. This is the seventeenth brief we have had here today and I think you have been pretty good.

The Chairman: Thank you. Mr. McCain is going to make a few observations and read a few notes on his brief and members may ask questions afterwards.

Mr. Fred McCain (Member of the New Brunswick Legislative Assembly): Mr. Chairman, Committee members, I think that as politicians perhaps we may now know tonight how the crowd in the hustings feel as the last speaker arrives at the big political rally because we certainly have been exposed to about that many remarks so far today.

Out of consideration for this, I will try to be brief in accordance with your patience, which I hope may still remain.

The breadth of discussion today seems to indicate a very sincere interest on the part of your Committee to do a job and we hope you will make a productive impression on government to develop a continuing policy designed to fill the need at hand. Directly or indirectly, the taxpayer has supplied subsidy for transportation since the first land grant to a railroad was made in Canada, whether it was New Brunswick, Alberta or British Columbia.

Since the first trucking highway was constructed, since the first airport was provided by the Department of Transport, since the first CN deficit as a national carrier, since the St. Lawrence Seaway and on and on ad infinitum, subsidy direct or indirect has been provided for transportation of individuals, animate and inanimate bodies, for the service of Canada. But all of these were done in good faith, in the firm belief that each was in the best national interest, and I, for one,

[*Interpretation*]

M. Fisher: Il n'y a pas d'usines filiales dans l'industrie manufacturière de cuisinières au Canada. Il y a juste une usine mère. Toutefois il existe certaines sociétés américaines qui sont propriétaires de deux ou trois usines, mais ces usines fonctionnent indépendamment les unes des autres.

Le président: Voilà la fin de notre période des questions. Nous voulons vous remercier, monsieur Fisher de votre présentation. Le prochain témoin nous vient de la *Enamel and Heating Products Limited.* On me dit qu'ils ne sont pas ici. Les autres témoins sont *Les members de l'Opposition de l'Assemblée législative du Nouveau-Brunswick.* M. McCain.

M. Nowlan: Je voudrais vous féliciter, car c'est le 7e mémoire que nous avons eu et je trouve que vous avez été très bien.

Le président: Merci. Monsieur McCain, vous fera quelques commentaires et vous lira quelques notes au sujet de son mémoire, puis les membres pourront poser des questions.

M. McCain (Membre de l'Assemblée législative du Nouveau-Brunswick): Monsieur le président, membres du comité, je crois, qu'à titre d'hommes politiques, nous pourrions peut-être savoir, nous saurons peut-être ce soir, comment la foule se sent quant arrive le dernier orateur de la réunion, car nous avons été vraiment exposés à toute une gamme d'observations de ce genre aujourd'hui. A la lumière de ceci, j'essaierai d'être bref, espérant que vous serez encore un peu patient avec moi. La discussion, aujourd'hui, semble indiquer un intérêt très sincère de la part de votre comité pour accomplir une tâche, et nous espérons que vous ferez une impression productive sur le gouvernement pour essayer de développer une politique qui répondra aux besoins que nous ressentons. Directement ou indirectement, le contribuable a versé des subventions au transport depuis que pour la première fois, on a accordé un terrain aux chemins de fer que ce soit n'importe où au Canada.

Depuis que la première route pour le camionnage a été construite, depuis que le premier aéroport a été fourni par le ministère des Transports, depuis le premier déficit du CN à titre de transporteur national, depuis la construction de la voie maritime du *Saint-Laurent etc. «ad infinitum»*, des subventions directes ou indirectes ont été consenties pour le transport des particuliers, des organismes animés ou inanimés, pour servir le Canada.

[*Texte*]

respect the judgment which brought each to pass. Today then we must not lose sight of the fact that we are considering a very small part of the national transportation problem—national transportation and government expenditure as a whole. But like each other part, it is vital to both the Atlantic and the national economy.

It has been pointed out today that free trade with the Eastern Seaboard of the United States would solve much of the problem—for agriculture, lumber, pulp and paper. For instance, Mr. Irving pointed out today they would be subject to 18 per cent duty on fine papers if they were to manufacture them in their plant. For fishing, it probably would, but when? When are the people of the United States apt to open that most lucrative market to products from Canada which would be competitive?

I wondered when the gentleman from British Columbia brought this subject up earlier today whether he had ever talked with Mr. Gilmore of the B.C. Coast Vegetable Marketing Board. I am sure that if he were here, his approach to free trade would be very definitely negative.

However, I do not share that feeling but the member from British Columbia perhaps might want to talk to Mr. Gilmore. I think it is important to note that the Atlantic area has had two very prosperous periods since it was settled as an organized society. The first occurred when we had free trade with the British market, and the second occurred when we had reciprocity with the United States. These were the two periods of real and proper prosperity for the Atlantic area and the only two. When our trade began to move east and west instead of north and south or out to sea—in other words when we became part of an area of Canada, we began to get into a bit of trouble, as far as our standards of living were concerned.

By all means let us work eternally towards broader trade patterns. But in the meantime let us solve the real transportation problem as it exists within our boundaries. There are many irritating questions which arise from the discussion as pointed out so ably by Mr. Irving earlier today, and in other industries similar question arise.

For instance, why is it cheaper to ship a product from Quebec City to St. John's,

[*Interprétation*]

Mais on a tout fait, de bonne foi, croyant que chaque chose était faite dans l'intérêt national et personnellement j'ai beaucoup de respect pour les jugements ou pour la décision prise. Aujourd'hui, donc, nous ne devons pas perdre de vue le fait que nous étudions une parcelle seulement du problème national en matière de transport, transport national et dépenses du gouvernement dans leur ensemble. Mais comme chacune des parties elles sont vitales pour l'économie de l'Atlantique tout comme pour l'économie nationale.

On a signalé, aujourd'hui, que le libre échange avec la côte Est des États-Unis réglerait le problème, pour l'agriculture, le bois, la pâte de papier. Par exemple, M. Irwin, a dit aujourd'hui qu'il était sujet à des tarifs de 18 p. 100 pour le papier fin s'ils le fabriquaient dans leurs usines. C'est vrai, peut-être, mais quand? Quand les Américains pourront-ils ouvrir ce marché payant aux produits compétitifs du Canada.

Je me suis demandé, lorsque le député de la Colombie-Britannique a soulevé la question plus tôt aujourd'hui, s'il avait déjà parlé à M. Gilmore de la *B.C. Coast Vegetable Marketing Board*. Je suis sûr que s'il était ici, son attitude en ce qui concerne l'échange libre serait certainement négative.

Cependant je ne partage pas ce sentiment mais les membres de la Colombie-Britannique voudraient peut-être parler à M. Gilmore. Je trouve qu'il est important de noter que la région de l'Atlantique a eu deux périodes très prospères depuis qu'elle s'est transformée en société organisée. La première c'est lorsque nous avons eu un libre échange avec le marché anglais et la deuxième lorsque nous avons eu l'accord de réciprocité avec les États-Unis. Voilà les seules deux périodes de prospérité réelle pour la région de l'Atlantique. Lorsque notre commerce a commencé à se faire dans le sens Est-Ouest au lieu de nord-sud, ou vers l'étranger, c'est-à-dire lorsque nous sommes devenus partie intégrante du Canada, nous avons commencé à éprouver des difficultés en ce qui concerne notre niveau de vie.

De grâce, travaillons sans relâche, en vue d'atteindre l'élargissement du commerce. Mais, essayons entre-temps, de régler le vrai problème tel qu'il existe à l'intérieur de nos frontières. Il y a plusieurs questions irritantes et fâcheuses qui se dégagent de la discussion qui a été si bien présentée par M. Irving aujourd'hui; d'autres industries se posent également les mêmes questions.

Par exemple, pourquoi coûte-t-il moins cher d'expédier un produit de la ville de

[*Text*]

Newfoundland, via rail than it is to ship the same product from Hartland, New Brunswick, to St. John's, Newfoundland, via rail? Let me point out there is no subsidy for the rail movement from Quebec City to St. John's, Newfoundland, but there is subsidy from Hartland to St. John's, Newfoundland. Yet the ratepayer pays more from Hartland.

Now, Mr. Chairman, the answer from the railroads might be that this is a water competitive rate from Quebec to Newfoundland; and if it be, I say to you that a subsidized railroad, it seems to me, is extremely ill-advised to give such a rate as to prejudice the position of another customer in another area of the same nation which pays its deficit.

Is there any reason, for instance, why we should not consider Maritime transportation problems when B.C. apples move freely to the Atlantic area, but New Brunswick stoves will have great difficulty in moving to British Columbia if present transportation policies and railroad policies become fact.

Another question which I think your Committee should consider, and I do not have the answer is: Why is the intercolonial railroad still the base on which rates are set for the Atlantic area? It is historic fact that the intercolonial railroad was built around the north shore of New Brunswick as a defensive necessity. It was the first railroad to serve that area. It became obsolete as a defensive weapon in 1814, but the rate structure in the Atlantic area is still influenced by this railroad. Why should it be, Mr. Chairman, that a product destined for Edmundston in New Brunswick from Hartland, New Brunswick, a distance of approximately 100 miles—and I notice that you have a New Brunswick map there; if you would like to follow me on this journey you would be interested, sir—why should it be that this product will be taken from Hartland to Woodstock CP, by CN to Fredericton, to McGivney to Newcastle to Campbellton to Cyr Junction to Edmundston, some 400 miles to travel 100 miles? This is the cheapest rate available. Why should this be?

These are questions and inequities that we feel that your Committee might have some influence in solving. To date our efforts to resolve these problems have not been produc-

[*Interpretation*]

Québec à St-Jean de Terre-Neuve par chemins de fer que ça nous coûte pour expédier le même produit de Hartland, Nouveau-Brunswick jusqu'à St-Jean Terre-Neuve par chemin de fer également. Permettez-moi de faire remarquer qu'il n'y a pas de subside pour le transport par rail de Québec à St-Jean Terre-Neuve, mais il y a des subsides de Hartland à Saint-Jean Terre-Neuve. Et malgré cela, le client paie plus à partir de Hartland.

Monsieur le président, la réponse des chemins de fer serait peut-être que c'est un taux plus concurrentiel de la voie d'eau de Québec à Terre-Neuve et s'il en est ainsi, je vous dirais qu'un service ferroviaire subventionné me semble mal avisé pour donner un tel taux au détriment d'un autre client d'une autre région de cette même nation, qui, lui, doit payer son déficit.

Est-ce qu'il y a motif, par exemple, pour qu'on ne considère pas les problèmes de transport des Maritimes lorsque les pommes de la Colombie-Britannique viennent librement dans notre région alors que les cuisinières du Nouveau-Brunswick éprouveront beaucoup de difficultés à être acheminées vers la Colombie-Britannique si cette politique devient la réalité.

Une autre question qui devrait être étudiée par votre comité et dont je ne possède pas la réponse est: pourquoi le chemin de fer intercolonial sert-il toujours de base pour le calcul des tarifs dans la région Atlantique? C'est un fait historique, que le Chemin de fer intercolonial fut construit sur le littoral nord du Nouveau-Brunswick comme une nécessité défensive. Ce fut le premier chemin de fer construit. En 1814 il était périmé en tant qu'arme de défense mais la structure des tarifs dans la région de l'Atlantique est toujours influencée par ce chemin de fer. Pourquoi, monsieur le président, un produit destiné à Edmundston (Nouveau-Brunswick) et venant de Hartland (Nouveau-Brunswick), une distance d'environ cent milles...

Je vois que vous avez une carte du Nouveau-Brunswick ici, si vous voulez bien me suivre vous serez édifié, pourquoi ce produit serait-il acheminé de Hartland à Woodstock par le Pacifique-Canadien, puis par le National-Canadien à Fredericton, McGivney, Newcastle, Campbellton, Cyr Junction et Edmundston soit un parcours de 400 milles pour faire cent milles?

C'est le taux le moins élevé disponible. Pourquoi en est-il ainsi?

Voilà donc des questions d'inégalité, que, à notre avis, votre comité pourrait aider à résoudre. Jusqu'ici nous n'avons pas réussi à résoudre ces problèmes. Pourquoi le taux de

[*Texte*]

tive. Why are eastbound rates often lower than, seldom higher than, and sometimes equal to westbound rates for similar products? Why is this so? Please note again the westbound rates are subsidized but the eastbound rate, without subsidy, are often lower than the subsidized westbound rates.

This seems to be railroad policy and I think it is a question to which your Committee might get the answer. But we in this area have been unsuccessful. For instance, why would beer in an occasional carload move as cheaply from Montreal to New Brunswick unsubsidized as potatoes would move by the thousands of cars from New Brunswick to Montreal under subsidy? The rate, Mr. Chairman, is quite comparable. These are infuriating questions and seem to present an unreasonable situation.

Why is the rate paid by Atlantic shippers plus government subsidy so often greater than unsubsidized rates for the same product moving eastward? Why cannot the CNR and the CPR co-operate to save themselves money and at the same time compete realistically to save the customer's money? The prime example, I would say, would be the routing of the potato chips from Hartland to Edmundston. Why has containerization been so long coming? Containerization has been taking business from agriculture in New Brunswick from other sources for 10 years, but containerization in 1968 became a topic in the Atlantic area by those interested in transportation.

Why is there so little piggyback for the general truckers? Why is there not co-operation between rails and truckers with piggyback service? The railroads use it in the U.S. Piggyback trains move there, flowing from one despatch centre to another, expediting service for all concerned, saving money for all. Why are the bottlers of soft drinks in the Atlantic area subject to the pressure of rates which they have depicted earlier? Is this to continue indefinitely?

The price-cost squeeze has farmers in a serious economic crop bind. The West is not alone in this. While transportation has not been the sole contributor it has been a very important part, and during the last 25 years there is no end in sight. Could your Committee ask the Government of Canada that if there is no solution for the freight costs mov-

[*Interprétation*]

l'acheminement vers l'est est-il souvent moins élevé, rarement plus élevé et parfois égal aux tarifs des mêmes produits acheminés vers l'ouest. Pourquoi en est-il ainsi? Une fois de plus, veuillez observer que les tarifs vers l'ouest sont subventionnés, mais que ceux vers l'est, sans subvention, sont souvent moins élevés que les tarifs vers l'ouest.

Cela semble être la politique des chemins de fer et ce devrait être une question pour laquelle votre comité devrait obtenir une réponse. Nous, nous n'avons pas réussi. Ainsi, pourquoi la bière, en chargements irréguliers peut-elle être transportée aussi économiquement de Montréal au Nouveau-Brunswick, sans subvention, que les pommes de terre qui sont acheminées par centaine de wagons, du Nouveau-Brunswick à Montréal, avec des subventions? Voilà des questions irritantes et qui témoignent d'une situation illogique.

Pourquoi le taux payé par les expéditeurs de l'Atlantique compte tenu de la subvention du gouvernement, est-il souvent plus élevé que le taux non subventionné pour le même produit qui est acheminé vers l'Est? Pourquoi le National Canadien et le Pacifique Canadien ne peuvent-ils pas collaborer pour épargner de l'argent, tout en ayant une concurrence réaliste, pour épargner de l'argent aux clients? Le meilleur exemple, serait l'acheminement des croustilles de Hartland à Edmundston. Pourquoi la question des cadres a-t-elle mis tant de temps à venir? Le transport par cadres a enlevé des affaires à l'agriculture du Nouveau-Brunswick et à d'autres sources pendant dix ans, mais en 1968 le transport par cadres est devenu un sujet au goût du jour pour ceux qui s'intéressent au transport dans la région Atlantique.

Comment se fait-il qu'il y ait si peu de remorques rail-route pour les camionneurs? Pourquoi n'y a-t-il pas de collaboration entre le service ferroviaire et les camionneurs? Aux États-Unis, les chemins de fer se servent des remorques rail-route. Des trains entiers de remorques vont d'un centre d'expédition à l'autre, accélérant le service pour tous et épargnant de l'argent à tous. Pourquoi les embouteilleurs de boissons gazeuses de la région de l'Atlantique, sont-ils sujets à la pression de ces taux qu'ils nous ont décrits plus tôt? Est-ce que cela va continuer indéfiniment?

L'écart des prix fait que les agriculteurs se trouvent dans une situation économique grave. L'Ouest n'est pas la seule région à connaître ce problème. Bien que le facteur transport ne soit pas le seul, ce fut un des facteurs importants, au cours des vingt-cinq dernières années et nous ne voyons pas encore la fin. Est-ce que votre Comité ne

[*Text*]

ing westward can the government find markets for our products elsewhere? Either one would be satisfactory. It is a matter of rates or markets for agriculture in this area. This is no simple problem, but it is very real.

Whether the rates be water competitive or road competitive or just plain competitive or noncompetitive, the Atlantic area must not be subject to rates which deny markets. This is an inherent right of our Confederation. The transportation industry, land, sea and air must be inventive, daring, pioneering, and when we look at changes in the U.S. under private ownership; changes in Europe, Russia, Japan, we are astounded that a land of daring pioneers such as ours has allowed our situation to degenerate to today's level.

Mr. Chairman and gentlemen, I think that Grand Manan's presentation has been an exclamation mark for presentations. They presented their case with sincerity, clarity and precision. The case for the Atlantic area cannot be so simply stated but it is no less urgent and it is no less clear in the minds of those in need.

In closing, I wish again to emphasize that the Atlantic problem is but a regional facet of the national problem where the taxpayers pay millions every day for all of Canada, and I refer to our brief where in essence we say we believe that an economic solution for the Atlantic area is a sound investment in Canada as a whole. Now, most of the questions have been asked and on behalf of the Opposition our brief prepared about a year ago is on file and is in your book. We still support that brief. Thank you, very much for the sincere interest you have shown throughout a very long and informative day.

The Chairman: Thank you, very much. Mr. Perrault?

Mr. Perrault: Mr. Chairman, Mr. McCain made reference to British Columbia and I would like to ask one or two questions of him, but before I do I would like to refer to the brief which he submitted in March of 1968 which reads:

> We are interested in and support the consideration of such proposals as the Chignecto Canal, a super airport, the Corridor Roads and Atlantic super

[*Interpretation*]

pourrait pas demander au gouvernement du Canada, que s'il n'y a pas de solution pour le coût des transports vers l'Ouest, il nous trouve des débouchés ailleurs pour nos produits? L'une ou l'autre des solutions serait satisfaisante. Il s'agit d'une question de tarifs ou de marchés pour l'agriculture de cette région. Ce n'est pas un problème simple, mais c'est un problème.

Qu'il s'agisse de tarifs maritimes ou routiers concurrentiels ou pas, la région de l'Atlantique ne doit pas faire l'objet de tarifs qui lui ferment des marchés. C'est un des droits de notre Confédération. L'industrie des transports terrestres, maritimes ou aériens doit être à la pointe du progrès et lorsqu'on voit les changements qui se produisent aux États-Unis, en Europe, en Russie, au Japon, nous sommes étonnés de voir qu'une terre de pionniers comme la nôtre ait permis que cette situation se détériore au point où elle en est aujourd'hui.

Monsieur le président, Messieurs, je pense que la présentation de Grand Manan a été un point d'exclamation. Ils ont présenté leur situation avec sincérité, autorité et précision. Le cas de la région de l'Atlantique n'est pas aussi simple, mais, il est tout aussi urgent et tout aussi clair dans l'esprit de ceux qui sont dans le besoin.

En terminant, une fois de plus, je désire vous signaler que le problème de l'Atlantique est un aspect régional du problème national où les contribuables paient chaque jour des millions pour tout le Canada, et je me réfère à notre mémoire où nous disons, en essence, que nous croyons qu'une solution économique pour la région de l'Atlantique, est un bon investissement pour l'ensemble du Canada. La plupart des questions ont déjà été posées, et, au nom de l'opposition, notre mémoire a été présenté il y a environ un an, il figure au compte rendu. Nous appuyons toujours ce mémoire. Je vous remercie beaucoup de l'intérêt dont vous avez fait preuve, tout au long de cette journée qui fut très longue, mais des plus utiles.

Le président: Merci beaucoup. Monsieur Perrault?

M. Perrault: Monsieur le président, M. McCain a parlé de la Colombie-Britannique. Je voudrais lui poser une ou deux questions, mais avant de ce faire, je voudrais me référer au mémoire qu'il nous a présenté au mois de mars 1968 qui dit:

> Nous nous intéressons à l'étude de projets comme l'aménagement du canal de Chignecto, la construction d'un superaéroport, l'aménagement de couloirs et

[*Texte*]

ports...it is not ..sound to consider the elimination of subsidies.

Now, you know, to be responsible in public life you have to put price tags on these things. Now what has the Official Opposition in New Brunswick worked out in the way of a price tag for the Atlantic super port, the corridor road, the super airport, the Chignecto Canal and the subsidies? Now, what does it all come to because...

An hon. Member: On a point of order . . .

The Chairman: Order! Order, please!

Mr. Perrault: Mr. Chairman, it is a serious question.

An hon. Member: It has all worked out in British Columbia.

Mr. Perrault: Mr. Chairman, I would ask that member be called to order because it is a serious question. We are faced, Mr. Chairman, with the critical problem of balancing the national budget and I think it is important...

An hon. Member: Increase the expenditures by one . . .

Mr. Perrault: Mr. Chairman, this is a question I have asked of everyone appearing before the Committee today. I have asked the same question and I think it is important to find out what the price tag is.

The second question I would like to ask relates to transportation costs. I think there are transportation rate anomalies in the Maritimes. These anomalies also exist in Western Canada, as Mr. McCain knows, but he must have been out of the room when I referred to the matter of free trade. He seems to dismiss the feasibility of freer trade in the Maritimes.

He suggested I talk to Mr. Gilmore of the West Coast Fruit Marketing Board. We have had many conversations about it. Mr. Chairman, I suggested earlier that whether we live in Western Canada or in Eastern Canada we should discuss the possibility of industry by industry free trade with the United States. The suggestion of Mr. McCain is, Mr. Chairman, that somehow Canada does not have any bargaining position at all; how could we possibly negotiate with the United States for freer trade? Now, I am suggesting to him, Mr. Chairman...

[*Interprétation*]

de superports sur l'Atlantique. Il n'est pas bon...de songer à éliminer les subventions.

Pour être responsable, dans la vie publique, il faut mettre un prix sur ces différents éléments. Alors, à combien l'opposition officielle a-t-elle chiffré le prix d'un superport sur l'Atlantique, d'un couloir, d'un super-aéroport, du canal de Chignecto et des subventions? Qu'est-ce que cela représente car...

Une voix: J'invoque le Règlement...

Le président: A l'ordre, à l'ordre, s'il vous plaît.

M. Perreaul: Monsieur le président, c'est une question sérieuse.

Une voix: Le travail a été fait en Colombie-Britannique.

M. Perrault: Monsieur le président, je voudrais que les députés soient rappelés à l'ordre, car c'est une question sérieuse. Monsieur le président, nous devons faire face à un problème critique d'équilibre de notre budget national et je pense qu'il est important...

Une voix: Augmentez les dépenses de un...

M. Perrault: Monsieur le président, c'est une question que j'ai posée à tous les témoins qui ont comparu aujourd'hui. J'ai posé la même question et je pense qu'il est important de savoir combien ça coûtera.

La deuxième question que je voudrais poser a trait au coût de transport. Je pense qu'il y a des anomalies dans les tarifs de transport dans les Maritimes. Ces anomalies existent aussi dans l'Ouest du Canada, comme l'a dit M. McCain, mais il devait être à l'extérieur lorsque j'ai parlé de libre-échange. Il semble ne pas croire à la possibilité d'un échange plus libre dans les Maritimes.

Il a suggéré que je parle à M. Gilmore de l'Office de commercialisation des fruits de la côté ouest. Nous en avons beaucoup parlé. Monsieur le président, j'ai suggréré plus tôt que nous vivions dans l'Est ou dans l'Ouest du Canada, nous devrions parler de la possibilité du libre-échange, industrie par industrie avec les États-Unis. La suggestion de M. McCain, monsieur le président, c'est que le Canada n'est pas en position de négocier. Comment pourrions-nous négocier pour des échanges plus libres avec les États-Unis? Maintenant, je suggère, monsieur le président...

[*Text*]

The Chairman: Mr. Perrault, if you would like to have an answer you will have to give the witness a chance to answer one of your questions.

Mr. Perrault: I am asking this question: Does Mr. McCain really believe that it is impossible, for example, to negotiate with the United States a free trade agreement in the area of forest products, for example, so we can sell some of our fine papers from Canada in the United States? A policy of this kind does not affect people who are in the business of marketing agricultural products in the United States. If we had more support for policies of this kind in the East and the West, Mr. Chairman, perhaps we could eliminate some of these transportation subsidies. Now that is my question, to start.

Mr. McCain: Mr. Chairman, I do not intend to attempt to compete...

Mr. Perrault: Well try.

Mr. McCain: I do not intend to attempt to compete in length with the last speaker. I will say that I do sincerely support any negotiations which can be conducted and which would have as an objective freer trade with our neighbour to the South. I so stated very clearly, but I also stated that the immediate problem at hand is our transportation problem within Canada. This is the item which needs immediate attention because of regulations which are about to come into effect.

By all means, Mr. Chairman, anything that your Committee can do to encourage negotiations for free trade in the item I mentioned when I spoke earlier we support 100 per cent, but let us not wait for that to deal with this.

Mr. Perrault: Mr. Chairman, I am glad to have that clarification. Now, the second suggestion was that somehow...

Mr. McCain: May I interrupt a moment? Mr. Gilmore is the one who is the proponent of duties on agricultural products, particularly British Columbia fruits and vegetables, when they come in competition with California and Washington. He certainly would not promote or support, as I know him, any negotiations in respect of free trade in agriculture.

Mr. Perrault: We are not talking about Mr. Gilmore; we are talking about transportation costs in the Maritimes.

Mr. McCain: You talked about him.

[*Interpretation*]

Le président: Monsieur Perrault, si vous voulez avoir une réponse, laissez au témoin une chance de répondre à vos questions.

M. Perrault: Voici la question que je pose: M. McCain croit-il vraiment qu'il soit impossible, disons, de négocier avec les États-Unis une entente de libre échange, disons, pour les produits forestiers, pour que nous puissions vendre cet excellent papier canadien aux États-Unis? Une telle politique n'affecte pas les gens qui se trouvent dans la commercialisation des produits agricoles, aux États-Unis. Si nous avions plus d'appui pour une telle ligne de conduite, dans l'Est et dans l'Ouest, monsieur le président, peut-être pourrions-nous faire disparaître certaines de ces subventions en matière de transport. Voici, ma question, pour débuter.

M. McCain: Monsieur le président, je n'ai pas l'intention d'essayer de m'attaquer...

M. Perrault: Essayez, du moins!

M. McCain: Je n'ai pas l'intention de m'attaquer au précédent orateur quant à la longueur de ma réponse. Je dois dire que j'appuie sincèrement toutes négociations qui pourraient avoir lieu et qui auraient comme objectif des échanges plus libres avec notre voisin du Sud. Je l'ai d'ailleurs déjà dit, bien clairement. Mais j'ai dit aussi que le problème immédiat est celui du transport au Canada. C'est là la question qu'il nous faut étudier immédiatement à cause des règlements qui seront mis en vigueur d'ici peu.

Enfin, monsieur le président, tout ce que votre comité pourra faire pour encourager de telles négociations pour des échanges plus libres dans les domaines dont j'ai parlé, nous l'appuierons tout à fait. Mais n'attendons pas cela pour régler les problèmes de transport.

M. Perrault: Je suis très heureux d'avoir cette précision. La deuxième suggestion était que...

M. McCain: Puis-je vous interrompre un moment? M. Gilmore est celui qui propose des droits sur les produits agricoles, notamment les fruits et légumes de la Colombie-Britannique, lorsque nous faisons concurrence aux produits de Californie et de Washington. Il n'appuierait certainement pas, tel que je le connais des négociations visant à la libération des échanges dans le domaine de l'agriculture.

M. Perrault: On ne parle pas de M. Gilmore, on parle des transports dans les Maritimes.

M. McCain: Vous avez parlé de lui.

[*Texte*]

Mr. Perrault: The second thing, Mr. Chairman, is this: The suggestion has been made that somehow British Columbia apples should move freely to Nova Scotia while these Valiant Enterprise stoves have a difficult time getting out to British Columbia. Now, you know, I do not think that the scales are balanced in favour of Western Canada in this country. I think we are no better off and probably no worse off than any other part of the country. But British Columbia contributes to the Atlantic Development Fund, we have no tax equalization out on the West Coast and I do not think this kind of comment is appropriate at a meeting of this kind; that somehow there is a favoured province status to one province in this country—certainly it is not British Columbia.

Mr. McCain: Mr. Chairman, if I made any implication that any part of Canada was receiving preference as a result of national policies, I apologize. I was not aware that I was even implying such a thing. I did suggest that British Columbia, through very strong representations, had found ways and means of obtaining a rate which made it possible for them to ship British Columbia apples to New Brunswick, and I enjoy those apples.

I am not finding fault with that in any way. I am merely finding fault with the fact that New Brunswick industry in contrast has found it impossible, according to the future plans, to continue to ship to British Columbia. I am looking, sir, for a two-way street for the Atlantic area in the transportation situation. That is all I ask.

An hon. Member: I move we adjourn.

The Chairman: Gentlemen, I think we have had a great day of work and I think everybody enjoyed it. We shall adjourn.

[*Interprétation*]

M. Perrault: Mais voici, monsieur le président, on a proposé que les pommes de la Colombie-Britannique viennent librement en Nouvelle-Écosse, alors que les cuisinières ont beaucoup de mal à se rendre en Colombie-Britannique. Je ne crois pas que l'Ouest soit très avantagé. On n'est pas mieux ou pire que n'importe quelle autre région du pays, Mais, la Colombie contribue au fond de développement de l'Atlantique. Nous n'avons pas de péréquation sur la côte ouest et je ne crois pas qu'un tel commentaire soit approprié au cours d'une telle réunion, disons que s'il y a un statut préférentiel pour une province, ce n'est certainement la Colombie-Britannique.

M. McCain: Monsieur le président, si j'ai laissé entendre quoi que ce soit voulant qu'il y ait une région du Canada qui reçoive un traitement préférentiel à la suite d'une politique nationale, je m'en excuse. Je ne croyais pas avoir dit une telle chose. J'ai seulement suggéré que la Colombie-Britannique, à la suite de demandes très fermes, avait trouvé des moyens d'obtenir un tarif lui permettant d'expédier au Nouveau-Brunswick les pommes de la Colombie-Britannique, et j'aime bien ces pommes.

Je ne vois rien de mal là-dedans. Ce que je trouve mal, c'est le fait que l'industrie du Nouveau-Brunswick s'est vue dans l'impossibilité, suivant les programmes à venir, de continuer ses expéditions vers la Colombie-Britannique. Ce que je voudrais, c'est une voie à double sens, pour les transports de la région atlantique, c'est tout ce que je demande.

Une voix: Je propose qu'on ajourne.

Le président: Messieurs, je pense que nous avons fait beaucoup de travail, que tout le monde l'a apprécié et que nous devrions lever la séance.

EVIDENCE

(*Recorded by Electronic Apparatus*)

Fredericton, N.B.,
Tuesday, February 18, 1969

The Chairman: Gentlemen, the first item on our agenda this morning will be the Town of Dalhousie. Will the representatives come forward, please. Is Mr. D. E. Noel present?

From the Canadian Trucking Associations Inc. we have on my right Mr. J. E. Palmer, President, and Mr. A. K. MacLaren, Executive Director. I imagine you have a short brief to present and then you would be willing to answer some questions from the members.

Mr. A. K. MacLaren (Executive Director, M.M.T.A., Canadian Trucking Associations Inc.): Mr. Chairman and gentlemen, this submission is made jointly by the Canadian Trucking Associations and the Maritime Motor Transport Association Inc. We also have with us today Mr. Peter Cook, Vice-President of M.M.T.A. for Newfoundland, Mr. Ross Judge, Vice-President from Nova Scotia, Mr. Lowell Hogg, Vice-President from P.E.I. and Mr. Charles Palmer, Vice-President from New Brunswick.

Gentlemen, by way of introductory remarks and to explain the perhaps somewhat unusual situation where a national association is participating in what might first appear to be a strictly regional matter, may I say that the problems facing the trucking industry in the four Atlantic Provinces and Eastern Quebec are important to the whole trucking industry for several reasons. The transportation policies in the Maritimes affect the trucking industry both within and without the Atlantic Provinces and it is for this reason that the CTA is participating.

Generally speaking, it is the policy of the Canadian Trucking Association to be against all forms of subsidies in transportation. However, where subsidies are necessary, it is our view that the subsidies should be applied equally to all modes of transport.

[*Interpretation*]

TÉMOIGNAGES

(*Enregistrement électronique*)

Fredericton, N.-B.
Le mardi 18 février 1969

Le président: Messieurs, à l'ordre du jour de ce matin, nous avons une première soumission de la ville de Dalhousie et je demanderais aux représentants de bien vouloir se présenter. Donc la ville de Dalhousie. Monsieur D. E. Noël est-il ici?

De l'Association Canadienne du Camionnage Inc., nous avons, à ma droite, M. J. E. Palmer, président et M. A. K. MacLaren, directeur exécutif. J'imagine que vous avez un résumé à présenter et qu'en suite vous serez prêts à répondre aux questions que les membres voudront bien vous poser.

M. A. K. MacLaren (directeur exécutif, M.M.T.A. Association Canadienne du Camionnage Inc.): Monsieur le président, messieurs, notre présentation est faite conjointement par l'Association Canadienne du Camionnage Inc. et la *Maritime Motor Transport Association Inc.* Avec nous, aujourd'hui nous avons aussi M. Peter Cook, vice-président de la M.M.T.A. pour Terre-Neuve, M. Ross Judge, vice-président pour la Nouvelle-Écosse, Lowell Hogg, vice-président pour l'Île-du-Prince-Édouard, et M. Charles Palmer, vice-président pour le Nouveau-Brunswick.

Messieurs, pour vous présenter notre soumission, pour vous expliquer la situation quelque peu inusitée qui fait que nous participons, nous, une association nationale, à une question essentiellement régionale, permettez-moi de vous dire que le problème qu'envisage l'industrie du camionnage tant à l'intérieur provinces de l'Atlantique et l'est du Québec est important pour toute l'industrie du camionnage pour plusieurs raisons. La politique des transports dans les Maritimes touche l'industrie du camionnage tout à l'intérieur qu'à l'extérieur des provinces de l'Atlantique et c'est pour cette raison que l'ACC participe à votre étude.

Dans l'ensemble, l'Association Canadienne du Camionnage s'oppose à tout mode de subvention en matière de transport. Toutefois lorsque des subsides sont nécessaires, nous sommes d'avis que ces subsides devraient s'appliquer également à tous les modes de transport.

[*Text*]

The trucking industry in Canada is, I think without question, the fastest growing mode of transport. Some of you will recall that two or three weeks ago I sent you a copy of a booklet prepared by our sister association in the United States, "Trucking 1980", which shows in a rather dramatic fashion the growth rate of the trucking industry in the United States where at the present time 50 per cent—just under 50 per cent, 49 decimal something per cent—of the value of intercity freight carried in the United States is carried by for-hire trucks. That is not private trucking, that is for-hire trucking. Based on trends, it is anticipated that within 10 years this will be up to 60 per cent. In Canada, unfortunately, statistical information is not nearly what we would like it to be. It would seem that the for-hire trucking industry accounts for about one third of the intercity freight generated. It is growing very rapidly.

One indication of that is the fact that the latest DBS figures show that trucking now accounts for one-third of the value of exports from Canada. Four years ago this figure was 20 per cent. So the growth of the trucking industry goes hand in hand with the growth of the manufacturing industry.

I have just one other comment. The trucking industry was pleased to see the introduction of the National Transportation Act. We want to be a part of the National Transportation Act. We are pressing for implementation of Part III of the National Transportation Act and, quite frankly, we do not see how Section I of the National Transportation Act can be effective unless all modes of transport are included. As you know, the National Transportation Act virtually eliminates—it de-regulates—control over rates. Each mode is free to set rates as it chooses. The factor that is being encouraged under the National Transportation Act is competition between modes. While one mode is heavily subsidized and other modes are not, we frankly question if the national transportation policy can be effective.

With those comments, Mr. Chairman and gentlemen, I will turn to Mr. Palmer.

The Chairman: Mr. Palmer?

Mr. J. E. Palmer (President, Maritime Motor Transport Association Inc., Canadian Trucking Associations Inc.): Thank you, Mr. Chairman, and members of the Committee.

[*Interpretation*]

L'industrie du camionnage au Canada est, je pense, le mode de transport qui connaît le rythme d'accélération le plus élevé. Certains d'entre vous vous souviendrez qu'il y a deux ou trois semaines je vous ai fait parvenir un exemplaire d'une brochure préparée par l'association analogue à la nôtre aux États-Unis, «*Trucking 1980*» qui indique de façon plutôt dramatique le taux de croissance de l'industrie du camionnage aux États-Unis où, en ce moment, 50 p. 100, ou un peu moins que 50 p. 100 soit 49.9 p. 100, du transport interurbain des marchandises aux États-Unis se fait par des camions de louage. Ce ne sont pas des camions privés, mais des camions de louage. C'est la tendance et on prévoit que d'ici dix ans cela sera rendu à 60 p. 100. Au Canada, malheureusement, les données statistiques ne sont pas tout à fait ce que nous aimerions voir. Il semblerait que l'industrie du camionnage à forfait représente environ le tiers des transports de marchandises inter-urbains. Cela croît très rapidement.

Un indice est que les dernières données du Bureau fédéral de la statistique nous montrent que le camionnage est maintenant comptable du tiers des exportations du Canada. Il y a quatre ans, c'était 20 p. 100. Donc avec la croissance de l'industrie manufacturière va de pair la croissance de l'industrie du camionnage.

Une autre observation. L'industrie du camionnage était heureuse de voir la présentation de la Loi nationale sur les transports. Nous voulons faire partie de ses dispositions. Nous demandons la mise en vigueur de la partie III de cette Loi et sincèrement nous ne voyons pas comment la partie I de la Loi nationale sur les transports peut vraiment donner un rendement efficace à moins que tous les modes de transports soient inclus. Comme vous le savez, la Loi nationale sur les transports fait disparaître à peu près, se trouve à dérégler tout contrôle sur les taux. Chaque mode est libre d'établir ses taux suivant ses désirs. Le facteur qu'on encourage en vertu de la Loi nationale sur les transports est la concurrence entre les différents modes de transports. Quand un mode de transport est fortement subventionné et d'autres ne le sont pas, nous nous demandons si cette politique nationale peut être vraiment efficace.

Donc, ceci dit, monsieur le président, messieurs, je cède la parole à M. Palmer.

Le président: Monsieur Palmer?

M. J. E. Palmer (président, Maritime Motor Transport Association Inc., Association Canadienne du Camionnage Inc.): Merci, monsieur le président et membres du Comité. D'abord

[*Texte*]

First, on behalf of the M.M.T.A., I would like to thank all of you for coming down and listening to the problems you heard yesterday and will hear again today. It is very good of you to do so. We will try to not take any more of your time than we have to, but we feel we have a very serious problem here and we would like to try to put it across to you.

First, M.M.T.A. stands for Maritime Motor Transport Association, and it represents the for-hire trucking industry in the four Atlantic Provinces. Our name, I might add, will be changed to the Atlantic Motor Transport Association next fall—it is in the process now—as Newfoundland, since the Trans-Canada Highway has been completed, is getting big in for-hire trucking also. We represent about 450 for-hire trucking companies.

We will not go into our brief this morning. Our brief is mainly composed of quotes from studies by three royal commissions carried out over the past 10 years, all of which agree with and back up what we say should happen to the trucking industry. We are not here this morning to ask for handouts or to look for sympathy, or anything of this nature. We feel we have a fair beef, we feel we have had for 10 years, and we feel it is time something was done about it.

We in the trucking industry all have our own ideas on what may be best in the way of a transportation policy for the Atlantic Provinces. We feel that it is not our position to try to form policy, but we do say that whatever the policy is now or what it may be next year or 10 years from now, we want to be a part of that policy.

Should the policy change, we will change with it, but we feel that in the past we have played a big part in helping the economy start to move in the Atlantic Provinces, we are at present and, if we are used equally, we will be a bigger part in the future. We feel that we have been discriminated against. We have been asked to compete against a government-owned railroad, and on a dollar rate we get the dollar and they get the dollar plus 20 per cent within and plus 30 per cent on westbound movements based on Levis, Quebec, and Diamond Junction. This kind of profit is not in business today. Nobody that we know of is making 20 and 30 per cent on

[*Interprétation*]

au nom de la *M.M.T.A.*, je désire vous remercier tous d'être venus ici pour entendre l'énoncé des problèmes dont on vous a parlé hier et dont on vous parlera aujourd'hui. Je suis d'avis que c'est excellent de le faire. Nous n'essayerons pas de prendre plus de temps que nous devons, mais nous sommes d'avis que nous avons un problème très grave à régler ici et nous aimerions essayer de vous l'exposer. D'abord la *M.M.T.A.* est la *Maritime Motor Transport Association* et elle représente l'industrie du camionnage à forfait dans les quatre provinces Atlantiques. Notre nom, en passant, sera changé et deviendra *Atlantic Motor Transport Association* l'automne prochain. Cela est en voie de se faire depuis que Terre-Neuve, depuis l'achèvement de la route transcadienne, devient importante dans le camionnage à forfait. Nous représentons environ 450 sociétés de camionnage à forfait.

Ce matin nous ne voulons pas revenir sur notre mémoire qui essentiellement présente les citations des études de trois Commissions royales d'enquête qui ont été faites au cours des dix dernières années avec lesquelles nous sommes d'accord et qui appuient toutes les idées que nous avons énoncées comme devant se produire dans l'industrie du camionnage. Nous ne sommes pas ici pour demander la charité et vous demander votre sympathie ou quoi que ce soit de ce genre. Nous avons un juste grief, nous l'avons depuis dix ans et nous trouvons que le moment est venu d'y faire quelque chose.

Nous avons tous, dans l'industrie du camionnage, nos propres idées quant à ce qui pourrait être la meilleure politique en matière de transports pour les provinces Atlantiques. Ce n'est à nous d'essayer d'énoncer cette ligne de conduite, mais nous disons que quelle que soit la ligne de conduite maintenant, l'année prochaine ou peut-être dans dix ans, nous voulons être partie intégrante de cette politique lorsque la politique sera changée.

Si elle doit être modifiée, nous évoluerons aussi, mais nous sommes d'avis que par le passé nous avons vraiment aidé à lancer l'économie dans les provinces Atlantiques et qu'en ce moment nous y participons et nous aurons un rôle plus grand à remplir à l'avenir. Nous sommes d'avis que nous avons fait l'objet de distinction, on nous a demandé de concurrencer avec un chemin de fer subventionné, propriété du gouvernement et au taux d'un dollar, quand nous obtenons un dollar, eux obtiennent un dollar plus 20 pour cent, plus 30 pour cent pour la distribution pers l ouest par Lévis, Québec et Diamond Junction. Bien entendu qu'un tel bénéfice ne

[*Text*]

any investment, and certainly not in the trucking business.

We have to abide by the laws of the four provinces. Any trucking industry crossing a border falls under all the jurisdiction of the federal government, such as the Canada Labour Code, Limitation of Hours of Work, and on and on.

Our costs have gone up continually and we are not only fighting one form of subsidy, in our opinion we are fighting three. The rate freeze has been on for two years and although it was only put on the railroads, the rates of the other competitive modes were also frozen.

The railroads' rates were frozen, but they have also been helped in other subsidies to the tune of $100 million a year. We are not saying we want to have a subsidy—we are not saying this and we are not saying that—we are saying that we want to be a part of whatever you people think is the best policy and we will do our fair share.

I would also like to mention that although everyone here today from the four provinces is representing the larger carriers in the Atlantic Provinces, we feel our association speaks very loudly for all the for-hire truckers in the area. I have said many times, and I said it a year ago when we met with the people in Ottawa, that I do not think it is right that the men whom we have seen work hard and who have helped to build this province, Nova Scotia, P.E.I. and Newfoundland should go broke because of the competition they have had to work against, and this has happened many, many times. So, we are not only representing ourselves here this morning, but all the for-hire truckers.

There is much more I can say, but we are prepared to try to answer any questions you may ask. Thank you.

The Chairman: Thank you very much, Mr. Palmer. You will find the brief at page 832. Mr. McGrath?

Mr. McGrath: Mr. Chairman, can the witness give us any examples of or indicate to us if CN trucks are taking advantage of the Maritime Freight Rates Act?

[*Interpretation*]

se trouve pas dans le monde des affaires aujourd'hui. Personne, nous le savons, n'a de bénéfices de 20 et 30 pour cent sur des investissements sûrement pas dans l'industrie du camionnage.

Nous devons nous en tenir aux lois des quatres provinces. Toute industrie de camionnage franchit une frontière tombe sous la juridiction du gouvernement fédéral. Par exemple en ce qui concerne les limites du Code canadien du travail, les heures de travail et ainsi de suite. Nos coûts d'exploitation ont constamment augmentés et nous combattons non pas simplement une forme de subside, mais trois, selon nous. Le gel des taux est en vigueur depuis deux ans et bien qu'il n'existait que pour les chemins de fer, tout autre mode de transport concurrentiel a subi aussi un gel de leurs tarifs.

Les chemins de fer ont eu un gel de leurs tarifs, mais ils ont eu d'autres subventions au rythme de cent millions de dollars par année. Nous ne disons pas que nous voulons des subventions, ni ceci ou cela, nous disons que si vous croyez qu'une telle politique est à l'avantage de tous, nous voulons y participer à cette politique et avoir notre part juste et équitable.

Nous aimerions aussi dire que quoique tout le monde ici aujourd'hui représentant les quatres provinces représente les plus grands transporteurs des provinces Atlantiques, notre association, à notre avis, parle aux noms de tous les camionneurs à forfait de la région. J'ai dit plus d'une fois, et je l'ai dit quand nous avons rencontrer les gens à Ottawa il y a un an, que je ne crois pas qu'il soit juste que lorsque des hommes que nous voyons travailler et qui ont aidé à monter leur entreprise, ont aidé ces provinces, l'Île-du-Prince-Édouard, Terre-Neuve et la Nouvelle-Écosse doivent faire faillite à cause de la concurrence qu'ils ont dû affronter et ce bien souvent. Nous représentons non pas simplement notre propre association, nous-mêmes ici, mais toutes les associations de camionneurs à forfait.

Je pourrais vous parler beaucoup plus longuement mais nous essayerons de répondre à toutes les questions que vous aimeriez bien poser. Merci.

Le président: Merci beaucoup, monsieur Palmer. Vous trouverez le mémoire à la page 832. Monsieur McGrath?

M. McGrath: Monsieur le Président, le témoin pourrait-il nous donner des exemples ou nous indiquer si les camions du Canadien National bénéficient des dispositions de la Loi sur les taux de transport des marchandises dans les provinces Maritimes?

[*Texte*]

Mr. Palmer: Yes. We have thought this for quite some time. A year ago we told the Minister of Transport that we felt they were.

A study was done about a month and a half ago by Touche, Ross, Bailey & Smart, the auditors for CNR, at the request of the Minister of Transport. In a preliminary audit they said they were able to say, without going further, that in the last year railroad trucks had received better than $50,000 by way of subsidy, and if we needed more information it would take a much bigger audit. It was not the amount of money we were looking for, it was whether they were getting it or not, and we have that.

Mr. McGrath: Have you made any representations to the Government of Canada in this regard?

Mr. Palmer: Yes, and we have been told—which we do not agree with—by the people paying the subsidy in Ottawa that as long as the company applying for it owns a railroad and the freight moves on a railroad bill of lading they do not care how it moves, it is for the subsidy.

Mr. McGrath: Perhaps you might be able to make a deal with the CNR to buy the Newfie Bullet and then you would be able to get—

Mr. Palmer: We have thought of that.

Mr. McGrath: How serious is the CN truck competition in the Atlantic Provinces? Perhaps, in explaining this to us, you might be able to break it down by provinces.

Mr. Palmer: The trucking arms of the CNR in the Atlantic Provinces number two. First, CNR completely owns Eastern Transport Ltd., which is the biggest carrier in Nova Soctia. Second, CNTL is a trucking arm of the railroad and they have a lot of trucks. We do not know how many, but I would say their fleet was by far the largest in the Atlantic Provinces.

What is happening today is that their trucks, for example, pick up freight in Moncton, New Brunswick and deliver it to Fredericton, New Brunswick, and its never sees a

[*Interprétation*]

M. Palmer: Oui. Nous y avons pensé pendant longtemps. Il y a un an nous avons dit au ministre des Transports que nous pensions qu'ils le faisaient.

Une étude a été faite par Touche, Ross, Bailey et Smart, les vérificateurs du National Canadien, à la demande du ministre des Transports, il y a environ un mois et demi. Une vérification provisoire a été faite et ils ont dit qu'ils étaient en mesure de dire, sans aller plus loin, qu'au cours de la dernière année, les camions du chemin de fer avaient reçu plus de $50,000 en subventions et si nous voulions plus de renseignements il faudrait une vérification plus grande. Nous ne voulions pas savoir le montant d'argent, mais nous voulions savoir si nous l'obtenions ou non et nous avons eu le renseignement.

M. McGrath: Est-ce que vous avez présenté des instances au gouvernement du Canada à cet égard?

M. Palmer: Oui, il nous a été dit, et nous ne sommes pas d'accord, par les gens qui payent le subside à Ottawa qu'aussi longtemps qu'une société qui le demande est propriétaire d'un chemin de fer et que les marchandises sont déplacées et expédiées en vertu d'une lettre de voiture ferroviaire peu importe le mode de transport, le subside est là.

M. McGrath: Vous pourriez peut-être faire un marché avec le National Canadien pour acheter le *NewfieBullet* et vous seriez alors capables...

M. Palmer: Nous y avons pensé.

M. McGrath: Dans quelques mesures considérez-vous la concurrence des camions du National Canadien dans les provinces Atlantiques? Peut-être pourriez-vous, en nous l'expliquant, nous faire une compilation par province.

M. Palmer: Les opérations de camionnages du National Canadien dans les provinces Atlantiques sont doubles. Tout d'abord, le National Canadien est propriétaire de l'*Eastern Transport Ltd.* qui est le plus grand transporteur dans la Nouvelle-Écosse. Deuxièmement, le CNTL est une arme de camionnage des chemins de fer et possède un grand nombre de camions. Nous ne savons pas combien, mais je dirais que c'est la plus importante flotte des provinces de l'Atlantique.
